REITs have been traditionally able to attract investors because of their relatively low risks and high dividend yields. Indeed, the high dividend yield of REITs is the main reason investors invest in the REIT market. REITs returns are composed of both price appreciation and rental yield from real estate. The rental component forms a significant portion of REITs return. Income streams from real estate are more predictable and relatively low in volatility compared to changes in capital values. The low volatility coupled with the high payout in the form of dividends adds a bond-like feature to REITs. However, rental incomes from investment properties are cyclical and may come under pressure during distress economic conditions.

The effects of dividend announcement have positive and negative effects in different ways. There is a positive abnormal return as the motivating factors that lead to dividend increase announcement with share price. Some of them have been given as to the result of the link between dividend payout and cash flow volatility, which leads to negative effect. Much is given to the expected outcome dividend, however, little is known as to the actual result of the i-REIT prices reactions at the dividend announcement in Malaysia. Thus, this study intent to analyze the effects of general, increased, decreased and unchanged dividend announcement on i-REITs.

#### 2. LITERATURE REVIEW

REITs were established in the United States (US) in the early 1960s. In Malaysia, the legislation to permit the formation of listed property trusts (LPT), which similar to REIT was the first to be introduced in Malaysia among Asian countries. Arab Malaysian First Property Trust (AMFPT) being listed on Kuala Lumpur Stock Exchange (currently known as Bursa Malaysia) as the first LPT on August 28, 1989 (Ahmad Husni, Mohammad Badri, & Izah, 2010).

By the end of the 1990s, there are four LPTs on the KLSE, with the second LPT, First Malaysian Property Trust (FMPT) that was established in November 23, 1989 and third LPT, Amanah Harta Tanah PNB (AHTP), which was launched in December 28, 1990 and followed by Mayban Property Trust Fund One (MPTF1), which was listed on March 25, 1997. However, after listed for thirteen years, FMPT ceased listing on July 2002.

At the end of April 2005, there were only three LPTs left on Bursa Malaysia, which are, AmFirst Property Trust (formerly Arab Malaysian First Property Trust), Amanah Harta Tanah PNB and Amanah Harta Tanah PNB 2. In 2005, Securities Commission introduced new guidelines on REITs, and the term LPT is renamed as REIT to standardize the term with other countries. The first Malaysian REIT (M-REIT) known as Axis REIT was subsequently listed on Bursa Malaysia. As at 31<sup>st</sup> Dec 2011, they are 14 M-REITs listed in Bursa Malaysia including 11 M-REITs are the Conventional REITs and another three (3) Islamic REITs.

Al-Aqar Healthcare REIT and Al-Hadharah Boustead REIT were the earlier i-REITs to be introduced in Malaysia in 2006 and 2007 respectively, followed by Axis REIT which was transformed from conventional REIT into i-REIT on December 2008. Al-Aqar Healthcare REIT, being the first i-REIT in the world and Al-Hadharah Boustead REIT, being the first Islamic plantation REIT in the world. Both the Al-Aqar KPJ REIT and Al-Hadharah Boustead REIT rank amongst the top three REIT in Malaysia in terms of dividend yield.

Since i-REITs growing are relevance, as investment instrument, study needs to be conducted to evaluate the current performance of i-REITs in relative to the global and broader equity market. Moreover, given that i-REITs are dividend yield based investment, whereby dividend yields are more significant than capital appreciation, increasing global and domestic inflation levels might have cast doubt on M-REITs as worthwhile investments. The increasing inflationary pressure in the recent years has mounted onto the effectiveness of M-REITs serving as a hedging tool for investors. The key to invest in REITs successfully is to know the sustainability and potential of their rental income, the management integrity and their intention and competency to improve and grow their rental properties.

Since the i-REITs market are undergoing a period of rapid development and expansion in order to position itself as an emerging REIT market in the region, this study is utmost vital as it provides all potential investors with a broader and deeper understanding on the nature and the development of i-REITs market in the past, present and future.

Dividend policy is relevant for portfolio considerations because of the likely impact on the risk-return characteristics of individual stocks. Wang, Erickson and Gau (1993) examined the dividend policies of 123 REITs in US between 1985 and 1988. They found that equity REITs pay a significant higher portion of their incomes as dividends than mortgage REITs. The authors also observed that REITs often pay out more dividends than are required by tax regulations, which suggests that their dividend decisions are dictated by imperfect information in the real estate market and the resulting agency costs (Wang, Erickson, & Gau, 1993).

Dividend payments can serve as market signals, conveying asymmetric information regarding the firm's future earnings (Aharony & Swary, 1980). Wang, Erickson and Gau (1993) found that REITs on average pay 165% of their taxable income. Wang, Erickson and Gau (1993) find an abnormal return on dividend increase announcements of 0.66% for equity REITs and 0.38% for mortgage REITs. For dividend decreases, the authors reported corresponding figures of -1.9% and -0.11%.

McDonald, Nixon and Slawson (2000) determine that dividend announcements provide information for equity REITs and smaller size REITs, but no information significance for larger size REITs. The effect of asymmetric information is more prominent around funds from operations (FFO) announcements than other announcements of performance. This suggests that investors process FFO announcements differently than other information. Any problems created from adverse selection are more than offset by the amount of uninformed traders (McDonald, Nixon, & Slawson, 2000).

#### 3. THE MODEL AND METHODOLOGY

There are two models that might explain the findings of this study, which are Efficient Market Hypothesis (EMH) and Dividend Expectation Model.

An efficient market defined as a market in which prices of all securities quickly and fully reflect all information about the securities. For example, when a company announces a significant increase in earnings, price will reflect this information and price will increase immediately. If the price adjustment is slow or less accurate, the market said to be not an efficient market. According to Fama (1970), an 'efficient' market is defined as a market where there are large numbers of rational, profit-maximizers actively competing, with each trying to predict future market values of individual securities, and where important current information is almost freely available to all participants. In an

efficient market, competition among the many intelligent participants leads to a situation where, at any point of time, actual prices of individual securities already reflect the effects of information based both on events that have already occurred and on events, which, as of now, the market expects to take place in the future. In other words, in an efficient market at any point in time the actual price of a security will be a good estimate of its intrinsic value (Fama, 1970).

Efficient Market Hypothesis (EMH) as one in which all information is reflected quickly and correctly in stock prices. The main variables assessing market efficiency is information. When prices adjust quickly and correctly to new information, investors are notable to use the information to earn abnormal return because it is already compounded in prices.

To examine empirically the adjustment of common stock prices to dividend announcements, a measure of unexpected change in dividends first must be derived. The dividend expectation model used in this study, which a dividend announcement is considered favorable if  $\hat{D}_{i,d} > D_{i,d-1}$ , neutral if

$$\hat{D}_{i,d} = D_{i,d-1}$$
 and unfavorable if  $\hat{D}_{i,d} < D_{i,d-1}$ .

where:

 $\hat{D}_{i,d}$  = expected dividend per share for the j-th firm in the d-th distribution and

 $D_{i,d-1}$  = actual dividend per share announced by the firm.

Managers do not change dividend payments unless they have reasons to expect a significant change in the future prospects of the firm (Aharony & Swary, 1980). Hence, an increase in dividends should signal a favourable change in managers' expectations, whereas a decrease in dividends should indicate a pessimistic view of the firm's future prospects.

The dividend announcements data collected from company announcement in Bursa Malaysia's website. Day *t* is defined as the day on which the firm announces its interim and final dividend and the same announcement appears in the Bursa Malaysia website. There are 41 dividend announcements from 2007 to 2012 for three i-REITs listed in Bursa Malaysia (see Appendix B). The first dividends after listed or being transformed into i-REIT are not included in this study. Thus, there are 38, 19 and 19 announcements of general, increased and decreased dividend respectively (see Appendix A).

Meanwhile, price of i-REITs and Kuala Lumpur Composite Index (KLCI) as a proxy for returns on the market portfolio data are gathered from klse.info and Yahoo Finance website respectively. Data collected based on their daily data 15 days before and after announcement dates (31 days event window). The different  $\pm$ 0 days from the study by Aharony and Swary (1980) which using 21 days event window with  $\pm$ 10 days and  $\pm$ 10 days is to observe if there are longer effect before and after the dividend announcement since REITs is supposedly to be stable investment instrument. Returns for each company announcing multiple dividends for 31-day event window have been calculated. Market returns for the same event window are also calculated. Formula for calculating returns from i-REITs prices or KLCI,  $R_{i,t}$  is as follows:-

$$R_{j,t} = \frac{(P_{j,t} - P_{j,t-1})}{P_{j,t-1}}$$

Where:

 $P_{j,t}$  = price of a specific i-REIT or KLCI, j over time t

 $P_{i,t-1}$  = price of a specific i-REITor KLCI, j over time t-1

To find out abnormal returns for companies, difference of both returns, for each day of event window, has been calculated as shown in formula:

$$AR = R_{it} - E(R_{it})$$

Where AR, represents abnormal returns,  $R_{it}$  represents returns for REIT stock i on event day t, and  $E(R_{it})$  is expected return.

Base on Market Model, expected return,  $E(R_{it})$  is given by following equation:

$$E(R_{it}) = \alpha + \beta iRm + e_{it}$$

Where:

 $R_{it}$  = the rate of return on i-REIT, i over period t, which is one day;

Rm = the rate of return on the equally weighted market index;

 a = the intercept of the linear relation for the return on i-REIT, i and the return on the market index;

B = the slope of the linear relation between the return on i-REIT, i and the return on the market index; and

 $e_{it}$  = the unsystematic component of i-REIT's return on day t.

The error term, **e** it can be considered a measure of the abnormal return of i-REITs, i on day t since it represents the deviation of i-REIT's return from its expected return, conditional upon the realized return on the market portfolio.

The abnormal return for each security / at time t is given by the following equation:

$$e_{it} = E(R_{it}) - \alpha - \beta_i Rm$$

where  $\alpha$  and  $\beta$  are obtained using 31 daily returns from day t-15 so to day t+15.

The market model is applied to all stocks in the sample and abnormal returns  $(AR_{it})$  are calculated for each day relative to the announcement day.

The average abnormal return on a time t, AAR, has been calculated as follows:

$$AAR_{t} = \frac{1}{N} \sum AR_{i,t}$$

Where;

 $AR_{i,t}$  = abnormal return of a REIT, i over a day t

N = number of dividend announcement over a specific time t

t = t-15...t+15

Then, average cumulative abnormal return on a cumulative period t,  $ACAR_t$  has been computed as follows:

$$ACAR_{t} = \frac{1}{N} \sum CAR_{i,t}$$

Where;

 $CAR_{it}$  = cumulative abnormal return of a REIT *i* over a cumulative period *t* 

N = number of dividend announcement over a specific period t

t = t-15...t+15

T-test has been applied on AAR and CAAR respectively to find out its significance. Formulas for calculating t values of AAR and CAAR respectively are:

$$t = \frac{AAR_t}{\left(\sigma/\sqrt{N}\right)}$$

and

$$t = \frac{CAAR_t}{\left(\sigma/\sqrt{N}\right)}$$

The standard deviation,  $\sigma$  is calculated as follows:

$$\sigma = \sqrt{\Sigma (x-xi)^2/(N-1)}$$

Moreover, t-test is also applied to test the statistical significance of the cumulative abnormal returns (where the significance level is 0.01).

# 4. FINDINGS AND ANALYSIS

Figure 4.1 and Figure 4.2 show performance of i-REITs around general dividend announcement throughout 2007 to 2012 in term of AAR and ACAR respectively. The charts show significant effect around dividend announcement day t. This can be evidenced by Appendix C, which shows that AAR for i-REITs at t+1 and t+2 are significantly positive at 90% confidence level (AAR= 0.6%, t-value= 1.9231\*) and at 95% confidence level (AAR= 0.42%, t-value= 2.3100\*\*). Moreover, the ACAR are significantly positive at 95% confidence level from t+2 (ACAR= +2.5%, t-value= 2.2156\*\*) to t+6 (ACAR= +2.88%, t-value= 2.5175\*\*) and is significantly positive at 99% at t+7 (ACAR= +3.22%, t-value= 2.8419\*\*\*). These ACAR continue to show significant positive at 90% confidence level until at t+12 (ACAR= +1.95%, t-value= 2.0049\*).

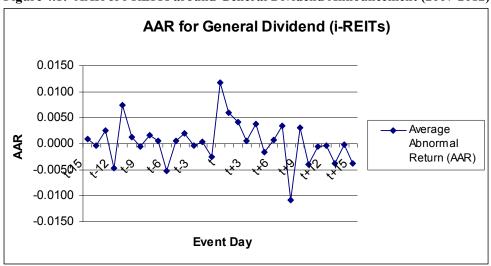

Figure 4.1: AAR of i-REITs around General Dividend Announcement (2007-2012)

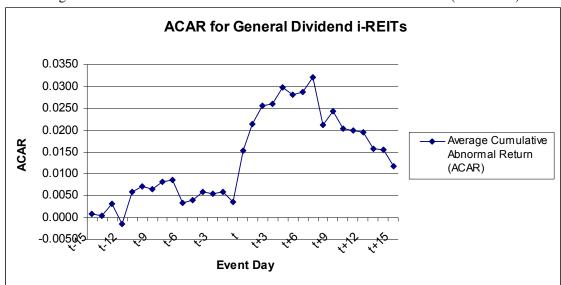

Figure 4.2: ACAR of i-REITs around General Dividend Announcement (2007-2012)

Figure 4.3 and Figure 4.4 show performance of i-REITs around increased dividend announcement throughout 2007 to 2012 in term of AAR and ACAR respectively. The charts show significant effect around dividend announcement day t. This can be evidenced by Appendix D, which displays that AAR for i-REITs at t+2 are significantly positive at 95% confidence level (AAR= 0.67%, t-value= 2.8148\*\*). Moreover, the ACAR are significantly positive at 95% confidence level from t+5 (ACAR= +3.79%, t-value= 2.0967\*\*) to t+7 (ACAR= +3.96%, t-value= 2.2696\*\*). These ACAR continue to show significant positive at 90% confidence level from t+9 (ACAR= +2.89%, t-value= 1.8703\*) until t+11 (ACAR= +2.83%, t-value= 1.9965\*).

Figure 4.4: ACAR of i-REITs around Increased Dividend Announcement (2007-2012)

Figure 4.5 and Figure 4.6 show performance of i-REITs around decreased dividend announcement throughout 2007 to 2012 in term of AAR and ACAR respectively. The charts show insignificant effect after dividend announcement day, t. This can be evidenced by Appendix E, which AAR shows insignificant value from announcement day, t to t+6 and ACAR indicates insignificant value from t-3 to t+15. However, AAR for i-REITs at t+8 and t+10 are significantly negative at 95% confidence level (AAR=-1.04%, t-value=-2.7502\*\*) and (AAR=-0.69%, t-value=-2.6432\*\*) correspondingly.

# 5. CONCLUSION AND RECOMMENDATIONS

This study aims to find out the effects of dividend announcements on i-REITs. Based on the previous studies, it is hypothesized that dividend announcements positively affect the share prices. People buy more of the shares in market REITs when expecting higher future returns announce more dividends by the companies of REIT. Dividends are commonly used as a signal of company's performance by the investor. The impact of dividend announcements on share prices was to be in the direction of dividend announcements. When dividend announced is greater than the expected dividend, i-REITs prices tend to increase and vice versa.

The AAR and CAAR were calculated for the 31 days event window (-15 days, +15 days) before and after the dividend announcement by the i- REITs. T-test has been applied to calculate the significance level for all announcements of i-REITs. On analyzing the general and increased dividend announcements from 2007 to 2012, this study found significant positive effect.

Based on Efficient Market Hypothesis (EMH) model, generally, the market for i-REITs are not efficient at semi-strong form since some investors can earn abnormal profit from the dividend announcements. This indicates that the public information on i-REITs is not well disseminated among investors. Meanwhile, the findings also support the Dividend Expectation Model, where investors are optimistic when the current dividend payout is higher than the previous dividend payout. The increased dividend announcement generates favourable surroundings among investors, which consistent with findings found by Wang, Erickson and Gau (1993).

However, for decreased dividend announcement, the results show an insignificant effect. The Dividend Expectation Model might not explain well this finding, where the decreased dividend announcements only create neutral environment among investors. This might be due to higher confidence level among investors on property capital appreciation and the stability of property rental business of i-REITs.

There are a number of implications of this study. This study contributes to the body of knowledge in supporting the EMH and Dividend Expectation Model, except for decreased dividend announcements, which might not explain for i-REITs market. Moreover, the policy makers should improve the process of information dissemination to increase the market efficiency of i-REITs market at semi-strong form. The findings from this study also very useful to more updated investors, where they can earn abnormal profit from dividend announcement especially for increased dividend announcement.

This study employs KLCI as a benchmark for Malaysia market in finding the abnormal return. Thus, it is recommended for future study to use Syariah Index as market benchmark in explaining Islamic capital market.

# IMPORTANCE OF ENVIRONMENTAL DISCLOSURE: DIFFERENCES IN PERCEPTIONS BETWEEN MUSLIM AND NON-MUSLIM FUND MANAGERS

Ridzwana Mohd Said<sup>1</sup> Maliah Sulaiman<sup>2</sup> Nik Nazli Nik Ahmad<sup>3</sup>

#### **ABSTRACT**

The objective of this study is to examine the differences in perceptions between Muslim and non-Muslim fund managers concerning the usefulness of environmental information in investment decisions. A questionnaire survey was used and 59 responses were received. No differences were found in perception between Muslim and non-Muslim fund managers regarding various companies' environmental attributes and types of environmental information. This implies that the Islamic worldview is not reflected in the perception of Muslim fund managers. Thus, the present study makes a significant contribution to environmental reporting research, companies and practitioners in Malaysia particularly from the context of accountability in Islam.

**Keywords:** Environmental information, perception, fund managers, Islam, accountability

#### 1. INTRODUCTION

Nowadays, businesses have been forced to rethink their responsibilities towards various stakeholders particularly after the world top companies scandals such as Enron, Worldcom, and Nike (Ehsan and Kaleem, 2012). The corporate scandals indeed have served as the "wake up" calls for the entire organization to be more responsible towards society (Janggu et al., 2007). Therefore, there is a growing trend of CSR practice around the world. Although CSR practices are commendable, it costs companies time, energy and money (Saleh et al., 2011). Accordingly, the information should be of value to corporate preparers and stakeholders. While a plethora of studies on perceived usefulness of social information has been carried out for decades, to the knowledge of the researchers, a study that specifically focuses on Muslims' perceptions concerning social information has not been found. Thus, the present study examines the difference in perceptions concerning the usefulness of environmental information in decision-making between Muslim and non-Muslim fund managers.

The study has one significant contribution. It includes the aspect of religion, specifically, Islam, which is lacking in the current environmental accounting literature. Additionally, studies on accountability in Islam are very limited. Most prior studies were developed from the Western worldview in which the concept of accountability is different from that of the Islamic point of view. While the present study will examine the usefulness of environmental information between Muslim and non-Muslim fund managers, it does not assert that non-Muslim stakeholders are less accountable than Muslim fund managers. The tests will only be examined on the degree of importance as perceived by Muslim in comparison with non-Muslim stakeholders. Muslims are expected to adopt a more comprehensive approach to decision-making.

<sup>&</sup>lt;sup>3</sup> Professor Dr. Nik Nazli Nik Ahmad is an Accounting Professor at the Department of Accounting, Kulliyyah of Economics and Management Sciences, International Islamic University Malaysia.

#### 2. DIFFERENCES BETWEEN MUSLIM AND NON-MUSLIM STAKEHOLDERS

A few scholars (such as, Baydoun and Willett, 2000; Haniffa and Hudaib, 2002; Maliah and Willett, 2003) have proposed Islamic Corporate Reporting that can fulfil the needs of wider stakeholders. Generally, the scholars agree that the main criteria in Islamic Corporate Reporting are social accountability and full disclosure of information. Companies need to be transparent through reporting full disclosure of information to wider stakeholders. Apart from profit and loss statement, balance sheet and cash flow statement, companies are required to report information on social performance activities, which includes information about environmental management or protection. This information is important to stakeholders, be they Muslims or non-Muslims, in assisting them in making economic and religious decisions (Haniffa and Hudaib, 2002).

In Islam, the concept of accountability is a dual accountability: accountability to God and to God's creations (Shahul, 2000). The Islamic accountability concept can be discussed from two different views. First, an organization is a social partner in the wider society. The management of the company acts as a trustee of capital providers and, thus, is responsible to carry out business ethically in a manner that will not impair the well being of the community. Responsibility of the management also includes accountability to disclose information in assisting users to make decisions (Haniffa and Hudaib, 2002). Thus, financial as well as social information, including environmental information, should be reported to the users (Haniffa and Hudaib, 2002).

Second, the Islamic concept of accountability indicates that each Muslim should realize his role as vicegerent in all situations. Man is not made without purpose and it is such a purpose that gives meaning to God's creation (Maliah, 2005). Thus, man is accountable for his actions (inactions), which will be accounted for in the hereafter and this includes every decision he makes.<sup>4</sup> Accountability of man is not restricted to the accountability to God but also accountability to God's other creatures including humankind, animals and the environment. Man is accountable to secure the welfare and sustainability of the environment as referred to by Samarai (1997) that the earth is for the betterment and development and not for misuse of God's given resources.

A few studies were identified that examine the extent that culture, race and religion influence decisions made by groups of stakeholders. Ramasamy et al., (2007) examined the relationship between corporate social performance and ethnicity, which is whether the ethnicity of the chief executives influence the way they formulate and implement the socially responsible policies and programmes of the organizations. The results indicate that organizations with Malay<sup>5</sup> chief executives reflect higher corporate social performance levels than organizations with Chinese chief executives. The authors believe that religious upbringing may play an important factor that contributes to the difference. Additionally, another study by Asma and Lim (2001) found that among the three major ethnic groups in Malaysia, Malay managers have a more positive attitude towards religion and their work ethics are strongly attached to their religious beliefs. This indicates that Islam has a deep influence on the attitudes and behaviour of Muslims when their behaviour is guided to comply with the Islamic teachings (Lim, 2001).

Haniffa and Cooke (2002) examined the effect of culture and corporate governance mechanisms on voluntary disclosure of companies in Malaysia. In the study, culture was measured by race (Malay versus Chinese) and one of the voluntary disclosure items was information on environmental policy. The authors

they are measured for you" (from Omar bin Al-Khattab (may Allah be pleased with Him)).

<sup>&</sup>lt;sup>4</sup> "Hold yourselves to account before you are held to account, for it is easier for your accounting, and measure your deeds before

<sup>&</sup>lt;sup>5</sup> The Article 160 of the Constitution of Malaysia defines Malay "as a person who professes the religion of Islam..." (Wikipedia, 2010). Accordingly, all Malays in the present study is presumed to be Muslims.

found that firms dominated by Malay directors have higher voluntary disclosure. They asserted that this is due to the Islamic business ethics, which encourage transparency in business.

The above studies imply that religion (Islam) as a cultural variable (Maliah, 1997) has, to some extent, influence on individual perceptions and behaviour, which subsequently affect their decisions. For example, one would expect a Muslim fund manager not to invest in a company that harms the environment. Accordingly, environmental information disclosure may be regarded as satisfying an Islamic society's need for full disclosure and social accountability (Maliah and Willett, 2003). Thus, the perceptions between Muslim and non-Muslim stakeholders would be different. Indeed, one would expect committed Muslims to perceive the environmental information to be more useful than non-Muslims. A Muslim fund manager who refers his doings at all times to *Shari'ah* is believed to realize the importance of having complete corporate information before making investment decisions. Accordingly, the following hypotheses are developed:

Hypothesis 1: There is no difference in the perceived importance of company

environmental attributes between Muslim and non-Muslim fund managers.

Hypothesis 2: There is no difference in the perceived importance of various types of

environmental information between Muslim and non-Muslim fund

managers.

### 3. RESEARCH METHOD

Data is collected through a questionnaire survey method. The research instrument has been adapted from previous related studies, thus ensuring both internal and external validity. Fund managers were chosen as they constitute an important category of stakeholders (Deegan and Rankin, 1997). The questionnaires were piloted with academicians and fund managers through convenience sampling. Several modifications were then made based on their comments. The sample consists of 218 licensed fund managers. Fifty-nine useable responses were received, which gave a response rate of 27 per cent. The test of non-response bias to compare between the early with the late respondents was conducted using the Mann-Whitney U test, and no significant difference was reported. Reliability tests were conducted for each question and Cronbach's alpha at a minimum of 0.89 was obtained for all questions. This implies that the items in the instrument possess high internal consistency reliability.

#### 4. FINDINGS AND ANALYSIS

# Demographic analysis

The majority of fund managers were male, which represents 71.2 per cent of the total fund managers (28.8 per cent of fund managers were female). Half of the fund managers were in the age group of 31-40 (50.8 per cent). Relatively few of the fund managers were below 30 years old or in the age group of 41-50 years old (20.3 per cent and 23.7 per cent, respectively). Interestingly, 3 fund managers were above 50 years old, which indicates their maturity working in the fund management and investment field. While 35 fund managers were Muslim (59.3 per cent), the remaining were non-Muslim including Christians, Buddhist and Hindu

# Company's Environmental Attributes

Table 1:
Perception Differences on the Importance of Environmental Attributes when Making Investment
Decisions between Muslim and Non-Muslim Fund Managers

		Muslims			Non-Muslims			Mann-
The company:		Mean	Std devn	Rank	Mean	Std devn	Rank	Whitney (Signif. test)
1	exhibits a high standard of environmental awareness (e.g.: in terms of the use of natural resources and/or pollution control)	3.37	1.165	3	3.50	1.180	3	ns
2	has environmental liability insurance	3.46	1.197	2	3.17	0.917	8	ns
3	conducts an environmental audit	3.03	1.150	9	3.21	0.884	7	ns
4	has a formal environmental control unit	2.86	1.167	12	2.96	0.955	10	ns
5	uses clean technology	3.23	1.060	7	3.29	0.955	4	ns
6	holds ISO 14001 certification	2.97	1.098	10	2.79	0.779	12	ns
7	registers its products with an eco-label scheme	2.89	0.993	11	2.88	1.076	11	ns
8	promotes the recycling of its products, by-products and waste	3.11	1.078	8	3.25	1.113	5	ns
9	seeks to minimize energy consumption	3.49	1.095	1	3.92	1.100	1	ns
10	seeks to minimize the use of materials that harm the environment	3.29	1.152	5	3.25	1.294	6	ns
11	meets all known and likely future environmental control standards	3.31	1.183	4	3.54	0.977	2	ns
12	manufactures environmental friendly products	3.26	1.067	6	3.12	1.035	9	ns
13	involved in environmental consultancy	2.60	1.035	13	2.33	1.049	13	ns

1=not important, 2=quite important, 3=important, 4=very important, 5=extremely important ns = not significant

The results in Table 1 above presented that there is no difference in the perceived importance of the environmental attributes between Muslim and non-Muslim fund managers in Malaysia. Accordingly, there is not enough evidence to reject the null hypothesis.

Indeed, as to the mean rankings, both Muslim and non-Muslim fund managers perceived the importance of the company's environmental attributes equally. Though not in the same order, both groups ranked nine out of thirteen items in the list as important with companies that seek to minimize energy consumption being ranked as the most important attribute by both groups before making investment decisions. The four environmental attributes that were ranked as quite important (rated at 2) by Muslim and non-Muslim fund managers include companies that have a formal environmental control unit, hold ISO14001 certification, registers their products with an eco-label scheme and those that are involved in environmental consultancy.

# Types of Environmental Information

Table 2:
Perception Differences on Various Types of Environmental Information
Perceived as Important for Investment Decisions between
Muslim and Non-Muslim Fund Managers

		Muslims			Non-Muslims			Mann-
		Mean	Std devn	Rank	Mean	Std devn	Rank	Whitney (Signif. test)

14	Awards	2.69	1.157	17	2.50	1.022	17	ns
15	Environmental audit	3.00	1.138	9	2.92	0.929	13	ns
16	Environmental management system	2.86	1.061	10	2.92	0.974	14	ns
17	Environmental end products/services	2.86	1.115	11	2.71	1.042	16	ns

1=not important, 2=quite important, 3=important, 4=very important, 5=extremely important ns = not significant

The results of the Mann-Whitney U tests in Table 2 show that there is not enough evidence to reject the null hypothesis. This implies that Muslim and non-Muslim fund managers had similar perceptions concerning the importance in their investment decisions of the various types of environmental information disclosed in corporate annual reports.

Both Muslim and non-Muslim fund managers ranked high regarding environmental information related to the past, present and future litigation as well as environmental information on company's past, present and future environmental expenditure. The results reveal that both groups perceive environmental information that has a financial impact on the company as important in their investment decision-making process. In addition, both groups ranked information about environmental awards compared to other types of environmental information as important for investment decisions as being the lowest.

Generally, there was no evidence to indicate that Muslims perceived environmental information as being more important than non-Muslims. The results show no differences in perception between Muslim and non-Muslim fund managers for both variables tested in the study.

# 5. DISCUSSION AND CONCLUSION

Man was created to be God's vicegerent (*Khilafah*) on earth and has been bestowed with spiritual and mental characteristics (Chapra, 1992). According to Chapra, one of the implications as God's vicegerent is that man must acknowledge God as the absolute owner of resources on earth and that man is merely a trustee. Thus, a Muslim is responsible to use the given resources in a manner that will benefit not only himself but also the wider society (Maliah, 1997). Furthermore, a Muslim should always believe that he is accountable for all his actions and inactions, which will be accounted for in the Hereafter (Abu-Sway, 2002; Abdul Rahim, 2003). Responsibility for all actions and inactions include Muslim decisions concerning to investment decisions.

Unfortunately, the results of the study did not support the argument. The results indicate that there are no differences in the perception of environmental information between Muslim and non-Muslim fund managers and, thus, none of the hypotheses can be rejected. This implies that the Islamic worldview is not reflected in the perception of Muslim fund managers. Additionally, the results are also inconsistent with prior studies on the difference in attitude concerning social issues between Malays and non-Malay top managers in companies (for example, Asma and Lim, 2001; Haniffa and Cooke, 2002, 2005; Ramasamy et al., 2007).

There are several possible explanations for these results. First, the economic system in the world is built on the idea of capitalism which is to maximize profit. The main feature of capitalism is economic rationalism (Weber, 1979 cited in Maliah, 1997). According to Weber, several assumptions are embedded in this type of economy. The first is that humans are motivated by self-interest, which is expressed to increase financial gain. Second, the action that yields the greatest financial return to an individual is also considered as most beneficial to society. This encourages competitive rather than cooperative behaviour in society. Finally, human progress is best measured by the increase in the value of what the members of society consume, which implies that higher levels of material output improve the well-being of society (Weber, 1979 cited in Maliah, 1997).

However, Islam's viewpoint is different. Islam clearly denies economic rationalism. The economic system from the Islamic perspective is developed according to *Shari'ah*, which explains the relationship between man and the Creator, man with other creatures and man with the environment in which the goal is to achieve *falah* to the people and the wider society (Abdul Rahim, 2003). These relationships may be represented by the four ethical principles described by Naqvi (1981), as unity, equilibrium, free will and responsibility. Islam emphasizes collective interest rather than self-interest. In Islam, the pursuit of profit should be carried out within the freedom granted to humankind by Allah for

the use of the resources so provided. Humankind should use the resources with responsibility to provide benefit to society with the intention of ensuring socio-economic justice and to Allah's pleasure (Maliah, 1997).

Second, is the failure to highlight the importance of ethical issues in the accounting and business related education. The accounting education that is presently being taught at institutions of higher learning is inconsistent with the Islamic teachings (Haniffa and Hudaib, 2002). Many of the Western accounting concepts and principles, such as going concern, money measurement, business entity, historical cost, conservatism, matching and materiality concept that are currently applied in many countries, including Malaysia, are irrelevant from the Islamic point of view (Adnan and Gaffikin, 1997). For example, Adnan and Gaffikin explained that in conventional accounting practice, a business is assumed to be in existence for the foreseeable future. However, this is criticized from the Islamic perspective as it implies that there is something else other than Allah that will live indefinitely. They further added that the monetary concept in accounting has several limitations. Accounting information is limited to information expressed in monetary units and monetary units are unstable over time. This implies that accounting information that cannot be expressed in monetary value, such as social and environmental information, should not be reported (Belkaoui, 1992). Indeed, the primary objective of accounting information should be to fulfil the accountability obligation to the Creator, that is Allah (Adnan and Gaffikin, 1997). This is manifested through comprehensive disclosure of accounting information (Haniffa and Hudaib, 2002). The results of the study seem to show that Muslim fund managers are significantly influenced by Western accounting thought that has been learned throughout their tertiary level.

In essence, the importance of environmental information disclosure that fulfils the full disclosure principle in Islam was not reflected in the perception of Muslim fund managers. In sum, despite the increasing trend of companies to report social and environmental information, its perceived importance in investment decisions to Muslim fund managers in Malaysia is still unclear.

# A REVIEW ON BOARD ROLES THEORIES: THE RELEVANCY OF ISLAMIC ACCOUNTABILITY AS THE THEORETICAL LENS IN EXAMINING THE SHARIAH COMMITTEE EFFECTIVENESS

Sabarina Mohammed Shah<sup>1</sup> Mohamat Sabri Hassan<sup>2</sup>

#### **ABSTRACT**

The financial crises affecting countries worldwide provide evidence of governance failure and the repercussion of speculative financial transactions. Thus, the Islamic Financial Institution (IFI) is seen as a viable alternative due to its unique value system that promotes sound governance, eventually creating value. Contrary to this belief, IFI is still subject to governance failure. In fact, the repercussions are greater, as this failure includes the shari'ah aspects. Hence, the Shari'ah Committee (SC) as the IFI gatekeeper is placed at the centre stage. The effectiveness of the SC needs to be assessed in relation to the IFI governance and value creation. In examining the IFI ontological issues, there exist two conflicting views on the epistemology to be applied. Therefore, this paper aims to cross-examine the existing board role theories simultaneously with the Islamic precept. The two main findings are as follows. First, the agency theory; which is widely used in the literature, displays inherent limitations within the IFI context. Second, the comparative analyses of the alternative board role theories, namely, resource dependency, stakeholder theory, redefined accountability, and the Islamic accountability (IA) doctrine, showed that IA is the most appropriate theoretical lens. This paper also develops the theoretical dimensions and propositions based on the IA, which formed the conceptual framework (CF). The CF, based on the contemporary IFI structure, is subject to further refinement. On the other hand, the IA remains true as a doctrine and is applicable beyond the boundaries of time, society, and culture; as its value remains universal.

**Keywords:** Governance, Islamic Financial Institution, Board Roles Theories, Islamic Accountability, Shari'ah Committee

#### 1. INTRODUCTION

The crises affecting the financial industry have been a recurring phenomenon. The downfall of financial institutions was not only due to the speculative financial transactions (M. N. Ismail, 2010), but also due to poor corporate governance (Gup, 2007). Ironically, the recurring phenomenon is attributed to the fact that people normally forget when the economies are booming<sup>3</sup>. This condition is evident in the downfall of the Conventional Financial Institution (CFI) throughout the centuries. Some examples over the past two decades are the Bank of Credit and Commerce in 1991, Barrings Bank in 1995, Societe Generale in 2008, Madoff Hedge Fund in 2008, and Stanford Financial Group in 2009.

<sup>&</sup>lt;sup>3</sup> Professor Dr. David Crowther in his keynote address titled 'Governance, sustainability and crisis management' delivered at the 2<sup>nd</sup> International Conference on Governance and Accountability (ICGA 2012) held in Kuching, Malaysia on 15–18 February 2012.

Now, the issue of financial crisis is affecting countries on a larger scale around the globe, including Japan, the United States (U.S.), and the European countries.

Thus, the existence of the Islamic Financial Institution (IFI) is seen as a viable alternative to the CFI, as the former is found to be more stable (Asiamoney, 2008; Hamzani, 2008). This is due to its unique value system (Deehani, Karim, & Murinde, 1999; Olson & Zoubi, 2008; Rosly, 2005) which is the permissibility of al bay (commerce and trade) and the non permissibility of riba (excessiveness which caused injustice) (Mirakhor, 2011). Contrarily to this belief, IFI is still susceptible to failure in the event of poor corporate governance (Chapra and Ahmed, 2002; Asiamoney, 2008). This phenomenon is evident as set forth in Table 1, which indicates that the governance issue extends beyond the corporate aspect as it includes the shari'ah<sup>4</sup> aspect as well. The reason is that the ultimate objective of the IFI establishment is to adhere to the shari'ah (Al-Zuhayli, 2003) in achieving the maqasid al shari'ah<sup>5</sup> (M. O. Mohamad & Haneef, 2011; M. O. Mohamad & Taib, 2011).

Insert Table 1 about here

The discussion above clearly demonstrates the need for continuous sound governance in the financial industry, be it the CFI or IFI. This need is pertinent to achieve the financial and economic sustainability in a country (Adams & Mehran, 2003; Ciancanelli, 2000; Polo, 2007). Thus, having an effective board is imperative, because the board plays a crucial role in ascertaining sound corporate governance (Fama & Jensen, 1983; Greuning & Bratanovic, 2009; Pathan, 2009), which eventually creates value (Cadbury Code, 1992; Huse, Minichilli, & Schoning, 2005). In the case of the IFI, the gatekeeper is the Shari'ah Advisory Board (SAB) (Jabbar, 2010), which is interchangeably known as the Shari'ah Advisory Committee or Shari'ah Committee (SC). The Shari'ah Commitee existence is a distinguished feature of the IFI board structure (El-Muhammady, 2009; Nathan & Ribiere, 2007). Therefore, the SC plays a crucial role to the survival of the IFI (Choudhury & Hoque, 2006; Haniffa & Hudaib, 2007) as the ultimate aim of the IFI is to obtain the barakah<sup>6</sup> (blessing) of Allah SWT.

Currently, the IFI has been criticized as its financial products appear to be similar to the ones offered by the CFI (Dusuki & Abozaid, 2007). Consequently, there exists shortcomings of the IFI value creation which have emerged at the aggregate level (Z. Hasan, 2011). As a result, there is a significant disparity exists in terms of the ideal identity of the IFI (Haniffa & Hudaib, 2007). Hence, attention towards the SC effectiveness in delivering their roles has increased tremendously (Unal, 2011) due to the high expectation of the ummah and society at large (R. Hassan, Ibrahim, Abdullah, Aziz, & Sawani, 2010). Thus, it is essential to assess the SC effectiveness vis a vis the IFI value creation which is to be aligned to the Islamic precept.

In examining the ontological issues affecting the IFI, two conflicting views persist in terms of the epistemology or theoretical lens to be utilised in order to form the conceptual framework. The first view is that the epistemology should be based on the Islamic precept<sup>7</sup> (Dadgar, 2010; Haneef and Furqani, 2009; Mirakhor, 2011), because the solutions provided have not been able to resolve the economic problems; in fact, they exacerbate the problem (Dadgar, 2010). On the contrary, the second

<sup>5</sup> The maqasid al shari'ah literally means 'the intent of the higher objective of the Islamic law' which is the wisdom behind its ruling (Auda, 2010).

<sup>&</sup>lt;sup>4</sup> Shari'ah literally means the road to the watering place, the straight path to be followed (Laldin, 2008: 2)

<sup>&</sup>lt;sup>6</sup> 'Shari'ah non compliant' means 'against the commands of Allah SWT, impediment of Allah SWT blessing, or barakah, invalidation of contract'; thus, the profit gain would be considered non Halal income; contravention of the IBA 1983 and Capital Adequacy Ratio (CAR) impact (Rusnah, 2011).

<sup>&</sup>lt;sup>7</sup> Salleh (2011) listed a few scholars, namely, Muhammad Syukri Salleh, Abdul Hamid Abusulayman, Mohamed Aslam Haneef, Ziaudin Sardar, Mousudul Alam Choudhury, and Syed Nawab Haider Naqvi, who insist that the epistemology should be from the Islamic precept.

view<sup>8</sup> is that the epistemology from the secular knowledge is permissible as long as it does not deviate from shari'ah. If the secular knowledge deviates from shari'ah, then such knowledge should be modified. Meanwhile, those that defy shari'ah should be rejected (Hassan, 1998). Therefore, due consideration must be given in selecting the appropriate theoretical lens to examine the relationship of the SC effectiveness with the IFI value creation. This approach ensures that the IFI ontological issues is properly comprehended in order to arrive at a more appropriate and feasible solutions.

Notably, the agency theory (AT) has been used extensively as the theoretical lens in the literature on the effectiveness of the Board of Directors (BOD) (Daily, Dalton, & Cannella, 2003; A. I. Hillman & Dalziel, 2003). The AT is based on several assumptions, which displays inherent limitations in addressing the issue of BOD effectiveness in all economic sectors (Daily, et al., 2003), including the financial sector, both conventional (Ciancanelli, 2000; Macey & O'Hara, 2003) and Islamic (Azid, Asutay, & Burki, 2007; Safieddine, 2009). Thus, an evaluation of the alternative board role theories, namely, the resource dependency theory (RDT), stakeholder theory (ST), redefined accountability (RA), and the Islamic accountability (IA) doctrine (Nagyi, 1990) is carried out.

This paper is structured as follows. Section 2 discusses the limitations of the agency theory. Section 3 compares the alternative board role theories from the Islamic perspective. Section 4 posits the conceptual framework and theoretical dimensions, and the propositions derived from the IA are discussed. Section 5 compares the alternative board role theories. Section 6 concludes this paper. Finally, Section 7 highlights the limitations and offers recommendations for future studies.

#### 2. LIMITATIONS OF THE AGENCY THEORY

The literature on corporate governance and board effectiveness is based largely on the AT, which has been heavily criticized as an inadequate theoretical lens (Huse et al., 2009; Judge, 2009). Nevertheless, this theory has been very dominant in the literature on corporate governance and board effectiveness (Daily, et al., 2003; A. I. Hillman & Dalziel, 2003). It has its origins in the economics and finance discipline (M. C Jensen & Meckling, 1976), which advocates the separation of ownership and corporation. Based on this theory, Fama and Jensen (1983) focused on the board roles as an apex of an organization. Consequently, the BOD plays an important role as the gatekeeper. Hence, the focus of the theory is that the BOD as an internal control mechanism must discharge its monitoring role to ensure that the shareholder interest is well guarded.

There are a number of the underlying assumptions of the AT (Ciancanelli, 2000; Daily, et al., 2003). First, there exists the notion that humans as self-interested creatures are unwilling to sacrifice personal interest for the interests of others. Second, there are only two participants, namely, the managers and the shareholder. Third, the organization operates under a normal or competitive market. Fourth, the nexus of information asymmetry is the principal agent relationship between owners and managers. Fifth, an optimal capital structure exists, which requires limited gearing.

The first assumption of the AT is that the managers are perceived to be self-centred (Daily, et al., 2003; W. Judge, 2009), but this notion may not reflect the true behaviour in practice (Davis, Schoorman, & Donaldson, 1997; Muth & Donaldson, 1998). Moreover, the incentive alignment to directors has been found to be insignificant, as other motivational factors are present, including altruistic behaviour (Stout, 2003) and developing a reputation as experts (Fama & Jensen, 1983). Therefore, the BOD role extends beyond monitoring, as it includes advising (A. I. Hillman & Dalziel, 2003) and assisting management in making strategic decisions (W. Q. Judge & Zeithaml, 1992).

\_

<sup>8</sup> Salleh (2011) listed a few scholars, namely, Muhammad Abdul Mannan, Monzer Kahf and Muhammad Nejatullah Siddiqui, Abdel Rahman Yousri Ahmed, and Mohammad Anas Zarqa, who hold the view that using the epistemology from the secular knowledge is permissible.

Second, the dyadic relationship, which is the principal agent relationship between owners and managers (Freeman, 1984), fails to address the interest of other stakeholders. Example is, the cash claimants interest in terms of firm value and information on both the CFI (Adams & Mehran, 2003; Macey & O'Hara, 2003; Polo, 2007) and IFI (Azid, et al., 2007; Safieddine, 2009). The third assumption of the AT is that it operates under normal or competitive markets, which violate the nature of both the CFI and IFI. The reason is that these institutions operate in a highly regulated environment (Levine, 2004), as they mobilize funds from the surplus to the deficit units.

Thus, this situation is closely related to the fourth assumption; the notion that the information are between owners and managers excludes the requirements of other stakeholders, namely the regulators and the depositors. The needs for information for these stakeholders are paramount in order to make an informed judgement. Finally, the capital structure differs in both the CFI and IFI. Notably, the CFI has a highly geared capital structure, which denotes the function of intermediary, whereas the IFI is based on the premise of equity, risk sharing (Mirakhor, 2011). These differences are summarized in Table 2.

Insert Table 2 about here

In addition, generalizing the use of AT worldwide undermines the contextual differences in the organizational settings across the countries, which is diversified in terms of its social construct (Aguilera & Jackson, 2003). Majority of the empirical research uses samples from the U.S. with the AT as the theoretical foundation (Kang, Cheng, & Gray, 2007; Tosi, 2008; Vafeas & Theodorou, 1998). Notably, the U.S. has a more developed external governance system, which differs from countries that rely heavily on the internal governance mechanism (Shleifer & Vishny, 1997). On the contrary, the IFI external governance system varies among Malaysia, the Gulf Cooperation Council countries, and the United Kingdom. The facilitative structure, the standards, and the regulatory bodies of the Islamic financial industry are relatively new. Finally, differences exist in terms of value, which is aligned with the Islamic precept, as majority of the IFIs operate in Islamic countries, such as Malaysia and Indonesia, and most of the Middle East countries (Beekun & Badawi, 2005; Kamla, Gallhofer, & Haslam, 2006).

The AT conceptual framework predicts a direct relationship between the board attributes and the firm financial value. The board attributes are divided into three main categories, namely, the composition, characteristics and board standing structure. Among the variables are the board independence, board size, skill, knowledge, minority interest, and gender. These variables are derived from the board effectiveness literature in the non-financial sector. In the case of a CFI, generally, research on board effectiveness has been examined based on the size and independence of the BOD in relation to the CFI financial performance, as shown in Table 3. Majority of these studies focus on the monitoring role of the board (Adams & Mehran, 2003, 2005, 2008; Belkhir, 2009; Caprio, Laeven, & Levin, 2003). Only a few have acknowledged the duality roles of the board, namely, monitoring and advising (Adams & Ferreira, 2007; Andres & Vallelado, 2008). However, results of these studies are inconsistent. Adams and Mehran (2003, 2005, 2008) and Belkhir (2009) found that no significant relationships exist between the board independence and the bank performance. Therefore, the debates regarding the necessity of more outside BOD for good governance are questionable. On the contrary, Andres and Vallelado (2008) found that an inverted U-shaped relation exists between board independence and bank value. Their results indicate that there is a trade-off between the monitoring and advising roles, and that the optimal board composition creates value.

Insert Table 3 about here

Several studies also examine the relationship of board size and bank performance. Adams and Mehran (2003, 2005, 2008) found that there is no relation exists between board size and bank performance even after controlling for plausible sources of endogeneity. Meanwhile, Belkhir (2009) suggested that banks with more insider ownership and more outside directors have larger boards. On the contrary, Andres and Vallelado (2008) found an inverted U-shaped relation between bank performance and board size. Their findings indicate that larger board size is related to the ability of directors to be more efficient in their monitoring and advising function, thus creating more value. Notwithstanding these implications, it is further noted that the empirical study produces contradictory results when the BOD role expands from the monitoring to advising role. Muth and Donaldson (1998) found conflicting results when they analysed their hypotheses based on the agency and stewardship theories within the non-financial sectors. These results are consistent, as both theories 'offer opposing predictions about the structuring of effective boards' (Muth and Donaldson, 1998, p. 5). Therefore, careful consideration is vital in ensuring that the findings are accurately interpreted, which would eventually result in better corrective measures in the recommendation provided. Therefore, adopting proposals that are largely motivated by board effectiveness research from the non-financial firms into the CFI and IFI are inadequate. Thus, more research is needed in this sector 'before governance policy concerning banks can be formulated' (Adams and Mehran, 2008, p. 24), and this should be applied to the IFI as well.

The evidence provided above clearly shows the need to search for an appropriate theoretical lens, and this need is advocated in the mainstream literature (Ees, Gabrielsson, & Huse, 2009; W. Judge, 2009; Pettigrew, 1992). The following section discusses the alternative conventional board role theories visà-vis the Islamic precept.

#### 3. ALTERNATIVE BOARD ROLE THEORIES

Three main alternative theories are being considered in the mainstream, namely, the resource dependency theory (RDT), stakeholder theory, and accountability.

#### 3.1 Resource Dependency Theory

In the BOD literatures, the RDT is acknowledged as one of the most influential theories used after the AT (A. I. Hillman & Dalziel, 2003; A. J. Hillman, Withers, & J.Collins, 2009). The RDT (Pfeffer & Salancik, 1978, 2003) is based on three main assumptions. First, the organization needs to consider the importance of the environment or social context before any decision is made to be competitive. Second, opportunities to do certain things exist despite the constraints, such as co-opting sources of constraint, more autonomy, and the ability to pursue organizational interests. Third, power is important as a construct in understanding the behaviour of both intra and inter-organizational dynamics.

Hence, the RDT advocated that the BOD, through its strong characteristics, has some power to reduce the environmental uncertainty and dependencies. In essence, there are four primary benefits, namely, advice and counsel; legitimacy; channel of communication to the external environment; and commitment and support from important elements outside the firm (A. J. Hillman, Albert A.Cannella, & Paetzold, 2000). According to RDT, the BOD's roles are divided into four main categories, namely, the insiders, business experts, support specialists, and community influences. Within these categories, the BOD has its own expertise, for it will provide the areas of resource that are needed by the organizations. An example is the insiders; this type of BOD will have specific knowledge of the firm, and thus would be able to contribute in terms of the organizational strategy. Hence, the BOD will consist of the current and former officers of the organization.

The RDT also provides a multidimensional definition of company performance, encompassing the financial, systemic, and social components (Zahra and Pearce, 1989, p. 299). Therefore, the

conceptual framework based on the RDT depicts a direct relationship between the board attributes and the performance, which has a broader definition compared to the definition provided by the AT. Nonetheless, the RDT has not been fully utilized, as the empirical research testing received little attention (Hillman et al., 2009). Apparently, this theory failed to inculcate the following aspects: first, the board strategic processes in relation to the firm's environment; second, the issue of board power with board composition and the change within the firm's environment; and third, the examination of the impact of the board towards the social performance (Casciaro & Piskorski, 2005; Zahra & Pearce, 1989).

The RDT categorization placed the SC under the category of the community influences, as a number of elected personnel are from the university faculty (Kasim, Ibrahim, & Sulaiman, 2009). Thus, under this classification, the SC is able to provide the non-business perspective on issues and legitimize the IFI existence. However, this is not the case, as the SC also plays the role of 'support specialists', as they provide specialized expertise on shari'ah matters (M. N. Mohamad, Husin, Salleh, & Yaakub, 2009). Notably, the RDT advocates that the importance of the BOD characteristics is similar to that of the Islamic perspective. The reason is that the IFI should ensure that the SC appointments are based on merit without any favouritism or nepotism (Beekun & Badawi, 2005; Chapra & Ahmed, 2002). This view is in accordance with Al Qur'an, Al Qasas (28: 26), As Sunnah, and the period of the four rightful guided caliphs. A number of narrations recorded how the Prophet Muhammad SAW was very particular in the selection of the appropriate personnel for a certain position without any prejudice and favour (Sin, 1997). This is because the repercussion is severe whenever the selection process is dented by favouritism<sup>9</sup>.

The following subsection will discuss on the ST together with the view from the Islamic perspective.

#### 3.2 Stakeholder Theory

The ST (Freeman, 1984; Freeman, Harrison, Wicks, Parmar, & Colle, 2010) is about value creation, trade, and how to manage a business effectively. This theory is built on two basic assumptions: the integration thesis and the responsibility principle. First, the integration thesis is about business and ethical decisions, which are interrelated. Moreover, this thesis is at the heart of human beings in creating value. Thus, the thesis involves strategic management for future development. The usefulness depends on the role of human beings and the business decision made with reference to the ethical aspects. Second, most people usually would want to and do accept responsibility for the effects of their action on others. Based on these central assumptions, the performance outcome has social orientations. This notion is that the board attributes have a direct relationship with the social performance.

Subsequently, Freeman's idea had spread to many disciplines, including accounting, business ethics, economics, finance, management, and political science (R. W. Roberts & Mahoney, 2004). However, the empirical evidence in terms of the role of the appointed external stakeholders to the BOD showed that a conflict of interest exists among these stakeholders (Michael C. Jensen, 2001). The conflict of interest arises as to whether they serve the need of the organization in which they become board members or the main organization where they reside. An example is the case of bankers appointed as the BOD, as they may act in the interest of their banks (Guner, Malmendier, & Tate, 2008).

The Islamic perspective of the ST differs on the grounds that Islam does not view all stakeholders as having equal claims (Beekun & Badawi, 2005; Dusuki, 2008; Iqbal & Mirakhor, 2004). The consensus is that Islam firmly upholds the principles of property rights, commitment to explicit and implicit contractual agreements, and implementation of an effective incentive system (Beekun &

\_

<sup>&</sup>lt;sup>9</sup> This hadith is recorded by Ibn Taymiyya (1966) as cited in Beekun and Badawi (2005, p. 137), which clearly states, 'Whoever delegates a position to someone whereas he sees someone else as more competent (for the position) verily he has cheated God and His Apostle and all the Muslims'.

Badawi, 2005; Iqbal & Mirakhor, 2004). However, the concept of property rights is to be understood as not an absolute right, and it must not violate the interests and rights of others (AbuSulayman, 1998; Beekun & Badawi, 2005). Apparently, the ST is favoured over the AT by the contemporary Islamic scholars. However, Chapra (2004) criticized that the theory is not viable, as the enabling environment<sup>10</sup> during the glorified period of Islam is currently virtually absent. Meanwhile, Dusuki (2008) suggested that the pyramid of maslahah<sup>11</sup> be applied to mitigate the conflict that arises in deciding the protection of stakeholder interest in the case of implicit contracts. However, the ST and the concept of maslahah (Michael C. Jensen, 2001; Laldin, 2010) are vulnerable in the absence of a proper control mechanism (Chapra, 2007). Thus, this case leads to accountability as another possible alternative, which is discussed in the following subsection.

#### 3.3 Accountability from the Conventional Perspective

Accountability involves the relationship between two parties that one needs to consider in legitimizing their action to another party<sup>12</sup>. Notably, the accountability has been the outcome of the board roles in most theories underpinning the corporate governance and performance of the corporation. These board roles are divided into the internal and external of the firm, which falls into three main roles, namely, the service role (advising), the monitoring role, and the strategic role (Huse, 2005). Notably, the widely used AT offers the accountability concept, which is limited to shareholders. The AT is extended to parties that have vested interests in the organization, rather than the shareholders under the ST theory. Meanwhile, the Accountability adds another dimension to the board roles because the increasing pressure from the institutional shareholders pushed forward the notion that the BOD needs to be involved in the strategic decision-making process (W. Q. Judge & Zeithaml, 1992). Although accountability includes a wider spectrum of players in an organization, it is yet to achieve a proper standing<sup>13</sup>.

Thus, accountability is redefined by Huse (2005), and is termed as 'redefined accountability' (RA) in this study. The RA has the upper advantage due to the behavioural perspective it offers in understanding the issue of the board effectiveness (Ees, et al., 2009). Basically, the RA acknowledges all three main roles of the board because its notion is about balancing various board role expectations (Huse, 2005). Therefore, the focus is on the board process and, thus, 'creating accountability is virtually aligning actual board task performance to board role expectations' (Huse, 2005, p. 74). Consistently, creating accountability is about creating value (Cadbury Code, 1992), which involves the entire value chain of an organization. Similarly, Huse, Minichilli, and Schoning (2005, p. 285) reaffirms that 'it is beyond the measures of earnings or corporate financial performance'.

The posited conceptual framework of a qualitative nature showed constructs, such as trust, emotions, politics, external actors, and the context understudy (Huse, 2005, p. 67). This conceptual framework differs from the AT, RDT, and ST because it has the mediating construct between the BOD attributes and the firm value. The mediator is the BOD involvement in discharging multiple roles through the board process. Hence, the RA offers a more dynamic and progressive behavioural perspective in understanding the board roles and its effectiveness. In addition, the value creation of the firm is broader, and includes the internal and external firm value, compared to the AT, RDT, and ST. Although the RA concept of value creation is broader nevertheless it is not aligned with the Islamic value creation.

Therefore, the following subsection discusses the Islamic accountability (IA) doctrine.

<sup>&</sup>lt;sup>10</sup> Refers to the internalization of Islamic values within market operators and the public.

Maslahah refers to 'human benefit and interest in both the worldly life and the hereafter. Therefore, generally, it is beyond the capacity of human intellect to deduce without guidance from the shari'ah. Human intellect may be able to deduce certain masalih. However, these will not be accepted unless they conform to the shari'ah. It is also feared that maslahah might be misused to satisfy human desires only' (Laldin 2010, p. 76).

<sup>&</sup>lt;sup>12</sup> See Rahman (1998) on the definitions of accountability from both Western and Islamic perspectives.

<sup>13</sup> It has a restrictive usage because it is denoted as making justified reasons for actions taken, which is highly subject to abuse as it is not related to the concept of creating value (Huse, 2005).

#### 3.4 Islamic Accountability Doctrine

Effective governance is an essential element of Islam as a way of life and also term as al siyasah al shari'yyah (al-Qudsy & Rahman, 2011). One<sup>14</sup> of the key elements in siyasah al shari'yyah is Islamic Accountability. The IFI has similar function with the CFI as it mobilizes funds from the surplus to the deficit units. This main function has been carried out as early as in the 1940s by either sarrafs (individuals) and djahbadh (states)<sup>15</sup>. Meanwhile, in the early 1970s at the dawn of the independence of the muslim countries, this function has been carried out in the form of cooperatives. It is only in the 1990s onwards that this function is being carried out by an institution; as seen today. Notably, the institutional dynamic has been identified (Choudhury & Hoque, 2006; Turnbull, 2012) and therefore there is a need to examine the SC effectiveness within this dynamicity.

Islam is a way of life and economics is a subset of man-to-man activities (muamalah). This worldly life is only a transition or merely temporal, because the world is not the final destination (Oasmi & Usmani, 2009). Even though, the Al Qur'an does not formulate any economic theory<sup>16</sup> because economics constitutes a small part of it. This does not mean that Islam does not acknowledge its importance. In fact, Islam places the importance of business as part of the economic activities. The Prophet Muhammad SAW placed importance of the merchant who hold good virtues as in the following; "The merchant who is honest and accountable will be placed with the al-Nabiyyin, al Siddiqin and al Syuhada' (Othman and Din 2005)<sup>17</sup>. Notably, Islam place the importance of the final destiny which is the hereafter. This is the added dimension of value creation as compared to the conventional economic system (Lewis, 2006). Thus, muslim should be highly motivated and would not rationally sacrifice his value in the long term to achieve a short-term value in this temporal world (Chapra, 2008). All muslims are accountable for their individual and collective actions in this world (Al-Safi, 1992). The collective IA is rather limited in the worldly affairs; in the hereafter, it is strictly individual. Al Safi (1992) quoted the following verses from the Al Ouran to reflect the accountability as an individual within one's capacity: Al Bagarah (2:233 and 286), An Nisa (4:84), Al An'am (6:52), and At Talag (65:7). Meanwhile, the following verses from the Al Ouran are about the accountability for individual deeds (good or evil), and indicate that nobody else would take the punishment or the reward for someone else, namely, Al Baqarah (2:281), Al Imran (3:185), Al-Anfal (8:24-25), Luqman (31:33), and Ash Shura (42:47).

In summary, the IA, taken individually, is based within the limits of one's capability (Al-Safi, 1992) for an individual is accountable for his own deeds. Essentially, the IA is applicable to every facet of life. Therefore, in addressing the issue of the SC effectiveness, which is the apex of the IFI, through IA simply means that the SC is accountable to Allah SWT, both muslims and the non-muslims, the society, and the environment. Consequently, the IA leads to value creation based on the maqasid al shari'ah. Naqvi (1990, p. 47) defines the IA as follows:

"...a dynamic principal in terms of human behaviour. The mankind has to strive in achieving perfectionism; which means the elimination of the "status quo" and therefore, mankind need not be tied up with the past or be imprisoned with the current obstacles."

-

Tariq Ramadhan stated accountability as one of the six elements in effective governance during the 3<sup>rd</sup> Penang in Asia lecture series in his speech entitled "Islam, Democracy and Human Rights" on 17 July 2012.

<sup>&</sup>lt;sup>15</sup> See Hassan (2011) for a detailed history prior to the establishment of the IFI.

<sup>16 &#</sup>x27;The Al Quran did not detail out the events and things that happen to mankind. However, the Al Quran provided the principles and methods in general which will be able to be interpreted in accordance to time and place as long as it does not deviate from the fundamentals of Islamic jurisprudence', as iterated by Dr. Abdul Rahman Taj, cited in Abu Sin (1997, p. 41).

<sup>&</sup>lt;sup>17</sup> Othman and Din (2005) compiled the following hadiths which are narrated from Imam al Tirmidhi and Imam Ibn Majah.

The IA<sup>18</sup> existed during the time of the Prophet Muhammad SAW. It is empirically evidence during the era of his two companions Abu Bakr RA and Umar RA, and Khalifah Al Waleed (Pomeranz, 2004; Zaid, 2004). The IA is practised through the mechanism of book keeping, accounting, and auditing. Notably, (Ibrahim, 2000, 2003) stressed the importance of applying the Islamic accounting in Islamic organizations as a form of IA. In addition, the literature on Islamic accounting and accountability focuses on the financial reporting of Islamic business entities (Maali, Casson, & Napier, 2006). The evidence of IA is also seen in the accounting of non-profitable organizations, especially religious organizations (Afifuddin & Nabiha, 2010; Rahman & Goddard, 2003). The recent studies on shari'ah governance (Z. Hasan, 2011) and SC effectiveness (A. F. S. Hassan, 2012) put forth the evidence through qualitative approach of the importance of SC accountability in the governance framework of an IFI.

This paper proposes the conceptual framework from the IA doctrine to examine the relationship of the SC effectiveness towards creating value to the IFI. Thus, the following subsection depicts the conceptual framework derived from the IA doctrine within the context understudy.

#### 4. CONCEPTUAL FRAMEWORK FROM ISLAMIC ACCOUNTABILITY

The IFI is established to uphold two main contracts. The first is the nexus of contract with Allah SWT (Al Quran Al-A'raf 7:172), and second is the nexus of contract with mankind (muamalah), which refers not only to mankind (Al Quran Al-Hujurat 49:10, 49:13), but also the environment (Al Quran Al-Qasas 28:83). Thus, the purpose of IA is two-fold, namely, that to the Creator, Allah SWT, and that towards mankind, and its social and environmental aspects<sup>19</sup>. The conceptual framework based on the IA is depicted in Figure 1, which outlines that an effective board means that the SC must possess knowledge, skillfulness (R. Hassan, et al., 2010), and tawhidic values to undertake the task.

Insert Figure 1 about here

This IA is closely interrelated with the application of tawhid (AbuSulayman, 1998: Choudhury & Hoque, 2006; Kamla, et al., 2006; Omer, 2010). Al tawhid drives mankind to excel because it is a formation of the ethics of both intention and action. Thus, a true muslim is expected to be engaged in bringing about the desired transformation aligned with the will of the Creator, Allah SWT (Faruqi, 1992). The ethics of intention or that which is equivalent to one's conscience will be judged by the subject's own conscience and Allah SWT (Faruqi, 1992, p. 93). The ethic of action has a measurable effect because it 'disturbed the time space alas the nature's cosmic equilibrium', and the effects constitute merit or demerit (Faruqi, 1992, pp. 93-94). Ultimately, the tawhidic values could only be judged by Allah SWT, and this judgment will be revealed in the hereafter. Nevertheless, generally, the tawhidic values may be assessed relatively in terms of the muslims' worldview and their internalization of their daily activities (Hamzah et al., 2007). These values are also accessible through the various levels of ibadah performance, namely, the consistency in performing fardhu, sunah, or mandhub, and avoidance of the haram (Abdullah & Majid, 2003). In addition, a proper structure is important to facilitate the SC in discharging its roles effectively (Sin, 1997). This structure is the proper institution or organization structure and an effective shari'ah compliance research function to facilitate the SC effectiveness (Rusnah, 2011). Although the IFI is based on a religious foundation, it

\_

The accountability is termed as taklif (Safi, 1992) and hesab (Lewis, 2006).

<sup>&</sup>lt;sup>19</sup> For a devout Muslim, concern for others and the environment he lives in is deeply inscribed in the pillars of Islam, and is binding for every Muslim. Each Muslim is, in fact, considered a social being who cannot isolate or ignore his role and responsibility to society or to any of his fellow human beings. Thus, he is discouraged from isolating himself, even for the purpose of worshipping God (Majallat al Ahkam, 2001, as cited in Dusuki, 2008).

must demonstrate a proper framework for optimal governance, be it shari'ah or corporate. Hence, clients, its stakeholders, and the public of the IFI's are assured on the IFI commitment to uphold the principles of Islam in its financial dealings (Alchaar, 2009; A. Hasan, 2007; Wilson, 2009).

Essentially, the characteristics and structure not only lead to better performance, but is also a prerequisite towards better board process or task performance. According to Choudhury and Hoque (2006, p. 127), 'The most critical governance of the Islamic corporation is by its guidance toward the formation of behavioural preferences premised on the systemically organic meaning of unity of knowledge by pervasively relational complementarities and linkages'. Eventually, 'governance' is not confined only to the process of decision making and its implementation, but is also the substance therein that ends with the consequences (M. Z. Ismail & Badron, 2011). The consequences are the value creation aligned to the maqasid al shari'ah. Therefore, an effective SC needs to observe board processes that may impair their effectiveness (R. Hassan, et al., 2010) because it would ultimately affect the IFI value creation. Consistently, applying the maqasid al shari'ah means that it should be based on 'wisdom and people's welfare', which was summarized by Ibn al-Qayyim in his juridical methodology (748 AH/1347 CE), as cited in (Auda, 2010). The value creation based on maqasid al shari'ah<sup>20</sup> serves as an indicator of the quality of life (Auda, 2010; Wahid, Ahmad, & Kader, 2010). In the case of the IFI, it is the value that would be fruitful to the ummah; it is not merely material gain because it extends to the blessings received from Allah SWT.

The IFI was established to specifically achieve the magasid al shari'ah in two dimensions, namely, the preservation of religion (hifz al din) and the preservation of wealth (hifz al mal) (Dusuki & Bouheraoua, 2011). In the 20<sup>th</sup> century, the magasid al shari'ah is placed as an important branch of knowledge in addressing the issue on the ummah. Notably, the development of the magasid and its interpretation are highly dependent on the views of Islamic scholars in addressing the challenges faced by the ummah during their time (Auda, 2010). Thus, this paper highlights the magasid based on the discussion of a few scholars in relation to economics and finance. First, the preservation of religion is the essence of the tawhid, khilafah, risalah, and akhirah. These are transpired into the rules of behaviour and proper motivation, and resulted in continuous education (moral and material), as conceptualized by Chapra (2008). Second, the preservation of wealth is divided into five dimensions, namely, the protection of ownership, acquisition and development, damage, circulation, and the protection of its value (al-Najjar, 2006) cited in Dusuki and Bouheraoua (2011). These divisions are also similar to those by Ibn Ashur (2006), with slight differences in terms of terminology. However, Mohamad and Taib (2011) used Abu Zaharah's theory of magasid al shari'ah, namely, justice (al-adl), to promote the well-being of public interest (al maslahah) and achieve a viable education system (al fard) as a performance benchmark in assessing the IFI value creation.

It is imperative to uphold the trust and satisfaction of muslims and non-muslims in the IFI. The IFI serves a niche market as it should be in existence and as demanded by muslims based on tawhid eventually creates value (Al Anbiya 21:107). Therefore, if there is no effort to improvise the existing practice is observed, the IFI market perception and acceptance would be tarnished (A. Hasan, 2009). Thus, the theoretical propositions (*P*), which are unique under the IA are proposed as follows:

- **P1**: The SC characteristics (tawhidic, knowledge, and skills) are associated with the IFI value creation based on maqasid al shari'ah, in terms of the preservation of Islamic religion and wealth.
- **P2**: The SC characteristics (tawhidic, knowledge, and skills) are associated with the level of SC involvement in the SC board process.

<sup>20</sup> Islamic scholars have reached a consensus regarding the levels of the maqasid shari'ah, which are darurat, hajiyat, and tahsiniyyat (Auda, 2010). These levels are further classified into five dimensions, namely, the preservation of deen, nafs, mal 'aql, and nasl. Notably, these dimensions evolved, and are not in any particular order because they depend upon the need at the time of the said Islamic scholars (Auda, 2010; Chapra, 2008).

\_

- **P3:** The SC involvement in the SC board process is positively associated with the IFI value creation based on the maqasid al shari'ah, in terms of the preservation of Islamic religion and wealth.
- **P4**: The SC involvement in the SC board process mediates the SC attributes with the IFI value creation based on maqasid al shari'ah, in terms of the preservation of Islamic religion and wealth.

The Prophet Muhammad SAW and the four rightly guided caliphs were very knowledgeable. Nevertheless, they sought advice from the shuratic system. They set examples of effective governance by monitoring the conduct of their governors through active acquisition. In addition, they were proactively involved (strategy/advice) in discharging their roles (As-Sallabi, 2007; Sin, 1997). This dedication has made Islam prosper in the heyday of Islamic glory. The rightly guided caliphs set up structures or enabling environments (Chapra, 2002, 2004, 2009) that evolved over time to meet the needs and requirements of muslims and non-muslims within their period, even if these actions were not practised by the Prophet Muhammad SAW. This process is an innovation to meet the demands of muslims through ijtihad within the framework of shari'ah (Sin, 1997), as well as to the non-muslims in achieving the maqasid al shari'ah. Thus, it indicates the dynamism, progressiveness, and viability of Islam. However, reliving that particular era should not be overemphasized. The need to evaluate changes is continually increasing and demanding; the space factor and current needs of the ummah now have taken a different route from the historical path. Hence, 'blind and ignorant imitations are basically betraying the dynamic spirit of both the common sense and the perpetual message of Islam' (Omer, 2010, p. 73).

Thus, Section 5 presents a comparative analysis of the alternative board role theories which have been discussed extensively.

#### 1. COMPARATIVE ANALYSIS OF THE BOARD ROLE THEORIES

A summary of the alternative board role theories is presented in Table 4. The RA and IA acknowledge a wider scope of board roles, namely, strategic monitoring and advising, compared to the RDT and ST. Although the RDT and ST board roles are limited, both serve as a condition for ensuring an effective board. The RDT recognizes operational roles as connecting the firm with the environment through the board, thus positioning the firm. Meanwhile, the ST is concerned with the discharge of board roles within the social context. Thus, the dimensions of variable proxies are its composition and characteristics. These dimensions are not foreign to the Islamic civilization because they form part of the directive from the Al Quran and exemplified through the As Sunnah and the lives of the companions. Nonetheless, these theories are inadequate whether on their own as a theoretical lens or in a pluralistic approach that is the combination of the two for it does not conceptualize the SC board process. Moreover, the value criteria is not aligned with the IFI's raison d'être. Therefore, a more coherent theory is required as a theoretical lens.

Meanwhile, the RA discusses the concept of value, whether internal or external, through its active involvement in the board process. Hence, accountability is not confined to the end, that is, the firm value; rather, it emphasizes the accountability throughout the board process. The RA appears to be more acceptable in the conventional setting because it acknowledges the multiple roles of a board and the importance of the board process in creating value for an organization. Nevertheless, the RA is yet to be widely adopted. This situation may be due to the difficulty in gathering data, which is time consuming because the empirical study was carried out using qualitative measures (J. Roberts, McNulty, & Stiles, 2005).

Similarly, the IA also emphasizes the SC active involvement in the board process as khalifah to adhere to shari'ah to uphold the maqasid al shari'ah. Thus, the value creation here differs significantly from that in the RA because it includes both value of the worldly and the hereafter. The SC's effectiveness needs to be assessed in relation to the underlying objective of the IFI, the maqasid al shari'ah, within the proper theoretical lens to address the current challenges. Hence, this clearly indicates the strength of the IA theoretical dimensions in explaining the

phenomenon of interest in the context of the IFI. Therefore, the derived conceptual framework based on the IA is found to be the most appropriate as the theoretical lens in this study.

Insert Table 4 about here

#### 2. CONCLUSION

The IFI size of its assets is considered small as compared to that of the CFI. Nevertheless, it experiences a robust worldwide growth of 10% to 15% annually,<sup>21</sup> and is widely accepted by muslims and non-muslim alike<sup>22</sup>. Notwithstanding the robust growth, concerns that the IFI may deviate from its core foundation (Haniffa & Hudaib, 2010), that is, to adhere to the shari'ah in achieving the maqasid al shari'ah, have surfaced. The SC is the gatekeeper for the IFI; hence, the issue on SC effectiveness must be examined in relation to the IFI value creation. The issue is relatively new within the context of an institution. This paper cross-examined the issue on BOD effectiveness in the mainstream literature acknowledged that the widely used theoretical lens worldwide is the AT. Notwithstanding this fact, the current literatures have enclosed the weakness of the AT as the theoretical lens especially within the context of the Financial Institution. Subsequently, the alternatives theories; the RDT, ST and RA vis a vis with the Islamic perspective discussed earlier revealed that these conventional theories display inherent limitations within the Islamic Financial Institution. As a result, IA is found to be the most suitable theoretical lens attributed to the IFI uniqueness.

The IA is a doctrine which remains true and is applicable beyond the boundaries of time, societies, and culture; its value remains universal. This is an unchallenged statement, however, how would it be implemented effectively in an Islamic Financial Institution. The arguments set forth earlier raised concern that the IFI value creation may have not reach a sufficient level. Nonetheless, there always be a platform to improvise the current practice and how would it be within the current contextual arrangement. Thus, the conceptual framework proposes that the SC characteristic which is an important dimension is nevertheless being mediated by the SC board process in order to achieve the IFI value creation. Thus the IA theoretical dimensions encapsulate the underlying Islamic ethical values embedded throughout the entire governance process in the light of the SC roles. The IA begins with the conditions (antecedents), mediated by the process-oriented approach and, finally, the value brought to the ummah, non-muslims and the environment based on the magasid al shari'ah. Therefore based on the more appropriate theoretical lens, it is hoped that the examination of the SC effectiveness will be able to reveal the areas that need to be improvised in order to achieve the IFI magasid al shariah. In addition, the recommendation made would be able to address appropriately the areas to be improvised and the mechanism to be implemented. However, there is reservation to be made which is that the derived conceptual framework based on the contemporary structure of the IFI is subject to further refinement.

Finally, the following section discusses the limitations of the theorizing based on the Islamic precept, together with the recommendations.

#### 3. Limitations and Recommendations

.

<sup>&</sup>lt;sup>21</sup> Estimation of the size, growth, and future prospects of Islamic Banking and Financial Institution was made by several agencies, namely, McKinsey 2007–2008, Asian Banker Research Group, and Bloominvest Bank Report February 2009, which produced varied statistical results.
<sup>22</sup> Islamic banking products have been widely accepted by non-muslims, and Malaysia has been cited as a good example

<sup>&</sup>lt;sup>22</sup> Islamic banking products have been widely accepted by non-muslims, and Malaysia has been cited as a good example (Blominvest Bank Report February 2009).

The literatures on governance in the Islamic finance are relatively few; conceptual and empirical studies compared to its more established counterpart, the CFI. Most of these papers are largely based on the theory borrowed from the conventional counterparts for a number of reasons. As iterated in the article, this knowledge may be borrowed, as long as the application does not deviate from the Al Quran and As Sunnah. However, the existing board theories are found to be inadequate in explaining the ontological issues affecting the SC effectiveness towards IFI value creation.

Consequently, the limitation is in terms of deriving the theoretical model based on the IA doctrine. The measurement of the tawhidic values will not be able to be measured accurately, thus the measurement will only provide some form of indicators relatively. In addition, the identification of the performance criteria based on the maqasid al shari'ah are subjective in nature as it must reflect the current context understudy which may be different due to time and place. Meanwhile, the SC board process also will only be able to be measured relatively. Thus, these dimensions only provide relative, but not absolute, measures. Hence, the proposed theoretical model based on the IA doctrine is only applicable within this contemporary structure.

Future studies are recommended to further refine and develop the dimensions proposed in this paper, and carry out empirical research on governance of IFI and also other Islamic institutions. This research direction would be fruitful because it would highlight the relevance of the IA doctrine in addressing other ontological issue affecting an Islamic Institutions on leadership effectiveness and organization value creation, specifically, and governance of Islamic Institutions, generally.

#### **APPENDIX**

**Table 1: Governance issues in the Islamic Financial Institutions** 

-	IFI	Country	Reasons	<b>Amount of Losses</b>

Ihlas Finance House (IFH) (2000-2001)	Turkey	Lack of internal control and other external factors	Closure of IFH
Bank Islam Malaysia Berhad (BIMB) (2006)	Malaysia	Lack of internal control on Non- performing loans	RM2.2 billion
Dubai Islamic Bank (2004-2007)	United Arab Emirates	Lack of internal control: Fraud	USD501million
Shariah Governance Kuwait's Investment Dar (TIDK.KW 2009-2010)	Kuwait	TIDK. KW VS Lebanon's Bloom Bank – dispute on wakala	USD10.7million
Tabung Haji (2001, 2003)	Malaysia	Forex losses (a form of gharar)	RM 200 million
BIMB (2009-2011)	Malaysia	BIMB VS Tan Sri Khalid – dispute on <i>Bai Bithaman Ajil</i>	RM67.4 million

**Table 2: Inherent Limitations of the Agency Theory within the Conventional and Islamic Financial Institutions** 

No	Assumptions	Conventional Financial Institution	Islamic Financial Institution
1	The notion that managers' possess an opportunistic behaviour.	May not necessarily reflect this behaviour.	The managers of the IFI should have different value system which is based on the Islamic precept.
2	Two participants- managers and shareholders	To include other cash claimants.	To include investment account holders, muslim and non muslim.
3	Normal or competitive markets	Regulated and administrated market.	Similar with CFI, regulated and administrated market.
4	The nexus of information asymmetry is the principal agent relationships between managers and shareholders.	The agency problem is more complex as it includes a number of stakeholders namely the regulators and depositors.	Similar with CFI, as there are other stakeholders namely the regulators and the Investment Account Holder (IAH)
5	Optimal capital structure requires limited gearing.	Capital structure is highly geared reflecting the bank's function as an intermediary.	Not similar with CFI as it should be based on equity.

Table 3: Studies on BOD effectiveness in the Conventional Financial Institution in relation to financial performance

#### قطر في المستثمرة الاجنبية الدول

ساهمت الشركات المستثمرة في قطر في تطوير الحالة الاقتصادية والاجتماعية وساهمت ايظاً في تنمية الموارد البشرية من تدريب الموظفين والعمال في قطر و كذلك ساهمت هذه الشركات المستثمرة في تحسين ميزان المدفوعات عن طريق تدريب الموظفين والعمال في قطر وكذلك ساهمت هذه الشركات المستثمرة في تحسين ميزان المدفوعات عن طريق من تدريب الموظفين والعمال في قطر وكذلك ساهمت هذه الشركات المستثمرة في تحسين ميزان المدفوعات عن طريق

وعلى الرغم من نجاح دولة قطر في جذب الاستثمار الاجنبي الا ان مجموع الشركات التي استثمرت في قطر تركزت في خمسة دول فقط, وهذه الدول هي ابريطانيا والولايات المتحدة والامارات العربية المتحدة واليابان وكوريا الجنوبية, وكان مجموع نسبة الدول الخمسة المستثمرة في قطر 80.2 من مجموع الاستثمار الكلي.

	المستثمرة الدول
المباشر الاجنبي الاستثمار نسبة	
35.5	المتحدة المملكة
26.3	المتجدة الو لايات
7.7	العربية الامارات
7.0	اليابان
3.6	الجنوبية كورية
80.2	المجموع

#### القطاعات التي جذبت الاستثمار

على الرغم من تنوع الانشطة الاقتصادية في قطر الا ان خمس قطاعات فقط استطاعت جذب اكبر نسبة من حجم التدفققات وهذه القطاعات هي النفط والغاز الطبيعي والصناعة والاعمال والخدمات والبناء والقطاع المصرفي حيث استحوذت على نسبة 93.9 من مجموع نسبة الاستثمار الاجنبي في قطر الا ان قطاع النفط والغاز سيطر على 50.7 من هذه النسبة واختيار الشركات الاجنبية لقطاع النفط والغاز الطبيعي بسبب الاحتياط الكبير التي يتمتع به هذا القطاع.

لقد استطاعت الاستثمارات الاجنبية في هذه القطاعات على رفع المستوى الفني والانتاجي عن طريق استيراد الخبرات الفنية التي جائت مع الشركات الاجنبية الى قطر وزيادة نسبة العاملين في هذه القطاعات.

الاستثمار تدفقات نسبة	الاقتصادي النشاط
50.7	الغاز النفطوالطبيعي
25.8	الصناعة
7.3	والخدماتالأعمال
6.5	البناء
3.6	المصرفي القطاع
93.9	المجموع

نتائج الاستثمار الاجنبي المباشر في قطر

ساهم الاستثمار الاجنبي المباشر في دور كبير في النشاط الاقتصادي في دولة قطر حيث وصل صافي التدفق من الاستثمار الاجنبي المباشر في قطر الى 5.1 من مجموع الناتج المحلي وهذه النتيجة ليست سيئة مقارنة مع الاقتصاديات العالمية الاخرى وان هذه النتيجة مرشحة للارتفاع في المستقبل, وايظاً ساهم في تشغيل حوالي 94.4 الف عامل نتيجة أخر أحصائية لعام 2009 حيث يعادل حوالي 18%من نسبة المواطنين في قطر وهذه نسبة كبيرة جدا حيث استطاعت دولة قطر من تقليص حجم الانفاق على الاجور الشهرية.

ويمكن تلخيص هذه النتائج بعدة نقاط:

1-دور تدفقات الاستثمار الاجنبي المباشر في تحسين ميزان المدفوعات في قطر عن طريق تدفق رؤوس الاموال .
2- دور الاستثمار الاجنبي المباشر في تقليل نسبة البطالة في قطر عن طريق زيادة عدد العاملين في الشركات المستثمرة .
3- الدور الذي يقوم به الاستثمار الاجنبي المباشر في تقليل الاعتماد على النفط في الميزانية العامة .
4- تقليل مستوى الانفاق الحكومي في قطر عن طريق الاعتماد على الاموال الخارجية .
5- تطوير الخبرات الفنية للموظفين في قطر عن طريق استيراد الخبرات الاجنبية المتطورة التي تأتي مع الشركات .
6- تنشيط الروح التنافسية بين الشركات الاجنبية والشركات المحلية مما يتيح الفرصة للشركات الوطنية ان تتقدم فنياً مما يفتح الطريق أمام دولة قطر على الاعتماد على امكانيتها المحلية في المستقبل .

# الصناديق الوقفية المعاصرة في ماليزيا: صندوق وقف الجامعة الإسلامية العالمية نموذجا عبد الكبير بللو أديلاني

### ملخص البحث

يتناول هذا البحث دراسة الصناديق الوقفية في ماليزيا: صندوق وقف الجامعة الإسلامية -ماليزيا نموذجا. فالصناديق الوقفية هي الإطار الأوسع لممارسة العمل الوقفي، ومن خلالها يتمثل تعاون الجهات الشعبية مع المؤسسات الرسمية في سبيل تحقيق أهداف التنمية الوقفية. حيث تمدف الصناديق الوقفية إلى المشاركة في الجهود التي تخدم إحياء سنة الوقف عن طريق طرح مشاريع تنموية في صيغ إسلامية للوفاء باحتياجات المجتمع، وطلب الإيقاف عليها، بالإضافة إلى حسن إنفاق ربع الأموال الموقوفة لتلبية الاحتياجات الاجتماعية والتنموية التي يفرزها الواقع. غطت أنشطة صندوق وقف الجامعة الإسلامية العالمية بماليزيا أوجه الحياة الاجتماعية وامتدت لتشمل المرافق التابعة لها من كفالة الضعفاء والفقراء والمساكين وطلاب العلم بتقديم المنح الدراسية والمساعدات المالية لطلابها. يتحدث هذا البحث عن الصناديق الوقفية، تعريفها، أهدافها، وإدارةا، ودور الصناديق الوقفية في إحياء سنة الوقف وإمكانيات التي تقدمها الصناديق الوقفية. وكما يمر البحث على حقيقة وقف النقود مرورا كراما، ويبين البحث إسهامات صندوق وقف الجامعة الإسلامية العالمية بماليزيا في دعم طلاب العلم.

الكلمات الأساسية: الصناديق الوقفية، وقف النقود، صندوق وقف الجامعة الإسلامية العالمية بماليزيا.

#### مقدمة

فإن الوقف مشروع نقلا، ومحبوب عقلا، بل هو قربة عظيمة من أفضل القرب، يثاب عليها المؤمن في العقبي، ويثني عليه الناس في الدنيا أطيب الثناء. وهو عبارة عن إيجاد موارد مالية ثابتة ودائمة لتلبية حاجات المحتمع الدينية والتربوية والغذائية والاقتصادية والصحية والأمنية، ولتقوية شبكة العلاقات الاجتماعية، وترشيخ قيم التضامن والتكافل، والإحساس بالأخوة والمحبة بين طبقات المحتمع وأبنائه.

فالصناديق الوقفية هي الإطار الأوسع لممارسة العمل الوقفي، ومن خلالها يتمثل تعاون الجهات الشعبية مع المؤسسات الرسمية في سبيل تحقيق أهداف التنمية الوقفية. تقدف الصناديق الوقفية إلى المشاركة في الجهود التي تخدم إحياء سنة الوقف عن طريق طرح مشاريع تنموية في صيغ إسلامية للوفاء باحتياجات المجتمع، بالإضافة إلى حسن إنفاق ربع الأموال الموقوفة لتلبية الاحتياجات الاجتماعية والتنموية.

وليست العقارات ذاتها هي الوقف ولا الأسهم. ومن ثم فإن محتويات هذا الصندوق ليست ثابتة بل تتغير بحسب سياسة ادارة الصندوق. ويعبر عن الصندوق دائماً بالقيمة الكلية لمحتوياته التي تمثل مبلغا نقديا. وهذا المبلغ هو الوقف وهو بمثابة العين التي جرى تحبيسها. فالصندوق الوقفي إذن هو وقف نقدي. يتألف هذا البحث من ثلاثة مباحث، المبحث الأول يتحدث عن الصناديق الوقفية، والمبحث

<sup>1</sup> سورة **المزمل**، الآية: ٢٠

الثاني حول حقيقة وقف النقود وأهميته، والمبحث الثالث عن إسهمات صندوق وقف الجامعة الإسلامية العالمية بماليزيا. وتندرج تحت كل مبحث مطالب.

## المبحث الأول: الصناديق الوقفية

المطلب الأول: تعربق الوقف لغة واصطلاحا

المطلب الثابي: تعربف الصناديق الوقفية وأهدافها

المطلب الثالث: إدارة الصناديق الوقفية

المطلب الرابع: دور الصناديق الوفقية في إحياء سنة الوقف

المطلب الخامس: الإمكانات التي تقدمها الصناديق الوقفية

## المبحث الثاني: حقيقة وقف النقود وأهميته

المطلب الأول: تعريف وقف النقود في اللغة والاصطلاح

المطلب الثاني: أهمية وقف النقود في الوقت الحاضر

المطلب الثالث: مشروعية وقف النقود

## المبحث الثالث: إسهامات صندوق وقف الجامعة الإسلامية العالمية بماليزيا

المطلب الأول: التعريف بالجامعة الإسلامية العالمية بماليزيا

المطلب الثانى: التعريف بصندوق الوقف بالجامعة الإسلامية العالمية بماليزيا

المطلب الثالث: مساهمات صندوق الوقف بالجامعة الإسلامية العالمية بماليزيا

## الخاتمة ونتائج البحث

## المبحث الأول: الصناديق الوقفية

المطلب الأول: تعريف الوقف لغة واصطلاحا

أولا: تعريف الوقف في اللغة:

## ثانيا: تعريف الوقف في الاصطلاح:

والوقف في الاصطلاح (Waqf): تعددت عبارات الفقهاء في تعريفه بناء على اختلاف آرائهم في لزومه، وتأبيده، وملكيته.

## التعريف الأول:

مذهب الحنفية: هو حبس العين على حكم ملك الله. وإلى هذا التعريف ذهب أبو يوسف ومحمد صاحبا أبي حنيفة<sup>7</sup>.

## التعريف الثاني:

<sup>2</sup> ابن منظور، جمال الدين محمد بن مكرم، **لسان العرب**، "مادة وقف" (بيروت: دار صادر د.ت.)، ج 9، ص 359 - 362

<sup>&</sup>quot; ابن منطور، جمال الدين محمد بن محرم، **لسان العرب**، ماده وقف (بيروت: دار صادر د.ت.)، ج 9، ص 939 – 502. <sup>3</sup> سورة **الصافات**، الأية: 24

<sup>4</sup> ابن عاشور، محمد الطاهر، **تفسير التحرير والتنوير**، (تونس: الدار التونسية للنشر، د. ط. 1984م)، ج 22، ص 102

 $<sup>^{5}</sup>$  انظر: مادة حبس: الزييدي، تاج العروس، ج 15، ص  $^{5}$ 0، ص  $^{5}$ 0 وانظر: مادة حبس: الزييدي، تاج العروس، ج

<sup>6</sup> انظر: ابن حجر العسقلاني، أحمد بن علي، فتح الباري بشرح صحيح البخاري، (بيروت: دار الفكر للطباعة والنشر والتوزيع، د.م، د.ط.)، ج 3 ص 33 -57 331، وانظر: النووي، أبو زكريا يحيي بن شرف، صحيح مسلم بشرح النووي، (بيروت: دار الكتب العلمية، د.ط.)، ج 7، ص 56 -57

<sup>7</sup> الكلوذاني، أبو الخطاب محفوظ، الهداية، (قصيم: مطابع القصيم، د. ط، 1391هـ)، ج 3، ص 13

مذهب المالكية: عرفه ابن عرفة المالكي وكثير من المالكية: بأنه: اعطاء منفعة شيء مدة وجوده لازما بقاؤه في ملك معطيه ولو تقديرا<sup>8</sup>.

## التعريف الثالث:

مذهب الشافعية والحنابلة: هو تحبيس مالك مطلق التصرف ماله المنتفع به مع بقاء عينه بقطع تصرف الواقف وغيره في رقبته، يصرف ريعه إلى جهة بر تقربا إلى الله تعالى $^9$ . وعرفه بعض أصحاب هذا القول بأنه: " تحبيس الأصل وتسبيل المنفعة " $^{10}$ .

## المطلب الثاني: تعربف الصناديق الوقفية وأهدافها

الصندوق الوقفي: عبارة عن تجميع أموال نقدية من عدد من الأشخاص عن طريق التبرع أو الأسهم، لاستثمار هذه الأموال، ثم إنقافها أو إنفاق ريعها وغلتها على مصلحة عامة تحقق النفع للأفراد والجمع ألله والمجتمع ألى والمجتمع ألى والمجتمع ألى المختلفة وتمويل المختلفة وتمويل العمليات التجارية لا يغير من طبيعة هذا الصندوق لان كل ذلك إنما هو استثمار لتحقيق العائد للصندوق.

## أهداف الصناديق الوقفية

تهدف الصناديق الوقفية إلى دعوة المسلمين عامة، وأصحاب الخير والثراء خاصة، ورجال الأعمال والأفراد على وجه أخص، إلى المساهمة في وقف أموالهم بالتبرع والتصدق بمبالغ نقدية مهما كان مقدارها. تتركز أهداف الصناديق الوقفية من الآتية:

1 - إحياء سنة الوقف بالدعوة إلى مشروعات تكون أقرب إلى نفوس الناس وأكثر تلبية لحاجاتهم.

2 - تحديد الدور التنموي للوقف.

<sup>18</sup> انظر: المغربي، محمد بن محمد، مواهب الجليل، (بيروت: دار الفكر، ط31412هـ)، ج6، ص8

 $<sup>^{9}</sup>$  الهيتمي، أحمد بن حجر، تحفة المحتاج، ج $^{6}$ ، ص $^{9}$ 

<sup>597</sup> بن قدامة، عبد الله بن أحمد، المغنى، (مصر: دار هجر، ط1، 14-10)، ج5، ص $^{10}$ 

<sup>11</sup> الزحيلي، محمد، الصناديق الوقفية المعاصرة – تتكييفها، أسكالها، حكمها، مشكلاتها، ص 4

- 3 تطوير العمل الخيري من خلال طرح نموذج جديد يحتذى به.
- 4 تلبية احتياجات الجحتمع والمواطنين في الجالات غير المدعومة بالشكل المناسب.
  - 5 إيجاد توازن بين العمل الخيري الخارجي والعمل الخيري الداخلي.
    - 6 تحقيق المشاركة الشعبية في الدعوة للوقف وإدارة مشروعاته.
- 7 انطلاق العمل الوقفي من خلال تنظيم يحقق المرونة مع الانضباط في آن معا $^{12}$ .

# المطلب الثالث: إدارة الصناديق الوقفية

يتولى عادة إدارة كل صندوق وقفي مجلس إدارة للإشراف عليه، وإقرار سياسيه وخططه وبراجحه التنفيذية، والعمل على تحقيق أهدافه في نطاق أحكام الوقف، والأنظمة المرعية، والقواعد المتبعة في إنشاء الصندوق. ويتكون مجلس الإدارة من عدد ما بين الخسمة إلى تسعة أعضاء من العناصر الشعبية، وتتارهم رئيس المجلس الأعلى لشؤون الوقف أو غيره، ويجوز إضافة ممثلين لبعض الجهات المختصة في مجلات عمل الصندوق، ويختار المجلس رئيسا له، ونائبا للرئيس من بين الأعضاء. ويشرف مجلس الإدارة على أعمال الصندوق، والإشراف على سياسته، وبرامجه، التنفيذية، والعمل على تحقيق أهدافه في نطاق أحكام الوقف، والأنظمة المرعية، وعند التساوي يرجح الجانب الذي فيه الرئيس. يقوم المدير بتعيين الموظفين، وقبول المتطوعين، وتشكيل اللجان وفرق العمل، وتكاليف من يؤدي عملا مؤقتا للصندوق، والاحتصاص. ويتولى المدير الإدارة التنفيذية، ويتخذ كافة الإجراءات اللازمة لتنفيذ قرارات المجلس وتوصياته، وبمارس الصلاحيات المالية المخولة له بموجب اللوائح 13.

# المطلب الرابع: دور الصناديق الوقفية في إحياء سنة الوقف

فالوقف في الإسلام توسع نطاقه في المال الموقوف، بتوسع الغرض في الوقف. فإن دور الصناديق الوقفية في إحياء سنة الوقف ما يلي:

 $<sup>^{12}</sup>$  الأسرج، حسين عبد المطلب، الصناديق الوقفية كآلية لتمويل وتنمية المشاريع الصغيرة والمتوسطة، ص  $^{12}$ 

<sup>&</sup>lt;sup>13</sup> الزحيلي، محمد، الصناديق الوقفية المعاصرة – تتكييفها، أسكالها، حكمها، مشكلاتها، ص 8 – 9

# - الوقف على التعليم

للوقف دور فعال في تنمية التعليم سواء داخل المساجد أو في المدارس أو في المكتبات أو غيرها من المؤسسات الخيرية الأخرى. ومن أهم هذه الجوانب إنشاء المدارس وتجهيزها وتوفير العاملين فيها من معلمين وغيرهم، وتشجيع طلاب العلم على الانخراط في عملية التعليم من خلال التسهيلات التي وفرت لهم، بالإضافة إلى إنشاء المكتبات وتجهيزها وغير ذلك من الجوانب الأخرى 14.

### - الوقف على دعم خدمات الرعاية الصحية

لنظام الوقف الإسلامي أثر كبير في دعم خدمات الرعاية الصحية للمواطنين والسكان على اختلاف مذاهبهم ونحلهم، وبلغ عناية المسلمين بالرعاية الصحية وتطوير خدماتها، أن خصصت أوقاف لبناء إحياء طبية متكاملة.

### - الوقف على بعض الجوانب الاجتماعية

ساهم الوقف الإسلامي في تقديم الخدمات العامة للإنسان في مختلف جوانب الحياة، فقد استغلت أموال الأوقاف في إيواء اليتامى واللقطاء ورعايتهم، وكانت هناك أوقاف مخصصة لرعاية المقعدين والعميان والشيوخ، وأوقاف لإمدادهم بمن يقودهم ويخ دمهم، وأوقاف لتزويج الشباب والفتيات ممن تضيق أيديهم وأيدي أوليائهم عن نفقاتهم، والقيام على حدمتهم 15.

# المطلب الخامس: الإمكانات التي تقدمها الصناديق الوقفية

### - تهيئة الفرص لجمهور المسلمين للوقف

إن بعض من الناس لم يتوافر لديهم الأموال الكثيرة والثروة التي تمكنهم من إنشاء الأوقاف المستقلة مثل المدارس والمستشفيات والمعاهد وغيرها من الممتلكات الوفقية. إلا أنهم يتمتعون بمستوى جيد من المعيشة، ودخلهم متواسط ويمكنهم ادخار نسبة من دخلهم الشهرية لفعل الخيرات بأن يتهيأ الوقف

www.kantakji.com/fiqh/Files/Wakf/ pdf 2075 اعوجان، وليد هويمل، وقف النقود وصيغ الاستثمار 140 www.kantakji

<sup>15</sup> ابن أحمد محمد الصالح، الوقف الخيري وتميزه عن الوقف الأهلي 26 www.al-islam.com/arb/Nadwa/doc/book doc

بطريقة يمكن لهم من جهة المساهمة بمبالغ قليلة تجتمع لتصبح كثيرة مؤثرة، ومن جهة أخرى أن يساهموا مساهمات مستمرة عبر الزمن ومنتظمة كانتظام دخلهم من وظائفهم وأعمالهم 16.

# - إحكام الرقابة على الأوقاف:

والمعروف أن ضعف الرقابة العامة أو انعدامها كان سببا لتدهور مؤسسة الوقف ولإساءة استخدامها من قبل النظار وسواهم والاستيلاء عليها وضياعها. وأن صيغة الصناديق الوقفية تمكن من إحكام الرقابة الشعبية والحكومية على الأوقاف. ذلك أن سبل المراجعة المحاسبية وطرائق الضبط في الأعمال المالية والمصرفية قد تطورت تطورا عظيما في الزمن الحديث مما يمكن أن يستفاد منه من هذه الناحية. كما أن القوانين المنظمة لعمل المصارف والمؤسسات المالية وصناديق الاستثمار والمؤسسات المالية ومناديق الاستثمار والمؤسسات العامة المشرفة على نشاطاتها يمكن أن تكون نموذجاً يستفاد منه.

# - النهوض بحاجات المجتمع:

ليس للوقف غرض محدد بل هو جائز في كل ما لا معصية فيه. وكما أنه يجوز على الفقراء والمساكين يجوز الوقف على جميع أفراد المجتمع بما فيهم الأغنياء، إذا لم يخص الأغنياء دون الفقراء. وتاريخ المسلمين يزخر بأنواع الأوقاف التي كانت شاملة لكل غرض نافع مفيد. وفي الوقت الحاضر تمس حاجة المسلمين إلى نشاطات تعد من الحاجات الأساسية للمجتمعات المعاصرة والتي يمكن أن يقوم الوقف بتوفيرها 17.

### المبحث الثاني: حقيقة وقف النقود وأهميته

#### تمهيد:

إن من الوسائل المهمة في موضوع الأوقاف مسألة وقف النقود، وهي ليست من المسائل المستحدة، ونحد في وقتنا الحاضر الدعوة إلى الوقف النقدي، لأنه متاح للناس بدرجة أكبر من غيره، وهو أكثر قابلية لإنشاء الوقف المشترك الذي يوفر موارد وقفية تمكن من إقامة المشروعات الاقتصادية.

# المطلب الأول: تعريف وقف النقود في اللغة والاصطلاح

فقد سبق القول عن تعريف الوقف في المطلب السابق، وأما هنا فتعريف النقود ثم تعريف وقف النقود.

### أولا: مفهوم النقود The meaning of Cash:

النقود: هي جمع النقد، ويطلق النقد في اللغة على عدة معان منها:

- هو خلاف النسيئة، والنقد والتنقاد: تمييز الدراهم وإخراج الزيف منها 18.
- 2. قال ابن فارس: نقد الدرهم، وذلك أن يكشف عن حاله في جودته أو غير ذلك، ودرهم نقد: وازن جيد، كأنه قد كشف عن حاله فعلم 19.
  - العملة من الذهب والفضة وغيرهما مما يتعامل به الناس<sup>20</sup>.

#### النقد اصطلاحا:

هو العملة من الذهب أو الفضة <sup>21</sup>، وعرّفه البعض بأنه: "الدراهم والدنانير ونحوها مما جرت العادة أن تقوم مقامها مما اصطلح الناس عليه نقدا"<sup>22</sup>. وأما المراد بالنقد عند الفقهاء، هو: "الدارهم والدنانير، ويعبرون عنهما أيضا بالأثمان"<sup>23</sup>. وعرّف الفقهاء المعاصرون النقود بأنها: "الأداة التي بما يتوصل الناس إلى إشباع رغباتهم والوصول إلى حاجاتهم مما في أيدى الناس وتحت سلطانهم"<sup>24</sup>.

### وأما تعريف وقف النقود The meaning of cash waqf

<sup>425</sup> من أنقد" ج3، ص $^{18}$  ابن المنظور، جمال الدين محمد بن مكرم، لسان العرب، مادة "نقد" ج

<sup>&</sup>lt;sup>19</sup> ابن فارس، أحمد زكريا، **معجم مقاييس اللغة**، ج 5، ص 467

<sup>&</sup>lt;sup>20</sup> انظر: ابن المنظور، جمال الدين محمد بن محرم، لسان العرب، ج 6، ص 4517، وانظر: الرازي، محمد بن ابي بكر بن عبد القادر، مختار الصحاح، ص 675

<sup>358</sup> أبو حبيب، سعدي، القاموس الفقهي، (بيروت: دار الفكر، د. ط، د. ت)، ص

<sup>&</sup>lt;sup>22</sup> قلعجي، محمد، معجم لغة الفقهاء، (بيروت: دار النفائس للطبلغة والنشر والتوزيع، ط 2، 1408 هـ - 1988م )، ص 486

<sup>23</sup> انظر: تحرير الفاظ التنبيه، ص 114

<sup>&</sup>lt;sup>24</sup> الشاذلي، حسن على، الاقتصاد الإسلامي، مصادره وأسسه، ص <sup>202</sup>

من خلال ما قد سبق من التعريفات للوقف وللنقود، يمكن تعريف وقف النقود في الاصطلاح، بأنه: "حبس النقود وتسبيل منفعته المتمثلة في الأرباح الناتجة عن استثماره". أو "أن يقوم المتبرع بوقف مبلغ من النقود ليستفاد منه". وقد أجازها مجمع الفقه الإسلامي المنبثق عن منظمة المؤتمر الإسلامي المنعقد في دورته الخامسة عشرة في مسقط<sup>25</sup>.

### المطلب الثالث: أهمية وقف النقود في الوقت الحاضر

اكتسب وقف النقود أهمية كبيرة في الوقت الحاضر، وذلك لما يتيحه من مزايا كثيرة، وسيتم ذكر أوجه الأهمية المعاصرة لوقف النقود، وذلك على النحو الآتي:

# أولا: قدرته على تفادي أغلب مشكلات وقف العقار:

إن بعض أهم مجالات الوقف لا يمكن إلا أن تكون عقارا، كالمساجد والمدارس والمستشفيات، إلا أنما لا تمنع من القول بإهمال ما عداه من الأموال التي يمكن وقفها، وبخاصة النقود، ولظهور بعض المشكلات التي كادت أن تؤدي بنظام الوقف بكليته في الوقت الحاضر. ونرى أن وقف النقود يمكنه تفادي هذه المشكلات، مما يعني أهمية وقف النقود، وأهمية التوسع فيه ما أمكن، ومن هذه المشكلات:

### 1. غلاؤه وقلة القادرين على وقفه:

من المعلوم أن العقار – أرضا أو بناءا – من أكثر الأموال غلاء وكلفة، وكثير من الناس لا يملكون ما يكفيهم منه، مما يعنى عدم وجود القدرة على البعض. وعدم رغبة وقدرة هؤلاء تؤدي إلى الإقلال من الأموال الموقوفة على أوجه الخير والمصلحة العامة<sup>26</sup>. ويعد وقف النقود من أهم الوسائل تفادي مشكلة الإحجام عن وقف العقار بسبب غلائه. لأن النقود الموقوفة لا يشترط أن تكون مبلغا كبيرة، بل يمكن للراغب المشاركة بأي مبلغ مقدور عليه، مهما كان قليلا.

### 2. ارتفاع تكاليف عمارة العقار وصيانته:

<sup>25</sup> انظر: قرار مجمع الفقه الإسلامي المنبثق عن منظمة المؤتمر الإسلامي المنعقد في دورته الخامسة عشرة في مسقط رقم 15، 6، ص 140

<sup>&</sup>lt;sup>26</sup> البدوي، إسماعيل إبراهيم، ا**لوقف مفهومه وفضله وشروطه وأنواعه**، ص 22

لا بد من عمارة وصيانة العقار دورية ومستمرة، وقد ذكر الفقهاء أن هذه العمارة من أهم وظائف الناظر، واتفقوا على أنها أول واجب يقوم به 27. ومعلوم أن عمارة العقار مكلفة، وقد يؤدي إلى الاستئثار بكامل الغلة أو جزء كبير منها، مما يؤدي إلى مزاحمة العمارة للمستحقين، بل وتقديمها عليهم 28. ويمكن تفادي هذه المشكل أو جزء كبير منه لو كان الوقف نقودا، لأن النقود يمكن استثماره في أوجه كثيرة ومختلفة لا تحتاج لعمارة وصيانة عالية التكاليف.

### 3. انحصار طرق استثمار العقار ومحدوديتها:

تنحصر طرق استغلال العقار في طرق محدودة، أهمها الإجارة، أو الاستغلال المباشر، كما في الأرض الزراعية، مما يعنى إعاقة قدرة إدارة الوقف على التصرف أو البحث عن بديل أفضل. وهذا بخلاف وقف النقود، لأن طرق استثماره عديدة، وبالتالى فإن إدارة الوقف تملك حرية أوسع في التصرف واختيار الأفضل من بين مجموعة البدائل المتوفرة.

### ثانيا: إمكان ظهور مؤسسات وقفية كبرى أكثر نجاحا:

ومن أوجه الأهمية لوقف النقود في الوقت الحاضر أيضا، أنه يمكن بواسطته تكوين مؤسسات وقفية كبرى وناجحة إداريا واقتصاديا. ويمكن لوقف النقود في الوقت الحاضر أن ينقل الوقف من وقف أفراد مستقلين إلى وقف واحد كبير ومتعدد الواقفين، حيث أمكن إيجاد أوعية "الصناديق الوقفية" تجتمع فيها أوقاف أعداد كبيرة من الناس<sup>29</sup>.

### ثالثا: إمكان إيجاد مؤسسة للقرض الحسن:

لقد حرم الإسلام الربا في القروض، وهذا التحريم يبين الأهمية التي يمكن أن يقوم بما القرض الحسن في الإسلام. وهذا يعني أهمية قيام مؤسسة أو جهة عامة في الدولة الإسلامية تتولى القيام بمذه الحاجة العامة 30. ويمكن لوقف النقود أن يقوم بمذا الدور، حيث إن من أهم أغراض الوقف النقدي الوقف

<sup>&</sup>lt;sup>27</sup> الخرشي، محمد بن عبد الله، شرح الخرشي على مختصر خليل، ج 4، ص 93

<sup>28</sup> انظر: الدسوقي، شمس الدين محمد، حاشية الدسوقي على شرح الكبير، ج 4، ص 90،: وانظر: ابن عابدين، محمد أمين الشهير، حاشية رد المختار، ج 4، ص 366، وانظر: المرداوي، على بن سليمان، الإنصاف، ج 8، ص 73

<sup>&</sup>lt;sup>29</sup> البدوي، إسماعيل إبراهيم، **الوقف مفهومه وفضله وشروطه وأنواعه**، ص 26

<sup>&</sup>lt;sup>30</sup> المرجع نفسه، ص <sup>38</sup>

لغرض الإقراض، وهو مما يؤكد أهمية الوقف النقدي حيث يعد هذا الدور فكرة مهمة وعملا جديدا يضيفه وقف النقود لنظام الوقف الإسلام.

### المطلب الثالث: مشروعية وقف النقود

بالتتبع لأقوال الفقهاء في هذه المسألة نجد أن لهم قولين رئيسيين، وهما: الأول: القول بجواز وقف النقود والثاني: القول بعدم جواز وقف النقود. يعرض الباحث في هذا المطلب أقوال العلماء ومذاهبهم من الجيزين والمانعين لوقف النقود، والترجيح بين الأقوال.

# أولا: أقوال الفقهاء في جواز وقف النقود

وهو المذهب عند الحنفية والمالكية، ووجه مرجوح عند الشافعية، ورواية مرجوحة عند الحنابلة، واختارها ابن تيمية، وهو مذهب الزهري<sup>31</sup>.

وذكر المالكية: أن فى وقف المثلي كالطعام والنقد ترددا، وأحد الترددين هو الجواز، إذا وقفت للقرض أو نحوه، وذكر الخرشي أن هذا هو المذهب<sup>32</sup>. وذكر بعضهم أن التردد فى غير النقود كالطعام، أما النقود فلا تردد فيها، فيجوز وقفها قطعا، للسلف ونحوه 33.

وعند الشافعية: القول بجواز وقف النقود وجه مرجوح، والمذهب عدم الجواز، وقال في الحلية عن هذا الوجه: "وليس بشئ "34".

وعند الحنابلة: وهو كذلك رواية مرجوحة واخارها ابن تيمية 35.

مذهب الحنفية: يجوز وقف النقود إذا جرى العرف بوقفها، وهو قول محمد بن الحسن صاحب الإمام أبي حنيفة، وذلك بناء على قوله في جواز وقف المنقول إذا جرى به عرف الناس، وتبعه على ذلك عامة فقهاء الحنفية<sup>36</sup>. والفتوى في مذهب الحنفية على قوله<sup>37</sup>.

<sup>36</sup> انظر: ابن عابدين، محمد أمين الشهير، حاشية رد المختار، ج 4، ص 363 – 364

<sup>&</sup>lt;sup>32</sup> انظر: الخرشي، محمد بن عبد الله، **شرح الخرشي على مختصر خليل**، ج 7، ص 70

<sup>&</sup>lt;sup>33</sup> انظر: الدسوقي، شمس الدين محمد، حاشية الدسوقي على شرح الكبير، ج 4، ص 77

<sup>34</sup> القفال، أبو بكر محمد بن أحمد، حلية العلماء في معرفة مذاهب الفقهاء، تحقيق الدكتور ياسين درادكة، (الأردن: مكتبة الرسالة الحديثة، ط 1،

<sup>1988</sup>م)، ج 6، ص 11، وانظر: الشيرازي، أبو إسحاق إبراهيم بن على، المذهب، ج 1، ص 575

<sup>11</sup> وانظر: ابن قدامة، المغنى، ج8، ص229، وانظر: المرداوي، على بن سليمان، الإنصاف، ج7، ص $^{35}$ 

# ثانيا: أقوال الفقهاء في عدم جواز وقف النقود

وإليه ذهب أبو حنيفة، وأبو يوسف، والشافعية في الوجه الصحيح، والحنابلة في قول هو المذهب. فأبو حنيفة: لا يرى جواز وقف المنقول مطلقا، حتى وإن كان مما يمكن الانتفاع به مع بقاء عينه كالحيوان والسلاح، وعليه فهو لا يرى جواز وقف النقود من باب أولى. وأبو يوسف: لم يستثن من المنقول إلا الكراع والسلاح للجهاد، وما عداه من المنقول لا يجوز وقفه، نقودا أو غيرها 38.

وعند الشافعية: في المسألة وجهان، أصحهما عدم الجواز، سواء أكان وقفها للتزيين بها، أم للإتجار وصرف الربح للفقراء 39.

ومـذهب الحنابلة: عـدم جـواز وقـف النقـود، سـواء وقفها للزينـة أو لغيرها كالقرض، قـال في الإنصاف: "على الصحيح من المذهب"<sup>40</sup>.

# تحرير مسائل النزاع في وقف النقود

لا يوجد نص صريح فى حكم وقف النقود، سواء بالمنع أو الإجازة، وقد بنى الفقهاء خلافهم فى هذه المسألة على مسألة أخرى من مسائل الوقف وهي "شرط التأبيد" فهذا الشرط هو أحد شروط الصيغة عند جمهور الفقهاء من الحنفية والشافعية والحنابلة.

عند الحنفية والشافعية والحنابلة: فلا يصح الوقف إلا مؤبدا، فإن وقته لم يصح 41. وأما المالكية: قد خالف في هذا الشرط فلم يشترطوه، وأجازوا الوقف مؤبدا ومؤقتا بمدة معينة 42. وقد أصبح موقف الفقهاء من وقف النقود – بناء على هذا الشرط – على ثلاث درجات:

<sup>&</sup>lt;sup>36</sup> انظر: ابن الهمام، كمال الدين محمد بن عبد الواحد، فتح القدير، ج 6، ص 202، وانظر: ابن نجيم، الحنفي، البحر الرائق شرح كنز الدقائق، ج 5، ص 18، ص 218، وانظر: الكلوذاني، أبو الخطاب محفوظ، الهداية، ج 3، ص 18

<sup>&</sup>lt;sup>37</sup> انظر: نظام وجماعة منة علماء الهند، الفتاوي الهندية، (بيروت: دار الكتب العلمية، ط 1، 1421هـ)، ج 2، ص 364

<sup>&</sup>lt;sup>38</sup> انظر: نظام وجماعة منة علماء الهند، **الفتاوي الهندية**، ج 6، ص 259 وانظر: الكلوذاني، أبو الخطاب محفوظ، **الهداية**، ج 5، ص 50

<sup>&</sup>lt;sup>39</sup> القفال، أبو بكر محمد بن أحمد، حلية العلماء في معرفة مذاهب الفقهاء، ج 6، ص 11، وانظر: الشيرازي، أبو إسحاق إبراهيم بن على، المذهب، ج 1، ص 575، وانظر: الهيتمي، أحمد بن حجر، تحفة المحتاج، ج 6، ص 238

<sup>229</sup> من المختى، ج 8، ص 11، وانظر: ابن قدامة، عبد الله بن أحمد، المغتى، ج 8، ص  $^{40}$ 

<sup>&</sup>lt;sup>41</sup> انظر: الرملي، محمد بن أبي العباس، نهاية المحتاج في شرح المنهاج، ج 4، ص 270، وانظر: الطرابلسي، إبراهيم بن موسي، الإسعاف في أحكام الأوقاف، ص 25، وانظر: المرداوي، على بن سليمان، الإنصاف، ج 7، ص 35

1- المالكية الذين لا يرون شرط التأبيد في صيغة الوقف، وبالتالي لا يوجد لدينهم ما يمنع من وقف النقود، لأنه - إذ سلّم - بأن النقود لا تتأبد وتستهلك عند استخدامها، فهذا لا يكفى مانعا لصحة وقف النقود، لأن التأبيد ليس شرطا للوقف عندهم، فالوقف نوع من الصدقات، يجوز مؤبدا ويجوز مؤقنا، وإذا جاز التأقيت في وقف العين، جاز وقف العين التي لا تتأبد كالنقود، وسائر المنقولات. وموقف المالكية هذا من جواز وقف النقود ينسجم مع موقفهم من شرط التأبيد، فوقف النقود جائز لعدم المانع، ودخوله تحت الأدلة العامة على مشروعية الوقف.

2- المانعون لوقف النقود من الحنفية والشافعية والحنابلة، فهؤلاء من شروط صيغة الوقف عندهم التأبيد - كما تقدم - وبناء على هذا اشترطوا في العين الموقوفة شرطا ينسجم ويتوافق مع شرط الصيغة، وهو: "أن تكون العين الموقوفة يمكن الانتفاع بها مع بقاء عينها"، وبالتالي لا يصح وقف النقود عندهم لأن النقود لا تتأبد، ولا يمكن الانتفاع بها إلا باستهلاك أعيانها، وقد انحصر استدلال المانعين في هذا المعنى فقط. والمبني على أن أصل الوقف هو تحبيس الأصل، أي التأبيد، وأن النقود لا تتأبد، لأنه لا يمكن الانتفاع بها إلا بإتلاف أعيانها.

3- المجيزون لوقف النقود من الحنفية والشافعية والحنابلة، فهؤلاء يسلمون بأن التأبيد شرط للوقف، إلا أنهم لا يرون أن وقف النقود يتعارض مع هذا الشرط، لأن النقود - وإن كانت من المنقولات التي تستهلك عند الانتفاع بها - إلا أن وقفها لا يقصد منه منحها لمن يستهلكها إلى غير بدل، بل المقصود منه الانتفاع إلى بدل يقوم مقام ما استهلك منها بإقراضها ثم رد بدلها، أو المتاجرة بها والإنفاق من الربح. وبالتالي لا تعارض بين القول بجواز وقف النقود، وبين شرط التأبيد وبقاء العين، لأن البدل يقوم مقام المبدل وكأنه لم يستهلك، وقد نص على هذا المعنى أغلب الفقهاء الذين أجازوا وقف النقود من الحنفية والمالكية وابن تيمية وغيرهم 43. كما أشار لهذا المعنى المالكية - بالرغم من عدم

<sup>&</sup>lt;sup>42</sup> انظر: الخرشي، محمد بن عبد الله، شرح الخرشي على مختصر خليل، ج 7، ص 91، وانظر: الدردير، أحمد بن محمد، الشرح الكبير، ج 4، ص 87

<sup>43</sup> العمادي، أبو السعود محمد بن محمد، رسالة في جواز وقف النقود، (بيروت: دار بن حزم، ط 1، 1417ه – 1997م)، ص 31

اشتراطهم التأبيد - يقول الدردير: "والمراد وقفه للسلف، وينزل رد بدله منزلة بقاء عينه"<sup>44</sup>. ويقول ابن تيمية "ومعلوم أن القرض والقراض (المضاربة) يذهب عينه، ويقوم بدله مقامة <sup>45</sup>

# الترجيح بين الأقوال

إن الباحث ليس في موقف الترجيح بين أقوال الفقهاء، ولكن بعد النظر في مذاهبهم وأقوالهم في جواز وقف النقود وآراءهم من كل من الجيزين والمانعين، فإن الخلاف في المسألة يعطينا سعة في الاختيار. وفي رأي الباحث المتواضع الميل إلي أصحاب القول بجواز وقف النقود مطلقا، وذلك لقوة أدلته. ويتأيد هذا الترجيح الأمور الآتية:

أن الذين منعوا وقف النقود لم يذكروا أي نص أو إجماع أو قياس صحيح يمنع من وقف النقود، ولم يستدلوا بأكثر من الدليل العقلى المتمثل في شرط التأبيد في الصيغة.

2- إن الذين أجازوا وقف النقود تمسكوا بالأصل، وهو مشروعية الوقف بصفة عامة، وجواز المعاملات ما لم يرد دليل الحظر، ولا دليل على منع وقف النقود، بل إن دليل المصلحة يقتضى الجواز<sup>46</sup>.

5- ولأن القول بجواز وقف النقود يحقق مصالح جمة، إذ يتحقق به مقاصد الوقف من حصول النفع للناس، وانتفاع الواقف بجرحان العمل الصالح له بعد وفاته، من غير أن يكون فيه ارتكاب المفسدة، ولا مخالفة لشرع الله سبحانه وتعالى، في عين يتحقق فيها تحبيس أصلها وتسبيل منفعتها، إذ أن بدلها يقوم مقامها. والقول بجواز وقف النقود هو ما توصل إليه مجمع الفقه الإسلامي في دورته الخامسة عشرة المنعقدة بمسقط، عام 1425ه، ضمن القرار ذي الرقم: "140"، وهذا هو نص القرار بهذا الخصوص:

1- "وقف النقود جائز شرعا، لأن المقصد الشرعي من الوقف وهو حبس الأصل وتسبيل المنفعة متحقق فيها، ولأن النقود لا تتعين بالتعيين، وإنما تقوم أبدالها مقامها".

2- "يجوز وقف النقود للقرض الحسن، وللاستثمار إما بطريق مباشر أو بمشاركة عدد من الواقفين في صندوق واحد، أو عن طريق إصدار أسهم نقدية وقفية تشجيعا على الوقف، وتحقيقا للمشاركة الجماعية فيه.

<sup>&</sup>lt;sup>44</sup> الدردير، أحمد بن محمد، الشرح الكبير، (مطبوع بمامش حاشية الدسوقي)، ج 4، ص 77

 $<sup>^{45}</sup>$  ابن تيمية، شيخ الإسلام، مجموع فتاوى، ج $^{45}$ 

<sup>46</sup> انظر: الزرقا، مصطفى، أحكام الأوقاف، ص 15

3- "إذا استثمر المال النقدي الموقوف في أعيان كأن يشترى الناظر به عقارا أو يستصنع به مصنوعا، فإن تلك الأصول والأعيان لا تكون وقفا بعينها مكان النقد، بل يجوز بيعها لاستمرار الاستثمار، ويكون الوقف هو أصل المبلغ النقدي"<sup>47</sup>.

### المبحث الثالث: إسهامات صندوق وقف الجامعة الإسلامية العالمية بماليزيا

في هذا المبحث يجعل الباحث صندوق الوقف بالجامعة الإسلامية العالمية بماليزيا "IIUM" في هذا المبحث يجعل الباحث صندوق الوقف بالجامعة الإسلامية العالمية.

### المطلب الأول: التعريف بالجامعة الإسلامية العالمية بماليزيا

الجامعة الإسلامية العالمية بماليزيا هي الحلم الكبير الذي تحقق للعالم الإسلامي وذلك من خلال توحيد الوحي والعقل، والعلم والدين، والأخلاق والتأهيل الأكاديمي. وهي المكان الذي يتربي ويترعرع قادة المستقل، هذا بجانب أذكائها لروح التفاؤل والاعتدال. وتعتبر الجامعة الإسلامية العالمية بماليزيا من أكبر الجامعات الماليزية، قد تم اتخاذ قرار تأسيس الجامعة الإسلامية العالمية بماليزيا في 12 يناير 1982م، من قبل رئيس الوزراء الماليزي الدكتور مهاتير محمد، كما ساهمت منظمة المؤتمر الإسلامي "Organization of the Islamic Conference OIC" وبعض الدول الإسلامية مثل المملكة العربية السعودية، باكستان، ليبيا، مصر، مالديف، تركيا، وبنغلاديش في دعم هذا الصرح العلمي، وقد صادق عليها مجلس الوزراء الماليزي في 12 فبراير 1982م، وبدأ العمل بما رسميا في 10 مايو 1983م، وتم تعيين سلطان ولاية بمنج كرئيس فخري للجامعة في 1 يوليو 1983م، وقد تم افتتاح الجامعة في منطقة بتعين سلطان ولاية بمنج كرئيس فخري للجامعة في 1 يوليو 1983م، وقد تم افتتاح الجامعة في منطقة بتلنج جاية "Petalin Jaya" ثم انتقلت إلى المبنى الجديد والضخم في منطقة جومبك "Petalin Jaya" في العاصمة الماليزية في عام 1996م، وأول حفل تخرج ضم 135 طالبا وطلبة وكان في عام 1984م.

في العام الدراسي 2012/2013م قد بلغ عدد طلاب الجامعة 22,583 طالب وطالبة، في جميع كليات الجامعة بالتخصصات المختلفة من كليات الطب، والهندسة، والصيدلية، والعلوم المتعلقة

<sup>&</sup>lt;sup>47</sup> قرار مجلة مجمع الفقه الإسلامي، الدورة الخامسة عشرة، العدد الخامس عشر، ج 3، ص 527، قرار رقم 140

<sup>&</sup>lt;sup>48</sup> انظر: الصلاحات، سامي محمد، دور الوقف في مجال التعليم والثقافة في المجتمعات العربية والإسلامية المعاصرة دولة ماليزيا المسلمة نموذجا، ص 39

بالصحة، والعلوم، والهندسة المعمارية وتصميم البيئة، وتكنولوجيا المعلوات والاتصالات، والقانون، وكلية معارف الوحي والعلوم الإسلامية. عندما كان عدد الطلاب في مرحلة البكلوريس "Undergraduate" هو "18,302" طالبا وطلبة <sup>49</sup>، وأن عدد الطلاب في مرحلتي الماجستير والدكتوراه "Postgraduate" هو "4,281" طالبا وطلبة <sup>50</sup>.

يتخرج عدد الطلاب من مرحلة البكالوريس حوالي 3700 طالبا وطلبة من جميع المراحل التعليمية سنويا. وكما يتخرخ عدد غفير من طلاب الدراسات العليا سنويا. وأما عدد طلاب الأجاب أو الوافدين "Foreign Students" من الدول الإسلامية والعربية وغيرها قد بلغ "4,905" طالبا وطالبة من أكثر من 103 دولة في العالم، يمثلون نسجا مختلفا من العادات والقاليد يجمعهم الدين الإسلامي.

# المطلب الثاني: التعريف بصندوق الوقف بالجامعة الإسلامية العالمية بماليزيا

أسس صندوق الوقف الخيري في الجامعة الإسلامية بماليزيا "IIUM Endowment Fund" في المسلامية الإسلامية باليزيا "1999م كقسم من أقسام الجامعة. فإن مجلس الجامعة العالى في لقائه برقم48 وافق على قائمة قوانين الوقف المتبعة في الجامعة لعام 1999م، والتي بدأ العمل بها في 16 يونيو 1999م.

يحد صندوق وقف الجامعة الإسلامية العالمية بماليزيا، حذو وقف جامعة الأزهر، وصناديق التبرعات للجامعات المرموقة في بريطانيا، والولايات المتحدة الأمريكية، والهدف الرئيسي من تأسيس الصندوق هو مساعدة الطلبة الفقراء والمحتاجين، ذوي الأداء الدراسي المتميز ولكنهم غير قادرين على تسديد رسوم الدراسة أو تكاليف المعيشة.

شرع صندوق وقف الجامعة "IEF" في عدة أنشطة لجمع التبرعات للطلبة من داخل ماليزيا وخارجها، وتشمل هذه الأنشطة التبرعات العامة من الأفراد والشركات والمنظمات، وبرنامج الكفالة،

Madam, Abazaimah Mohm : حصل الباحث على هذه الإحصائيات عند المقابلة الشخصية في يوم الإثنين 2012/12/10 مع: Abass, (Senior Deputy Directir, Center for Postgraduate Students (Academic and Research) IIUM

Academic Management and Admission Division, IIUM, Statistics :حصل الباحث على هذه الإحصائيات من 49 2013/2012, 10f Undargraduate Students, Semester

<sup>&</sup>lt;sup>51</sup> انظر: الصلاحات، سامي محمد، دور الوقف في مجال التعليم والثقافة في المجتمعات العربية والإسلامية المعاصرة دولة ماليزيا المسلمة نموذجا، ص 41

وحملة رنجت واحد، وجمع الزكاة من خلال التعاون مع مؤسسة زكاة سلانجور، وكذلك مساهمة في بعض الأعمال لزيادة قدرة الصندوق. وإن صندوق الوقف للجامعة بما قدمت إليه من المبالغ، مثل تلك المبالغ التي ساهمت بما جمعية اقرأ الخيرية. وهذه المبالغ، في بعض الحالات التي أشار إليها الجهات المانحة تستثمر مع الأرباح، وتستخدم هذه الأرباح لتمويل الأغراض الفردية المختلفة 52.

إن استثمار الأموال في صندوق الوقف للجامعة يعهد إلى لجنة الاستثمار التي رئيسها هو الأستاذ الدكتور أوبية الله، ويشرف عليها المجلس التنفيذي لصندوق الوقف، تمشيا مع الممارسة المقبولة لاستثمار، الوقف أكثر رسوخا، وكذلك يدرس صندوق الوقف للجامعة إمكانية تكوين اللجنة الزائرة للاستثمار، وهذه اللجنة مكونة من ثلاث الشخصيات والشركات ورجال الأعمال البارزين. وسيتم استثمار المساهمة وردت في صندوق الوقف للجامعة في أي وسيلة الاستثمار، وتستخدم العائدات فقط لمساعدة الطلاب.

### المطلب الثالث: مساهمات صندوق الوقف بالجامعة الإسلامية العالمية بماليزيا

إن من مساهمات صندوق الوقف بالجامعة الإسلامية العالمية بماليزيا تقديم المساعدات المالية للطلاب المحتاجين Financial Assistant to the needy Students قدّمت الجامعة مساعدات مالية لطلابحا من مختلف دول العالم الإسلامي. قد تغطي المساعدات المالية رسوم الدراسة والسكن، وقد تشمل مصاريف المعيشة، حسب حالة الطالب المالية 54.

في عام 2008م، قد بلغ عدد الطلاب الذين حصلوا على المساعدة المالية 1319 طالب وطالبة. Pesessional & " طالب وطالبة مرحلة الدراسات الأساسية والدورية " Foundation Studies ومنهم 978 طالب وطالبة من طلبة المرحلة الجامعية (البكالوريس)

"Undergraduate Students" والعدد 186 طالب وطالبة من طلبة مرحلتي الماجستير والدكتوراه "Postgraduate Students".

وفي عام 2009م، قد زاد عدد الطلاب الذين حصلوا على المساعدة المالية إلى 1844 طلب Pesessional & "180 منهم 180 طالب وطالبة، من طلبة مرحلة الدراسات الأساسية والدورية "Foundation Studies" ومنهم 1329 طالب وطالبة، من طلبة المرحلة الجامعية (البكالوريس) "Foundation Studies" والعدد 335 طالب وطالبة من طلبة مرحلتي الماجستير والدكتوراه، "Vndergraduate Students". كل المساعدات المالية يشمل الطلاب المحتاجين من المالزيين والوافدين.

### ومن إسهامات صندوق وقف الجامعة

توفير أنواع المنح الدراسية والمساعدات المالية المختلفة لطلاب المحتاجين من طلاب الجامعة المسجلين بالدوام الكامل "Full-Time" لجميع المراحل الجامعية، (بكالوريس، ماجستير ودكتوراه)، منها:

1- منح الجامعة الاسلامية العالمية الدراسية الأمتكية "IIUM Ummatic Scholarship".

هذه المنح الدراسية خاصة لطلاب مرحلة البكالوريس في الجامعة الإسلامية العالمية، منحت للطلاب الفقراء والمحتاجين والمتستحقين أكاديميا، تقديرا لجهودهم في الدراسة. يقدم كل طالب ممتاز أكاديميا حصل على (المعدل التراكمي 3.6) أو أكثر في مجال الدراسة في نتيجة الفصل الدراسي الأول، على السياسة العامة في عبء العمل الأكاديمي بالجامعة. تشمل هذه المنح الدراسية كافة الرسوم من قبل الجامعة، من رسوم التسجيل، رسوم الدراسة، والرسوم ذات الصلة، والمكافأة الشهرية، ورسوم السكن، وبدل الكتب 55.

2- جائزة الجامعة الاسلامية العالمية الأكاديمية الممتازة "IIUM Academic Excellent Award"، يقدم لهذه المنح الطلاب توفرت عليهم الشروط التالية:

- أن يكون الطلاب مسجّلين بالدوام الكامل سواء كانوا القدماء أو طلاب الجدد.

- أن يكون الطلاب ممتازيين أكاديميا حصلوا على المعدل التراكمي 3.8 أو أكثر، على أساس السياسة العامة في عبء العمل الأكاديمي بالجامعة.
- أن لا يكون الطالب ممنوحا بأي منح دراسية "Self Sponsor" و يكون متلقيا بالقرض فقط. تغطى هذه المنح الإعفاء من الرسوم الدراسية فقط.
  - "Postgraduate Scholarship" المنح الدراسية لطلاب الدراسات العليا
  - منح الجامعة الاسلامية العالمية الدراسية الأمتكية "IIUM Ummatic Scholarship"
    - صندوق وقف الجامعة الاسلامية العالمية "IIUM Endowment Fund"
  - منح الجامعة الإسلامية العالمية في مجال متخصص "IIUM Scholarship Niche Area" منح الجامعة الإسلامية العالمية

4- المنح الجزئية "Partial Scholarship" يقدم لهذه المنح جميع طلاب الجامعة المحتاجين، وإذا تمت الموافقة على طلب أي طالب فتدفع الجامعة بعض ما عليه من رسوم الدراسة، ويحصل على هذه المنح عدد كبير من الطلاب في كل الفصل الدراسي. وغيرها من المنح الدراسية والمساعدات المالية.

### ومن إسهامات صندوق وقف الجامعة

من بين أنشطة صندوق وقف الجامعة برنامج الكفالة، وهو برنامج حصري، تسعى من خلاله إلى وصول إلى المحسنين وفاعلي الخير من الافراد والمنظمات (الكفيل) لتمويل تكاليف المعيشة، ومصاريف الدراسة لطلاب الجامعة المحتاجين من الماليزيين والوافدين.

### وبرنامج إعطاء الزكاة للفقراء والمساكين والمحتاجين من طلاب الجامعة

تعلن مكتب الزكاة داخل الجامعة تحت رعاية صندوق الوقف تقديم الطلب الأموال الزكاة في كل شهر طول العام الدراسي، وكل من تمت شهر طول العام الدراسي، وكل من تمت

الموافقة على تقديمه من الطلاب يدفع مكتب الزكاة ألف رنجت ماليزي " $1000 \mathrm{RM}$ " في حسابه البنكى الخاص بالطالب أقساطا بالمبلغ  $250 \mathrm{RM}$  في كل شهر للإعاشة لمدة أربعة أشهر  $^{56}$ .

### ومن إسهامات صندوق وقف الجامعة

بناء مبني عزمان هاشم التجاري داخل الجامعة "Azman Hashim Complex" قد حصل صندوق وقف الجامعة الإسلامية العالمية بماليزيا على وقف النقود بالمبلغ 7 مليون رنجت ماليزي من قبل الواقف تان سري عزمان هاشم million 7RM من قبل الواقف تان سري عزمان هاشم الواقف، لدعم الطلاب المحتاجين.

في يوم 8 سبتمبر عام 2008، تم اطلاق بدأ العمل على بناء هذا المبني، ويحتوي على القاعات للأغراض المتعددة، من الخدمات التجارية، مع ثلاثة بنوك، بنك إسلام Bank Islam Malaysia Bhd للأغراض المتعددة، من الخدمات التجارية، مع ثلاثة بنوك، بنك إسلامي Bank Islam Malaysia Bhd و إي أم بنك إسلامي و Bank Islam Malaysia Bhd و إي أم بنك إسلامي عزمان هاشم في يونيو Bhd، ومستودع الكتب للبيع، والمقهي، قد بدأ النشاط التجاري رسميا في مبنى عزمان هاشم في يونيو 2010م 57. ويتم استخدام الدخل من إيجار مبني عزمان هاشم، لدعم الطلاب المحتاجين من المالزيين والوافدين من طلاب الجامعة الإسلامية العالمية بماليزيا.

وكما قال رئيس مؤسسة عزمان هاشم، تان سري عزمان هاشم، بأن إيرادات الإيجار من العمل التجاري من المبني والإيرادات من القاعة، تستخدم لرعاية 15 طلاب المستحقين من صندوق وقف الجامعة الاسلامية العالمية، بحيث يساعد على تخفيض نسبة من الطلبة المتفوقين، الذين لهم حق المساعدة لتطوير الأمة في مختلف أنحاء العالم، لكي لا يستقلوا من دراستهم. وقال رئيس المؤسسة تان سري عزمان هاشم في أثناء كلمته في يوم افتتاح المبني، "أن المنح الدراسية بالمبلغ حوالي 500,000 سنويا من دخل المبني، تشمل جميع الرسوم للطلاب المستحقين بما في ذلك رسوم التسجيل والدراسة والسكن وبدل الكتب، وكذلك المكافأت الشهرية"<sup>58</sup>.

### الخاتمة ونتائج البحث

لقد توصل الباحث بعد جولته العلمية على جملة من النتائج أعرج على أبرزها على النحو التالي:

- 1. أن الصناديق الوقفية هي الإطار الأوسع لممارسة العمل الوقفي، ومن خلالها يتمثل تعاون الجهات الشعبية مع المؤسسات الرسمية في سبيل تحقيق أهداف التنمية الوقفية.
- 2. تهدف الصناديق الوقفية إلى المشاركة في الجهود التي تخدم إحياء سنة الوقف عن طريق طرح مشاريع تنموية في صيغ إسلامية للوفاء باحتياجات المجتمع.
- 3. يعبر عن الصندوق بالقيمة الكلية لمحتوياته التي تمثل مبلغا نقديا، وهذا المبلغ هو الوقف وهو بمثابة العين التي جرى تحبيسها، فالصندوق الوقفي هو وقف نقدي.
  - 4. اختلف الفقهاء في حكم وقف النقود أقوال، والرأي الراجح هو أن وقف النقود جائز.
- 5. أن للوقف هدفا عاما يتمثل من القيام بما أوجبه الله على المسلمين من التعاون والتكافل والتراحم، وهدفا خاصا يتمثل في تحقيق رغبة خاصة قائمة في نفس المسلم يدفعه إلى تحقيقها دوافع دينية وغريزية وواقعية واجتماعية.
- 6. تتميز دولة ماليزيا بالأفكار الإسلامية الرائدة ومن هذه الأفكار النافعة وغير التقليدية، إنشاء الصناديق الوفقية المعاصرة مثل: صندوق الوقف لجامعة الإسلامية العالمية بماليزيا.
- 7. لصندوق وقف الجامعة الإسلامية العالمية بماليزيا المساعدات المالية المتنوعة لطلابها من مختلف دول العالم الإسلامي.

#### توصيات

في ضوء ما أسفر عنه هذا البحث من نتائج، يمكن تقديم هذه التوصيات كما يليق:

- 1- فتح باب المساهمة في الأوقاف الجماعي، يمكن أن يساهم الراغبون في الخير بمبلغ بسيط، وهذا السبيل من أنجح الوسائل، بل هي أفضلها على الإطلاق.
- 2- تعيين الرجل المتخصص مديرا لإدارة الصناديق الوفقية، فكان مسئولا عنها، ومعه أشخاص مؤهلون الذين لهم الكفاءة والدراية والإخلاص والأمانة.

3- عقد المؤتمرات والندوات واللقاءات عن الصناديق الوقفية، والاهتمام بتوصياتها ونتائجها، ستكون وسيلة لتنظيم واصلاح حالة الصناديق الوقفية من الإشكالات والتساؤلات التي لا يمكن حلها إلا في عقد مثل هذه المؤتمرات والندوات دولية كانت أو أهلية.

### تنمية الموارد البشرية من منظور اسلامي

#### Nasir Massoud Hassan

#### Zulkiple Bin Abd Ghani

#### إدارة الموارد البشرية من منظور اسلامي

اهتم الإسلام بالموارد البشرية ونظر إليها على اعتبار أنها الحياة الطيبة، فهو بهذه النظرة قد سبق وفاق كافة المفاهيم السابقة لها وما ألت إليه وما اختلف في مسماها، فهو لا يولى الثروة اهتمامه بقدر ما ينظر إلى صانع تلك الثروة وهو الإنسان الخلاق المبدع. ذلك المخلوق الذي بيده صنع الثروة و في الوقت ذاته لا تصنعه الثروة. وكونه أكرم مخلوق خصه الله تعالى على وجه الكرة الأرضية وسخر له الله الكون خادماً لا مستخدماً فقال تعالى: { وَلَقَدْ كُرَّمْنَا بَنِي آدَمَ وَحَمَلْنَاهُمْ فِي الْبَرِّ وَالْبَحْرِ وَرَزَقْنَاهُمْ مِنَ الطَّيِّبَاتِ وَفَضَّلْنَاهُمْ عَلَى كَثِيرٍ مِمَّنْ خَلَقْنَا تَفْضِيلًا}. [سورة الإسراء:70].

وتتجلى الرؤية التنموية في الإسلام من فكرة استخلاف الإنسان وفلسفته في العلاقة الكامنة بين الإنسان والكون والخالق. فهذا المفهوم يجمع بين كلاً من التنمية الروحية والمادية ويرفع من شأن النفس الإنسانية إلى أعلى المراتب، ويجعلها موضع التكريم الذي يليق بحا، والذي يمكنها من أداء دورها في إعمار الكون واخلاص العبودية للخالق عز وجل وحده لا أحد سواه (حسن،2000).

أشار عبده (1984) إلى أن العمل هو الذي تدور عليه عملية إدارة الموارد البشرية، حيث أن الإنسان الذي يؤدي عمله يتطلب منه كشرط مسبق أن يكفؤ مهنياً وعقلياً وتربوياً بحيث يمكنه ذلك من القيام بدوره في المهام والوظائف العملية. وبحد أن الإسلام اهتم بحذا الموضوع وحث عليه سواء كان عملاً تعبدياً أو مهنياً ورفع قيمة العمل لقولة تعالى: { إِنَّ اللَّذِينَ آمَنُوا وَعَمِلُوا الصَّالِحَاتِ إِنَّا لا نُضِيعُ أَجْرَ مَنْ أَحْسَنَ عَمَلا . أُوْلَئِكَ لَهُمْ جَنَّاتُ عَدْنٍ تَجْرِي مِن تَحْتِهِمُ الأَنْهَارُ يُحَلَّوْنَ فِيها مِنْ أَسَاوِرَ مِن ذَهَبٍ وَيَلْبَسُونَ ثِيَابًا خُضْرًا مِّن سُندُسٍ وَإِسْتَبْرَقٍ }. (الكهف:30).

وحث النبي (صلى الله عليه وسلم) على العمل فقال" ما كسب الرجل كسباً أطيب من عمل بيده، وما أنفق الرجل على نفسه وأهله وولده وخادمه فهو صدقة"(صحيح ابن ماجه).

ويرى العاني (2002) بأن التغيير هو سنة هذه الحياة ومطلب أساسي فيها ولكن التغيير الذي نقصده هنا هو ما يحقق النفع والخير والصلاح على الإنسان، فهو ليس مطلباً لذاته وإنما لغاية ايجابية سامية يعمل من أجل تحقيقها، ولهذا فقد أوجد

الله إداره التغيير فهو القادر على كل شي بإرادة الإنسان ، فقال تعالى: إنَّ اللَّهَ لا يُغَيِّرُ مَا بِقَوْمٍ حَتَّى يُغَيِّرُوا مَا بِأَنْفُسِهِمْ. (الرعد:11).

وأشار عويضة (2000) أن مهمة إدارة الموارد البشرية تعتمد على إصلاح الفرد من ذاته بحيث يكون عنصراً فاعلاً لخدمه دينه ومجتمعه والبشرية جمعاء، وأتخذ مفهوم إدارة الموارد البشرية في كل بلدان العالم بالانتشار وأصبح للجميع رؤية واحدة حوله في أن الغاية التي تسعى لها التنمية هي إصلاح الإنسان، ولكن المجتمعات تختلف في مفهومها للإصلاح ، فإذا كان المقصود للجميع إصلاح مهاراته ومعارفه وإمكاناته، إلا إن الإسلام كان له نظرة أخرى للإصلاح حيث نظر إليه نظرة شاملة إذ يمتد الإصلاح إلى ايمانه وأخلاقه وسلوكه ومعاملاته، ولذا نجد أن رسالات الأنبياء جميعاً نادت بالإصلاح انطلاقاً من قوله تعالى { قَالَ يَا قَوْمٍ أَرَأَيْتُم إِنْ كُنْتُ عَلَىٰ بَيِّنَةٍ مِنْ رَبِّي وَرَزَقَنِي مِنْهُ رِزْقًا حَسَنًا وَمَا أُرِيدُ أَنْ أُخالِفَكُم إلَىٰ مَا أَنْهَاكُم عَنْهُ إِنْ أُرِيدُ إِلَّا الْإِصْلَاحَ مَا اسْتَطَعْتُ وَمَا تَوْفِيقِي إِلَّا بِاللَّهِ عَلَيْهِ تَوَكَّلْتُ وَإِلَيْهِ أُنِيبُ }.(هود: 88).

إن مفهوم إدارة الموارد البشرية من منظور إسلامي يتخطى المنظور المادي وتحقيق الرفاهية التي تتجلى فكرتما في العمل على إشباع متطلبات الجسد ويمتد إلى طلبات الروح والعقل التي لا تقل عن الناحية المادية في الحياة. فالإنسان بواسطه علقة يصنع الماديات فقد نجد الماديات إلا أننا نفتقر إلى الإنسان المفكر المتحضر فقد سبق الفكر المادة (حسن، 2000).

#### هدف إدارة الموارد البشرية:

تغير هدف إدارة الموارد ليكون محوره الإنسان وقد ظهر ذلك في تقرير الموارد البشرية (1990) وتقرير التنمية الإنسانية (2002) الصادران عن البرنامج الإنمائي للأمم المتحدة، وما تلاهما من تقارير. كما أن البنك الدولي الذي كان يساند النمو الإقتصادي الكمي منذ الثنمانينيات كهدف رئيس للتنمية أعلن في تقريره عن التنمية لعام 1991:" إن التحدي أمام التنمية هو تحسن نوعية الحياة، خاصة في الدول الفقيرة، إن أفضل نوعية لحياة هي التي تتطلب دخولاً عاليه، ولكنها في نفس الوقت تتضمن أكثر من ذلك، تتضمن تعليماً جيداً ومستويات عالية من التغذية والصحة العامة وفقراً أقل، وبيئة نظيفة، وعدالة في الفرص، وحرية أكثر للأفراد وحياة ثقافية غنية". (فرحانة،1995)

وتهدف إدارة الموارد البشرية في الإسلام بشكل عام في ايجاد وتحقيق الأمن المادي المتمثل بالجوع والمعنوي المتمثل بالخوف لقوله تعالى: ( لْيَعْبُدُوا رَبَّ هَذَا الْبَيْتِ \* الَّذِي أَطْعَمَهُمْ مِنْ جُوعٍ وَآمَنَهُمْ مِنْ خَوْفٍ.) (قريش:2). فيكمن هدف الإسلام الأسمى من وراء عملية التنمية تحقيق حياة طيبة كريمة لكل إنسان لقوله تعالى: ( مَنْ عَمِلُ صَالِحاً مِّن ذَكُر أَوْ أُنثَى وَهُوَ مُؤْمِنٌ فَلَنُحْيِيَنَّهُ حَيَاةً طَيِّبَةً وَلَنَجْزِينَهُمْ أَجْرَهُم بِأَحْسَن مَا كَانُواْ يَعْمَلُونَ) .(النحل: 97)

حياة تملؤها المودة والرحمة ويعلوها شعار الأمن والعدل والحرية والمساواة، ولا يسودها الجوع والخوف والكراهية والبغضاء والأثرة، تراعى العدل في تقسيم الثروة حتى لا يكون المال دولة بين الأغنياء وحدهم (دوابة،2007).

#### مقياس إدارة الموارد البشرية من منظور إسلامي:

يسر ومهد الله تعالى سبل العيش للإنسان واهتم بتكوينه وربط ذلك بالسعى للعمل والأحذ بالأسباب والتوكل عليه مع الإيمان بالله فقال تعالى: ( وَهُو الَّذِي جَعَلَ لَكُمْ الأَرْضَ ذَلُولاً فَامْشُوا فِي مَنَاكِبِهَا وَكُلُوا مِنْ رِزْقِهِ وَإِلَيْهِ النَّشُورُ) ( سورة الملك الإيمان بالله فقال تعالى: ( وَهُو الَّذِي جَعَلَ لَكُمْ الأَرْضَ ذَلُولاً فَامْشُوا فِي مَنَاكِبِهَا وَكُلُوا مِنْ رِزْقِهِ وَإِلَيْهِ النَّشُورُ) ( سورة الملك - آية 15). فقد سطر تاريخ المسلمين بمواقف بطولية للأمة الإسلامية في اقتصادها وازدهارها بالمعرفة، وفاضت بيوت المال بالأموال فلم يجد الخلفاء من الفقراء من يعطوه فزوجوا الشباب، وعتقوا العبيد والإماء. (الندوة الفكرية في التنمية البشرية المستدامة في الوطن العربي، 2001).

أكد عبد الرحمن (2003) أن الإسلام يهدف إلى ايجاد متطلبات الحياة الكريمة بما يمكنه من العيش في سعة ويكتفي عن الاعتماد على غيره، وهو ما يعرف بحد الكفاية لا حد الكفاف، فإن حد الكفاف يتمثل في توفير ضرورات المعيشة للفرد بما يسمح له حق البقاء على قيد الحياة، بحيث يوفر مستوى متواضعاً وبسيط من الرفاهية. أما الإسلام يعمل على توجيه التنمية على رفع مستوى معيشة الفرد، بما يضمن توفير حد الكفاية لجميع الأفراد، بحيث يكون كل فرد قادرا على الإنفاق على من يعول.

ويتضح مما سبق أن مؤشر الموارد البشرية يعكس الجوانب المادية والروحية في البلدان الإسلامية بما يكفل تحديد مشاكله والعمل على حلها، فقد أشار النبي صلى الله عليه وسلم مؤشراً مركباً للتنمية البشرية بالبلدان الإسلامية يتكون من عدد من المتغيرات في قوله: " من أصبح منكم آمناً في سربه، معافى في جسده، عنده قوت يومه فكأنما حيزت له الدنيا".

وأشار (دوابة،2007) إلى أن هذا المؤشر يتكون من المتغيرات الآتية:

أ) المعرفة: تعد المعرفة مؤشر على تقدم الأمم وكما أنها مؤشر على زيادة القيمة المضافة، لقوله تعالى: (اقْرَأْ بِاسْمِ رَبِّكَ الَّذِي حَلَقَ) (العلق: 1). فعندما نعمل على إدارة الموارد البشرية تأتي في أولوياتها المعرفة بما تتضمنه من محو الأمية سواء أكانت أمية القراءة والكتابة أو أمية الكمبيوتر والإنترنت، ايضاً ما يقدمه العقل البشري من البحث العلمي في كافة الجالات فلا يوجد تناقض بين العقل والوحي. لقوله تعالى: ( يَامَعْشَرَ الْجِنِّ وَالإِنسِ إِنْ اسْتَطَعْتُمْ أَنْ تَنفُذُوا مِنْ أَقْطَارِ السَّمَاوَاتِ وَالأَرْضِ فَانفُذُوا لا تَنفُذُونَ إلا بِسُلْطَانِ). (الرحمن: 33).

ب)الصحة: تعد الصحة عنصر فعال ومهم في الإنتاج ومحدد رئيس للإنتاجية ورأس المال البشري، ويندرج في ذلك العمر المتوقع عند الميلاد، ومدى انتشار الأمراض والعلل، ومدى الاهتمام والرعاية والوقاية والعلاج، والمستوى الذي تخصصة الدولة من نسبة الإنتاج المحلي الإجمالي. حيث كان من دعاء النبي صلى الله علية وسلم: "اللهم عافني في بدني، اللهم عافني في بصري.

ج) الأمن المادي: ويتمثل في توفير المتطلبات الأساسية للعيش من ماء ومسكن وما يسد لحد الكفاية لا الكفاف ويبعده عن دائرة الفقر التي استعاذ منها النبي صلى الله علية وسلم بقوله: اللهم إني أعوذ بك من الكفر والفقر". ومن هنا تبرز أهمية معرفة الدخل القومي وتوزيعه للوقوف على العدالة الإجتماعية. مع الأخذ بعين الاعتبار عوائد انتاج المرأة في بيتها التي قد لا توليها مقاييس الاقتصاد الوضعي بالأهمية عند حساب الدخل القومي.

د) الأمن النفسي: يتمثل ذلك بارساء مبادئ العدل والمساواة والشورى والحرية. فإن توفير الطمأنينة ليس من الحاكم بل هي حق للمحكوم على اساس أن الحاكم أجيراً عند رعيته. فالحرية في الإسلام حرية منظبطة بقواعد شرعية مراعيه لحدود الآخرين. ويندرج تحت هذا المتغير الحرية السياسية وما تتضمنه من حق النقد وإنشاء الأحزاب ومنع الاعتقال والاستبعاد. وكما يندرج تحت الحرية الحرية الإقتصادية معتمدة بذلك على اقتصاد السوق لتوفير فرص العمل وتوزيع الثروة بعدل ودون احتكار، كما يدخل في الحرية الحرية الحرية اللاجتماعية المتمثلة بانشاء الجمعيات الأهلية، وتحقيق التكامل لا التناحر بصورة تحكمها المساواة، مع مراعاه الفروق الفردية الطبيعية بين الجنسين.

#### واقع الموارد البشرية من منظور إسلامي في البلدان الإسلامية:

ما تزال البلدان الإسلامية يسيطر عليها الجهل والفقر والمرض ويعيش أبنائها في عداد الدول النامية بالرغم من صلاحية شريعتها لكل زمان ومكان إلى قيادة الأمم علماً وخلقاً إذا ما استمسكوا بها. ولصعوبة توفير معلومات وبيانات كافية عن إدارة الموارد البشرية في البلدان الإسلامية سوف تقدم ما توافر من بيانات عن الدول الإسلامية أو الدول العربية وذلك باعتبار الدول العربية ربما تعكس حال الدول الاسلامية. (الندوة الفكرية في التنمية البشرية المستدامة في الوطن العربي، 2001).

فعلى مستوى المعرفة يبلغ عدد الأميين من بين البالغين العرب حوالي 65 مليوناً ثلثاهما من النساء. وتوجد فجوة كبيرة بين مستوى المعرفة يبلغ عدد الأميين من بين البالغين العرب حوالي 65 مليوناً ثلثاهما من النظم التعليمية واحتياجات سوق العمل وأصبح التعليم شكلاً بلا مضمون. ويستخدم شبكة الإنترنت 6.0% من السكان فقط، ويبلغ انتشار أجهزة الحاسوب الشخصي 1.2% وبصورة عامة لا يزيد الاستثمار في البحث والتطوير عن من السكان فقط، ويبلغ انتشار أجهالي أي أقل من ربع المتوسط العالمي. ويبلغ متوسط نسبة البطالة 15% وهي من أعلى

النسب في العالم. ويبقى مواطن من كل خمسة مواطنيين يعيش على أقل من دولارين أمريكيين في اليوم. والناس في المنطقة العربية أقل استمتاعاً بالحرية على مستوى العالم (دوابة، 2007).

إن الدول الإسلامية مطالبة بإحداث تغيرات جذرية في التعليم بما يعمق المعرفة التي تنشأ جيلاً متمسكاً بحويته، محافظاً على لغته، كما تعمل على ربط التعليم باحتياجات سوق العمل، أيضاً تغيير سياسات الحكم من خلال العمل على ايجاد ديموقراطية يشعر الأفراد من خلالها بحرية التعبير، وأنهم سواء أمام القانون، وأرساء مبدأ المساءلة قيداً على سلوك القائمين على شؤون السلطة، كما توفر أحزاب سياسية لا تتحكم الدولة بإنشائها، مع التأكيد على سلطة القضاء وأهميته، والفصل بين السلطات، والتداول السلمي للسلطة، واحترام حقوق الإنسان المدنية والسياسية، واعطاء مؤسسات المجتمع المدني حريات التعبير عن الرأي والاجتماع.

#### تطوير المؤسسات المصرفية الإسلامية في ليبيا

أحلام ابو القاسم أمير شاهر الدين

بدأت باكورة المنتجات والخدمات المصرفية الإسلامية في الجمهورية الليبية في عام 2009. وذلك عن طريق "مصرف الجمهورية"، ويعتبر من أكبر المصارف التجارية في البلاد، ويقدم خدماته ومنتجاته من الصرافة الإسلامية من خلال نافذته الإسلامية. ومنذ ذلك الحين، وقطاع المصارف الإسلامية يتطور ويزدهر بشكل ملحوظ، ويرجع ذلك إلى دعم القطاع المصرفي الإسلامي من قبل غالبية السكان المسلمين والذين يطالبون بالمنتجات المصرفية المتوافقة مع الشريعة الإسلامية. وتتناول هذه الدراسة مجموعة التطورات الأخيرة في صناعة المصارف الإسلامية في الجمهورية الليبية. كما وتسلط الضوء على حجم النمو، والاستراتيجيات التي تقوم بها الحكومة لتعزيز الإطار التنظيمي في سوق الخدمات المصرفية الإسلامية. وإلى جانب ذلك، تناقش الدراسة بعض التحديات التي تواجهها السلطات الحكومية في قطاع الصرافة الإسلامية على مستوى الجمهورية. وقد اعتمدت الدراسة على تحليل محتوى الكثير من المراجع والمصادر والأدبيات العلمية والمهنية ذات الصلة المباشرة بمواضيع الدراسة وتبين الدراسة أن الصناعة المصرفية الإسلامية لديها مستقبل واعد في الجمهورية الليبية. ومع ذلك، هناك مجموعة من التحديات الرئيسة التي تحتاج إلى حلول. ويؤمل أن تساعد هذه الدراسة ضمن إطارها المرسوم برفد وإثراء الأدبيات الموجودة والمتوفرة، ليتسنى لأصحاب الاختصاص والباحثين الرجوع إليها وتوظيفها في فهم الصناعة المصرفية الإسلامية في الجمهورية الليبية.

الكلمات المفتاحية: ليبيا، المصارف الإسلامية، مصرف الجمهورية.

#### The Development of Islamic Banking Institutions in Libya

Ahlam Abu Algasem<sup>1</sup>
Amir Shaharuddin<sup>2</sup>

The introduction of Islamic Banking products and services in Libya started in 2009. The Jumhouria Bank, the biggest commercial bank in the country, offer the banking products through its Islamic window. Since then, the industry is growing remarkably. This is due to the support from Muslims customers who demand shari'ah compliant banking products. The present article discusses the recent development of the new industry in Libya. It highlights the growth and the strategies undertaken by the government to strengthen the regulatory framework of Libya Islamic Banking market. Besides, the article discusses some of the challenges faced by the authorities. The article adopts content analysis. It analysis article journals, books and professional writings on the topic. It is found that Islamic Banking industry has a promising future in Libya. However, there man challenges that need to be solved. It is hoped that the article will add to the existing literature in understanding the Libya market in Islamic Banking industry.

Keywords: Libya, Islamic Bank, Jumhouria Bank

#### 1. مقدمة

يعتبر القطاع المصرفي من أهم القطاعات التي لها تأثير مباشر على اقتصاد الدول المتقدمة والنامية على السواء. ويمثل القطاع المصرفي عصب الحياة الاقتصادية لأي بلد ومقياس تطور ونمو الاقتصاد الوطني، كما أن انتشارها في المجتمع يسهل على الأفراد الحصول على الخدمة المصرفية، وفي ذات الوقت يجعل هذا التنظيم المصرفي أكثر قدرة على جمع أكبر كمية من الودائع، ومنح التسهيلات المصرفية مما يترك أثراً بالغاً في الاقتصاد القومي. ويؤكد (الشميمري، 2010) على أن البنوك بصفة عامة من المؤسسات الأساسية للحياة الاقتصادية في أي مجتمع، حيث تتجمع لديها الودائع والمدخرات ومنها تتدفق في شكل قروض واعتمادات للقطاعات المختلفة، مما يؤدي إلى تحقيق التقدم والتنمية الاقتصادية، كما أنها الإطار الذي تنساب من خلاله تدفقات الأموال المحلية والأجنبية بصورها المختلفة، ولها أيضاً تأثير متعدد الأبعاد على هيكل الاستثمار والتمويل، واستقرار الأوضاع المالية والنقدية في الاقتصاد القومي.

ويبين الباحثان (مقداد؛ حلس، 2005) أن المصارف التقليدية تعتبر كأوعية تتجمع فيها الأموال والمدخرات من الأفراد والهيئات المختلفة، وتحقيق ربح يتمثل في الفرق بين سعر الفائدة المدينة التي تدفعها على الودائع والمدخرات، والفائدة الدائنة التي تحصل عليها لقاء القروض والسلف التي تمنحها، فالمصارف تمثل في هذه الحالة وسيط بين المدخرين والمستثمرين، وتعتبر وظيفة التمويل أحد الخدمات المهمة التي تقدمها المصارف لعملائها رغم تطوير المصارف للوظائف التي تؤديها حيث أصبحت تؤدي خدمات أخرى لا تقل أهميتها عن وظيفة التمويل.

إن تزايد الإمكانيات المالية في العالم الإسلامي خلال العقود الأخيرة، إلى جانب الوعي الإسلامي، ساعد في ارتفاع الأصوات المنادية بضرورة استخدام تلك الإمكانيات لخدمة مصالح الأمة الإسلامية ورفع شأنها، بالوسائل والأساليب التي تتفق وأحكام الشريعة الإسلامية، الأمر الذي دعا إلى عقد الدراسات العلمية وعقد الندوات المتخصصة التي جمعت بين رجال الاقتصاد الإسلاميين وفقهاء الدين، بهدف بلورة فكرة إنشاء البنوك الإسلامية. (مقداد؛ حلس، 2005).

ويحدد الدكتور أحمد النجار (1980) موجبات إقامة البنوك الإسلامية بأن هنالك عدد من القضايا الأساسية جعلت التفكير في إيجاد بديل إسلامي للبنوك والمصارف الربوية القائمة التزاماً دينياً وهو التزام ضروري وعقائدي. ويمكن إجمال هذه القضايا فيما يلي:

- إن نصوص الإسلام متضافرة على تحريم الربا، وعلى اعتباره منكرا اقتصاديا واجتماعيا غليظ الإثم، بل ومن الممكن عدّه جريمة سياسية كذلك، فقد ثبت أن الغزو الاقتصادي القائم على المعاملات الربوية كان التمهيد الفعال للاحتلال العسكري والتجاري الذي سقطت أكثر دول الشرق في مخالبة.
- ا الشبكة الربوية العديدة الفروع المعقدة الاتجاهات المنتشرة في الحياة العامة انتشار الشرايين في الجسم قد صدعت البناء الاجتماعي للإسلام -كدين عام- وشوهت حقائقه الأولى في عقول أبنائه وقلوبهم، وأنها قد أصابت كذلك الوضع السياسي للمسلمين.
- إن الأنظمة الاقتصادية التي نتلقاها عن الشرق أو الغرب ونسير على هداها تعزل الأخلاق عن الممارسات العملية في توظيف المال وهي بذلك تنحى الدين عن الحياة الاقتصادية.
- ان النظام الإسلامي والنظام الربوي لا يلتقيان في تصور ولا يتفقان في أساس، ولا يتوافقان في نتيجة، فالإسلام يقيم النظام الاقتصادي على أساس أن الله سبحانه − هو الخالق لهذا الكون وهو خالق هذه الأرض وهو خالق هذا الإنسان، وأنه قد استخلف الجنس البشري في هذه الأرض ومكّن له فيها على عهد منه وشرط. بينما يقوم النظام الربوي على تصور آخر لا نظر فيه لله سبحانه وتعالى ومن ثم لا رعاية فيه للمبادئ والأخلاق التي يريد الله للبشر أن تقوم حياتهم عليها، كما يقوم على أساس أن الفرد هو سيد هذه الأرض، وأنه حر في وسائل حصوله على المال وفي طرق تنميته كما هو حر في التمتع به غير ملتزم في شيء من هذا بعهد الله أو شرط. وغير مقيد كذلك بمصلحة الآخرين.

- إن الشبكة الربوية تنشئ في النهاية نظاماً يسحق البشرية سحقاً، ويشقيها في حياتها أفراداً وجماعات ودولاً وشعوباً لمصلحة عدد من المرابين، ويحدث الخلل في دورة المال ونمو الاقتصاد... وينتهي كما انتهى في العصر الحديث إلى تركيز السلطة الحقيقية والنفوذ العملي على البشرية كلها في أيد زمرة ممن لا يرعون في البشرية إلاً ولا ذمة ولا يراقبون فيها عهداً ولا حرمة.
- إن النظام الأخلاقي والنظام العملي في الإسلام متر ابطان تماماً وإن الإنسان في كل تصرفاته مرتبط بعهد الاستخلاف وشرطه. وأنه مختبر ومبتلى وممتحن في كل نشاط يقوم به في حياته ومحاسب عليه في آخرته، فليس هناك نظام أخلاقي وحده ونظام عملي وحده وإنما هما معاً يؤلفان نشاط الإنسان، وكلاهما عبادة يؤجر عليها إن أحسن ويؤاخذ عليها إن أساء... وأن الاقتصاد الإسلامي الناجح لا يقوم بغير أخلاق، وأن الأخلاق ليست نافلة يمكن الاستغناء عنها ثم تنجح حياة الناس العملية.
- ا إن الإسلام نظام متكامل، فهو حين يحرم التعامل الربوي يقيم نظمه على أساس الاستغناء عن الحاجة إليه، وينظم جوانب الحياة الاجتماعية بحيث تنتفي منها الحاجة إلى هذا النوع من التكامل، بدون المساس بالنمو الاقتصادي والاجتماعي والإنساني.
- وجود استحالة اقتصادية في أن يحرم الله أمراً لا تقوم الحياة البشرية ولا تتقدم بدونه، كما أن هناك استحالة اعتقادية
   كذلك في أن يكون هناك أمر خبيث، ويكون في الوقت ذاته حتمياً لقيام الحياة وتقدمها.

ويعتبر تحرج كثير من المسلمين من التعامل مع المصارف والبنوك التجارية التقليدية أكثر الأسباب التي ساعدت على ظهور فكرة إنشاء المصارف والبنوك الإسلامية واظهارها إلى الواقع. وكان الأمل يراود الكثير من المسلمين، ولفترة طويلة من الزمن لإنشاء بنوك لا تتعامل بالفائدة والربا، وتحقق الأهداف المرجوة منها كالعدالة الاجتماعية ومبدأ التكافل والتراحم الإنساني. وتشير الباحثة (الربيعان، 2008) إلى الواقع المدهش والرائع الذي حققته المصارف الإسلامية في منافسة قوية مع البنوك التقليدية في العالم بنسبة نمو لأصولها بلغت نحو 23 في التقليدية بقولها: دخلت البنوك الإسلامية ويحجم استثمارات تمويلية إسلامية تخطّت ال 400 مليار دولار. ودفعت المنافسة ببعض المنف "التقليدية" إلى التحول إلى بنوك تتعامل وفق أحكام الشريعة الإسلامية في السنوات الأخيرة. ويقدر الخبراء حجم أصول البنوك "التقليدية" إلى التحول إلى بنوك تتعامل وفق أحكام الشريعة الإسلامية في السنوات الأخيرة. ويقدر الخبراء حجم أصول ويتزايد الاهتمام بالصناعة المصرفية الإسلامية من قبل العديد من المؤسسات المالية العالمية الشهيرة مثل (سيتي جروب) وراتش اس بي سي اللتين دخلتا السوق المصرفي الإسلامي وأخذتا تطوران منتجاتهما لتلبية الطلب المتزايد عليها. وكان وينزايد الاهتمام خاصة في معاملات التورق الإسلامي مشيرا إلى الزيادة في اصدارات الصكوك بقيمة ارتفعت من 7رك طفرة تستحق الاهتمام خاصة في معاملات التورق الإسلامي مشيرا إلى الزيادة في اصدارات الصكوك بقيمة ارتفعت من 7رك مطرفا مليار دولار عام 2004 إلى و2 مليار دولار عام 2004 ودائع يبلغ 202 مليار دولار أمريكي، وبمجموع ودائع يبلغ 202 مليار دولار أبريكي، وبمجموع ودائع يبلغ 202 مليار دولار بزيادة سنوية تتراوح ما بين 10 و20 في المئة .

#### 2. مشكلة البحث

أن وجود المصارف الإسلامية في ليبيا كما في غيرها من البلاد التي يعيش فيها المسلمون، وإن كان في ذاته منذ أمد بعيد مطلبا إيمانيا ملحا في ضمير كل مسلم، فإنه اليوم- صار أشد ضرورة وإلحاحا، في ظل الأزمة المالية التي اكتوى بنارها العدو والصديق والبر والفاجر على السواء، من كان مع المصارف الإسلامية على وفاق ومن كان معها على خلاف، من كان مشككا في أهميتها وضرورتها ومن كان مدافعا عنها ساعيا لترشيدها، فمن خلال الوقوف على الأسباب التي ظهرت في تقارير الخبراء والمختصين لتحليل الأزمة المالية في الشرق والغرب على اختلاف مشاربهم وألوانهم، لوجدنا أن ما ذكروه في تقارير هم من الأسباب التي أدت إلى هذا الانهيار المالي، ترجع كلها إلى مخالفات شرعية لا يقرها النظام المصرفي الإسلامي، فقد اتفقت كلمتهم على أن أزمة الائتمان العقاري قائم على الإقراض الربوي لتملك المساكن، وصحب الأزمة العقارية وتبعاتها سلسلة من المخالفات المحظورة شرعا. (الغرياني، 2009)

ومن خلال ما سبق تتضح مشكلة الدراسة بسعينا بشكل رئيس إلى تحديد وبيان واقع التجربة الليبية في المصارف الإسلامية والمأمول منها.

وتحاول الدراسة الإجابة على السؤال الرئيسي التالي:

ما هو واقع تجربة الجمهورية الليبية في تبنيها للمصارف الإسلامية والمأمول منها؟

#### 3. هدف البحث وأهميته

هدفت هذه الدراسة بشكل رئيس إلى تحديد وبيان واقع تجربة الجمهورية الليبية في تبنيها للمصارف الإسلامية والمأمول منها. وتتأتى أهمية البحث من خلال الاهتمام العالمي المتسارع والمتزايد بالعمل المصر في الإسلامي، والذي حقق قفزات نمو سريعة جدا وغير متوقعة، فالنمو السريع في قطاع المصارف الإسلامية وبجميع مجالاته من حيث حجم الاستثمار ورأس المال والانتشار السريع وتبنية كخيار أول في مجال الصناعة المصرفية في الكثير من البلاد سواء في البلدان الإسلامية أو في أجزاء أخرى من العالم خلال السنوات الأخيرة، فعالم الصرافة الإسلامية أصبح يتربع على عالم الصرافة وهو المطلب الاول والخيار الأقوى لدى الكثير من الدول. وتوكد على ذلك الكثير من الاحصائيات ومؤشرات التنمية فقد انتشر العمل المصرفي الإسلامي بشكل واسع فيما يربو على سبعة وعشرين بلدا في آسيا وأفريقيا، كما ظهر أيضا في كثير من المراكز المالية في أوربا وأمريكا الشمالية ، حتى أصبحت المصارف والمؤسسات المالية المتخصصة والدولية تقدم خدمات متوافقة مع الشريعة الإسلامية، لتلبية التياجات شريحة واسعة من الزبائن في هذه الأسواق، ففي أسواق الدول الإسلامية يفوق عدد البنوك الإسلامية على مستوى العالم الان700 مصرفا منتشرة في 75 دولة في العالم برؤوس أموال سوقية تبلغ نحو 13 مليار دولار أمريكي وبمجموع ودائع يبلغ 200 مليار دولار بزيادة سنوية تتراوح ما بين 10 و 20 في المئة. كما وتظهر أهمية هذا البحث لما للمصارف الإسلامية يبيرة في التنمية الي التقيف في المعاملات المصرفية الإسلامية وبيان أهميتها وأهدافها وغاياتها وفوائدها العظيمة. دفع المجتمعات الإسلامية إلى التتقيف في المعاملات المصرفية إسلامية بديلة للعالم.

#### 4. أسلوب الدراسة

تعتبر هذه الدراسة من الدراسات النظرية التحليلية إذ توضح وتبين واقع تجربة الجمهورية الليبية في تبنيها للمصارف الإسلامية، وتحدد مجموعة من المحاور الأساسية لها، كما وتتعرض للتجربة الليبية من خلال تحليل الواقع وكذلك النظرة الاستشرافية للمستقبل. وتقدم مجموعة من التوصيات والنصائح التي قد تغني العمل المصرفي الإسلامي وتزيد من تقدمة وازدهاره، وكذلك تقدم خلفية نظرية عميقة لبعض جوانب صناعة المصارف الإسلامية في ليبيا. وقد اعتمدت الدراسة بالأساس على الكثير من المراجع والمصادر والأدبيات العلمية ذات الصلة المباشرة بمواضيع الدراسة، وتم الاعتماد ايضا على مجموعة من الاساليب العلمية ومنها التحليل والربط والاستنتاج والتفسير وذلك للوصول إلى إطار واضح ودقيق ومتكامل يجيب على سؤال الدراسة المطروحة ويحقق هدفها المرجو منها.

#### 5. التجربة الليبية في المصارف الاسلامية الواقع والمأمول.

#### 1.5 بداية الجهاز المصرفي الاسلامي الليبي ونشأته

تصنف ليبيا من الدول التي أخذت زمام المبادرة في تقنين الشريعة الإسلامية وإدخالها في تشريعاتها النافذة، وهي وإن قامت عقب الاستقلال عن الدولة الإيطالية الاستعمارية بسن تشريعات اقتبستها من بعض الدول الشقيقة وعلى الأخص مصر العربية، إلا أن تلك التشريعات لا تخلو من قواعد تخالف أحكام الشريعة الإسلامية، لذلك حرص المشرع الليبي عقب قيام الثورة سنة 1969 على أن يعاد النظر في التشريعات الصادرة قبل ذلك، وتعديل أحكامها بما يوافق شريعة الإسلام، وتمثل ذلك في تشكيل لجنة من العلماء المتخصصين في مجال الشريعة والقانون قامت بوضع مشاريع قوانين، حيث تم اعتمادها وإصدارها، وتكفلت بتنقيح عدة تشريعات، من بينها القانون المدني والقانوني التجاري من كل الشوائب التي علقت بهما، والمتمثلة في بعض القواعد المخالفة لأحكام الشريعة الإسلامية، من ذلك على سبيل المثال:

- تحريم الربا في القانون المدني بالقانون رقم 74 لسنة 1972 بتحريم ربا النسيئة في المعاملات المدنية والتجارية بين
   الأشخاص الطبيعيين (الأفراد) وبتعديل بعض أحكام القانون المدني والقانون التجاري.
- إلغاء عقود الغرر بالقانون رقم 86 لسنة 1392 هـ / 1972 في شأن تحريم بعض عقود الغرر في القانون المدني وتعديل بعض أحكامه بما يتفق مع الشريعة الإسلامية. (الزريقي، 2009)

وتعتبر التجربة الليبية حديث العهد بالصيرفة الإسلامية، مقارنة مع تجارب الدول العربية والاسلامية والعالمية. ففي تاريخ: 22 أكتوبر، 2012. أعطى مجلس إدارة مصرف ليبيا المركزي الضوء الأخضر لإطلاق نشاط البنوك الاسلامية داخل السوق الليبي والسماح للبنوك التقليدية القائمة بممارسة أنشطة الصيرفة الاسلامية. ويبين (الطراد، الحوتي؛ 2010) أن البداية الفعلية للعمل المصرفي الاسلامي الليبي انطلقت من خلال المصرف الجمهورية الذي باشر العمل بصيغ التمويل والاستثمار المصرفية الإسلامية "المنتجات المصرفية البديلة، الاسم الرسمي المعتمد من طرف مصرف ليبيا المركزي" منذ بداية 2009، وكان ذلك في إطار إذن مصرف ليبيا المركزي للمصارف التجارية العاملة بفتح نوافذ لتقديم التمويلات والخدمات المصرفية الإسلامية، وفقاً للمنشور رقم (2009/09م) الصادر عن مصرف ليبيا المركزي بتاريخ 29 \80 \2009 بشأن المنتجات المصرفية البديلة، وعرف المنشور المنتجات المصرفية البديلة كونها أدوات وصيغ تمويل واستثمار متوافقة مع الشريعة الإسلامية وحددها في الصيغ التالية:

- التمويل على أساس المرابحة.
- التمويل على أساس المضاربة.
- التمويل على أساس المشاركة.

وأتاح المجال لإمكانية التعامل لاحقا بصيغ أخرى مثل "الإجارة، الإستصناع، السلم، شريطة دراستها وإعداد عقودها ومتطلباتها" وعليه باشر مصرف الجمهورية الرائد في العمل المصرفي الإسلامي على أساس النوافذ الإسلامية التعامل بصيغة المرابحة للأمر بالشراء في بعض السلع منها السيارات والحاسبات... وغيرها، كما أن العديد من المصارف العاملة هي الأخرى التحقت بدرب الصيرفة الإسلامية، فقدمت صيغة المرابحة للأمر بالشراء ومنها المصرف التجاري الوطني. ومؤخراً وفي عام 2010 يفكر مصرف الجمهورية في توسيع دائرة المعاملات المصرفية الإسلامية من حيث العقود: "وشملت إعداد الدراسات بشأن تفعيل صيغ تمويل إضافية وتمويل نشاطات مختلفة وأكبر حجماً" كما أن الجهود الآن تنصب في اتجاه فتح فروع مصرفية إضافية مستقلة، ويستهدف هذه السنة فتح من 6 إلى 10 فروع على مستوى ليبيا. كما ويعمل مصرف شمال أفريقيا حاليا على تنفي دراسة لتحويل فروعه لفروع إسلامية، وذلك بعد أن تمّ افتتاح فرعه الإسلامي الأول في حي الأندلس، وهو حاليا يقدم خدمات إسلامية كاملة.

# 2.5 تحليل وبيان واقع التجربة الليبية في المصارف الإسلامية من خلال نموذجيها الفاعلين على أرض الواقع (مصرف الجمهورية) و (مصرف شمال افريقيا).

سنستعرض التجربة الليبية في الصرافة الإسلامية من خلال نموذجين فاعلين على الساحة الليبية وهما مصرف الجمهورية ومصرف شمال أفريقيا، وسنعتمد في عملية التبيان والتحليل على المواقع الكترونية للمصرفين، وعلى بعض الاوراق والمقالات العلمية التي تناولت التجربة لليبية.

#### 1.2.5 التجربة الليبية في المصارف الاسلامية (مصرف الجمهورية)

■ مصرف الجمهورية هو أحد المصارف العاملة في ليبيا.

وتنفيذا للاستراتيجية التي اعتمدها مصرف ليبيا المركزي لإعادة هيكلة وتطوير وتحديث القطاع المصرفي الليبي الهادفة إلى الارتقاء بالخدمات المصرفية على المستوى المحلى والعالمي، وإلى ما انتهت إليه الجمعية العمومية لكلا المصرفين الأمة والجمهورية بشأن الموافقة على دمج المصرفين في كيان مصرفي موحد، استنادا على قرار مجلس إدارة مصرف ليبيا المركزي رقم (74) لسنة 2007 بالإذن بذلك وقرار مجلس إدارة مصرف ليبيا المركزي رقم (8) لسنة 2008 بشأن تصنيف ذلك ضمن الحالات المنصوص عليها في المادة (62) من قانون المصارف فقد صدر قرار دمج المصرفين في مصرف واحد تحت اسم مصرف الجمهورية، وقد بدأ العمل فعلياً بهذا الكيان المصرفي العملاق مع بداية الربع الثاني من سنة 2008 بميز انية تفوق 11 مليار دينار وبعدد فروع يصل إلى 146 فرعاً ووكالة، ويعمل به عدد (5807) موظف وموظفة، الأمر الذي ساهم بشكل مباشر في توفير التمويل اللازم للمشاريع الصغري والمتوسطة سواء للقطاع العام أو الخاص، والعمل على توسيع نطاق تمويل حركة التجار الدولية تشجيعاً لعمليتي التصدير والاستيراد. وبذلك يكون أحد أكبر المصارف الليبية إذ سيحتل المرتبة الثانية بعد المصرف الليبي الخارجي حيث سيحدث طفرة في العمل المصرفي، كما سيصبح ضمن المصارف العشرة الكبري في منطقة المغرب العربي وشمال إفريقيا، إذ تخضع كافة أنشطة وخدماته التي يقدمها لأحكام القانون التجاري الليبي واللوائح المعتمدة بالنظام الأساسي للمصرف والقوانين المنظمة لأعمال المصارف الليبية والتي يشرف عليها مصرف ليبيا المركزي. ويتخذ المصرف من النظام الأساسي منهاج عمل في كافة عمليات استقطاب وتوظيف الأموال، بالإضافة إلى توجيهات المصرف المركزي بخصوص تقديم التمويل اللازم لمشاريع التنمية، والتي يعمل المصرف على المشاركة فيها، ويتخذ المصرف من مدينة طرابلس مقراً للإدارة العامة، وتنشر فروعه ووكالاته على رفعة شاسعة وذلك لتقديم أفضل وأحدث الخدمات المصرفية لجميع العملاء في كافة أنحاء ليبيا.

■مصرف الجمهورية قطاع الصيرفة الاسلامية.

يعتبر مصرف الجمهورية على المستوى المحلي رائداً في تقديم خدمات الصيرفة الإسلامية ، واتباع أسسها الصحيحة وهذا يؤكده إقبال الزبائن والاستطلاعات العامة والبحوث والدراسات والمقالات المختلفة. هذا وأبدت مصارف خارجية مختلفة لمساندة مصرف الجمهورية لتقديم الدعم بالتدريب والاستشارات والمشاركة في تأسيس مصرف إسلامي مستقل وبإجراء صفقات تجارية محلية ودولية. وقد قام مصرف الجمهورية باتباع الخطوات اللازمة للتأسيس لخدمات الصيرفة الإسلامية وفقاً لمعايير ومناشير مصرف ليبيا المركزي وهيئة المحاسبة والمراجعة للمؤسسات المالية الإسلامية العالمية (AAOIFI) وبموافقة الهيئة الشرعية بالمصرف والمكونة من كبار علماء الدين بالبلد. وفي هذا الإطار فإن المصرف قد فعل المنتجات الإسلامية التالية:

(المرابحة للأمر بالشراء: وذلك لملائمتها لجميع شرائح المجتمع ويسهل فهمها وتوظيفها من قبل موظفي المصرف بالمرحلة الأولى، وهي مُفعلة لسلعتين هما الحاسب الآلي والسيارات نظرا لكثرة الطلب عليهما ، وحاجة جميع الأسر لهما وتعذر إمكانية أغلب الزبائن من اقتنائهما بالدفع الفوري). (المرابحة البسيطة: وهي التي يبيع المصرف ما لديه من سلعة في المخزن وقد نُفذت لبعض أنواع السيارات التي اشتراها المصرف عن طريق عقود المرابحات الاستيرادية المبرمة مع بعض الشركات المحلية الكبرى). (المشاركة عدد فروع الصيرفة الإسلامية المستقلة المستهدف افتتاحها في المرحلة الأولى من القطاع= 17 وتحصل المصرف على موافقة مصرف ليبيا المركزي لافتتاح 3 فروع "فشلوم، المختار ببنغازي، غريان." وعدد صيغ المرحلة الأولى 5 المرابحة والمشاركة والمضاربة والإجارة والإستصناع).

#### ■ هيئة الرقابة الشرعية في مصرف الجمهورية.

جهاز مستقل من الفقهاء المتخصصين في فقه المعاملات المالية الإسلامية ، يقوم بتوجيه نشاطات المصرف ومراقبته والإشراف عليه للتأكد من التزام الإدارة بأحكام ومبادئ الشريعة في المعاملات التي يجريها المصرف. وتتكون أعضاء الهيئة الشرعية في المصرف من (أ. د الصادق الغرياني رئيسا، د. أسامة الصلابي عضوا، د. محمود الغرياني عضوا). ويناط بالهيئة مجموعة من المسؤوليات ومنها:

- تكون الهيئة مسؤولة أمام الجمعية العمومية ومجلس الادارة في حالة وجود قصور في مستوى الرقابة الشرعية بشرط قيام منتسبي الإدارة العامة للمصرف وفروعه بجميع مسؤولياتهم المحددة في هذه اللائحة.
- تجهد الهيئة بإبداء الحكم الشرعي في كل ما يعرض عليها من المصرف، وتعد الهيئة تقريرا سنويا
   يعرض على الجمعية العمومية للمصرف لبيان مدى التزام البنك بأحكام الشريعة الإسلامية.
- تحضر الهيئة أو بعض أعضائها اجتماع الجمعية العامة للإجابة على الاستفسارات المتعلقة بالمسائل الشرعية إن وجدت.
- يكون عضو الهيئة مسؤولا عن افشائه أياً من أسرار المصرف إلى جهات منافسة أو نشر معلومات تعود بالضرر على المصرف.

#### 2.2.5 التجربة الليبية في المصارف الاسلامية (مصرف شمال أفريقيا)

مصرف شمال أفريقيا أنشئ بموجب قرار مجلس إدارة مصرف ليبيا المركزي رقم (1) لسنة 2006، وتم اعتماد نظامه الأساسي كمصرف تجاري بمختلف أنشطته التجارية ووفقا لأحكام قانون المصارف، وبانعقاد الجمعية العمومية غير الاعتيادية للمصرف بتاريخ 10-01-2010 تقرر رفع رأس مال المصرف إلى مبلغ (350) مليون دينار بمشاركة مصرف ليبيا المركزي الذي أصبح المساهم الأكبر في رأس المال المدفوع. تقع الإدارة العامة للمصرف بمدينة طرابلس، ويدار المصرف بمجلس إدارة تم اختياره من قبل الجمعية العمومية للمصرف إدارة تنفيذية تدار بعناصر مصرفية متخصصة تم استقطابها من سوق العمل المصرفي المحلى، ويعول عليها في الدفع بالمصرف إلى الأمام والدخول في سوق المنافسة المصرفية على الصعيدين المحلى والإقليمي، كما يمتاز المصرف بالانتشار الواسع لفروعه ووكالاته في أغلب المدن والمناطق بليبيا يصل إلى (53 فرعا ووكالة). وفي أعقاب المشاكل الإدارية والمالية التي تعرضت لها أغلب المصارف الأهلية العاملة ونظراً لبعض الظروف التي مرت بها هذه المصارف وما ترتّب عليها من سوء تقديم الخدمة المصرفية المطلوبة وتعثر تحصيل الديون التي سبق وأن قدمتها وعجزها عن الوفاء ببعض التزاماتها وكذلك عدم قدرتها على الوفاء بمتطلبات القانون رقم (1) لسنة 2005 بشأن المصارف فيما يتعلق بتوفير رأس المال المطلوب وفقا لأحكام هذا القانون صدر قرار مجلس إدارة مصرف ليبيا المركزي رقم(1) لسنة 2006 باعتماد دمج بعض المصارف الأهلية في المؤسسة المصرفية الأهلية والإذن لها بممارسة أنشطة المصارف التجارية وفقا لأحكام قانون المصارف، حيث تمّ عقد اجتماع الجمعية العمومية للمؤسسة المصرفية الأهلية وفروعها التابعة لها وعددها (42) فرعا. وتم اعتماد النظام الأساسي لها كمصرف تجاري 01-01-01 م وتمّ فيه رفع رأس مال المؤسسة إلى (350) مليون دينار كما تم تغيير اسم المؤسسة ليصبح (مصرف شمال أفريقيا.)

- رسالة مصرف شمال أفريقيا.
- نحن مصرف تجاري يتعامل مع الأفراد والمؤسسات والشركات في جميع أنحاء ليبيا، إضافة إلى سعينا إلى إرضاء مساهمينا وتحقيق عوائد مجزية على استثماراتهم فإننا نعمل على تحقيق رضاء زبائننا وتقديم الخدمات المميزة بطريقة مبتكرة تتماشى وتطورات نمط حياتهم ، كما نعمل على تحقيق رضاء موظفينا وتهيئة الجو المناسب والمناخ الملائم أثناء العمل .... يأتى ضمن أولوياتنا:
  - عميلنا أولا ، فهو ركيزة مجتمعنا واقتصادنا.
  - ازدهار بلدنا وتطور اقتصادنا من خلال تشجيع وتمويل القطاعات الاقتصادية المنتجة.
    - الاهتمام بموظفينا فهم رأس مالنا البشري.
  - القيادة والإدارة الرشيدة المبنية على الصدق والأمانة واتخاذ القرارات الحكيمة والشجاعة.
    - التطوير المستمر للتنظيم الداخلي والاهتمام بالتكنولوجيا.
      - الاهتمام ببيئتنا وسلامتها.
      - تطلعات ورؤيا المصرف.

نطمح لأن نكون أول مصرف في ليبيا في تقديم الخدمات المصرفية الشاملة والمتوافقة مع أحكام الشريعة الإسلامية وفق منهجية تحظى توقعات زبائننا، كما نطمح لأن نقدم جميع هذه الخدمات بسرعة ودقة، وفي سبيل ذلك نسعى لاعتماد التقنية والتكنولوجيا المتطورة في الإدارة والتشغيل والخدمة، كما نسعى لخلق رأس المال البشري الكفؤ والمؤهل والمدرب للتعاطى مع الزبائن باحتراف ومع التكنولوجيا بمهارة وفاعلية.

■ مصرف شمال أفريقيا يفتتح فرعة الإسلامي الأول. الفتتح مصرف شمال أفريقيا فرعة الإسلامي الأول في حي الأندلس بتاريخ 2012/4/22. ويقدم الفرع الخدمات الإسلامية الكاملة. كما ويجري مصرف شمال أفريقيا حاليا دراسة لتحويل كامل فروعه لفروع إسلامية.

#### 3.5 المأمول من التجربة الليبية في المصارف الاسلامية

أن دخول المصارف الإسلامية إلى ليبيا، وإن كان متأخرا، فهو خطوة مباركة نرحب بها ونقدرها، وندعو إلى التوسع فيها، بحيث لا تخلو منها مدينة صغيرة ولا كبيرة في بلادنا، فحاجة الناس إليها كحاجتهم إلى إقامة أسواقهم التي لا غنى لهم عنها بصفة دورية في مدنهم، وذلك لرفع الحرج عن الناس وتخليصهم من شر الوقوع في الربا، فإنه يخلي الديار ويخرب البلاد. (الغرياني، 2009)

يؤكد الكثير من الباحثين والمتخصصين على قدرة الصناعة المصرفية الإسلامية على التوسع والازدهار والارتقاء في المستقبل القريب وبدعم مباشر من المناخ الذي شكلة الربيع العربي من جهة، وارتفاع منسوب الاهتمام الغربي من جهة ثانية، بعدما أظهرت هذه المصارف نجاحا في مواجهة تحديات الأزمة المالية العالمية. (افزاز، 2012)

ويبين (الحوتي، 2012) عضو اللجنة العليا لشؤون الصيرفة الإسلامية بليبيا ورئيس مجلس إدارة الجمعية الليبية للمالية الإسلامية، أنه تمت المصادقة على تعديل قانون مصرفي جديد يضيف فصلا كاملا متخصصا في الصيرفة الإسلامية، وذلك لأول مرة في تاريخ ليبيا. فوفقا للقوانين السارية فإن ملكية المستثمرين الأجانب في المصارف عموما والمرتقب تأسيسها ستحدد على الأرجح - في حدود 20%، بالرغم من أن القانون يسمح بـ49%، وبين أن الخطة الاستراتيجية التي تعكف اللجنة على صياغتها هدفت الحصول على موافقة رسمية لتأسيس مصرف إسلامي جديد لعام 2013، وتحويل بنك تجاري تقليدي وآخر متخصص إلى مصرفين إسلاميين، فضلا عن السماح بتوسيع عدد الفروع والنوافذ الإسلامية، وهو ما قد يرفع حصة المصارف الإسلامية من إجمالي أصول المصارف المحلية إلى 20%، وأشار أن المنتظر من الاستراتيجية المذكورة هو حشد موارد كبيرة لليبيا من أجل تفعيل مؤسسات وموارد مالية إسلامية جديدة كمؤسسات الزكاة والوقف، علاوة على إنشاء شركات للتأمين الإسلامي وصناديق وأدوات الاستثمار، لتكتمل أركان السوق المالية الموافقة للشريعة بليبيا نهاية عام 2014 أو بداية بغرض استقطاب وتوظيف الموارد. فالرؤية الاستراتيجية للمشرع تهدف لتحويل ليبيا إلى مركز مالي إسلامي في صعيد منطقة المغرب العربي .

ويوضح الخبير المالي (الكزة، 2012) أن المصارف الإسلامية قد تؤدي إلى طفرة كبيرة في النتائج التنموية في دولة سكانها من المسلمين ، حيث كشف أن 49% من الليبيين يرفضون التعامل مع المصارف التقليدية بسبب نظام الفائدة، واعتبر أن المصارف الإسلامية يناط بها بالدرجة الأولى دعم الوازع الديني، والتأكيد على نشر سماحة الإسلام، و يأتي بالدرجة الثانية تحقيق الأرباح والمكاسب المتسقة مع روح الشريعة وجوهرها. وشدد على ضرورة فصل ذمة وميزانية المصارف الإسلامية، وإلغاء النوافذ السابقة في المصارف التجارية.

المأمول من المصارف الاسلامية في الجمهورية الليبية إن تتبنا المنهج الإسلامي الشامل، كما ويؤمل منها أن تساهم في تقدم البلد ونهضته، وتصنع الرخاء والتنمية والازدهار في جميع الجوانب والمجالات. فالمصارف الإسلامية تنطلق من ذلك التصور الذي يراه ويحدده الإسلام للكون والحياة. فالأثار التي ستحدثها المصارف الإسلامي والنهضة المتوقعة في مجتمعنا الليبي الاسلامي من تنمية وتطوير وازدها وخصوصا في الجانب الاجتماعي كبير جدا.

## النتائج والتوصيات التى توصلت اليها الدراسة

هدفت هذه الدراسة بشكل رئيس إلى تحديد وبيان واقع تجربة الجمهورية الليبية في تبنيها للمصارف الإسلامية والمأمول منها. وأفرزت الدراسة مجموعة من النتائج ومنها: أظهرت الكثير من الدراسات والأبحاث والكتابات أهمية قطاع الصرافة الاسلامية لدى الدول الإسلامية لدى الدول الإسلامية لدى المصارف الاسلامية أحد الأركان الأساسية في ميدان الصرافة وعلى مستوى العالم. كما تعتبر التجربة الليبية في المصارف الاسلامية تجربة حديثة جدا مقارنة مع الدول العربية والإسلامية الأخرى. وتعتمد التجربة الليبية في المصارف الإسلامية على تجارب الدول العربية والإسلامية الأخرى وقد عملت على إنشاء استراتيجية وطنية خاصة بها وتمتاز بدقة التشريعات والقوانين وسرعة التنفيذ. وتبين النتائج العملية للتجربة الليبية سواء من الناحية النظرية ومن ناحية تقييم التجارب العملية. كما تشير النتائج عن الضعف العام بالمواقع الالكترونية الخاصة بالمصارف الإسلامية التي تمثل التجربة الليبية من حيث حجم المعلومات والبيانات، والتصميم، والخدمات، وبرامج التوعية والارشاد. وكذلك الضعف الإعلامي والتسويقي لبرنامج المصارف الإسلامية في ليبيا سواء على الصعيد المصارف الموضوع. وتبين النتائج أيضا ان هنالك رؤيا على شبكة الانترنت حيث أنه لا يوجد إلا عدد قليل من المقالات التي تدور حول الموضوع. وتبين النتائج أيضا ان هنالك رؤيا السلامية في ليبيا، بحيث تطمح لتكون الأ ولى على مستوى إفريقيا مع نهاية عام 2015.

ومن خلال ما تقدم توصي الدراسة بما يلي: الاهتمام الإعلامي بالتجربة الليبية وتسويق العمل المصرفي الإسلامي بين أفراد المجتمع الليبي، وتوعيتهم بأهميته بالطرق العلمية الحديثة، وخاصة باستخدام وتوظيف التكنولوجيا الحديثة، وكذلك تطوير المواقع الالكترونية الخاصة بنموذجي التجربة الليبية مع المصارف الإسلامية، وهما مصرف الجمهورية ومصرف شمال إفريقيا لما سيلعبانه بالمستقبل من دعم وتحفيز للأخرين على المشاركة في تطوير العمل المصرفي الإسلامي في ليبيا، وأن تساهم الحكومة الليبية بجميع مؤسساتها وقطاعاتها بدعم الخطة الاستراتيجية المبنية للنهوض بالقطاع المصرفي الاسلامي في ليبيا، حيث أنها ستكون محور الثورة الاقتصادية واساس التطور والازدهار في البلاد. والعمل على إجراء المزيد من البحوث والدراسات والمؤتمرات التي تبين أهمية قطاع المصارف الاسلامي، وتبادل الخبرات مع الاخرين وإجراء الدراسات التقييمية للمشاريع المنفذة لعلاج الخلل ودعم نقاط القوة للوصول إلى الغاية المرجوة.

أساليب مؤسسة الزكاة في تحويل مستحِقّي الزكاة إلى المزكّين: دراسة حالة في مؤسسة الزكاة النكاة الحكومية فرع مدينة سيمارنغ، جاوى الوسطى، إندونيسيا

The Zakat Agency's Methodology in Shifting Mustahik to Muzakki: A Case Study in The Semarang Zakat Agency, Central Java, Indonesia.

قدمه: محمد توفيق زمومي، عزمان عبد الرحمن 1 كلية الشريعة والقانون، جامعة العلوم الإسلامية الماليزية، نيلاي

## ملخص البحث

فإن الزكاة هي الركن المالي الاجتماعي من أركان الإسلام الخمسة التي فرضها الله علينا في كتابه المنزل على رسوله الأمين. ولتكون أموال الزكاة موزعة لأصحابها، فلا بد من تنظيمها وحسن إدارتها، وكان تنظيم وإدارة أموال الزكاة بدولة إندونيسيا خاضعة لقانون الزكاة رقم 38 سنة 1999، وينظم القانون طرق إدارة أموال الزكاة على مستوى الدولة أو الأقاليم، رغم أن وجود هذا القانون لم يكن دورا فعالا في رفع مستوى مستحقيها. تحدف هذه الرسالة إلى دراسة مؤسسة من مؤسسات الزكاة الموجودة بإندونيسيا، وهي مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ، وذلك لمعرفة كيفية إدارة الزكاة فيها، وبيان الوسائل التي تستخدمها هذه المؤسسة في توزيع الزكاة إلى المستجقّين وتحديد الأسباب والمشاكل التي تواجهها المؤسسة في تحويل مستجقّي الزكاة إلى المزكين. وأهمها أن جباية أموال الزكاة في مؤسسة الزكاة الخكومية فرع مدينة سيمارنغ تعمل بثمانية أصناف من الزكاة، وتوزيع أموال الزكاة وأهمها: البرامج الانتاجية المناسبة للشريعة، وأموالها لإنقاذ الضعفاء. وأن إدارة مال الزكاة بمدينة سيمارنغ تعمل جيداً، وذلك بوجود عملية جباية أموال الزكاة وتوزيعها وتنظيمها، ولأجل نجاحها فقد وضعت مؤسسة الزكاة ولرامجاً لتحويل مستحقى الزكاة إلى المزكين وأيضا معالجة المشاكل فيها.

#### **ABSTRACT**

Zakat is the main contribution to the social welfare and finance which has its basis from the five pillars of Islam. It is a compulsory obligation towards all the Muslims to pay zakat as the obligation is derived and stated in the Al-Qur'an. Therefore one of the main important things pertaining to zakat is the distribution of zakat which required zakat to be distributed properly and fairly to those people called *mustahiq*. In order to ensure the distribution is done properly, a new systematic system of administration and management of zakat is needed. For instance in Indonesia case specifically, the administration of zakat is based on the Indonesian Law No. 38, Year 1999. There is a huge potential to implement a professional administration and management of zakat in Indonesia and the same situation is foreseen in the Semarang city. This study examined one of the zakat institutions established in Indonesia, it called Semarang Zakat Agency. This paper presents the first field study of aimed to find out how the management of Zakat is in Semarang Zakat Agency, as well as describe the methods used in the distribution of alms to *mustahiq*. Then identify the cause of the obstacles encountered and learn how to overcome it until achieve their goals by changing mustahiq be muzakki. Researcher concluded that the funds collected by Semarang Zakat Agency are used for the benefit of eight ashnaf, this agency has been implementing programs to change mustahiq become muzakki, by doing Economic empowerment and Outreach Efforts. Semarang Zakat Agency already doing properly in managing their zakat fund. The evidence is such as Semarang Zakat Agency has implemented activities of planning, organizing, and monitoring of the accumulation and distribution, and utilization of zakat.

#### المقدمة

تُعتبر مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ إحدى مؤسسات الزكاة النافعة في إندونيسيا. ونشأة مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ في البداية، كانت مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ تسمي بمؤسسة الزكاة والانفاق والصدقة (YAZIS) والتي يتولى إدارتها وزارة الشؤون الدينية (Depag) وقد تم تشعيله بشكل حيد. بالنسبة لضخامة حجم مدينة سيمارنغ وبالنظر في بعض العوامل الموجودة فيها، فغير اسمها إلى مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ. وفي سنة 2008، وافقت الحكومة على ذلك التطور الجدير فأصدرت بعد ذلك مرسوما محليا رقم 4 سنة 2008 يخص لما في الدستور رقم 38 سنة 1999 المتعلق بإدارة الزكاة. وبحذا التطور أصبحت مؤسسة الزكاة، التي كانت من قبل تحت إدارة شخص معين، تحت تدبير رجال الحكومة. وأن بعض الشئون والبرامج وجميع الأنشطة الموجودة من قبل مازالت مستمرة حيث يهتم بما رجال المؤسسة كل اهتمام. وهذه

المؤسسة أصبحت إحدى وكالات الموجودة في مدينة سيمارانغ والتي تعد أفضل الطرق لتخفيف الفقر في مدينة سيمارنغ.<sup>2</sup>

قامت مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ بتنفيذ نشاطاتها رقم 4 عام 2008 عن إدارة الزكاة والإنفاق والصدقة. لقد جاءت هذه النظم كخطوة تابعة للدستور رقم 38 عام 1999 عن إدارة الزكاة.<sup>3</sup>

على أنها أمانة التي تكون الخطوة التالية لنظام الدائرة بمدينة سيمارنغ، هناك أشياء تؤدي إلى إقامة مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ ما يلى:

- 1. كان أكثر الجتمع في هذه المدينة مسلما.
- 2. قد تطورت مؤسسة الزكاة بمدينة سيمارنغ جيدا لكن الأمر بالعكس فيما يتعلق لجمع الأموال وفي استفادتها.
- 3. اجتماع المجلس التنفيذي والمجلس التشريعي وكبراء أو عظماء المجتمع لإقامة مجلس إدارة الزكاة الأمين المتمرس.
- 4. مشاركة مجالس الأعمال والصناعة والهيئة المدنية في استخدام مواهبهم الاجتماعية لسلامة المجتمع. 4

وتتمثل المشاقات أو أحوال مدينة سيمارغ التي أصبحت تحديات مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ في النقاط التالية:

- 1. بلغ الفقر 32 % أو 233، 000 نسمة تقريبا.
- 2. قد أثرت الأزمة الاقتصادية العالمية في الأكثر من 15، 000 نسمة من المحتمع بصورة سلبية.

مقابلة شخصية شفوية مع رئيس قسم المالية، مؤسسة الزكاة الحكومية الفرع مدينة سيمارنغ، السيد بامبانغ في 2013/4/1م.

<sup>&</sup>lt;sup>3</sup> Latar belakang & Sejarah Pendirian BAZIS. Retrieved 13<sup>th</sup> September 2012 from http://www.baziskabsemarang.com

<sup>&</sup>lt;sup>4</sup> Ibid

- 3. عدد الطلاب الذين يحتاجون المساعدة قدر 6، 000 طالبا.
- 4. عدد الطلاب الذين توقفوا عن الدراسة قدر 150 طالبا في كل سنة.
  - قد أصابت بعض ولاية سيمارغ بمصائب العالم. 5

لم يتداول دستور جمهورية إندونيسيا رقم 38 عام 1999 ونظام الدائرة رقم 4 عام 2008 بين جميع طبقات المجتمع، لذلك أصبح الأغلبية الساحقة لايعرفون ما يجري في المجتمع ولا يفهمون الأشياء جيدا، بالرغم من أن الهدف الرئيسي من ذلك كله هو توعية وتشجيع الذين يؤدون الزكاة وصيانة مؤسسة الزكاة.

# أساليب المؤسسة في تحويل مستحِقّي الزكاة إلى المزكّين

ليكون تمويل المساكين نافعا، بحيث يرفع مستواهم الاقتصادي والاجتماعي وليزول التحاسد في حياة الجمتع، فيحتاج هذا التمويل الإدارة الجيدة والتنظيم الصالح من قبَل المجتمع والحكومة. وفي هذا الأمر فقد أصدرت الحكومة بمدينة سيمارنغ قانونا مدنيا أي "Peraturan Daerah" يتعلق بإدارة وتنظيم أموال الزكاة والإنفاق والصدقة، وهذه القانون يهدف إلى إيجاد التعاون والإرشاد والخدمة على المزكين والمنفقين والمصدقين أو الواهبين والموصين، وأيضا إلى أصناف مستحقي الزكاة.

لقد ركزت مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ بأكبر تركيز في 3 جوانب، وهي التمكين الاقتصادي، والتعليم، والصحة، هذه من أكبر نسبة في إدارة الزكاة في مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ. وتحاول هذه الدراسة خاصة في التمكين الاقتصادي، كما يرى من جوانب مختلفة أن التمكين الاقتصادي هو وجود تأثير كبير في تحويل مستحقى الزكاة إلى المزكين.

5

<sup>&</sup>lt;sup>5</sup> Ihid

<sup>&</sup>lt;sup>6</sup> Peraturan Daerah Kabupaten Semarang Nomor 4 Tahun 2008 Tentang Pengelolaan Zakat, Infaq, Dan Shadaqah.

ولأجل نجاح القانون السابق من قبل الحكومية، فقد وضعت مؤسسة الزكاة طرقا وبرامجا لتحويل مستحقي الزكاة إلى المزكين وذلك عن طريق تمويل مستحقي الزكاة برنامجا إنتاجية مع رقابة وإرشاد المؤسسة لهم.

والبرامج الانتاجية التي أصدرتها المؤسسة، هي: 7

أ. برنامج العمل المعتمد على اكتفاء الذاتي

ب. برنامج إرشاد البائعين والتعاون لتنمية تحارتهم.

ج. تدريب العاطلين عن العمل والمطرودين من أعمالهم.

أولا: برنامج العمل المعتمد على اكتفاء الذاتي

برنامج العمل المعتمد على اكتفاء الذاتي يعني بتكوين الشركة الإسلامية، والهدف هي التعاون على المساكين من غير القرض أي سمي بقرض الحسن، 8 نحو التعاون في شراء الجوالة وإعطاء رأس المال لكسب المعيشة. وقد قرر رجال الممتحنين من بيت المال على صلاحية ونجاح هذه الشركة. وبجانب ذلك، ساعد مؤسسة الزكاة مجتمع غير المسلمين في كسبهم، ولكن كان رأس المال لمساعدتهم لا يؤخذ من مال الإشتراك.

جعلت مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ بعض الطرق لمساعدة المستحقين في حفظ مصلحة حياتهم، بأهداف وتحسين مستوى معيشتهم حتى يكون المزكين قادرين في مساعدة المحتاجين. وهذه كلها لإبتغاء مرضاة الله وأخذ الحكمة من فريضة الزكاة.

وقد شرح في كتاب فقه السنة لسيد سابق أن الزكاة اسم لما يخرجه الإنسان من حق الله تعالى الله الفقراء. وسميت زكاة لما يكون فيها من رجاء البركة، وتزكية النفس وتنميتها بالخيرات فإنها مأخوذة

<sup>7</sup> مقابلة شخصية شفوية مع رئيس قسم المالية، مؤسسة الزكاة الحكومية الفرع مدينة سيمارنغ، السيد بامبانغ في 2013/1/31م.

<sup>8</sup> القرض الحسن هو أحد أبواب التكافل الاجتماعي التي شرعها الإسلام وحث عليها ورتب عليها الأجر. الشرق الأوسط، جريدة العرب الدولية. الثلاثاء، 10 شوال 1430 هـ، 29 سبتمبر 2009.

دور مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ كواسطة بين المزكين والمستحقين قد عمل جميع واجباتها على أساس الشريعة الإسلامية، لأن الشريعة كلها مصالح، أينما كانت المصلحة فثم وحه الله تعالى وهي مبنية على جلب المصالح ودرء المفاسد والزكاة حكمها هو درء مفاسد وجلب مصالح الخاصة والعامة. ولكن التركيز يكون على المصالح العامة ويقوم المصالح الأخروية على الدنيوية فتفرد هيكل الزكاة أنه يبحث دائمًا عن المصالح الأخروية ثم المصالح الدنيوية العامة التي ترجع على الكافة بالطهر والنماء.

وبهذه المساعدة سوف يستطيع المستحق يرقي حياته، مثلا بالعمل التجاري، لأن الثروة التجارية مصدر من مصادر أموال الزكاة في هذه المؤسسة. وزكاة الثروة التجارية أو العروض التجارية تعني المال الذي يعده المسلم للبيع أي للتجارة.

ثانيا: إرشاد البائعين والتعاون لتنمية تجارتهم.

أموال الزكاة التي أخرجه مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ لبرامج إنتاجية أو استثمارية التي تعطي المستحقين القدرة إلى أن يكونوا على طريقة تنظيم إقتصادي من المساكين أحدها يعني برنامج إرشاد البائعين والتعاون لتنمية تجارتهم، هذا البرنامج دائما عمله بالمؤسسة الحكومية لمساعدة ولمراقبة البائعين في الأسواق الذين لدبهم مستوى ضعيف في تجارتهم. إن هذا يكون

دورا كبيرا في تحويل مستحقي الزكاة إلى المزكين، لأن مؤسسة الزكاة الحكومية تساعد وترافق البائعين لتنمية أو تطوير أعمالهم ومساعدتهم على زيادة أعمالهم وارتفاعهم لتكنوا مزكين. 13

لقد اختارت مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ وتوجهت مستحقين خاصة من الفقراء الذين في مستوى العمر المنتج التمكن على إقتصادهم.

ثالثا: تدريب العمل العاطلين والمطرودين من أعمالهم.

وبجانب ذلك مؤسسة الزكاة الحكومية تكوين البرنامج في تدريب العمل العاطلين والمطرودين من أعمالهم، مثل تدريب أو تمرين النفايات البلاستيكية، وهذا البرنامج عمل مؤسسة الزكاة الحكومية لمساعدة العاطلين والمطرودين من أعمالهم كي أن يكونوا مستمرين في أعمالهم، وهذه أيضا طريقة أي أسالب لتحويل مستحقى الزكاة إلى المزكين بمؤسسة الزكاة الحكومية فرع مدينة سيمارنغ. 14

# المشكلات التي تواجهها المؤسسة وطريقة لمعالجتها

إدارة أموال الزكاة والإنفاق والصدقة هي عملية التخطيط والتنظيم والتنفيذ والإشراف على جباية الزكاة والإنفاق والصدقة وتوزيعها والإستفادة منها. <sup>15</sup> وأهدافها هي نمو الوعي ونمو المؤسسات الدينية في الحياة، وخاصة في تحصيل وحدمات الزكاة لتكون أنفع لإيجاد المصلحة والعدالة في الحياة الاجتماعية. <sup>16</sup>

<sup>15</sup> Peraturan Bupati Semarang No: 66 Tahun 2008 Tentang Susunan Organisasi Dan Tugas Pokok, Fungsi Serta Uraian Tugas Badan Amil Zakat, Infaq Dan Shadaqah Kabupaten Semarang.

<sup>14</sup> نفس المرجع

<sup>&</sup>lt;sup>16</sup> Penjelasan Atas Peraturan Daerah Kabupaten Semarang Nomor 4 Tahun 2008 Tentang Pengelolaan Zakat, Infaq, Dan Shadaqah.

## أولا: المشكلات في إدارة الزكاة

وللحصول والتحقيق على هذا الهدف كانت مؤسسة الزكاة لها المشكلة، وهي فيما يلي: 17

- أ. كان المزكين لم يفهموا على أن إخراج الزكاة ليست إلا مرة واحدة، أي أن أنهم يعلمون أن إخراج مال زكاة الفطرة في يوم العيد فحسب.
- ب. كان وعي المزكين محدودا، ولكن كان معظمهم من الموضفين الحكوميين، وأما صنف الآخر من المجتمع أنهم لا يريدون أن يخرجوا زكاتهم إلى مؤسسة الزكاة.
  - ج. أن الدعم من رجال الحكومة سيمارنغ لم يكن كافيا.
  - د. وأن الأموال التشغيلية في إدارة الزكاة لاتزال محدودة.

ومن هنا، يجب أن نعلن أن نجاح "مؤسسة الزكاة" في تحقيق أهدافها وآثارها في حياة الجتمع المسلم وعلاج مشكلاته الإقتصادية والإجتماعية من مطاردة الفقر والعوز، وإقامة الضمان الاجتماعي الشامل، وتأمين ذوى الحاجات الطارئة وتقريب الفوارق بين الأفراد والفئات، وتطهير الجماعة من أسباب التحاسد والتباغض، وإعانة الأخيار على إصلاح ذات البين، وتعزير الدعوة إلى الإسلام، وتثبيت عقيدته، وتأليف القلوب عليه، وغير ذلك مما تطبيقنا لها. وبعبارة أخرى: إن الزكاة لا تؤتى أكلها، ولا يجتنى ثمرها، إلا بشروط يجب توافرها. وبإهمال هذه الشروط أرى أن إصدار أي قانون للزكاة لا يحقق ما ينشده المخلصون من ورائه.

وقال الدكتور محمد إبراهيم أن المنهج الذي يتبعها مؤسسة الزكاة في التوجه عن المسائل الخلافية خاصة عما تتعلق بالزكاة، وهي فيما يلي: مصالح الفقراء والمساكين، والاحتياط بأن لا يكون

<sup>17</sup> مقابلة شخصية شفوية مع رئيس قسم المالية، مؤسسة الزكاة الحكومية الفرع مدينة سيمارنغ، السيد بامبانغ في 2013/1/31

<sup>18</sup> القرضاوي، يوسف . 2001. دور الزكاة في حل المشكلات الاقتصادية وشروط نجاحها. دار الشروق. ص. 58

المال دائما في يد صاحبه، ولكن فيه حق الغير أي حق للفقراء والمساكين، والإنصاف والعدالة بين أصحاب المال. 19

ثانيا: طرق مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ في معالجة المشاكل

إن المهمة الأولى للزكاة هي علاج مشكلات الفقر علاجا جذريا أصيلا لا يعتمد على المسكنات الوقتية، أو المداواة السحطية الظاهرية. حتى إن النبي صلى الله عليه وسلم لم يذكر في بعض الأحيان هدفا للزكاة غير ذلك، كما في حديثه لمعاذ حين أرسله إلى اليمن، وأمرهم أن سلم من أسلم منهم: "أن الله افترض عليهم صدقة في أموالهم تؤخذ من أغنيائهم فترد على فقرائهم" (رواه الجماعة عن ابن عباس).

ولتحليل هذه المشكلة فعلت مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ بما يلي: 21

- أ. إعطاء التوجيه والإرشاد إلى المجتمع عما تتلعق بالزكاة. وذلك إما بالحوار والمناقشة وإما بوصيلة
   الكتابة في المجلة.
- ب. المراقبة في تعيين القرار من رجال الحكومة سيمارنغ، وهذا لتحقيق المساعدة من رجال الحكومة.
  - ج. جعل عملية الإقتصادية مناسبة بالإقتصاد الإسلامي.
    - د. إرتقاء الملاحظة على أعمال رجال المؤسسة الزكاة.

بنظر إلى معالج الأول يعني إعطاء التوجيه والإرشاد إلى المجتمع عما تتلعق بالزكاة. وذلك إما بالحوار والمناقشة والكتابة في المجلة، أن في كتاب دور الزكاة في حل المشكلات الاقتصادية وشروط

<sup>&</sup>lt;sup>19</sup> Ibrahim, Abdullah. 1997. *Zakat, Beberapa Masalah Semasa dan Penyelesaiannya*. Jami'ah Islamiah Kedah (INSANIAH): Pustaka Reka. p. 6

<sup>21</sup> . 2001 . 2001 . 2001 . 2001 . 2001 . 2001 . 2001 . 2001 . 2001 . 2001 . 2001

<sup>&</sup>lt;sup>21</sup> مقابلة شخصية شفوية مع رئيس قسم المالية، مؤسسة الزكاة الحكومية الفرع مدينة سيمارنغ، السيد بامبانغ في 2013/1/31

نجاحها للشيخ يوسف القرضاوي، قد شرح أن مشكلة الجهل كثيرا ما يكون سبب الفقير لا يستطيع أن يتعلم ولا أن يعلّم أولاده. كيف، وهو في حاجة إليهم ليعلموا معه منذ نعومة أظفارهم؟ لهذا كان من الحاجات الأصلية التي يجب أن تتوافر للفقير في عصرنا من أصيلة الزكاة أن يتعلم ويتعلم أولاده ما لابد لهم منه لدينهم ودنياهم. وقد ذكرنا من قبل ما قال علماؤنا: إن المتفرض لطلب العلم له حق في الزكاة، بخلاف المتفرغ للعبادة كما قالوا: أن يعطى من الزكاة ما يشترى به كتب العلم اللازمة له إن كان من أهله. بل نصّ بعضهم على حواز نقل الزكاة إلى غير بلدها على خلاف الأصل، إذا كانت لطالب علم محتاج بلا كراهة، وعد بعضهم طالب العلم (في سبيل الله).

وبنظر إلى معالج الثاني يعني المراقبة في تعيين القرار من رجال الحكومة سيمارنغ، وهذا لتحقيق المساعدة من رجال الحكومة، كما شرح في مقالة "ورقة مؤسسة الزكاة" لمحمد إبراهيم، أن من المبادئ المهمة لترقية المؤسسة إعطاؤها سلطة الاختيار ابتداء وعلى هذا لا بد من إعطاء الإدارة العليا بالديوان وتحت إشراف المجلس الأعلى للزكاة سلطة الاختيار ابتداء وألا يخضع التعيين لأجهزة الخدمة العامة وقواعدها التي تقوم على المؤهل وتاريخ التأهيل فقط.

كما أن الزكاة فريضة على كل ذي مال من المسلمين وهي كذلك مصدر التمويل المحتمل للرفاهية العامّة. لتكون مصدر التمويل الذي يتمكن من الإستفادتة لرفاهية المحتمع. وفي بلاد إندونيسيا تحتاج إدارتما بمسؤولية وإحتراف.

رأى حسبي الصديقي أن لجباية أموال الزكاة ينبغي أن يعقد مؤسسة الزكاة لإدارة أموال الزكاة. وعند الشرازي أن على رئيس الجمهورية يجب عليه عقد مؤسسة الزكاة وإبعاثهم لجباية وتوزيع أموال الزكاة من مزكين.

752

<sup>22</sup> القرضاوي، يوسف . 2001. دور الزكاة في حل المشكلات الاقتصادية وشروط نجاحها. ص. 32

<sup>23</sup> محمد، إبراهيم. ورقة مؤسسة الزكاة. جمهرية السودان المعهد العالي لعلوم الزكاة. ص. 16

<sup>&</sup>lt;sup>24</sup> Ash-Shiddieqy, Hasbi. 1984. *Pedoman Zakat*. Jakarta: Bulan Bintang. p. 77.

وينبغي المؤسسة الزكاة أن تتألف من الذين علموا علم الزكاة، والسيطرة على المشاكل المرتبطة فيها، متمثلة من الصدق والأمانة، وإلا فلا تصل الزكاة إلى مستحقيها.

في هذه المسألة رأى أمين رئيس على أن هناك سببان لماذا كان أداء الزكاة غير متداولة، وهما أولا أن المزكون لم يلتزموا بواجبتهم الدينية. ثانيا، وأنهم قد اعترفوا على واجبة إخراج الزكاة، ولكنهم لا يصدقون تماما بالمؤسسة الزكاة. 25

من هذه خصائص يظهر على أن إيمان المسلمين ما زال ضعيفا ومعنى أن علامة البخيل موجود في أنفسهم. وعند داود على أن الوعي الديني من المسلمين فقط ظهر عندما إخراج زكاة الفطر فحسب، وأما في إخراج زكاة المال لا يزال ضعيفا وقليلا. لذلك ينبغي للعاملين والمدعي أن يعقد التحقيق والإرشاد للمسلمين عما تتعلق بضرورية الزكاة في الحياة الإجتماعية.

#### الخاتمة

بهذه الرسالة وحد الباحث أنّ إدارة مال الزكاة بمدينة سيمارانغ قد كانت حسنة وصالحة، وذلك بوجود العملية جمع مال الزكاة وتوزيعها وتنظيمها، ولأجل نجاح القانون السابق من قبل الحكومية، فقد وضعت مؤسسة الزكاة طرقا وبراجحا لتحويل مستحقي الزكاة إلى المزكين وذلك عن طريق تمويل مستحقي الزكاة برناجحا إنتاجية مع رقابة وإرشاد المؤسسة لهم. وجباية أموال الزكاة في مؤسسة الزكاة الحكومية فرع مدينة سيمارنغ تعمل بثمانية أصناف من الزكاة، وتوزيع أموال الزكاة وأهمها: البرامج الانتاجية المناسبة للشريعة، وأموالها لإنقاذ الضعفاء، منها: مساعدة اليتامي والخدمة الصحية ومساعدة صاحب الكوارث، وأيضا إعطاء المنحة الدراسية. ومن بعض البرامج الإنتاجية التي اصدرتها المؤسسة، هي: برنامج العمل المعتمد على اكتفاء الذاتي، وبرنامج إرشاد البائعين والتعاون لتنمية بحارتهم، وتدريب العاطلين عن العمل والمطرودين من أعمالهم. وأعظم المشاكل التي تواجهها المؤسسة هي

<sup>&</sup>lt;sup>26</sup> Ali, Mohamad Daud. Sistem Ekonomi Islam Zakat dan Wakaf. Jakarta: UI Press. p. 63

نقصان وعي المجتمع لدفع الزكاة إلى المؤسسة، وهذه المشكلة مبنية على أن المجتمع لا يعرف جيدا عن المؤسسة. لذلك أكثرية المزكين من صنف رجال الموظفين الحكوميين، وأما صنف الآخر من المجتمع أنهم لا يريدون أن يدفع زكاتهم إلى مؤسسة الزكاة. بهذه المشكلة، إن المؤسسة تمت معالجتها بطريقة تعريف المؤسسة للمجتمع، وهي بإعطاء التوجيه والإرشاد إلى المجتمع وما يتعلق بالزكاة، وبطريقة الحوار وغيرها.

أبوبيصير أحمد مصبا

## مقدمة

إن علم الاقتصاد من العلوم التي تعتمد في تحليلها على البيانات الكمية والنوعية والإحصاءات المختلفة؛ لغرض قياس مستوى النشاط الاقتصادي عبر في المجتمع، وإرساء دلائل كمية نمطية معنوية لمحددات السلوك الاقتصادي ومدى تأثره وتفاعله بالبيئة المحيطة به. ويتم قياس النشاط الاقتصادي عبر تجميع ورصد لتطورات أسعار السلع والخدمات وعوامل الإنتاج، وكذلك حجم التدفقات والمبادلات التي تتم في الأسواق، ويتم تجميع هذه القيم بالأسعار الجارية أو الثابتة حسب عدة معايير تصنيف، أصبحت أغلبها دولية متعارفاً عليها. أما النشاطات غير السوقية فإنه يتم قياسها إما بتكلفة إنتاجها أو بافتراض سعر لها مثل الكلفة أو سعر الظل، ومع الانفتاح والتحرير الاقتصاديين، وتغيير دور الدولة في الشأن الاقتصادي لمصلحة القطاع الخاص، أخذت مسألة القدرة على المنافسة في الأسواق الدولية تحتل مساحات متزايدة في الأدبيات ذات العلاقة، سواء كان ذلك على المستوى الوطني (الأسواق الدولية ترتكز على هسألتين أساسيتين أ:

- تتعلق الأولى بالمفهوم، من حيث معنى المنافسة الدولية ومضمونها وارتباطها بالأهداف الوطنية وكيفية التعامل معها.
  - تتعلق الثانية بمؤشرات المنافسة الدولية.

فالمشكلة البحثية لهذه الدراسة تتمثل في الضعف الواضح للقدرة التنافسية للمنتوجات الليبية في الداخل وفي الخارج ، ومما زاد من عمق هذا الاختلال هو التطلع للانضمام لمنظمة التحارة العالمية Wto.

منهجية البحث يعتمد الباحث في هذه البحث على المنهج الوصفي التحليلي من خلال جمع البيانات من الكتب والندوات والتقارير والمنشورات ذات العلاقة بموضوع الدراسة .

لذلك فأن هذا البحت يتركز على المحاور التالية:

المحور الأول: – القدرة التنافسية للصناعات التحويلية في التجارة الخارجية الليبية.

المحور الثاني: – متطلبات تحسين القدرة التنافسية.

<sup>&</sup>lt;sup>1</sup> بلقاسم العباس: المؤشرات المركبة لقياس تنافسية الدول، إصدارات المعهد العربي للتخطيط، الكويت، العدد 75، لسنة 2008، السنة الرابعة، ص2.

#### المحور الأول: - القدرة التنافسية للصناعات التحويلية في التجارة الخارجية الليبية.

في ظل مفهوم الدولة الليبرالي، كانت وظائف الدولة تنظيمية مقتصرة على الحد الأدنى (الأمن، القضاء، الجيش، الدبلوماسية)، أما سائر الوظائف الأخرى فقد كانت من اختصاص القطاع الخاص، وكان من المحظور على الدولة التدخل في الشؤون الاقتصادية والاجتماعية، وكانت المنافسة أساساً منافسة محلية، وكان يترك للأسواق المحلية تحديد الإجابات عن التساؤلات لأي نظام اقتصادي وهي تتمثل في: ماذا؟ وكيف؟ ولمن تنتج؟ في ظل السياسات الاقتصادية الكلية والجزئية التي تحدد البيئة التي تجري فيها التفاعلات بين المتعاملين في إطار هذه التساؤلات الثلاثة، في إطار البحث عن مصادر النمو الاقتصادي والسياسات المعززة له في المدى الطويل، وفي إطار الجهود المبذولة لمعالجة تردي الأوضاع الاقتصادية بتصميم وتبني وتنفيذ برامج استقرار وتصحيح اقتصاديين بدأ الدور الإنمائي للدولة يتراجع مقابل تقدم الدور التصحيحي الذي يرتكز على ثلاثة محاور هي2:

- التحرير الاقتصادي، مثل إزالة القيود والمعوقات أمام التجارة الخارجية، ودعم المنافسة في ظل تشجيع القطاع الخاص.
- إصلاح القطاع العام، وذلك من خلال تحسين إدارة المصروفات العامة، وإصلاح الخدمة الوطنية، وتحسين أداء المؤسسات العامة بتخصصها أو إعادة هيكلها.
  - سياسة اقتصادية تحقق استقرار الاقتصاد الكلي.

ومن ثم سيتم إيضاح مجموعة من المفاهيم في هذا المحور، والتي منها مفهوم التنافسية، أنواع المنافسة، مؤشرات قياس تنافسية الصناعات التحويلية، والقدرة التنافسية للصناعات التحويلية الليبية.

#### أولاً: - مفهوم التنافسية.

أصبحت عبارة تنافس وتنافسية ذات وقع متزايد الأهمية في عالم اليوم، وأصبح للتنافسية مجالس أو هيئات أو إدارات، ولها سياسات واستراتيجيات، وتقدم عنها تقارير لكبار المسؤولين ، وليس لرجال الأعمال فقط، حتى إن بعض الدول كالولايات المتحدة الأمريكية مثلاً تعد هبوط التنافسية الاقتصادية أحد العناصر التي تحدد الأمن القومي للبلاد. ولم تعد التنافسية حاجة مقتصرة على الشركات لكي تبقى وتنمو، أو الأفراد ليحظوا بفرص العمل، بل باتت حاجة ملحة للدول التي ترغب في استدامة وزيادة مستويات معيشة أفرادها ومشاركتهم في التقدم العالمي.

استند هذا الاهتمام بمناخ التنافس إلى التغيرات الحاصلة على النشاط البشري من مختلف جوانبه، في التنظير الاقتصادي وفي التنظيم الاجتماعي والسياسي، فقد عرف العالم في العقود الأخيرة تطورات واسعة في الفكر الاقتصادي حول محددات القدرة التنافسية، فهناك التطورات في نظريات النمو والتحارة الجديدتين، إضافة إلى التغيرات على نظريات إدارة الإنتاج والتوزيع والتخزين، وبروز نظرية إدارة الجودة الكاملة، والتنافس في ذلك عوضاً عن المنافسة في السعر، كما استند الاهتمام إلى التطورات على المستوى العلمي والتكنولوجي وتقاصر المسافة بين العلم والتقانة أو بين الاختراع وتطبيقه، ولم تعد الصناعة مرتبطة بالضرورة، وفي كل فروعها، بكثافة رأس المال بقدر ارتباطها بالمحتوى المعرفي ومهارات العاملين والإدارة 8.

إن السبب وراء نجاح العديد من الشركات والدول يعود إلى النظام الاقتصادي المؤسسي لهذه الدول، الذي يتمتع بمواصفات تمنح الشركات مزايا تنافسية في مضامير معينة، أما المنافسة الحقيقية والعولمة والابتكار السريع والانتشار الواسع النطاق للمعلوماتية، فهي عناصر تساعد الدول على اكتساب أسواق حديدة والتقدم بسهولة، وينشأ هذا النوع من التقدم من نظرية (الميزة النسبية)، وبموجبها ينبغي أن تركز مؤسسات كل دولة على بعض أجزاء الاقتصاد من أحل تحقيق أقصى المكاسب، وتشكل الموارد الطبيعية بعض هذه الأجزاء، فيما تُكون الدولة بعضها الآخر من أحل ترسيخ الميزة التنافسية.

3. <sup>3</sup> محمد عدنان وديع: القدرة التنافسية وقياسها، إصدارات المعهد العربي للتخطيط، الكويت، العدد 24، لسنة 2003، السنة الثانية، ص3.

<sup>2</sup> رياض بن جليلي: سياسات تطوير القدرة التنافسية، إصدارات المعهد العربي للتخطيط، الكويت، العدد 83، لسنة 2009، السنة الثامنة، ص2-

وبالنسبة لمفهوم المنافسة فليس هناك من مفهوم متفق عليه بشأنه، الأمر الذي يعني أن تغيير المنافسة يوحي بمعانٍ كثيرة للعديد من المهتمين به، فالبعض يربط المفهوم بالتكلفة المنخفضة أو بسعر الصرف، والبعض الآخر يربطه بالقيادة التقنية أو معدل النمو والإنتاجية أو ميزان التحارة الخارجية، وفي بعض الأحيان لا يكون النقاش حول الأوضاع الراهنة للاقتصاد بل حول سلوك المتعاملين على أساس ارتباط مفهوم المنافسة بالتسابق أو الخصومة 4.

إن مفهوم التنافسية مفهوم دائم التغير، ولذلك لا يمكن تعريفه من وجهة نظر جامدة، وقد شهد مفهوم التنافسية تغيراً ملحوظاً مؤخراً، وخاصة في ظل التغيرات المتلاحقة في العلاقات التجارية العالمية، والتغير المماثل في أسس التنظيمات الصناعية العالمية، ومع ذلك فإنه يوجد اتجاه لتعميم بعض التعريفات العملية لمفهوم التنافسية على المستوى الكلى والقطاعي وكذلك على مستوى المنشأة 5.

إن مفهوم المنافسة الدولية، إذا ما تم تعريفه بطريقة أو بأخرى، هو امتداد أو محاكاة لنموذج السوق التنافسية المتسمة بالكفاءة، وللكفاءة أبعاد أهمها 6:

- كفاءة تخصيص الموارد: وتستوجب تسعير السلع النهائية بما يعكس تكلفة توفيرها، أي إن السعر يجب أن يساوي التكلفة الحدية أو ما يقرب منها.
- كفاءة الحجم: وتستوجب إمكان وضع حدود على عدد المؤسسات التي تدخل في قطاع ما، الصناعة مثلاً، بحيث لا ينخفض حجم المؤسسات دون الحجم الأمثل.
  - الكفاءة الحركية: وتستوجب تنشيط الاختراع والتحديد في المؤسسات القائمة عن طريق الاهتمام بالبحوث والتطوير.
- الكفاءة المرتكزة على التنافس والتنظيم: وتستوجب توفير الظروف التنافسية حارج المؤسسة، وكذلك الظروف التنظيمية داخلها للضغط على
   الإدارة لبذل أقصى الجهود الممكنة لخفض التكاليف.

إذاكان من المقبول أن الشركات يمكن أن تطور تنافسيتها، فإن الاختيار الحقيقي للتنافسية العالمية هو الإنجاز في الأسواق العالمية، وإن التنافسية مثلها مثل التجارة ترتفع في العمل في بنية دولية مفتوحة، وقد فتحت أعداد متزايدة من البلدان والقطاعات حدودها أمام المنافسة الدولية، ومع ذلك لا تزال التنافسية غير معرفة بشكل واضح ودقيق؛ إذ تتزاوح بين مفهوم ضيق يتركز على تنافسية السعر والتجارة، وبين حزمة شاملة تكاد تتضمن كل نشاط للاقتصاد والمجتمع، وقد تبنى فريق مشروع التنافسية في المعهد العربي للتخطيط، خلال عمله في إعداد تقرير عن تنافسية الاقتصاديات العربية، مفهوماً واضحاً للتنافسية يركز أساساً على الأسواق الخارجية والاستثمار الأجنبي المباشر كميادين أساسية لتطوير التنافسية العربية (تتعلق التنافسية الوطنية بالأداء الحالي والكامن للأنشطة الاقتصادية المرتبطة بالتنافس مع الدول الأخرى).

ووضع لهذا التعريف مجالاً يتناول الأنشطة التصديرية ومنافسة الواردات والاستثمار الأجنبي المباشر.

ويعد الاقتصاد تنافسياً إذا ما تمكن من النمو دون قيد على ميزان المدفوعات، ويكون أداؤه جيداً إذا ما نما بسرعة أعلى من اقتصاديات أخرى. وتجدر الإشارة في هذا المجال إلى اختلاف نتائج المنافسة على مستوى الشركة ومستوى الاقتصاد، فعلى المستوى الأول (الشركات) فإن مضمون المنافسة هو رابحون وخاسرون، وعلى المستوى الآخر (الاقتصاد) فإن نجاح دولة في السوق العالمية لايعني بالضرورة فشل دول أخرى، فنمو الصادرات يحدث طلباً على الواردات، وتعرف هيئة الولايات المتحدة للمنافسة الصناعية المنافسة الدولية على أنها: "قدرة الدولة على إنتاج السلع والخدمات التي تنجح في امتحان أو اختبار الأسواق الدولية، وفي الوقت نفسه المحافظة على توسيع الدخل الحقيقي للمواطنين"8.

 <sup>4</sup> رياض بن جليلي: سياسات تطوير القدرة التنافسية، مرجع سابق، ص4.

<sup>&</sup>lt;sup>5</sup> الْتَقريرُ الاقتصادي العربي الموحد، صنَّدوق النقد العربي، التجارة الخارجية للدول العربية ،2008، ص152.

رياض بن جليلي: سياسات تطوير القدرة التنافسية، مرجّع سابق، ص $^6$ 

محمد عدنان وديع: القدرة التنافسية وقياسها، مرجع سابق، ص4.

 $<sup>^{8}</sup>$ رياض بن جليلي: سياسات تطوير القدرة التنافسية، مرجع سابق، ص $^{5}$ .

كما تعرف منظمة التعاون الاقتصادي والتنمية التنافسية على مستوى الاقتصاد الوطني بأنها: "الدرجة التي يمكن وفقها، وفي شروط سوق حرة وعادلة، إنتاج السلع والخدمات التي تواجه أذواق الأسواق الدولية في الوقت الذي تحافظ على توسيع الدخل المحلى"<sup>9</sup>.

ووفقاً لتقرير المنتدى الاقتصادي العالمي عن التنافسية عام 1995 ، عرف التنافسية بالنسبة للدول بأنحا " خلق المزيد من الثروة عن منافسيها في الأسواق الدولية " <sup>10</sup> .

#### ثانياً: -أنواع التنافسية.

- تنافسية التكلفة أو السعر: فالبلد ذو التكاليف الأرخص يتمكن من تصدير السلع إلى الأسواق الخارجية بصورة أفضل، ويدخل هنا أثر سعر الصرف 11، فعند الإشارة إلى سعر الصرف يعني سعر وحدة العملة الأجنبية مقومة بوحدات من العملة الوطنية 12.
  - التنافسية غير السعرية: باعتبار أن حدود التنافسية معرفة بالعديد من العوامل التقانية وغير السعرية.
- التنافسية النوعية : وتشمل بالإضافة إلى النوعية والملائمة عنصر الابتكارية، فالبلد ذو المنتجات المبتكرة ذات النوعية الجيدة، والأكثر ملاءمة للمستهلك، وحيث المؤسسات المصدرة ذات السمعة الحسنة في السوق، يتمكن من تصدير سلعة حتى ولو كانت أعلى سعراً من سلع منافسيه.
  - التنافسية التقانية : حيث تتنافس المشروعات من خلال النوعية في صناعات عالية التقانة .

#### ثالثاً: - مؤشرات قياس تنافسية الصناعات التحويلية.

إن على الدول النامية زيادة أنشطتها التكنولوجية إذا ما أرادت الالتحاق بالدول المتقدمة ، فهي مصدر الميزة التنافسية في الصناعة التي تعتبر من ضروريات العولمة والمنافسة الدولية ، كما أنحا تعمل على تحسين كفاءة الإنتاج وأرتفاع مستويات الجودة <sup>14</sup> ، فعلى مستوى الاقتصاد الكلي، فإن التنافسية هي قدرة الاقتصاد على توفير مستوى معيشة مرتفع للمواطنين، قياساً بقدرة الاقتصاد على خلق الثروات، من خلال تعظيم الإنتاجية ودعم قدرات الابتكار، وقد قامت المؤسسات الدولية باستحداث العديد من المؤشرات التي تقيس تنافسية الصناعات التحويلية وهي كالتالي:

#### 1- الربحية:

تشكل الربحية مؤشراً كافياً على التنافسية الحالية، وكذلك تشكل الحصة من السوق مؤشر التنافسية، إذا كان المشروع يعظم أرباحه، أي أنه لا يتنازل عن الربح لمجرد غرض رفع حصته من السوق، ولكن المشروع يمكن أن يكون تنافسياً في سوق تتجه هي ذاتما نحو التراجع، وبذلك فإن تنافسيته الحالية لن تكون ضامنة لربحيته المستقبلية، ومن ثم فإن ربحية المشروع الذي يريد البقاء في السوق تمتد إلى فترة من الزمن، فالمنافع المستقبلية للمشروع تعتمد على إنتاجيته النسبية وتكلفة عوامل إنتاجه، وكذلك الجاذبية النسبية لمنتجاته على امتداد فترة طويلة، وعلى إنفاقه الحالي على البحث والتطوير أو البراءات التي يحصل عليها 15.

فالمشروع الصناعي قد يكون مربحاً للمستثمر الفرد وذلك نتيجة لإعفائه من الرسوم الجمركية، أو الضرائب على الأرباح، أو حصوله على دعم كبير للمواد الأولية والوقود المستخدم، ومن ثم يمكن حساب ربحية المشروع. ويتضمن التقييم ما يأتي<sup>16</sup>:

- تحليل الربحية التجارية أو الخاصة (أي الربح الصافي الذي تحققه المشاريع الصناعية).
- تحليل الربحية الاقتصادية أو القومية (أي المنافع التي يجنيها المجتمع من وراء هذه المشاريع).

محمد عدنان وديع: القدرة التنافسية وقياسها، مرجع سابق، ص5.

<sup>11</sup> محمد عدنان وديع: القدرة التنافسية وقياسها ، المرجع السابق نفسه، ص7.

<sup>12</sup> عطية المهدي الفيتوري: الاقتصاد الدولي، اللجنة الشعبية العامة، مصلحة الوسائل التعليمية، 2003، ص116.

<sup>13</sup> محمد عدنان وديع: القدرة التنافسية وقياسها، مرجع سابق، ص7.

<sup>14</sup> Fagerberg Jan ( Technology and Competitiveness ) OXFORD Review of Economic Policy . p . 196 محمد عدنان وديع: القدرة التنافسية وقياسها ، المرجع السابق، ص11.

<sup>16</sup> محمد محروس إسماعيل: اقتصاديات الصناعة والتصنيع، الناشر مؤسسة شباب الجامعة، الإسكندرية، 1992، ص 255.

#### 2- تكلفة الصنع:

إن تكلفة الصنع المتوسطة بالقياس إلى تكلفة المنافسين تمثل مؤشراً كافياً على التنافسية في فرع نشاط ذي إنتاج متجانس، ما لم يكن ضعف التكلفة على حساب الربحية المستقبلية للمشروع، ويمكن لتكلفة وحدة العمل أن تمثل بديلاً جيداً عن تكلفة الصنع المتوسطة عندما تكون تكلفة اليد العاملة تشكل النسبة الأكبر من التكلفة الإجمالية، ولكن هذه الوضعية يتناقص وجودها.

#### 3- الإنتاجية الكلية للعوامل:

إن الإنتاجية الكلية للعوامل تقيس الفاعلية التي يحول المشروع فيها مجموعة عوامل الإنتاج إلى منتجات، ولكن هذا المفهوم لا يوضح مزايا ومساوئ تكلفة عناصر الإنتاج، كما أنه إذاكان الإنتاج يقاس بالوحدات الفيزيائية مثل أطنان من الورق أو أعداد من التلفازات، فإن الإنتاجية الإجمالية للعوامل لا توضح شيئاً حول حاذبية المنتجات المعروضة من جانب المشروع، إذ من الممكن مقارنة الإنتاجية الكلية للعوامل أو نموها لعدة مشروعات على المستويات المحلية والدولية، ويمكن إرجاع نموها سواء إلى التغيرات التقانية وانخفاض التكاليف، أو إلى تحقيق وفورات الحجم!.

فقد اختلفت الرؤي حول مفاهيم الإنتاجية وقياسها ، فهناك من ينظر إليها بأنما إنتاجية العمل ، أي العلاقة بين كمية الإنتاج والعمل المستخدم في إنتاجه <sup>18</sup>، ومنهم من يرى أنما تشمل عنصري العمل ورأس المال <sup>19</sup>، فمشكلة الطاقة الإنتاجية العاطلة تؤدي إلى تباطؤ معدلات النمو في إنتاجها، بسبب صعوبات التسويق، وهو ما يؤكد الترابط بين مشكلة التسويق ومشكلة استخدام الطاقة الإنتاجية القصوي، وهذا الوضع يمكن رده إلى أسبابه التي يأتي في مقدمتها ضعف الكفاءة، وسوء تخصيص الموارد المتاحة في القطاع الصناعي، علاوة على التوريد غير المنتظم لقطاع الغيار والسلع الوسيطة، ونقص القوى العاملة المدربة، وسوء تكيف العرض مع التفضيلات العامة والطلب، بيد أن أهم هذه الأسباب مجتمعة هو اصطدام الطاقة الإنتاجية القصوى أو الحجم الأمثل للصناعة بضيق نطاق السوق المحلية التي قامت هذه الصناعات في إطارها، إذ ينبغي للقيام بعمليات تصنيع ذات حجم ينتج بكفاءة، أن يمتلك القطر أو الدولة سوقاً واسعاً يكفي لتبرير قيام الصناعة بالحجم السائد في الأقطار الصناعية 20 ، فمبدأ الكفاءة يرتكز على قدرة المنتجين لاستغلال ما هو متوفر لديهم من إمكانيات فنية وتقنية واقتصادية ، لرفع الجودة الصناعية واستمرارية العمل ، فالعلاقة بين عدد المنتجين ونسبة الإنتاج المقبول تستند على كفاءة المنتجين في الموقع الصناعي ، وهو ما يتفق مع مفهوم الكفاءة (\* الداخلية التي أشار إليها الاقتصادي المعروف " هارفي " <sup>(\*\*</sup>) 21.

#### 4- الحصة في السوق:

من الممكن لمشروع ما أن يكون مربحاً ويستحوذ على جزء هام من السوق الداخلية بدون أن يكون تنافسياً على المستوى الدولي، وبحصل هذا عندما تكون السوق المحلية محمية بعقبات تجاه التحارة الدولية، كما يمكن للمشروعات الوطنية أن تكون ذات ربحية آنية ولكنها غير قادرة على الاحتفاظ بالمنافسة تجاه تحرير التحارة أو بسبب تأثيرات الأسواق، لذلك ينبغي مقارنة تكاليف المشروع بتكاليف المنافسين الدوليين، لأنه كلما كانت التكلفة الحدية للمشروع ضعيفة قياساً بتكاليف منافسيه، كانت حصته من السوق أكبر وكان المشروع أكثر ربحية، مع افتراض تساوى الأمور الأخرى، فالحصة من السوق تترجم إذاً المزايا في الإنتاجية أو في تكلفة عوامل الإنتاج، وعندما تكون المنتجات التي يقدمها ربما أقل جاذبية من منتجات المنافسين بافتراض تساوي الأمور الأخرى أيضاً، إذ كلما كانت المنتجات التي يقدمها أقل جاذبية ضعفت حصته من السوق ذات التوازن.

ويفترض أن يتم تحليل التنافسية على مستوى المشروع ومستوى الصناعة أو القطاع، ومستوى الاقتصاد الوطني، وحتى على مستوى التكامل الاقتصادي الإقليمي. ويجب التمييز بين الأهداف والمؤشرات، فإذا كان هدف المشروع يتمركز في تعظيم القيمة الحالية للربح، وكان واقع حصول المشروع على حصة أكبر من السوق يمكن أن يؤشر على أن المشروع في طريقه للوصول إلى هدفه، فإن هذه الحصة ليست مرغوبة بحد ذاتها، وإن ارتباط حصة السوق مع الربحية الأكبر هو أكثر صحة على مستوى المشروع منه لفرع النشاط أو البلد ككل<sup>22</sup>، ويمكن أن نرى مشروعاً يحقق أرباحاً أكثر من المعتاد بسبب حصته الكبيرة في السوق، لكن ذلك لا ينطبق على فرع النشاط، كما أن المشروع أفضل قدرة من البلد في استخدام موارد إضافية بغية توسيع حصته في السوق أو المحافظة عليها، وتنطبق أغلبية مقاييس تنافسية المشروع على تنافسية فرع النشاط، إذ إن فرع النشاط الذي يحقق بشكل مستديم مردوداً متوسطاً أو فوق المتوسط، على الرغم من المنافسة الحرة من الموردين الأجانب، يمكن أن يعد تنافسياً إذا تم إجراء التصحيحات اللازمة، كما يمكن قياس تنافسية فرع النشاط بالاعتماد على مقاييس تنافسية المشروع، وأهم المؤشرات المستخدمة، مؤشرات التكاليف والإنتاجية والميزة النسبية.

#### رابعاً: - القدرة التنافسية للصناعات التحويلية الليبية.

على الرغم من موارد الطاقة الوفيرة التي تتمتع بما ليبيا، فهي تمتلك اقتصاداً من أقل الاقتصاديات تنوعاً في المنطقة العربية وبين البلدان المنتجة للنفط، ففي أوائل السبعينيات اختارت ليبيا نظام الاقتصاد الموجه الذي حصر الاستثمار في الحدود التي تقررها الدولة، وفرض قيوداً صارمة على التحارة الخارجية، وشاعت فيه قيود الأسعار، وكثرت أشكال الدعم، وغاب القطاع الخاص بشكل شبه كامل، وأدى تدخل الحكومة الخانق في الاقتصاد على مدار عدة سنوات إلى حدوث تدهور متواصل في مناخ الأعمال، وانخفاض النمو الاقتصادي، وتدبى مستويات المعيشة، وهشاشة أوضاع الاقتصاد الكلي، وزيادة تعرض الاقتصاد للصدمات الخارجية ( )، وكان ضعف المؤسسات من المعوقات الأخرى أمام التنمية، وقد بدأ تدهور الأحوال الاقتصادية في منتصف الثمانينيات مع انخفاض أسعار النفط العالمية، ثم تفاقمت الأحوال في التسعينيات نتيجة للعقوبات الدولية، وبعد تجميد عقوبات الأمم المتحدة المفروضة على ليبيا في سنة 1999، عملت ليبيا على تنفيذ تدابير للإصلاح والانفتاح الاقتصادي، ولكن التقدم نحو إقامة اقتصاد السوق كمان بطيئاً ومتقطعاً، وتحتاج ليبيا إلى نمو اقتصادي قوي ومستمر لتلبية احتياجاتها التي تشهد زيادة متسارعة، وهو ما يتطلب استثمارات قوية في رأس المال المادي والبشري، وكفاءة في استخدام الموارد القومية، ويتعذر تحقيق ذلك إلا من خلال إصلاحات هيكلية واسعة النطاق تتوافق مع متطلبات السوق من أجل تعزيز دور القطاع الخاص، وتحسين مناخ الأعمال، وتشجيع تنويع الاقتصاد. وقد أحرز في الفترة الأخيرة تقدم ملموس نحو إصلاح النظام التجاري وتبسيط قواعد التجارة، وعلى سبيل التحديد ينبغي إلغاء كل ما تبقى من أشكال احتكار الدولة للاستيراد(\*\*)، كما أن تنويع الاقتصاد هو التحدي الأكبر الذي يواجه ليبيا، لأنه ينطوي على جهود متواصلة لتشجيع المشروعات الصغيرة والمتوسطة من أجل زيادة الإنتاج غير النفطي وتوسيع قاعدة التصدير وخلق فرص العمل اللازمة لسد احتياجات القوى العاملة التي تشهد زيادة سريعة مستمرة، وينبغي أن تركز سياسات توسيع قاعدة الإنتاج على مجموعة من الإصلاحات التي تحدف إلى زيادة التنويع الاقتصادي والمساهمة في خلق مصادر بديلة للدخل، ولأن ليبيا لا تملك ميزة تنافسية في النشاط الصناعي كبير الحجم، يتعين أن يكون تركيزها الأكبر في جهود الإصلاح على تطوير المشروعات الصغيرة والمتوسطة في مجالات الصناعة التحويلية بالتحديد، مما يعطيها ميزة القدرة على المنافسة، إضافة إلى المساهمة التي يعطيها القطاع الصناعي التحويلي للناتج المحلي الإجمالي 23 فقد بلغت مساهمة الصادرات غير النفطية من إجمالي الصادرات في المتوسط 5% خلال فترة الدراسة، إضافة إلى أن الصادرات غير النفطية لا تخضع لمفهوم الميزة النسبية للتجارة الخارجية، لاعتمادها على عناصر إنتاج مستوردة ذات تكلفة عالية وهو ما يفقدها القدرة التنافسية في الأسواق الخارجية، إضافة

22 محمد عدنان وديع: القدرة التنافسية وقياسها، مرجع سابق، ص12، 14.

<sup>(\*)</sup> أنشأت السلطات الليبية صندوق الاحتياطي النفطي في عام 1995، لتحقيق الأهداف التالية:

تخفيف أثر تقلبات أسعار النفط متوسطة الأجل على النفقات الحكومية.

حماية الميزانية من الضغوط السياسية الدافعة إلى الإنفاق عند زيادة إبرادات النفط.

<sup>(\*)</sup> بما في ذلك احتكار استيراد الذهب، والتبغ، والأدوية، واللقحات البيطرية.

بعا في تلك الحكور المسيرات الدهب، واللبع، والا دويه، والمعكات البيمريد. 2005 صندوق النقد الدولي، توصياته حول استر اتبجيات متوسطة الأجل للإصلاح الاقتصادي في ليبيا، 2005.

إلى عدم مرونة الصادرات الوطنية<sup>24</sup>، أي لا يمكن التحكم فيها وزيادتها لأنها تخضع لظروف أسواق النفط الدولية وتغيراتها، وكذلك عدم مرونة الواردات، أي إنها لا تتأثر بتغيرات الأسعار في الأسواق الخارجية والمحلية نتيجة العجز الذي يعانيه سوق السلع والخدمات من المنتجات المحلية.

#### 1- القدرة التنافسية للصادرات الصناعية التحويلية الليبية

يلاحظ من أهداف خطط التنمية التي نفذت خلال الفترة 1970–1985، أن السياسة الاقتصادية الليبية تبنت كلاً من سياستي إحلال الواردات وتشجيع الصادرات، وحيث أن الصادرات الليبية النفطية ومشتفاتها تشكل ما يقارب 96% من إجمالي الصادرات، وذلك بسبب عدم تنفيذ خطة التنمية 1981–1985، والتي كانت تستهدف إقامة صناعات تصديرية، وذلك بسبب الكساد العالمي وتدهور أسعار النفط خلال عقد الثمانينيات الذي أدى إلى انخفاض إيرادات الدولة، وترتب على ذلك انخفاض قيمة المشاريع التي وقعت عقودها من 1327 بليون دولار أمريكي، سنة 1981، إلى 1374 بليون دولار أمريكي سنة 1982. كما أن الاعتماد على النفط منذ الستينيات من القرن الماضي، أدى إلى انقطاع السوق الليبية في جمال تصدير السلع الأخرى غير النفطية، قد ترتب عليها غياب جملة من المعارف والإمكانيات والمهارات اللازمة للتصدير، وغياب التشريعات التصديرية الملائمة واختفاء فاعلية الموجود منها، وفقدان الصلة بالأسواق العالمية، وعدم مواكبة التطورات الدولية في شروط التصدير، إلى غير ذلك، فالتصدير لا يتم بمحرد وجود سلعة أو خدمة فائضة عن الحاجة المحلية، وإنما يتطلب جملة الإمكانيات القادرة على توفير السلعة المناسبة بالأسعار المناسبة في الأوقات المناسبة من وجهة نظر المستورد الأجنبي 25، إضافة إلى أن الكثير من السلع التي يتم تصديرها يعاني السوق المحلي نقصاً واضحاً فيها، وإن متوسط سعر الوحدة الواحدة من السلع المصدرة يعد متدنياً حداً مقارنة بالسعر الذي تباع به في السوق المحلي والسبب في ذلك يعود إلى عبارة عن صفقات تجارية بحتة، الغرض منها هو الحصول على ربح سريع دون أي اعتبار لتكاليف إنتاجها أو تسعيرها، والسبب في ذلك يعود إلى وجود سوق سوداء للصرف الأحدي وبأسعار تفوق سعر تصديرها.

إن تنمية الصادرات عملية ضرورية للاقتصاد الليبي، إذ تُمكنه من زيادة معدلات نموه الاقتصادي، واستخدام أفضل للموارد الاقتصادية، وتحقيق أهداف في مجال زيادة الطاقة الإنتاجية، وتوفير فرص عمل للعمالة المحلية، إن زيادة الصادرات الليبية وتنوعها أمر في غاية الأهمية لتنمية مصادر الدخل القومي وتنويعها، إلا أن هذا الابجاه مرتبط بتطوير الهياكل الإنتاجية التي تمكننا من تحقيق ذلك، ومدى قدرة الإنتاج المحلي على المنافسة في الأسواق العالمية، الأمر الذي يستدعي تحيئة الصادرات الليبية لما بعد انضمام ليبيا لمنظمة التجارة العالمية (\*)، وذلك لأن الصادرات الليبية تعاني مجموعة صعوبات أهمها 27:

- ارتفاع تكلفة الصادرات الليبية.
- غياب إستراتيجية واضحة المعالم للصادرات الليبية.
- المنافسة الأجنبية للسلع المحلية في الأسواق المحلية.
  - نقص الخبرة في مجال التسويق الدولي.

فالمتتبع لإحصائيات التجارة الدولية من حيث اتجاهاتها وهيكلها السلعي وتوزيعها الجغرافي ، يلاحظ أن النظام الدولي للتخصص وتقسيم العمل القائم على البناء النظري لنظرية التجارة الدولية، قد أدى بالدول النامية إلى التخصص في إنتاج المنتجات الأولية وتصديرها، مقابل تخصص الدول الصناعية في إنتاج السلع المصنعة وتصديرها، وذلك بدعوى تخصص كل دولة في إنتاج ما تمتلك أكفأ الإمكانيات لإنتاجه، وتصديره، تحقيقاً لمبدأ

المست بيني الفطوا المرابع في عام 2004. <sup>27</sup> عيسى حمد الفارسي: تنويع مصادر الدخل في الاقتصاد الليبي "الشراكة مع القطاع الخاص"، مجلة الاقتصاد والتجارة، اللجنة الشعبية العامة للاقتصاد والتجارة، السنة الأولى، العددان (3،4)، 2005، ص13.

<sup>(\*)</sup> أُخذت ليبيا عضواً مراقباً في عام 2004.

الرشادة الاقتصادية، والارتفاع بمستوى الإنتاجية، ومستوى الرفاهية الاقتصادية على النطاق العالمي، وبتخصص الدول النامية في إنتاج المواد الأولية وتصديرها 28، وفي ظل اعتبارات متعددة تشكل في مجملها محددات العرض والطلب لكلا النوعين من السلع في السوق العالمي، وما أدت إليه من تدهور في معدلات التبادل التجاري الدولي للدول النامية، وتذبذب عائدات صادراتها، فإن حل المنافع والمكاسب المترتبة على التجارة الدولية قد آلت إلى الدول الصناعية المتقدمة، في حين لم تجن الدول النامية إلا الفقر والتخلف الاقتصادي، واستمرار اعتمادها على اقتصاديات الدول الصناعية المتقدمة.

#### 2- تنافسية الصادرات الصناعية التحويلية العربية ومقارنتها ببعض الدول.

ظهر في الأدبيات الاقتصادية العديد من المؤشرات التي تقيس قدرة اقتصاد معين على المنافسة في الأسواق الخارجية، والتي ذكر أهمها، ونقدم هنا أحدث المؤشرات التي طورتمًا بعض المؤسسات الدولية في مجال التنافسية، ومن أبسط المؤشرات لقياس تنافسية صادرات دولة معينة، احتساب نسبة الصادرات السلعية إلى الناتج المحلي الإجمالي، فكلما ارتفعت قيمة هذا المؤشر، أي كلما ازدادت نسبة الصادرات إلى الناتج المحلي الإجمالي، دل ذلك على تنافسية الصادرات. وفي الدول العربية فقد ارتفعت قيمة هذا المؤشر من 36.2% في عام 2002 إلى 54.2% عام <sup>29</sup>2007، وتعد هذه النسبة مرتفعة مقارنة ببعض المناطق الأخرى، غير أن هذا المؤشر لا يعكس مكونات الصادرات السلعية، إذ قد تكون معظم هذه الصادرات من السلع الخام، الأمر الذي يعني أن الصناعات التحويلية إما أنحا غير هامة في هذه الدول، أو أنحا غير تنافسية في الأسواق العالمية، وبناءً على ذلك فقد يكون من المناسب أخذ مؤشر آخر يتناسب مع وضع الدول العربية، وهو حصة الصادرات غير النفطية في الصادرات العربية، وقد تراوحت هذه الحصة بين 32.4% عام 2002، وما نسبته 24.6% عام 2007، وتعد هذه الحصة متدنية مقارنة بالحصص السائدة في العديد من المناطق، بالإضافة إلى تراجعها بشكل كبير خلال الأعوام القليلة الماضية، ويدل هذا المؤشر على انخفاض تنافسية الصادرات العربية وتراجعها، غير أن هذا المؤشر لا يعكس التنافسية بشكل صحيح، حيث من المكن أن يطغي الارتفاع في إجمالي الصادرات جراء ارتفاع الصادرات النفطية على قيمة المؤشر حتى في حالة حدوث ارتفاع ملحوظ في الصادرات غير النفطية، ويقيس مؤشر آخر حصة الدول العربية كمجموعة في واردات الشركاء التجاريين الرئيسيين، وقد ارتفعت هذه الحصة في أسواق الاتحاد الأوروبي والولايات المتحدة والصين واليابان خلال الفترة 2003 -2006، بعد أن شهدت تراجعاً خلال الفترة 2000-2000، وعلى الرغم من ذلك فإن حصص الدول العربية في هذه الأسواق، باستثناء اليابان، تبقى متدنية ويغلب عليها الصادرات النفطية<sup>30</sup>، وفي ضوء ذلك فإن قياس تنافسية الصادرات بصورة أدق يتطلب أخذ مؤشرات تقيس قدرة السلع المصنعة على النفاذ إلى الأسواق العالمية، ولذلك فقد تم الأخذ بعين الاعتبار مؤشرين هما (مؤشر تنوع السلع التصديرية) و(مؤشر تركز السلع التصديرية)، فعلى صعيد مؤشر تنوع الصادرات الذي يقيس درجة انحراف حصة صادرات السلع الرئيسية (١٥) في إجمالي صادرات دولة معينة عن الحصة المقابلة على الصعيد العالمي، أي عن حصة الصادرات الوطنية في الصادرات العالمية، يدل الانحراف القليل على وجود درجة أكبر من التنوع، ولذلك فإن انخفاض قيمة هذا المؤشر تدل على تنوع أكبر في الصادرات. ويلاحظ أن هذا المؤشر انخفض في العديد من الدول العربية في عام 2006 مقارنة بـ 1995، أي إنحا سجلت زيادة في تنوع صادراتها مقارنة بالتنوع في الصادرات العالمية. والجدول التالي يبين ذلك.

#### جدول رقم (1) تنافسية الصادرات التحويلية العربية ومقارنتها ببعض الدول.

المصدر: التقرير الاقتصادي العربي الموحد 2008.

#### الخاتمة

- يعاني الاقتصاد الليبي احتلالات ناتجة عن سياسات متضاربة وغير فعالة في براجحها التنموية في المراحل السابقة، وبشكل أكثر تفصيلاً: نجد أن الصناعات الليبية، سواء القديمة أو الجديدة، تعاني ضعف القدرة التنافسية، فقد أظهرت ضعفاً في قدرتما التنافسية على المستويين المجلي والدولي، وإن السبب في ذلك يرجع إلى التخلف التكنولوجي لهذه الصناعات وارتفاع التكاليف، كما أن هذه الصناعات لا تزال في طور النشوء، وتعتمد على الإعانات والحماية، وتعتمد على التكنولوجيا المستوردة من الخارج.
- استحواذ الصادرات النفطية على النصيب الأوفر من إجمالي الصادرات؛ إذ بلغت في المتوسط ما نسبته 96%، وهي تتأثر بظروف الأسواق النفطية الدولية، أي إن الاقتصاد الوطني يعاني مشكلة عدم التنوع، وأصبح الاقتصاد الليبي يعرف من ضمن الاقتصاديات ذات الجانب الواحد.
- إن الاقتصاد الليبي يعد من الاقتصاديات المفتوحة نسبياً، وكل الذي حصل أن الواردات تغيرت من استيراد السلع النهائية إلى استيراد المواد الخام والسلع الوسيطة، أي إن الصناعات التي قامت لتحل محل الواردات تعتمد وبدرجة أساسية على المواد الخام والميكنة المستوردة، واتضح -بشكل قطعي- عدم جدوى الصادرات غير النفطية بوضعها الحالي.

# HAD KIFAYAH, KEMISKINAN BANDAR DAN WANITA DI MALAYSIA: SOROTAN LITERATUR

Ahmad Fahme bin Mohd Ali<sup>1</sup> Mohd Faisol Ibrahim<sup>2</sup> Muhammad Ridhwan Ab. Aziz<sup>3</sup> Fuadah Johari<sup>4</sup>

#### **ABSTRAK**

Zakat merupakan antara sumber kewangan bagi sesebuah negara Islam untuk meningkatkan ekonomi masyarakat khususnya golongan bawahan. Pengurusan kutipan dan agihan zakat yang efektif akan membangunkan kehidupan masyarakat yang unggul. Namun, kaedah pengagihan zakat di Malaysia yang hanya memberi tumpuan kepada bentuk bantuan berkala dilihat seolah-olah tidak dapat menyelesaikan isu kemiskinan dalam masyarakat Islam. Disebalik peningkatan jumlah kutipan dan agihan zakat, jumlah peningkatan dikalangan golongan fakir dan miskin terus meningkat dari tahun ke tahun. Ini disebabkan terdapat beberapa kelemahan dalam kaedah pengagihan ini. Pertama, ianya tidak mengambil kira perbezaan antara kos sara hidup antara kawasan bandar dan luar bandar. Kedua, keperluan jantina ketua isi rumah yang berlainan tidak ditangani dalam pengiraan Garis Kemiskinan Zakat (Had Kifayah). Untuk menjadikan bantuan zakat memberi kesan yang signifikan kepada kualiti hidup golongan fakir dan miskin, satu tindakan yang drastik perlu dilakukan untuk memastikan kualiti hidup mereka adalah terjamin sekurang-kurangnya mendapat barang keperluan dan kecukupan. Nilai bantuan zakat perlu dinilai semula berdasarkan keperluan semasa kerana nilai bantuan yang diberi amatlah kecil berbanding dengan keperluan kehidupan semasa. Ini termasuklah mengambil kira keperluan yang berbeza dan kos sara hidup yang berbeza antara asnaf di kawasan bandar dan luar bandar serta jantina ketua isi rumah. Sehubungan dengan itu, kertas kerja ini bertujuan untuk meninjau kajian-kajian lepas berdasarkan dua faktor penting dalam penetapan Had Kifayah iaitu kemiskinan di antara kawasan Bandar dan luar Bandar dan jantina isi rumah. Dapatan kajian mendapati bahawa satu penentuan had kifayah baru perlu dirangka mengikut keperluan semasa yang pelbagai dengan mengambil kira dasar Negara Maju 2020 nanti.

Kata Kunci: Zakat, Had Kifayah, Kemiskinan Bandar-Luar Bandar, Jantina Ketua Isi Rumah

# ZAKAT POVERTY LINE, URBAN AND WOMEN POVERTY IN MALAYSIA: LITERATURE STUDY

#### **ABSTRACT**

Zakat is one of the financial resources for an Islamic country to improve their society economy, especially those who in bottomline. An effective zakat management in terms of collection and distribution will create a prosperious life. However, the current method of zakat distribution in Malaysia which focusing on the visible assistance form on periodic basis seems cannot solve the

poverty issue among Muslim community. Despite the increasing amount of zakat collection and distribution, the amount of poor and hardcore poor are also continue to increase from year to year. This is because of some weaknesses in this distribution method. First, it does not take into account the difference between the cost of living between rural and urban areas. Second, different needs among household head gender are not addressed in the calculation of Zakat Poverty Line (Had kifayah). To make zakat distribution provides significant impact on the quality of life among the poor and needy, immediate actions need to be done to ensure that at least their needs are satisfied and adequate. The amount of zakat distribution should be revalued due to the current amount is not suitable compared to the current cost of living. This includes the different needs and cost of living between urban recipients and urban recipient as well as household head gender. Therefore, this paper aims to review previous studies based on two important factors in setting Had Kifayah between urban and rural areas and gender households head. It is found out that a new method of setting Had Kifayah should be designed based on current requirement and needs besides considering the future Vision 2020 policy as weel as becoming a developed country.

**Keywords**: Zakat, Had Kifayah, Urban-Rural Poverty, Household Head Gender

#### 1. PENGENALAN

Zakat adalah rukun Islam yang ketiga. Ianya adalah satu bentuk ibadah wajib yang ditetapkan dan diperintahkan oleh Allah SWT di dalam Al-Quran:

"Sesungguhnya zakat-zakat itu hanyalah untuk orang-orang fakir, orang-orang miskin, pengurus-pengurus zakat, para mu'allaf yang dibujuk hatinya, untuk (memerdekakan budak), orang-orang yang berhutang, untuk jalan Allah dan orang-orang yang sedang dalam perjalanan, sebagai sesuatu ketetapan yang diwajibkan Allah, dan Allah Maha Mengetahui lagi Maha Bijaksana."

(Al-Qur'an 9:60)

Zakat adalah tanggungjawab dari Allah SWT kepada manusia, sama seperti kewajipan menunaikan solat lima waktu<sup>1</sup>. Untuk mendirikan solat secara berjemaah, masyarakat Islam menganjurkan tempat ibadat (Masjid/Pusat Islam) bagi menunaikan solat berjemaah. Begitu juga, masyarakat Islam wajib untuk menubuhkan institusi zakat dalam usaha untuk mengumpul dana dari masyarakat umat Islam yang kaya dan mengedarkannya di kalangan orang-orang yang memerlukan (Qardawi, 2000).

Zakat juga memainkan peranan sebagai mekanisme ibadat kewangan yang melakukan beberapa fungsi utama kewangan awam, yang berkaitan dengan hak-hak keselamatan sosial, pemberian bantuan sosial, subsidi makanan, pendidikan, penjagaan kesihatan, perumahan, dan pengangkutan awam di sesebuah negara (Jasni Sulong, 2012; Hairunnizam Wahid, 2004, 2009). Ianya memisahkan perbelanjaan kebajikan awam dari lain-lain barangan belanjawan dan meletakkan beban untuk memenuhi keperluan kebajikan ekonomi masyarakat miskin. Tidak seperti cukai yang dikenakan oleh kerajaan untuk perkhidmatan yang disediakan kepada pembayar cukai, zakat dibayar oleh golongan yang kaya dan akan diagihkan kepada golongan Asnaf (Penerima Zakat).

Menurut M. Ridhwan (2012) zakat mewujudkan kitaran pertumbuhan yang seimbang bagi sesebuah ekonomi. Apabila peratusan tertentu daripada kekayaan seseorang dibelanjakan dalam setahun, diserahkan kepada lapan kategori yang tersebut di dalam Al-Qur'an, zakat mempunyai kesan ekonomi yang penting kepada masyarakat Islam. Sokongan daripada sudut kewangan kepada golongan fakir dan miskin akan menyebabkan peningkatan dalam permintaan untuk barangan dan perkhidmatan (Bakar, 2011; Hasan, 2010). Ini disebabkan oleh kemampuan golongan ini berbelanja dan mewujudkan permintaan untuk keperluan asas kehidupan seperti makanan, pakaian, tempat tinggal, pengangkutan dan lain-lain, akan menyebabkan perkembangan dalam pengeluaran. Seterusnya bagi

menyokong peningkatan pengeluaran, lebih banyak peluang-peluang pekerjaan baru akan wujud. Pertambahan peluang pekerjaan pula akan menjana lebih banyak permintaan untuk barangan dan perkhidmatan, lebih banyak ruang untuk pelaburan, dan akhirnya, kitaran pertumbuhan ini akan menyumbang kepada pertumbuhan ekonomi sesebuah negara (Ahmad, 2004; M. Ridhwan, 2012).

Kajian empirikal oleh Geoffrey A. Jehle (1994) membuktikan agihan zakat yang telah diberi kepada asnaf telah berjaya mengurangkan ketidakseimbangan agihan pendapatan di Pakistan. Abdul Aziz Muhammad (1986) juga membuktikan bahawa agihan zakat berperanan untuk membasmi kemiskinan, instrumen agihan pendapatan dan kekayaan dalam Islam. Selain itu kajian Patmawati Ibrahim (2006) di Selangor dan Fuadah Johari (2004) di Melaka menunjukkan zakat berkesan dalam mengurangkan jurang ketidakseimbangan agihan pendapatan dan seterusnya berjaya mengatasi masalah kemiskinan. Indeks kemiskinan berdasarkan Keluk Lorenz, Koefesien Gini dan indeks Atkinson menunjukkan sumbangan positif agihan zakat di negeri-negeri tersebut.

#### 2. PRESTASI PENGURUSAN ZAKAT DAN KEMISKINAN DI MALAYSIA

Di Malaysia, pungutan zakat semakin meningkat dari semasa ke semasa. Disebabkan itu zakat berpeluang sebagai kaedah dalam mengurangkan kemiskinan. Kutipan zakat boleh digunakan untuk mewujudkan tarikan dana yang boleh digunakan dalam aktiviti-aktiviti pembangunan pembiayaan dan boleh menggantikan perbelanjaan kerajaan. Sebagai contoh dari tahun 2011 hingga 2012, kutipan zakat telah meningkat daripada RM 15,650,000 RM 40,620,000 (JAWHAR, 2012). Ini menunjukkan bahawa zakat mempunyai peluang yang tinggi bagi mengurangkan dan menghapuskan kemiskinan di Malaysia. Jadual 1.1 menunjukkan jumlah kutipan dan agihan zakat di Malaysia pada tahun 2008-2011.

Jadual 1.1: Kutipan dan Agihan Zakat Di Malaysia Bagi Tahun 2008 - 2011

CLC – COLLECTION / KUTIPAN DST – DISTRIBUTION / AGIHAN

Jadual 1.1 menunjukkan bahawa jumlah kutipan dan agihan zakat telah meningkat dari tahun 2008 sehingga tahun 2011. Prestasi ini menunjukkan peningkatan tahap kepercayaan yang diletakkan oleh pembayar zakat kepada jabatan pengurusan zakat. Peningkatan yang memberangsangkan ini disebabkan oleh banyak faktor antaranya kaedah pembayaran yang mudah, pengurusan zakat yang

semakin cekap, penswastaan institusi zakat dan sebagainya. Penswastaan institusi zakat telah menimbulkan minat ramai pengkaji untuk melihat kesannya terhadap jumlah kutipan zakat (Hairunnizam Wahid et.al, 2009).

Selain itu, Malaysia telah berjaya mengurangkan kadar kemiskinan daripada 49.3% kepada 3.8% di antara tahun 1970 dan 2009 (Ragayah, 2011). Jumlah bilangan isi rumah miskin berkurangan daripada 1.6 juta kepada 267,000 sepanjang tempoh ini (Ahmad, 2005). Kadar kemiskinan di Malaysia masih berpusat di kawasan luar bandar. Kadar kemiskinan luar bandar telah berkurang dari 1.4 pada tahun 1999 kepada 0.8 untuk tahun 2009. Manakala kemiskinan bandar pula mencatat penurunan dari 0.3 pada tahun 1999 kepada 0.17 untuk tahun 2012. Carta 1.1 menunjukkan kadar kemiskinan bagi bandar dan luar bandar di Malaysia bagi tahun 1999-2009.

## 3. KONSEP HAD KIFAYAH

Kebanyakan institusi zakat menggunakan pendekatan kewangan dalam mengukur kemiskinan berdasarkan kaedah Had Kifayah (Purata Garis Kemiskinan Zakat). Kaedah pengiraan Had Kifayah (HK) adalah hampir sama dengan Purata Garis Kemiskinan (PGK) kerana ia menggunakan pendapatan sebagai pembolehubah untuk menentukan sama ada individu atau isi rumah itu miskin atau sebaliknya (Mohamed Salahuddin Abdul Rasul et al, 2011). PGK didefinisikan sebagai pendapatan yang diperlukan bagi memenuhi keperluan minimum termasuklah makanan, kesihatan, pakaian, pendidikan, rekreasi, pengangkutan, minyak dan sewa. PGK ini telah ditetapkan oleh Unit Perancang Ekonomi (EPU), Jabatan Perdana Menteri, manakala Had Kifayah ditentukan oleh institusi zakat negeri masing-masing. Had kifayah memainkan peranan bagi menentukan tahap keperluan yang diperlukan oleh isi rumah untuk menampung keperluan harian. Ianya dikira berdasarkan pelbagai pembolehubah seperti bilangan ahli dalam isi rumah, kumpulan umur dan lain-lain ahli. Jabatan Wakaf, Haji dan Zakat (JAWHAR,2007) telah menggariskan beberapa komponen utama dalam menentukan keperluan Had Kifayah seperti tempat tinggal, makanan, pakaian, kesihatan, pendidikan dan pengangkutan berdasarkan Maqasid al Syariah (keperluan manusia). Walau bagaimanapun, terpulang kepada setiap institusi zakat negeri untuk menentukan keperluan setiap komponen ini. Adalah penting untuk ambil perhatian bahawa Had Kifayah adalah berbeza bergantung kepada bilangan ahli isi rumah dan kumpulan umur dalam isi rumah.

Penggunaan Had Kifayah bertujuan untuk memudahkan proses penentuan golongan miskin tegar, miskin dari golongan yang tidak miskin. Qardawi (2000) dan Parid (2001) mengesyorkan bahawa pengagihan zakat perlu sekurang-kurangnya mencukupi tahap kos sara hidup minimum dan keselesaan untuk penerima dan tanggungannya. Jumlah zakat diagihkan perlu dipastikan kesinambungan kehidupan yang berkualiti di mana kesan pengagihan zakat adalah untuk mencapai atau mengcukupi taraf hidup Keperluan Asas (*Daruriyyat*) dan Keselesaan (*Hajiyyat*) (Qardhawi *op. cit.*, 2000).

Othman al Habshi (1990; 1998; 2006) menjelaskan bahawa zakat adalah cara yang paling berkesan untuk membantu golongan miskin dan mereka yang memerlukan. Islam menekankan umatnya untuk mengambil serius peranan zakat dalam memperbaiki kehidupan sosial umat Islam yang miskin. Beliau juga menyatakan bahawa kadar zakat yang diterima oleh orang miskin sepatutnya membantu mereka meningkatkan taraf hidup mereka, iaitu, dalam memenuhi *Daruriyyat* mereka dan keperluan *Hajiyyat* mereka yang menjadi keperluan minimum dalam hidup mereka. Oleh itu, zakat yang diterima oleh mereka haruslah membolehkan mereka untuk meningkatkan keperluan kehidupan mereka. Perspektif keperluan di sini bermaksud kesejahteraan dalam kehidupan untuk mencapai kemudahan dan keselesaan dalam kehidupan mereka. Jadual 1.2 menunjukkan contoh penentuan Had Kifayah berdasarkan keperluan isi rumah di Selangor.

Jadual 1.2: Penentuan Had kifavah di Selangor

Kuantiti	Kategori Isi Rumah	Jumlah had kifayah (RM)		
1	Ketua Isi Rumah	680		
1	Dewasa (Bekerja)	420		
1	Dewasa (Tidak Bekerja) (18 tahun ke atas)	240		
1	Kanak-kanak ( berumur 7-17)	180		
1	Kanak-kanak (berumur 1-6)	130		
	JUMLAH	1650		
	Had al Kifayah Tambahan (Kes Khas)			
1	Cacat	200		
1	Penjagaan Kanak-kanak	190		
1	Isi rumah dengan penyakit kronik	200		
	JUMLAH	590		

Sumber: Lembaga Zakat Selangor (LZS)

Sebagai contoh, sekiranya sebuah keluarga itu mempunyai 5 anggota keluarga dengan kedua-dua ibu bapa bekerja, seorang dewasa bekerja yang berumur 18 tahun, seorang kanak-kanak dalam kumpulan umur 7-17 dan kanak-kanak dalam kumpulan umur 1-6, maka Had Kifayah keluarga tersebut adalah RM 1650. Namun, sekiranya pendapatan bulanan isi rumah tersebut adalah RM 1800, maka keluarga ini tidak layak untuk menerima zakat kerana pendapatan isi rumah tersebut melebihi Had Kifayah yang diperlukan. Walau bagaimanapun, sekiranya pendapatan mereka adalah RM 650, maka mereka layak untuk menerima zakat sebanyak RM 1000 bagi mencukupi Had Kifayah mereka. Di samping itu, sekiranya isi rumah tersebut mempunyai penyakit kronik, jumlah Had Kifayah mereka akan meningkat. Penentuan Had Kifayah yang diamalkan oleh Lembaga Zakat Selangor adalah komprehensif dan lebih terperinci berbanding dengan institusi-institusi zakat yang lain di Malaysia.

Menurut Maslow (1954), keperluan asas seseorang yang mesti dipenuhi sebelum meneruskan kehidupan untuk keperluan masa hadapan. Oleh itu, seseorang mesti mencapai atau memenuhi keperluan asas pertama untuk terus hidup di mana keperluan yang paling asas seperti makanan, pakaian dan tempat tinggal sebelum beralih kepada memenuhi keperluan yang lebih tinggi. Oleh yang demikian, jika keperluan asas seseorang individu tidak dapat dipenuhi, ini menunjukkan bahawa hidupnya tidak berkualiti. Walau bagaimanapun, jika keperluan asas telah dipenuhi, seseorang itu akan beralih kepada keperluan yang lebih tinggi dan keperluan lain. Menurut Maslow, seseorang akan cuba

untuk memenuhi keperluan dan cuba untuk mendapatkan keperluan tertinggi (kepuasan diri). Jika seseorang mencapai kepuasan diri, dia boleh dikatakan telah mendapat kualiti tertinggi kehidupan (Maslow, 1954).

#### 4. METODE KAJIAN

Kajian ini menggunakan pendekatan deskriptif kualitatif dan jenis penelitian yang digunakan adalah kajian perpustakaan iaitu mengumpul data atau karya tulisan ilmiah yang bersesuaian dengan objek penelitian atau pengumpulan data yang bersifat keperpustakaan. Antara bahan yang terlibat dalam pencarian maklumat adalah buku, akhbar, jurnal, majalah dan internet. Kaedah penyelidikan ini memerlukan pengumpulan data yang berkaitan daripada dokumen-dokumen tertentu dan menyusun pangkalan data untuk menganalisis bahan dan memberi kefahaman yang lebih lengkap berkaitan dengan isu Had Kifayah dan isu-isu kemiskinan bandar dan luar bandar serta kemiskinan antara jantina ketua isi rumah di Malaysia.

#### 5. ISU-ISU DALAM KAJIAN TERDAHULU

Keadah pengagihan semasa zakat di Malaysia masih memberi tumpuan kepada pengagihan bulanan yang masih tidak dapat menyelesaikan isu kemiskinan dalam masyarakat Islam. Ini disebabkan oleh beberapa kelemahan dalam kaedah ini. Pertama, ianya tidak mengambil kira perbezaan kos sara hidup antara kawasan bandar dan luar Bandar. Kedua, keperluan jantina ketua isi rumah yang berlainan adalah berbeza dan tidak ditangani dalam pengiraan had kifayah. Oleh itu, kaedah semasa pengagihan zakat tidak dapat menyokong penerima zakat dan keluarga mereka dan mengubah kehidupan mereka yang lebih baik. Bantuan modal bulanan zakat yang diagihkan kepada Asnaf (penerima zakat) yang memenuhi kriteria tertentu mestilah mencukupi untuk meliputi keperluan asas mereka, termasuk makan, pakaian dan perumahan untuk masa yang tertentu.

# 6. FAKTOR PERTAMA: PERBEZAAN ANTARA KOS SARA HIDUP BANDAR-LUAR BANDAR

Ukuran kemiskinan zakat (Had Kifayah) di Malaysia adalah berdasarkan garis kemiskinan tanpa mengambil kira perbezaan antara kos sara hidup bandar dan luar bandar. Kebanyakan kajian kemiskinan zakat di Malaysia menggunakan Purata Garis Kemiskinan (PGK) sebagai perbandingan. Kebanyakan ahli akademik mengakui kepentingan pelarasan antara kos sara hidup di kawasan bandar dan luar bandar dalam mengkaji kemiskinan. Ketiadaan Had Kifayah berasingan antara kawasan bandar dan luar bandar telah menyebabkan kajian sebelum ini menggunapakai garis kemiskinan (PGK) berdasarkan harga purata perbezaan di antara kawasan bandar dan luar bandar. Perbezaan kos sara hidup bandar dan luar bandar yang jauh melebihi kos sara hidup sebenar akan memberikan gambaran yang mengelirukan terhadap kesan pengagihan zakat, serta proses penentuan golongan yang layak menerima zakat. Oleh yang demikian, dalam menentukan garis kemiskinan bagi kawasan bandar dan luar bandar, faktor perbezaan kos sara hidup di seluruh kawasan ini hendaklah diambil kira.

Malaysia telah berjaya mengurangkan kadar kemiskinan dari tahun ke tahun. Pengurangan ini bagaimanapun semakin diganggu oleh pertumbuhan ekonomi yang pesat di negara ini dan perbandaran yang pesat tahun 1990-an. Penduduk bandar bertambah daripada 30% pada tahun 1960 kepada 40% pada tahun 1980 dan 60% pada tahun 2000. Kenaikan jumlah penduduk telah menyebabkan peningkatan kemiskinan bandar ditambah dengan kesesakan, pengagihan manfaat pembangunan yang tidak sekata dan perubahan dalam persekitaran ekologi bandar (Ragayah, 2011).

Asra (2000) dalam satu kajian perbandingan antara kadar kemiskinan bandar dan luar bandar di Indonesia, mendapati bahawa kadar kemiskinan di kawasan luar bandar adalah sentiasa lebih tinggi

daripada di kawasan bandar. Beliau mendapati berdasarkan anggaran rasmi yang menggunakan kaedah lama telah menunjukkan bahawa antara tahun 1980 dan 1993, kadar kemiskinan di bandar adalah lebih tinggi daripada kadar kemiskinan luar bandar. Kaedah pengiraan ini telah dikritik oleh (Ravallion (1992) dan (Ravallion dan Bidani (1994) kerana perbezaan garis kemiskinan antara bandar dan luar bandar adalah jauh lebih tinggi daripada perbezaan kos sara hidup bandar dan luar bandar. Ravallion dan Bidani (1994) juga telah menyatakan bahawa garis kemiskinan di rantau itu tidak konsisten, yang menyebabkan pengiraan kemiskinan antara bandar dan luar bandar adalah mengelirukan. Bagi mereka persoalan 'konsisten' adalah perlu untuk membolehkan perbandingan yang betul antara kemiskinan bandar dan luar bandar. Ravallion dan Bidani (1994) menunjukkan bahawa jumlah makanan (food bundle) antara bandar dan luar bandar yang diperluan (2,100 kalori setiap orang) setiap hari bagi tahun 1990 berbeza dengan ketara antara satu sama lain, yang menunjukkan bahawa taraf hidup juga berbeza di antara kawasan bandar dan luar bandar.

#### 6.1 KEMISKINAN BANDAR VS KEMISKINAN LUAR BANDAR

Kemiskinan bandar dan luar bandar merupakan dua fenomena yang berbeza. World Development Report (World Bank, 1999) mendapati sejumlah 495 juta golongan miskin bandar pada tahun 2000 yang terdiri daripada golongan berpendapatan rendah dan sederhana. Jika dilihat dari segi peratusan, kemiskinan di bandar mempunyai jumlah yang kurang berbanding dengan luar bandar. Bagaimanapun, impak kemiskinan di bandar lebih terasa berbanding dengan luar bandar. Seseorang yang tinggal dibandar mendiami rumah batu, mempunyai kereta ataupun motosikal, berpendapatan melebihi PGK namun mereka mempunyai bilangan tanggungan yang ramai, kos sara hidup yang tinggi terutamanya sewa rumah, pengangkutan dan pelbagai perbelanjaan keperluan asas dan perkhidmatan (Chamhuri Siwar, 2011). Disamping itu, terdapat banyak perbezaan antara corak perbelanjaan isi rumah dan corak kemiskinan antara kawasan bandar dan luar bandar. Di kawasan bandar, peratusan perbelanjaan isi rumah masyarakat bandar lebih banyak tertumpu kepada barangan bukan makanan (non food item) seperti rumah, pengangkutan dan pelajaran. Ini berbeza dengan corak perbelanjaan di kawasan luar bandar yang banyak tertumpu kepada makanan dan barangan bukan makanan hanya di perolehi selepas keperluan makanan dipenuhi serta terdapat lebihan dari perbelanjaan makanan tadi (Ravallion and Bidani, 1994). Selain itu, corak kemiskinan di bandar selalunya melibatkan hutang samada dengan bank atau institusi kewangan manakala di kawasan luar bandar, kemiskinan mereka selalunya tidak melibatkan hutang (Alam, 2011). Bagi sesetengah negara yang sedang membangun seperti China, Malaysia, India dan Indonesia, kemiskinan bandar adalah satu masalah yang serius yang menjadi fokus utama dalam inisiatif atau polisi pembangunan mereka. Ini kerana kemiskinan bandar mencetus berbagai masalah di bandar seperti permasalahan setinggan bandar, kemiskinan, peningkatan kes jenayah dan masalah sosial, penurunan taraf kesihatan dan tahap keselamatan, pengabaian terhadap pendidikan anak-anak dan berbagai permasalahan alam sekitar khususnya pencemaran (Mohd Fadzil Abdul Rashid et.al, 2007). Oleh itu, kemiskinan bandar menyebabkan penduduk sentiasa berhadapan dengan keadaan yang tidak selamat sama ada di dalam mahupun di luar tempat tinggal. Berbagai masalah yang dicetuskan oleh kemiskinan bandar pula saling mempengaruhi di antara satu dengan yang lain (Hasan Bahrom, 2004).

Seterusnya kemiskinan di luar bandar wujud disebabkan oleh pengabaian sektor pertanian yang menjadi penyumbang ekonomi terbesar kepada masyarakat luar bandar (Yunus, 2007). Hasilnya timbul masalah hutang, pembahagian tanah yang tidak adil, bertani di tanah yang disewakan dari orang lain yang menyebabkan pengeluaran yang rendah, pendapatan yang kecil, tahap pendidikan yang rendah dan taraf kesihatan yang rendah. Selain itu, eksploitasi dan monopoli orang tengah dan tanah yang tidak ekonomik juga dikatakan antara penyebab kepada kemiskinan di desa (Nurhayati, 2011). Ibnu Khaldun (1332-1406) mengutarakan konsep kemiskinan dari segi perbezaan masyarakat *Badawah* (luar bandar) dan masyarakat *Hadharah* (bandar). Beliau berkata keadaan hidup di bandar berkembang pesat kerana adanya tuntutan kemewahan berbanding di luar bandar yang rata-ratanya terdiri daripada penduduk yang lemah dan daif kerana kemiskinan mereka. Keadaan ini berlaku kerana pendapatan mereka tidak cukup untuk menampung keperluan dan tidak dapat memberi lebihan yang dapat dikumpulkan sebagai keuntungan (Ibnu Khaldun, 1993). Di samping itu, sesetengah pengkaji berpendapat bahawa kemiskinan di luar bandar, khususnya di kalangan petani padi di Malaysia,

berlaku kerana daya pengeluaran yang rendah kerana pengerjaan tanah yang tidak ekonomik, pulangan bersih yang kecil kerana kos-kos input (seperti racun, membajak dan sewa tanah) yang meningkat, hasil yang tidak mencukupi kerana menumpukan pekerjaan hanya kepada menanam padi, dan penumpuan terlampau ramai isi keluarga ke atas sumber padi (Chamhuri Siwar dan Mohd. Anuar Md. Amin 1989:39-43). Sukor Kasim (1985), misalnya telah melihat kemiskinan dalam sektor pertanian. Beliau menyatakan bahawa terdapat tujuh sebab atau faktor kekukuhan kemiskinan. Faktor-faktor tersebut ialah saiz tanah kecil dan penyewa, pertumbuhan penduduk, hasil pengeluaran yang tidak bertambah, perpindahan buruh sawah padi, kurang perhatian bagi tanaman lain dan aktiviti-aktiviti ladang, tidak mempunyai peluang untuk mendapatkan pekerjaan selain daripada sektor pertanian, serta kos sara hidup yang meningkat. Selain daripada itu kemiskinan luar bandar juga berpunca dari taraf pendidikan yang rendah. Menurut kajian, kadar buta huruf di kawasan luar bandar adalah lebih tinggi berbanding dengan kawasan bandar di Malaysia (Abdillah, 1999). Keadaan ini menyebabkan penduduk luar bandar yang berpendidikan rendah tidak berupaya untuk mendapatkan pekerjaan yang mampu meningkatkan taraf hidup. Kadar kemiskinan luar bandar sukar untuk dibanteras dengan kekurangan golongan professional di antara penduduk luar bandar.

#### 7. FAKTOR KEDUA: JUMLAH BANTUAN BERDASARKAN JANTINA KETUA ISI RUMAH

Di kebanyakkan kes kemiskinan di dunia, kebanyakkan isi rumah yang diketuai oleh wanita amat berisiko tinggi untuk berada dalam kemiskinan (D. Kyaw dan JK Routray, 2006). Perkara yang sama berlaku di Malaysia. Isi rumah yang diketuai wanita mempunyai kebarangkalian yang lebih tinggi menjadi miskin berbanding dengan isi rumah yang diketuai lelaki. Penentuan Had Kifayah sekarang gagal untuk membezakan jantina ketua isi rumah yang sudah tentu mempunyai keperluan dan karektor kemiskinan yang berbeza dan kriteria antara lelaki dan wanita. Dalam konteks Malaysia, pelbagai masalah timbul dalam hal ini.

Ketua Isi rumah wanita selalunya mempunyai tanggungjawab yang lebih, selain daripada menguruskan keluarga dan anak yang menjadikan mereka kurang masa untuk kegiatan lain. Dalam erti kata lain, mereka mengalami kemiskinan masa dan keperluan mereka tidak sama seperti orang-orang lelaki (Nilufer Cagatay, 1998). Para pengkaji sering berhujah bahawa wanita adalah lebih miskin daripada lelaki dan konsep yang biasa digunapakai adalah "Kemiskinan Wanita" (feminization of poverty). Kajian di Afrika, negara-negara Timur Tengah dan Asia menunjukkan bahawa penghijrahan kaum lelaki telah mewujudkan isi rumah yang diketuai oleh wanita (Makinwa-Adebusoye, 1988). Ketua Isi rumah wanita juga lebih terjejas semasa krisis ekonomi dan menjadikan mereka lebih miskin (Seidl, A. (2000). Kajian di Bangladesh pula mendapati sebahagian besar daripada ketua-ketua isi rumah wanita terdiri dari balu dan wanita yang belum berkahwin (Ruzika dan Chowdhury, 1978; Ellickson, 1975; Kain et al, 1979).

Barros et al. (1997) membuktikan bahawa ketua isi rumah wanita mempunyai kekurangan dari segi sosial, ekonomi dan demografi berbanding dengan ketua isi rumah lelaki dan dengan sebab itu mereka lebih cenderung untuk menjadi miskin. Ini dibuktikan dengan hasil kajian beliau di Brazil yang menunjukkan bahawa isi rumah yang diketuai oleh wanita cenderung untuk mempunyai pendapatan isi rumah lebih rendah berbanding dengan isi rumah yang lain. Senada and Sergio (2007) menyiasat samaada isi rumah wanita lebih terdedah kepada kemiskinan di Bosnia dan Herzegovina. Dengan menggunakan perbelanjaan per capita tahunan bagi mengukur kemiskinan sebaliknya, mereka mendapati kemiskinan lebih tertumpu dikalangan ketua isi rumah lelaki.

#### 7.1 FAKTOR KEMISKINAN DIKALANGAN WANITA

Buvinic dan Gupta (1997) mengenal pasti tiga sebab utama kemiskinan dikalangan ketua isi rumah wanita. Pertama, isi rumah wanita secara umum mempunyai lebih tanggungan dan mempunyai nisbah ahli keluarga yang tidak bekerja lebih tinggi berbanding dengan ketua isi rumah lelaki. Kedua, wanita biasanya mempunyai upah yang lebih rendah berbanding dengan kaum lelaki selain mereka mempunyai akses yang kurang untuk aset. Ketiga, wanita biasanya menanggung beban kerja-kerja rumah yang menyebabkan kekangan masa dan mobiliti berbanding ketua isi rumah lelaki. Dalam erti

kata lain, ketua isi rumah wanita mesti memikul beban sokongan ekonomi dan isi rumah kerja-kerja, yang meninggalkan mereka dengan masa yang kurang untuk masa lapang berbanding dengan ketua-ketua lelaki. Ini berkaitan antara jumlah jam waktu kerja dan waktu lapang yang diambil kira dalam menentukan kemiskinan. Buvinic dan Gupta (1997) membuktikan bahawa di Chile, program pengurangan kemiskinan di kalangan ketua isi rumah wanita merupakan cara terbaik dalam mengurangkan kemiskinan di Negara tersebut.

Definasi kemiskinan samaada secara relatif atau mutlak selalunya tinggi di kalangan wanita terutama bagi wanita yang menjadi ketua isi rumah. Bagi wanita yang bercerai hidup atau mati, mereka boleh menjadi miskin serta merta sekiranya terpaksa menanggung anak tanpa sebarang nafkah atau harta yang ditinggalkan (Nor Aini Haji Idris et.al 2012). Disamping itu, kewujudan kanak-kanak di dalam keluarga yang diketuai oleh wanita khususnya ibu tunggal atau nenek haruslah diambil perhatian kerana fenomena keluarga sebegini makin bertambah. Anastasia R. Snyder (2006) mendapati bahawa satu-perempat dari keluarga di Amerika yang diketuai oleh wanita adalah terdiri dari warga emas dan cucu disamping kadar kemiskinan yang lebih tinggi bagi keluarga tersebut. Ini disebabkan mereka tidak mempunyai sumber ekonomi disebabkan ketiadaan orang dewasa dalam keluarga mereka.

Dalam kepelbagaian budaya dan tahap pembangunan ekonomi, wanita cenderung untuk banyak terlibat dalam pekerjaan yang tidak dibayar (cth: menjaga keluarga) berbanding dengan lelaki, yang cenderung untuk bekeria di dalam aktiviti yang mendapat bayaran. Namun, kebanyakkan wanita terjebak kepada diskriminasi dalam pekerjaan, bantuan modal yang kurang serta mereka juga memiliki harta peninggalan yang kurang berbanding dengan lelaki (D. Kyaw dan JK Routray, 2006). Dalam sesetengah masyarakat, janda, wanita bercerai atau ditinggalkan mungkin terjebak dengan pengecualian sosial, pengasingan dari keluarga dan gangguan, menjadikan mereka amat sukar untuk mengekalkan kehidupan untuk diri sendiri atau anak-anak mereka. Ketua isi rumah wanita yang mempunyai anak kecil mungkin menghadapi kekangan masa yang menghadkan waktu kerja mereka. Walaupun jumlah ketua isi rumah wanita adalah kecil berbanding ketua isi rumah lelaki namun jumlah ini semakin meningkat dikebanyakkan rantau dunia (Buvinic dan Gupta 1997). Selain itu kebanyakkan ketua isi rumah wanita terdiri dari golongan warga emas yang mempunyai kekangan tenaga untuk bekerja (Gomez and Gaton, 1987). Mereka juga mempunyai tahap pendidikan yang kurang dan mempengaruhi jenis pekerjaan yang dilakukan oleh mereka yang kebanyakkannya jenis pekerjaan yang diceburi tidak memerlukan kelayakan akademik yang tinggi (Buvinic and Youssef, 1978). Dari segi pekerjaan pula, kaum wanita lebih banyak terlibat dalam aktiviti ekonomi yang tidak formal yang menyumbang kepada pendapatan yang kecil (Merrick and Schmink, 1983).

#### 8. KESIMPULAN

Perbezaan antara fenomena kemiskinan bandar dan luar bandar amatlah ketara. Ini telah dibuktikan dengan beberapa kajian lepas yang membuktikan walaupun kemiskinan di bandar mempunyai jumlah yang kurang berbanding dengan luar bandar namun impaknya lebih terasa berbanding dengan luar bandar. Ini disebabkan oleh perbezaan corak perbelanjaan yang berbeza antara kedua-dua awasan ini ditambah pula oleh perbezaan kos sara hidup. Dalam menentukan purata garis kemiskinan zakat bagi kawasan bandar, terdapat beberapa perkara yang perlu diambil perhatian seperti kos sara hidup untuk perumahan dan pengangkutan yang menjadi perbelanjaan terbanyak malah lebih banyak dari perbelanjaan untuk makanan. Manakala bagi kemiskinan luar bandar pula, perkara-perkara seperti bantuan pembelajaran, perniagaan dan latihan kemahiran adalah penting bagi membolehkan mereka bekerja dan berdikari.

Selain itu kebanyakkan kajian lepas mendapati kemiskinan dikalangan jantina ketua isi rumah banyak tertumpu dikalangan ketua isi rumah wanita berbanding ketua isi rumah lelaki. Ini adalah kerana faktor tenaga, sosial, pendidikan, kebolehan dan masa yang banyak memihak kepada ketua isi rumah lelaki. Faktor-faktor sebegini harus diambil perhatian oleh pihak pengurusan zakat dalam membahagikan bantuan zakat kerana mungkin masalah kemiskinan dikalangan wanita dapat diselesaikan dengan cara menyelesaikan masalah-masalah berikut. Oleh kerana zakat berfungsi sebagai sumber pengagihan sumber-sumber dari golongan kaya kepada golongan miskin (iaitu zakat mencegah penumpuan

kekayaan di tangan orang kaya), ianya menjadi pendekatan yang berkesan untuk memerangi kemiskinan. Secara keseluruhannya, keputusan perbincangan ini haruslah diberi perhatian terhadap pembuat polisi khususnya kepada agensi pentadbiran zakat dalam menentukan Had Kifayah. Penentuan Had Kifayah dan pengurusan zakat yang efektif akan memperbaiki keadaan sosio-ekonomi masyarakat Islam di negeri itu.

# POVERTY IN SAUDI ARABIA, THE WAY TO REDUCE: AN EMPIRICAL STUDY ON TAKAFUL PARTICIPANTS

Dr. Hashem Abdullah AlNemer<sup>1</sup>

#### **ABSTRACT**

Takaful is the Islamic counterpart of conventional insurance, where it relies on a combination of tabarru (donation) and agency or profit sharing. The *takaful* fund is considered a *musharaka* (partnership) among participants (policyholders). The relationship between the *takaful* operator (TO) and participants' fund is based on either wakala contract to manage the underwriting activities, and/or a mudaraba to manage the underwriting or investment activities. Accordingly, one of the main differences between takaful operation and conventional insurance is the concept of underwriting surplus, where in conventional insurance means profit for insurance company, which is not the case for TOs. The issue of sharing distribution and management of surplus in takaful undertakings has become a matter of great importance and debate lately. The practice of takaful surplus has varied from one operator to another operator and from one country to another country. Regulators, experts and Shariah scholars have differed in their views and interpretations with regards to the sharing of surplus, resulting in a difference of opinion as to who is entitled to takaful surplus or who is not. Both the participants as well as the TOs claim that they deserve the surplus and hence have a right over the surplus in *takaful*. AAOIFI has resolved the issue by clearly pointing that the surplus in takaful fund belongs to participants only and the TO is not entitled to receive any part of it. However, regulators in different countries are allowing the TOs to share participants in the underwriting surplus. For example, the Saudi Arabian Monetary Agency (SAMA) allowed surplus to be shared between participants and TO. By doing so, TOs have prioritize the interest of shareholders over the rights of participants (this was obvious on some of the Saudi Arabian TOs annual reports), since shareholders have control of the TOs governance organs. Accordingly, participants may find themselves in a challenges and the only right that participants can exert to discontinuing their contractual relationship with the company in case of dissatisfactions with the distributed surplus. No studies have been conducted to systematically document *takaful* participants' perceptions and preferences about underwriting surplus. This paper attempts to fill the gap. The paper reports results on the perceptions of 420 participants of TOs in Saudi Arabia about their perceptions and whether or not they want the company to share underwriting surplus with them. The paper also reflects and compares SAMA regulations with the regulations of the international takaful bodies in term of distributing underwriting surplus among participants. In line with SAMA regulations, this paper also reflect a practical example taken from some of the Saudi Arabian TOs annual reports, which shows a great variation between participants and shareholders in term of surplus and profit accumulations, i.e. shareholders profit increases against the interest and right of participants. In other word, if SAMA has followed the AAOIFI standards, takaful participants will be able to participate on the takaful fund with a small amount of contribution for a reasonable expected surplus return, which in away helps in red ucing poverty in Saudi Arabia.

#### 1. INTRODUCTION

*Takaful* is derived from the Arabic root word "kafala", a verb which means guarantee, bail, warrant or an act of securing one's need (Ali and Odierno, 2008).

Takaful is also defined in Section 2 of the Malaysian Takaful Act 1984 as;

"A scheme based on brotherhood, solidarity and mutual assistance which provides for mutual financial aid and assistance to the participants in case of need whereby the participants mutually agree to contribute for that purpose."

AAOIFI's<sup>2</sup>, also defined Islamic insurance on (2004/2005) as per the Financial Accounting Standard No. 12, in Appendix E;

"Islamic insurance is a system through which the participants donate<sup>3</sup> part or all of their contributions which are used to pay claims for damages suffered by some of the participants. The company's role is restricted to managing the insurance operations and investing the insurance contributions."

By 2007 AAOIFI defined Islamic insurance as in line with shari'ah Standard 26 (2) 2007;

"Islamic insurance is an agreement between persons who are exposed to risks to protect themselves against harm arising from risk by paying contributions on the basis of a "commitment to donate". Following from that the insurance fund is established and it is treated as a separate legal entity which has independent financial liability. The fund will cover the compensation against harms that befall any of the participants due to the occurrence of the insured risks (perils) in accordance with the terms of the policy."

It may be thought on first glance that *takaful* does not deviate from conventional insurance, since both types depend on the concept of pooling money from a group for the sake of helping the unfortunate of the same group in the events of encountering financial loss. However, unlike *takaful*, the spiritual mutual support is not a requisite of commercial insurance. Commercial insurance is based on the exchange whereby the insured pay a premium in exchange for protection in case of calamity exposure, with "no compensation" in a case of no loss. However, the *takaful* mechanism is based on the concepts of *tabarru* (donation) combined with the intention (*niah*) to participate in the pooling aid mechanisms. Hence, those who participate in the *takaful* mechanism will be less likely to encounter the feeling of receiving nothing if no claim occurs. They will be satisfied enough to help their colleague at the same pooling group in his loss. Another unique function for Islamic insurance is the strong relationship between *takaful* operator and participants, that *takaful* operator will goes even beyond the provisions of "spiritual satisfaction needs", by providing a Nobel services which will be rewarded by God only.

While the conventional way of satisfying a customer is accomplished by fulfilling their material or worldly needs with benefits such as low prices, higher returns, faster delivery or even benefiting the deceased's family members after his death in the form of life insurance. However, it does not mean that customer satisfaction in terms of price, quality, delivery and precision are not important to the *takaful* operator; in fact they are important as well as the customer's spiritual needs satisfaction. So when Muslims buy Islamic insurance they can combine two benefits; (i)- They receive Islamic protection that

<sup>&</sup>lt;sup>2</sup> Accounting Auditing Organization for Islamic Financial Institutions.

<sup>&</sup>lt;sup>3</sup> The concept of donation is considered to be the back bone of *takaful* in supporting the real meaning of mutual cooperation.

<sup>&</sup>lt;sup>4</sup> the insurance value will be so intangible that its value cannot be appreciated

<sup>-</sup>

<sup>&</sup>lt;sup>5</sup> Al-Qaradawi, suggest that donation should be the basis of the contract, if insurance is to be *shari'a* compliant (Al-Qaradawi,2003). The spirit embodied in the concept of *tabarru* is that the participants are not thinking only of their own protection but they should also be thinking of helping other participants, without the concept of donation the contract will be that of buying and selling of insurance (Lewis, 2003).

complies with *shari'a* rules against financial loss, in the same way as conventional insurance, (ii) Customers can distance themselves from the possibility of sin<sup>6</sup> incurred by purchasing conventional insurance in line with God's law. Although a believing Muslim is required to accept destiny, which may incorporate certain misfortunes, Islam encourages Muslims to take extra precaution to minimize potential misfortune, losses or injury arising from unfortunate events. Thus, having an insurance policy is not considered to be against the will of Allah, rather the will of Allah can be enhanced by holding an insurance policy to elevate the unexpected risk that exists in day to day life. (Al-Zarqa, 1962; Attar, 1983; Moghaizel, 1991).

On the other hand, the *Takaful* grew at a compound annual growth rate of 39% over 2005 - 2008 in terms of global *takaful* premiums, 45% in the GCC, and 28% in South East Asia (SEA). The comparative growth of global insurance was 7% with the corresponding figures of 20% and 23.5%, respectively (Bhatty, 2010). The estimated size of the global *takaful* premium was US\$ 5.3bn in 2008 and US\$ 8.9bn in 2010 (Bhatty, 2010) and expected to rise to US\$ 12.5bn by 2015 (Lewis *et al.*, 2007). There were some 179 *takaful* companies and windows (20%) in 2008, and this number in 2010 can easily be in excess of 200. The total capital committed within the *takaful* industry in 2007 was around US\$ 3.5bn (Bhatty, 2010). Saudi Arabia remains the largest *takaful* market in the GCC with contributions of US\$ 2.9 bn in 2008 (E & Y, 2010). Meanwhile, in 2011, most GCC markets witnessed a slowdown in *takaful* growth with only the Saudi insurance market remaining strong. This was due to the compulsory medical insurance mandated by the government. Saudi Arabia's introduction of compulsory medical insurance policies has contributed to a strong growth in family and medical *takaful* in the Middle East and North Africa (MENA) region (E & Y, 2011).

#### DOMINANT TAKAFUL MODEL

There are several *takaful* operational models that have been adopted by *takaful* operator companies worldwide such as *mudarabah*, *wakalah*, *waqf*, hybrids of *mudarabah* and *wakalah*, *ta'awuni* and non-profit fund. However the first two models are most dominant, that the *mudarabah* is widely used in Asia, while *wakalah* has become popular in the Middle East (Smith, 2007). Accordingly, this paper will focuses on the *wakalah* model as it is been used by the majority of the TOs in Saudi Arabia. This paper will also highlight the operational scheme of the Saudi Cooperative insurance model as it been considered as a key feature of the *takaful* model. The *wakalah* model can be operated according to two main schemes; either General or Family. However, this paper will focuses on the *wakalah* model on its family form as the participated policyholders on this study were selected from a family *wakalah* model.

# BASIC WAKALAH MODEL (FAMILY TAKAFUL)

There will be separate contracts in the *wakalah* model, of which one is used for underwriting and the other is used for investment activities of *takaful* funds. Although the *wakalah* model has widely been practised by TOs in underwriting activities, it is rarely adopted for investment activities. In the *wakalah* model as shown in Figure 1, the participants (policyholders) place their contribution into a pool of donations (*tabarru*), hence the *wakalah* operator (agent), is entitled to a *wakalah* fee for their effort to manage the *takaful* fund regardless of the performance of the fund. It is an upfront fee which is calculated based on an agreed percentage of the total fund; nevertheless the TO cannot ask for an additional *wakalah* fee in the future if the calculated fee was underestimated (Tolefat, 2008). The *wakalah* fee should be approved by the *Sharia'h* Supervisory Board (SSB)<sup>7</sup>. Thereby, most of the TOs will declare their *wakalah* 

\_

<sup>&</sup>lt;sup>6</sup> Based on three prohibition elements, Uncertainty of outcome *(gharar)*, Gambling *(maisir)*, and dealing with Interest *(riba)* which is frowned upon by the *shari'ah* law.

<sup>&</sup>lt;sup>7</sup> CCB Rulebook, 2005.

fee at the beginning of the contract, but the loading will be calculated at the end of the year once the actual encountered expenses have been declared for an accurate fee calculation.

Like the general wakalah model, the model used here for underwriting and investment activities as shown in Figure 1, can deviate according to the nature and sensitivity of the underwriting policy encountered (Tolefat, 2008). For example, if the policy is regarding (i) Risk protection from death, then the contributions split into two channels. The first contribution goes to the wakil (Agent), for their management effort and other fees related to the family policy if any, while the second contribution goes to the Participants' Special Account (PSA), in the form of donations (tabarru) to participate in the risk of death protection pooling, the donations of the participants varies in accordance to his age at the time of the contract (Hassan and Lewis, 2007). On the other hand, if the policy is written as (ii) Family Takaful savings policy, then the contributions split into three channels. The first two channels follow the aforementioned policy. However, a small portion also goes to the PSA to cover mortality risk, while a substantial portion goes to the Participants' Account (PA) for the purpose of savings and investments. Furthermore, the PSA, and shareholders fund operates the same way as in the general basic wakalah takaful model. While the PA represents the savings policies, most of the investments here are accomplished on a long-term basis, thereby the TO deserves a management fee which is calculated as a percentage of the total invested assets and this fee represents their effort to manage such an investment fund. The TO as a result has four sources of income: (i) wakalah fee from underwriting activities, (ii) fund investments fee from PSA, (iii) fund investments fee from PA and (iv) incentive performance fee if it followed the operational procedures.

#### SAUDI ARABIAN COOPERATIVE INSURANCE AS A TAKAFUL MODEL

SAMA requires all insurance companies to operate under a cooperative insurance business model, which is a key feature of the *takaful* model (E & Y, 2010). *Shari'ah* scholars have indicated that the Saudi cooperative model is similar to a *takaful* model (funds segregation and surplus distribution) (Abouzaid, 2007).

The cooperative insurance model works in the same way as the *takaful* model. The SAMA directives called the Implemented Regulations, Article 70, has identified the surplus distribution between the company and the participants. SAMA has indicated that 10% of the net surplus shall be distributed to the policyholders either directly or in the form of reduction in premiums for the next year. The remaining 90% of the net surplus shall be transferred to the shareholders' income statement. Shareholders' net income shall be transferred to the statement of shareholders' equity similar to the *takaful* model. Furthermore, 20% of the net shareholders' income shall be set aside as a statutory reserve until this reserve amounts to 100% of the paid capital (SAMA, 2005). Therefore, any deficit in the policyholders' fund is borne solely by the shareholders.

Despite SAMA regulations which are directed towards cooperative insurance, only a number of cooperatives operate as sole TO (E & Y, 2010, 2011). Examples of these operators are (AlJazira, 2008; SAAB, 2009; AlAhli, 2010). These TOs are using the *wakalah* model to operate their *takaful* scheme and they have appointed *Shari'ah* boards to supervise business operations, including investments and ensure compliance with Islamic law. However, these TOs are following the Saudi cooperative insurance laws as SAMA did not issue specialized *takaful* laws and directives.

#### JUDICIARY SYSTEM COMMERCIAL LITIGATION IN SAUDI ARABIA

The Saudi Arabian courts system is currently going through major reforms under a new Judiciary Regulation and a new Board of Grievances Regulation, which were both enacted under the Royal Decree No. M/78 of (1st of October 2007)<sup>8</sup>. The Saudi Arabian courts system is divided into the *Shari'ah* (Islamic Law) courts on the one hand, and specialized statutory tribunals on the other hand. The *Shari'ah* courts are of general jurisdiction, and they are mainly concerned with matters relating to land, family disputes, personal injury claims, and criminal cases. Of the statutory tribunals, the most important by far is the Board of Grievances. Its jurisdiction includes disputes involving the Saudi Arabian government and government agencies (judicial review of administrative action and government contract disputes), most types of commercial cases, the enforcement of foreign judgments and arbitral awards. Establishment and conduct of commercial courts is regulated by the Royal Decree No. 32 issued on the (2<sup>nd</sup> of June 1931). Under this law, all commercial disputes except for those related to insurance business are settled by the Ministry of Commerce. The Ministry of Commerce will appoint a committee for commercial disputes, comprising two *Shari'ah* judges and one legal adviser (Ghazzawi *et al.*, 2011).

Insurance disputes and claims to which insurers have become subrogated are adjudicated by a special committee, the Committee for the Settlement of Insurance Disputes. There is an automatic right of appeal from the Committee for the Settlement of Insurance Disputes to the Board of Grievances. Since 31st December 1987, Commercial Disputes have been adjudicated by the Grievances Court (*Diwan Al-Mazalem*), Commercial Circuit, instead of the Committee for Commercial Disputes.

On the other hand, most disputes arising in Saudi Arabia can be submitted to arbitration in accordance with the Arbitration Law, promulgated by Royal Decree No. M/46 dated 25th April 1983 and the Rules

<sup>&</sup>lt;sup>8</sup> Legal Department, Ministry of Commerce Grievances Court at http://www.saudicommercialoffice.com/settlement\_of\_commercial\_dispute.html.

for the Implementation of the Arbitration Regulation of 1985, which form a reasonably comprehensive code derived largely from Islamic law principles. Under these statutes, the authority which has original jurisdiction to hear the dispute retains extensive control over and involvement in the conduct of arbitration. In most commercial disputes this is the Board of Grievances. Broadly, only the conduct of the hearings and the decision-making is the arbitrators' responsibility, whilst all pre-hearing and post-hearing procedures, and other ancillary matters, are the responsibilities of the Board of Grievances. In particular, the arbitral tribunal is not properly constituted until the Board of Grievances approves an arbitration instrument which must be executed and signed by the parties and the arbitrators (Ghazzawi *et al.*, 2011). Nor is an award final and enforceable until it is approved by the Board of Grievances. Hence, the losing party in arbitration has an automatic right of appeal to the Board of Grievances on points of law or procedure, opening the door to yet further appeals on points of law or procedure to the Board of Grievances Review Panel (Ghazzawi *et al.*, 2011).

#### SAUDI ARABIAN INSURANCE INDUSTRY

The insurance industry in Saudi Arabia was unregulated prior to the passing of the Control of Cooperative Insurance Companies Law, which came into force on 20 November 2003 along with its implementing regulations published on 23 April 2004, together with the Cooperative Insurance Regulations (Hodgins and Beswetherick, 2009). However, the implementation of regulations was delayed to April 2008, until the unlicensed entities operating in Saudi Arabia brought their operations into accordance with the requirements of the new law and regulations that have been imposed by SAMA (Wilson, 2007). Prior to the implementations of the insurance regulations, the only options for individuals or businesses operating in Saudi Arabia seeking insurance were between taking out a conventional insurance either overseas or with an unlicensed provider in the Saudi Arabia or taking out cooperative insurance with Saudi Arabia's former state monopoly provider, the National Company for Cooperative Insurance (NCCI), now known as (*Tawuniya*) (Hodgins and Beswetherick, 2009).

Shortly after implementation of insurance laws, SAMA established an independent team of insurance supervisors to operate in its banking inspection department (SAMA, 2010a). The team has developed from a small internal department of 9 employees to an independent supervisory authority with a team of 44 employees (Hodgins and Beswetherick, 2009). The regulatory body has four main objectives: (i) Protect the rights of policyholders and shareholders', (ii) provide better insurance services for fair and effective competition, (iii) foster stability of the insurance market, and (iv) establish a developed insurance industry by providing training and employment opportunities (SAMA, 2010a).

SAMA is mandated as the regulator for all licensed insurance companies including insurance brokers, insurance agents, insurance consultants, surveyors, loss adjusters and actuaries. In other words, SAMA is responsible for licensing and authorization, supervision, rule-making, supervision of investment of assets and monitoring compliance with capital and reserve requirements (SAMA, 2010a). Such extensive control by SAMA is due to the regulations that accompanied comprehensive laws that have been represented by a number of Articles. These Articles define different types of insurance, the conditions for licenses being granted, corporate governance and regulatory and supervisory procedures (Wilson, 2007).

The implementation of the new regulations and laws has made the kingdom to be the largest insurance market in the GCC and one that has developed substantially since insurance business was first permitted in the 1990s (E & Y, 2011). Driven by strong macroeconomic performance due to the global rise in oil prices, rising income levels and positive demographic trends, the Saudi insurance market has grown by double digits for the past 5 years (OBG, 2011).

Finally, in order to enhance the supervision and control and application of insurance international standards and practices, SAMA has become a member of the International Association of Insurance Supervisors (IAIS), and it participates in all its main committees and sub-committees. In addition, SAMA is a member of the Arab Forum of Insurance Supervision and Control Authorities (SAMA, 2010b). Accordingly, SAMA is considered one of the strongest insurance regulatory authorities in the GCC, which was obvious by their reactions to the adverse competitive trends by restricting new licenses; and players wishing to enter the market are being advised to buy existing licenses (E & Y, 2011).

#### STATUS OF INSURANCE COMPANIES IN SAUDI ARABIA

Saudi Arabia hosts a number of prominent multinational firms in addition to several domestic players that rival them in size. By April 2009 there were 29 Saudi insurers in the country including 20 that had completed SAMA's licensing process and were publicly listed; 5 were publicly listed but awaiting a license and 4 were neither publicly listed nor licensed. By the end of the first quarter of 2010, SAMA has approved 33 insurance and reinsurance companies, of which 27 were finally licensed to practice insurance and/or reinsurance (SAMA, 2010a). In addition, one insurance company was listed on the Saudi Stock Exchange but it had not obtained a final license yet to offer insurance services. The Council of Ministers also approved the establishment of five other insurance companies, and two more insurance companies were recommended by SAMA to be approved initially, and their license procedures reached advanced stages (SAMA, 2010b). By July, 2011 SAMA has given operation licenses to seven takaful insurance providers to operate in Saudi Arabia (Al Ahli Takaful, SABB Takaful, Wiqaya Takaful Insurance & Reinsurance, Solidarity Saudi Takaful, AlJazira Takaful Ta'awuni, Saudi Takaful insurance, Watani Takaful) (OBG, 2011).

#### SAUDI INSURANCE MARKET BEHAVIOURS

This section addresses different issues concerning the Saudi insurance industry. Among others, the performance of different insurance lines of business, insurance market penetration rate, and the market claim ratio are presented.

#### PERFORMANCE OF SAUDI ARABIAN INSURANCE MARKET

Saudi Arabia's insurance sector has been able to weather the worldwide financial crisis well, outperforming a number of other business segments to post consistent year-on-year growth throughout the duration of the global economic downturn (OBG, 2011). The country's insurance sector is now able to play a more significant role in the national economy and enjoys a greater capital position as more local businesses and individuals become aware of and recognize the value of having adequate insurance coverage.

Figure 3, represents the overall insurance business performance, which has been classified by business line. In 2009, the insurance market witnessed a substantial growth rate of 33.8%, with gross written premium (GWP)<sup>9</sup> reaching SAR<sup>10</sup> 14.6 billion compared to a total of SAR 10.9 billion in 2008. In 2010, the GWP has reached SAR 16.4 billion, which represents a growth rate of 46% (SAMA, 2010b). The increases was due mainly to the growing awareness of the importance of insurance and the favourable economic conditions during the year, as well as the introduction of compulsory motor insurance and cooperative health insurance (SAMA, 2010b).

Figure 3: Gross Written Premiums (2006 to 2010, SAR Millions)

Source: (SAMA, 2010b)

Health insurance, reported the biggest line of business in 2010, its contribution to total GWP increased from 50% in 2009 to 53% in 2010, followed by general insurance, with a contribution to the total business volume decreasing from 43% in 2009 to 41% in 2010. Protection and Savings insurance remained the smallest line of business accounting for 6% of total GWP, with a decrease in its written premiums by 3.1% in 2010 (SAMA, 2010a). Health insurance became the most demanded line of business in Saudi Arabia, which accounted for SAR 1.39 billion of the SAR 1.77 billion increase in 2010 (SAMA, 2010a). More information on specific insurance line of business growth rates can be found in Figure 4.

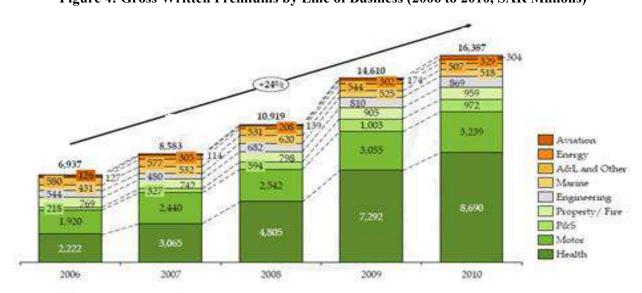

Figure 4: Gross Written Premiums by Line of Business (2006 to 2010, SAR Millions)

- 1. Source (SAMA, 2010b).
- 2. Motor and Health insurance accounted for around 73% of total GWP in 2010.
- 3. Health insurance (compulsory and non-compulsory) accounted for 53% of total GWP in 2010.
- 4. Motor insurance (compulsory and non-compulsory) accounted for 20% of total GWP in 2010.
- 5. Aviation insurance GWP increased by 75% in 2010.
- 6. Health insurance was the second fastest growing line of business with growth rate of 19%.
- 7. P&S underwritten premiums decreased by 3%.

The impressive rate of growth seen in 2010 looked poised to continue, with Saudi Arabia's insurance sector believed to be one of the regional industry's prime movers. OBG (2011) referred to the report released in late August 2010 by the Investment bank Alpen Capital, which indicated that the premium growth across the GCC region would increase by some 20% a year between 2011 and 2015, lifting total premium values from the current SAR 67.5 billion to SAR 138.75 billion. Of this total growth, 75% would be concentrated in Saudi Arabia and the United Arab Emirates.

The report also expected that the Saudi Arabian life insurance sector will have a compounded annual growth rate (CAGR) of 48%, while the non-life sector will grow at a steadier CAGR of 14%. Overall, the Saudi insurance sector is forecasted to expand by a CAGR of 18% by the middle of the decade, reaching a total value of SAR 34.62 billion. Insurance is expected to grow due to the forecasted increase in the country's construction industry. This is a result of the government's massive infrastructure investment programme over the next decade, with billions being ploughed into transport, housing, health and education developments. A raft of insurance opportunities will arise from the developments since hundreds of projects will need comprehensive coverage (OBG, 2011).

As has been mentioned previously, the Saudi market is dominated by health and general insurance business lines, which currently account for around 71 % of the market's gross written premiums, However, protection and savings products, have become the fastest- growing insurance segment, posting a 68.9 % annual growth and now accounting for 7 % of gross written premiums, largely attributed to the introduction of Islamic insurance (*takaful*) products (SAMA, 2010a). Accordingly, while most of the GCC markets have witnessed a slowdown in *takaful* growth, the exception is the Saudi market which remains strong. Figure 5, shows the compound annual growth rate (CAGR) of GCC countries from year 2005 to 2009.

# INSURANCE PENETRATION<sup>11</sup> IN THE SAUDI ARABIAN MARKET

Insurance penetration (GWP/GDP) has been growing at a CAGR of 17% in Saudi Arabia. Over the past five years the increase in the insurance market penetration was attributable to the growing demand for all types of insurance (SAMA, 2010a). However, in 2010, insurance penetration decreased to 1%, down from 1.06% in 2009, mainly due to a strong growth in total GDP (18.6% in 2010 compared to -21.2% in 2009), while the penetration rate of protection and savings insurance was low compared to general and health insurance as shown in Figure 6 (SAMA, 2010b).

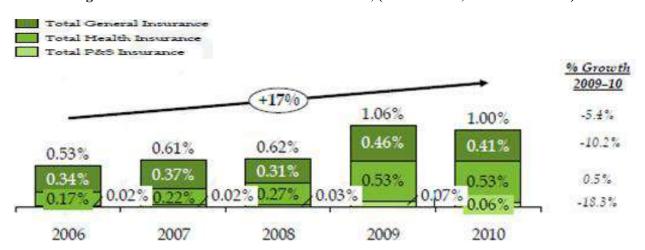

Figure 6: Insurance Penetration of Total GDP<sup>12</sup>, (2006 to 2010, % of Total GDP)

1. Source (SAMA, 2010a)

Despite these impressive penetration figures, however, Saudi Arabia remains one of the world's most underinsured countries. Penetration rates will need to improve considerably if the Kingdom is to reach the

<sup>11</sup> Insurance Penetration = Gross Insurance Premiums / GDP.

<sup>&</sup>lt;sup>12</sup> Saudi Total GDP of SAR 1,308, SAR 1,414, SAR 1,758, SAR 1,384, and SAR 1,642 Billion in 2006, 2007, 2008, 2009, and 2010, respectively (SAMA, 2010a).

levels of more developed markets, both in the region and internationally. Saudi Arabia's insurance sector still has a long way to go before matching levels in many Western countries. Whereas the Kingdom's insurance sector is now valued at 1% of GDP, the ratio of premiums to domestic product is well over 10% in France and around 13% in the UK, as shown in Figure 7 (E & Y, 2011).

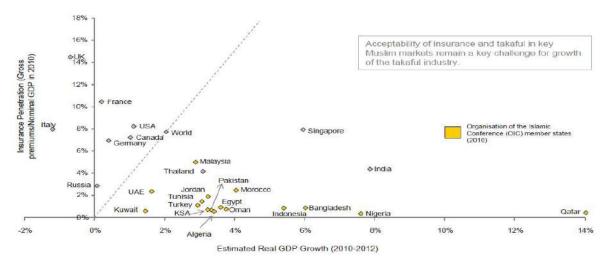

Fig 7: Insurance Penetration and Real GDP Growth for Select Countries

Source (E & Y, 2011)

Saudi Arabia, however, remains the largest *takaful* market in the GCC with contributions of US\$ 1.7 billion in 2007 and US\$ 2.9 billion in 2008 (E & Y, 2009; 2010). *Takaful* penetration in Saudi Arabia is very low compared to commercial insurance as shown in Table 1.

# CLAIM RATIO<sup>13</sup>

Total claims paid by line of business in the Saudi Arabian insurance market has reported a straight increase from SAR 5.2 billion to SAR 7.3 billion with a growth rate of 38.9 % between 2008 and 2009, and a recent increase of SAR 8.51billion and 17 % growth rate between 2009 and 2010, as shown in Figure 8 (SAMA, 2010b).

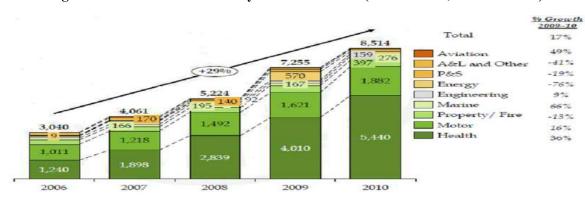

Figure 8: Gross Claims<sup>14</sup> Paid by Line of Business (2006 to 2010, SAR Millions)

Source (SAMA, 2010a)

Health and motor insurance together, accounted for 82.9 % and 77.6 % of all gross claims paid between 2008 and 2009 respectively, with an increase in gross claims paid that grew by 36 % and 16 %, respectively in 2010. However, in 2009 the highest growth rate in gross claims paid was recorded by energy insurance, rising to SAR 570 million compared to SAR 27 million in 2008 (SAMA, 2010a: 78). In 2010, marine insurance recorded the highest growth rate in gross claims paid, after increasing by 66 % from SAR 167 million to SAR 276 million. These high-growth percentages in gross claims reflected the relatively high ratios of these lines of business of the total market premiums (SAMA, 2010a; 2010b).

Furthermore, Protection and Savings, which includes *takaful* insurance, has reported a decrease in the claim ratio from 2009, by 19 %, due to compulsory rules that cannot force people to buy a family *takaful* (life insurance) policy. However, *takaful* claims ratios in Saudi Arabia remains high compared to other countries as shown in Figure 9, due to structured underwriting practice (E & Y, 2010).

#### SURPLUS DISTRIBUTION PER THE INTERNATIONAL REGULATORY BODIES

AAOIFI on its *Shar'iah* Standards (2010) defined surplus as excess of the total premium contributions paid by policyholders during the financial period over the total indemnities paid in respect of claims incurred during the period, net of reinsurance and after deducting expenses and changes in technical provisions ( *i.e.* Contributions - Indemnities = Surplus). Accordingly, earning underwriting surplus is considered as a common requirement for both policyholders and TOs so that the distribution of surplus will be an incentive for participants to enhance their loyalty towards the company. In practise paying back part of the surplus makes the *takaful* participants responsible and aware not to make false or fraudulent claims that would lower the surplus rate. On the other hand, surplus means a great reward incentive for TOs as many TOs are very keen to share the underwriting surplus with participants. TOs can argue that the recorded surplus at the end of the financial year is the sign of efficient management and prudent practices.

However, as a *takaful* contract is a combination of *tabarru*' and agency or profit-sharing, the *takaful* fund is considered a *musharaka* (partnership) among participants. The relationship between the TO and participants' funds is based on either *wakala* contract to manage the underwriting activities, and/or a *mudarabah* to manage the underwriting or investment activities. Accordingly, the main difference between *takaful* operations and conventional insurance is the concept of underwriting surplus – conventional insurance underwriting surplus means profit for the insurance company, while underwriting surplus is not regarded as profit for *takaful* operators (Hassan, 2008). Therefore TOs are not entitled to share the surplus of the fund with participants. TOs for the sake of the best benefits and with full consent of the participants use the surplus as reserves, reduction of the contribution, charitable donations and partial/full distribution of the surplus among the participants. AAOIFI *Shari'ah* standard No. 26 (5/5) of 2007, has stated that surplus can only be distributed back to the participants and cannot be taken by the TO; the distribution of surplus will be based on a percentage share of participant's donations.

Despite the fact that TOs are not allowed to share the surplus with participants, until recently, the *mudarabah* model adopted by Malaysian TOs refers to profit as the underwriting surplus plus investment returns. This arrangement marks a departure from the original *mudarabah* model, which will entitle the TO a ratio in the investment returns, without sharing in the underwriting surplus (Soualhi, 2008: 2). Later

on, the modified *mudarabah* model justified the sharing of the underwriting surplus on the grounds that such an arrangement would allow TOs to withstand competition and avoid overpricing (Soualhi, 2008: 2).

On the other hand, AAOIFI in its *Shari'ah* Standards (2010) has indicated the following three approaches to allocate underwriting surplus justly among participants:

- I. Pro-rata mode: Underwriting surplus must be allocated to all *takaful* participants in proportion to the contribution paid by the participants, without differentiating between claimable and non-claimable accounts, since they all contributed to the fund with a noble goal of brotherhood protection with no intention to achieve a surplus. Thus, the surplus must be equally distributed among them.
- II. Selective mode: Underwriting surplus must only be allocated to those participants who have not made any claims for a given financial year. This mode tends to indemnify non-claimable accounts only and deprive claimable accounts so that they become more prudent in the future. This is meant to apply justice among *takaful participants* as it is unfair to give claimable accounts part of the surplus since they have already received *takaful benefits*.
- III. Offsetting mode: Underwriting surplus must only be allocated to those participants where the amount of claims is less than the contribution paid. That is where the claims ratio is below 100%, then the surplus would be distributed after deducting the amounts of claims received in the given valuation period.

The above three approaches to allocate underwriting surplus should be clearly disclosed to participants as per AAOIFI No13, which requires disclosure of the method and the *Shari`ah* basis applied in allocating the underwriting surplus. Participants should also receive relevant, sufficient and reliable information in connection with their participation rights on a timely and regular basis (IAIS and OECD, 2009).

#### SURPLUS DISTRIBUTION PER SAMA REGULATIONS

SAMA has issued a number of laws and regulations that aimed to regulate and standardized the Saudi insurance industry. In August 2005, SAMA issued the Cooperative Insurance Companies Control Law, which contains 25 articles. The main headings for insurance companies operating laws include licensing procedures and conditions, the required capital, key personnel responsibilities, auditing and annual reports, the role of the Ministry of Commerce and the role of SAMA in dealing with insurance companies, *etc.* In the same year SAMA has issued the controlling law that contains 84 articles, which gives an extensive illustration of the previous control laws. SAMA has also issued a number of specific regulations that address certain issues in the Saudi insurance industry, with the aim of strengthening transparency and accountability and to enable SAMA to enforce better business practices in the Saudi insurance market.

Furthermore, SAMA on its directive called the "Implemented regulations" Article 70, mentioned that the surplus distribution shall be conducted as 10% of the net surplus distributed to the policyholders, the remaining 90% of the net surplus shall be transferred to the shareholders' income statement, and 20 % the net shareholders' income shall be set aside as a statutory reserve until this reserve amounts to 100% of the paid capital (SAMA, 2005). Accordingly, as the majority of the TOs in Saudi Arabia are using the *Wakalah* model to run the *takaful* scheme (AlJazira, 2008; SAAB, 2009; AlAhli, 2010) a contradict will be raised between SAMA instructions and AAOIFI *shari'ah* standard No. 26 (5/5) of 2007, as the TO in the *wakalah* operational mechanisms is considered an agent to run the underwriting and investments activities. The TO suppose not share underwriting surplus with participants and they have only four sources of income only, (i) - *wakalah* fee from underwriting activities, (ii) - fund investments fee, (iii) -

investments on the operator's own capital and (iv) - an incentive performance fee, *i.e.* "sharing in the net underwriting surplus of the *takaful* fund" (in case of modified *wakalah* model).

Furthermore, SAMA seems in favor of implementing the net underwriting surplus instead of the gross underwriting surplus (SAMA, 2005), which implies that the investment income is ploughed back into the *takaful* fund and the *takaful* company shares with the participant the surplus from the *takaful* fund (Ali and Odierno, 2008; Asaria, 2009). Following SAMA surplus distributions instructions will reduce both underwriting surplus and investment return for participants, while shareholders will get the ultimate benefits per SAMA instructions. This fact was consolidated by the disclosed annual reports of some of the TOs in Saudi Arabia.

Table 2, shown a practical example from ALAhli *takaful* company, despite the fact that participants gross *takaful* contributions has been increased from SAR 115.85 million in 2009 to SAR 208.80 in 2010, with a growth rate of 80 % increase in revenues, with a net loss of only SAR 9.02 million in 2010, however participants fund surplus/deficits figures shown an amount of SAR 0.71 million, reflected a shortage in surplus distribution (AlAhli, 2010: 5).

Table 2: AlAhli Participants' Takaful Operations

Description -	2010	2009	2008	Variance ('09 vs '10	
	SAR millions			SAR	%
Gross Takaful Contributions	208.80	115.86	6.4	92.94	80%

Re-Takaful Balance Payable	4.13	3.62	0.19	0.51	14%

Source: AlAhli (2010)

At the opposite side AlAhli *takaful* company balance sheet as shown in Figure 10 reflected an increase in shareholders assets from SAR 152.82 million in 2009 to SAR 315.09 million in 2010 as a result of the significant increase in policyholders' investment (AlAhli, 2010: 6). The increase in shareholders assets and cash at Bank was due to the increase in investments as a result of increasing participants' value per contract of the new policies acquired and the resultant increase in the investable portion of contributions. While, the encountered increase loss in the *wakalah* operations was due to an increase in General and Administrative expenses (AlAhli, 2010).

The main reason that causes a loss in AlAhli wakalah operations is the administrative expenses besides the general wakalah model liabilities, which brings another discussion point that the Indirect expenses such as salaries and rents are paid by the operator if there is a surplus in the takaful fund that has been shared between the operator and the participants, otherwise it will be paid from the takaful fund (Lewis, 2003). However, since the sharing percentage of surplus distributions between shareholders and participants has not been followed as per AAOIFI standards, then it will be quite unpractical to deduct general and administrative expenses from the takaful fund. Deducting general and administrative expenses from the takaful fund will creates a shortage in the participant's fund. The more of the takaful fund is used to cover expenses so the lower the underwriting surplus will be which will make it impossible for the participants to enjoy having an underwriting surplus in the future. Accordingly, it is recommended that the TOs to disclose the administration and expenses procedures to the participants to

be aware of different kind of expenses that going to be deducted from the takaful fund. AAIFI on its standards No 13, stated that "disclosure of the basis applied by the company in calculating expenses affecting policyholders' funds such as pre-operating expenditures, reserves, costs of assets used in operations, claims and compensations, *etc*".

Furthermore, Figure 10 below indicated that despite the fact that shareholders assets has been slightly decreases from 2008 to 2010, however there is a quite huge differences between shareholders encountered liabilities and their accumulated assets. Shareholders encountered liabilities are way less than their accumulated assets. Shareholders accumulated assets would not be positively increases without strong and regular contributions from the policyholders.

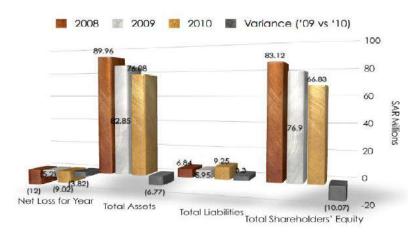

Figure 10: AlAhli Shareholders Operations

Source: AlAhli (2010)

On the other hand, SAMA unclear scenarios of distributing underwriting surplus among participants (prorata mode, selective mode, offsetting mode) has led TOs in Saudi Arabia to be confused on the proper way to distribute the surplus among participants, which causes a discretion of the Board of Directors to control participants generated surplus. This was clear in SAAB *takaful* (2009: 34) prospectus report, as they clarifies that, surplus distributions among participants will be based on BoDs approvals, despite that fact that *takaful* fund is purely belongs to the participants. SAAB *takaful* report stated that:

"A portion of the surplus is distributed to the participants subject to approval of the Company's Board of Directors".

One of the main challenges faced in the *takaful* industry is shareholders and management discretions. Participants' undeserved rights might be due to management prioritizing interest towards shareholders as they are the main stewards of the *takaful* company. Prioritizing the interest of the shareholders might be due to the unclear structure of the *takaful* operational scheme. The *Takaful* operational scheme should follow the two-tier hybrid structure (mutual and proprietorship) as it has been identified by the prominent regulatory bodies such as AAOIFI and IFSB. However, almost all regulators, of which SAMA is one, treat the TOs as a proprietorship, as it can be easily regulated and supervised which requires an identified share capital and shareholders.

Shareholders can exert their power to use participants' fund underwriting surplus to enhance their financial position, as shareholders have the right to appoint the company BoD's. Accordingly, there are acceptable practices in the *takaful* contract, which allow shareholders' intrusion in participants' fund *e.g.* 

- (i) Shareholders are allowed to invest the underwriting surplus with an express provision for an agreed consideration (profit-sharing or fee), with a complete consent for policyholders to either agree or reject the contract, (ii) Shareholders have the right to invest and share the return from investments, (iii) Shareholders have the right to share in the underwriting surplus with policyholders (Ali and Odierno, 2008). However, the three practises relationship between participants and shareholders should be clearly disclosed to the public as per AAOIFI No. 13 which states that disclosure of the bases governing the contractual relationship between policyholders and shareholders that touch on:
  - I. Management of insurance operations.
  - II. Investments of policyholders' funds.
- III. Investments of shareholders' funds and the body that approve these bases.

The above discussions reflected a variation between SAMA cooperative insurance directives and the international insurance standards and policies in terms of distributing underwriting surplus. AAOIFI has been stipulated that surplus is purely belongs to the participants, while SAMA stipulated that the participants are allowed to share with only 10 % out of the underwriting surplus. Such a contradictions has made the TOs in Saudi Arabia to exerts some discretions on the *takaful* fund forgetting that the fund is purely belongs to the participants. Accordingly, it's vital to hear participants' perceptions about their rights and preferences in receiving underwriting surplus.

#### 2. STUDY METHODOLOGY AND PARTICIPANTS PERCEPTIONS

Figure 11, illustrates that the value of underwriting surplus can be positively or negatively affected by the participants contributions and/or by deductable items (claims, expenses, *re-takaful* arrangement fees, reserves management) from the *takaful* fund. Accordingly participants' contributions represent an important factor in the analysis of the underwriting surplus. The AAOIFI *Shari'ah* Standards (2010) define *takaful* contribution as the amount of the contribution which the participant donates, along with its related profits, for the benefit of the insurance scheme; this is the main source for the *takaful* operator to cover the future damages or losses of *takaful* participants.

Outgo: Re-takaful ·Claims Recovery Operating Takaful ·Re-takaful ·Claims Contribution contributions expenses Underwriting Changes in surplus eserves Underwriting surplus or deficit

Fig. 11: Formation of Underwriting Surplus in the Takaful Operation

Source: Tobias (2009)

Since participants considered the main source of accumulating surplus in the *takaful* fund, it's quite vital to review participants' perceptions on their willingness to gain a surplus out of their contributions to the takaful fund. Therefore, questionnaire was chosen as the method by which the survey was completed. Questionnaires are a useful tool for investigating patterns and trends in data and are frequently used with success in management, marketing and consumer research (Easterby-Smith *et al*, 1991). The questionnaire measured adequate and desired expectations, perceptions of service quality as well as overall feelings, in terms of satisfaction and favourable, or otherwise, disposition. The questionnaire was

originally prepared in English and then translated into Arabic by using the back-translation method with great assistant from an expert who is fluent in both languages. Accordingly, a total of 500 questionnaires were distributed, of which 420 completed questionnaires were rejected, leaving 300 completed and usable questionnaires.

*Takaful* participants in Saudi Arabia were identified to be the main research population for this study. The targeted populations were clients of all TOs in Jeddah, Saudi Arabia, since a number of large TOs have their headquarters in Jeddah. Accordingly, the researcher with the support of an 8 survey distributer team has managed to distribute the questionnaires among 9 branches of 3 TOs<sup>15</sup> in Jeddah. The targeted participants are those with a family *takaful* policy. Thus policyholders are expected to have a long-term contract with the TOs and expected to have a periodic financial returns (Underwriting Surplus & Investment Return). The participants should not possess *takaful* contracts that belong to corporations, *i.e.* the *takaful* contracts are between the TOs and the participants directly<sup>16</sup>.

The main reason behind this research is to reflect how participants are in a real need to reduce their poverty by findings other source of income to support providing a descent future for themselves and their family. Therefore, this section will reflect participants' demographics characteristics and how participants' characteristics indicate their real needs behind their contributions on the takaful fund. This section will also reflect participants' perceptions, knowledge and preferences about their rights in receiving surplus out of their contributions. Accordingly, participants' dominant demographic characteristics are:

Gender: Male (96.3 %),Age: 31 - 40 Years (42.7 %),

- Education level: Bachelor Degree (59.3 %),

Premium Paid: SAR 0 - 500 (33 %),Contract Duration: 0 - 5 Years (46 %),

From the above demographic characteristics it seems that the majority of the *takaful* participants in Saudi Arabia are male between the ages of 30 to 40 years old and paying a monthly premium between SAR 0 to 500, with contract durations that goes up to 5 years. Participants demographic characteristics indicates that the real needs for participants to be rewarded with a surplus out of their contributions as most of them are males which they repeatedly reminded of the responsibilities (as husband and father) awaiting them when they reach the adulthood stage, while girls anticipate marriage, motherhood and housekeeping. The majority of participants are also at an age stage where more responsibilities involving different financial commitments, such as paying back a mortgage loan, or paying children's school fees.

On the other hand, 230 (77 %) participants are using the *takaful* policy for the purpose of investments, while only (33 %) of the participants are contributing to the *takaful* fund for the purpose of risk and financial loss recovery. 256 (85 %) participants are using the *takaful* policy for future plan that can benefited their family. Surprisingly, 193 (64.3 %) participants clarifies that they are not using the *takaful* policy as a reason of *Shari'ah* compliance. Accordingly, it's highly believed that participants are contributing to the *takaful* fund as a reason of the expected financial return. Thus, SAMA should be aware of this fact, that *takaful* participants in Saudi Arabia are in a real need to be rewarded out of their contributions on the *takaful* fund.

-

<sup>&</sup>lt;sup>15</sup> For confidentiality reasons, as was requested by the TOs, the identity of the 3 TOs were kept anonymous.

<sup>&</sup>lt;sup>16</sup> The main justification behind these conditions is that participants with personal family *takaful* policies should have a usual communication with the TOs to discuss their rights and obligations in the fund.

Furthermore, 280 (93.3 %) participants replies with don't know to the conditions that made them eligible to receive underwriting surplus in association with claim situations, which reflects participants weak knowledge about the underwriting surplus conditions. Participants weak knowledge is a results of TO shortage in disclosing the required information about underwriting surplus conditions as 290 (97 %) replies with NO, that the TO didn't disclose the required information that allows them to receive underwriting surplus. Despite the fact that participants have a weak knowledge about underwriting surplus conditions because of TO weak disclosure, 224 (75 %) participants are willing to share underrating surplus with other participants regardless their claim conditions. Accordingly, it is recommended that the TOs to disclose enough information about different issues that deals with distributing underwriting surplus among participants, as (AAOIFI) No 13 stated "disclosure of the method and *Sharia'h* basis applied in allocating the underwriting surplus".

#### 3. CONCLUDING REMARKS

The current research has found a clear variation between SAMA cooperative insurance directives and the international insurance standards and policies in terms of distributing underwriting surplus. AAOIFI has been stipulated that surplus is purely belongs to the participants, while SAMA stipulated that the participants are allowed to share with only 10 % out of the underwriting surplus. Such a contradictions has made the TOs in Saudi Arabia to exerts some discretions on the *takaful* fund forgetting that the fund is purely belongs to the participants as they are the ones who contributed to build that fund.

The current research also found that participants are contributing to the *takaful* fund as a reason of the expected financial return and there is no effect at all for religious motivation. Accordingly, SAMA should take into considerations this fact that participants are in a need of a financial reward out of their contribution to the *takaful* fund. Hence, it's highly recommended if SAMA follows AAOIFI directives in distributing surplus among participants for fair treatments of the participants.

Accordingly, it is highly recommended that SAMA to issue directives to address the *takaful* insurance as SAMA did not issued a single directive that deals with takaful insurance. It's also recommended that SAMA assign a directive to make it obligatory for the TOs to structure a corporate governance framework. The framework should identify the operational scheme of the wakalah model in accordance with the international takaful organizations such as IFSB or AAOIFI. The framework should reflect the percentage of the distributed underwriting surplus among participants per AAOIFI Shari'ah standard that the takaful surplus purely belongs to participants and the surplus cannot be taken by the TOs. The framework should also identify the best approach to allocate underwriting surplus among participants as per an appropriate AAOIFI standard, i.e. pro-rata mode, selective mode, or offsetting mode. The framework should identify different types expenses and management fee that are going to be deducted from the participants fund, as this might causes a future deficits in the participants fund, consequently prevents participants rights in receiving underwriting surplus. The framework should disclose the the bases governing the contractual relationship between policyholders and shareholders. It's highly believed that if the TOs operating in Saudi Arabia follow the recommended framework; participants can contributes to the takaful fund with fewer amounts of contributions with the expectations of getting a decent underwriting surplus, which in a way reduces poverty among Saudis.

# WHY WOMEN ARE BEING POOR IN KWARA STATE, NIGERIA: AN EXPLANATION FROM THE GENERIC THEORY

Abdussalam Onagun Isiaka<sup>1</sup> Fuadah Johari<sup>2</sup> Muhammad Hj Alias<sup>3</sup>

#### **ABSTRACT**

Nigeria has a longstanding and lingering poverty obstacle despite she has been tried many anti-poverty programmes and policies in her history to alleviate the problem in the economy. However, this paper attempts to explore the rationale behind the women' poverty in Nigeria, especially in Kwara state, via generic theory or simply blaming the system explanation. Under the premise that the poverty is basically caused among the women in the country by the system and society as opposed to the causes of poverty by the individual poor women, themselves. This paper is based largely on academic research that is currently undertaken by the author on Kwara state, Nigeria. The paper is conceptual in nature and employs analytical methods based on the previous literature to give account of the causes of poverty among the women in the context of the state. The finding shows that government or the system is much more responsible for the longstanding poverty in the country through her inability and failure to provide sufficient socioeconomic services for the populace, reasonable macroeconomic policies and programmes. Lastly, it concludes that the government ought to endeavour to provide stable and adequate socioeconomic amenities that can assist directly and indirectly, the masses particularly women in enterprises and pull them out of suffering.

Keywords: Women' poverty, Nigeria, Generic Theory, Causes of poverty

#### 1. INTRODUCTION

The federation of Nigeria became an independent sovereign state in 1960, after having existed as a unified political entity under the British colonial rule for less than half a century, from 1914 to 1960. The country is struggling to alleviate poverty in her economy. Many efforts and measures have been taken by the economy through various policies and programmes to alleviate this chronic disease. Among the anti-poverty programmes introduced in the past include, National Agricultural and Cooperative Bank 1972, Operation Feed the Nation 1976, Green Revolution Programme 1979, Go Back to Land Programme 1984, Directorate of Food, Roads, and Rural Infrastructure 1986, Better Life Programme, to improve the lives of rural women also in 1986, and Family Support Programme 1993. Today in Nigeria, National Poverty Eradication Programme (NAPEP) was introduced by the government to fight the poverty in the country since 2001. Through, this programme poor people are given relatively small capital to establish their selves businesses i.e. small scale business and the target-population of the programme are rural poor, illiterates, women and unemployed graduates in urban centre. Kwara state is one of oldest state in country created on 27th May 1967 as one of the first of 12 states to replace the nation's three regions. The tormentor of poverty in the state is something more than mere measurement of household's income,

expenditure or wellbeing. This involves lack of access to public utilities and other services, poor and dilapidated infrastructure, illiteracy and ignorance, poor health care, social and economic insecurity as well as political exclusion and oppression.

Nigeria has a longstanding and lingering poverty problem despite she has tried many anti-poverty poverty measures since her independence. Albeit, poverty is being described as a multidimensional in nature (Ogunleye, O. S. 2010) Nigerian system also exacerbates the situation in the country. Infrastructures which are basic public services or socioeconomic services such as road networks, water supply, electricity supply, transportation and communication network, education, and health service are significantly necessary for the economy of the country to be at well-functional state. According to the Global Poverty Project (GPP), without school people cannot educate their children, without hospital or clinic people cannot access healthcare service, and to transport our produces or goods to market for sale it requires good roads, therefore, it is very difficult to trade properly in the absence of these.

Meanwhile, badly provided essential facilities and services in the country contribute to the lingering problem of poverty among women in the country, particularly in Kwara state. Since most of these women are relying much on those facilities and services for their local businesses. Among other things are gender bias in the political participation and poor implementation of various anti-poverty measures in the country. Theses attribute to the part of the reasons why people are being poor in the country. According to Tell Magazine, February 2009, cited in Ogunleye, (2010), Nigeria has been one time regarded as the promising economy in the commonwealth prior other member states such as India, Malaysia and Singapore. Quite unfortunate, when these other member states are making appreciable progress in their economic growth indicators, Nigeria is still on struggle to bring out most of her citizens from the destitute of basic necessities of life.

# 2. GENERIC THEORY OR BLAMING THE SYSTEM

Previously, there are certain theories of poverty in history with different approaches and dimensions employed to give explanation to the series of causes of poverty in a society. In any system or society the conceptualization, measurement of problem as well as the application of policy are contained with formulation of poverty theory. For instance, minority group theory which originated in the earliest empirical studies of poverty largely presents some characteristics of peculiar groups of poor people in the related studies and the main causes of poverty in this theory associated with case theory or blaming the victim explanation, as young married couples with or without kids, children generally, likewise, old aged people with highest risk of impoverishment. Other theories which are characterized as socioeconomic theories in the past include sub-culture of poverty, dual labour market and radical theory, the cycle of deprivation, orthodox economic theory as well as sociological ones which incorporating functionalist, explanations of poverty and inequality. Albeit the subsequent theory of poverty is the main approach employed to explain the causes of poverty in this study which is succinctly introduced below.

The generic theories of poverty view those factors that cause poverty in an aggregate or totality. The theories are much concerned on the problems generated from the macro economy rather than the micro economy, that is, national economic problems as opposed to the individual socio-economic traits. In other words, "blaming the system" explanation posits that continuous suffering of the individuals is as a result of various social factors and forces which include the structures of social and economic systems, specific institutions and/or institutional regulations and demands, political programs and policies, various cultural...social interaction such as racism, sexism, and ageism, which prevent peculiar individuals and groups equal right to enjoy social and economic opportunities and resources. Poverty is hardly attributed to the individual defects in this situation. In a situation where there is inadequate job opportunities in the economy and some people cannot find work to do or other can get but underemployed, the reason for be

unemployed and impoverished cannot be blamed on individuals in such society (Ryan, W. 1971 cited in Ropers & Hinton, 1991; Tussing, 1975; Kerbo, H. R. 2006; Ragayah Haji Mat Zin, 2011, cited in Rajah Rasiah, 2011:218).

## 3. RESEARCH METHOD

This paper has been aforementioned that is largely based on the on-going academic research work and descriptive analysis to get an overview of the poverty in current situation. Therefore, the paper is conceptual in nature and analytical method is being used to give account of the general causes of poverty and most especially women in Kwara state, Nigeria. Previous literature and studies on the poverty, it causes and women in Nigeria are used in this study. Data and information are collected through the libraries, recognized journals both local and international, report on the Nigerian poverty profile, by the National Bureau of statistics as well as internet. In other words, it is conceptual analysis in which taken into consideration majorly previous research that published between year 2008 and 2012 with a few exception due to their necessity. This simply suggests that secondary sources are predominantly used in the methodology of this study.

#### 4. LITERATURE REVIEW ANALYSIS

This paper will be analysed the previous research done by at least 20 authors or researchers regarding the topic of poverty, women's poverty and causes of poverty. Four main themes will be outlined to be analysed accordingly. The themes are; *firstly*, Concept of poverty, *secondly*, Poverty in Nigeria and Kwara State, *thirdly*, Women and poverty, and *forth*, Causes of poverty. The literature review analysis is as follows;

## **4.1 CONCEPT OF POVERTY**

There is no specific definition for poverty and many see it as multi-dimensional situations which mean different thing to different people, societies and countries. It is quite difficult for the humanity to comprehend the concept of poverty and the coincident poverty reduction measures as the latter has no consensus (Akindola, R. B. 2010; Aderonmu, J. A. 2010).

Poverty is classified into two forms: absolute poverty and relative poverty. "The former means that a person's basic subsistence needs (for food, clothing, and shelter) are not being met while the latter means that a person's needs are not being met in comparison with the rest of his or her society" (Alters, S. M. 2009:1-2). In the Human Development Report 1997, cited by her, UNDP incorporated two distinct elements to the standard definitions of poverty, that is income poverty and human poverty where each further sub-divided into two. The income poverty consists of extreme and overall poverty. The first is the inability to meet basic food needs, which are defined by minimum calorie requirements while the second is the inability to afford food and other basic needs, such as shelter, clothing and energy. The human poverty also includes direct and indirect of poverty on human life. The first effects of poverty on people include illiteracy, hunger and malnutrition, shortened life spans, illness or death from serious diseases ... while the second effects include a sheer lack of access to essentials such as energy, sanitation, clean drinking water, health care, transportation and communication services.

Pramanik, A. H. et al., (2008:3) suggests additional form of poverty aside from aforementioned income and human poverty as hard core or abject or perverse poverty which is a situation of the existence of extreme deprivation for being unable to meet even minimum food needs, which resulted in malnourishment, loss of vitality of life, productivity as well as consequently absent basic minimum to

survive. Whereas Idowu, A. and Oyeleye, O. A. (2012) views poverty as a peculiar situation or condition where people are exempted from participating in activities in a given country or society as well as prevention of income necessary to satisfy their basic requirements for life survival, such as food, accommodation, training skill and working tools.

According to Animashaun, I. A. (2010), he views poverty as lack of access to both visible and invisible items which can improve the level of welfare such as shelter, drinkable water, food, security, education, health care and other services. While Aku, et al. (1997) cited in Ijaya, I. G. et al., (2011), sees poverty as deprivation of someone from certain aspects of life such as personal and physical, economic, social, cultural and political deprivation. Meanwhile, poverty has also been considered as a situation in which an individual finds it difficult to attain minimum living standard. A situation or condition that deprives or incapacitates a person to have reasonable access to basic necessities such as food and non-food requirements which can give him/her meaningful life in a society (Arogundade, K. K. et al., 2011).

#### 4.2 POVERTY IN NIGERIA AND KWARA STATE

Available statistical data on the trend of poverty in Nigeria show that overtime, there had been increase in the incidence of poverty in the country. According to National Bureau of statistics (NBS) on the Nigeria poverty profile accounts for the absolute and relative poverty in the country for 2004, 2010 and 2011. The absolute poverty for the three years is in percentage of 54.7, 60.9 and 61.9, respectively while for the relative poverty percentage for the three years is 54.4, 69.0 and 71.5, respectively. For dollar per day, the same percentage (62.8) recorded for the year 2004 and 2011 although this has to be influenced by the exchange rates. The Millennium Development Goals (MDGs) expects the country poverty incidence to witness drastic reduction by the year 2015, the percentage of people living under one dollar (\$1) per day to be at 21.35% (MDGs 2010: Nigeria MDGs Report 2010:14). With this trend of Nigerian poverty record it is doubtful perhaps the country can attain the percentage by year 2015. For Kwara state separately, in the year 2010, poverty level in the state in percentage for both absolute and relative is 61.8 and 74.3, respectively (see appendix: table 1). It is just slight difference between the percentages for the whole country and Kwara state in terms of absolute and relative poverty in the year 2010. But dollar per day poverty for Kwara state was at 79.85% as of the year 2005 (NBS 2005). Anyanwu, J. C. (2012) finds in his study that North central geopolitical zone (comprises of Niger, Kwara, Kogi, Benue, Plateau and Nassarawa) of Nigeria has higher tendency of being poor along with other geopolitical zones like Northeast, Southeast, Southwest and Southsouth which have declined the chances of being poor.

From table 2 in the appendix, it shows that larger percentage of people concentrate between being poor and moderate while very few are fairly rich and rich in Nigeria. The situation of Kwara state is similar to the Nigeria's one in term of concentration of wealth in the hands of few, mostly the politicians and the few businessmen associated with the former. Only 2.6% of the total population is considered rich in Kwara state which is very insignificant. It implies that the state government needs to be more tasked on how to reduce the level of poverty in the state. More so, there is more poverty concentrated in the rural area as compared to the urban area in Nigeria. About 53.5% are poor in the rural area as compared to 36.2% in the urban area.

Based on the core Welfare Indicators Questionnaire Survey (CWIQS) carried out by the NBS in 2006 revealed that total poverty head count for Kwara state was 83.3 per cent while head count for both rural and urban areas of the state were 95.9 and 97.3 per cent, respectively (Ijaiya, 2011). Women are the majority in this poverty problem for the whole country and for the Kwara state in per se. From this study there is no doubt that Nigerian women are seriously suffering in the society both in rural and urban areas of Kwara state the number of poor among women is very high. This is clear indication that Nigeria has trouble with her economy in general as the incidence of poverty far beyond what can be internationally even domestically accepted for poverty magnitude for any given country or society to develop.

Poverty incidence of Kwara state in 2006 was 67.5% with distribution of incidence of 2.4 in the same year whereas, for the whole Nigeria the incidence of poverty and the distribution of incidence for the same year are 65.6% and 100.0, respectively (Alaye-Ogan, E. O. 2008:54-55). This shows that the number of population that fall below poverty line in Kwara state is exceeded that of the entire Nigeria's.

# **4.3 WOMEN AND POVERTY**

In Nigeria, the main victims of poverty are small farm households, illiterate households, households with large family sizes, households headed by women, unemployed graduates, women and elderly ones, who are rarely accessed to socioeconomic safety nets. Nigerians, especially women are worse off in the economy due to the wickedness of poverty since eighty up till today. As individual women had been affected so do their families, as they are in many instances responsible to take care of children and home in general. Whereas, they are being deprived and denied from accessing many basic amenities such as electricity, safe drinking water, housing, education, health care, e.t.c. (Adepoju, A. 2004). Poverty in the country is appear to be feminization of poverty that is the situation which is frequent in the midst of women-headed households than in the midst of men-headed households due to discrimination and bias against the erstwhile at different levels and sectors in the economy. In terms of job opportunity, women are with less chance to be given appointment, they are being paid lower income in the working place and similarly backward in terms of education as compared to men. Going with all these factors, women in Nigeria are considered to be poorer than men (Anyanwu, J. C., 2010).

It has been argued that the bitter realities in Nigeria is the experience of rising poverty and the Nigerian women have different ways of experiencing this problem of poverty as compared to their counterpart men. The erstwhile are economically being deprived, socially being discriminated, politically being marginalized, culturally being saddened, and ecologically being affected. For the women in the country, all these threats are had become part of their daily lives, in other words, they are simply living with these problems. The struggle of women in the country is more importantly to ensure food security, nutrition, and good health of their family, community and the entire country despite all these they are only being rewarded negatively (Sofo, C. A. & Toni, P., n.d.:48). It has been differently argued that men are more food secure than women, particularly those women-headed households, in the sense that women are expend their income mostly to support the family members especially the children in terms of food, nutrition, and general development (Olubunmi Idowu Yetunde Ajani, 2013:IFPRI). Upon all the efforts of the government in participating and collaborating with the international community with regard to the women empowerment and recognition in the society, the women still have higher number of poor in the country as compared to men. The government has yet to pull them out of poverty problem in the society.

"According to a gender analysis of poverty in Nigeria, poverty has a feminine face. Women lag behind men in most indicators of socio-economic development. Women constitute the majority of the poor, the unemployed and the socially disadvantaged, and they are the hardest hit by the current economic recession, with about 52 percent of rural women living below the poverty line. Unfortunately, most poverty alleviation policies of the government lack special provisions for women. Gender inequality in disfavor of women features prominently in access to and control of land, credit facilities, technologies, education and health, and as a result, women are more vulnerable to poverty than men." (Olubunmi Idowu Yetunde Ajani, 2013:IFPRI).

Mostly women in rural areas that comprises of larger percentage of the population that lives below the designated poverty line in the country can only survive with relatively limited social services and infrastructural facilities. They are majorly relied on the agricultural activities to support themselves and their family members for food consumption and small income. Fayomi, O. O. (2009) argues that the poverty situation of Nigeria is the concept of feminization of poverty in the sense that women make larger percentage of the poor, out of 61.9% absolute poverty in the country. Women are also suffering from

gender inequalities at various levels and sectors such as economic, social and political spheres of development in which aggravate their disadvantaged position in the country.

Part of the challenges put forward that impoverish women that are shea buter producers in Fufu community in Ilorin south local government areas in Kwara state are lack of access to piped borne water, unreliable power supply, inadequate health facilities, problem with transportation and access to markets. Despite the fact that these local producers are industrious, their product attract foreign demand, earning income and supporting the family members, thus those challenges mentioned above deprive them from producing more and better for the economy in Kwara state. Although, Empowerment of African Women Organization (EOAWO) has prepared to give necessary support to these women in agriculture in order to alleviate poverty among them and eventually bring sustainable growth and development to the state at large (www.eoaw.org/index.php?option=com...view...women...).

Women in Kwara state has been confirmed poorer than their counterpart men in the rural area. According to the study carried out by Olorunsanya, E. O. and Omotesho, O. A. (2011) in the North Central of Nigeria using Kwara state as a case study found that women-headed households were more less-privileged than their counterpart men-headed households in the state. Likewise, widow-headed households are more significantly deprived or disadvantaged compared to the mere women-headed households in the state. The study was carried out among the rural farming households in the state and the data from the survey were analyzed using descriptive statistics, social indicators and Foster-Greer-Thorbecke class of weighted poverty indices.

Similarly, the founder of An Islamic Charity Group, Ar-Rahmah Zakat Foundation, Femi Omo-owo in Ogun state, Nigeria claims that there is widespread of poverty in the state therefore, the institution is mainly established to effectively and efficiently used the Zakat money to assist the financially-poor people to uplift their lives. The foundation targets those women that engaged in small scale enterprises in the state in order to keep their business moving, a way of economically empower the women in the state. This gesture is in line with the purpose of Zakat in Islam which is to ensure equitable distribution of wealth and resources in the Muslim society (Sunday Punch, 2013:5).

### **4.4 CAUSES OF POVERTY**

Ijaiya, G. T. et al., (2011) has pointed out that part of the causes of poverty in Kwara state can be attributed to insufficient or lack of socioeconomic amenities and services such as electricity supply, pipe borne water supply, roads and transportation network, sanitation facilities in which are burden for the people in the state and equally particularly affect the businesses in the state. Problem of all these necessary facilities of lives are poorly provided in the state due to their interruption in supply. Business women hardly well prosper in their micro businesses because most of these socioeconomic facilities and services that are expected to aid their venture are either poorly supplied or not there at all. Therefore, this leads many businesses to bear unnecessarily huge cost of production in which subsequently lead to higher market prices of goods and services in the state. More so, this dwindle away lion share of their profit/income to be enjoyed after the sale and equally exacerbate their living condition.

They further argue that in the history, Karl Marx viewed the operation of capitalists as a way of impoverishing the labourer in the society of Europe which resulted in so-called industrial reserved army. Although to the capitalists, it was a labour-saving technique which brought about increase in production and profit. Meanwhile, Marx termed this as profiteering as it reduced labour merely to the low subsistence level of wages, create pull of unemployment and eventually, exacerbate the welfare of the many proletariat and their families.

Yahaya, K. A. (2011) similarly through his recommendation for the government to ensure sustainable entrepreneurial activities mostly for the women in the state, should ensure the availability of essential

socioeconomic amenities that would assist the potential entrepreneurs to improve their productive capacity. This has been identified as one of those factors that hinder them from attaining in their businesses. The state has been known with the poor and dilapidated infrastructures and the latter has been causing impoverishment in the economy due to its negative impact on the women in entrepreneurship in the state.

Poor and interrupted power supply has become mundane issue in Nigeria's economy, big issue that creates greater concern to both Nigerian authourity as well as Nigerian people because of the constant problem causing for the economy. Failure of the government to restore the electricity and related amenities has been considered jeopardizing the efforts of many ordinary Nigerians in businesses, likewise, causing more people to be poor. According to the World Bank Vice President for Africa, Dr. Mukhtar Diop (2013), without steady power supply poverty would still remain big challenge in the economy despite recent eight percent economic growth witnessed by the country, as the lives of people would continue to be worsening and long-term capital projects are discouraged in the economy, both domestically and strategically, due to lack of improvement in the infrastructures.

However, various anti-poverty programs and policies introduced in the country and of course, in Kwara state, have largely failed to overcome the three reasons for this persistent poverty that is, social, economic and political problems facing the country since the inception of the programmes. NAPEP was introduced since 2001 till date to replace those previously failed poverty alleviation programmes. The finding in the study carried out on the effectiveness of the poverty reduction programmes in Nigeria between 1980s and first decade of the 21<sup>st</sup> century, a case study of Enugu state by (Ntunde, F. O. & Oteh, C. O. 2011) shows that many poverty alleviations programmes introduced in Nigeria were failed to have significantly positive impact on the lives of the target-groups, the poor. In other words, they are hardly reduced poverty level and rate in the country. The rationales behind their failure are attributed to insufficient funds to run the programmes, mismanagement of available resources as well as lack of infrastructures.

Similarly, Aderonmu, J. A. (2010) laments that no significant outcome despite all the resources both human and capital devoted on alleviating the lives of the rural dwellers by the past governments in Nigeria through their various poverty reduction programmes. Among the reasons account for their failure include low level of participation by the poor, lack of political will, corruption and poor accountability, discrimination based on gender, ethnicity, religion and party affiliation, more so, over reliance on grants and loans from international financial institutions and other private donor agencies, in which their attached conditions eventually affect the poor's needs and interest. Arogundade, et al., (2011) are of the similar view as they suggested different anti-poverty agency to replace the existing one in order to serve the people better by alleviating poverty in them and not causing more poverty for them.

Some of these macroeconomic policies introduced to fight poverty appear to be adding to the problem because, the more these anti-poverty measures are introduced the worse is the incidence of poverty in the country and also in Kwara state. This can be justified from the data on the Nigerian poverty by the National Bureau of Statistics, NBS 2010. Absolute poverty in the country increases by 7.2% between 2004 and 2011 (54.7 and 61.9, respectively). This shows that instead for the programmes and the policies to reduce the poverty level, the reverse is the case in the country's situation. It equally means that the latter are causing the country and the state to be poorer.

As many causes or elements attributing to the persistent of poverty in Nigeria according to Ogunleye, S. O. (2010) among other factors are disparities in income of people and unemployment, which are seen as wider to the extent that it neutralizes the existence of middle class and pool of unemployed graduates among the youth and women. More so, gender inequality also plays strong role in causing poverty in the country and Kwara state, mostly against women. He also argues that women have fewer accesses to

economic resources or microloans, less social and political powers than their counterpart men in the state worsening the poverty situation. Couple with these, are the disparities set in education and health sectors which make it harder for already-poor people and their family members to get out of this economic mess. Lastly, other causes of poverty according to him are the long time neglect of agricultural sector and poor infrastructural base. These have been worsening in the country and in the state. The former is being jettisoned for the oil boom discovery since early seventy while the latter's development is relatively below expectation which result in relatively low level of productivity and eventually poverty skyrocket.

Most factors consider as causes of poverty are found positively related with the latter. These include among others, physical limitation, corruption, rapidly increase population, bureaucratic stiffing, heavy reliance on highly developed economies/countries as well as domestic exploitation by the elites. Other factors raised by (Adawo, M. A. 2011) can be grouped as socioeconomic, political as well as natural causes of poverty in the country. Similarly, poverty is being viewed as macro obstacle in which its causes among the people include political instability, lack of access to education, socioeconomic disparities and prejudice, natural disasters, corruption, lack of infrastructures or other causes such as severe conditions as civil war. The aforementioned factors are believed to be major causes of poverty in many developing economies (World Development Report, cited in Fapohunda, T. M. 2012). She further argues that poverty could be as a result of flooding and droughts.

Omoyibo, et al. (2010) claim that the women in Nigeria are culturally, socially and politically being denied of their many rights that lead to their sufferings in the society. The discrimination against them toward the gender bias, participation, representation, and decision making at every tier of government make them look inferior to their counterpart men in the society. This prevents them from access to power, property as well as prestige in society eventually creates gender inequalities. The position and roles of women in family, economy and power relations vary from culture to culture. Restriction of women or female education to minimum level result to their high incidence of illiteracy and powerlessness equivalent to discrimination against them in which make them to remain poorer as opposed to men. Political and social factors are observed as causes of women poverty in Nigeria in general and kwara state in particular. Therefore, government's legislation, policy framework and sufficient funding of project are required to alleviate gender inequality and women poverty in the country.

Nigerian women are being poor because of the tradition and culture associated with land ownership as well as inheritance. Since most of these rural women rely mostly on agricultural activities, to own land by them is very rare in the rural area due to the traditional practice for long period of time. Women do not have right of ownership and only confine to cultivate land and plant crops. Likewise, they are being deprived to inherit their late husbands' land property except their male children or heirs after attaining certain age. Therefore, the right or privilege of inheritance is not enjoyed by the widows, which make them to remain landless in the village and aggravate their poverty problem. Their situation continues worsening as they don't gain access to education and educational facilities, as well as other vital resources to survive, such as safe drinking water (Okoji, A. M. 2001).

In the study carried out by (Akindola, R. B. 2010) on the causes of poverty in Oyo state, Nigeria, found numerous numbers of the causes of poverty in the country in which they are being described as multifaceted and complex in nature as well as attributed to blaming the system. The study is a qualitative in nature and the findings show that poverty is being caused majorly due to high rate of unemployment, corruption, which is high and considered as structural one, poor administration, poor road networks, high rate of population growth, and macro-economic distortions. Many Nigerians are dissatisfied with the way the government is being run in the country as the leaders are so much corrupt without genuine vision and mission for the country.

The final report of the Japan International Cooperation Agency (JICA) in 2011 on the Federal Republic of Nigeria Study for Poverty Profile (Africa) shows that several factors aggravate poverty incidence in Nigeria. Among the factors raise is governance, which is believed weak and poor. This is coupled with corruption to bring bad effect on the effective implementation of previous anti-poverty programmes in the country. Physical infrastructure is another factor considered seriously causing poverty in the country. This includes drinking water circumstances, sanitation, power supply and transport infrastructure. The rate of processed drinking water supplied through network in Kwara state from 2005 to 2008 is declined or worsened from 22.1% to 7.3% while the aggregate supply rate for the country also dropped from 12.7% to 7.7% for the same years, this proves poor provision of water infrastructure in Nigeria (National Population Commission, 2009 is cited by JICA).

Other infrastructures that are not impressive in condition include electricity supply and transportation networks. Power Holding Company in Nigeria (PHCN) is main body responsible for the power supply in the country and it succeeded National Electric Power Authourity (NEPA) as part of commercialization and privatization process in the country. Relatively less than half of Nigerian people rely on PHCN for power supply today. In the year 2007 and 2008, only 47.3% and 40.4%, respectively, rely on PHCN for power supply in Nigeria while for the same years, 41.4% and 48.0%, respectively, are not consuming adequate electricity or power supply from the PHCN source. Likewise, there is no significant improvement in the transport network particularly in the road and railway networks. The existing ones are not properly maintained while the new ones are hardly provided (JICA, 2011:38-43).

Islamically speaking, some causes of poverty could be incurred on a person from Allah, as it is confirmed that a person would be rewarded or punished based on his action, both richness and poverty are tests from Allah on every human being as reward and punishment. Therefore, poverty could be caused as a result of test from Allah or punishment for sins. This is more or less spiritual causes of poverty as opposed to the material causes that have aforementioned in our discussion, although, the latter causes of poverty are also mentioned in Islam such as unemployment, corruption, bad leadership, insufficient provision of socioeconomic amenities etc. all of these are the causes of poverty that Islam also believes are as a result of happenings in a Muslim society or system runs in such society (The Fatwa Center at Islamweb).

The two types of poverty mentioned above i.e. the spiritual and material are the two ways Islam views poverty. To compare the two poverty, Islam sees the former one as the worse than the latter one, in the sense that a person who is spiritually poor is ultimately against both the right of Allah and the fellow human being and such person mostly considered or become *kafr* i.e. disbeliever. The tradition or say of the Prophet Muhammad (SAW) had clearly described the person who is spiritually poor in Islam, this was narrated by Muslim from Abu Hurayrah, said:

"Do you know the one who is bankrupt? They said, 'The bankrupt is the one who has no money and no possession.' He said, 'Among my Ummah, the one who is bankrupt is the one who will come on the Day of Resurrection with prayer and fasting and Zakah (to his credit), but he will come having insulted this one, slandered that one, consumed the wealth of this one and shed the blood of that one, and beaten that one. So they will all be given some of his hasanaat (good deeds), and when his hasanaat run out, before judgement is passed, some of their sins will be taken and cast onto him, then he will be cast into the Fire." (Muslim: 4/1998, Hadith no. 2581).

As Islam ordains Muslims to seek for the blessing of Allah in this World and the Hereafter and use judiciously whatever form of wealth and resources at their capacity to benefit themselves and others. Today, in the Muslim countries, there are many other factors that leads to poverty due to the mismanagement and corruption of resources in which Allah had previously discouraged Muslims from such actions in the Holy Qur'an: "But seek, through that which Allah has given you, the home of the Hereafter, and [yet], do not forget your share of the world. And do good as Allah has done good to you. And desire not corruption in the land. Indeed, Allah does not like corrupters." (Qur'an: 28:77).

#### 5. RESULTS

It is revealed that the general causes of poverty and of women poverty in particular are multiple with different facets. Many literatures and studies have shown that those causes are much more related to socioeconomic issues and national economic system which are beyond the influence of the individual poor especially women. Since the poor group is handicapped to prevent the situation like this, they remain in poverty until the system changes to favour them. Mostly, women in Nigeria and of course, in Kwara state are potential to be living above the poverty line of one dollar per capita per day it is unfortunate that they could not meet up with this level because of other exogenous factors which are not created by them. The blame is on the system and the society that create hardship for the poor and failure of the government to provide sufficient socioeconomic infrastructures that can assist to improve the incomes of the women in enterprises and alleviate their suffering. As Yahaya, K. A. et al. (2011) pointed out that government in the state ought to make essential availability of the major infrastructures that could greatly assist to improve the productivity of the micro entrepreneurs that characterizes by women.

Besides, there are some causes of poverty in Nigerian society that are controllable ones like those associated with economic, social and political, in the sense that they can be checked by the system or government by placing on ground strong policy which can be implemented. Even those ones that are viewed as uncontrollable they can be controlled by the system or government if they are responsible enough to do so. For instance, flooding and storm which their effects further impoverish some rural poor and particularly rural women can be controlled by providing necessary drainages and strong policy and inspection on housing structures that can minimize the effects of these on the poor people. Likewise the rapidly increase in the incidence of population of Nigeria can be checked by reasonable population and immigration policy. Albeit, the genesis of this can be traced or attributed to the micro level as individual household responsible for its control but still government can put in place at least an effective moderate birth control measure for the sake of the economy. Alternatively, since population is considered as a resource for any given country, Nigeria can make optimal utilization of this by turning it to asset for the economy instead of viewing it as liability in the system. With availability of other natural resources and endowment in the country, the current population figure can be manageable. Can individual Nigerians or women do all these? Definitely no, only the system or government can do them.

# 6. CONCLUSION

The study has proved that the causes of poverty cannot be blamed on the individual poor rather the blame should be shouldered by the system and the society at large. Most especially, the government has created a lot of economic and social difficulties in the lives of Nigerian masses, particularly women. We can justify this from the former's injustice in the distribution of national income and resources, wastage of national resources on different and abortive anti-poverty programmes, ineffective macro-economic policies, structural corruption, mismanagement and poor administration. Although there are immediate causes of poverty such as civil unrest, religious and ethnic tensions continue to reoccur day in day out in different parts of Nigeria result in outbreaks of violence in which in turn aggravate poverty and malnutrition. Those women previously lived in these troubled areas and are forced to return home find it hard to survive without getting anything tangible doing as their businesses had been destroyed because of series of violence.

Based on the results of this study, the following policy measures are being recommended to tackle the problem of poverty in general and of women poverty in particular in the state:

 Government should ensure regular basic necessities such as provision of power and safe drinking water, health care and motorable roads, since these basic necessities are most needed by the poor especially women both for their micro business and life in general, for instance, is likely to attract women entrepreneurs, a development which could revamp both local and national economy.

- Anti-poverty programmes, measures, initiative, strategies and agencies, particularly National Poverty Eradication Programme (NAPEP) need to be reformed and restructured, so that the goal of eradicating poverty in the country can be attained without further delay, as scrapping of this peculiar programme is not the best option to address its ineffectiveness.
- Workable macroeconomic policies that are people-friendly ones need to be introduced.
- Islamically, if the government can formally support and standardize the management of Zakat and
  Waqf collection among Nigerian Muslims which are the sources of alleviating poverty in Islam, it
  would be a such of help to the government of the day to achieve her goal of poverty eradication in
  the country, reduce government spending on poverty and attain faster economic growth and
  development in the country.

Revert to the poverty scenario and women as the key point in this paper, it is agreed that this paper is limited to the data available from the literature review analysis. Thus, this paper is suggested to expand the scope of the study to be more focus on the enhancing access to women empowerment as a strategy of poverty alleviation in Kwara State, Nigeria to be conducted in future research.

# IS HIRING WOMEN AS A LEADER IN AN ORGANIZATION A RISK? : A CASE OF MALAYSIAN TAKAFUL COMPANIES

Affiaine Ahmad<sup>1</sup> Safeza Mohd Sapian<sup>2</sup> Zuriah Abdul Rahman<sup>3</sup>

#### **ABSTRACT**

The main purpose of this paper is to examine the relationship of commitment, management, attitude and risk of hiring women as a leader. This empirical study focuses on Malaysian Takaful Companies. The study utilized a survey approach which involved 150 respondents. The sample for this study was drawn from urban population in Klang Valley. Findings showed that all factors have no significant relationship with the hiring of women. Future studies could include other factors such as cultural, economic circumstances, learning, media and information system as independent variables. The study has provided a basis understanding on women credibility of Malaysian Takaful companies. The findings of this paper also have several implications, which would undoubtedly benefits the Takaful companies to bring innovation management into the organization while at the same time making them to realize the equal potential of workers in Malaysian Takaful companies.

Keywords: Commitment, management and attitude.

#### 1. INTRODUCTION

The purpose of this research is to analyze the relationship risk factors and women in the leadership positions. The study will introduce about the meaning of leader, especially in an organization and also would be able to identify the challenges and risks that were faced by women who act as a leader which obviously would differ from male. Women's today are more intelligent than man which can be seen in the universities and also in many big companies. Women are more talented in handling some complicated tasks and usually are multi-tasking. Women's today are not like women in an ancient time which only depends on men only. Now, women can make their own decision without any help from men.

Leadership today has always been associated with the power, money, and status of the position and also descendent which contribute to the title of leadership that someone is holding. The power that they have will dominate a group which is smaller than them. But, today, this power is fast disappearing. Now, we are more confident and ready to move by the power of brilliant ideas, innovations and creativity. The awkward fact about the good ideas is that no one can monopolize them.

In the modern era of workplace, leaders always fronted with the organizational challenges in many aspects. In determining how leadership would affects the performance of organizations, among the issues that must be considered is the gender since it is a common element being used in contributing to the effectiveness of leadership in the organizations. If gender has been identified as a main element of leadership, then it should be able to answer what is the bearing that gender exhibits in evaluating the effectiveness of an individual leader? It seems obvious that males and females will communicate in different manner whether in both, inside or outside the workplace. Given the fact that, the globalization

<sup>&</sup>lt;sup>1</sup> A lecturer, Faculty of Business Management, Universiti Teknologi Mara (UiTM), Shah Alam, Selangor, Malaysia

<sup>&</sup>lt;sup>2</sup> A lecturer, Faculty of Economics and Muamalat, University Sains Islam Malaysia (USIM), Bandar Baru Nilai, Nilai, Malaysia

<sup>&</sup>lt;sup>3</sup> A professor, Arshad Ayub Graduate Business School, Universiti Teknologi Mara (UiTM), Shah Alam, Selangor, Malaysia

era of today's world, instant access to information, and also advanced communication services and products has possibly changed the path of how we conduct the business. These changes may help to overcome any possibility of gap in the communication style and most importantly is to build good communication between men and women at the workplace.

#### **Problem Statements**

With the increase of women participating in senior management, not all employees at every level in the organization could accept the reality of the position being monopolized by women. It is difficult for them to accept the reality that their leaders are women. At present, we can see almost all private sector tends to prefer women as their chief to lead the organization. The important thing is we need to find out whether there are significant risks faced by the organization itself or not when they decide to take women as a leader because of the differentiation between women and men where women were much more concerned.

This study is focusing more on the risk of hiring a female as a leader in an organization where we would examine the differences between women and men in terms of leadership as well as investigating whether the independent variables are related to the dependent variable or not.

# Research Objectives

The aims of this study is to understand women as a transformational leaders, to understand what factors could possibly influences the differences between male and female and to identify the varieties of challenges and barriers for women in upper managements.

# Research Questions

Does sex determine the effectiveness of a person in becoming a leader? What are the differences between the two genders with regard to leadership? What are the differences between the genders in terms of communication?

# Hypothesis

 $H_0$ : There is a significant relationship between commitment and risk faced by an organizational when hiring women as a leader.

 $H_0$ : There is a significant relationship between management in an organization and risk faced when hiring women as a leader.

 $H_0$ : There is a significant relationship between attitude of leader and risk faced by an organization when hiring women as a leader.

#### Definition of Terms:

Gender: When focuses on gender, the aim is to identify and highlighting the differences between man women (Jayne & Dipboye, 2004). Gender's definition is refer to a culture's social structure that make up the comparison between the sexes. This included different attitude, behaviors between women and men and how they are expected to control it (DeMatteo, Eby, and Subdstrom, 1998; Northouse, 2004).

*Leadership:* According to Capezio and Morehouse (1997) leadership can be defined as the ability to influence individuals, group to think and to take the action in order to achieve an objectives.

*Organizational Structure:* refers to those which employee perceives, and hope that perception creates a pattern of beliefs, values, and expectations (Schein, 1990).

#### 2. LITERATURE REVIEW

### Meaning of Leadership

Leadership is a science and an art which is creative, propelling and discipline, Capazio and Morehouse (1997) Leadership underlines relationship at work and in the organizations and involves the acceptance of the responsibilities. Adler (2000) felt that in view of changes in leadership roles and organizational practices female leaders have come to symbolize a new type of leadership that connotes greater effectiveness and synergy than leadership past. Many female executive think that they must to achieve the highest standards of performance than the males. Women nowadays tend to have more strength and fewer faults than male in order for them to achieve the highest level. In addition, Dess and Picken (2000) wrote that in order to survive, the corporation should know the boundaries. The 21<sup>st</sup> century is here and the organizational leaders will face a whole new set of managerial problems: the globalization of the marketplace, the rapid changes of information and communication and the scarcity of the world's natural resources.

Dess and Picken (2000) further states that an organization will need a strategic vision, explicit or implicit and effectively employed, a clear future direction, and a framework for the organization's mission and goals. The job of leadership is to give meaning, not just to make money.

Lapp (1999) stated that successful leaders can reduce complex ideas into simple massages, such as they communicate using symbols, analogies and acts as storytellers to help the employees to understand the information or message conveyed. In order to see another person's perspective on certain issues, they must be able to express empathy and possess high level of understanding towards conflicts among workers. Women have the special advantages of having fresh ideas in seeing the way out on issues and able to identify new solution to old problems.

#### Commitment

Another significant difference that was identified is the way the women and men being recognized with their commitment in jobs. Male think that their own identities are being complex and multifaceted and difficult to share the information. The female executives, however, regularly schedule their time for sharing information (Fairholm, 2004). Nowadays, women tend to lead from the center of an organization rather than from a top of the command hierarchy.

Accordingly, Billing and Alvesson (2000) found that organizational life, information, and expertise have often being perceived to be the sources of organizational power. Female leaders tend to be more educational in nature as a leaders, making commitment to share about the information, so that, the others will become more effective as organizational participants and leaders.

Lots of women become justifiably frustrated from the belief that a double standard exists for men and women were related to the key business leaders (Callas & Smircich, 1999). Leadership behaviors that may be praised and rewarded in males may be ignored when exhibited by females. For examples, leadership would be described as assertive when exhibited by men and may be described as too aggressive when exhibited by women.

However, women with a wedding band may be perceived as having potential for high rates of absenteeism. This is because of the pregnancies or other child-related responsibilities, and short employment tenure related to the possible employment relocation of the spouse. While male leaders may be characterized as a detail-oriented that may exhibit the same behaviors as women leaders characterized as obsessive. Where male leaders may be seen sensitive and female leaders characterized as overly emotional.

# Attitude of Leader

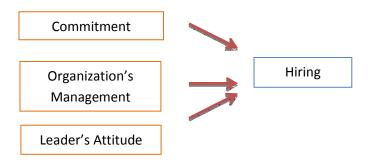

On the other hand, there are some notable advantages for women in educational leadership positions. Many female head teachers (the British equivalent of principals) felt that because "they did not fit the stereotypical male mold", they had more freedom in the leadership behaviors they choose to adopt and "They did not have to operate within the dominant discourse of male leadership" (Coleman, 2003). Bass (1990) found that subordinates are more likely to describe female leaders as charismatic, and that female leader are more inclined to temper any criticism they gave with positive feedback.

(Dana and Bourisaw, 2006) have attempted to characterize a specific female leadership style, identifying preferred collaborative practice, instructional focus and a transformational approach. The findings suggested that many women also fail to support other women in that such positions.

# Organization Management

Clark (2005) determined that there has been a two-fold increase in the number of women in corporate leadership positions in the past ten years; however, many women are leaving large companies to start their own business. With labor shortages worsening, women leaders are becoming more important to employers (Hewlett, 2008). Individuals in leadership positions are often unaffected by issues of race or gender as long as they are part of the dominant social group (Ruderman & Munusamy, 2007).

It is generally assumed women lead differently from men, yet women's effectiveness is measured in traditional ways (Klein, 2009). Bradford (2008) observed the transformational style is the most effective leadership model. These leaders mentor their followers by encouraging self-development and providing increased responsibility within the organization (Bradford, 2008). Accordingly, study by Toland (2006) evidenced that, because of a mentor's presence, women rose to executive management positions within the organization at faster rates. Additionally, these women reached higher levels of management quicker, earned more money and successfully built career networks (Toland, 2006).

#### 3. METHODOLOGY

#### Data Collection Method

The methods that were involved are acquiring primary data and secondary data and questionnaire. These data were collected from internal and external sources. Primary data is referring to the information that was obtained in the firsthand manner. The method used in collecting the data is survey questionnaire. It is an efficient data collection method when the researcher knows what is required and how to measure these variables. There are about 150 respondents were involved in the survey. On the other hand, secondary data is used as an additional information for the researcher. Example of several types of secondary data

such as articles and Journals which was extracted from PROQUEST and Internet information because it can be the easiest and fastest way of data collection. In this drastic changes of technology and a vast global networking era, information are available easily and can be accessed just a click away and everything is at our finger tips.

#### Sampling Technique

Sampling is the process of selecting a sufficient number of elements from the population. Sampling is needed in order to collect data. By studying the sampling, it will be more reliable, reduce fatigue and also will reduce the number of mistakes. The method of sampling that will be use is probability sampling. Probability sampling is when all the elements in the population have equal chance to select as a sample. So, 150 respondents will be selected randomly in order to answer the questionnaire.

# Data Analysis Technique

After all the data are collected, the researcher will use Statistical Package of Social Science (SPSS) to analyze the data. The finding result acquired from the analysis is described by the data in hypothesis testing.

# Hypotheses Testing

Testing the hypotheses is important for confirming the significant relationships and it is expected that solutions can be found to correct the problem that will be encountered. The theoretical framework earlier noticed the relationship among the independent variable (commitment, management of organization and attitude of leader) and dependent variable (risk faced when hiring women as a leader). The aim is to know whether all the independent variables have positive relationship with the dependent variable.

#### 4. ANALYSIS OF DATA AND FINDING

A questionnaire is developed in order to obtain the information from the respondent. 150 sets of questionnaire were distributed to be analyzed. The questionnaires are divided into 5 sections which are A, B, C, D and E. Section A consist of 6 questions related to the demographic profiles of the respondents which are consists of employees in several Malaysian Takaful companies.

Section B consists of 5 questions relating to commitment their leader toward her work. Section C consists of 4 questions relating to the management of organization during her as a leader and section D consists of 4 questions relating to attitude of leader itself towards on her performance at organization. The researcher using the multiple regressions in order to get the significant relationship between all the variables as well as between the independent variables and dependent variables. The multiple regressions is including model summary, Annova and Coefficient of the relationship.

# **SECTION A: Demographic Profile**

According to the question distributed, the result shows all the 150 respondents are Malay. According to this question, the majority of the researcher respondents are female. It shows 62% higher than male which shows 38%. The question for education level will include, certificate, diploma, degree, and master level. From the result, it shows that the researcher's respondent more incline to degree compared to other. This question regarding to the respondent's position in department. The result shows that 44% respondent coming from executive title. This question investigate about the period that the respondent working in Takaful industry. This shows that most of the respondents have 5-6 years working experience.

### **SECTION B:**

Table 1: Model Summary<sup>b</sup>

Ī	Model	R	R Square	Adjusted R	Std. Error of the
				Square	Estimate
Ī	1	.231 <sup>a</sup>	.053	082	2.35668

a. Predictor: (Constant), AL, MO, COM

b. Dependent Variable: RT

This table shows the significant relationship between three independent variables (commitment, management of organization and attitude of leader) and risk faced by an organization. The value of R-Square of .053 explain that only 5.3% has a significant relationship between the independent variables and the dependent variables.

Table 2: ANOVA b

Model	Sum of Square	df	Mean Square	F	Sig.
	6.577	3	2.192	.395	.758ª
Residual	116.633	21	5.554		
Total	123.201	24			

This ANOVA<sup>b</sup> table explain that significant relationship which using F- Test as a measurement.

Table 3: Coefficients<sup>a</sup>

	Unstandardized	Coefficients	Standardized Coefficient		
	Offstaffdafdf2cd	•	Coefficient		
Model	В	Std. Error	Beta	t	Sig.
1 (Constant)	17.729	8.011		2.213	.038
COM	347	.440	220	789	.439
MO	.045	.508	.023	.088	.930
AL	.055	.285	.045	.194	.848

This coefficient<sup>a</sup> table shows that commitment, management of organization and attitude of leader did not have positive relationship with the risk. The T-test above shows negative sign. Thus, there is no significant relationship. The positive relationship in T-test can be shown if the significant 0.000.

# 5. CONCLUSION

To put it in a nut shell, the researcher can conclude that Malaysian Takaful companies did not have any risk when they decided to hire women as a leader in their company. In addition, from the multiple regressions, there is also no significant relationship between all the independent variables and dependent variable. Last but not least, there is totally no practical difference between men and women. As a human which have variety of choices, they also have their own style and attitude towards their works.

# THE RELATIONSHIP BETWEEN LEVEL OF INCOME AND WILLINGNESS OF MUSLIM COMMUNITY TO CONTRIBUTE FOR ISLAMIC WAQF BANK

Mohd Asyraf Yusof<sup>1</sup> Muhammad Ridhwan Ab. Aziz<sup>2</sup> Fuadah Johari<sup>3</sup>

#### **ABSTRACT**

Islamic waqf bank is a special designed financial institution in Islam. This bank will benefit the student and also their parent, due to its unique structure that could finance students education in term of fees and cost of living. Islamic waqf bank use the concept of cash waqf in term of funding the education. Cash waqf means the dedication of some money from one's possessions and establishing a waqf based on that amount and offering it to the benefit of people. In addition cash waqf is defined as the devotion of an amount of money by a founder and the dedication of its usufruct in perpetuity to the prescript purposes. In the other hand education is very important for the development of human capital for Muslim community. The Objective of this paper is to examine the relationship between level of income and willingness of Muslim community to contribute for Islamic waqf bank for financing in education. The methodology of this paper is a quantitative research based on 128 respondents of Muslim community on this country. The general finding of this article shows that there is an extreme willingness among Muslim community to contribute for Islamic waqf bank for funding the education.

**Keywords**: Waqf, cash waqf, Islamic waqf bank, waqf for education.

#### 1. INTRODUCTION

Waqf, an Arabic term that literally means confinement or prohibition. The word is used in the Islamic Law in the sense of holding certain assets or belongings whilst preserving it for the confined benefit of certain patronage, forbidding any use or disposition of it outside its specific objective. According to Imam Abu Hanifah, the legal meaning of waqf is the detention of a specific thing in the ownership of waqif and the devoting of its profit or product for the purpose of charity to the needy. In the other hand Imam Abu Yusuf and Imam Muhammad stated that waqf signifies the prevention and detention of an assets and donated it for the benefit of mankind solely for the sake of Allah.

Waqf is different from donation because waqf generates an endless profit to the needy and a reward to the donors. Waqf applies to non-perishable properties which it can be use without excruciating the property itself. Therefore waqf widely relates to land and buildings. However, there are waqf of computers, note books, machinery, vehicles, share and stocks and cash money. In fact, even University Al-Azhar is a form of waqf.

<sup>&</sup>lt;sup>2</sup>Senior Lecturer, Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia.

<sup>&</sup>lt;sup>3</sup>Senior Lecturer, Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia.

The first words revealed of the Quran was *Iqra'* which meant read or recite. It is obvious that this verse shows the importance of education. Thus, to seek knowledge is a sacred duty, it is obligatory on every Muslim. Education is very essential for the improvement of human capital and success of an individual's financial viability, the society, and the nation at large. Nevertheless, to achieve these goals a particular student needs to think how to finance or fund their study. Unfortunately our institute of higher learning required our students to get a loan to finance their studies. Most of them receive their loan or financing from the Perbadanan Tabung Pendidikan Tinggi Nasional (PTPTN). It will be troublesome for them to repay back their PTPTN loans after they have completed their studies due to several commitments such as car loan repayment, house rental, cell phone bill and etc.

According to data taken from PTPTN's website, until April 2010, PTPTN has spent RM 32 billion for education loan and only 52% of the borrowers have managed to repay their loan according to the agreement. For the next few years, it is expected that less than 50% of total loan given to the borrower will be able to be collected by PTPTN due to the increasing number of unemployed graduates recorded in this country, which is almost to 177 840 graduates until September 2011. Anyone who wishes to further their studies should have *waqf* as their source of education funds. In order to solve this problem and to help Malaysian students in funding their education without worrying to payback their loans.

#### 2. LITERATURE REVIEW

The word waqf in Islamic Law is used for the principle of contribution intended for religious purpose, family welfare, charity and other things for the sake of Allah. Some Muslim jurists agreed that giving waqf are one of the ways to express our submission to Allah. According to Baharuddin Sayin there are no accurate definitions of waqf declared from our Muslim scholars. The definitions that they have given are different from each other thus lead to dissimilar legal practice from four different schools of thought.

According to al-Sharbini, (1933) waqf means holding something such as properties or belongings that can be use and remain its physical form in accordance with regulation approved by Islamic Law. Furthermore according to Ibn 'Abidin (1966) waqf is detain a belonging in condition on the owners and it must be utilize. Other than that according to al-'Asqalani (1959) waqf is hold a property that can be use permanently and channel the used for a good purposes. On the other hand according to al-Shaukani (1964) waqf is holding a property in the path of Allah for the needy but the properties is still owned by the donor. However according to al-Asqalani Waqf is to hold an asset that can be used on a condition that the item stays intact and provided that it is channeled towards a permissible profit. While according to al-Qurtubi (1980) waqf is to give wealth and the benefit that we possess in order to subjugate our self towards Allah.

From the explanation given by Muslim jurists, we can say that *waqf* must have characteristic such as *waqf* item must be clear in term of type and ownership. *Waqf* item are not from prohibited source. *Waqf* property must be nonperishable and everlasting. Outcome or profit from *waqf* properties are for the benefit of the public or for specific purpose and *waqf* properties cannot be used for other purpose then what has been stated by the donor. (Baharuddin Sayin 1996)

In the Quran there are no direct commands about *waqf*. However during the time of Prophet Muhammad whereby companion Umar Al-Khatab (r.a) acquire land in khaybar and went to Prophet Muhammad (PBUH) and seeking advice regarding the land. The Prophet further said that the land should be endowed and the profit given to charity (Hadith by Muslim). Therefore, *waqf* is professed as a permanent dedication by Muslim of any property for a good faith purpose that is recognized as being pious or charitable.

There are some opinions saying that *waqf* is exist during the time of Prophet Ibrahim as he endowed the *Masjidil Haram* and surroundings to his children's and grand children's. Other evidence of *waqf* is after the apostolic of Prophet Muhammad (PBUH) as he endowed a land that left by Mukhairiq. (Baharuddin Sayin 1996). There are some of Muslim Jurists saying that the *waqf* system did not exist during *jahiliya* and only form by our Prophet Muhammad thus what it is now known *waqf* is previously charity or alms deeds *Saadaqah Jariyah*. (Dr Hossien Esmaeili 2013)

From historical point of view there is no precise history to identify "What time was the emersion of *Waqf* exactly?" However from some historical surveys we can deduce that *waqf* was originated at the same time of synagogues and shrines emersion which had some vows to consume in charity purposes and restructuring of them (e.g. shrines). So not only *Waqf* was not created by Islam presence, but also it has been a rational deed(Hăshemi Nasab,1999,P.109). Some inductions on this claim are such as, Imam Khomeini in his book said "*Waqf* was common in other nations, even it probably have been common on impious nations" (Khomeini Mousavi, Vol.3, P.81). Dr Abouzohre in his book stated "Before the emersion of Islam, *Waqf* was prevalent in other names. As far as we concerned there were shrines, synagogue and even some mosques (*e.g. Al-Aqsa mosque*) that so many lands and properties were allocated for their maintenance by beneficent people. Therefore we can't assume whose ownership was for some specific people; those lands and properties and the income which was made form them were consumed for people who worshiped in those buildings" (Hăeri Yazdi, 2002, P.44).

Consequently, although waqf has played a considerable role before the emersion of Islam, Islam was the first religion that developed its legal and regulated form. Islamic jurisprudents believe that initial building which consecrated for worshiping was Ka'bah. In addition, along the history, there were so many shrines, synagogues, churches and such these buildings which consecrated for doing religious deeds and ceremonies (Săfi, 2006, P.62). The history of Islam shows that Quba mosque in Medina was the first foundation which was endowed by Prophet Mohammad (Peace be upon him) in 622 A.C. It is stable nowadays but in extending structure (Shakoori, 2007, P.10 & 11). As we mentioned in the topic, this paper is intent on discussing about cash waqf. So in following the most of materials are about cash waqf. Previously, waqf of buildings and lands were the most popular forms of waqf. Nowadays, cash waqf has become increasingly well known particularly because of its flexibility which allows distribution of the waqf's potential benefit to the poor anywhere (Mannan, 1999, P.5).

Although, some historians believe that initial root of cash *waqf* returns back to 8<sup>th</sup> century in Islamic era (Saădat Far; Dădgar, 2008, P.3) - while various questions about the usage of such *waqf* were asked from "Zafar Ibn Hazil" and he answered that those amount of money have to be accomplished by *mudharabah contract* others believe that after emersion of cash *waqf* in Rome, it was firstly introduced in Ottoman era in Egypt (Dian Masyita, P.2). Professor Mannan then socialized cash *waqf* in Bangladesh through Social Investment Bank Limited (SIBL). SIBL issues cash *waqf* Certificate to collect funds from the rich and to distribute gains of the managed funds between the poor (Mannan, 1998, P.10). Like those of Bangladesh, in other Islamic countries, most of people are poor. Therefore, effectiveness of cash *waqf* certificate program to help reduce poverty in Bangladesh gives hope that a similar program can be successfully implemented in other countries. So, by the time, this *waqf* model has developed day to day. These days this model is expanded through most of Islamic and even western countries.

There are two ideas in *Shia* school about cash *waqf*, some jurisprudents believe that it is not acceptable e.g. *Mohaqeq Helli* (Mohaqeq Helli, 1982, Vol.3, P.444), *Sheikh Tousi* (Tousi, Vol.3, P.288) and others are in contrast e.g. *Shahid Săni* (Shahid Săni, 2001, P.520) and *Mămaqăni* (Mămaqăni, 1983, P.322 & 323). The believers of later idea assume that the significant conditions of cash *waqf* accuracy are based on two components 1) to make juridical profit from those cash, 2) and the origin of cash must be survival perpetually. According to precede statements, firstly we focus on *waqf* in general and then discuss on cash-*waqf* in details.

There are three types of waqf. First is religious waqf. This type of waqf usually allocated for mosque and religious school thus the majority of mosque and religious school is fund by religious waqf. Second type of waqf is philanthropic waqf where the waqf is allocated the benefits to public for to support the needy and promote social activity. For example waqf library, education centre, health care, environment care and etc. The third waqf is family waqf. This waqf pointed from parent to their children and heir. (Dr Habibollah Salarzehi 2010)

Waqf can be divided in to two categories that are general waqf and specific waqf. General waqf have the characteristic of sacrifice and charity for the needy and fi-sabililah. This type of waqf does not need the element of acceptance; on top of that the assets directly belong to Allah. The waqf is managed by government and distributed for charity purpose. Specific waqf means group of receiver or beneficiary is stated clearly by the donor, either to a person, to a group of people or to a specific family. Thus the waqf properties will belong to the person stated by the donor, and that person is the only beneficiary of the assets. (Baharuddin Sayin 1996)

Instead of waqf land, the other important and potential waqf is a cash waqf, which has developed considerably since the time of Prophet Muhammad (PBUH). Cash waqf has become increasingly well known due to its flexibility, which allows distribution of the waqf's potential benefit to the poor anywhere (Mannan, 1999). However, cash waqf is not aggressively practiced nowadays due to a certain conceptual argument concerning perpetuity and inalienability.

The study of cash waqf was done by several researchers in recently time. Murat Çizakça (1998) explains that historical evidence indicates that the real exiting potential lies in the cash waqf. The waqf system has provided throughout Islamic history all the essential services at no cost to the state and a successful modernization of the system implies a significant cut in government expenditure and all the associated benefits including downsizing the state sector and a reduction or elimination of riba. Cengiz Toramanet.al.(n.d.), conclude that in a society where health, education and welfare were entirely financed by gifts and endowments, the cash waqf carried serious implications for the very survival of the Ottoman empire.

Islahi (1992), stated that the internationalization of the voluntary institution of *waqf* is needed nowadays, by setting up a non-government Muslim foundation which should provide public goods on large scale and attempt to combat illiteracy, sickness and lack of technical know-how.

Monzer Kahf (1998), explain the importance of *waqf* for socioeconomic development, which is consists of creating and developing a third sector distinct from the profit-motivated private sector and the authority-based public sector, and changing this third sector with the responsibility of performing a group of tasks whose nature will make them better achieved. This third sector assigned in education, health, social and environmental welfare. Furthermore, it can provide defense services and public utilities in many instances.

Chowdhury *et.al.*(2011) explain that cash *waqf* would also help to reform the present institutional setup and their networking throughout the country with a view of increasing their performances. Moreover, Tahir (2010) explains that the *waqf* bank can be applied as the bank of the poor. It is permissible in Islam based on the validity of cash *waqf* and the need of *waqf*, its beneficiaries as well as the society. But, if there is favorable political will and strong support from the government, the institution of *waqf* through the establishment of *waqf* bank will contribute significantly to the society.

Tahir & Hamid (2006) explain that the new formulation of waqf may be realized by making a distinction between the perpetuity of the physical being of the object and a 'dedication' of benefits. New form of waqf can be declared in the non-traditional way. Old waqf, however, may still remain subject to the old conditions as long the greater interests of the waqf are not threatened by these conditions.

Wafa (2010) explains that the impact of developing *waqf* for education in Malaysia not only promoting the significant rule of *waqf* towards the country, but also will (1) promote the third sector of Islamic economic, (2) establish economic activities through several projects, and business, (3) complement the government aid, benevolent and educational programs, and (4) promote the oneness of society.

Cash waqf can be defined as the donation of an amount of money by a founder and the dedication of its usufruct in perpetuity for the prescribe purpose (Abdel Mohsin, M.I. 2008). According to history, cash waqf already started during the time of Prophet Muhammad (PBUH) in that the Prophet's Companion was reputed to have used waqf to donate their farmland for development purposes. The revenue from the land would be solely used for the sake of the development of society. Consequently, cash waqf is targeted to become an effective option for poverty alleviation programs, especially in Muslim countries. These programs require a huge amount of funds, which cannot be provided by the government. In the Islamic socio economy concept the source of social funds, called cash waqf, is economically and politically free of charge. The cash waqf trustee collect the funds from the waqif and invest the money in real sector such as SMEs or in any Islamic based investment firms

In term of education, cash waqf seems to be effective in helping the Islamic education institutions. This has been proven by the success of the education system in Egypt. According to Danna, D.R. (2007), the Al Azhar University was built through the cash waqf fund and invested most of its cash waqf fund to built the storage warehouse at Suez Canal. In addition, the Egyptian government also borrowed the waqf fund from Al Azhar University for government consumption. As a result, the sustainability that Al Azhar has gained proves the effectiveness of the cash waqf fund, even though the university is not a profit oriented institution.

Similarly, the cash waqf in Malaysia has the potential to develop. Muhammad Salleh (2009) said that cash waqf has the potential to promote the development of ummah. He estimated that the cash waqf collection in Malaysia could reach RM4.3 billion a year if each Muslim adult Malaysian citizen donated RM1 a day or RM30 a month to the cash waqf fund. Furthermore, Penang state has a very high potential to develop a cash waqf fund because of its planning and marketing strategy that are used for the promotion of the cash waqf funds. Muhammad Salleh (2009) estimated that the cash waqf fund could reach RM7 million a year, which could create many opportunities for the Muslim community.

In addition, Baharuddin Sayin, et al. (2006), corroborated the cash waqf implementation through Selangor Waqf Shares Scheme, which has a high potential growth. This scheme has encouraged Muslims to implement waqf via cash money while purchasing share units offered by the Selangor State Religious Council (SSRC). The waqf fund collected by the SSRC will be used for the benefit of the Muslim society instead of giving a fair chance for the poor to implement waqf.

Therefore, the idea of establishing an Islamic *waqf* bank purposely design for education financing is very attractive. From conventional bank perspective inclusive PTPTN, these institutions earned by collecting deposits from customers or fund from government and then granting the loans to the customer or student. They also charge transaction fees on financial services, and earn interest on lending. Islamic banks do earn the same but avoid usury, uncertainty (*gharar*), gambling, and investment in prohibited (*haram*) businesses. An Islamic *waqf* bank would do the same in addition they need to comply with rules of *waqf* and avoid all forbidden elements.

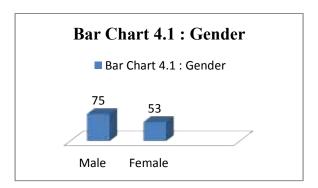

For this, the permissibility of cash waqf and suitability of capital of Islamic bank be considered as waqf as well as its business and structure will be explored in details in his study. There is no primary text in Islamic law prohibiting the establishment of Islamic waqf bank or waqf bank, and almost all waqf issues are rational (ijtihadi). The permissibility of cash waqf can be extended to Islamic waqf bank; and the need of waqf, its beneficiaries, and the general interest of the society or public interest (maslahah amah) demand the validity of Islamic waqf bank.

#### 3. RESEARCH METHODOLOGY

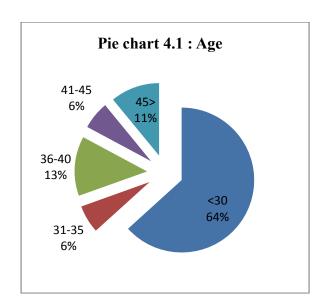

The research methodology used by the research is quantitative method. The method used throughout the research is through the questionnaires as the data collection instrument thus the uses of questionnaires allow us to get information without having to take a long time to acquire data from each respondent. The questionnaire forms would be printed and distributed directly to each of the targeted respondents that live in Klang Valley area. Each respondent must answer all the questions in the form using any stationery in less than 10 minutes. Researcher would randomly choose assigned respondents from various related parties. To analyze the data, there are some methods that should be used. After a thorough survey, data from respondents' answers are analyzed statistically through the use of SPSS version 17. This study will analyze the frequency of each variable in the survey questions, since each respondent has their own evaluation on the issue, which is useful in this analysis. Results of the analysis will determine the level of assessment of each respondent on various aspects of this study.

#### 4. DISCUSSION AND FINDINGS

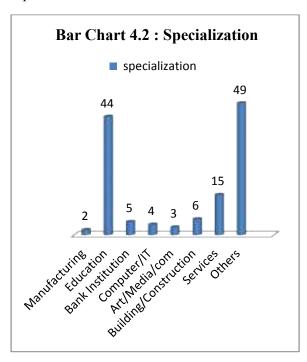

From the survey, below are the descriptive analyses of the respondents. The bar chart 4.1 reveals that male respondent is 75 persons which are 17.2% higher than female respondent, which are only 53 persons.

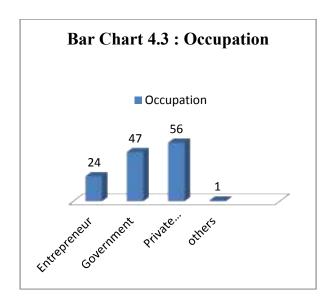

The pie chart 4.1 shows that the respondent aged below 30 years old is the majority respondents (81 people) representing 63.3% out of 128 total respondents, followed by 36-40 years old with 17 respondents or 13.3% of it. Next, respondent with 45 years old and above, 14 persons (10.9%). The last category of respondent is in the age of 31-35 and 41-45 years old, where both are 8 respondents or 6.3% of the total respondents.

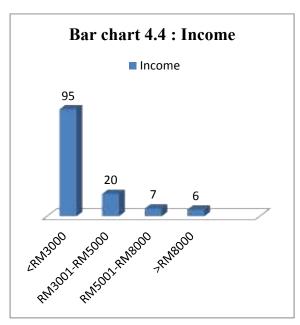

The Bar Chart 4.2 of job specialization indicates that the majority of participants are from others specialization which is 49 people. Comprising of 38.3 %, and followed by education sector, 44 persons which is 34.4% out of total respondents.

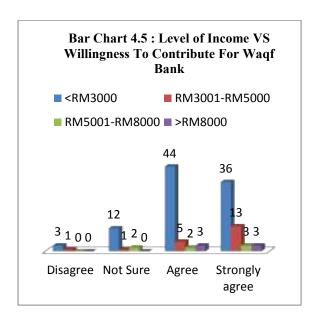

The Bar Chart 4.3, shows that majority of participants are from private enterprise and government sector, which are 43.8% and 36.7% respectively. In the other hand, entrepreneurs and other sector are only 18.8% and 8% respectively.

Based on Bar Chart 4.4 below, the majority of respondents have income less then RM3000 per month or 74.2%. The other respondents have income more than RM3000 or 25.8%.

The above Bar chart 4.5 indicates that there are strong willingness or strongly agreed to contribute for Islamic *waqf* bank from all level of income. Respondents who have income less than RM3000 shows strong willingness to contribute for Islamic *waqf* bank. There are only three participants who disagree to contribute for Islamic *waqf* bank and twelve respondents who are not sure to contribute for Islamic *waqf* bank. Perhaps they have many commitments and do not have enough income to support their basic needs. There are forty four respondent who agree and thirty six respondents who strongly agree to contribute for Islamic *waqf* bank.

Respondents with income between RM3001 and RM5000 also show strong willingness to contribute for Islamic *waqf* bank. There are only one person who disagree and one person who not sure to contribute for Islamic *waqf* bank. This is probably because of the low confidence over the mechanism for collecting the fund. There are five respondents who agree and thirteen respondents who strongly agree to contribute for Islamic *waqf* bank.

Respondents with income between RM5001 and RM8000 also have strong willingness to contribute for Islamic *waqf* bank. There are only two respondents who not sure to contribute for Islamic *waqf* bank due to lack of general knowledge about *waqf* itself. The other two respondents are agreed and three of respondents are strongly agree to contribute for Islamic *waqf* bank. Furthermore respondent with income more than RM8000 are all agreed to contribute for Islamic *waqf* bank.

This research shows that the level of income does not affect the willingness of Muslim community to contribute for Islamic *waqf* bank. The only reasons that they did not want to contribute for Islamic *waqf* bank is lack of knowledge about *waqf* and lack of trust for the people who represent as an agent for Islamic *waqf* bank to collect *waqf* donation.

#### 5. CONCLUSION

General findings out of this article shows that each and every level of income willingly to contribute for Islamic waqf bank. It is because each and every one of them is aware of the important of education and how Islamic waqf bank will support their child in the future. The willingness of each Muslim to

contribute in Islamic waqf bank is very high thus will lead to the establishment of Islamic waqf bank. Since education is very important for the development of human capital and achievement of economic well-being for oneself, society and nation at large, the idea of establishing an Islamic waqf bank which designed for education financing is very attractive and timely. The permissibility of cash waqf and suitability of capital structure of Islamic bank can be considered as waqf instrument in solving the financing problem of students.

#### CASH WAQF MODELS FOR FINANCING IN EDUCATION

Muhammad Ridhwan Ab. Aziz<sup>1</sup> Fuadah Johari<sup>2</sup> Mohd Asyraf Yusof<sup>3</sup>

#### **ABSTRACT**

Cash waqf is a trust fund established with money to support services to mankind in the name of Allah. The gifted capital was "transferred" to borrowers for certain period, which was then spent for all sorts of pious and social purposes inclusive for the investment objectives. It is recognized that there is no ample study in the area of cash waqf. Again literature is very scanty relating to the cash waqf area especially for the establishment of Islamic financial institution for financing in education. The main objective of this paper is to examine and compare various cash waqf models as proposed by many Muslim scholars. The methodology of this paper is a qualitative research through document analysis of relevance references pertaining to cash waqf models. The general finding of this article shows that there is possible structure for waqf instrument that can be implemented in the future for the financing of education. It is expected that with a proper mechanism of waqf financing provided by specific Islamic financial institution, it is able to benefit many parties in getting financing facilities as well as for investment purposes that may attain the both objectives of this world and the Hereafter.

**Keywords:** Wagf, Cash Wagf, Islamic Bank, Islamic Financial Institutions

#### 1. INTRODUCTION

The word waqf is derived from the Arabic root verb "waqafa" means 'causing a thing to stop and standstill'. It also takes the meanings of 'detention', 'holding' or keeping. Waqfwhich (pl. Awqaf) is called Boniyad in Iran and Habs (pl. Ahbas) in North and West Africa. However, by taking its different meanings into consideration waqf can be applied to non-perishable property whose benefit is extracted without consuming the property itself. Although, waqf is not specifically mentioned in the Holy Quran, the concept of wealth distribution is strongly emphasized therein (Chowdhury et.al., 2011). Distribution of wealth is a key issue in the modern economy to make it more dynamic, prejudice free and entrepreneurial. However, a hadith narrated by Abu Hurairah [May Allah be pleased with him (Ra)] is considered as the origin of this institution in the world of Islam. "Abu Huraira (Ra) reported Prophet Mohammad [Peace be upon him (Pbuh)] as saying: when a man dies, all his acts come to an end, but three; recurring charity (sadaqah jariyah) or knowledge (by which people are benefited), or a pious offspring, who prays for him" (Reported by Muslim, No. 4223)

Generally, waqf can be classified into several categories on the basis of three diverse aspects that is, timing, purpose and the object of waqf (Jalil and Ramli, 2008).

<sup>&</sup>lt;sup>3</sup>Research Assistant, Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia.

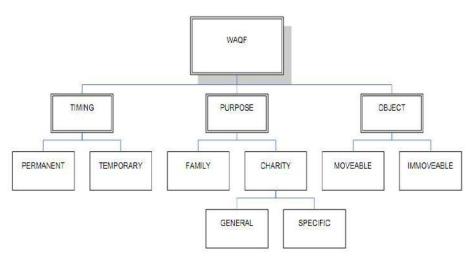

Figure 1: The Categories of Waqf in Islamic Jurisprudence

From *shariah* point of view, *waqf* may be defined as holding a maal (an asset) and preventing its consumption for the purpose of repeatedly extracting its usufruct for the benefit of an objective representing righteousness or philanthrophy. this definition also covers several news forms of *waqf* that were not discussed in the classical literature, such as the *waqf* of financial rights and *waqf* of usufruct, are covered by the definition of the word *Maal* (asset) according to the majority of fuqaha' and as expressly mentioned in the collective fatawa, especially tha OIC Fiqh Academy(Monzer Kahf, 1998). The contemporary jurists also justify the validity of the cash*waqf*, because it is in the interest of the *waqf*, its beneficiaries and the society (Tahir, 2011).

In addition waqf assets can also be immoveable or moveable (e.g. cashwaqf). In cashwaqf alwaqif (donor) endowed cash instead of realestate. Cashwaqf begin in primeval Mesopotamia, Greece and the Roman Empire. In fact, in the eighth century, Imam Zufar had approved cashwaqf in the Islamic World for the first time. According to him cashwaqf would be invested through Mudarabah and profits would be spent for charity. Nevertheless, cashwaqf did not expand and mature until the 16th century and after that century it became popular, especially among the ottomans. Although there was controversy on the legality ofcashwaqfamong the Shariah scholars but thousands of cashwaqf continued to be endowed. In particular, cashwaqfwas supported by the Ottoman Sultans, because funds were financed in the expansion of Islam in Europe (Cizakca, 2004, 2010).

Therefore, many Muslim did not get chance to participate in waqf endowment because there is a wrong perception among Muslims that there may be waqf endowment through only land not in cash. They believe land can fulfill the three conditions of waqfsuch as perpetuity, irrevocability and inalienability. However, land may be subject to demolition, destruction due to the natural calamity and waqf will only last till its value exist (Mohammad, 2008). Through proper cashwaqfmanagement, it is easily possible to holdwaqf value as well as value enhancement. As a result, those who do not have land can participate in endowment through cashwaqf. In addition, nowadays people have more choices for waqf by including cash into waqf.

Furthermore, cashwaqf is far more important since it is more productive compared to land, buildings, books, cattles and so on, as it is testified by the existing research studies and have been found profitable in the practices of modern Islamic financial system. In fact, in cashwaqfthe amount or value of the waqf is not an important issue, rather it is worthy to involve whole ummah in the process of waqf, so that everyone irrespective of financial condition could be involved by contributing as little as a cent within the prescribed systems of institutionalizing

the concepts under government or private initiatives and guidelines provided by Islamic doctrines. Because, it is not only the preserve of the wealthy (Chowdhuryet.al, 2011). That is anyone, subject to certain *Shariah* conditions, can be *al-wagif* (donor) through cashwagf.

# 2. CONCEPT OF CASHWAQF

Cashwaqf are charitable endowments established with cash capital. What distinguishes these from the standard real estate endowments is the nature of their capital, corpus, which is in the form of cash. The corpus of the real estate waqfs, by contrast, is in the form of real estate. Thus, whereas a well to do Muslim normally endows his real estate and channels its rent revenue for charity, in the case of a cashwaqf, not real estate but cash is endowed and the revenue generated out of the investment of this cash is then channelled for charity(Murat Cizakca, 2004).

Cashwaqf can only be distributed and allocated for anything not against Sha'riah Law. This form of waqf provides opportunities for facilitating its participation in social development (Tanim Laila, Undated).

- a) Mass Participation: It provides an opportunity for participation of all segments of the Muslim society and not just the wealthy Muslims, like in the case of real property *waqf*. This gives every interested Muslim a chance to participate, contribute with whatever means he has to offer, even with the simplest amount.
- b) Rightful Utilization: cashwaqf scheme can gather the scatteredendowments to create a common fund to maximize its utilization rather than the endowment being spent in mere consumer consumption. This lends itself to employ an efficient management scheme of moder n financial system and thereby protect waqf being destroyed by incompetent Mutawallis.
- c) Social and Economic Development: Such a scheme can enhance the government's national development plan for poverty eradication and social services through co-ordination. In fact the fund raised by cashwaqf scheme can be used to fund microfinance projects which are currently funded by high interest rate and charges.

Dunya listed the significances of cashwaqf as: (a) compare to immovable property many members of the public have cash.(b) cashwaqf is the best way for a joint waqf(waqf mushtrak/waqfjuma'i), thus, it can attract finance for the development of diverse and big projects. (c) cashwaqf can be invested in diverse economic activities, and therefore greater revenue can be expected. (d) It can be for any objective, and any social purposes. (e) The chances for the growth of this waqf are higher. Maiman added that it is easily liquefiable compare to realty(Tahir, 2011).

Ammar further listedthe benefits of cashwaqf. They are: (i) currency as the benefits or replacement of coins is the medium for exchange of goods. (ii) Currency is replaceable with similar (i.e. it is a mal mithli).(iii) cashwaqf enables everyone to donate as waqf, whereby the poor and needy can benefit from the abundance of resources. (iv)cashwaqf is capable of creating more economic stimulus, and it can be a welfare fund used to sponsor many educational, social and health projects. To sum, the coins of the old, the paper currency of today,or any other form of liquid asset, under modem banking practice, can be the object of waqf. For the purpose of loans and investment, currency will be more useful to a bank, while other forms may end up in non-liquefiable asset, unless prudent deeds of waqf are in place, empowering the bank touse certificates of shares, sukuk and others as currency(Tahir, 2011).

#### 3. LITERATURE REVIEW

The study of cashwaqf was done by several researchers in recently time. Murat Çizakça (1998) explains that historical evidence indicates that the real exiting potential lies in the cashawqaf. The awqaf system has provided throughout Islamic history all the essential services at no cost to the state and a successful modernisation of the system implies a significant cut in government expenditure and all the associated benefits including downsizing the state sector and a reduction or elimination of riba. Cengiz Toramanet.al. (undated), conclude that in a society where health, education and welfare were entirely financed by gifts and endowments, the cash awqaf carried serious implications for the very survival of the Ottoman social fabric.

Islahi (1992), stated that the internationalize the voluntary institution of *awqaf* is needed nowadays, by setting up a non-government world Muslim foundation which should provide public goods on large scale and in much more significant fashion than has been the case up till now, to combat illiteracy, sickness and lack of technical know-how.

Monzer kahf (1998), explain the importance of *waqf* for socioeconomic development, which is consists of creating and developing a third sector distinct from the profit-motivated private sector and the authority-based public sector, and changing this third sector with the responsibility of performing a group of tasks whose nature make them better achieved. This third sector assigned in education, health and social and environmental welfare. Furthermore, it can provide defense services and public utilities in many instances.

Chowdhury et.al.(2011) explain thatcashwaqf would also help to reform thepresent institutional setup and their networking relationship throughout the country with a view to increasing their performance in the direction of the efficient and need based dynamic management of the waqf affairs and systems which total policy dimensions at micro and macro mixed with the diversified objectives of innovations and development in the waqf management systems complying with the Shariah guidelines.

Again Tahir (2010) explains that the *waqf* bank can be applied as the bank of the poor. It can be permissible in Islam based on validity of cash *waqf* and the need of *waqf*, its beneficiaries as well as the society. But, If there is favourable political will institution of *waqf* through *waqf* bank contribute to society geatly. The institutions of *waqf* have the unrealized potential to establish a *waqf*Bank.

Tahir & Hamid(2006) explain that the new formulation of waqf may be realized by making a distinction between the perpetuity of the physical being of the object and it is not 'dedication' of benefits. New form of waqf can be declared in the non-traditional way. Old waqf, however, may still remain subject to the old conditions as long the greater interests of the waqf are not threatened by these conditions.

Wafa (2010) explains that the impact of Developing *Waqf* For Education In Malaysia not only promoting the significant rule of *waqf* towards the country, but also will be impact to (1) promoting the third sector of Islamic Economic, (2) establishing economic activities through several projects, and business, (3) complementing the royal aid development, benevolent and educational programs, and (4) promoting the oneness of society.

#### 4. MODELS OF CASHWAQF FOR EDUCATIONAL FINANCING

The permissibility of cashwaqf can be extended to waqf bank for several reasons. (1) waqfissues are rational (ijtihadi), (2) The Utility of a Waqf Bank, (3) Compliance of the Structure and Operation of a Waqf. Thus, the establishment ofwaqf bank could be allowed for the benefit of waqf, its beneficiaries, and also public interest of(maslahah) as long as it is not against Shariah principles. The function of cashwaqf can be the function of a waqf bank through loans to the needy, and investment onmudarabah,mu'malah, and ijarah. If a wider application is given to the idea, a waqf bank can use such cashwaqf for the same purposes(Tahir, 2011).

# 4.1. Waqf Bank Model 1

As a rule, productive *waqf* must be kept invested and income generating, which can be best achieved by going to the business of banking. The contemporary Islamic banking practice provides evidence of successful cash investment methods that are not only good for expecting good returns on the investment but also protection of the capital which will be discussed in due course.

Additionally, the bank will use cashwaqf for its capital according to fiqhi principles in its operations (both loans and investment). Therefore, the core characteristic of waqf i.e. perpetuity of the object or the capability of recurrent use and benefit, would apply to both the cashwaqf and waqf bank alike.

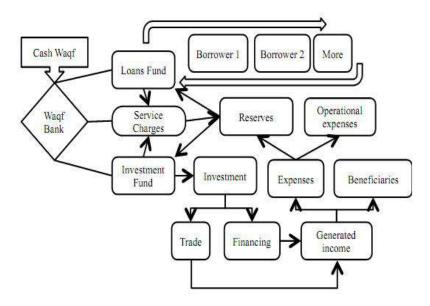

Figure 2: Waqf Bank Model 1

Fig. 1. Waqf Bank's Proposed Structure and Operation

First, the bank can be entrusted with cashwaqf or collect cashwaqf from the public for special purposes disclosed and easily available to the donating public. Once such deposits are made, the bank can disburse the cash, which is dedicated for loans, to the indebted, for marriage, and for any other welfare project. As borrowers settle a loan, the repaid amount can be once again loaned to another. This will be repeated whenever an amount is available in the given fund. The cash can be maintained perpetually, provided compensations for losses and market fluctuations are planned and paid. For this, a special account called the reserves account will be needed. As

the Loan's Fund will be disbursed interest free, minimum service charges will be imposed on borrowers, a proportion of which can be for making good on losses and damage suffered by the fund.

Second, the waqf bank can be entrusted with investment deposits or its own waqf capital. The same as cashwaqf, the bank has to operate the entrusted capital in an income generating business. This capital is not to be used for purposes other than investment; its protection and growth will be the main function of the bank. Such funds are established to use its income for the benefit of the society or the purpose for which the donors have dedicated them. Therefore, the capital has to be invested in any permissible transaction capable of generating income. The waqf bank can use all these modes. This is particularly true in the case of cash, which is not donated to be disbursed for loans. In other words, the bank will use cash the income of which is dedicated for welfare, in the majority of its investment transactions.

The bank will benefit waqf, and its beneficiaries, as it can provide adequate capital to waqf institutions. It can attract a large sum of cash, both waqf and non-waqf. It is possible that the mission and the ethical system of the bank will attract many individuals and entities either to donate or to save and earn profits.

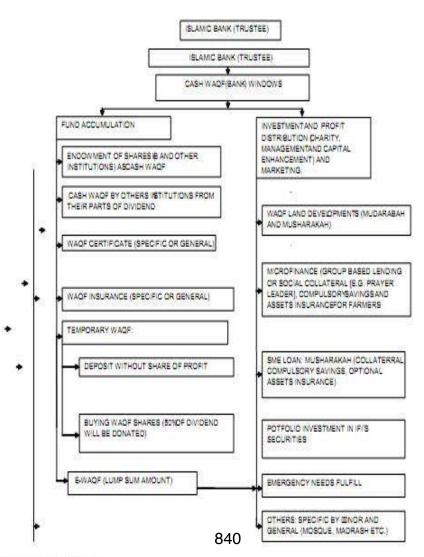

Figure 3: Waqf Bank Model 2

Figure 2. Cash WAQF model.

In doing so, the mechanism of this figure is as follows;

First, Islamic Bank will act as a trustee for cashwaqf. It will supervise and monitor the collection of waqf fund, investment and distribution of profit to the charity activities. Although, Islamic Bank will monitor all activities of waqf, but actual financing, investment and profit distribution will be done under proper management of its cashwaqf windows. If in the future the windows activities expanded in a large extent, then it would be operated as a separate waqf Bank.

Second; The mentioned techniques in the cashwaqf Model can be used to raise cashwaqf fund. It requires diverse techniques because different al-waqif (donor) prefers dissimilar way of cashwaqf endowment. The techniques as follows; (1) Endowment of shares (Islamic bank and other institutions) as cashwaqf, (2) cashwaqf by other institutions from their parts of dividend, (3) waqf certificate, (4) waqf insurance, (5) temporary waqf, (6) deposit without share of profit, (7) e-waqf.

Third,in term of investment, the use of cashwaqf fund in the best Islamic mode of financing, such as Musharakah, diminishing Musharakah and Mudarabah, or a combination of both two. In doing so,waqf fund should be used to finance pious people and other IFI's, basically for two reasons. Firstly, al-waqif donates money not only to help poor people but also to get reward hereafter or to satisfy Allah and secondly, honesty is very important for successful Musharakah and Mudarabah contract. The investment can be invested through waqf land developments, microfinance, small and medium enterprise (sme) loan, portfolio investment in Islamic financial institution's (IFI's) securities.

Fourth,the profit distribution should be distributed according to the donor's will. However, if he assigns the responsibility to the bank, then it can be distributed in three ways: (1) to charities such as mosque, *madrassah*, poor, socialactivities, training of youth, marriage for poor girl,religious education etc, (2) to management includes maintenance, managerial expenses and future development and capital enhancement, (3) to marketing because when there is any natural disaster (emergency needs fulfill) or illness etc. then through publicity by television,radio or newspaper it is always easy to raise donated fund. So through proper marketing policy it is possible to encourage people to endowed more cashwaqf.

#### 5. CONCLUSSION

From the discussion above, the general finding of this paper shows that there is possible structure for *waqf* instrument that can be implemented in the future to the education financing. Again the discussion about cash*waqf* needs to be more extensive to find the best system and model to establish the development of country.

Because of education is very important for the development of human capital and achievement of economic well-being for oneself, society and nation at large. In doing so, the idea of establishing an Islamic waqf bank which designed for education financing is very attractive. The permissibility of cash waqf and suitability of capital of Islamic bank can be considered as waqfas well business with good structure to solve the problem of students in his education financing. Its also can be extended to Islamic waqf bank and the need of waqf, its beneficiaries, and the general interest of the society or public interest (maslahah) demand the validity of Islamic bank.

# DEMONSTRATING ACCOUNTABILITY THROUGH ACCOUNTING AND REPORTING: LESSONS FROM AN *AWQAF* INSTITUTION OPERATING IN A NON-ISLAMIC SOUTH EAST ASIA COUNTRY

Hisham Yaacob<sup>1</sup> Saerah Petra<sup>2</sup> Azimah Sumardi<sup>3</sup> Hairul Suhaimi Nahar<sup>4</sup>

#### **ABSTRACT**

The accountability literature is growing remarkably specifically on the role played by accounting and reporting in not-for-profit, religious-based organizations and its implications for the accountability discourse. Consistent with such stream of research and with the aim of exploring the intertwined nature of accounting, reporting and the religion of Islam, we examine in this exploratory research, how management, accounting and reporting are being practiced and how these "official exercises" provide systematic essences in the organization's accountability trajectory. Focusing on a single awqaf institution (waqf-S) operating in a non-Islamic South East Asia country, our analysis allows us to observe the influence of multiple factors influencing its organizational-wide accountability policy. We consider this as a contribution to the literature as it generates knowledge on how management, accounting and reporting are being devised as strategic tools in the institution's accountability policy framework, beyond the normal office management, financial data recording and disclosure per se. The multiple factors effectively drive the structured and transparent reporting by waqf-S to transcend beyond the traditional financial accounting and reporting boundary of meeting regulatory requirements; it reaches the concern of ensuring the necessary accountability towards stakeholders are appropriately observed and consistently uphold.

**Keywords** - Awgaf, Islamic endowments, accountability

#### 1. INTRODUCTION

Awqaf (Islamic endowments) is receiving increased attention and interest by the *Ummah* (Muslim community) due to its proven socio-economics contributions of providing wide range of public goods. During the Islamic *Ottoman* era for instance, awqaf plays important roles as a bank, free education

<sup>&</sup>lt;sup>1</sup> Faculty Economics and Muamalat, Universiti Sains Islam Malaysia (USIM) Department of Accounting & Finance, Faculty of Business, Economics & Policy Studies, University of Brunei Darussalam, Gadong, Brunei Darussalam. Corresponding author.

<sup>#</sup> The financial support from the University of Brunei Darussalam Seed Grant [UBD/PNC2/2/RG/1(189)] is acknowledged.

<sup>&</sup>lt;sup>3</sup> Faculty Economics and Muamalat, Universiti Sains Islam Malaysia (USIM) Department of Accounting & Finance, Faculty of Business, Economics & Policy Studies, University of Brunei Darussalam, Gadong, Brunei Darussalam.

<sup>&</sup>lt;sup>4</sup> Department of Accounting and Finance, Faculty of Economics and Management Universiti Putra Malaysia, Serdang, Selangor, Malaysia

provider, healthcare and other social services in many Muslims Nations. The cash *awqaf* fund complements *zakat* (Islamic tithe) fund and was used as financial aid to the poor and needy, besides financing the construction of public infrastructures (Saduman and Aysun, 2009). The most prestigious *awqaf* institution in the world which remains until today is the *Al-Azhar* University in Egypt which was established on endowment basis thousand years ago. It has produced and still producing thousands of religious scholars scattered throughout the world. Many other products of *awqaf* system are however, noticeably vanished as a result of various factors including but not limited to mismanagement, colonization and imperialism (Deguilhem, 2003; Hidayatul and Shahul-Hameed, 2011).

Given the nature of endowment which requires trust and integrity as well as the economic importance which the *awqaf* system carries, the observance towards accountability by *awqaf* managers are therefore imperatively crucial. The sustainability of *awqaf* institutions greatly depends on prudent management and administration. Specifically, *awqaf* managers must ensure that *awqaf* deeds are honoured and the *awqaf* usufructs reach the intended beneficiaries. Extant *awqaf* literature indicates that the accountability aspects of *waqf* trustees or managers are still lacking due to several reasons. Among others it includes unqualified human capital, insufficient resources to maintain and develop the *waqf* properties, mismanagement of *waqf* funds, and lack of transparency (Hidayatul and Shahul-Hameed, 2011; Shahedur, Aftekhar, Zulkifli *et al.*, 2012; Siti-Rokyah, 2004). The accountability literature has also been relatively scant on the role played by accounting and reporting in *awqaf* institutions which are considered as not-for-profit, religious-based organizations. Accordingly, the plausible implications for the accountability discourse in the religious context remain unexplored. This is with the exception of very limited studies focusing on Malaysian cases (e.g. Hidayatul and Shahul-Hameed, 2011; Hairul-Suhaimi and Hisham, 2011; Siti-Rokyah, 2004).

Drawing from the accountability literature and setting management, accounting and reporting as strategic accountability devices in our intellectual framings, we embark on an exploratory study which examines the contemporary management, accounting and reporting practices of waqf-S. The aim is to explore the intertwined nature of management, accounting, reporting and accountability in the awqaf context. We build up the understanding of how management, accounting and reporting are being practiced and how these "official exercises" provide systematic essences on the organization's accountability trajectory. Specifically, our exploratory research is guided by the following objectives of (1) to review, understand and document the contemporary waqf-S management, financial accounting and reporting practices; (2) to understand relevant drivers behind the current accountability culture in waqf-S.

By adopting a qualitative approach of a case study, necessary data were collected from semistructured interviews, archival documentation review and analyses. Physical observations on randomly selected *awqaf* properties were also conducted with the aim of eliciting primary data. Further, secondary data were also gathered from the institution's annual reports, related news and other publications. By focusing on a single *awqaf* institution operating in a non-Islamic South East Asia country, our analysis enables us to observe the influence of multiple factors influencing *waqf*-S's organizational-wide accountability policy.

Our exploratory inquiry finds that waqf-S is a highly regulated institution and its awqaf funds and properties are professionally managed. Its accounting and reporting practices are comprehensively governed by relevant legislated Acts. Its annual financial statements being the prime means of communicating accountability to stakeholders are found to be systematically and timely produced and audited yearly, both internally and externally. The relevant disclosures reveal that usufructs were systematically distributed to the intended beneficiaries. Transparency by waqf-S is further improved as its annual reports are being made available on-line on its corporate website. Ironically, these materialized despite the institution is currently operating within human resources constraint. The results of our semi-structured interviews suggest that the culture of accountability observance in waqf-S is driven by three strategic factors of regulatory, stakeholders' demands and religious image.

We consider our research endeavor as a contribution to the literature as it generates knowledge on how management, accounting and reporting are being devised as strategic tools in the institution's accountability policy framework, beyond the normal office management, financial data recording and disclosure *per se*. The institution's structured and transparent reporting primarily transcend beyond the traditional financial accounting and reporting boundary of meeting regulatory requirements; it reaches the concerned with ensuring accountability towards stakeholders is observed and uphold. The remainder of the paper is structured as follows. Section 2 revisits discussions on *awqaf* which provides brief introduction to the Islamic endowment concepts and practices (past and current). Section 3 describes the link between accounting, reporting and accountability in the specific context of Islam and *awqaf* institution. We then proceed to explain our adopted research approach and techniques in section 4, followed by results in section 5. Final section summarizes and concludes the paper.

#### 2. AWOAF REVISITED

Awqaf (singular: waqf) is literally defined as the holding of assets and the distribution of its usufruct to others (Hairul-Suhaimi and Hisham, 2011). Its operations are closely connected to the concepts of "confinement" and "prohibition" in which when a particular awqaf asset is given out as awqaf, its ownership is regarded as "belong to God-Allah" and therefore "prohibited" from being taken private or even transferred to government ownership (Hashmi, 1984; Hassan, 1984; Kahf, 1998; Qasmi, 1999). The awqaf asset's usage is also "confined" to the predetermined purposes identified by waqif (awqaf asset's donator). The management of awqaf assets can be in the form of direct and indirect. The former means that awqaf assets are managed by the donator himself/herself while the latter involves the appointment of third party called "mutawalli" or waqf manager.

Awqaf system is pillared by four elements (see Gaudiosi, 1988) namely (1) waqif (the donor); (2) mauquf (the assets); (3) mauquf-alaih (beneficiaries); and (4) al-sighah (waqf deeds or contract). Islam requires waqif to be of sound mind and intellect when giving out his/her assets as waqf which assets must also be wholly and legally owned by the waqif. The beneficiaries are required to be clearly identified and the waqf deeds are required to be drawn in the case of indirect form of awqaf management as it acts as a governance device in any eventualities of dispute between the appointed mutawalli and relatives or descendants of the waqif. Awqaf literature (e.g. Fyzee, 1974; Zarqa, 1947) further outlines specific conditions enforcing the validity of awqaf transactions which includes (1) perpetuity—assets are given out perpetually; (2) objectives—waqf purpose(s) is clearly stated; (3) irrevocable—agreed awqaf transactions are final, unless by consensus or fatwa (religious decree) for istibdal (change of property with a similar value or location). Waqf is different from zakah (Islamic tithes) in the sense that the latter is compulsory to all able Muslims while the latter is absolutely voluntary. However, awqaf is a highly recommended act as in the following verse of the Qur'an:

"By no means shall ye attain righteousness unless ye give (freely) of that which ye love; and whatever ye give, of a truth God knoweth it well" (Qur'an, 3:92).

Although *awqaf* is not specifically mentioned in the Qur'an, it falls under the on-going or recurring *sadaqah* (donation) classification. Good deeds will continue to be rewarded even after the donator is passed away as per the *hadith* (sayings of Prophet Muhammad, peace be upon him) narrated by *Abu Hurayra*:

"When anyone dies, his acts come to an end, except three, regular (recurring) charity, knowledge which he has imparted to other or a God fearing (pious) child who makes supplication for him".

Awqaf exist in different form namely (1) waqf al-khayr; (2) waqf khas; (3) waqf fi-ahli or waqf al-aulad (posterity waqf); and finally (4) the cash waqf (Kahf, 2003). While the usufruct from waqf al-khayr is open for any beneficiaries and thus it can be distributed to any religious purposes or social

benefits such as education, healthcare and public utilities, usufruct derived from waqf khas on the other hand can only be distributed according to the specific objectives stipulated in the waqf deeds. Waqf fi-ahli allows only a small proportion of its usufruct to be distributed to others while the remaining larger portion is meant for the waqif's dependents and posterity. This effectively ensures that closed relatives being the beneficiaries are taken care of after the waqif died. This closely resembled the concept of "trust" which is common among non-Muslims.

Unlike the previous forms of *waqf* which involve illiquid assets, the cash *waqf* refers to the collection of cash money or funds (Hoexter, 1998; Hairul-Suhaimi and Hisham, 2011; Sadeq, 2002). Modern approach to managing cash *waqf* entails the investment of principal amount collected and any returns are subsequently used to cover operational and distributional costs according to the pre-agreed *waqf* deeds. The money is commonly used for general purposes such as aid for the poor and needy (Cizakca, 1998), educational assistance (Van-Leewun, 1999) and even for healthcare maintenance for the chronic diseases patients (Yedyyildiz, 1996).

# 3. SHOWCASING ACCOUNTABILITY THROUGH ACCOUNTING AND REPORTING IN AWQAF

Accountability is a derivative word of "accountable" which root word is "count" and its secondary word is 'account'. Bovens (2007) argues that accountability is originated from the *Anglo-Norman* period and it is closely connected to "accounting" as it also means book-keeping. The accountability concept according to Bovens (2007) could be traced back to William-I reign during which the Norman conquered England in 1066. He then ordered all the landlords to provide 'a count' of their possessions and subsequently used for taxes and to strengthen royal governance (Bovens, 2007). In a modern context, accountability implies the need for equitable and transparent reporting to all users covering both financial (e.g. financial statements) and non-financial information (e.g. explanatory narratives) (Patton, 1992; Yasmin, Haniffa and Hudaib, 2013). Accounting and reporting are therefore considered to be one of the most important devices for accountability (Tower, 1993; Connolly and Hyndman, 2004).

In view that charitable environment like *awqaf* operates within the parameters of trust and integrity, accountability observance by *awqaf* managers is thus not an option. As *mutawalli*'s responses towards prudent management and transparent reporting greatly affect the sustainability of *awqaf* institutions, accounting and reporting are therefore considered as the most important device for *mutawalli* to discharge his/her accountability obligations (Hairul-Suhaimi and Hisham, 2011). Transparent reporting in charitable environment effectively increases public confidence (Perrin, 1985) whilst facilitating stakeholders' strategic evaluation which forms the basis of their decision of supporting the charitable institution or otherwise (Hooper, Sinclair *et al.*, 2008).

Prior studies examining the actual reporting practices of charitable entities and its linkages to accountability are primarily concentrated in a non-Islamic context (e.g. Connolly and Hyndman, 2004; Connolly and Dhanani, 2006; Dhanani, 2009; Dhanani and Connolly, 2012; Hooper *et al.*, 2008; Yasmin *et al.*, 2013). The accumulating research essentially investigates the reporting of non-Islamic charitable entities based on information disclosure found in the organization's annual reports. Results from these prior studies generally reveal significant differences in reporting and disclosure practices across the selected samples charitable institutions and alarmingly, majority did not even meet basic accountability criteria in reporting. Results on prior studies also indicate that charitable institutions mainly report basic information representing fiduciary accountability covering probity and compliance, consistently deemphasizing reporting on information related to managerial and operational performance (e.g. Connolly and Dhanani, 2006; Dhanani, 2009).

Limited prior studies have also been conducted in the Islamic environment. Hairul-Suhaimi and Hisham (2011) for instance examine *mutawalli's* accountability from the lens of management, accounting and reporting using Stewart (1984) accountability ladder and found that a lot of

improvements are needed for the selected Malaysian *awqaf* institution to fulfill both its primary and secondary accountabilities. Consistent with results found in prior studies in the non-Islamic context, Hidayatul and Shahul-Hameed (2011) found that transparency and efficiency of two selected Indonesian *awqaf* institutions are significantly different. The disparity in reporting practices are found to be attributed to different management style and human capital availability. Recent study by Yasmin *et al.* (2013) mirrored earlier study by Hairul-Suhaimi and Hisham (2011) albeit in a different research setting. Using the same research framework of Stewart (1984) accountability ladder, Yasmin *et al.* (2013) compare the reporting of Christian and Islamic based charity organizations in England. Results indicate that the UK sample charity organizations treat the exercises of disclosing mandatory information in their financial reports as merely rituals affairs, thereby neglecting the specific information details therein. The study further identifies donors' trust, informal organisational structure with concentrated decision making power, manpower expertise and costs being the contributing factors towards the lack of communicated accountability among the selected charitable entities.

#### 4. RESEARCH METHOD

Consistent with the established research objectives, this study adopts the qualitative research approach of case study research involving semi-structured interviews and archival documentation review and analyses. The relevant documents include *waqf*-S annual reports, related news and other relevant, publicly available government publications. This method allow the study to understand complex phenomenon involving human interaction and organizations (Yin, 1994) whilst enabling the collection of rich data (Firestone, 1987) and allowing contextual analyses in understanding occurring phenomena in the selected sample organization (Moore, 2000). In view that quantitative research approach and measurement provide limited explanatory ability towards specific social phenomenon in the natural settings particularly those involving human, qualitative approach of case study research is thus preferred as it provides appropriate research platform for the researcher to explore or describe phenomenon in context using a variety of data sources (Baxter and Jack, 2008).

The sample waqf institution selected for this study is coded as waqf-S which actual name is withheld for confidentiality reason. This is the condition which current study has to agree and honour when the institution agreed to become our research sample. Waqf-S is selected as a sample in this study on the basis of purposive sampling method. This judgmental or convenience sampling approach is chosen premising on the fact that it addresses notable weaknesses (management, accounting and reporting) associated with samples chosen in previous awqaf-accountability studies. According to the operational review of waqf-S presented in the international waqf seminar held in the country in which waqf-S is operating, managerial and operational weaknesses in terms of human capital, awqaf assets management as well as transparency and awqaf reporting infrastructure are claimed to be minimal and in some cases are not present. The operations of waqf-S have also been acknowledged by various scholars in many international awqaf conferences and seminars as the best in the world.

To elicit important data which is non-observable explicitly from the relevant published documents, semi-structured interviews which refer to face-to-face conversation between the researcher and the respondents were conducted. Electronic recording device was used to record the conversation and the transcription is kept in separate electronic data storage for further analysis in deriving important meanings and themes (Baxter and Jack, 2008) besides for future reference. This also reduces potential error risks and misinterpretation of the conversation (Leonard and McAdam, 2000). The interviews were conducted with the Assistant Director of waqf-S (Ms. S) and the Executive Officer (Mr. X) which was held in waqf-S's head office located in the city centre of the Country. A corporate video was also shown during the interview highlighting waqf-S recent activities. Prior to the interview sessions, published financial statements of waqf-S for eight years period (from 2004 to 2011) were downloaded from its corporate website and descriptive statistics were conducted. It covers four main accounting statements namely (1) Statement of Income and Expenditure; (2) Balance Sheet; (3) Cash Flow Statements; and finally (4) awqaf assets register.

#### 5. RESULTS AND DISCUSSION

### 5.1 Administration and management

Waaf-S is operating in a modern and most developed nation (Coded country-S) in the South East Asian Region. Muslims only constitute a fraction (less than 30%) of the country-S's population. Whilst Islam is not its official religion, two of its closed neighboring countries are populated by Muslims and Islam is documented as the official religion in their respective constitutions. The regulatory framework governing awqaf in general and waaf-S in particular in country-S is notably comprehensive and well established. The first awqaf legislation was passed by the colonial authority in 1905 and it was provided under the "Muhammadan and Hindu Endowments Ordinance" (chapter 27). The chapter explicitly defines awqaf concept and its different types, institution responsible of managing it [Islamic Council (IC)] and the provision allowing IC to be corporatized. It also outlines other responsibilities of IC including the administration of other Islamic related activities of collecting Islamic donations (e.g. tithes), arranging the Muslims' pilgrimage to Mecca and the administration of mosques and religious schools in country-S.

Supplementing the Ordinance is the parliamentary act of "Administration of Muslim Law Act" (thereafter "The Act"). Specific provisions related to awqaf in the Act could be seen in Section 59 which empowers IC to administer all awqaf assets in the Country. The regulatary apparatus was further strengthened in 1995 during which it was amended to require all awqaf in the Country to be registered under IC. This is to avoid any discrepancies due to poor management and selling of awqaf properties without IC's knowledge. In keeping with modernity and subscribing to the decentralization philosophy, the administration and management of all awqaf properties are put under the purview of specific management unit called "Zakat and Wakaf Strategic Unit". Other matters such as the selling and development of awqaf properties are handled by the IC and the specific established committees. Whilst the Fatwa Committee decides on any arising shari'ah issues, the Investment Committee oversees the purchase, investments and any financial obligations of waaf-S. Strict internal control is noted to be in place whereby any transaction that exceeds five million in currency value will require the appropriate approval by the minister in-charge of Islamic affairs. The following figure 1 depicts waaf-S's organizational structure (as in 2012).

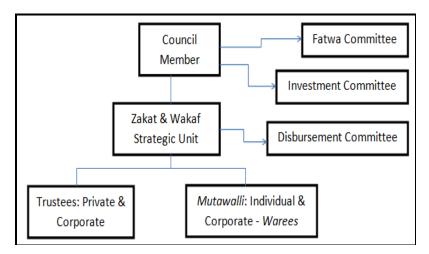

Figure 1: Waqf-S Organizational Structure (source: Waqf-S website)

Waqf-S is a separate body created under the Zakat and Wakaf Strategic Unit and acts as a regulatory body to ensure compliance by trustees and mutawallis. The Act also requires all trustees and mutawallis to submit annual accounts for monitoring and control purposes. According to our documentation review, whilst private trustees are mostly the relatives or descendants of the waqif, only one corporate trustee (coded BMT) was recognized by IC to manage the awqaf properties and BMT has actually existed much earlier than the formation of waqf-S and the IC. To ensure proper

awqaf management, the appointment of trustees and mutawallis in country-S requires official approval from waqf-S. Periodic meetings with trustees and mutawallis are conducted to ensure that awqaf properties and awqaf funds are properly managed and administered. In recognition of waqf-S's excellence awqaf management, the ISO-9001 certification was duly awarded. This reflects international recognition towards the efficiency and effectiveness of the established rules and procedures in its operations.

It is very interesting to note that *awqaf*-S is effectively managed by only two persons—the Assistant Director (Ms. S) and the Executive Officer (Mr. X). Their job scope covers almost everything from handling financial transactions to answering (in)formal enquiries on *waqf*-S. This has been made possible by virtue of the comprehensive systemization and computerization of operations which limits the dependency on human capital. The Assistant Director (Ms. S) explained:

"The technology helps us termendously as we are working under tight human resource capacity"

Waqf-S is currently handling ninety nine awqaf, thirty three (33%) of which are managed by trustees and the remaining 66% are directly managed by waqf-S. The awqaf records show that two third of the waqifs are males and the remaining thirty three are female waqifs. The beneficiaries according to the waqif's will are notably heterogeneous and classified in the awqaf record into "local-within country-S" and "foreign-outside country-S". While the former refers to disbursement of awqaf funds to purposes within country-S, the latter relates to expenditure on purposes in foreign land. Our documentation review also revealed that the last awqaf was made almost twenty years ago (in 1993) and the potential reasons are explained by the Assistant Director (Ms. S):

"The ever increasing in property prices and lack of awareness on awaaf benefits among Muslims in this Country might potentially explain this worrying fact"

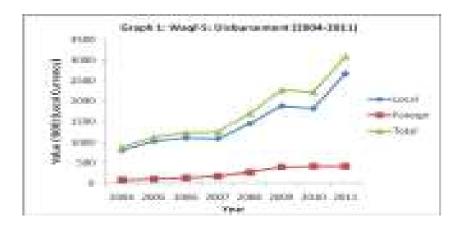

To soften the impact of soaring property prices on the normal property-based *awqaf* practices, *waqf*-S shifted the focus on attracting Muslims to join the *awqaf* philantrophic platform by marketing the cash *awqaf* type whereby each Muslim family in the Country is encouraged to donate a quantumn amount (according to economic status proxied by the monthly salary) to the established cash *awqaf* fund which was later used for pre-specified religious purposes of building mosques, religious schools and even financing the purchases of strategic *awqaf* properties in the city centre. During the physical visit, the researcher was shown several high rise buldings located in strategic locations in the city centre which are currently managed by *waqf*-S on *awqaf* basis. These high-end office buildings are currently tenanted and the collected monthly rental are pooled back into the *awqaf* fund. It is truly impressive albeit ironic that many highly valued properties located in strategic locations in the heart of Country-S's city centre are owned and managed by Muslims and this is happening in a non-Islamic country.

#### 5.2 Disbursements Ratios

Utilizing relevant financial information available in *waqf*-S financial statements, table 1 and graph 1 below present basic analyses on *awqaf* funds disbursements made over the eight years period (2004 to 2011).

Table 1: Awqaf funds Distribution Ratios (local currency) (source: Waqf-S Annual Reports)

('000')	2004	2005	2006	2007	2008	2009	2010	2011	Total
Local (L)	804	1,026	1,103	1,087	1,440	1,879	1,817	2,675	11,831
Foreign (F)	77	106	128	165	259	391	404	408	1,938
Total (T)	881	1,132	1,231	1,252	1,699	2,270	2,221	3,083	13,769
% change (L)	)	28%	8%	-2%	33%	31%	-3%	47%	
% change (F)	)	38%	21%	29%	57%	51%	-3%	1%	
% change (T	)	28%	9%	2%	36%	34%	-2%	39%	

The average increase in total distribution over the 8-years period is calculated at 18% per year whereby the average increase is greater for foreign distribution compared to local. This is due to the high fluctuation in the rate of increase with respect to local distribution compared to foreign. The awqaf distribution surpassed one million (local currency) mark in 2005 and two million (local currency) in 2009 and three million (local currency) in 2011. These reflect the strenghtening of awqaf funds managed by waqf-S over the eight years period. Detailed analysis of the category of distribution and the beneficiaries is disclosed in "Appendix 1".

#### 5.3 Accounting and Reporting Practices

The financial accounting and reporting environment in country-S is noted to be comprehensively regulated. In view that *waqf*-S is established as a statutory body under IC, it has to strictly follow the country's administrative policies and guidelines as well as other financial regulations issued by the relevant regulatory bodies. Some of these written rules (e.g. financial reporting rules) are derived from acts mandated by the parliament, warranting for non-compliance to be resulted in severe punishment in the court of law. This directly motivates *waqf*-S being the *mutawalli* to exercise due care and diligent in managing and reporting *awqaf* assets and funds. The Assistant Director (Ms. S) explained:

"Our operations and financial reporting practices are practically governed by comprehensive set of rules some of which are mandated by the Parliament. We consider the presence of these tight rules as a blessing in disguise as it insulates us from malpractices"

The annually published financial statement of waqf-S includes (1) Consolidated statements of comprehensive income; (2) Balance sheets; (3) Statement of changes in funds; (4) Consolidated statement of cash flows; and (5) Notes to the financial statements which consist of comprehensive listing of all awqaf subsidiary accounts. These official documents are audited internally (by the internal audit department) and externally (by big four international accounting firm) and made available online for public scrutiny. This is in compliance with the prevailing country-S's accounting standards (Accounting Standard Act, Chapter 2B, Revised Edition 2008). Additionally, waqf-S also maintains a comprehensive non-current asset register to record all awqaf assets managed and registered under waqf-S since the early 1900s. All assets are given a reference number and the list includes a photograph of the respective properties. In compliance with the prevailing accounting standards, depreciations are charged to each awqaf properties and appreciation are captured accordingly in its yearly financial statements. Awqaf properties are also subject to yearly valuation by an independent professional valuation company registered in country-S. This enables the current or market value of awqaf properties to be reflected in the published financial statement.

With regards to the basis of preparation, the financial statements of waqf-S are prepared using the accrual reporting basis, consistent with country-S's financial reporting requirements. Accordingly, "fund accounting" system commonly recommended in the awqaf literature for cash awqaf is not

adopted. The system separates the Balance Sheet and Income Statements into several entities according to the established fund (Hooper *et al.*, 2008). The Assistant Director (Ms. S) explained:

"We are not using the fund accounting for our cash awaaf as the requirements set out in the prevailing Accounting Standard Act do not require us to. However, we do have a subsidiary accounts for each of the individual awaaf assets and they are presented as the notes to the accounts in the awaaf section financial statements"

Upon our inquiry during the interview, the Assistant Director (Ms. S) explicitly identifies target users for *waqf*-S financial statements to include (1) the public; (2) donors (*waqif*); (3) government as regulator; (4) *awqaf* beneficiaries; and (5) management personnel including its Board of Trustees.

"As a public interest body, our financial affairs are the interest of various stakeholders such as the public, government, beneficiaries and our board members"

This implies that waqf-S's financial statements are produced to cater for the informational demand by wide range of relevant stakeholders. The published documents are also noted to be easily obtainable through various means including direct request from waqf-S's office and online. Relevant questions may also be posed to waqf-S's personnel particularly on issues related to collection and disbursement of the awqaf funds and it is the institution's policy to attend and respond professionally to each public's inquiry.

#### 5.4 Drivers for Accountability

Multiple drivers for observing and upholding accountability by waqf-S are analyzed in this exploratory research through three specific lenses of (1) Regulatory; (2) Stakeholders; and (3) Religious image of Islamic organization. These are considered as pertinent driving forces that are expected to mould the accountability culture in waqf-S, thereby improving the effective management and transparent reporting by the institution. Results based on the semi-structured interviews indicate that all three driving forces are considered as equally important to waqf-S in influencing its accountability trajectory. Whilst regulatory apparatus and stakeholders' demand are observable drivers for high accountability observance, religious image of Islamic organization seems rather subtle and intrinsic.

The fact that comprehensive regulatory apparatus on *awqaf* management, accounting and reporting provide profound impact on *waqf*-S's accountability culture is irrefutable. Comprehensive regulatory framework covering various statutory enactments (ordinance and the Act) on *awqaf* operations and financial reporting (Accounting Standard Act) reiterates if not reinforces the need for *waqf*-S to properly observe and uphold accountability. The Assistant Director (Ms. S) explained:

"Our organization is effectively a regulatory driven entity. The prevailing inclusive regulatory framework drives our accountability culture and hence it dictates our operational exercises, whether management, accounting or reporting"

Apart from sound regulatory framework, waqf-S's accountability culture is also noted to be driven by the ever increasing stakeholders' demand. Among others are the demand for efficient management and disbursement of awqaf assets by waqifs as well as transparent reporting by ummah being the prospective waqifs in building their trust towards waqf-S. The Assistant Director (Ms. S) explained:

"We operate as an entity managing public funds. It is thus our utmost concerns that all stakeholders are effectively and appropriately served to the best of our ability. Observing accountability is thus not an option to us as it primarily ensures stakeholders' trust is inherently developed and strongly built".

The strengthening of awqaf funds as reflected in the increasing value of disbursements across the eight years period provides initial indication of increasing trust by waqifs whom continuously

contributing to the established *awqaf* funds. As these stakeholders place their demand for efficient management and disbursement as well as transparent reporting in return for continuous supports and trust towards in *waqf*-S, such forces for enhanced accountability becomes apparently inherent in the institution's accountability culture.

The final observable albeit subtle and intrinsic driving force for accountability in waqf-S relates to the inherent religious image of Islam attached to the organization. Awqaf in itself is an Islamic based philanthropy whereby its existence and operations are based on Quranic injunctions and hadiths. This necessitates for waqf-S being the institution managing the awqaf system to properly act in line with the spirit of Islam which mould awqaf operations. The Assistant Director (Ms. S) explained:

"The philanthropic system we are managing is seen as representing specific religious values. Public whether Muslims or otherwise tend to equate our organization to being a flag bearer of Islam by virtue of awqaf system finds its root in the religion. This carries significant meaning to our conducts with specific reference to accountability observance"

#### 6. SUMMARY AND CONCLUSION

This exploratory research paper investigated auxiliary issues with regards to accountability practices of a single *awqaf* institution (*waqf*-S) operating in a non-Islamic South East Asia country. Specifically, we examined how the management, accounting and reporting are being practiced and the impact it provides on the institution's accountability trajectory. We also investigated multiple factors influencing *waqf*-S's organizational-wide accountability policy. By considering management, accounting and reporting as "official exercises" continuously conducted by the institution and subsequently setting them as strategic accountability devices in our intellectual framings, we collected relevant data from multiple sources including semi-structured interviews, physical observations, archival documentation review and analyses.

Our exploratory inquiry revealed that the institution is operating in a highly regulated environment, inducing its *awqaf* funds and properties to be professionally managed whilst information disclosure to be relevant and comprehensive. Relevant enactments and regulatory provisions guide the effective management of *awqaf* assets and funds whilst ensuring information disclosure are relevant and sufficiently comprehensive to enhance stakeholders' trust and hence support for the institution. Our qualitative research approach further revealed the fact that accountability observance in the institution is driven by three strategic factors of regulatory, stakeholders' demands and religious image. These collectively motivate *waqf*-S to ensure that accountability is continuously observed in their operations.

# POTENTIAL OF WAQF FUNDS AND INSTRUMENTS IN CONTEMPORARY ECONOMIC SYSTEM

Dr. Fuadah Johari<sup>1</sup> Prof. Dato' Dr. Mohammad Haji Alias<sup>2</sup>

#### **ABSTRACT**

The act of making waqf is verily one of the good deeds enjoined by Islam. The practice of waqf has been around since the time of Prophet Muhammad SAW until today. The potential of waqf funds has been made significant contribution in dealing with the recent global financial crisis, shrinking public revenues and highly demand and increasing cost of health expenses, education and community development. Thus, the main objective of this paper is therefore to review these various waqf funds and instruments in contemporary economic system. This paper is based on the literature review research work and descriptive analysis to get an overview of the instruments in enhancing the potential of Waqf Fund in current practices. Information on the instruments has been gathered from the previous research and literature for the period of 1999 until 2013. At the end of this research found that, seven (7) instruments have been identified and the instruments are 1) cash waqf and waqf shares, 2) waqf in financing education. 3) Waqf in Microfinance. 4) waqf as social bank /trust fund. 5) Waqf and Mudarabah Investment. 6) Waqf and Sukuk Investmen and 7) Waqf in Business growth and economic development. All these instruments are assumed can inspires a positive sustainable development through the Islamic Economics System.

Keywords: Waqf Funds, Revival Waqf Instruments, Contemporary Economic System

## 1. INTRODUCTION

A number of cooperating factors have contributed to the interest and effort to revive waqf management, administration and funding in particular in the areas of funding higher education. The recent global financial crisis (2008-2009) and its effect on global trade, economic growth and consequently Government revenues, has implications on the ability of the Government to provide additional resources to finance development of the social sector (e.g health, education and community development). Success of the voluntary sector - waqf, sadaqa, hibah and wasiyya - in Islamic history in providing social and public goods are excellent benchmarks to follow. An excellent example in higher education is Al-Azhar University in Egypt – an awqaf-led institution – which has provided free education and training from primary to tertiary level to students local and foreign. Both Albukhary International University and Islamic International University Malaysia have benefited from endowments. Revival of the wagf institution in this country requires the enhancement of the charity culture the waqf way among members of the Muslim society in particular. There has been the perception that endowed waqfs are in the form of mosques, madrasahs and Muslim burial grounds only. But significant developments have occurred in recent decades with the introduction of other instruments of waqf that are syariah-compliant. The main objective of this paper is therefore to review these various instruments.

<sup>&</sup>lt;sup>2</sup> Professor at Faculty of Economics and Muamalat/ Director Center for Awqaf Development Financing USIM. Email: hjmohd 99@yahoo.co.uk

The term waqf has not been specifically mentioned in the Al-Quran or al-hadith but are interpretations made by the fuqaha on sadaqa jariya (Abdul Shakor Borham, 2011). What is meant by waqf (singular); awqaf (plural)? 'A waqf is an act of holding certain properties and preserving them for the confined benefit of certain philanthropic purposes that disallows any use or disposition of them outside the specific objective (Kahf, 1998). According to Imam Mohammad al-Khatib Syarbiniy waqf is holding something that could be used to perpetuate the form ('ain). Therefore, all transactions are subject to the laws of Islamic syariah (al-Sharbiniyy, Mohammad Khatib, (1933: 376). Interestingly, AOAFI mention on the definition of Waqf in Arabic to mean preventing something from movement. In Shariah's terminology, waqf refers to making a property invulnerable to any disposition that leads to transfer of ownership, and donating the usufruct of that property to beneficiaries as specified by the endower.

## 2. WAQF PRACTICE IN SOME ISLAMIC COUNTRIES: A REVIEW

Most of the endowment assets developed by some countries are in the form of building for educational institutions, mosques and even business premises. Al-Azhar University in Egypt for example is a great benchmark in developing the institution of waqf endowment assets for the Islamic higher education. This pioneer university was founded in 975 AD. The University received full financial contribution enables fund for free education for students from all over the world. Al-Azhar education system covering from primary, secondary to university. The success of Al-Azhar University is also inspired by managing the endowment in other countries such as the construction of Al-Qurawiyyin in Fez and Madrasah Nizamiya in Baghdad (Mashitoh, 2006). Other than for the purpose of education, the commercialization of waqf lands were also taken into account by the waqf administrators in Singapore and Bangladesh. Islamic Religious Council of Singapore (MUIS), through its subsidiary Warees Pte Limited has been successful in developing waqf land in Bencoleen Street from the site of an abandoned donated land to a commercial residential buildings that have generated large returns to MUIS to be distributed to Muslims who are in need (Shamsiah, 2006).

Recognizing the importance of having business premises to Muslims, waqf authorities in Bangladesh have built business premises for rent and the rents would be counted in the endowment fund. In Bangladesh, the cash waqf certificate introduced by the Social Investment Bank Limited (SIBL) has helped the construction of mosques for Muslim use. Muqarada scheme Waqf Cash Deposit Account (MWCDA) was offered to individuals and organizations to open deposit accounts and used for endowment purposes (Abdul Halim &Kamaruzzaman, 2006). The experience of waqf institutions in the country of Kuwait which uses the concept of centralized administration is also a good example of management implementation to develop the waqf property. Government of Kuwait has established the Awqaf General Foundation of the Kuwait or the Kuwait Awqaf Public Foundation (KAPF) to execute all activities related to waqf mainly for promotion, fundraising and development of waqf properties (Abdul Halim & Kamaruzzaman, 2006). The establishment of waqf fund such as waqf fund for Mosque, and waqf fund for Health, have contributed to the improvement of society.

According to Dato' Nik Mustapha Hj. Nik Hassan, Director General, Institute of Islamic Understanding Malaysia, the *awqaf* mechanism is a very relevant and a dynamic approach in organising the present economic society. The purpose of the mechanism of *awqaf* "is religiously to encourage individuals who are well-to-do in the society to voluntarily donate some of their properties to be used for a specific purpose like building of mosque, hospital, cemetary, hostel, play ground, etc. or for general purposes that can be beneficial for the present and future generations" (Nik Mustapha, 2013).

If it is properly mobilized and managed, waqf can be an important instrument in the socioeconomic development of the Ummah and society. Islam encourages and provides mechanisms for the redistribution of wealth from the rich to the poor and the needy.

#### 3. THE POTENTIAL OF WAOF: A CASE OF MALAYSIA

The investment in real estate's sectors has a high potential to be developed as it represent the most preferable mode of investment. In case of Malaysia, a research done by JAKIM in 2000 recorded that there are 20,735.61 acres of registered *waqf* lands (refer appendix 1). The potential is to develop the registered waqf land under the State of Islamic Religious Council (SIRC). On top of that, it is found that *waqf* lands in Pulau Pinang, Federal Territory and certain part of Johor particularly within the area of Johor Bahru are considered as the most strategic and valuable property in term of high demand for commercial purpose (ZulkifliHasan and Muhammad Najib Abdullah, 2008).

In order to make the waqf land to yield more benefits to the ummah, the managers of the waqf land should start to think on how to optimize the potential of waqf land so that the ummah can gain the benefit for a long period of time. Creative and innovative strategy on how to implement the intention of the *al-waqif* to the specific of purpose should be taking place. For example, the intention to build a mosque on waqf land. It is a normal concern or traditional perception as when we talk about waqf, then the intention is more on to build a mosque, grave yard or etc. The problem is that the need of the mosque is not urgent as there is already sufficient number of mosques around the area. But to embrace the purpose of the intention, the building should be built up several levels with multi-functions to incorporate the mosque or musolla with other urgent needs such as commercial premise, education purpose or healthcare centre. However, to fulfil this require innovative initiative besides additional funds to support this project. Herein lies the importance of the cash waqf or waqf shares.

The development of waqf assets should also be supported by cash flow either by generating profit from the property's business or contributions in cash waqf by society. The cash flow's funding is essential to ensure the waqf assets can be maintained and continue to contribute significantly and be able to be used by the current society and the future.

Since the early years of independence, the government has implemented numerous policies including the New Economic Policy (NEP) and the latest policy namely New Economic Model (NEM). However there has not been significant change on Bumiputera capabilities through equity possessions. Until 2006, the Bumiputeras only hold the equity of ownership around 19.4% compared to 43.9% non-Bumiputeras (Chinese 42.4%, Indian 1.1% 6.6% Non-nominee and others 0.4%), while foreign ownership is 30.1%. However, it is reported that Bumiputeras have achieved success in the field of employment where until 2005, a total of 58.5% of Bumiputeras were in professional jobs compared to Chinese 31.9% and Indian 8.2%. On top of that, 59.5% of Bumiputeras were involved in technical and associated profession while Chinese 29.7% and 10% were Indian (Ragayah Mat Zin (2011).

Ability and achievement of Bumiputera in professionals fields should be translated in the form of ownership in terms of waqf possession with waqf possession benefit would be continuously gained by the future generations. By the ability of equity ownership, it is not seen as a limitation possession of an individual people, but rather on the ability of the equity ownership in togetherness as one society or one ummah. This effort would be to strengthen the government's policy in the form of equity holdings of Bumiputera through the waqf property. This policy is also very useful to enhance the community and the country and best practice in Islam as to support the sustainable development.

#### 4. RESEARCH METHOD

This paper is essentially based on the literature review research work and descriptive analysis to get an overview of the instruments in enhancing the potential of Waqf Fund in current practices. Information on the instruments has been gathered from the previous research and literature for the period of 1999 until 2013. Thus, this study aims to identify the instrument to enhancing the potential of waqf fund. At least seven (7) instruments have been identified. The instruments are *firstly*, cash waqf and waqf shares. *Secondly* is waqf in financing education. *Thirdly* is Waqf in Microfinance. Fourth is waqf as

social bank /trust fund. Fifth is Waqf and Mudarabah Investment. Sixth is Waqf and Sukuk Investmen and *finally*, Waqf in Business growth and economic development.

# 5. THE INSTRUMENTS AND THE POTENTIAL OF WAQF FUND

## 5.1 Cash Waq fand Waqf Shares

Cash waaf is now becoming popular mode of waaf not only in Malaysia but also in other countries such as Syria, Turkey, South Africa, Singapore, Pakistan and Egypt. A cash waq fis another avenue for the Islamic Religious Council to gain financial resources. A general public may dedicate a sum of money to the council and this money will be put into a special wagf fund. The fund can be used for social and welfare activities including investment. To encourage people to dedicate property for a charitable purpose, the government has provided a tax incentive for any donation given including a cash waaf in section 44(6) the Income Tax Act 1967 (Reference no. LHDN.01/35/42/51/179-6.5621 Government Gazette No. 14369 dated 27.07.2004) (Zulkifli Hasan and Muhammad Najib Abdullah, 2008). Another way to raise income for a purpose of funding the investment of waqf land is through waqfs hares scheme. Some states have initiated a scheme of waqf shares. Waqf share is a scheme where individual or organization purchase a few units of shares with the minimum value for example of RM10.00 per unit offered by the Islamic Religious Council. Waaf shares in form of certificate with the necessary value will be offered to the general public. The purchased waaf shares will be dedicated in perpetuity for the purpose of charity and hence the purchaser will not be given any dividend or profit. Several states such as Johor, Melaka and Selangor have already issued waaf shares. This is in line with the resolution of Majma' Figh Islami on 24th november 2005. The success of this scheme can be shown by referring to Johor Waaf Shares Scheme which has been launched in 2005. It is reported that the scheme has contributed to several economic and educational developments in Johor such as Building of Johor Waaf Shares at cost of RM4 million, plantation project of 3,800 acres land and purchase of a six-storey hostel at Cairo, Egypt for students' accommodation (Zulkifli Hasan and Muhammad Najib Abdullah, 2008).

# 5.2 Waqf in Financing Education

Waqf in financing education in Malaysia, has been implemented with initiatives from both public and private Malaysian Institution of Higher Learning themselves. Among them are a) Albukhary International University, Kedah Malaysia, b) Dana Wakaf Ilmu, Universiti Putra Malaysia, c) IEF (Islamic Endowment Fund, International Islamic University Malaysia) d) Tabung Pemberian Islam, Universiti Kebangsaan Malaysia, e) Universiti Islam Malaysia f) Pusat Pembangunan Pembiayaan Wakaf (PPPW) / Center for Awqaf Development Financing, Universiti Sains Islam Malaysia (USIM).

- a) Albukhary International University, Kedah Malaysia. This university was established based from the endowment from the Yayasan Bukhary for the purpose of facilitating high quality education and empowering the students either local or international those who are from low income and handicapped on condition that they satisfy entrance requirements.
- b) Dana Waqaf Ilmu, Universiti Putra Malaysia. UPM has established the waqf fund called "Dana Wakaf Ilmu". This is an initiative to raise funds for UPM endowment approach. Resource of Waqf funds are donations from individuals, corporate sector, cooperatives, nongovernmental organizations (NGOs), the return of the endowment assets, returns from a portfolio of money market etc. Endowment funds collected provide complementary and sustainable fund resources to fund academic activities at the university. (http://www.fund4knowledge.upm.edu.my)
- c) International Islamic University Malaysia's Islamic Endowment Fund IEF. The IEF was established in 1999 inspired by the al-Azhar University Waqf. Funds for the IEF have been raised from many sources viz. internal and external parties, organisations and companies, zakat collections through cooperation with Lembaga Zakat Selangor, business collaborations

- and RM Campaign. The main of objective of IEF is to help poor and needy students who are academically qualified to finance the costs of their studies at IIUM. (http://www.ijum.edu.my)
- d) TabungPemberian Islam, UniversitiKebangsaan Malaysia. UKM has established anwaqf fund named "TabungPemberian Islam" under Yayasan Islam Chancellor. UKM Endowment Fund provides space for fund-raising and donation. Among the objectives of the Endowment Fund is to fund teaching and learning (T & L), research, publications, establishment of Chairs of Excellence, community service and industrial relations. <a href="https://www.ukm.my/yc/?page\_id=4">www.ukm.my/yc/?page\_id=4</a>).
- e) Universiti Islam Malaysia. Universiti Islam Malaysia (UIM), the pioneer university in Malaysia granted with the mandate of The Rulers Council, has received a huge waqf amounting MYR 5.18 million from seven contributors including private company, clubs and inviduals. The endowment was presented to the Sultan of Selangor Sultan Sharafuddin Idris Shah in a special ceremony in the Bukit Kayangan Palace. The main donor is the Permodalan Nasional Bhd (PNB) that contribute MYR 5 million.
- f) Pusat Pembangunan PembiayaanWakaf (PPPW) / Center for Awqaf Development Financing, Universiti Sains Islam Malaysia (USIM). The center was established by USIM with the cooperation of the State Islamic Religious Council (SIRC), Negeri Sembilan, to create a special fund called the Al-Abrar USIM Waqf Fund. PPPW's objectives are to 1) Manage the collection and distribution of waqf fund based from the decision-MAINS Waqf Council and Waqf Fund Committee of Al-Abrar USIM Waqf Fund. 2) Identify and define the activities and projects that can be funded with waqf funds. 3) Develop products that are appropriate to the USIM's waqf fund. 4) Conduct research on waqf financing of higher education.

#### 5.3 Waqf in Financing Microfinance

Habib Ahmed (2007) suggested that Waqf-based Islamic microfinance institution should be introduced as an alternative to replace conventional microfinance institution. The role will be, in alleviating poverty and to attaining development in Muslim nations. The role of waqf in financing microfinance is the support system to develop successful entrepreneurs. This view is supported by Habibollah Salarzehi, et al., (2010) as he shows the significance of Waqf in developmental fields.

#### 5.4 Waaf as social bank / Trust Fund

Mohammad Tahir Sabit Haji Mohammad (2011) argued that the waqf bank can be the bank of the poor and underprivileged. It can be permissible in Islam based on validity of cash waqf and the need of waqf, its beneficiaries as well as the society. The current banking system has failed to attend to the poor majority in the muslim countries. With special emphasis of cash waqf, it is show that, according to Mannan, M. A. (1999) Cash waqf certificate practise can monetize the Islamic voluntary sector and assist to accumulate social capital & national wealth- through global mobilization and creation of cash-waqf fund, forming a confederation of Islamic voluntary organizations, globalization of Islamic voluntary sector activities, strategic and futuristic social investment by committee of volunteers.

## 5.5 Waqf and Mudarabah Investment

Murat Çizakca, (2004) highlighted on cash waqf to be invested through Mudarabah. Cash waqf started by philanthropist through savings for charity and borrowing with collateral. Emphasis on partnership to cash Waqf Corporation, and the merger of cash waqfs and islamic banks is to tackle financial difficulty. He proposed rebirth of cash waqf to be waqf company relation. He suggests a model in which the concept of cash *waqf* can be used in contemporary times to serve the social objectives in the society.

# 5.6 Waqf and Sukuk Investment

Issuance of Bond or Sukuk through Waqf Fund as to support the sustainable development and to optimizing the potential of the Islamic Financial system locally and globally. The main objective is to

provide long term support with a focus on building capabilities and showing results. Sukuk is a proven Shari'ah-compliant financial product which has been used in Malaysia as well as in the other Muslim countries. This instrument could be the best practice to development of the awqaf properties or a specific economic activity permitted by Shari'ah. Singapore for instance has implemented the issuance of bond or sukuk to develop the waqf properties. The Zam Zam tower complex, in Saudi Arabia was also built with waqf assets using sukuk intifa' on the basis of time-share bond (SIti Mashitoh, 2007).

## 5.7 Waqf in Business growth and economic development

Azliza Azrah Mohd Zakaria (2012), suggested that, waqf instrument could contribute immensely to business growth and development. She proposed a model with special characteristics in philanthropic venture waqf practices that could be implemented in Malaysia's scenario. The characteristics are 1) low price of essential goods and services, 2) Creation of employment opportunities, 3) stimulates the growth of Islamic financial institutions and 4) establishing a waqf-based financing. Waqf instrument is vital in business growth and economic development as Alias (2012) suggest that Enterprise *Waqf* Fund (EWF) model that combines the cash *waqf* model with relevant concepts from venture capital is suggested to enhance the dynamism of cash *waqf*.

#### 6. CONCLUSION

In Conclusion, seven (7) instruments have been identified and the waqf institution has great potential in enhancing the socioeconomic development of the Ummah given the fact that we are starting from a low base. Creative and innovative instruments have been developed. The critical success factors are firstly enhanced awareness among the Muslim society on waqf especially its position as of the good deeds enjoined by Islam. Secondly to ensure an effective delivery system require proper implementation of Waqf Enactments by professionals trained in management, investment finance and syariah requirements. Reflex to the potential of waqf funds and instruments in contemporary economic system, it is agree that this paper is limited to the data available from the literature review analysis. Thus, this paper suggested to expand the scope of the study to be more focus on the readiness of current society to contributing the waqf fund and what are the pulling and pushing factors that effects the successful of waqf financing in contemporary economic system.

## AR RAHNU: A SHORT TERM FINANCING ALTERNATIVE

# Imani Mokhtar<sup>1</sup> Shah Rizal Zambahari<sup>2</sup>

#### **ABSTRACT**

Islamic pawn broking or *ar-rahnu* can be considered as the promising business. Ar rahnu is viewed as the most suitable form of micro financing particularly to cater for the individuals and small businesses who may have limited access and support via the conventional banking system. This paper undertakes to explain the concepts and importance of *ar rahnu* as a form of short term financing alternative particularly to Malaysian customers on a conceptual basis. Moreover this paper also attempts to highlight the significant or benefits of Ar Rahnu and issues faced in implementing the Islamic pawn broking (*ar rahnu*) in Malaysian context from shariah principles. Apart from that this paper also explains the differences between conventional and Islamic pawn broking. This paper concludes *ar rahnu* is beyond doubt that it is fundamentally upholding the *shari'ah* principles aiming to achieve its objective (*Maqasid al-Shari'ah*). In this context of *ar rahnu*, applying and achieving the objectives of *shari'ah* (*Maqasid al-Shari'ah*) become the main concern. Hence, the introduction of *ar rahnu* as a permissible micro financing tool based on the *Maqasid al-Shari'ah* gives Muslims customers an alternative of getting a fast and low-cost interest free cash advances. Finally in view of the fact that this paper is on conceptual basis, the method employed is descriptive in nature based on the available existing literatures.

**Keyword**: Islamic banking product, Islamic pawn broking, shariah principles, micro financing tool

# 1. INTRODUCTION

Malaysia is considered as the leader of the introduction of Islamic finance and banking in Southeast Asian countries (*Nakagawa*, 2011). Islamic financial system has been promoted in Malaysia since 1983 with the establishment of Bank Islam Malaysia by the government. Ten years later, Islamic Banking Scheme was started which enable banks to introduce Islamic banking and expand it across the country while creating a more competitive business environment.

In the early years, the basic approach of Islamic banking implementation was the replication of the conventional banking, basically transforming the sources and application of funds into products and services which are acceptable in Islam. However, due to some factors such as competition, institutionalization and quest for authentic Islamic products and services, the industry has take an initiative to develop its own products and services which undoubtedly uphold the *shari'ah* principles and guidelines. In this context, Islamic banks play an important role in providing the Islamic based products and services in order towards the achievement of *maqasid-al-shari'ah* in the economic system (Manan, 2008).

To date, several Islamic banking products have been developed such as Islamic bonds (sukuk), Islamic insurance (takaful) and Islamic pawn broking (ar rahnu). Among the Islamic banking products currently available in the market, ar rahnu can be considered as the promising business. Ar rahnu is viewed as the most suitable form of micro financing particularly to cater for the individuals and small businesses who may have limited access and support via the conventional banking system (Aziz, 2006). Ar rahnu was basically introduced because the existing conventional pawn broking's practices are inconsistent with the shari'ah principles and guidelines. As such, now it can be said that Muslim customers have an alternative form of financing from the conventional pawn broking towards Islamic pawn broking (ar rahnu).

## 1.1 Objectives of the study

A review of the pertinent literatures was carried out in order to identify the differences between conventional and Islamic pawn broking. In addition, this paper undertakes to explain the concepts and importance of *ar rahnu* as a form of short term financing alternative particularly to Malaysian customers on a conceptual basis. Moreover this paper also attempts to highlight the issues faced in implementing the Islamic pawn broking (*ar rahnu*) in Malaysian context. Therefore, the significance of this paper is to give a better understanding on *ar rahnu* as a permissible financing tool and should be regarded as one of the main short term financing alternative currently available in the market. Finally in view of the fact that this paper is on conceptual basis, the method employed is descriptive in nature based on the available existing literatures.

#### 2. LITERATURE REVIEW

## 2.1 Development of conventional and Islamic pawn broking (ar rahnu) in Malaysia

Pawn broking services have been introduced in Malaysia way back in the 15<sup>th</sup> century based on the Chinese and Malaccan empires' diplomatic relationship. The first pawnbrokers were the Chinese merchants that stayed in Malacca and providing their services to both locals as well as the other trade merchants (Cheong & Sinnakkannu, 2012). At that time, the number of pawn broking licenses shows an increasing figure which is translated into an increasing demand of pawn broking services.

The conventional pawn broking business in Malaysia has been governed by the Pawnbrokers Act 1972. This Act basically outlines the basic guidelines and principles for both clients and pawnbrokers. Even it is governed by the Act, it is still unacceptable according to Islamic Law due to its provision that allows for the taking of interest. Due to this reason, a concerted effort has been put in order to set up an interest-free credit facility particularly to fulfill the need of the Muslim community (Ismail & Ahmad, 1997).

As a result, *ar rahnu* was basically introduced because the existing conventional pawn broking's practices are inconsistent with the *shari'ah* principles and guidelines. The development of Islamic pawn broking in Malaysia started in 1992 with the establishment of Majlis Agama Islam by the Kelantan state government and Muassasah Gadaian Islam Terengganu (MGIT) by Terengganu State Government. It is noted that at that time, the establishment of this Islamic pawn broking system which adhered to the methods considered *halal* under the *shari'ah* tenets gives as an alternative to the customers in obtaining short term funds. Then, "Skim Ar Rahnu" (SAR) was announced by the Minister of Finance in 1993 through the effort of Bank Negara Malaysia (Malaysia's central bank), Bank Kerjasama Rakyat Malaysia Berhad and Malaysian Islamic Economic Development Foundation. Consequently, latter in the same year, several branches of Bank Kerjasama Malaysia Berhad had launched this "Skim Ar Rahnu" (SAR) for their customers (Appannan & Doris, 2011).

In 1995, the Kelantan state government has stepped forward to impose new ruling on the cessation of all *riba* or interest based conventional pawnshops, thus lead to the termination of the operation of the conventional pawnshops in Kelantan. However, those conventional pawnshops which are primarily operated and owned by non-Muslims may continue to operate as long as they adhere to the *ar rahnu* principles (Shaari & Azlina, 2003).

## 2.2 Conventional versus Islamic pawn broking (ar rahnu)

There are several differences between conventional and Islamic pawn broking (ar rahnu) found from the literatures. The followings discuss about the similarities and differences under both conventional and ar rahnu.

Traditionally, conventional pawn broking appears to be the fastest and simplest sources of short term secured financing. Primarily its main target customers are those groups of people with no and little cash, working for themselves and difficult to acquire loans from banks as well as other financial institutions (Othman, Hashim, & Abdullah, 2012). It is considered as a quick way to obtain financing as there are no complex and tight credit evaluation procedures to go through as compared to financing application from conventional financial institutions. It is also regarded as procedurally non-cumbersome type of financing as there are no specific restrictions set in terms of how the fund can to be utilized (Cheong & Sinnakkannu, 2012).

Pawn broking is generally a contract that involve pledging a security and becomes binding once possession of the pledge being done. Conventional pawnshops are regarded as "poor-man's bank" which plays a significant role in providing financing in which customers need to pledge certain amount of jewellery or other such items of value (Shaari & Azlina, 2003). In conventional pawn broking, pawned items can be in various forms namely jewellery, electronic assets, diamond or other items that that are easy to be stored as well as items that do not depreciate in value over certain period of time (Ismail & Ahmad, 1997); (Amin, Chong, Dahlan, & Supinah, 2007).

Moreover, this conventional pawn broking also imposes certain amount of interest rate on the amount borrowed by the customers regardless of the value of the collateral (Appannan & Doris, 2011). This is also highlighted by Bhatt and Sinnakkannu (2008) where conventional pawn brokers charges a fixed twenty four percent interest rate per annum on the amount borrowed, which is considered relatively high for those lower income group of customers.

Additionally, under conventional pawn broking scheme, if the customers default in payments or if the pawned items are not redeemed within the stipulated period, those pawned items will then be possessed by the pawnshop owners (Ismail & Ahmad, 1997).

Adversely, the concepts of conventional pawn broking mentioned above can also be identified as the shortcomings or weaknesses of this conventional pawn broking system. Specifically Abdul-Razak (2011) mentions that among the weaknesses of the conventional pawn broking are non systematic or transparent ways of valuing the pawned goods, higher interest rate charged by the pawnbrokers and misconduct or immoral practices done by the pawnbrokers such as auctioning the pawned goods without notifying the customer.

As a consequence of these conventional pawn broking weaknesses, an Islamic *shari'ah* based pawn broking system known as *ar rahnu* was introduced. In general, the operations of both conventional and *ar rahnu* transactions are somewhat similar. However, there are several underlying principles that govern the *ar rahnu* transactions as opposed to the conventional pawn broking. These basic principles governing *ar rahnu* are the one that actually differentiate it from the conventional one.

Similar to conventional pawn broking, *ar rahnu* enables the customers to acquire fast cash for any transaction or emergency purposes. It was designed to offer an alternative source of easing temporary financial difficulties targeted at the low-income conventional pawnshops patrons. It is regarded as one of the Islamic based micro-credit and financing tool catered primarily for those low-income earners seeking for financial assistance in meeting their working capital needs (Amin, 2011). However, *ar rahnu* extend

this feature in the sense that one of its principles governing the scheme is pertaining to the concept of *Qardhul Hassan* (benevolent loan). According to Amin, Rahman, Sondoh Jr, and Hwa (2011), *Qardhul Hassan* is referred as a beneficial loan which is a form of interest free type of financing. Based on *Qardhul Hassan* principal, the lender (al murtahin) helps the borrower (ar rahim) by providing them the financing required without charging any extra money apart from the amount borrowed.

Likewise *ar rahnu* allows its customers to pledge their valuable assets as a form security to obtain financing. However, it is noted that gold and gold jewellery are the only allowable pledged item in the *ar rahnu* transactions and the amount of borrowing is dependent on the value of that gold (Appannan & Doris, 2011); (Ismail & Ahmad, 1997). Here, gold is used as collateral over other items due to its advantages such as it can be conveniently traded, its purity can be ascertained easily and its value is relatively stable. Along the same line, another principle governing *ar rahnu* scheme is related to *Wadiah Yad-Amanah* (trustworthiness). In relation to this principle, *wadiah* is one of the main concepts in Islamic banking that agree on the custody of another person's valuable assets (Mansor, 2009). In *ar rahnu* scheme, the borrower (*ar rahim*) who has pledged their assets for the purpose of obtaining the loan has trusted the lender (*al murtahin*) to take care of their wealth or assets within the loan period. The lender (*al murtahin*) is not bound to be responsible to the collateral in case if there is anything happens to it provided that it is not due to the his negligence. At the maturity of the stipulated period, the borrower (*ar rahim*) needs to pay equal amount borrowed in order to redeem the collateral (*ar rahn*) pledged.

The next point to compare between both schemes is concerning to interest or service charges. As mentioned above, certain amount of interest will be charged to the customers under conventional pawn broking scheme. However in *ar rahnu* scheme, the cost of borrowing that is the service charge is imposed instead of interest. This service charge is relatively lower if compared to the conventional pawn broking scheme (Amin, 2011). Cheong and Sinnakkannu (2012) further supported that the cost of borrowing under the Islamic pawn broking is about half of the cost charged by the conventional scheme. The cost of borrowing is in the form of storage fee and it is calculated based on the value of the assets pledged (Appannan & Doris, 2011). Thus, this proved that the cost of borrowing under Islamic pawn broking is relatively cheaper as compared to the conventional pawn broking. This principle of storage fee governing the *ar rahnu* scheme is called as *Al ujrah* (safekeeping fee). In explaining this principle, the reasonable service fee payable is allowed to be charged by the lender (*al murtahin*) in safeguarding the wealth or assets of the borrower (*ar rahim*). This service fee is given to the lender (*al murtahin*) may be to compensate him for taking some precautionary measures in looking after the wealth or assets.

Unlike conventional pawn broking, *ar rahnu* scheme is conducted based on the concept of *Wadiah Yad-Dhamanah* (guaranteed storage). In *ar rahnu* scheme the lender (al murtahin) at any circumstances is bound to be responsible in safeguarding the assets pledged by the borrower (ar rahim). The lender (al murtahin) is deemed to be responsible in case if the assets are missing or damaged while it is in his or her custody. In the same context, if the borrower (ar rahim) fails to redeem the collateral within the stipulated period, a notice auctioning the assets will be given to the borrower (ar rahim). If the lender (al murtahin) still does not receive any response, the assets will then be auctioned in order to recover the amount of loan outstanding. Here, if there is any surplus derived from auctioning the assets, it shall be returned back to the borrower (ar rahim). However, in case if the borrower (ar rahim) cannot be detected therefore it should be the responsibility of the Islamic institutions to handle it, such as it should be put in the *Baitulmal* account for the benefits of both borrower (ar rahim) and his or her beneficiary (Cheong & Sinnakkannu, 2012).

# 2.3 Islamic pawn broking (ar rahnu) from shari'ah perspectives

The Arabic term of *ar rahn* means collateral or mortgage which refers to possessions offered as security for loan in case of default payment of the debt (Jalil & Rahman, 2010). According to the *ar rahnu* concept, the borrower (*ar rahim*) is required to pledge redeemable collateral (*ar rahn*) normally in the

form of gold jewellery as a guarantee of repayment of loan. Ar rahn is considered an essential instrument as a security of loan as it reduces the lender's risk and also increases the borrowers' cost in case of default in payment.

*Ar rahn* is permissible in Islam where there are proofs of its legality mentioned both in the *Qur'an* and *Sunnah* (Ismail & Sanusi, 2005). For instance based on the Surat al-baqarah verse 283, Allah states:

"And if you are on a journey and cannot find a scribe, then a security deposit [should be] taken. And if one of you entrusts another, then let him who is entrusted discharge his trust [faithfully] and let him fear Allah, his Lord. And do not conceal testimony, for whoever conceals it - his heart is indeed sinful, and Allah is Knowing of what you do"

In the above verse, Allah states that in the event of no scribe available at hand, sufficing to pledge is allowed as a mean of documenting and insuring of debt. The pledge serves as a deposit and guarantee of payment to the creditor but treachery of this pledge is a great sin. At the end of the verse Allah also emphasizes the importance of protection of deposits, delivering the rights of others and at the same time warned about the concealment of testimony.

In addition, there are also several evidences on the legality of *ar rahn* that can be derived for the *Sunnah*. For example in one of the *Hadith* narrated by Anas (mAbpwh), he states:

"The Prohphet (pbuh) pawned a shield with a Jew in Madinah and he took from him some barley for his family"

Based on the above verse and *Hadith*, therefore, it can be concluded that Islam permits the use of *ar rahn* in a pawning transaction. It is noted that among the main objective of the use of *ar rahn* is to guarantee the repayment of the loan and in the event of non-payment, the creditor then has the option to sell it (Nor, Abdullah, Ali, & Zakaria, 2012). Thus it is also clear that the philosophical foundation of this *ar rahnu* is to uphold virtue and justice in its transaction. In this context, any kind of unjustified enrichments by the creditors or any kind of oppression on the debtors, such as *riba* (interest) must be totally avoided.

Literally the Arabic word *Riba* can be defined as an expansion, increase or growth (Manan, 2008). From *shari'ah's* perspective, *riba* is related to the premium charged by the fund provider on the amount of loan granted to the borrower or for extending the maturity period of the loan. It is not doubt that Islam has strictly prohibited the imposition of *riba* on every business activities (Jalil & Rahman, 2010). Allah has stressed on this prohibition of *riba* and the punishment for dealing with *riba* in several versus of the *Holy Qur'an*. For instance based on the *Surat al-bagarah* verse 275, Allah states:

"God has allowed trade and forbidden riba (interest)"

In the above verse, it is clear that trade is allowed and encouraged in Islam however it should not involved any elements of interest such as any forms of additional returns or premium imposed due to the postponement of the repayment of loan. Hossain (2009) also states that *riba* is not allowed in Islam because it serves as a dangerous weapon which may exploit those needy and poor people, thus creating an imbalance circulation of wealth among the society. Additionally, the word *gharar* refers to all elements of uncertainty or ambiguity (Manan, 2008). It is stated that in Islam, all financing transactions and activities which are covered under the framework of Islamic business law (*fiqh ul muamalat*) must avoid this element of uncertainty (*gharar*).

## 2.4 Significance of Islamic pawn broking (ar rahnu)

There are many benefits that can be derived from *ar rahnu* services as opposed to conventional pawn broking and other forms of financing alternatives.

The first advantage is related to the transparency of *ar rahnu* in its business conducts. Since *ar rahnu* follows closely the Islamic code of conduct in their transactions, therefore it can be said that *ar rahnu* scheme does not involve the imposition of *riba* and *gharar* in its dealings. It is clear that every steps involved in the process is made known to the customers. Every process such as the acceptance of items tendered as well as the valuation process is conducted openly in front of the customers (Othman et al., 2012).

Second, *ar rahnu* does consider the sensitivity of its clients, who are mainly the Muslim women who owned small-scale business. They regularly need fast money for various reasons for any transactions or emergency purposes. *Ar rahnu* is regarded as one of the main source of capital for these small-scale businesses who have no access and capacity to other types of immediate financing for certain period of time (Aziz, 2006). In short, *ar rahnu* services are important as it caters the sensitivity of the needs and requirements of their customers.

Third, the groups of customers as mentioned above are able to use the *ar rahnu* services due to its fast, flexible and easy procedures. The customers will need to bring their valuable goods as collateral and their applications would normally be processed in a short period of time. The approvals are prompt as they are fully supported by the collaterals. Furthermore the process can be expedited as there are no complex and tight credit evaluation procedures to go through as compared to financing application from conventional financial institutions (Amin et al., 2007).

Finally, all of the items tendered will be kept in safe places which are insured under government protection. Each customer will also be notified on monthly basis related to the items tendered such as the date to surrender the items to them and giving their excess money from selling the items in case they do not want to claim back those items (Othman et al., 2012).

# 2.5 Issues in implementing Islamic pawn broking (ar rahnu)

It is undeniable that there are huge potential of *ar rahnu* as a short term financing alternatives however several issues need to be properly addressed in order to ensure the increase in the usage rate of *ar rahnu* among the public.

Among the prominent issues in implementation of *ar rahnu* is to consider the factors that influence customers on the use of *ar rahnu* services. According to Appannan and Doris (2011), the low cost of loan is the most important factor influencing the public to use *ar rahnu*. Similarly, Cheong and Sinnakkannu (2012) mention that customers choose to use ar rahnu services over conventional pawn broking services because of its *riba*-free attributes, transparent, quick and hassle-free micro-credit financing alternatives. In addition, Amin (2011) also identify three important factors that have an impact of Eastern Malaysia Muslim women's usage intention. He explains that religious obligation is one of the influencing factors in determining one's intention to use *ar rahnu* financing. Besides that, transaction cost associated with *ar rahnu* services is also found to be one of the main contributing factors in influencing the use of this financing alternative. Similarly Amin et al. (2007) mentioned that customers' *shari'ah* view on *ar rahnu* is one of the main factors affecting their acceptance level. The issue of reasonable fees charges instead of imposing *riba* is their main concern in using the *ar rahnu* services provided.

Another critical issue that need to be addressed pertaining to *ar rahnu* implementation is creating and enhancing customers awareness. To date, it can be said that the level of customers' awareness and acceptability of this *ar rahnu* system is relatively low. Sam, Tahir, and Latif (2010) highlight that most of the customers are not aware of the service currently provided by the Islamic pawnshop. They also mentioned that most of the customers do not favour to use it as a financing tool as compared to the other types of short term financing alternatives available. Similarly Appannan and Doris (2011) also report that majority of Indian customers are not aware of *ar rahnu* as compared to Malay and Chinese customers.

Finally, today's market segments pertaining to the pawn broking customers are different compared to before. Shaari and Azlina (2003) demonstrate that *ar rahnu* basically serves different groups of market segment. They conclude that *ar rahnu* seems to attract relatively higher income group of the society irrespective of their gender. It is also found that *ar rahnu* seems more appealing to the relatively younger segments of the society. Additionally, customers with significantly different lifestyles who are more sociable and outdoor in nature regards *ar rahnu* as more attractive compare to the conventional pawnshop.

## 3. DISCUSSION

Based on the review of the literatures, *ar rahnu* is allowed in Islam where it is a form of short term financing that does not involved the elements of *riba*. It is also noted that a clear set of guidelines has been outlined in *ar rahnu* scheme. It is no doubt that all the guidelines governing *ar rahnu* transactions are made clear for the sake of safeguarding the welfare of both parties, the borrower (*ar rahim*) and the lender (*al murtahin*). Thus, in view the similarities and differences between conventional and *ar rahnu* mentioned above, it can be said that *ar rahnu* transaction is somewhat similar to conventional pawn broking. However several general principles underlying *ar rahnu* scheme namely *Qardhul Hassan*, *Wadiah Yad-Amanah*, *Al-Ujrah* and *Wadiah Yad-dhomanah* differentiate it from the conventional one (Appannan & Doris, 2011). These Islamic principles governing *ar rahnu* scheme has proved that *ar rahnu* is a form of short term financing which adhere to the *shari'ah* guidelines. Customers nowadays have an alternative in deciding on their short term financing. *Ar rahnu* serves as an alternative source of financing which is in line with the *shari'ah* guidelines are expected to drive away particularly the Muslim customers from involving in the interest-based financing instruments which are available in the market nowadays (Sam et al., 2010).

Based on the above issues in implementing *ar rahnu* scheme highlighted, it is crucial for *ar rahnu* providers to carefully evaluate those issues in order to attract new customers thus increasing its usage rate. These factors that influence the customers demand on *ar rahnu* includes *shari'ah* based and low fee charge are strong key points of *ar rahnu* over the conventional pawn broking that should be highlighted in order to increase the awareness and usage by the customers. Besides that, additional information about this *ar rahnu* services are also crucial and should be disseminated in order to expose potential customers to familiarize and understand the concepts behind *ar rahnu* system.

Moreover, since the awareness and level of acceptance among Malaysians are relatively low, necessary actions should be taken to promote *ar rahnu* services as the form of micro financing alternatives. Therefore, creating awareness of *ar rahnu* products through several promotional tools such as advertising could be considered as appropriate approach in order to inculcate public's awareness. Such approach will assist in creating good perceptions among the public with regards to *ar rahnu* product. Among others, the Islamic pawn brokers also need to clearly identify their target market in order to promote its products. To summarize, it is undeniable that Islamic pawnshops institution in Malaysia have the potential to expand in the future as there is still big market yet to be tapped. It is hoped that one day, Muslim customers especially, could regard *ar rahnu* as their main priority in deciding on their short term financing alternative.

#### 4. CONCLUSION

In conclusion, ar rahnu is beyond doubt that it is fundamentally upholding the shari'ah principles aiming to achieve its objective (Maqasid al-Shari'ah). In this context of ar rahnu, applying and achieving the objectives of shari'ah (Maqasid al-Shari'ah) become the main concern. Hence, the introduction of ar

rahnu as a permissible micro financing tool based on the Maqasid al-Shari'ah gives Muslims customers an alternative of getting a fast and low-cost interest free cash advances.

The introduction of the Islamic pawn broking (ar rahnu) should not considered as a competition to the conventional pawn broking but it is aimed to compensate the rising demand of Islamic-based financial products of today's society. Ar rahnu was basically introduced to fulfill the social responsibilities which are inconsistent with the shari'ah principles and guidelines. In order to achieve this maqasid-al-shari'ah, all business activities conducted and products used in the economy must uphold the basic shari'ah principles particularly in relation to the prohibition of riba and gharar. If all Muslim customers choose those products which are permissible by shari'ah such as ar rahnu, as a result the Maqasid al-Shari'ah will be achieved that is to safeguard the interest of the mankind and at the same time to prevent them from harm, both in this world and hereafter. Once Muslim customers have a choice that would later rival the conventional ways of obtaining short term financing which involved the elements riba or gharar, there would not be any question of Muslims not fulfilling their obligations to uphold Islam in their daily lives.

# AGRICULTURAL PRODUCT AND LOST SHARING (aPLS) AS A POTENTIAL SCHEME FOR ISLAMIC MICROFINANCE IN AGRICULTURE

Muhammad Hakimi Bin Mohd Shafiai<sup>1</sup> Amira Ajeerah Binti Mohd Samsi<sup>2</sup> Siti Khadijah Ab Manan<sup>3</sup> Ismail Mahyudin<sup>4</sup> Fadhilah Abdul Rahman<sup>5</sup>

#### **ABSTRACT**

The agricultural sector works in an environment of its own. This sector is vulnerable to many natural risks such as droughts, floods, and also attacks from wild animals, and these need to be taken into account by the farmer and the landlord. Due to these risks, financiers are reluctant to invest or finance this sector. Comparatively speaking, these risks are not common in industry, trade, services, and other sectors. Structurally, agricultural projects in Malaysia are often in the form of small holdings owned by families and households in rural areas. Private ownership is, by and large, the predominant attribute in the ownership of properties and assets. Most of these small-scale agricultural and non-agricultural enterprises are left to themselves. They have limited capacity to generate revenues beyond the equivalents of subsistence needs of the families. This is a reflection of the production capacity which is small and depends on the immediate needs of the household in the rural sector. Therefore, this paper attempts to highlight the farmers' lives in Malaysia and their problems in developing agricultural land. Based on the problems faced by farmers, Islamic solutions are proposed to be considered by the governing bodies. Consequently, this paper investigates the possibility of agricultural development utilizing Islamic microfinance schemes in order to help farmer's sustainability.

Keywords: Agricultural Land, Islamic agricultural finance, Malaysia.

#### 1. INTRODUCTION

There is no doubt that the Islamic finance industry is regarded as one of the fastest growing industries in the world. However, there are still many potential Muslim customers especially in rural areas whose banking needs are not being met, and who do not have access to lending products or credit products due to their poverty level. In the meantime, the agricultural sector is presumably the sector in which entrepreneurial projects would have the greatest impact on economic growth.

Based on arguments from Hoshmand (1995), it was stated that the financial problems faced by the agriculture sector were caused by the risks of debt financing and a lack of access to the capital market

<sup>&</sup>lt;sup>1</sup> Senior Lecturer, <sup>2</sup> Postgraduate Student, School of Economics, Faculty of Economics & Management, The National University of Malaysia (UKM)

<sup>&</sup>lt;sup>3 45</sup> Accounting Research Institute (ARI), Universiti Teknologi MARA, 40450 Shah Alam, Selangor, Malaysia

respectively. He proposed that the partnership contracts could offer a solution to the problems of credit availability as well as reducing the risks of debt financing.

In addition, one of the major contributing factors to the idle land problem in Malaysia was the inadequacy of debt finance as a means of providing agricultural credit and the related issue of financial insolvency among landowners and farmers.

Meanwhile, agricultural projects in Malaysia are often in the form of small holdings owned by families and households in rural areas. Private ownership is, by and large, the predominant attribute in the ownership of properties and assets. Most of these small-scale agricultural and non-agricultural enterprises are left to their own devices. Therefore, they have limited capacity to generate revenues beyond the equivalents of the subsistence needs.

Thus, it is necessary for financiers to be aware of and to understand the reality of the lives of farmers and the risks they face, in order to effectively finance agricultural land development and eventually to contribute to economic growth. Since Islamic finance is regarded as a flagship of Islamic economics and agricultural development is one of the important aspects in Islamic economic discourse which has still not been emphasized enough by Islamic economists in the current age, there is potential space for the discussion of Islamic microfinance for agriculture sector and for the enrichment of literature on Islamic economics as well as Islamic banking and finance.

Furthermore, in agricultural land contracts between farmers and landlords, the cost of input usually requires a huge initial investment of money or funds to implement it. If the matter of utilizing idle land is not managed properly, and an inefficient agricultural contract is drawn up, this can be a cause of the poverty among farmers.

Islamic jurists who validated *muzara'a* and *musaqa* contracts as partnership agreements were also concerned about sharing input costs between landlords and tenants. Hence, it would make the contract between both parties more efficient if they were to include joint responsibility for the financing from the financial institution in their partnership agreement.

On the other side, in reality, partnership modes of financing are marginalized in practice among Islamic banking and finance institutions even though these principles are idealized in the theory of Islamic finance as an alternative to *riba*.

However, partnership contracts in agricultural land development based on the principles of *muzara'a* and *musaqa* can be promoted as a potential scheme for Islamic microfinance, if appropriately modified to suit the current situation, as an alternative for financing agricultural land development.

Therefore, there is an urgent need to develop a sound Islamic agricultural microfinance system in order to developing agricultural land and to achieve increased and sustained growth in farmers' and landowners' incomes and to reduce poverty.

# 2. METHODOLOGY

This paper is using descriptive and exploratory method of study which refers to the situation of agricultural sector in Malaysia. Based on the issues of financing in agricultural development in Malaysia, this paper seeks for potential solutions, i.e., Islamic microfinance which attempts to create a suitable approach to ensure the sustainability production in agriculture.

## 3. THE 'NATURE' OF AGRICULTURE IN MALAYSIA

Generally, four major types of physical assets that form the farm capital are; farm land and buildings, implements and machineries, livestock, and stored crops. Land derives its value from its usefulness in agricultural production and not from its potential as urban estate or in mining (Tostlebe, 1957). The value of land can be raised by the investment of effort and money in cultivating and preserving jobs. In general, labour is the key factor of production while profit is the reward given as motivation for them.

The misunderstanding about where the value of land derives, drag the initiative to activate agricultural land with a structural and technological transformation into the increment in the size of idle agricultural land instead. This is what happened in Malaysia when a program named as "pertanian kontrak" results failure (Amriah & Ratnawati Yuni, 2011).

Majority farmer in Malaysia can be classified as small holding farmers, whose normally facing similar situation, which is a financial difficulty. They have gone through cycles of growth and decline in their use of credit. Such cycles take a long time to complete, regularly lasting more than a generation. (Hunges, 1986)

It is a fact that agricultural production is a seasonal process. Farmers have to pay for all production inputs such as seed, fertilizer, land preparation and machinery at the beginning of farming season; but they are only able to produce the output at the end of the season. The lag between the time that they have to pay for their expenses and when they receive output revenues requires them to take a loan to maintain their liquidity.

Therefore, improving the availability of agricultural credit enables farmers to use enough inputs and engage in farm investments in order to produce the optimal level of output and achieve or increase their profits. Thus, agricultural finance helps farmers to expand their production activities and earn their living; in the absence of which both their output supply and their welfare would decline.

In term of structure, agricultural projects in Malaysia are often in the form of small holdings owned by families and households in rural areas. Private ownership is, by and large, the predominant attribute in the ownership of properties and assets. Most of these small-scale agricultural and non-agricultural enterprises are left to their own devices (Muhammad Hakimi, 2012).

They have limited capacity to generate revenues beyond the equivalents of the subsistence needs of the families. This is a reflection of the production capacity which is small and depends on the immediate needs of the households in the rural sector. Therefore, the asset holdings and products of these agricultural activities are not amenable to market transactions.

Based on the fieldwork done to the farmers of six states in Malaysia (Muhammad Hakimi, 2012), three major issues found. The first issue is about financing. The first and foremost matter that needs to take into consideration among financial institution in Malaysia is about non-cash element in farmers daily live. Cash transactions are necessary in trading sectors, commerce, manufacturing, and construction, but not in agriculture. Farmers do not use money for food, because they eat what they get from their farm. Therefore, incomes from their agricultural products are their net income.

Second thing that require serious attention from financial institutions in Malaysia is lack of support from financial institutions towards farmers in developing their agricultural land. Several factors cause the low involvements of farmers with financial institutions are:

- a) Muslim farmers are not willing to involve in the interest-based (*riba*') financing which is prohibited in Shariah.
- b) Bankers are reluctant to finance small farmers.

- c) The farmers are frustrated with the bureaucracy of the financial institutions.
- d) The small farmers feel that the agricultural government bodies will give them support.
- e) Fear among farmers about paying back a loan or financing from conventional financial institutions.

Third issue on financing is about financial problem that particularly happen during second cultivation cycle. Most of the farmers received full subsidies from Department of Agriculture (DOA) during their first cultivation but have to survive on their own during next cycle of cultivation. Due to financial problem, many of the farmers are not able to cultivate their land and let the land abandoned as how happened to the developed idle agricultural land that again became abandoned.

Fourthly, farmers prefer to make informal financing which is making a loan from relatives, landlords, or unauthorized moneylenders. They are more comfortable to borrow from family members rather than formal institution since it is more flexible if they have problem in repayment. Hence, there are significant numbers of farmers who actively involved in informal financing. This issue, can be said as a consequence of all issues that had been mentioned above.

The second main issue arise is the farmers themselves. Farmers face few tribulations in developing their idle agricultural land. Most of the farmers in the interview only use traditional method in activating their land. They are unorganized and do not have proper transaction records of their agricultural input and output. Because of this, farmers fail to accurately calculate their income or profit and drag them to the unpredicted problems and put them in trouble for the next cultivation.

Another issue from farmers arises reflected in government's policy which is about the change from cash crops to permanent crops. Farmers who cultivate cash crops during the first harvesting cycle consider changing into permanent crops such as palm oil and rubber as farmers want to increase their income. Indirectly, this changing affects the government mission of food security.

Lack of cooperation among farmers and problems in marketing their agricultural products are other issues that occurred among farmers in Malaysia. The influences of middleman who control the market lead to marketing problem where farmers do not get the fair price for their output.

Thirdly, land issues are also crucial to take attention. It can be stated that the size of farm significantly affects the farmer's income. Based on the fieldwork, farmers who involved in small scale farms of one to five hectares got an income of RM 1000 – RM 2000. While farmers who dealing with large area of land from 11 to 15 hectares got a monthly income of RM 3001- RM 4000 and above. Majority of respondents who are dealing with more than 20 hectares got RM 4001-RM 5000 income. It can be determined that farmers with large scale farming get a higher income. However, it is hard to find those who own and cultivate their land at the same time. Therefore, the only way for agricultural entrepreneur to get a better income is deal with the landowners who own a large scale farm or several landowners that have small scale farm each.

Another issue of land that occurred is about scattered land ownership and uneconomic sized holdings. Generally, much of land in Malaysia has been alienated on permanent titles. The land is normally held under a single ownership, but over the years, Islamic and customary law of inheritance, as well as the sale of land have gradually given rise to the multiple ownerships and the fragmentation of land.

The change on the status of land from agriculture to another profit orientation such as industry and commercial housing is a serious matter to ponder. The status change will disturb the ecology and of course the food security.

Basically, the issues discussed are the reality picture of farming. All parties either farmers, landowners, financial institutions, or government are chasing to meet their goals, but without right understanding and the feel of responsibility among each other, nobody can sustain in achieving their missions.

Accordingly, in Malaysia, even though agricultural markets are free arenas, there are certain inflexible elements such as government subsidies and support programs in which we find direct intervention from the government in the market mechanism, prices and resource allocations. This can be seen through the direct participation of the Department of Agriculture (DOA) in Malaysia to support farmers in developing agricultural land.

However, high dependence to the subsidies and programs from government results to the cycle of idle land which had been discussed before. As mentioned earlier, shortage in capital happen in second cultivation as they only get subsidies at start. In this situation, farmers need financial aid, but financier reluctant to give financing due to the risks in agriculture. Farmers, at this moment strive to sustain with borrowing money from relatives, or landlords. However, this traditional method will not long last and at the end will result unsustain in cultivation. Therefore, Islamic microfinance is suggested as a way to overcome the capital shortage that farmers faced.

#### 4. THE SIGNIFICANCE OF ISLAMIC MICROFINANCE IN AGRICULTURE

In general, the need for financing is universal in society, whether or not it is based on conventional or Islamic finance. However, I would like to highlight three main arguments supporting my opinion that we need to apply Islamic financial principles in order to activate or finance agricultural land, particularly in the case of Malaysia.

# 4.1 Shari'a Compliancy

In any case, Islam is a complete way of life and addresses all aspects of man's life including finance. In brief, Islamic finance is based on the Shari'a which provides guiding principles for all aspects of Muslim life, including religion, society, politics, economics, banking, business and law. Islamic or Shari'a compliant financing constitutes financial practices that conform to Islamic law which is based on al-Quran and Sunnah.

In addition, Shari'a compliant finance was designed to enable Muslims to buy financial products that comply with the tenets of their religion. Just as non-Muslims do, Muslims require banking services such as savings accounts, financing for education, home loans and many other services which banks offer their customers.

History from the establishment of *Tabung Haji* in Malaysia in 1962 and the first Islamic bank in Egypt in 1963 to the present day has proven the great need for Shari'a compliant banking or financial products in rural communities.

According to El-Gamal (2000), a banking and financial system based on Islamic principles exists mainly to provide religiously acceptable banking services to the Muslim community. Islamic banks are also intended to be financial institutions to assist Muslims in keeping away from *riba*, *gharar* and *maysir* which are present in conventional banking institutions (El-Gamal 2000: iv-v).

Therefore, these days, there is no reason why Muslims should not be able to access the services offered by banks in a Shari'a compliant way. For instance, in Malaysia, in addition to full-fledged Islamic banks such as Bank Islam Malaysia Berhad (BIMB), almost all commercial banks are offering Islamic financial products to their customers (Haron and Wan Nursofiza 2009:79-81).

In addition, based on interviews with the officer of the Department of Agriculture, Malaysia and Agro Bank officers in May 2010, a lot of farmers and landowners in rural areas of Malaysia are demanding Islamic financial products to assist them in developing agricultural land. On the other hand, they are also very reluctant to make use of debt financing since this type of financial product puts them into very high risk situations in terms of repayment.

## 4.2 Long Term Profitability

The Islamic financial scheme originates from the total prohibition of the payment or receipt of any predetermined, guaranteed rate of return. This closes the door to the theory of interest and precludes the use of debt-based instruments. The system encourages risk sharing, promotes entrepreneurship, discourages speculative behavior, and emphasizes the sanctity of contracts. Islamic finance promotes entrepreneurship and risk sharing and its expansion to the poor could be an effective development tool (Alasrag 2010: 8).

In Islamic banking systems, banks are considered as organizations working with their customers' funds. In general, Islamic banks offer two kinds of banking facilities, namely: fixed profit facilities such as hire purchase, installment sale at a fixed rate of profit which is based on principles of *al-murabaha* and *al-bay bithaman ajil* and secondly, variable profit facilities, based on "Profit and Loss Sharing" rooted in *al-musharaka* and *al-mudaraba* principles.

Meanwhile, the profitability of Islamic banks has been analysed on the basis of two measures; namely rate of return on assets and rate of return on equity. From the analysis by the authors, it appears that Islamic banks' performance, in terms of profitability in general, at least meets (or even surpasses) international standards (Iqbal and Molyneux 2005: 78-80).

However, it should be noted that conventional banks' depositors are guaranteed their principal amounts, and hence bear less risk than Islamic banks' depositors, and so the depositors of Islamic banks would legitimately expect a higher rate of return to recompense for the extra risk. The current rates of profit on assets of the Islamic banks may not be enough to meet that expectation. Therefore, there is a need to make the rates of return paid to depositors more attractive and Islamic banks should not only rely on the loyalty of clients for religious concerns.

Furthermore, in all business, there is need for long term finance. In a conventional system, it was offered through long term bonds and equities. However, Islamic banks do not deal with interest-bearing bonds and therefore the need for equity markets is crucial in an Islamic framework (Iqbal and Molyneux 2005: 105).

From another perspective, Siddiqi (1983a) and Chapra (1992) have argued that Islamic banks will promote growth in Islamic countries by providing long-term financing to growth oriented sectors of the economy by using "Profit and Loss Sharing" (PLS) contracts or partnership financing. It was envisaged that PLS became the core characteristic of Islamic banking financing (Chapra 1992: 201 and 329-331; Siddiqi 1983a: 112-113 and 122-123).

Chapra (2002) also argues that more partnership or equity financing would enhance the stability characteristics of financial systems because, through the resultant risk-sharing contracts, financiers would have a greater incentive both to assess risks at the outset and to monitor borrowers after finance had been given (Chapra 2002: 232).

In the meantime, in general, the agricultural sector especially requires long term financing due to the long duration from sowing to harvesting. Therefore, partnership financing is feasible for funding the long term projects found in the agricultural sector.

Meanwhile, Aggarwal and Yousef (2000) have divided PLS, which is anchored in the principles of *almudaraba* and *al-musharaka*, into both long term and short term financing, while always linking them to the principles of *bay al-salam* and *al-ijara*.

Additionally, Hoshmand (1995) proposed that Islamic banking principles such as PLS may offer a solution to the problems of credit availability as well as reduce the risk of debt financing in the agricultural sector. Two reasons can be given in support of this statement. First, banks would not risk their funds for highly speculative purposes. Second, banks would have the incentive necessary to promote the projects' profitability because they would be acting as shareholders in the projects they financed (Hoshmand 1995: 75).

However, research done by Yousef (1997), Hasan (2002b) Dusuki (2007) and Nagaoka (2010a) discovered that the majority of Islamic banks in recent times both in the Middle East and Malaysia do not essentially use PLS products as core financial instruments in their dealings and rely much more greatly on markup financing than on PLS financing. In addition, the constraints on the progress of "Profit and Loss Sharing" methods are believed to be caused not only by the asymmetric information, but also the nature of banks as short-term finance institutions.

From the research done by Ahmed (2006), it was found that the Islamic banks were reluctant and unable or unwilling to participate in long-term projects. They much preferred short term and medium term investments

Nevertheless, this phenomenon is opposed to what happened at Agricultural Bank of Iran (ABI) as Kazem and Zamir Iqbal (2002) have shown in their research. They have presented empirical evidence by using the 15 years of data from ABI which depicts that a reduction in information asymmetry and increased direct participation by the financier led to a preference for equity participation or partnership contracts based on *al-musharaka* principle. They also suggested that close monitoring and supervision should not be considered as an extra cost but as an investment to build a knowledge base of superior quality entrepreneurs and projects.

# 4.3 Social Needs

It is undoubtedly true that the agricultural sector makes a vital contribution to society, mostly through the supply of food and economic growth. In developing countries in particular, this sector is still the backbone of the country's production and an important component in the growth of the economy.

Dorward *et al.* (2004) also mentioned that agriculture is a vital part of the livelihoods of many poor people. Thus, it is always argued that agricultural growth is a fundamental pre-requisite for widespread poverty reduction.

Moreover, it is an undeniable fact that the agricultural sector plays a significant part in many crucial social issues such as the incidence of poverty, food security and rural development. Indeed, the idle land problem is frequently connected to the high incidence of poverty in rural areas in Malaysia (Vincent and Rozali 2005: 157-158).

Furthermore, as mentioned by Haron (1998), the philosophy of the establishment of Islamic banking and finance institutions should not only be for profit making but should also be alert to the needs of the

society in order to attain the social goals of socio-economic development and eradicate poverty in parallel.

According to Khan (1994), one of the problems of the rural economy is that small farmers do not have access to improved farm inputs such as seeds, fertilisers, and pesticides (Khan 1994: 19). Meanwhile, commercial banks have traditionally operated in urban areas and provided short-term finance to firms and industries, but they have very little experience of operating in the rural environment. For Islamic banks to enter this field, it would need a lot of preparatory work by way of risk assessment, financial planning, operating procedures and monitoring arrangements. It would also require strong legal support (Khan 1994: 12).

This is very important for Islamic banks in order for them to play significant roles in contributing to the development of rural areas and to meeting social needs. Therefore, in this crucial area, there are three vital considerations as to why Islamic finance should be involved in financing agricultural land particularly in Malaysia's case.

## **4.3.1 Food Security**

Though Malaysia is blessed with fertile soil, adequate rainfall distribution throughout the year and a beautiful tropical climate, the country is still a net food importer and has never achieved a surplus in its food trade balance. For instance, according to statistics from the Ministry of Agriculture and Agro-Based Industry Malaysia in 2008, Malaysians consume about 2.2 million tons of rice in a year, but Malaysia is only able to produce 1.6 million tons. Therefore, the government has to import around 600,000 tons to meet the demand for rice as the main food of Malaysia. In Malaysia, the food security issue is always linked to and mainly focused on rice which is our basic staple and 'political' crop (Mansor 2008).

# **4.3.2 Potential for Rural Development**

In Malaysia, the agricultural sector is usually common to rural areas which have the most arable lands. Theoretically, agricultural activities can be carried out to accomplish personal or family desires or even for profitable purposes. Thus, individuals' desires will promote the agricultural sector and impact to the rural economics.

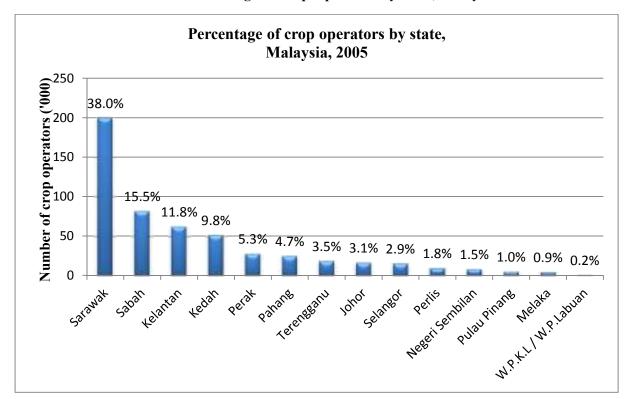

Chart 1.1: Percentage of Crop Operators by State, Malaysia 2005

Source: Agriculture Census 2005, the Department of Statistics, Malaysia.

The agriculture Census 2005 identified a total number of 526, 265 crop operators. Sabah and Sarawak together accounted for more than half (53.5%) of the crop operators in 2005. This was followed by the east coast states of Kelantan, Terengganu and Pahang, contributing 20%. Meanwhile the Northern states of Kedah, Perak, Perlis and Pulau Pinang together accounted 17.9%. Kuala Lumpur and Labuan cumulatively only accounted for 0.2% of the total crop operators.

From Chart 1.1, it was found that most of the crop operators in Malaysia are located in the rural areas because most of states with a high number of farmers such as Sarawak, Sabah, Kelantan, and Kedah are less developed compared to Kuala Lumpur, Melaka and Pulau Pinang.

## 4.3.3 Poverty Reduction

Islam does not like inaction of the society against poverty because it degrades the societal status of the vicegerents of God, gives birth to many social problems and puts the poor nations at a disadvantaged position in the world society.

In addition, the incidence of poverty in the smallholder sector, especially in rural areas, has remained higher than in urban areas over the last decade or so. Therefore, while the agricultural activities commonly practiced in rural areas have created employment for the people; Islamic finance should be more and more involved in these activities because, implicitly, it can reduce the numbers of poor people in these rural areas.

Table 1.1: Incidence of Poverty (%) in Malaysia, 1970-2000

	1970	1980	1990	2000	_
Peninsular Malaysia	49.3	37.4	17.1	8.3	
Rural	58.7	45.8	21.8	8.0	
Urban	21.3	17.5	7.5	3.0	

Source: The Economic Planning Unit, Malaysia.

Table 1.1 shows that the poverty incidence was reduced from 49.3% in 1970 to 8.3% in 2000. Furthermore, the incidence of poverty amongst rural and urban households also declined respectively. However, there is still a much greater incidence of poverty in the rural areas than the urban areas of Malaysia.

# 5. THEORETICAL PROPOSAL OF "AGRICULTURAL PRODUCT AND LOSS SHARING" (aPLS) AS AN ISLAMIC MICROFINANCE FOR AGRICULTURE

#### 5.1 Microfinance and Islamic Microfinance

Based on this fieldwork which has revealed the real scenarios of farmers' lives, there are some alternative solutions from an Islamic perspective and in particular related to Islamic microfinance that can be proposed here.

Theoretically, special element in microfinance lies in "joint liability" concept which lender does not take a secured interest like common credit disbursal mechanism. (Braschler, 2006). It is different from conventional loan especially in terms of participants. Microfinance is usually in small size loan, easy and flexible terms and conditions, short term financing, weekly repayment basis, fast and easy procedures of loan disbursement, (A.Rahim, 2007) and uncollateralized (Amit & Bhagwan, 2010).

Microfinance main features consist of groups of individuals who are interested, several groups from the center, have weekly meetings between representative from the center and the participants, and an official meeting from the microfinance institution (MFI) for the transaction matters. There are also forced in saving and insurance programs besides several social development programs.

Many elements of microfinance are consistent with the broader goals of Islamic finance. Both advocate entrepreneurship and risk sharing to help the poor, the financial inclusion, focus on developmental and social goals, and involve the participation by the poor. (Obaidullah, 2008) Hence, there is no doubt about benefits to joint them together while modifying the products and services to produce it as Islamic microfinance. Instead of just retain the best practices of microfinance, Islamic microfinance would consider to religious and cultural sensitivities of the Muslim clients.

However, there are few important aspects in microfinance need to be modified to make it *shariah compliant*. Prohibition of *riba*' is the main fundamental of Islamic finance existence. Regardless what the intentions are *riba*' is prohibited. At least two main types of *riba*' can be classified which is namely as credit *riba*' (*riba*' *al-nasi*' *ah*) and surplus *riba*' (*riba*' *al-fadl* (al-Zuhayli, 2006). *Riba*' *al-nasi*' *ah* can be

defined as postponement interest where happen in the delay of settlement of a due debt whether in term of loan or goods sold. While surplus *riba'*(*riba'al-fadl*) can be described as an unlawful excess in the exchange of two counter-values in the six canonically-forbidden categories of goods; gold, silver, wheat, barly, salt and dry dates. *Riba'* also exists if there is either inequality or delay in delivery of the goods offered

As an alternative to *riba*', profit and loss sharing arrangement are held as an ideal mode of financing in Islamic finance (A.Rahim, 2007). Fairness of sharing the profits and losses can be seen in two dimensions: the supplier of capital possesses a right to reward, but this reward should be commensurate with the risk and effort involved and thus be governed by the return on the individual project for which funds are supplied. What makes profit-sharing permissible in Islam while interest not is the profit-sharing ratio, not the rate of return itself that is predetermined.

In early literature on IBF studies, it was envisaged that a partnership contract or PLS rooted in the principles of *al-mudaraba* and *al-musharaka* was to be the core characteristic of Islamic banking financing operations. This was proved through the proposal to apply the PLS scheme from (Qureshi, 1945), (Uzair, 1955) and (Siddiqi M., 1983a) in order to eliminate *riba* in banking transactions (Saeed, 1999).

Additionally, the Islamic principles of *al-mushraka* and *al-mudaraba* can be adopted for all types of business. Capital can be invested alike in commercial, industrial and agricultural business on the principle of *al-mudaraba* and each enterprise can be carried on by a few capitalists jointly in partnership. There, the discussion of banking without interest should make this stand as a cornerstone or the basis for the system of banking without interest (Siddiqi M., 1985, pp. 104-105).

# 5.2 The Concept of Muzara'a and Musaga as forms of Partnership in Agriculture

Muzara'a is derived from the word "zara'a", viz crop (Ibrahim Madzkur, 1983: 401). Majalla al-Ahkam al-'Adliyya in section 1431 defined muzara'a as a contract made between two people, one a landowner and the other a farmer, whereby the landlord gives his land to the farmer to cultivate against a specified joint share of the crops (Tyse, 2001: 237). Technically, it also means a contract for the cultivation of land in return for part of the produce in accordance with conditions stipulated by law, when a farmer agrees with the landowner on a specific percentage to be obtained in exchange for work on his land. Farming expenses are shared by the worker and the landowner, proportionally.

Meanwhile, the word *musaqa* is derived from *saqa*, to water, or irrigate the land (Rohi, 1995: 636). *Majallah al-Ahkam al-'Adliyya* defines it as a contract between the owner of some trees and the farmer who treats, services, irrigates and cares for the said trees, and stipulates that the fruit produced is to be shared between them. In other words, the contract of *musaqa* means that a person agrees with someone that for a specified time, the fruit-bearing trees owned by him, or those which are under his discretion, will be assigned to that person so that he cares, tends and waters them. In return, that person will have the right to take an agreed quantity of the fruits harvested (Bosworth, 1993: 658).

However, some arguments have arisen among leading Islamic jurists as to their concept as a leasing or partnership contract. In the earlier concept of *muzara'a*, Imam Abu Hanifah suggested that this principle is invalid and only acknowledged the concept of *ijara* (leasing). Nevertheless, later schools such as Abu Yusuf, Shaybani, Ahmad ibn Hanbal, Ibn Hazm and contemporary scholars like Sadr and Taleqani proposed that this principle was similar to the partnership contract and permissible.

In structuring an Islamic microfinance for agricultural sector specifically, Islam provides another contract which similar to *al-mudarabah* and *al-musharakah* but exclusive for agriculture; namely *al-muzara'a* and *al-musaqa*.

In general, *al-muzara'a* and *al-musaqa* contracts can be defined as an agreement between the owner of a piece of land and the farmer. They would share the produce in proportions which are agreed and depend on the contribution that each has made. (Hailani & Sanep, 2009). In practice, one of the partners is working on the agricultural project and other is providing capital (land). The relationship between the partners is based on trust, with the landlord having relied heavily on the farmer's ability to manage and his honesty when it comes to harvest.

In particular, *al-muzara'a* is closely related to the cultivation of general agricultural products and *al-musaqa* is for orchard preservation. The approach crosses over into a form of partnership or product and loss sharing in agriculture. These principles have transformed the use of land and labour into commodities which both give them a value and expose them to loss and damage. Hence, it can be said that land together with labour can be considered as a form of capital and therefore has a resemblance to the contracts of *al-mudarabah* and *al-musharakah*.

Many researchers consider *al-muzara'a* and *al-musaqa* to be a partnership in profit just like *al-mudarabah*. In nature, capital of *al-mudarabah* will create profit as it cause the term profit and loss sharing (PLS) known by many Islamic economists. Nevertheless, *al-muzara'a* and *al-musaqa* have their own origins in classical custom. It was participation in output like sharecropping or output sharing. This is because the land as capital will produce the product or agricultural output. In the meantime, (Sarker, 1999) stated that output sharing contracts are mainly categorized into two types of principles which are *al-muzara'a* and *al-musaqa*. This is supported by (Khan, 1995) which agreed the difference between these contracts with *al-mudarabah* is the output shared and not the profit earned.

# 6. THE PROPOSED SCHEME OF ISLAMIC "AGRICULTURAL PRODUCT AND LOSS SHARING" (aPLS) FOR THE ISLAMIC MICROFINANCE FOR AGRICULTURE

In order to compete with the global financial system, the Islamic financial system needs innovative and hybrid financial products to meet the requirements of its customers. Therefore, Sharia scholars these days have been innovating Islamic financial instruments by combining and renovating traditional Islamic contracts.

The "joint liability" concept in microfinance is actually similar to *mudarabah and musyarakah* contracts where have widely applied in Islamic finance. In terminology, *al-mudarabah* was define as a contract between two contracting parties whereby one party (*rabb al-mal*) provides capital (money) to the second party (*mudarib*) to employ that money in trade while the profit will be divided based on initial agreement (Hailani & Sanep, 2009). The point behind this kind of partnership is collaboration of parties who have money but not skilled with the parties who have good skills and experience but do not have money.

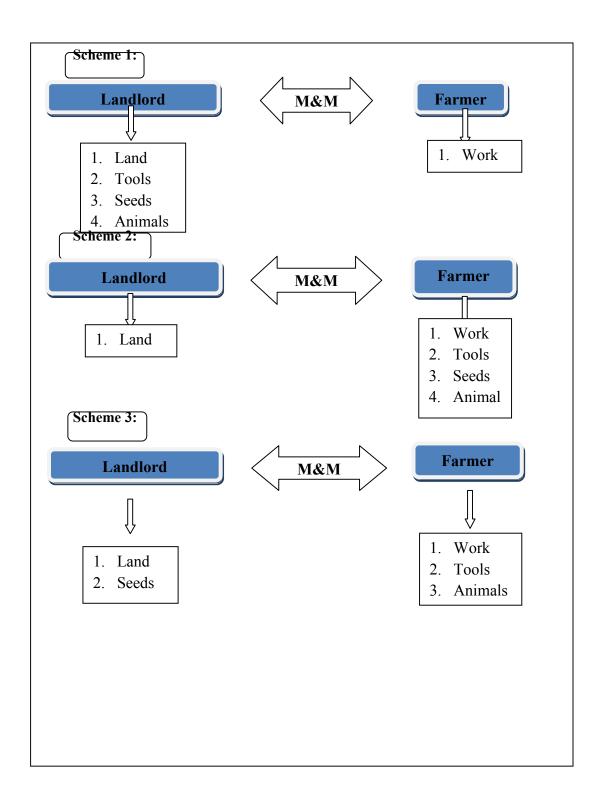

Meanwhile, *al-musharakah* was define as joint enterprise in which all the partners share the profit or loss in the joint venture in the context of business and trade. It comes from the word *shirkat ul-amwal* which refers to partnership between two or more persons with contribution some of their capital. (Usmani, 1999) . Hence, *al-mudarabah* can simply define as a profit sharing agreement and *al-musharakah* is about joint venture, which involve a profit and loss sharing agreement.

Alternatively, *al-muzara'a* and *al-musaqa* contract of financing which can be named as 'agricultural product and loss sharing' (aPLS) contract, can be initiated subject to joint partnership in the mobilization of land, other physical inputs and labour. As a basis, a contract based on this principles can specify that land and other physical factors of production for the partnership could come from one party while labour could be supplied by the other party.

On the other hand, only land can originate from one party while other factors, including labour, could come from the other party. Yet, another alternative of *al-muzara'a* is that land and labour could come from one of the contracting parties, while other factors of production may be provided by the other party in the contract. In contemporary agriculture, there is also a three-party *al-muzara'a* partnership, where the first party provides land, the second provides the physical inputs, and the third provides labour.

# 6.1 The Traditional Schemes of *al-Muzara'a* and *al-Musaqa* (M&M) between Landlord and Farmers.

Figure 1.0: The Traditional Schemes of *al-Muzara'a* and *al-Musaqa* (M&M) between Landlord and Farmer

The figure above shows the traditional schemes of *al-Muzara'a* and *al-Musaqa* (M&M) between landlord and farmer. Land, seeds, work, tools, and animals are the elements needed to be counted as contribution between both parties. Based on traditional schemes, landlord must provide land, while farmer must give contribution in term of work. The rest of the elements can be contributed by any parties as long as both of them agree.

#### 6.2 Combination of aPLS scheme and al-Salam, al-murabaha, al-ijara, and al-ujra

#### 6.2.1 aPLS and al-Salam

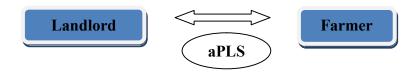

Figure 2.0: An Example of al-Salam Structure

# Procedures:

- 1. The farmer sells the crop to the bank on a forward basis. The bank pays the farmer \$X.
- 2. After the crop is harvested (let's say in 6 months), it is delivered to the bank.
- 3. The bank then sells the crop to the buyer in the market for \$Y. The difference between \$X and \$Y is the bank's profit.

Figure 3.0: A Proposed Scheme of aPLS between Farmer and Landlord

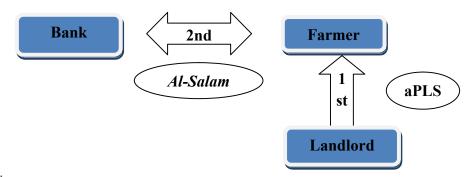

# Procedures:

- 1. The contract based on this principle can stipulate that land and other physical factors of production such as tools, seeds and animals could come from landlord while labour could be supplied by the farmer.
- 2. Alternatively, only land can initiate from the landlord while other factors, including labour, could come from the farmer.

Another alternative to aPLS is that land and seeds could come from landlord, while all other factors of production such as tools and animals may be provided by the farmer.

Figure 4.0: A Combination of aPLS and al-Salam Contracts in Developing Agricultural Land

- 1. In the first contract, the farmer and landlord create their relationship based on "Agricultural Product and Loss Sharing" (aPLS). This contract should be created as mentioned in the three schemes suggested in Figure 1.0.
- 2. Meanwhile, the second contract would be between the farmer and a bank based on *al-salam* principle. In this contract, the bank acts as a buyer and the farmer as a seller for which payment of the transaction amount occurs today for a crop to be delivered in the future.
- 3. The bank, after entering into *al-salam* contract, can enter into a parallel contract or a promise with any third party (agent) to sell the same commodity with the same specifications and date of delivery. The two contracts would be enforceable separately and independently.

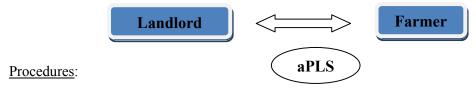

#### 6.2.2 aPLS and al-Murabaha

Figure 5.0: An Example of al-Murabaha Structure

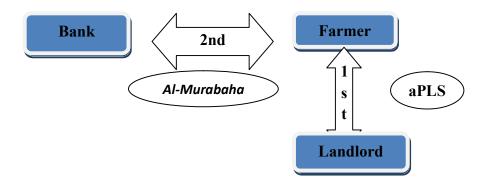

- 1. The farmer identifies a machine or agricultural tool that he desires.
- 2. The farmer approaches the bank to obtain financing based on an *al-murabaha* contract.
- 3. The bank buys the asset from the third party (manufacturer) and pays in full.
- 4. The bank sells the asset to the farmer at a mark-up selling price which can be formulated as purchase price + profit margin = selling price.
- 5. The farmer makes monthly installment payments to the bank for the specified duration time as agreed by both parties.

Figure 6.0: A Proposed Scheme of aPLS between Farmer and Landlord

- 1. The contract based on this principle can stipulate that land and other physical factors of production such as tools, seeds and animals could come from the landlord while labour could be supplied by the farmer.
- 2. Otherwise, only land can initiate from the landlord while other factors, including labour, could come from the farmer.
- 3. Another alternative to aPLS is that land and seeds could come from the landlord, while all other factors of production such as tools and animals may be provided by the farmer in the contract.

Figure 7.0: A Combination of aPLS and al-Murabaha in Developing Agricultural Land

- 1. In the first contract, the farmer and landlord have a transaction in developing agricultural land based on the aPLS principle as suggested earlier.
- 2. In the meantime, the farmer and the bank create a contract based on the *al-murabaha* principle. In the *al-murabaha* contract (deferred payment sale), the farmer identifies the assets such as tractors and agricultural machines and all its specifications and requests the bank to purchase them.
- 3. The bank afterward sells the assets on to the farmer on a deferred payment basis. The assets, the original purchase price, the mark up for deferred payment and the payment date are all agreed in the contract.

# 6.2.3 aPLS and *al-Ijara* (leasing of machinery)

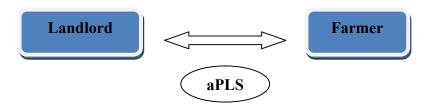

Figure 8.0 : An Example of *al-Ijara* Structure

## **Procedures**:

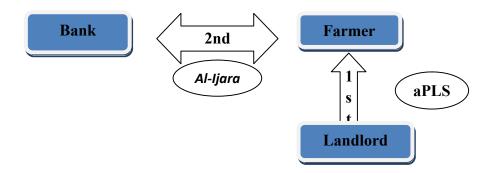

- 1. The farmer identifies a machine or agricultural tool that he desires.
- 2. The farmer approaches the bank to obtain financing based on an *ijara* contract.
- 3. The bank provides the asset and leases it to the farmer.
- 4. The farmer makes periodic rental payments to the bank for the specified duration time as agreed by both parties.
- 5. At the end of the contract, the farmer will return the asset to the bank.

Figure 9.0: A Proposed Scheme of aPLS between Farmer and Landlord

- 1. The contract based on this principle can stipulate that land and other physical factors of production such as tools, seeds and animals could come from landlord while labour could be supplied by the farmer.
- 2. On the other hand, only land can initiate from the landlord while other factors, including labour, could come from the farmer.
- 3. Another alternative to aPLS is that land and seeds could come from landlord, while all other factors of production such as tools and animals may be provided by farmer.

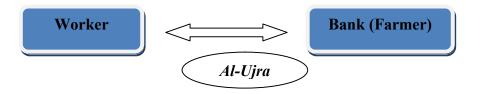

Figure 10.0: A Combination of aPLS and al-Ijara in Developing Agricultural Land

- 1. In the first contract, the farmer and landlord create their relationship based on "Agricultural Product and Loss Sharing" (aPLS). This contract should be constructed as mentioned in the three schemes suggested in Figure 1.0.
- 2. In the second contract, the farmer can use an *al-ijara* contract with the bank as a mode of financing with the purpose of enabling farmers to use durable goods and equipments such as heavy machinery like tractors and plants in productive enterprises without having to buy them.
- 3. In *al-ijara* financing, the bank purchases the asset and allows the farmer to use it for a fixed charge. The ownership of the asset remains with the bank and the farmer pays the rental.

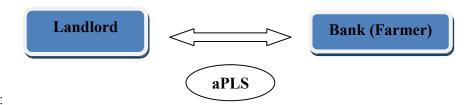

# 6.2.4 aPLS and al-Ujra (fee or commission) Labour

Figure 11.0: An Example of al-Ujra Structure

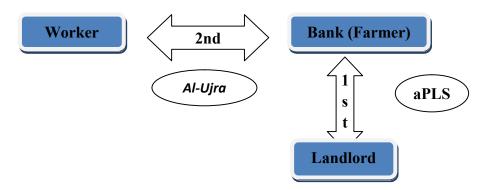

- 1. The bank acts as a farmer in this transaction and hires agricultural workers based on an *al-ujra* contract.
- 2. Al-ujra can be defined as wages or service fees against work done for others.
- 3. The workers will supply their labour skills and be paid by the bank as agreed in the contract.

Figure 12.0: A Proposed Scheme of aPLS between Farmer and Landlord

- 1. The contract based on this principle can stipulate that land and other physical factors of production such as tools, seeds and animals could come from landlord while labour could be supplied by the farmer.
- 2. Instead, only land can initiate from the landlord while other factors, including labour, could come from the farmer.
- 3. Another alternative of aPLS is that land and seeds could come from landlord, while all other factors of production such as tools and animals may be provided by the farmer.

Figure 13.0: A Combination of aPLS and al-Ujra for Developing Agricultural Land

- 1. In the first contract, the bank acts as a farmer and has a transaction with the landlord in developing agricultural land based on the aPLS principle as suggested earlier. It should be clear that it is not possible for the bank to be a farmer in real terms.
- 2. Therefore, in the second transaction, the bank will hire an agricultural worker for managing and harvesting the agricultural land based on the *al-ujra* contract. The bank will pay wages to the workers for their labour.
- 3. In this scheme, if the farmer doesn't have the capability to harvest the land by himself, he can create another relationship with other workers which are based on the *al-ujra* contract.

#### 7. CONCLUSION

As a conclusion, it can be understood that the scheme aPLS that proposed cannot stand alone in the traditional *fiqh* to be implemented now. Therefore, the combinations of aPLS contract with *ujrah* principle are really needed. This is important to ensure the flexibility of the contract that can be offer a fully comprehensive scheme of Islamic agricultural finance.

Furthermore, these principles have changed the use of land and labour into commodities which both give them a value and expose them to loss and damage. Hence, it can be said that land together with labour can be considered as a form of capital and therefore has a similarity to the contracts of *mudaraba* and *musharaka*. Hence, it can be said that these principles are "agricultural production and loss sharing (aPLS)" because land will naturally produce an output or a product. *Muzara'a* and *musaqa* therefore can be said to be contracts which are based on sharing output rather than sharing profit.

Based on the issues discussed above, the nature of farmers does not actually need a big amount of money to sustain in their cultivation. But, they also need support in term of financial, and motivation to secure their life. This support can be earned when they do partnership in agriculture based on aPLS microfinance scheme. In reality, the Islamic banks should distribute a pragmatic part of their funds to social priority sectors like agriculture and create a sound Islamic agricultural financing system to facilitate agricultural land development. Islamic banks can use "production and loss sharing" rooted in *muzara'a* and *musaqa* contracts to finance the fixed and working capital needs of small and medium farmers who cannot provide sufficient collateral to qualify for financing through conventional institutions. Moreover,

agricultural partnerships' financing, when supervised and guided, could give much higher returns on investment than most of the other methods of finance.

In brief, it should be noted that any Islamic financial products approved, should not only prioritize profit maximization as their main motivation. They must have soul in considering their social responsibility specifically for the farmer's development and generally for the worldwide food security.

To sum up, it is necessary to make more empirical studies to further clarify the above mentioned issues, defining particular steps by bringing together input from many parties, and eventually building a framework for a partnership between the landlord and the farmer from the perspective of Islamic economics.

Therefore, it is relevant to use the principles of *muzara'a* and *musaqa* or aPLS with proper adjustments from financial experts to make them practical transactions in Islamic banking and financial institutions as a form of Islamic microfinance for agriculture.

# THE EFFECTIVENESS OF ISLAMIC MICROFINANCE IN BRUNEI DARUSSALAM: A CASE STUDY

Nurhasanah Morsid<sup>1</sup> Rose Abdullah<sup>2</sup>

#### **ABSTRACT**

This research aims to analyze the effectiveness of Islamic Microfinance in helping the poor in Brunei Darussalam. Based on a qualitative method, this study selected one Islamic Microfinance Institution, which is the Department of Community Development (JAPEM) as its case study. Two types of respondents were interviewed; one JAPEM officer and 15 microfinance participants of JAPEM's Perkasa Programme. An in-depth interview was conducted to find out whether or not the programme could help lessen the poverty among the participants. The level of effectiveness of Perkasa Programme is measured in terms of the clients' income, repayment rate and business growth. The finding shows that the institution is not effective in terms of increasing the clients' income, repayment rate and growth of the clients' business. The factors that contribute to the clients' business performance beside the internal factors such as commitment include the size of the loan amount provided and support from the institution. JAPEM lacks in its outreach and sustainability aspects as they only target the economically active poor in one out of four districts, i.e. Brunei-Muara and only managed to get one fully-repaid loan out of 15 clients. This research recommends hands-on-training to the client as well as training for the staff in order to improve the effectiveness of the programme. Group lending is also suggested as a new approach in order to boost up the motivation of the client.

**Keywords:** Islamic microfinance, poverty alleviation, Brunei Darussalam

#### 1. INTRODUCTION

Brunei Darussalam, an oil abundant Islamic State was ranked 30<sup>th</sup> out of 187 countries in the Human Development 2013 Report, with a Human Development Index (HDI) of 0.855<sup>3</sup>, positioning Brunei in the 'very high' human development category and also above the regional average. This shows that Bruneians live longer and healthier, are better educated and have a higher standard of living compared to billions of people living in 157 other countries. With benefits such as free education and health care, heavily subsidised social housing and domestic infrastructure, Brunei continues to enjoy one of the highest standards of living in the world in terms of GDP per capita.

The long-term national development plan called Wawasan Brunei or Vision 2035 includes welfare assistance for certain groups of the community including the unprivileged, old age and disabled persons. The assistalaiance were provided by government institutions such as the Community Development Department (JAPEM) of Ministry of Culture, Youth and Sports (MCYS) as well as non-governmental institutions such as Sultan Haji Hassanal Bolkiah Foundation (YSHHB), Pengiran Muda Mahkota Al-

Muhtadee Billah Fund for Orphans (DANA), Brunei Islamic Religious Council (MUIB), voluntary organisations, banking institutions and others<sup>4</sup>. This study will be discussing about JAPEM, an institution that gives special attention to the segments of the population in Brunei Darussalam such as children, problematic teenagers, family, the poor and needy, unemployed single mothers and those with special needs as well as the elderly<sup>5</sup>. However, the emphasis of this study will be placed on the poor and needy. JAPEM's role in providing financial assistance to the poor and needy include providing start-up entrepreneurial funds for the needy, help in searching for employment, as well as awareness programmes on family cohesion, parenting skills, communication skills, and the provision of support and services such as counselling<sup>6</sup>.

Based on Brunei Darussalam's Household Expenditure Survey 2005<sup>7</sup>, there is no extreme poverty in Brunei Darussalam<sup>8</sup>. In 2005, the average daily expenditure per capita was PPP USD4.60 per capita, which is more than the international norm of PPP USD1.25 per day for absolute income deprivation (UNDP, 2010). Poverty in Brunei Darussalam is therefore, at a relative level. In addition, another indicator of poverty in Brunei is the number of recipients who receive *zakat* and welfare benefits and assistances<sup>9</sup>. Based on MUIB's statistics, the number of *Asnaf fakir* and *miskin* increased in the last decade, from 13,298 people in 2004 to about 16,638 people in 2012<sup>10</sup>. As disclosed in the Seventh Legislative Council meeting in 2012, there are 5,472 families (27,360 people) who are living in poverty in Brunei Darussalam<sup>11</sup>.

In 2008, the Sultan has observed in his *titah* that residents' income per capita has been increasing in the past few decades, thereby contributing to the citizens' welfare and standard of living<sup>12</sup>. This growth, he said, should imply that the rate of poverty is decreasing however, what we have witnessed is otherwise. Due to recent reports on few agencies and institutions, the number of people receiving financial benefits and assistance seems to be increasing every year. The government of Brunei has raised its concern by introducing more poverty alleviation programmes in the country. However, thus far it is still unknown that if the current poverty alleviation programmes are effective enough to tackle poverty in Brunei Darussalam.

Microfinance is known as one of the most effective global poverty alleviation tools. Its success and positive impacts in most developing countries had been proven, mentioned and retold plenty of times in the media as well as literature. Despite its growing success, it also has its issues and limitations. Not being able to cater to Muslim countries, particularly in terms of having *riba* (interest) is one of its main limitations. Since most of the poor people living in developing countries are Muslims and practicing, many shunned away from using the conventional microfinance system. Furthermore, most Muslims need financial schemes that are *Shar'iah*-compliant. Therefore, this research will be focusing on Islamic Microfinance which can help the poor and needy to improve their standard of living.

Islamic microfinance has recently become a rapidly growing market, offering millions of disadvantaged people in Muslim countries and beyond access to financial services that are premised on providing for the welfare of the population. Islamic microfinance is also becoming an ever more important instrument in fighting rural poverty in Muslim countries, and effectively diversifying strategies in improving access to finance in other parts of the world. While conventional microfinance has successfully reached large numbers of the poor in Muslim countries (mainly in Bangladesh and Indonesia), there is evidence to suggest that there are many potential clients of microfinance that categorically reject products that do not comply with Islamic principles<sup>13</sup>. The increasing rate in unemployment, poverty as well as the low levels of financial access in Muslim countries continues to create high demand for microfinance. International Finance Corporation (IFC)-commissioned market studies show that in Algeria and Jordan, about 20% of the poor cite religious reasons for not seeking conventional microfinance, while in Yemen and Syria, there is about 40% of them. In the CGAP survey in 2008, local practitioners and key informants suggested similar trends in Indonesia, Afghanistan, Pakistan, the Palestinian territories as well as Muslim majority areas of India, Sri Lanka, Cambodia, the Philippines and including Brunei Darussalam. Overall, it is estimated about two-thirds of the microfinance market in the Muslim world either insists on, or prefer Islamic financing (Khaled, 2011).

The objectives of this research are to evaluate the effectiveness of Islamic Microfinance Institution in terms of the clients' income, repayment rate and business growth and to review the institution's performance in terms of its outreach and sustainability. The remaining of this paper will discuss the overview of Islamic Microfinance in section 2. This will be followed by discussion on a case study of Islamic Microfinance in Brunei Darussalam in section 3. The results and analysis of this survey will be presented in section 4 and ended with conclusion and recommendation in section 5.

#### 2. OVERVIEW ON ISLAMIC MICROFINANCE

Several researchers such as Dogarawa (2009), Harran (2008) and Nazirwan (2009) defined Islamic Microfinance as the provision of financial services and products to those whose low economic standing excludes them from *Shari'ah* compliant financial institutions or programmes and is basically an extension of the Islamic banking and finance concept, which is free of *riba*<sup>14</sup> (non-interest based) financing arrangements. Instead of charging interest, the transaction is in a form of profit and loss sharing contract and mutual partnership, where its practices should be tied to tangible goods and real economic activities, prohibit speculative transactions, illicit business, cheating and deception as well as unjust practices<sup>15</sup>. In other words, it should be free from any involvement of activities prohibited by Islam and from elements like usury (*riba*), gambling (*maisir*), harmful substance (*darar*), and excessive ambiguity (*gharar*)<sup>16</sup>.

Karlan and Golberg (2011) and Obaidullah (2008) agreed that conventional and Islamic microfinance should have characteristics that instil economic empowerment as well as cooperation and solidarity for the poor. In other words, microfinance in general aims to: provide loans for entrepreneurial activity,

promote group lending and focus on poor clients. In addition, Obaidullah (2008) identified four other characteristics that made IMF distinct from conventional microfinance, which are:

**Charity-based** - The broad term for charity in Islam is *sadaqah*<sup>17</sup>. When *sadaqah* continues to accrue over generations and results in flow of benefits that are expected to be stable and permanent such as through endowment of physical property, it is called *sadaqah jariah or waqf*. When obligatory mandated on an eligible Muslim, *sadaqah* is called *zakah*. *Zakah*, the third among five pillars of Islam, is a tax that is levied on all persons having wealth above an exemption limit (*nisab*) at a rate fixed by the *Shari'ah* to purify wealth and souls from impure love<sup>18</sup>.

**Debt Avoidance** - Debt is permitted in Islam however it recommends only as a last resort and not as a means to finance one's growing lifestyle needs. Some of the warnings for Muslims in the *Qur'an* and *Ahadith* include warnings against extravagance<sup>19</sup>, against the dangers of incurring heavy debt<sup>20</sup>, exhorted to repay their debt in time and avoid deliberate delays. The Prophet (pbuh) is reported to have said: "The best among you are those who are best in paying off debt<sup>21</sup>" and "Procrastination in repaying debts by a wealthy person is injustice<sup>22</sup>." IMFIs should refrain from seeking to entrap a client in ever-increasing levels of debt as may be the case with many conventional MFIs.

**Family Cohesiveness** - Family is being regarded as the utmost important role in Islam as it shapes the future of mankind. Furthermore, Islam sees a balanced role for men and women in ensuring the economic and the social well-being of the family. It was stated in the Qur'an that all human beings are created in pair, "And everything have We created in pairs that you may reflect." (51:49). The "womenonly" approach in most conventional microfinance is alien to Islamic religion and culture. Instead of only focusing on women, the Qur'an promotes the concept of "family empowerment" by exhorting men and women to play their respective roles in seeking economic and social well-being of all members of the family. One verse from the Qur'an highlighted this part, "And covet not that whereby Allah has made some of you excel others. Men shall have a share of that which they have earned, and women a share of that which they have earned. And ask Allah of his bounty. Surely Allah has the perfect knowledge of all things." (4:32)

**Shari'ah-Compliance of Contracts** - Islamic microfinance products and services are essentially in the nature of the contracts, that is, all contracts in *Shari'ah* must be free from certain forbidden elements such as *riba*, *gharar*<sup>23</sup> and *jahl*<sup>24</sup>. The Qur'an declares trade to be lawful means of livelihood as opposed to *riba*, which is forbidden for being oppressive and exploitative. *Riba* is a loan or debt contract that exists when it stipulates an excess in repayment by the borrower. The presence of *riba* in most

<sup>20</sup> Sahih Bukhari, Book 41, Vol. 3, No. 582; Sahih Muslim, Book 4, Chapter 68, No. 1218

<sup>&</sup>lt;sup>17</sup> *Lit:* Charity. *Tech:* In its widest sense it means an attitude of mutual appreciation, affection, mutual assistance, an act of loyalty to God and one's fellow beings, a sense of true human hood. At material level, it consists of two kinds: *al-sadaqah al-tatawwu'* given at free will of the donor and *zakah*, the obligatory tax imposed by the *Qur'an* on the Muslims having wealth beyond a certain limit.

<sup>&</sup>lt;sup>18</sup> Khan, M. A. (2010) "Islamic Economics and Finance: A Glossary". London and New York: Routledge.

<sup>&</sup>lt;sup>19</sup> Al A'raf (7: 31) and Al-Isra' (17: 26-27)

<sup>&</sup>lt;sup>21</sup> Sahih Muslim, Book 10, Chapter 3, No. 3898.

<sup>&</sup>lt;sup>22</sup> Sahih Bukhari, Book 37, Volume 3, No. 486.

<sup>&</sup>lt;sup>23</sup> *Lit*: Hazard, chance or risk. *Tech*: Sale of a thing that is not present at hand; or the sale of a thing whose consequence or outcome is not known; or a sale involving risk or hazard in which one does not know whether it will come to be or not, such as a fish in the water or a bird in the air.

Jahalah (single: jahl). *Lit:* Ignorance, folly, foolishness. *Tech:* Doing something without sure knowledge. For example, buying something without knowing its specifications. There is a fine difference between jahalah and gharar. In a sales transaction, if a person is unsure whether he would be able to get the subject of sale or not, it would be a transaction involving gharar. For example, buying a fish still in water, not being sure if it would be possible to catch it or not. But if a person buys something lying in the closed cabinet of the seller, it would be transaction involving jahalah as the buyer is sure to get the subject of sale but is not sure about its specifications.

conventional financial contracts makes it unlawful and unacceptable in Islamic microfinance. The concept of *gharar* has been discussed by Islamic scholars and defined in two ways, first, *gharar* implies uncertainty and second, it implies deceit. The Qur'an has clearly forbidden all business transactions that cause injustice in any form to any of the parties. This may be in the form of hazard or peril leading to uncertainty in any business, or deceit or fraud or undue advantage. It is also worth noting that the prevalence of *gharar* poses a great challenge to an Islamic legal expert in the context of the informal setting of rural and micro economies with their non-standardized contracts of various types. The need for *Shari'ah* compliance has led to considerable research into product development. While the conventional system provides for simple interest-based deposits, donations and loans, the Islamic financial system comprises an array of instruments for mobilization of funds, financing and for risk management.

#### **Islamic Microfinance Products**

According to CGAP (2013), the supply of Islamic financing products for the poor is largely limited to *Murabaha* and *Qard Hassan* loans, whereas the minority includes *Salam, Musharakah/Mudarabah*, and other. *Murabaha* is a "cost plus mark-up" sale contract often used as working capital to finance goods needed<sup>25</sup>. The client typically requests a specific commodity for purchase which the financier procures directly from the market and subsequently resells to the client after adding a fixed "mark-up" for the service provided. Ownership of the commodity (and the risk inherent thereto) strictly lies with the financier until the client has fully paid the financier. The mark-up is distinct from interest because it remains fixed at the initial amount, even if the client repays past the due date. This product is used heavily in trade/inventory financing.

**Qard Hasan** is a virtuous or benevolent loan. It is an interest-free loan, typically given to needy students, small producers, farmers, entrepreneurs and economically weaker members of the society, who are not in a position to obtain loan or any financial assistance from any other institutional sources<sup>26</sup>. **Qard Hasan** loans are often dispersed as a form of charity rather than a self-sustaining business, funded by donations such as **zakat** or **sadaqa**. **Salam**, is an advance payment against future delivery<sup>27</sup>. According to the general law, no sale can be affected unless the goods are in existence at the time of the bargain, but this sort of sale forms an exception to the general rule provided the goods are defined, price is paid in advance and the date of delivery is fixed. It is usually applied in the agricultural sector where the bank advances money for various inputs to receive a share in the crop (that the bank sells in the market)<sup>28</sup>.

The profit and loss sharing schemes of *Musharakah* and *Mudarabah* are not widely offered by Islamic Microfinance providers though both are most encouraged by *Shari'ah* scholars as they are the Islamic financial contracts that are best reflecting *Shari'ah* principles. *Musharakah* is partnership financing in which the parties share the profits or losses according to a predetermined ratio. It can be used for assets or for working capital. *Mudarabah* is capital or trustee financing, in which one party acts as financier by providing the funds, while the other party provides the managerial expertise in executing the project (or provides some other form of nonfinancial contribution). In *Mudarabah*, profits are shared according to a predetermined ratio but any financial losses are borne entirely by the financier while the manager loses time and effort (or other nonfinancial contribution). Both *Musharakah* and *Mudarabah* require vigilant reporting and a high level of transparency for profits and losses to be distribute fairly. Though promoted strongly by *Shari'ah*, they often result in substantial operating costs, particularly for micro and small enterprises that are not accustomed to formal accounting (CGAP, 2013).

Another Islamic microfinance product that is oft-mentioned in most literature such as by El Tigani Ali (2011), Haque and Yamao (2011), Abdul Rahim Abdul Rahman (2010), IRTI (2008) is called *Ijarah*, which is a leasing contract typically used for financing equipment such as small machinery<sup>29</sup>. For the transaction to be considered as Islamic (and not a sale with camouflaged interest), the *ijarah* contract must specify that ownership of the asset and responsibility for its maintenance remain with the financier<sup>30</sup>. *Ijarah Muntahia Bitamleek (IMB)* is an elaborate concept of *ijarah* where the transfer of ownership will take place at the end of the contract and pre-agreed between the lessor and the lessee<sup>31</sup>. The title of the asset will be transferred to the lessee either by way of gift, token price, pre-determined price at the beginning of contract or through gradual transfer of ownership<sup>32</sup>. IMB is more suitable for microfinance scheme especially for microentrepreneurs who are in need of equipments.

# **Limitations and Challenges of Islamic Microfinance Institutions**

A study conducted in Bangladesh by Haqq and Yamao (2011) found that Islamic Microfinance Providers (IMPs) have failed to reach the poorest of the poor because of its fund limitations. Their findings also revealed that almost all of the Muslim respondents were compelled to borrow from conventional interest-based NGO-MFIs in the absence of Islamic financing sources. However, almost all of them had a strong desire to join Islamic NGO-MFIs, switching from their membership in conventional NGO-MFIs, provided that the right conditions are created. The main challenges for the growth and development of IMPs in Bangladesh include lack of funding and support from the government and national and international donor and development agencies, allegations of involvement in patronising militant activities and lack of entrepreneurial and managerial skills. According to UNDP (2012), several challenges of Islamic Microfinance in many Muslim majority countries include having lack of resources particularly funding and Islamic finance related knowledge, lack of capacity building, lack in operational efficiency and risk management and finally, unfavourable rules and regulations.

# 3. A CASE STUDY ON ISLAMIC MICROFINANCE IN BRUNEI DARUSSALAM

The Community Development Department or JAPEM is selected to be a case study for this research as it has fulfilled most of the key characteristics of a traditional microfinance institution. Referring to the common characteristics of microfinance agreed between Karlan and Goldberg (2011) and Obaidullah (2008) in section 2, JAPEM has two out of three characteristics of microfinance, namely: it provides loans for entrepreneurial activity and it gives a focus on poor clients. This study is based on qualitative method, which is in the form of structured interviews. In-depth interviews were conducted with 15 respondents at their residences or on their business premises. Secondary data was also collected from news media, published materials such as academic books, reports and conference proceedings, online materials such as JAPEM's website, reports, conference proceedings (both national and international).

In 2005 JAPEM introduced a microcredit scheme called Self-Reliance Scheme. This scheme has been operated for 5 years from the year 2005 until the year 2009. In total, there were about 96 people who participated in this scheme and only 4 of them, i.e. those who were living in destitute conditions were given grants. The repayment rate in 2012 for this scheme was 28.6% and was considered 'good' by a local bank<sup>33</sup>. However, several problems arose from this scheme such as the sustainability of the fund, misuse of the money, the ineffectiveness of the entrepreneur and lack of business courses offered, resulting in the lack of knowledge of basic financial and marketing skills and lack of motivation. As the

<sup>&</sup>lt;sup>29</sup> Haque and Yamao (2011) *Prospects and Challenges of Islamic Microfinance Programmes: A Case Study in Bangladesh.*<sup>30</sup> Thid

<sup>&</sup>lt;sup>31</sup> Abdul Rahim Abdul Rahman. (2010). *Islamic Microfinance: an ethical alternative to poverty alleviation*.

<sup>32</sup> Ibid.

<sup>&</sup>lt;sup>33</sup> Rose Abdullah (2012) Microfinance Services in Brunei Darussalam.

fund was obtained from the National Welfare Fund, it is not sustainable and will keep on depleting unless there is a constant contribution from donors<sup>34</sup>. JAPEM then terminated the scheme and tried to improvise it by adding mandatory training courses to potential clients for its new programme. Its new programme called Perkasa was introduced in 2011 and to date it only has one batch of 17 clients.

The main aim of Perkasa programme is to help the target group to change their attitude and mindset from relying wholly from the welfare assistance in order to avoid problems of not meeting their daily expenses needs. Loans will be given according to their business plan that is presented and is based on *Qard alhasan*, thus the loan will be given out without interest, guarantor or collateral. The programme runs on financial resources from the Ministry of Finance. This programme has four main elements, which are entrepreneurship training, business skills, personal development, and loans for business. These four elements are closely related to achieve several detailed objectives, namely: reducing dependency on welfare assistance, providing a higher level of exposure regarding entrepreneurship and business field, promoting attitudes to be more self-sustainable, always progressive and resilient among target groups, and helping to reduce the rate of poverty in Brunei Darussalam.

JAPEM initially reached its applicants by informing any of its welfare recipients about the programme. They asked the recipients if they have business background and if they are interested to participate in the microfinance programme. If the recipients are interested, they will be given an application form to be filled in. Each Perkasa participant is required to be a citizen of Brunei Darussalam including a permanent resident, has no permanent job, has no income or below BND150 (according to the guideline by JAPEM's monthly welfare assistance), has a business location, has government-approved business registration licenses, is prepared to attend mandatory courses, any interviews or meetings, briefings, counselling, training or others that are organized by JAPEM, has experience in managing any entrepreneurial activities, is healthy, is willing to pay back the loans and agrees to comply with the conditions set by JAPEM from time to time.

The following steps include: the applicant receives their application form through letter, reference or walk in; the applicant fills in their application form with the assistance from social worker; the applicant lets their house or business premise to be visited and inspected by social worker who will then write a report about it; the applicant waits for the preliminary assessment by Perkasa Task Force Committee (PTFC) that will send a letter notifying the success or failure of their application; if the applicant is successful, they will be interviewed by Interview Committee and their qualification will further be assessed by PTFC; those who failed the assessment will be sent a rejection letter and those who are successful will be asked to present their business plan and quotation; PTFC will then assess the applicant's proposed loan/financial assistance and will conduct a preliminary meeting (screening) with Head of Division; the applicant will then sign an agreement with JAPEM and will be given Letter of Permission for loan/financial assistance; a supplier will be appointed to supply permanent/raw materials to applicant in which the supplier needs to present claims to JAPEM so that JAPEM will give payment to them; and finally the applicant will make monthly loan repayments to JAPEM.

The PTFC has a mandate to approve the business financing whether in the form of loan or financial assistance according to the application and also the applicant's ability. The maximum loan amount that can be approved is BND3,000 for each applicant, while the maximum assistance that can be approved is BND2,000. However, the amount of assistance or loan approved would depend on the evaluation of the PTFC and does not necessarily follow the amount that has been applied by the applicants. The recommended minimum loan repayment rate is BND50 per month and the applicant is encouraged to repay at a higher rate according to each other's agreement. The repayment begins three months after the supply of permanent/raw materials and the repayment period depends on the monthly loan repayment rate

<sup>&</sup>lt;sup>34</sup> Ibid.

until it finishes. For example, if the approved loan amount is BND3,000 and the applicant agrees to repay at the rate of BND50 per month, then the loan repayment period is 60 months or 5 years starting from the fourth month after the supply of permanent/raw materials.

The type of Entrepreneurship that will be managed by participants depends on the willingness and ability of applicants. The Perkasa Programme Committee will evaluate and give advice pertaining to the compatibility of the maximum capital amount that has been prepared by JAPEM. To fulfil the conditions in order to approve the loan or financial assistance, the participants should attend mandatory courses at the venue and during the period that has been set by JAPEM. Some of the components of the mandatory courses are as follows: i) basic entrepreneurial course, ii) business management course, iii) finance and cash flow courses, iv) business skills course, v) business plan course, vi) personal development course.

Within the period of the course, participants will be given training allowance of BND200 each, while for a couple, whether husband and wife, siblings, or parent and child who are participating together for each enterprise, training allowance approved is BND300 for each enterprise or BND150 for each partner. Training allowance will be paid according to the attendance of participant in every training session. Monitoring of applicant's business activity will be conducted every week of the first three months from when the applicant was given his/her loan or financial assistance and twice per month starting from the fourth month onwards. This is to ensure that the recipients will continuously be given support and guidance in order to help them to do their business successfully. Series of monitoring visits will be done by the officer and social workers of entrepreneurship unit. Among the things that will be emphasized in the monitoring sessions is the journey of the entrepreneur such as finance, the cleanliness of the premise and to monitor any difficulties faced by the applicant. According to the Programme officer, the Ministry of Finance has given JAPEM an estimated loan of BND200,000 for a three-year period. Of this amount, JAPEM has spent about BND61,000 for one batch of participants alone.

Table 1: Cost incurred during the first session of Perkasa Programme

Particulars	Amount (BND)
Mandatory training courses	\$61,000
Training allowance for training instructors and training expenses	\$10,000
Training allowance for participants	\$4,000
Food	\$3,000
Transportation (bus)	\$1,500
Loans for participants	\$20,000
Extra courses and talks for participants – by Brunei Economic Development Board (BEDB) and Youth Development Centre (PPB)	\$22,500

Source: JAPEM, 2013

**Current Status -** As of April 2013, Perkasa has only one batch of clients comprising of 17 individuals since its commencement in 2011. JAPEM is currently still waiting for more funds from the Ministry of Finance to finance for the second batch of Perkasa Programme. JAPEM expects the number of people applying would be increasing, thus the need to wait for the loan.

**Outreach** - Regarding the outreach of Perkasa's potential clients, JAPEM only takes clients who are living in the Brunei Muara district as this programme is still new. However it plans to reach clients in other districts if the programme is proven to be successful and sustainable.

**Sustainability of fund** – JAPEM is currently trying to look for some sound solutions as to how they would be paying back the loan to the Ministry of Finance for the mandatory training courses expenses.

**Current Problems** - They are having difficulties in financing the programme as well as lacking of staffs. To date, they only have 4 social workers. To attend the mandatory training courses, each client who already has a business would find it difficult as they would have problems such as not having anyone to replace him or her to care for their business while attending courses, or not having anyone to take care of their family members such as their old parent or toddlers. JAPEM is currently trying to look for ways on how to solve this issue as they plan to extend the mandatory training courses period for future participants.

**Perkasa's Future Plans** - For the next batch of Perkasa participants, they have discussed some plans such as: i) to extend the period of mandatory training courses from 1 month to 2-3 months, ii) to add more subjects, i.e. Cake & Pastry and Beauty & Make-up from Youth Development Centre (PPB), iii) give financial grants of about BND2,000 to each participant who is considered as destitute and is worse off than the economically active poor.

**Sample** – In total, only 17 people participated in the Perkasa Programme in 2011. The researcher initially planned to interview all participants but found it difficult to reach two of them via phone calls as well as meeting in person because they were reluctant to be interviewed. Therefore, the researcher only managed to interview 15 of them. Respondents are all from the Brunei Muara district (the most populated district amongst the four districts in Brunei Darussalam).

Questionnaires – The purpose of this survey questionnaire is to examine and analyse the effectiveness of Perkasa Programme in JAPEM. Each set of the interview questionnaire comprises of 60 questions, which includes both close-ended and open-ended questions. Close-ended questions were used for clarification, verifying information regarding JAPEM and their micro-business projects, thus making it easy for data analysis. Open-ended questions were used to gather more information regarding the respondents' profiles, the status of their business projects and their loan repayment performance. These questions were also used to collect narrative responses so as to reveal rich information that could help in creating or suggesting sound solutions for their problems.

**Determinants of the Level of MFI Effectiveness** - In order to find out the effectiveness of Islamic Microfinance in helping the poor in Brunei Darussalam, this study attempts to determine Perkasa Programme's level of effectiveness in terms of the clients' income, repayment rate and business growth (number of business assets and number of workers). Based on these variables, this study categorizes it into 5 level of effectiveness, namely: very low, low, medium, high, and very high (See Table 2).

Table 2: Level of Effectiveness of Perkasa

	Low	Very Low	Medium	High	Very High
Loan Consumption for Business Purpose	Less than or equal to 19% of clients used loans for business purpose	Only 20%-39% of clients used loans for business purpose	40%-59% of clients used loans for business purpose	60%-79% of clients used loans for business purpose	More than or equal to 80% of clients used loans for business purpose
Increase in Income	Less than or equal to 19% of clients have increase in their income	Only 20%-39% of clients have increase in their income	40%-59% of clients have increase in their income	60%-79% of clients have increase in their income	More than or equal to 80% of clients have increase in their income
Increase in Repayment Rate	Less than or equal to 19% of clients have increase in their repayment rate	Only 20%-39% of clients have increase in their repayment rate	40%-59% of clients have increase in their repayment rate	60%-79% of clients have increase in their repayment rate	More than or equal to 80% of clients have increase in their repayment rate
Increase in Number of Business Assets	Less than or equal to 19% of clients have increase in their number of assets	Only 20%-39% of clients have increase in their number of assets	40%-59% of clients have increase in their number of assets	60%-79% of clients have increase in their number of assets	More than or equal to 80% of clients have increase in their number of assets
Increase in Number of Workers	Less than or equal to 19% of clients have increase in their number of workers	Only 20%-39% of clients have increase in their number of workers	40%-59% of clients have increase in their number of workers	60%-79% of clients have increase in their number of workers	More than or equal to 80% of clients have increase in their number of workers
Total (Average)	0-19%	20%-39%	40%-59%	60%-79%	80%-100%

Source: Author's own design based on findings

This table will then be used to determine the level of effectiveness of the Perkasa microfinance programme in the following section.

#### 4. FINDINGS

This section presents the findings of the interviews:

# i) Analysis on the Effectiveness of JAPEM as an Islamic Microfinance Institution

This section analyses the effectiveness of JAPEM in terms of the client's loan consumption, increase in income, increase in repayment rate, increase in the number of workers, and increase in the number of business assets. In terms of the respondents' loan consumption, all of the respondents were using the loans for business purposes. This is due to the close and strict monitoring made by JAPEM social workers to ensure that these loans were all bought for business purposes (see Table 3).

**Table 3: Respondents' Loan Usage** 

Client	Loan Amount	Loan usage/consumption
1	\$1,000	\$600: Freezer, \$400: Goods
2	\$1,000	\$600: Freezer, \$400: Goods
3	\$1,000	\$1,000: Freezer, Ice box, Blenders, Food processor, Oven
4	\$1,000	\$420: 3 types of Gas, \$580: Welding set, tools, etc
5	\$2,000	\$1,900: 2 sewing machines, \$100: sewing materials
6	\$500	\$500: Raw food materials such as chicken, meat, etc
7	\$1,000	\$500: Velvet rolls, \$500: Threads
8	\$1,950	\$1,950: Freezer, Ice box, Mixer, Oven, Rice Cooker
9	\$1,000	\$1,000: Trolley, Tent, Cool box, Food and drinks materials
10	\$1,000	\$500: Tent, \$500: Flowers
11	\$1,000	\$800: Chafing dish sets, rice cooker, wok pan, \$200: raw food materials
12	\$1,600	\$1,600: Freezer, refrigerator, blender, raw food materials
13	\$1,000	\$1,000: All fruits bought in bulk
14	\$1,950	\$1,950: 2 sewing machines
15	\$1,000	\$500: Containers, weighting scale, trays, \$500 – fishes

In terms of the respondents' income, it is found that the majority (47%) of the respondents have fluctuating income, 33% maintained their income and only 13% have an increase in their income while taking into account that one respondent was unemployed (see Table 4). This shows that the loan is only helping to very few respondents as the majority of them have unstable income.

Table 4: Respondents' Income Breakdown for the period of 3 months (before the interview)

Participant	Last 3 months	Last 2 months	Last month	Change
1	40+	70+	50+	Fluctuate
2	300+	300+	300+	No change
3	0	0	0	N/A (unemployed)
4	<1000	1000+	1000+	Increase
5	1953	Not fixed	Not fixed	Fluctuate
6	100	100	100	No change
7	1500+	1500+	1500+	No change
8	1000+	1000+	1000+	No change
9	0	0	300+	Fluctuate
10	30	50	83	Increase
11	>5000	>5000	>5000	No change
12	Not fixed	Not fixed	Not fixed	Fluctuate
13	Not fixed	Not fixed	Not fixed	Fluctuate
14	Not fixed	Not fixed	Not fixed	Fluctuate
15	Not fixed	Not fixed	Not fixed	Fluctuate

In terms of the repayment rate, more than 90% of the respondents do not repay their loan regularly while 7% of them have stopped repaying the loan due to being unemployed or inactive in their businesses. However, it is found that JAPEM has recently asked the respondents to pay every month regardless of the minimum required repayment, i.e. \$50. It was during the month of the interview that the respondents started to pay regularly as low as \$5. It can be observed that JAPEM has taken an action although subtly to discipline the respondents regardless of the amount size of the repayment.

In terms of the number of helpers or workers, this study found that most (40%) of the respondents have family members as their helpers, 33% are self-operating their businesses, 13% have foreign workers to assist them doing the business, and the rest will only hire their relatives or other people if the workload is too much. This shows that most of the respondents rely on their families as their helpers and the payment for them is sharing-based. To date, they have not added new helpers or workers, however based on the interview, about 20% of the respondents intend to increase more workers however they do not have enough capital to employ any workers. This shows their businesses are growing regardless of their limited income for extra labours. However, the majority (67%) of the respondents have increased their assets in the form of equipment used in operating their micro businesses however 13% obtained their added equipments from BEDB grant. This shows that most of their micro-businesses are growing (see Table 5).

Table 5: Respondents' Added Assets of Business

Particulars	Frequency	Percentage
Added Assets		
None	5	33
Materials for displaying products at stall	3	20
Popcorn machine, sealer, food warmer, freezer, refrigerator, chocolate fountain, waffle maker, 5 trays (BEBD loan)	2	13
Own Mini store (built it on his own)	1	7
Bought clothing materials in KL worth of \$3,000	1	7
Glass box container for drinks	1	7
Umbrella for shade (taking care of flowers) at the market	1	7
Barbecue grill	1	7

According to JAPEM's objectives in section 4. Perkasa programme aims to reduce dependency on welfare assistance, provide a higher level of exposure regarding entrepreneurship and business field, promote attitudes to be more self-sustainable, always progressive and resilient among target groups, and help reduce the rate of poverty in Brunei Darussalam. Based on the personal interviews with each client, the majority (53%) of them are still receiving assistance from the government and of those who are not receiving, 20% of them are currently waiting for their application for assistance to be approved. This shows that the clients are still in need of welfare assistance. As for providing a higher level of exposure regarding entrepreneurship and business field, all participants stated that they have learned a lot in their one-month mandatory training courses. However, because the mandatory courses were all done at the same time, i.e. every subject has to be attended by each participant regardless of their type of business, for example, a cook has to listen about the scope of work of a mechanic, 7% of respondents became confused and less interested to focus on the training courses and 13% said the period of mandatory courses should be extended as one month is too packed for them. This also means that they are interested to learn more about such fields. In terms of promoting to clients to be more self-sustainable, always progressive and resilient among themselves, only one out of 17 participants can do so, i.e. by repaying in full the loan amount of BND500.

In order to determine the effectiveness of the microfinance institution, this study has categorized the level of effectiveness into five categories, namely: very low (0-19%), low (20%-39%), medium (40%-59%), high (60%-79%), very high (80%-100%). The percentage of effectiveness level is computed by totalling up the percentage of client population (with an increase in the variable) and dividing it by 5 (see Table 6).

Table 6: Result of Level of Effectiveness of the Perkasa Programme

Particulars	Level	Level of Effectiveness (Very Low, Low, Medium, High, Very High)
Loan consumption for business purposes	100%	Very High
Increase in Income	13%	Very Low
Increase in Repayment rate	0%	Very Low
Increase in number of workers	0%	Very Low
Increase in number of assets	67%	High
Total	36%	Low

Overall, it can be seen that the level of effectiveness of the Islamic microfinance institution, JAPEM is low. JAPEM has shown a low level of effectiveness in terms of increasing its clients' income as well as its repayment rate and number of workers. However, it has shown a very high level of effectiveness in terms of utilizing the loan for business purposes and high level of effectiveness in terms of increasing the number of their clients' assets.

In terms of JAPEM's outreach, it only takes clients who are living in Brunei Muara district as this programme is still new. In terms of its sustainability, it does not seem to be doing well as only one of the respondents have made a full repayment and that they are willing to take any size of loan amount as low as \$5. However, this programme is still new and the institution has plenty of rooms for improvement. The microfinance clients still need continuous guidance and consultancy services from the institution. Productive discussions need to be made with both parties at a regular interval so as to achieve a compromise. The mandatory training courses also need to be extended and more focused in each of the client's chosen business type so as to make use of the time effectively.

# 5. CONCLUSION

Despite being a very small country, Brunei is one of the wealthiest countries in the world in terms of GDP per capita and HDI. However, over the past few years, along with the improvement of the country's economic and human development, there is evidence that poverty becomes a concern in Brunei which is especially due to the increasing number of welfare and *zakat* recipients every year. Although poverty remains a problem, it is considered as a relative poverty in the country.

Strong evidence shows that all of the clients had been consuming the loan given entirely for business, which is due to the strict monitoring by staff of JAPEM. However, the IMFI (JAPEM) has a low level of effectiveness in alleviating poverty in Brunei Darussalam. Although JAPEM is highly effective in increasing the clients' number of business assets, the institution is not effective in terms of increasing the clients' income, repayment rate and number of workers. JAPEM has not been reaching the poor people in all four districts in Brunei Darussalam however it only focuses on clients living in Brunei-Muara district. The type of poor they target is also not the poorest of the poor however they are economically active poor. JAPEM is not doing well in terms of sustainability as the repayments that they are receiving cannot cover their operational costs. Only one of JAPEM's clients managed to make a full repayment, who is also the only client that has the smallest size of loan amount. Also, based on the findings, there is evidence that the clients still need welfare assistance in order to become successful in their microbusinesses. Finally, the aim to reduce the rate of poverty in Brunei Darussalam seems farfetched at this short period of time, i.e. 2 years. Overall, JAPEM has not achieved its objectives however it is moving positively towards it although slowly. Although having a low level of effectiveness in alleviating poverty, JAPEM technically has more rooms for improvement.

#### Recommendation

Almost all Perkasa participants have not repaid in full, which is a major problem when it comes to sustaining its funds. This is perhaps due to lack of discipline and poor management in their bookkeeping. As most of them have quit school during their secondary level, they would have difficulties in receiving a crash course in such a short period of time. This study therefore recommends JAPEM to provide handson-training by their staff at the initial stages of the clients' businesses. Not only the clients could learn the bookkeeping step by step, they would also become more confident when being closely guided by the staff of JAPEM. The people in Brunei are not living close to each other like those people in Malaysia. It is because of the closeness of the clients' houses to each other that make the group lending easier for the Malaysians, e.g. in Amanah Ikhtiar Malaysia (AIM), which probably might not have the same effect in Brunei. Nevertheless, as the majority of Perkasa clients are interested in group lending, this study recommends for JAPEM to first have a pilot study in Kampong Ayer, where many poor people live very close to each other. JAPEM could provide loans to groups of five borrowers together and each member shares joint responsibility (risks) with all of the other group members.

Although JAPEM is currently using *Qard Hasan* as its Islamic microfinance product, its performance has not been as effective. To make it more sustainable, this study recommends either one or two types of debt-financing models, namely: Murabaha and Ijarah. For Murabaha, JAPEM will purchase goods upon request of a client, who makes deferred payments that cover cost and agreed-upon profit margin for JAPEM. Murabaha's mode of operation<sup>35</sup> includes: i) the institution (JAPEM) buys good from Supplier, ii) the borrower then buys the assets from JAPEM at marked-up price, which is payable on a deferred payment basis, iii) the period covering the deferred payment is effectively the period of financing, and iv) the title to the assets is transferred to the client at the time the client purchases the asset. As for *Ijarah*, JAPEM could use its elaborated concept, Ijarah Muntahia Bitamleek. JAPEM will purchase the assets required by the entrepreneurs and rent the assets to qualified entrepreneurs <sup>36</sup>. In this case, the entrepreneurs can just rent the assets over a period of time and pay the rentals at regular intervals. As a lessee, the entrepreneur will be responsible to safeguard the asset whereas the lessor (JAPEM) will monitor their usage.

Looking at the closest MFI to Brunei that is AIM, this institution emphasizes that significant support from the government is important in developing a viable and sustainable microfinance system. JAPEM therefore needs to establish official links with other government agencies such as Ministry of Industry and Primary Resources (MIPR) to assist the Perkasa clients to become suppliers of local companies in Brunei, thereby marketing their products locally as well as internationally. In order to realise the potential of Islamic Microfinance in Brunei, the country must focus on capacity building at all levels. This includes conducting a conference or seminar on Islamic Microfinance with presentations from Shari'ah scholars and academics as well as organizing a talk on managing money in an ethical and Shari'ah compliant way by relevant agencies in order to increase the public's awareness of Islamic microfinance.

# LOAN REPAYMENT PROBLEMS IN INDIVIDUAL LENDING MICROFINANCE PROGRAMS IN MALAYSIA

Norhaziah Nawai<sup>1</sup> Mohd Noor Mohd Shariff<sup>2</sup>

#### **ABSTRACT**

Access to financing is an important aspect in the business operation of micro enterprises. However, repayment problem is an obstacle to the financial institutions including microfinance institutions (MFIs) that offer microfinance based on individual lending approach to provide credit to micro entrepreneurs. Therefore, this paper tries to explore the loan repayment problems in microfinance programs that using individual lending approach. This study applied qualitative analysis through in-depth interviews with MFI staffs and MFI clients in Peninsular Malaysia. The result shows that the factors affecting the ability of the borrowers to repay their loans are business factors, borrower's attitude towards their loans, other debt burden, amount of loan received, business experience, business formality and family background. The study recommends the MFIs to enhance their loan monitoring through peer monitoring like in group lending approach such as through entrepreneur's club or mentor mentee program to reduce the borrower's attitude to not pay back their loans and help them to enhance their business. Besides, the study suggests differentiating the terms and conditions between applying loan for start-up the business and for working capital purpose.

**Keywords**: Repayment Problems, Individual Lending, Microfinance Programs

# 1. INTRODUCTION

Many researchers have emphasized the importance of loan repayment performance such as Stearns (1995) and Hulme and Mosley (1996). Examining repayment performance is important because if borrowers do not repay, then there may not be sufficient funds to ensure that the liquidity position of the MFI is maintained. When there is a loss in the MFI liquidity due to high levels of non-repayment, the cyclical flow of funds between the MFI and the borrowers will be interrupted. The result of this is a reduction in the efficiency of the MFI's operation (Kurien, 1985). To attain financial viability, MFI must reach operational self-sufficiency first and in order to attain operational self-sufficiency, the MFI must ensure that the operational cost can cover non-financial expenses. This can be achieved by low delinquency where the MFI must maintain a low delinquency rate to ensure operational self-sufficiency.

Repayment performance refers to the total loans paid on time as stated in the loan agreement contract. Godquin (2004) defines repayment performance in terms of binary variable; based on an arbitrary definition of what constitutes repaying "on time" (a given maximum "grace period" is allowed). Guttman (2007) measures repayment performance based on the degree of arrears. While, the term delinquency is defined as a failure to meet the repayment obligations at the date complete repayment was promised (Nannyonga, 2000) and delinquent loans are loans that have been written off by a MFI (Norell, 2001).

<sup>&</sup>lt;sup>1</sup> Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia, Bandar Baru Nilai, 71800 Nilai Negeri Sembilan, Malaysia. Email: norhaziahn@usim.edu.my

<sup>&</sup>lt;sup>2</sup> College of Business, Universiti Utara Malaysia, 06010 Sintok, Kedah. Email: mdnoor@uum.edu.my

Hence an account is said to be delinquent if it is overdue in payment (Collins, 1991; Sharma & Zeller, 1997).

As a lending institution, MFI is a risky business because it offers credit to the poor people without any collateral and the repayment of loans are cannot be fully guaranteed. However, the repayment rate is the most important performance indicators of MFI (Woolcock, 1999; Zeller, 1994; Yaron, 1994). Yaron (1994) finds that the failure of a large number of MFIs in many developing countries was due, among other things, to their inability to ensure good repayment rates among their borrowers. Yaron (1994) also emphasizes that a high profit earned by MFIs cannot be used as the only indicator of self-sustainability of the institutions, since a high profit could be attained only in the short period. Attaining a high loan collection rate is a necessary condition for MFI to become self-sustainable in the long run. Loan losses often have been the largest cost borne by the institutions and the principal cause of insolvency and illiquidity.

Repayment problem is an unsolved issue faced by the majority of financial institutions including MFIs. In Malaysia, repayment problem faced by many semi- formal financial institutions that offer credit to the micro enterprises and SMEs (Starbiz, 2 June 2010). For example, in 2008, the non-performing loans (NPLs) for TEKUN Nasional are 29 percent, SME Bank is 8 percent, Malaysia Cooperative Commission (CCM) is 13.8 percent and Perbadanan Nasional Berhad (PNB) is 11 percent (Utusan Malaysia, 16 December 2008). While, the NPLs for Perbadanan Usahawan Nasional Berhad (PUNB) is 30 percent for Retail PROSPER Scheme and 20 percent for Graduate PROSPER Scheme and PKS Scheme (Berita Harian, 16 February 2009). Until 2012, the NPLs for TEKUN Nasional still high which is 20 percent (TEKUN Nasional, 2012).

Therefore, this paper tries to explore the loan repayment problems in microfinance programs that using individual lending approach. This paper is divided into five sections namely introduction section followed by literature review and the methodology used. The analysis of findings is in section four and the last section is conclusion and recommendations.

#### 2. REVIEW OF LITERATURE

Majority of the literature on repayment performance of MFIs focused on group-based lending or group liability because group based lending is synonym with microfinance activities such as Ghatak and Guinnane (1999), Godquin (2004), Sharma and Zeller (1997), Zeller, (1998), Besley and Coate (1995), and Silwal (2003). Much theorising has been done to show the advantages of group loan in minimising the default rate compared to an individual loan (Ghatak, 2000; Ghatak & Guinnane, 1999; Besley & Coate, 1995; Maata, 2004). Much of the studies emphasized the role of joint liability in group lending, such as peer selection (Ghatak, 1999), peer monitoring (Stiglitz, 1990; Varian, 1990; Banerjee et al., 1994), and peer enforcement (Besley & Coate, 1995). It proved that through group lending, it could mitigate moral hazard, adverse selection and information asymmetries faced by the MFIs. Microfinance programs that used peer selection, peer monitoring, dynamic incentives, regular repayment schedules, and social collateral help maintain high repayment rates (Silwal, 2003).

However, not all MFIs offer microfinance based on group-lending because of some reasons such as group-lending is not suitable for the entrepreneurs who expand their businesses faster and required more capital where they must wait their turn to lend and cannot lend in large amounts. While those whose businesses grew more slowly found them guaranteeing big debts for other people and it is not fair. The group-lending is also not suitable for not so poor people where they need personal guaranteed and more flexible loans conditions such as no weekly meeting and no need to form group.

In terms of factors affecting loan repayment problems among borrowers in MFI that using individual lending approach is very sparse and limited especially to microfinance experience in low-income countries (Suraya Hanim, 2011; Derban et al., 2005; Silwal, 2003). Several studies such as Awoke, 2004; Hoque, 2000; Coyle, 2000; and Ozdemir and Boran, 2004 show that when a loan is not repaid, it may be a result of the borrowers' unwillingness and/or inability to repay. Stiglitz and Weiss (1981) recommend that the banks should screen the borrowers and select the "good" borrowers from the "bad" borrowers and monitor the borrowers to make sure that they use the loans for the intended purpose. This is important to make sure the borrowers can pay back their loans. While, Greenbaum and Thakor (1995), suggest to look at a borrower's past record and economic prospects to determine whether the borrower is likely to repay or not. Besides, characters of the borrowers, total capital needed, collateral requirements, capacity or ability to repay and condition of the market should be considered before giving loans to the borrowers.

Some authors link the repayment performance with firm characteristics such as Nannyonga (2000), Arene (1992), Oke et al. (2007) and Roslan and Mohd Zaini (2009). Oke et al. (2007) and Nwaru (2004) mention that firm's profit significantly influenced loan repayment. Khandker et al.,(1995) raise the question of whether default is random, influenced by erratic behavior, or systematically influenced by area characteristics such as rural electrification, road width, primary educational infrastructure and commercial bank density that determine local productions conditions or branch-level efficiency. Meanwhile, Godquin (2004) suggests that the provision of non-financial services such as training, basic literacy and health services has a positive impact on repayment performance.

In contrast, Hulme and Mosley (1996) argue that the important factors contribute to loan repayment performance are the design features of the loan. They categorise the design features into three categories namely access methods, screening methods and incentive to repay. Access methods generally ensure that poor people access the loans not the richer people and the features include maximum loan ceilings and high interest rate. While, screening methods are used to screen out bad borrowers.

# 3. METHODOLOGY

Qualitative methodology is a multimethod in focus, involving an interpretive, naturalistic approach to its subject matter where the researcher studies things in natural settings, attempting to make sense of, or interpret phenomena in terms of the meanings people bring to them. Qualitative methodology involves the studied use and collection of a variety of empirical materials such as case study, personal experience, interview, observational, interactional, life story and visual texts. It describes the routine and problematic moments and meanings in people's lives (Denzin & Lincoln, 2005). This study used qualitative methodology which is interviews with selected respondents and selected MFI State Managers.

An interview is one type of research methods that have been used by many researchers in collecting data. It can be done through face-to-face interviews or through electronic medium such as telephone, video call and internet interviews (Bryman & Bell, 2007; Stewart & Cash, 2003). Face-to-face interviews are more personally compared to other form of research methods where the interviewer has the opportunity to probe or ask follow up questions. Interviews are generally easier for respondent, especially in the expression of views and opinions. There are two types of interviews; formal and informal (conversational) interviews (Fitzgerald & Cox, 2002) whereas some other scholars categorise interviews as structured and unstructured interviews (Creswell, 2003; Bryman & Bell, 2007; Leedy & Ormrod, 2001).

The researchers did face-to-face interviews where a total of 30 respondents were selected equally from good borrowers, delinquent borrowers and default borrowers (10 respondents from good borrowers, 10 respondents from delinquent borrowers and 10 respondents from default borrowers). In addition, a total of six MFI State Managers in Peninsular Malaysia were choosing to get in depth information about borrower's behavior towards their loan repayment performance. In qualitative research methods, sample

size is generally much smaller than those used in quantitative research methods (Ritchie, Lewis, & Gillian, 2003). This is because qualitative is concerned with meaning and not making generalised hypothesis statement and analysing a large sample can be time consuming and often simply impractical (Crouch & Mckenzie, 2006). In qualitative, the more data does not necessarily lead to more information (the diminishing return of qualitative data). Table 3.1 below shows the respondents' demographic profile.

**Table 3.1: Repondents' Demographic Profile** 

Respondents' Demographic P	rofile
Gender	
Men	12
Women	18
Loan Status	
Good Borrower	10
Delinquent	10
Default	10
Age (mean)	43.81
Business Experience (mean)	12.90

#### 4. ANALYSIS OF FINDINGS

Based on the interviews with MFI State Managers, the result found that business characteristics are the main factor to be good borrowers where if the borrowers have a good business and can make a profit, they can payback the loans on time but if their business loss or failed, it can ruin their loans repayment. The result is parallel with the result from interviews with delinquent and default borrowers where half of them agreed that they cannot pay back the loans because of having problems in their business such as competition, low product price, high raw materials, unpredictable weather and decrease of customers.

"My business was loss where the number of customers who came to my shop decreased because of too much competition and I don't know how to compete with them"

Besides, borrower's attitude towards their debt also the main reason in determining loan repayment performance. Borrowers who set their mind that every debt must be repaid have higher chances to repay on time. The result also shows that borrowers who have regular savings tend to become good borrowers. These borrowers usually manage their income well and not lavish with the profit received.

"What motivate me to pay back the loans even during in the difficult time because every debt must be paid no matter with whom we borrow the money. I never missed my payment"

"Every month, I have allocated my income to pay all my expenses and debts. I have moneybox for each of my expenses and debts. As we know that debt must be paid"

The borrowers also have a problem to pay back their loans that make them delinquent because they have to pay other debts such as car installment, supplier debt, shop rental and family expenses. Usually when their sales drop or have personal problems such as sick or family sick, it will affect their loans repayment. Unpredictable crises such as illness or death of family members may affect borrower's repayment (Norell, 2001). Besides, the amount loan received by the borrowers may also affected borrowers repayment

performance where the bigger total loan received by the borrowers, the higher probability of the borrowers to default. When the borrowers received more loans, there is a tendency that the excess loan may be diverted to other unproductive, non for business uses such as for personal use, children's school fees and pay other debt (Norell, 2001). Based on the interviews with respondents, six of them admit that they use some of the loan given for other things.

"Yes, I admit that I used some of the loans given to renovate my kitchen because my kitchen is too old and need to be repaired"

"I had used a little of the loans given to buy handphone but I already asked my friend who also made a loans with TN and he said is allowed and it is up to us to use the loans"

Based on the interviews with MFI State Managers, the borrowers who just started their business and no experience in handling the business also have a problem to manage their business that make the business loss and the borrowers faced difficulty to payback their loans. The result is in line with the previous studies such as Njoku (1997) and Arene (1992) that found borrower's business experience is important in determining loan repayment performance where the longer the experience, the higher the chances to be good borrowers. The result from interviews show that the borrowers who have less than ten years of experience more tend to become delinquent and defaulted borrowers.

In addition, doing business on full-time basis or part-time basis may influence borrower's repayment where borrowers who doing their business in full-time basis are more concentrate and focus compared to borrowers who doing their business in part-time basis are more likely to become delinquent, because they cannot concentrate and focus on their business. One of the MFI State Manager has mentioned that family factor may influence borrower's repayment performance where borrowers need to protect the good name of the family such as Village Head, an Imam and Community Leader. These borrowers usually are good borrowers because they need to protect the good name of the family in the community. Usually the village community will refer to Village Head or an Imam if they have any problems or need advices and they very respect to this people.

# 5. CONCLUSION AND RECOMMENDATIONS

Microfinance was introduced in Malaysia to provide financing facilities to the poor and microenterprises to start up business or to finance business activities such to buy tools and machines, business equipment and, raw materials. Most of the MFIs in Malaysia are subsidised institution where they received funds in the form of grants from the government and local governments and majority of them are too depending on the grants that make them not sustainable. Therefore, high repayment performance is important for them to continually providing microfinance to their clients.

This research tries to explore the loan repayment problems among MFI borrowers in Malaysia through indepth interviews with respondents and MFI officers. The result shows that the factors affecting the ability of the borrowers to repay their loans are business factors, borrower's attitude towards their loans, other debt burden, total loan received and no experience in business. The research found that business factors such as business loss and failed are the main reason why borrowers cannot pay back their loans on time. Besides, the borrower's attitude towards their loans also the reason they cannot pay back their loans on time.

Therefore, the researcher recommends the MFIs to enhance their loan monitoring through peer monitoring like in group lending approach such as through entrepreneur's club or mentor mentee program where this can reduce the borrower's attitude to not pay back their loans and help them to enhance their business. Besides, the new borrowers can learn from the successful borrowers in running their business. This can reduce the operational cost of MFIs in monitoring their clients. The study also suggests

differentiating the terms and conditions between applying loan for start-up the business and for working capital purpose because normally who apply for start-up the business are new entrepreneurs and have less experience in business. They not only need credit but more than credit such as business training like how to promote their product, prepare financial statement and the presentable of the product. Therefore, it is suggested to provide related training skills to the new entrepreneurs to enhance their business skills.

Lastly, the researcher also suggests to the government to combine all the MFIs in Malaysia and introduce one formal MFI such as Bank Rakyat Indonesia (BRI) in Indonesia under the purview of Bank Negara Malaysia. The establishment of formal MFI can strengthen the microfinance facilities in Malaysia in one roof, unlike now there are a few agencies under government that provide microfinance to the same entrepreneurs. Therefore, some of the borrowers have made loans with different agencies and the agencies do not know the repayment status of the borrowers.

# MEASURING E-GOVERNMENT SYSTEMS SUCCESS: A VALIDATION OF THE DELONE AND MCLEAN MODEL OF ISLAMIC INFORMATION SYSTEMS SUCCESS

Ramdan S.M.A Yousif Nurdiana Binti Azizan Kamarudin Saadan

#### **ABSTRACT**

With the proliferation of the Internet and World Wide Web applications, people are increasingly interacting with government to citizen (G2C) e-government systems. It is, therefore, important to measure the success of G2C e- government systems from citizens' perspective. While information systems (IS) success models have received much attention among researchers, little research has been conducted to assess the success of egovernment systems. Whether traditional IS success models can be extended to investigating e- government systems success needs to be addressed. This study provides the first empirical test of an adaptation of DeLone and McLean's IS success model in the context of G2C e- government. The model consists of six dimensions: Information Quality, System Quality, Service Quality, Use, User Satisfaction, and Perceived Net Benefit. Structural equation modeling techniques were applied to data collected by questionnaire from 119 users of G2C e- government systems in Malaysia. Except the link from System Quality to Use, the hypothesized relationships between the six success variables were significantly or marginally supported by the data. The findings of this study provide several important implications for e- government research and practice. This paper concludes by discussing limitations that could be addressed in future studies.

**Keywords**: E-Government, E-Services, adopt G2C, DeLone and McLean's Islamic information systems, success model.

# 1. INTRODUCTION

Since the late 1990s, governments at all levels have launched electronic government (egovernment) projects aimed at providing electronic information and services to citizens and businesses [42]. Many governments have realized the importance of Information and Communication Technologies (ICT) to bring efficiency and transparency to the functioning of the governments [34]. Now several government agencies around the world have embraced the digital revolution and placed a wide range of materials on the web, from publications to databases to actual government services online for the use of citizens [46]. E-government can be broadly defined as a government's use of ICT, particularly Web-based Internet applications, to enhance the access to and delivery of government information and service to citizens, business partners, employees, other agencies, and entities. The construction and management of e-government systems is becoming an essential element of modem public administration [42]. In order to ensure e-government success, it is important to assess the success and effectiveness of e-government and take necessary actions based on this assessment [17]. However, little is known about the success and effectiveness of public Web site systems [42]. There are three general types of e-government systems, including government to government (G2G), government to citizen (G2C), and government to business (G2B) services. Though e-government has clear benefits for businesses and government themselves, citizens actually received the widest array of the benefits from egovernment [23]. Thus, the focus of this study is on G2C systems. As Larsen & Rainie [26] suggest, typical G2C services include information for research, government forms and services, public policy information, employment and business opportunities, voting information, tax filing [43], license registration or renewal, payment of fines, and submission of comments to government officials. Since the key to making G2C e-government work and successful is not technology but the citizens [1], this study focuses on the measures of G2C e-government systems success from citizens' perspective. In recent years, many citizens are demanding more and better service through the Intemet. Government organizations should make an e-government systems success/effectiveness assessment and see whether they are capable of doing the task and delivering services as expected [17]. In order for Web-based applications to be effectively used in the e-government environment, a better understanding of what factors best measure the success of e-government systems needs to be developed. This has also created an increased need for dependable ways to measure the success of an e-government system. However, e-government systems success is a complex concept, and its measurement is expected to be multi-dimensional in nature. The measurement of information systems (IS) success or effectiveness is widely investigated throughout IS research community. Theorists, however, are still grappling with the question of which constructs best measure IS success [35]. DeLone and McLean [6] comprehensively reviewed the different IS success measures and proposed a six-factor IS success model as a taxonomy and framework for measuring the complex dependent variable in IS research. The categories of the taxonomy are System Quality, Information Quality, Use, User Satisfaction, Individual Impact, and Organizational Impact. Recently, DeLone and McLean [7] discussed many of the important IS efforts that have applied, validated, challenged, and proposed enhancements to their original model, and then proposed an updated DeLone and McLean IS success model depicting the relationship between System Quality, Information Quality, Service Quality, Use, User Satisfaction, and Net Benefit. DeLone and McLean (henceforth, "D&M") do not provide empirical validation of the updated model and, in fact, suggest further development and validation is needed for their model. Actually, the G2C e-government service process fits nicely into the D&M updated IS success model and its six success dimensions. Thus, continued research is needed to investigate and test a comprehensive model of e-government systems success based on the D&M model. While IS success models have received much attention among researchers, little research has been conducted to assess the success of e-government systems. Whether traditional information systems success models can be extended to investigating e-government systems success needs to be addressed. Thus, the main purpose of this study is to develop and validate a multidimensional G2C e-government systems success model based on the DeLone and McLean's [7] IS success model. This paper is structured as follows. First, this study reviewed the development of IS success models. Second, based on prior studies, an egovernment systems success model and a comprehensive set of hypothesis were proposed. Next, the methods, measures, and results of this study were then presented. Finally, theoretical and managerial implications and directions for future research were discussed. The validated e-government systems success model can be served as a foundation for positioning and comparing e-government success research, and can provide e-government managers with a useful framework for evaluating e-government systems success.

# 2. IS SUCCESS MODELS

DeLone and McLean [6] comprehensively reviewed the different IS success measures and concluded with a model of interrelationships between six IS success variable categories: System Quality, Information Quality, IS Use, User Satisfaction, Individual Impact, and Organization Impact (see Figure 1). The model makes two important contributions to the

understanding of IS success. First, it provides a scheme for categorizing the multitude of IS success measures that have been used in the literature. Second, it suggests a model of temporal and causal interdependencies between the categories [37] [30]. Since 1992, a number of studies have undertaken empirical investigations of the multidimensional relationships among the measures of IS success [12] [15] [16] [20] [24] [27] [35] [36] [38]. Seddon & Kiew [38] tested part of the D&M's [6] model through a structural equation model. They replaced Use with Usefulness and added a new variable called User Involvement, and their results partially supported D&M's [6] model.

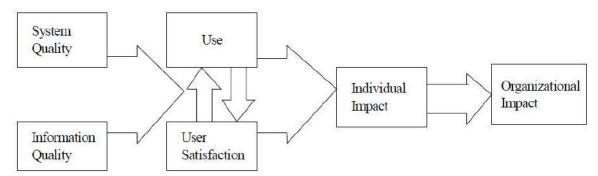

FIGURE 1: DeLone and McLean's IS Success Model [6]

Based on the DeLone and McLean's [6] model, Seddon [37] proposes an alternative model that focuses on the causal (variance) aspects of the interrelationships among the taxonomic categories, and separates the variance model of IS success from the variance model of behaviors that occur as a result of IS success. Seddon's IS success model includes three classes of variables: (1) measures of information and system quality, (2) general perceptual measures of net benefits of IS use (i.e., Perceived Usefulness and User Satisfaction), and (3) other measures of net benefits of IS use. Seddon [37] also claims that IS Use is a behavior, not a success measure, and replaces D&M's [6] IS Use with Perceived Usefulness, which serves as general perceptual measures of net benefits of IS Use, to adapt his model to both volitional and nonvolitional usage contexts. Rai et al. [35] empirically and theoretically assessed DeLone and McLean's [6] and Seddon's [37] models of IS success in a quasivoluntary IS use contexts, and found both models exhibit reasonable fit with the collected data.

DeLone and McLean [7] propose an updated D&M IS Success Model (see Figure 2) and evaluate its usefulness in light of the dramatic changes in IS practice, especially the advent and explosive growth of e-commerce. They agree with Seddon's premise that the combination of variance and process explanations of IS success in one model can be confusing, but argue that Seddon's reformulation of the D&M's [6] model into two partial variance models unduly complicates the success model and defeats the intent of the original model. Based on the prior studies, DeLone and McLean [7] propose an updated model of IS success by adding "service quality" measures as a new dimension of IS success model and grouping all the "impact" measures into a single impact or benefit category called "net benefit". Although some researchers claim that service quality is merely a subset of the model's systems quality, the changes in the role of IS over the last decade argue for a separate variable - the "service quality" dimension [7]. On the other hand, while researchers have suggested several IS impact measures, such as individual impacts [6] [41], work group impacts [32], organizational impacts [6] [29], interorganizational impacts [4], consumer impacts [3], and societal impacts [37], DeLone and McLean [7] move in the opposite direction and group all the "impact" measures into a single "net benefits" variables in order

to avoid complicating the model with more success measures. Given that system usage continues to be used as a dependent variable in a number of empirical studies [14] [15] [16] [20] [21] [35] [40] [47] and takes on new importance in Internet-based system success measurements where system use is voluntary, "system usage" and alternative "intention to use" are still considered as important measures of IS success in the updated D&M model. Within the G2C e-government context, citizens use an Internet-based application to search information and conduct transactions (e.g., tax filing and payment of fines), making the Internet-based application an IS phenomenon that lends itself to the updated D&M IS Success Model. DeLone and McLean [7] also suggest further development, challenge and validation is needed for their model. Thus, we assume that D&M's updated IS Success Model can be adapted to the measurement challenges of the G2C e-government context.

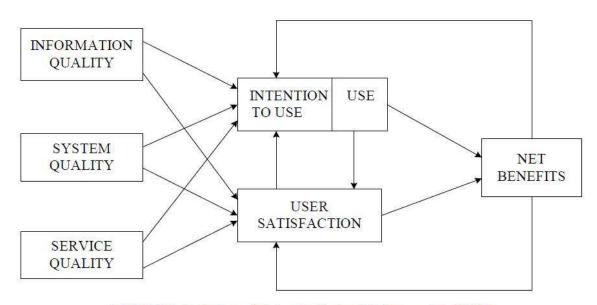

FIGURE 2: DeLone and McLean's Updated IS Success Model [7]

# 3. RESEARCH MODEL AND HYPOTHESES

According to DeLone and McLean [7], this study proposes a comprehensive, multidimensional model of e-government systems success (see Figure 3), which suggests that Information Quality, System Quality, Service Quality, Use, User Satisfaction, and Perceived Net Benefit are success variables of e-government systems. As mentioned earlier, system usage continues to be used as an IS success variable in a number of empirical studies and continues to be developed and tested by IS researchers [5] [9] [11] [14] [15] [20] [21] [28] [30] [31] [35] [40]. DeLone and McLean [7] contend that Use and Intention to Use are alternative in their model, and that Intention to Use may be worthwhile in the context of mandatory usage. However, citizens' use of G2C systems is fully voluntary and system use is an actual behavior, which has been considered as the variable closer in meaning to success than behavioral intention to use. Thus, this study adopts Use instead of Intention to Use as an e-government systems success measure.

Most researchers agree with DeLone & McLean's [7] suggestion that Service Quality, properly measured, deserves to be added to System Quality and Information Quality as components of IS success. Seddon [37] and DeLone & McLean [7] have also come to a compromise on the use of "net benefit" as IS success measures. However, "the challenge for the researcher is to define clearly and carefully the stakeholders and context in which net

benefit are to be measured" [7, p.23]. Different stakeholders may have different opinions as to what constitutes a benefit to them [39], Since the focus of this study is on measuring G2C systems success from citizens' perspective, "net benefit" in this study refers to the citizen-perceived net benefit evaluation toward using a specific G2C system. Citizens and taxpayers may feel that they are not getting benefit for their money. They would like this benefit reflected in terms of cost/time savings and better e-government systems performance. Thus, "perceived net benefit" appears to be an important success measure of G2C systems.

Satisfaction

**FIGURE 3: Research Model** 

The hypothesized relationship between Use, User Satisfaction and the three quality variables is based on the theoretical and empirical work reported by DeLone & McLean [7]. As DeLone & McLean [7] suggest. Use and User Satisfaction are closed interrelated. Positive experience with "use" will lead to greater "user satisfaction" in the D&M model. Because of usage and user satisfaction, certain net benefit will occur. DeLone & McLean [7] also assume that the positive (negative) net benefit from the perspective of the stakeholder of the system will influence and reinforce (decrease) the subsequent "use" and "user satisfaction". To avoid model complexity and reflect the cross-sectional nature of this study, the feedback links from Net Benefit to both Use and User satisfaction were excluded from the current research. As DeLone & McLean [7] note, the IS success is a multidimensional and interdependent construct and it is therefore necessary to study the interrelationships among, or to control for, those dimensions. Also, the success model certainly needs further development and validation before it could serve as a basis for the selection of appropriate IS measure. Thus, the following nine hypotheses were tested:

HI: Information Quality will positively affect Use in the G2C e-government context.

H2: System Quality will positively affect Use in the G2C e-government context.

H3: Service Quality will positively affect Use in the G2C e-government context.

H4: Information Quality will positively affect User Satisfaction in the G2C e-government context.

H5: System Quality will positively affect User Satisfaction in the G2C e-government context.

H6: Service Quality will positively affect User Satisfaction in the G2C e-government context.

H7: Use will positively affect User Satisfaction in the G2C e-government context.

H8: Use will positively affect Perceived Net Benefit in the G2C e-government context. H9: User Satisfaction will positively affect Perceived Net Benefit in the G2C e-government context.

# 4. RESEARCH DESIGN AND METHOD

## **Measures of the Constructs**

To ensure the content validity of the scales, the items selected must represent the concept about which generalizations are to be made. Therefore, items selected for the constructs were mainly adapted from prior studies to ensure content validity. Two items, selected from Doll and Torkzadeh's [8] ease of use scale and adapted to specify the G2C e-government system, were used to measure System Quality in this study. Three items for the Information Quality construct were adapted from Doll and Torkzadeh [8] to capture the two attributes of information quality of a G2C system: content and timeliness. Three items, selected from Wang and Tang's [44] EC-SERVQUAL scale, were used to measure Service Quality consfruct. Use was measured by two-item measures adapted from the previous IS use measures [19] [35]. Traditionally, User Satisfaction has been measured indirectly through Information Quality, System Quality, Service Quality, and other variables [2] [8] [10] [25] [22]. However, the concept of e-government systems success has been adapted, based on the DeLone and McLean's [7] model of IS success, to develop causal relationship between indirect measures of User Satisfaction (i.e., System Quality, Information Quality, and Service Quality) and overall level of User Satisfaction. Thus, the items to measure User Satisfaction were taken from the previous measures of overall level of user satisfaction or Web customer satisfaction [8] [33] [35] [45]. Perceived Net Benefit was assessed by twoitem measures adapted from Etezadi-Amoli & Farhoomand's [12] user performance scale. Each item was adapted to specifically reference e-government systems. Likert scales (1-7), with anchors ranging from "very strongly disagree" to "very strongly agree" were used for all questions. After the pre-testing of the measures, these items were modified to fit the egovernment context studied.

## **Data Collection Procedure**

Data used to test the research model were gathered from a sample of experienced users of various G2C e-government applications. To increase the generalizability of the results, the respondents were spread across 3 popular G2C systems in Malaysia: Malaysia admission universities (www.upu.mohe.gov.my). Scholarship (www.jpa.gov.my). Education loan (ptptn.gov.my). Respondents were first asked whether they had ever used the abovementioned e-government systems; if they replied in the affirmative, they were asked to participate in the survey. The questionnaire requested the respondents to relate to the last time they used the e-government system and to answer the remaining questions accordingly. That is, respondents were asked to write down the name of the last e-government system they used. The respondents were insfructed in the questionnaire to answer the questions by assessing that system. For each question, respondents were asked to circle the response which best described their level of agreement. A total of 119 usable responses were obtained. Approximately, 58% of the respondents are male. Detailed descriptive statistics relating to the respondents' characteristics are shown in Table 1.

# 5. RESULTS

# **Measurement Model**

A first-order confirmatory factor analysis using LISREL 8.3 was conducted to test the measurement model. The similarity of the original and model-reproduced covariance mafrix is referred to as the fit of the model. Seven common model-fit measures were used to assess the model's overall goodness of fit: the ratio of  $X^2$  to degrees-of-freedom {df}, goodness-of-fit index (GFI), adjusted goodness-of-fit index (AGFI), normalized fit index (NFI), comparative fit index (CFI), root mean square residual (RMSR), and root mean square error of approximation (RMSEA). As shown in Table 2, all the model-fit indices exceeded their respective common acceptance levels suggested by previous research, thus demonstrating that the measurement model exhibited a fairly good fit with the data collected ( $X^2$  =90.28 with df=62, GFI = 0.91, AGFI = 0.84, NFI = 0.92, CFI = 0.97, RMSR = 0.085, RMSEA = 0.062). Therefore, we could proceed to evaluate the psychometric properties of the measurement model in terms of reliability, convergent validity, and discriminant validity.

**TABLE 2: Fit indices for measurement and structural models** 

Fit	Recommended	Measurement	Structural
Indices	value	model	model
$X^2/df$	<3.00	1.46	1.43
GFI	>0.90	0.91	0.91
AGFI	>0.80	0.84	0.85
NFI	>0.90	0.92	0.92
CFI	>0.90	0.97	0.97
RMSR	< 0.10	0.085	0.090
RMSEA	< 0.08	0.062	0.060

Reliability and convergent validity of the factors were estimated by composite reliability and average variance extracted (see Table 3). The composite reliabilities can be calculated as follows: (square of the summation of the factor loadings)/{(square of the summation of the factor loadings)+(summation of error variables)}. The interpretation of the resultant coefficient is similar to that of Cronbach's alpha, except that it also takes into account the actual factor loadings rather than assuming that each item is equally weighted in the composite load determination. Composite reliability for all the factors in my measurement model was above 0.80. The average extracted variances were all above the recommended

0.50 level [18], which meant that more than one-half of the variances observed in the items were accounted for by their hypothesized factors. Convergent validity can also be evaluated by examining the factor loadings from the confirmatory factor analysis. Following Hair et al.'s [18] recommendation, factor loadings greater than 0.50 were considered to be very significant. All of the factor loadings of the items in the research model were greater than 0.70. Thus, all factors in the measurement model had adequate reliability and convergent validity.

To examine discriminant validity, we compared the shared variances between factors with the average variance extracted of the individual factors [13]. This analysis showed that the shared variance between factors were lower than the average variance extracted of the individual factors, confirming discriminant validity (see Table 3). In summary, the measurement model demonstrated adequate reliability, convergent validity, and discriminant validity.

TABLE 3: Reliability, average variance extracted and discriminant validity

Factor	Composite reliability	Information quality (IQ)	System quality (SQ)	Service quality (SV)	Use (U)	User satisfaction (US)	Perceived Net Benefit (NB)
IQ	0.90	0.74					
SQ	0.87	0.27	0.77				
SV	0.86	0.19	0.35	0.67			
U	0.87	0.15	0.10	0.14	0.77		
US	0.88	0.47	0.45	0.35	0.31	0.79	
NB	0.80	0.23	0.16	0.11	0.31	0.29	0.67

Diagonal elements are the average variance extracted. Off-diagonal elements are the shared variance.

# **Structural Model**

A similar set of fit indices was used to examine the structural model (see Table 2). Comparison of all fit indices with their corresponding recommended values provided evidence of a good model fit ( $X^2$ =93.11 with df=65, GFI = 0.91, AGFI = 0.85, NFI = 0.92, CFI = 0.97, RMSR = 0.090, RMSEA = 0.060). Thus, we could proceed to examine the path coefficients of the structural model.

Properties of the causal paths, including standardized path coefficients, p-values, and variance explained for each equation in the hypothesized model are presented in Figure 4. As expected. Information Quality had a significant influence on both Use and User Satisfaction. Thus, HI and H4 were supported (7 = 0.26 and 7 = 0.37, respectively). The influences of Service Quality on Use and User Satisfaction were not significant at p<0.05, but significant at p<0.1. Thus, H3 and H6 were marginally supported (7 = 0.25 and 7 = 0.15, respectively). System Quality had a significant impact on

User Satisfaction, but had no significant effect on Use. H5 was supported (7 =0.31) while H2 was rejected (7 =0.05). Consequently, Information Quality exhibited a stronger effect than System Quality and Service Quality in influencing Use and User Satisfaction respectively. In addition, Use had a significant influence on both User Satisfaction and Perceived Net Benefit. H7 and H8 were supported (/3=0.26 and /3=0.36, respectively). Finally, User Satisfaction appeared to be a significant determinant of Perceived Net Benefit. H9 was supported (/3=0.35).

Altogether, this model accounted for 40 percent of the variance in Perceived Net Benefit with Use exerting the stronger direct effect on Perceived Net Benefit than User Satisfaction. 70 percent of the variance in User Satisfaction was explained by Information Quality, System Quality, Service Quality, and Use while 21 percent of the variance in Use was explained by Information Quality, System Quality, and Service Quality. The direct and total effect of User Satisfaction on Perceived Net Benefit was 0.35. However, the direct and total effects of Use on Perceived Net Benefit were 0.36 and 0.45, respectively. Thus, Use

exhibited stronger direct and total effects on Perceived Net Benefit than those of User Satisfaction. Among the three quality-related constructs. Information Quality had the strongest total effect on Perceived Net Benefit. The direct, indirect, and total effects of Information Quality, System Quality, Service Quality, Use, and User Satisfaction on Perceived Net Benefit were summarized in Table 4.

# 6. DISCUSSIONS

This study presented and validated a model of e-government systems success based on the DeLone & McLean's [7] updated IS success model, to capture the multidimensional and interdependent nature of G2C e-government systems success. The results indicated that Information Quality, System Quality, Service Quality, Use, User Satisfaction, and Perceived Net Benefit were valid measures of e-government system success. Except the link from System Quality to Use, the hypothesized relationships between the six success variables were significantly or marginally supported.

This research provides several important implications for e-government system success research and management. According to the proposed model. Perceived Net Benefit has been considered as a closer measure of e-government systems success than the other five

success measures. Perceived Net Benefit should develop if the formation of perceived quality, system use, and user satisfaction is appropriately managed. Thus, management attention might more fruitfully focus on the development of these psychological and behavioral processes. In order to increase the citizen-perceived net benefit, e-government authorities need to develop G2C e-government systems with good information quality, system quality, and service quality, which, in tum, influence citizens' system usage behavior and satisfaction evaluation, and then perceived net benefit of the systems. System Use was found to have the strongest direct and total effects on Perceived Net Benefit in the model, indicating the importance of system use in promoting citizen-perceived net benefit. While simply saying that more use will yield more benefits, without considering the nature of this use, is insufficient [7], system use is a necessary condition of yielding benefits to the citizens.

The findings clearly supported that the total effects of Information Quality on Use, User Satisfaction and Perceived Net Benefit are substantially greater than those of System Quality and Service Quality. That is, beliefs about Information Quality, within the G2C egovernment context, are more dominant in influencing Use, User Satisfaction and Perceived Net Benefit than beliefs about System Quality and Service Quality. This means that egovernment authorities should pay much more attention to promoting the information quality of e-government systems. With the advent and development of e-government systems research, measuring multiple e-government system success variables continues to be of importance. The model provides a richer portrayal of the dynamics surrounding quality measures, satisfaction evaluation, usage, and user perceived net benefits. The results showed that citizens perceived the benefit of a G2C system because they have used it and felt satisfied with its quality of information, system and service. While system usage and user satisfaction are commonly acknowledged as useful proxy measures of system success [2] [22] [8] [9] [11], this study suggest that user-perceived net benefit can be considered as the variable closer in meaning to success than system usage and user satisfaction. This research also confirmed that Use, User Satisfaction and Perceived Net Benefit are complementary yet distinct constructs, and that Use is partially mediated through User Satisfaction in influencing Perceived Net Benefit of an e-government system.

It is worth noting that the effect of System Quality on Use was not significant. This may be because citizens have higher computer self-efficacy and Intemet experience in the Intemet age, the system quality or ease of use of an e-government system is not critical for citizens in determining whether to use the system or not. Thus, respondents showed more concem on information quality (e.g., usefulness) and service quality (e.g. transaction safety) than on system quality (e.g., ease of use). Given that the usage of G2C e-government systems is completely voluntary, and that the target user group consists of a large number of people with diversified backgrounds, the findings of this study suggest that in order to attract more people to use G2C systems and make them satisfied with the systems, it is not enough to make the system easy to interact with. It is of paramount importance to develop G2C systems that can provide high-quality information and service for people, including sufficient and up-to-date information, security and privacy protection, personalization, etc. This empirical result also emphasizes the importance of assuming a multidimensional, interdependent analytical approach. It is imperative for e-government authorities to lay stress on various system success levels. Information Quality, System Quality and Service Quality belong to the system development level while System Use, User Satisfaction and Perceived Net Benefit belong to the effectiveness-influence level. Establishing strategies to improve only one success variable is therefore an incomplete strategy if the effects of the others are not considered. The results of this study encourage e-government managers to include measures of Information Quality, System Quality, Service Quality, System Use, User Satisfaction, and Perceived Net Benefit into their present valuation techniques of egovernment system success. The current study has provided reliable and valid measures of these constructs. As the concise success measures with good psychometric properties are periodically administered to a representative set of citizens, e-government managers can enhance their understanding of the levels of the citizen-perceived net benefit and its antecedents, and take necessary corrective actions to improve them. Researchers can also use the validated model as the foundation for developing comprehensive e-government systems success measures and theories, exploring relationships between the proposed constructs, and comparing e-government success empirical studies.

# 7. CONCLUSION AND LIMITATIONS

This research was in response to the call for continuous challenge and test of IS success models in different contexts [7] [35]. Based on the DeLone & McLean's [7] updated IS success model, we proposed and validated a comprehensive, multidimensional model of egovernment systems success, which considers six success measures: Information Quality, System Quality, Service Quality, Use, User Satisfaction, and Perceived Net Benefit. Except the link from System Quality to Use, the hypothesized relationships between the six success variables were significantly or marginally supported by the data. The findings of this study provided several important implications for e-government research and practice.

Even though the rigorous procedure allowed us to develop and validate a model of egovernment system success, this empirical study has several limitations that could be addressed in the future research. First, investigation of e-government systems success model is relatively new to e-government researchers. The discussed findings and their implications were obtained from one single study that examined some particular e-government systems and targeted a specific citizen group in Malaysia. Thus, caution needs to be taken when generalizing my findings and discussion to other e-government categories or user groups. It is imperative to validate the proposed model with different user populations in different egovernment contexts, especially in G2B and G2G contexts. In addition, the sample size used in this study is another limitation. A cross-cultural validation using a large sample gathered elsewhere is required for greater generalization of the proposed model. Second, this study did not incorporate all Net Benefit measures, raises some concems. This study merely measured the Net Benefit construct from a citizen-perceived perspective. Thus, developing and testing of the Net Benefit measures on the governmental or societal level (e.g., retum on investment) is a useful direction to further examine the validity of this model. However, future researchers still need to define clearly and carefully the stakeholders and context in which Net Benefits are to be measured [7]. Finally, since this study was conducted with a snapshot research approach, the feedback links from Net Benefit to Use and User satisfaction were excluded from this study. Additional research efforts are needed to evaluate the validity of the investigated model. Longitudinal evidence might enhance our understanding of the causality and interrelationships between variables of e-government systems success.

# ORGANIZATIONAL CAPABILITIES FOR KNOWLEDGE SHARING IN ISLAMIC BANKING MALAYSIA

Abdusalam Abdulazez Abdulla Abuazoum<sup>1</sup> Nurdiana Azizan<sup>2</sup> Nursilah Ahmad<sup>3</sup>

#### **ABSTRACT**

Recent concerns about the issue of knowledge management (KM) within an organization have accentuated the need for more efficient and effective knowledge sharing (KS) that is (KS) plays an increasingly significant role in determining the outcomes of KM. Today, banks are beginning to understand the relevance and importance of knowledge management systems (KMS) and of KS. Similarly, banks are beginning to appreciate knowledge as the most significant and valued asset that leads to effective organizational performance. This research aims to investigate the role of certain factors in organizational culture for the success of KS. Factors such as interpersonal trust and communication among staff, information systems, rewards, and organizational structure play an important role in defining the relationships among staff, creating possibilities for breaking the obstacles to KS in the Islamic banking sector in Malaysia.

Key words: Knowledge sharing, conventional bank, Islamic banks

### 1. INTRODUCTION

The well-known knowledge era has radically changed the values in organizations (Carlisle, 2001). Since the emergence of this era, the long-term viability and prosperity of organizations has been viewed as being increasingly dependent on the ability of organizations to leverage the concealed worth of this crucial, acquired, intangible knowledge. In previous years, the commodities of the capital and labor-intensive firms were gradually replaced owing to continuous change in market expectations and increased demand for new products introduced by knowledge-intensive firms (Ali& Ahmad, 2006). Knowledge sharing (KS) is undoubtedly an important component in all organizations, especially in banking institutions that pursue knowledge as an intangible and highly sought asset. KS is important in distinguishing the competitive and rapidly changing environment, as it enables not only intellectual reuse but also the renewal of knowledge possessed by bank employees. Therefore, Barachini, (2009), emphasized that these organizations must continuously motivate their employees to share valuable information to leverage their intellectual capital. This study aims to examine the KS strategies that help increase the tendencies of employees in Islamic banks in Malaysia to engage in KS practices.

# 1.1 Background of Study

The importance of research comes from that of the research variables in contemporary organizations and societies. This importance is likewise revealed through the ways by which organizations could be provided with information and communication technology to expand the possibilities of KS, which could not have been achieved previously, as well as to provide real opportunities for KS to contribute to their strategic development. This study provides significant influence and impact in determining the success of

the sharing of warranted knowledge among employees of Islamic banks to achieve organizational competitiveness. The research findings provide useful information and deepen the understanding of Islamic banks in motivating their employees to engage in KS practices.

## 1.2 Scope of Study

This paper aims to assess the level of KS among the staff and managers of a number of Islamic banks in Malaysia. Through questionnaires and interviews, we evaluate the exchange of experiences and knowledge based on documents and all elements of knowledge, to identify the factors hindering KS in Islamic banks. The results of our survey are analyzed using SPSS software.

## 1.3 Problem Statement

Malaysia has differentiated itself from other Islamic countries, as its government has implemented a parallel system wherein Islamic and conventional banks function alongside each another, as opposed to full Islamisation (UKM. April 2004). Insufficient personnel training is one of the issues in this study (Kahf, 1999). Many Islamic banks recruit their employees from conventional banks, and these employees sometimes experience difficulties in understanding Shari'ah rulings. Conventional banks that implement a parallel system (Islamic banks) allow institutions to offer Islamic banking products and services using their existing infrastructure, including staff and branches (Khurrum, 2006). The issue is whether to hire non-Muslim staff or staffs who possess no information or knowledge on Shari'ah.

As a result of the lack of independence of conventional Islamic banks, independent Islamic banks have become industry leaders, particularly because their employees are ready to share Islamic information. This result therefore reflects the problem on the growth and development of Islamic banking in Islamic banks as well as on the correct non-application of religious texts. The problem of the ineffective dissemination of existing knowledge throughout the organization was addressed.

## 1.3 Objective

The objective is to compare KS Islamic activities through ICT between Islamic banks and conventional banks that use a parallel system wherein the Islamic and conventional systems function alongside each other.

## 2. LITERATURE REVIEW

Islamic banking

"Islamic banking has become a substantial and fastest growing industry during the last four decades. It has followed the Islamic transactions rules and principles (Shari'ah) to carry out their business" (Henry & Wilson, 2004), (Iqbal & Mirakhor, 2007), (Dusuki & Abdullah, 2007). According to Shari'ah principles, any payment or receipt of interest is strictly prohibited, although the Islamic bank offers products and services that are more or less similar to those offered by a conventional bank.

Conventional banks which added service Islamic banking to its system banking

Malaysia differs from other Islamic countries in that its government has implemented a parallel system wherein Islamic and conventional banking can function alongside each another, rather than adopting full Islamisation. This implementation is the first step of the country towards the development of a dual system where Islamic banking and the conventional system function parallel to each other (Khurrum, 2006).

### Islamic banks

Malaysia, as one of the first countries to introduce Islamic banking, is deeply committed to developing a complete Islamic financial system. The Malaysian government established the first Islamic bank in the beginning of the 1980s, and followed by the Bank Muamalat. These Islamic banks have been independent since their inception, (Haron & Wan Azmi, 2005).

# 3. THEORETICAL FRAMEWORK OF THIS STUDY

Organizational knowledge capability

The core capabilities of a knowledge organization are important in providing information and knowledge-based services. (Yang & Chen, 2007). Wiig (1994) claims that KM initiatives would fail if the investments of organizational resources and capabilities are inappropriate. In other words, effective KM should contribute to organizational performance through the development of organizational knowledge capability (Malhotra& Segars 2001). Empirical studies (Yang & Chen, 2007), reveal that the organizational capability to learn or acquire the required knowledge from other organizations is a key resource for successful KS. Thus, the enhancement of knowledge capabilities as the foundation of organizational development is beneficial for organizational effectiveness. Normally, organizations invest on process improvement, work effectiveness, learning, and supporting technology that facilitate knowledge (Lee's 2001).

## 4. RESEARCH METHODOLOGY

Connect the data

In connecting the two data types, the researchers realized the need for further data collection to support results after analyzing the first set of data. Therefore, following the results of the initial phase, the second phase of data collection is marginal and supportive, intended to explain the initial results, (Cresswell & Plano Clark, 2007).

Design of research process

Figure 2: Connecting the data mixed method

# 4.1 Research Questions

The research question for this paper is:

How can one understand the source of any observed differences in the KS Islamic activities using ICT among Islamic banks and Islamic banks adopting a parallel system?

### 4.2 Contribution

Islamic banking is a growing sector in Malaysia and many other countries. KS among staff is important in improving the performance and ensuring the sustainable growth of Islamic banks. The potential for KS in developing countries is reportedly higher than that in other parts of the world (Voelpel & Han, 2005). Banking institutions that intend to fully leverage their knowledge potential must first appreciate and look forward to the enablers that affect KS as a whole. Therefore, this study eventually expects to facilitate and assist the banking sector in improving its recognition and understanding of factors that further induce KS in Islamic banks and in conventional banks with Islamic banking services. Moreover, the study aims to determine the status of Islamic information sharing among staff and the success of KS in Islamic banks. The issue is whether to hire non-Muslim staff or staff with no information or knowledge about Shari'ah, as such employees could create problems for customers of Islamic banking services and on the correct application of religious texts. Islamic banks should overcome such issues and gain a deeper understanding of its staff needs and demands to support KS among them. New staff should be trained in KS, creating a better understanding of the correct application of religious texts and provision of Islamic banking services.

### 4.3 Result

Data collection

The methodological instruments employed in this research include collection data during questionnaires from staff in Conventional banks that added the service Islamic banking to their system banking (CB)and Islamic banks (IB) after that during result of questionnaires that support this result. Collection data during make interview with some of staff that support for first phase and explain for it.

# Pilot Study

A pilot study of the survey instrument was carried out to ensure that the questionnaire is acceptable and answerable by a wide range of respondents. This pilot survey tested perceptual items and the reliability of

the scales before conducting the main survey; it sought to reduce the number of items to a reasonable number for inclusion in the main survey. A sample size of 50 was used in this exploratory research exercise to establish the general viability of the survey questionnaire. Several questionsneed to be modified to serve the purpose of this survey. Furthermore, deleting the item "It is prestige" from a question regarding the level of HKC and KS would increase the Cronbach's Alpha to more than 70%.

**Table 1: Reliability Analysis** 

Variables	No. of items	Alpha Coefficient
Cultural knowledge capabilities (CKC)	15	.756
Structural knowledge capabilities (SKC)	10	.756
Human knowledge capabilities (HKC)	6	.711
Technical knowledge capabilities (TKC)	10	.893
Knowledge sharing (KS)	3	764

# Data Processing and Analysis

The data collected were verified for accuracy. Data cleaning was performed using descriptive statistics, coding, and data entry to ensure correct frequencies in data. Inconsistencies and errors were eliminated, and the data were adjusted for missing values and outliers. The cleaned data were then verified using a reliability test.

# Factor Analysis

Factor analysis primarily aims to describe the covariance relationships existing among numerous variables in terms of factors. The factor model assumes the possibility of grouping variables based on their correlation coefficients. A strong correlation exists when all the variables in a certain group are associated with one another and are related to other variables outside this group. By contrast, a weak correlation exists when each factor is represented by a different set of variables. Varimax analysis can aid in achieving the goal of this study, which is to present independent rankings of the factors and to define the psychological factors, as factor interpretation should be based on psychological logic. Through the analysis, five factors were identified as necessary to such psychological explanation and these factors were shown to have identical interpretation (Table 2).

**Table 2: Factor Analysis** 

Latent Constructs	Items	Loadings
Cultural knowledge capabilities	5	.804

		.689

# Regression

Regression analysis was adopted in the study, and the adjusted coefficient of determination (R average) was -.043, which served as basis for assessing the moral relationship between the dependent and independent variables. In other words, the contribution of the independent variables in explaining the change in the dependent variable can be derived using array deviations. The standard error was 0.714, as shown in Table 3.

**Table 3: ANOVA** 

Sig.	F	Mean Square	df	Sum of	Model
				Squares	
001.	.498	.356	4	1.422	Regression
		.714	45	32.124	Residual
			49	33.547	Total

Based on Table 4, the percentage of the link between the KS and the independent factors was 608. Squaring this value in terms of the effect of the combined factors yields an impact value of 369. The proportion link square adopted in disseminating the sample to the entire community was 394, implying that the independent factors affect the dependent variable.

**Table 4: Model summary** 

Adjusted R Square	R Square	R	Model
043-	.042	.206	1

Moreover, based on their coefficients, a significant relationship was found between the dependent variable (i.e., KS) and all the independent variables, except for CKC, which obtained significance and beta values of 968 and .007, respectively. The remaining values were statistically significant at p = 0.05 (Table 5). Therefore, SKC, HKC, and TKC have significant effects on KS.

**Table 5: Coefficient** 

No	Model	Unstandardi	zed	Standardized	t	Sig.
		Coefficients	}	Coefficients

### 5. CONCLUSION

This study examines the KS problem and its effects on the KS process, in the context of Islamic banks in Malaysia. Islamic banking institutions must first appreciate and look forward to the enablers and barriers that affect KS as a whole to fully leverage their knowledge potential. Therefore, this study is expected to facilitate and assist the Islamic banking sector in improving its recognition and understanding of KS among staff in Islamic banks in Malaysia.

# IMPLEMENTING MANAGEMENT INFORMATION SYSTEM IN LIBYAN ISLAMIC FINANCIAL INSTITUTIONS

Mohammed Abulqasem Eldlimi<sup>1</sup> Muhammad Ridhwan Ab. Aziz<sup>2</sup> Mohd Faisol Ibrahim<sup>3</sup>

### **ABSTRACT**

Management Information System (MIS) is a management system that is used by many banks in developed countries nowadays to improve the banking service and support decision-making process. The Islamic banking is considered as one of the fast growing industry in the financial and banking sector. In Libya the Islamic banks are still new and many traditional banks have opened Islamic banking departments or separate branches to provide banking services according to Islamic law and Sharia. The study will explore the impact of Management Information System on improving the banking service and information quality North Africa Bank, and identify the main obstacles those hinders the implementation of MIS in Islamic banking. The methodology of MIS is qualitative research that aims to gather an indepth understanding to the role of Management Information System in Libya banks and evaluate the impact of MIS on Islamic banking. The finding of this paper shows that Libyan financial institutes need proper research to implement MIS.

**Keywords:** Management Information systems (MIS), Islamic Banking, Investment, Banking Activities, Information Quality, Decision-Making Process

### 1. INTRODUCTION

Islam is a comprehensive way of life, which strikes the balance between the spiritual and the material need of human being. One of the important aspects in human life is the need for a comprehensive system in order to govern their life and to ensure all the needs are catered adequately including the material needs such as the financial management. This aspect of life is closely related to the fast growing industry in the world nowadays, which is the Islamic financial services industry.

Islamic banks are banks that practicing banking activities according to the principles of Sharia law in all financial transactions and utilizes the banking functions to develop the economy using the Islamic way. Sharia prohibits imposing fixed payment of specific interest or fees due to profit from specific loan, this type of financial loan is known as usury (Riba). Islamic banking has the same purpose and functions as conventional banking with the exception of lending money at interest and avoiding any kind of suspect in financial transactions that may include usury (Riba).

Management Information System (MIS) is a system used by most of modern banks nowadays to provide information at high quality and precision needed to manage the bank effectively. Management Information System (MIS) provides the necessary reports and summarizes the bank's basic operations to the senior managers in the bank and support decision-making process. Other advantages of MIS are transparency and efficiency of information provided for bank's clients. Investors need for efficient

-

<sup>&</sup>lt;sup>2,3</sup>Lecturers at University Sains Islam Malaysia.

information before they decide to invest in Islamic banks and they need quality in information, which can only be provided using Management Information Systems.

Banks in Libya were trying to follow the latest development around the world in all ways in order to achieve the desired goal but all these attempts still not yet accompanied with complete awareness on the importance of Management Information Systems (MIS), and by considering MIS a vital and strategic source for success in Islamic banking.

The Islamic financial services are considered as one of the fast growing industry in banking sector. In Libya the Islamic banks are still new and many Islamic banks that will be established in the coming few year. However, applying Management Information Systems in Islamic Banks is quite important to develop the economy of Libya through effective banking system that attract investors from inside and outside Libya who wish in invest using the Islamic way and invest their money in efficient Islamic banking systems with full satisfaction.

#### 2. BACKGROUND OF THE STUDY

The banking system plays a vital role in improving the national economy and represents the backbone of any national economy, therefore this research attempt to find the best approach to implement the management information systems in Islamic banks and the remove the obstacles that prevent the implementation of Management of Information Systems (MIS) in Libyan banks that include Islamic banking. The study selected North Africa Bank in Libya as the focus of this study.

North Africa Bank provide different types of Islamic banking such as (Islamic funding for small projects, finance commercial projects inside and outside Libya, granting loans for hire purchase contracts, financing real-estates projects) and other financial banking that comply with Islamic regulations and Sharia law.

The current information services in North Africa Bank are not satisfactory to the management of the bank and to the clients as well. The senior management in this bank received many complaints from Libyan investors and beneficiaries in which they describe their inability to deal with bank and benefit effectively from the Islamic banking services offered by North Africa Bank, and they showed weak interest to invest due to poor quality of financial information and poor banking service.

# a. MIS in Banks

The measurement of success of any bank is by providing banking services with high quality based on the capacity of the bank to meet the requirements of the client to financial information and satisfy these requirements better than other competitors. The huge developments in information systems are strategic weapons in dealing with current conditions that are characterized by rapid changes and strong competition among financial institutions. Competition in the financial sector matters for a number of reasons. The degree of competition in the financial sector emphasizes on the efficiency of production of financial services, the quality of financial products and the degree of innovation (Manolis, & Winsor, 2000).

Management Information Systems (MIS) are not new to the banking sector. Since the early 80s, banks have been using this terminology to refer to the process of generating various reports and analyses at the Corporate/Head offices for their decision making for own use as well as for conveyance to authorities in charge of regulation.

MIS in the present context of high availability of voluminous data on electronic media at diverse locations and on diverse platforms, has become more pertinent to banks' decision-making process, thanks to the availability of new tools of technology such as data warehousing, data mining.

There are several definitions of the concept of MIS and may vary in expressions, but correlate in the connection and implications, actually there is no explicit agreement among most researchers and experts in the field of management science on one comprehensive definition for MIS.

A management information system (MIS) provides information that organizations need to manage themselves efficiently and effectively (Brien, 1999). Management information systems are typically computer systems used for managing five primary components: hardware, software, data (information for decision making), procedures (design, development and documentation), and people (individuals, groups, or organizations). Management information systems are distinct from other information systems, in that they are used to analyze and facilitate strategic and operational activities (Lucey, 2005) Academically, the term is commonly used to refer to the study of how individuals, groups, and organizations evaluate, design, implement, manage, and utilize systems to generate information to improve efficiency and effectiveness of decision making, including systems termed decision support systems, expert systems, and executive information systems. Management information systems (MIS), produce fixed, regularly scheduled reports based on data extracted and summarized from the firm's underlying transaction processing systems to middle and operational level managers to identify and inform structured and semi-structured decision problems (Laudon, 2010).

Most management information systems specialize in particular commercial and industrial sectors, aspects of the enterprise, or management substructure.

# 2.2 The importance of MIS in banks

Management Information Systems MIS is very significant and fundamental for efficient banking service. In many modern banks, there is a great role of Management Information system in providing accurate information related to customer requirement and data gathering and processing. MIS helps in many ways the Bank for the better result and customer satisfaction.

Most banks consider information technology (IT) as a route for service quality improvement, while others perceive it as a cost-effective expansion strategy (Kim and Davidson, 2004). There is a general consensus regarding the importance of understanding the patterns of IT adopted by bank customers (Pikkarainen et al, 2004), and several studies (Applegate, McFarlan and McKenney, 1999; Kim and Davidson, 2004) emphasize that financial institutions such as banks are distinguished from other businesses in their reliance on IT. As early as the 1980s, Porter and Millar (1985) found that banking was one of the most information intensive sectors. Banks tend to use IT to improve the quality of their services, increase efficiency and customer satisfaction, and offer wider choices with lower costs to the customer. In other words, banks are using IT for competitive advantage.

The following are some of the benefits to financial institute that can be attained for different types of management information systems (Pant, 2007):

- Financial institutes are able to highlight their strengths and weaknesses due to the presence of revenue reports, employees' performance record etc. The identification of these aspects can help financial institutes to improve their business processes and operations.
- Giving an overall picture of the financial institute and acting as a communication and planning tool between the departments of the bank.

• The availability of the customer data and feedback can help the financial institute to align their business processes according to the needs of the clients. The effective management of customer data can also help the financial institute to perform direct marketing and promotion activities.

# 2.3 MIS in Libyan banks

Libya's centrally planned economy depends primarily upon revenues from the petroleum sector, which contributes practically all export earnings and over half of GDP. These oil revenues and a small population give Libya one of the highest per capita GDPs in Africa. Since 2000, Libya has recorded favorable growth rates with an estimated 8.1% growth of GDP in 2006. The Government is in the process of preparing a financial sector reform program. Recent legislation setting corporate governance standards for financial institutions makes progress towards better management and greater operational independence of public banks. Over the past two decades, the banking industry in Libya has experienced very significant development, which was the direct result of various factors, one of the most important being the implementation of new accounting information systems (AIS) and associated technologies.

However, Libyan public banks still lack management structures supported by skills in critical areas like credit, investment, risk management and information services quality and control systems. Moreover, the majority of banks and financial institute in Libya did not apply the modern management information systems and are still depending on old management systems and long routine using paper works to organize the workflow the bank. The result was negative on clients' perception and satisfaction about Libyan banks.

## 3. THE RESEARCH PROBLEM

The importance of Management Information Systems that provide reliable information for bank's clients has much increased in recent years. Investors nowadays are much interested to use the new technologies to support their investment decisions. Since Islamic banking is very much similar in its banking activities to other non-Islamic banking service, however, these banks needs to develop their internal functions to follow the latest development in technologies specially applied for banks in order to provide effective banking service and high transparency for investors and clients.

Providing high quality of information is important to rationalize the decisions of investors. MIS can help the management in Libyan banks to make good and strategic decisions, but this target can't be achieved without implementing an efficient Management Information System. The information technology is vital to the success of any banking institution including Islamic banks.

The main problem that will be discussed in this research is the obstacles that hinder the implementation of Management Information Systems by North Africa Bank in Libya. Some of these obstacles are managerial, while the lake of technological capacity and qualified personnel needed to operate Management Information Systems is another obstacle that prevent swift development to new information system. Most of the banks in Libya including these banks that include branches of Islamic banking are using traditional and old way in doing daily banking activities and also most of their systems and computers are old and without advanced software and new computer applications, therefore this situation produce real difficulties and obstacles to implement modern information systems which is part of the Management Information System.

Another problem that will be discussed in this study is the low level of knowledge about the management information system by employees of the Islamic banks and how to raise the level of awareness and understanding to use Management Information Systems in doing the daily banking activities by specialist employees in North Africa Bank, who are qualified and capable to run and operate these systems.

### 4. THE RESEARCH OBJECTIVE

- 1) To identify the main role of management information system MIS in banks and financial institutions.
- 2) To explore the factors those affect the quality of information produced by the Management Information System MIS.
- 3) To identify the major obstacles those hinder the implementation of Management Information System (MIS) in Islamic banks in general and North Africa Bank in particular.

# 5. THE RESEARCH QUESTIONS

- 1) How management information system MIS operates in banks and financial institutions?
- 2) What are the factors those affect the quality of information produced by the Management Information System MIS.
- 3) What are the major obstacles those hinder the implementation of Management Information System (MIS) in Islamic banks in general and North Africa Bank in particular.

## 6. RESEARCH METHODOLOGY

We applied a quantitative research that aims to gather an in-depth understanding to Management Information System in Libya with accordance to the current information services provided by Libyan banks in general and North Africa Bank in particular. The qualitative methodology used in this research will investigates why these Libyan banks can't adopt Management Information Systems swiftly, and how Libyan banks can improve quality of information and Islamic banking through adoption of Management Information Systems.

# 7. THE SIGNIFICANCE OF THE RESEARCH

This study is the first study to cover this subject in Islamic banks in Libya, the importance of this study due to the immediate requirement to replace the traditional and old way in doing banking activities by proving the right plan to implement management information system in Islamic Banks help the supervisors and managers in these banks to remove the obstacles that prevent the implementation of MIS.

This study attempt to improve the service quality of banking sector in Libya starting from the Islamic banks, and because most of Libyan clients prefer to put their money in Islamic banks due to religious factors, the banking sector is very important to the national economy in Libya, this study will contribute to the development efforts to the economy of Libya in the coming few years. Without efficient banking systems, the banks in Libya in general and Islamic banks in particular will remain weak and attract few investors to invest in these banks. A reliable and efficient Management Information System will help the Islamic banks to achieve its goals

The main contribution in this study is evaluating the relationship between the reality of management information system in Libyan banks and its role in activation the financial market of Libya by evaluating the current information sources provided by Libyan banks. The result of this study will enable the officials in Libyan banks in general and other financial institutes like Libyan stock market to identify the eeffectiveness of deploying information system and test its ability to follow up the new development in banking industry, moreover this study will make high effect on the scientific research in this field.

In addition to that the study will attempt to help North Africa Bank to develop the information service through improving the information quality using Management Information Systems; therefore the bank will be able to face the increasing challenges and competition with international banks.

### 8. THE SCOPE OF THE RESEARCH

This study will conduct analysis in North Africa Bank in Libya and will focus on a group of employees and managers who are responsible to provide and manage Islamic banking activities in North Africa Bank. The researcher believes that the only way to get precise answers to all the questions arise from this study from the managers and specialist employees working in the IT departments in the bank.

In addition to that the study will investigate the current level of information quality provided by North Africa Bank in Libya because it is the first bank in Libya, who provided Islamic banking service, and conclude the best implementation plan that suite the financial environment in Libya according to market demands and the rapid development in the global economy and the high competitions imposed by foreign non-Islamic banks.

## 9. CONCLUSION

Management information system ensure high level of service quality and effective information sharing between all the departments in the bank and provide accurate information to the senior management inside the banks that help to make precise strategic decisions.

This study concluded that the past experience and awareness of managers and employees was weak about the function of MIS as well as the benefits of MIS on the overall performance of the bank and the service quality provided to the clients. It is clear that training on using the functions of MIS will improve their experience and ability to deal with these functions and good practicing on using these functions. In addition to that the perception and willingness of managers in the bank is very important to ensure swift implementation of MIS. Moreover the perception and willingness of managers to use and adopt MIS in North Africa bank was not encouraging and weak, according to this study perception of managers is one of the main obstacles that hinder swift implementation to MIS in North Africa Bank.

# RELATIONSHIP BETWEEN ACADEMIC PROFILE AND COMPUTER USAGES WITH LEVEL OF COMPUTER SKILL AMONG NEW MUAMALAT STUDENTS

Nor Asiah Yaakub<sup>1</sup> Nurul Aini Muhamed<sup>2</sup> Norailis Ab. Wahab<sup>3</sup> Norman Hamdan<sup>4</sup> Nathasa Mazna Ramli<sup>5</sup>

## **ABSTRACT**

Many higher learning institutions decided to eliminate computer literacy courses due to the facts that many students who registered at higher education level were exposed to computers since in a pre-school. Thus they assumed an incoming student at a tertiary level, has possessed adequate computer skills and will bring with them the basic IT skills needed for their studies. However, some studies revealed that students at higher learning institutions still lacking of even basic IT skills and manifesting fear of the technology. This study were carried out with the aim to determine a relationship between previous computer usages with the level of computing skills among new enrolment students at the Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia. A set of questionnaires were distributed to 25 first year students registered for academic session 2010/2011. The data collected data were analysed using descriptive statistics. By determine the level of IT skills exposure, this research findings are expected to provide input to the local higher learning institutions in preparing suitable computer courses outlines in the future.

**Keywords**: computer, skill, office-based application, exposure, perception.

# 1. INTRODUCTION

In line with the advance of information technology (IT) tools in businesses, the skills need by workers to perform the task related to IT also change. The Secretary's Commission On Achieving Necessary Skills Of US Department Of Labor (SCANS, 1991), have identified eight basic skills which they call as workplace know-how, that are needed for career development in any workplace including resources skills, interpersonal skills, information skills, systems skills, technology skills, basic skills, thinking skills and personal qualities. This supported by Moody et al (2002), where they found that computer literacy was a second most desired skill for potential employees after communication skills.

As most of entrance in the job market are supplied by a higher learning institutions, thus people trusted the institutions has provided an academic courses which incorporate these skills to ensure the employability of their graduates. In contrast, many higher learning institutions decided to eliminate computer literacy courses due to the facts that many students who registered at higher education level were exposed to computers since in a pre-school. In addition through a Smart School program, one of the seven flagships of Multimedia Super Corridor (MSC), Malaysian government has allocated various hardware and software infrastructure support, educational courseware, info structure as well as training over the last five years to many schools. Thus higher education provider assumed incoming college

\_

<sup>1,2,3,4,5</sup> Faculty Economics and Muamalat, Universiti Sains Islam Malaysia (USIM)

students, has possessed an adequate computer skills and will bring with them the basic IT skills needed for their studies.

Basically, the above fact is reasonable. But to what extent these students have gained computing skill? Is their skills possess before entering university are enough for them to survive in university or work? These questions aroused since some foregoing studies revealed that students at higher learning institutions still lack even basic IT skills and manifesting in a fear of the technology. While industry commented that undergraduate

In designing curriculum, it is important for the university's management to determine their student computer literacy skills and also what should be taught in IT courses. By that the course content level is not too low or too high and the topics covered really necessary to the students to move in the industry.

This study was carriedout with the aim to determine a relationship between previous computer usages with the level of computing skills among new enrolment students at Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia. By determine the level of IT skills exposure, this research findings are expected to provide input to the locall higher learning institutions in preparing suitable computer course outlines in the future.

## 2. LITERATURE REVIEW

The penetration of information technology has great influences in all facets of human's life including daily life, business and education. In the business context, IT not only facilitates the business process, but now also changes the business process itself. The related IT skills needed for manpower in the firms changed in step with the revolution of IT usage in the business. There are some researchers from job advertisements suggested that technical skills are predominantly required for IT positions (Litecky, et al, 2004) where a computer literacy as second most desired skill for potential employees after communication skills Moody et al (2002).

For this reason, universities as main suppliers to a job market, are heavily been forced to redesign their curriculum to fit the business demands. The universities should first identify the IT skill level possess by students before entering the university to ensure that, valuable resources are not wasted by providing the more computer literate students with skills and knowledge which they already possess, while on the other, they could also devote more resources to developing programs for entrants who lack basic computer competence skills (Ballantine, 2007). Stoner (1999) stressed the IT software skills which students get from secondary school have important implications for what additional IT skills are taught in the higher education.

Wallace & Clariana, (2005) via their studied discovered many students enrolled in college today were experienced used computer for the first time since in a kindergarten yet. While in Malaysia, the establishment of the Smart School as one of the seven flagships of Multimedia Super Corridor (MSC) has benefits many schools in the countries by providing various hardware and software infrastructure support, educational courseware, info structure as well as training over the last five years under these efforts. It also has managed to increase the students' and teachers' information communication technology (ICT) literacy from zero to 100 per cent over a period of four years (Manecksha, 2002). Thus, many believe that youth of today are IT literate as they are widely exposed to computers whether at home or in schools.

As a consequence, many higher learning institutions decided to eliminate computer literacy courses It is generally accepted that incoming college student, particularly business students, has possess adequate

computer skills. Therefore it will be reasonable to assume that students entering university will bring with them the basic IT skills needed for their studies. (Wallace & Clariana, 2005).

However, this perception is distinct compared to the factual. Gazely & Pybus (1997) and Stoner (1999) had found that some students who are entering tertiary studies are still lacking basic IT skills and displaying computer phobias to varying degrees.

This finding is being strengthened by McDonald (2004) and Wallace & Clariana (2005) though online computer proficiency tests to determine computer literacy skills among new enrolment students. The result showed students actually do not possess the necessary function in an undergraduate school of business. As a result of McDonalds study, the students at the Robinson College are now required to complete a freshmen level course which includes both a lecture and lab component. While Wallace & Clariana (2005), recommending all incoming new students at their college to take a full semester course in IT, combining computer concepts and computer software. Supported by Turner (2001), based on her study in Australia, students perceive their skills as being better after assignment on IT-related subject during the first year of study.

Besides identifies the necessity of offering IT skills courses, another issues should be catered by higher learning institutions is determination of what should be taught in IT courses. This is important in order to provide students with IT skills which up to date and highly requested by industry. There are many different types of IT skill for business applications. However, the most important are those concerned with 'office' skills using typical office-based applications, such as word processing, spreadsheets, and presentation graphics, databases and web development. This idea has been agreed by Naqwi (2002), who proposed the IT course for students from business-related programs should include the basic concepts of IT business application, followed by the introduction business software such as word processing, spreadsheet/graphics and databases.

The most common office application software used in universities as well as in industries is the Microsoft Office. This office suite includes Microsoft Word (word processing), Microsoft Excel (spreadsheet), Microsoft Access (database management), Microsoft Powerpoint (presentation) and Microsoft Frontpage (web development).

Microsoft Office Word is a computer application used for the production (including composition, editing, formatting, and possibly printing) of any sort of printable material. Businesses tend to have their own format and style for any of these. Thus, versatile word processors with layout editing and similar capabilities find widespread use in most businesses. Generally, students use this application to prepare essays and other assignments.

Microsoft Office Word is a computer application that simulates a paper, especially for preparing accounting worksheet. It displays multiple cells usually in a two-dimensional matrix or grid consisting of rows and columns. Each cell contains alphanumeric text, numeric values or formulas. Normally Excel is used for to present financial data, prepare budget and various calculation and analysis. Proficiency with spreadsheet software such as Microsoft Excel is a requirement for success in most management positions.

Microsoft Access is a software intended to organize, store and retrieve large amounts of data easily. It consists of an organized collection of data for one or more uses, typically in digital form. In business, this software is really needs for organizing data systematically, analysis, maintaining customer relationship and decision making.

Microsoft Powerpoint is used to display information, normally in the form of a slide show. As its name, this software is normally used for business for a dynamic and attractive presentation. Students also use this software for class presentation.

Microsoft Frontpage is a broad term for the work involved in developing a web site for the Internet or an intranet, include web design, web content development, client-side/server-side scripting, web server and network security configuration and e-commerce development. It can range from developing the simplest static single page of plain text to the most complex web-based internet applications, electronic businesses, or social network services. As business move from brick and mortar to visible form, it is vital for students to have some skills related to basic web administration tools.

## 3. RESEARCH METHODOLOGY

To achieve the objectives of the study, data were collected by the researcher within a month using questionnaires. The questionnaires were adapted from Stoner (1999) and Turner (2001) with some modifications to suit the intention of this study. The questionnaire was divided into three following sections; demographic, computing experience and perceptions on IT skills. The 'one to five' Likert Scale was used with 'excellent to nothing' in the level of IT skills.

The questionnaires were distributed to all first year students registered at FEM for Semester 1, 2010/2011 academic session. From 295 questionaires, 225 of them were participated in this study, representing 76.27 percent of response rate.

The statistical analysis was carried out using Statistical Package for the Social Sciences (SSPS). A Crosstabulation was used to analyse he relationship between demographic profile and perception on IT skill.

# 4. RESULTS AND DISCUSSION

# **Demographic Profile of Respondents**

From this sample, most of respondents were female which comprising 73.8 percent of the total, while only 26.2 percent of them are male. Majority of the respondents (83.6 percent) are between 18-19 years old. The demographic data related to age is constant with the data on education given that the main admission education level in public higher education in Malaysia are matriculation level, followed by Sijil Tinggi Agama Malaysia (STAM), diploma and others.

Table 1: Respondents' demographic profile

## **Computing experience**

216 respondents represent 96.4 percent are having experience using computer before entrance into USIM. Only eight respondents (3.6 percent) did not have experience of using computer. Findings in table 2 is consistent with Wallace and Clariana (2005) who suggested that students were already exposed to IT skills before entering the university.

For the reasons of using computer, the main reason for using computing were for searching information (84.0 percent), followed with study (56.5 percent) and communication (36.5 percent). While 7.8 % spent their time for buying and selling transactions and online booking. This finding seem reasonable since as a student, they needs to search information online and prepare their assignment using computer. Furthermore, respondents were rarely involve with buying and selling transactions and booking, due some reasons such as financial position and payment available for them.

Most respondent used computer between 3-5 times a week with average time spent for each usage between 1-3 hours. Thus the frequency of using computer and average length of time per usage were moderate. In addition, authors assumed that majority respondent having their own computer since 64.8 percent of respondents confess used computer at home. Besides, the most frequent website visited was a social networking system (sns) which are Facebook/Flixter (56.9 percent) and Yahoo (35.8 percent) as well. While less than 1 percent visited Lelong/Mudah.com. This finding is agree with reasons for using computer, highly for communication and information searching and lower for business online.

**Table 2: Respondents' computing experience** 

Item		Frequency	Percentage	
Experience using	Yes	216	96.4

## **Perception on Available Microsoft Office Skills**

Table 3 below demonstrates perception of the respondents on their IT skills in five types of Microsoft Office applications — Microsoft Word, Microsoft Excel, Microsoft Access, Microsoft Power Point and Microsoft Front Page. In general, most of the respondent perceived their skills are moderate towards all skills, leads by Microsoft Word application specifically the usage of mail merge and database skills with 48.8 percent. Findings also shows, the level of respondents which do not possess any skills in Microsoft Words, especially others word application and document preparation with 2.3 percent and 2.8 percent respectively, are low compare to the other four Microsoft Office based. In addition skill of the usage of mail merge and database, 6.5 percent is also still low compare to the others Microsoft applications. The trends of responses towards skills level quit similar between Microsoft Words and Microsoft Power Point, where their skills level form excellent to weak are event (except for Usage of mail merge and database) and less than 10 percent respondent have nil skill for this two categories.

While for Microsoft Excel skills, it is nearly balance finding between having excellent and nothing skill all relevant aspect including financial statements preparation without formula, financial statements preparation with formula and data analysis. There are only between 3.2 percent till to 3.7 percent of respondents admitted excellent in Excel and around 6.8 percent to 8.7 percent of them have zero skill.

Finding on skill related to Microsoft Access revealed a percentage of respondent ranked for every skills asked as excellent also low, with 1.8 percent only for each skills including skills related to database preparation, relate table and search data. It also shows skill possess as excellent under this types of Microsoft applications can be said the lowest followed by skill of publish website in the internet (1.9 percent) under Microsoft FrontPage. Another interesting finding is the level of skill for Microsoft Front Page also shows a same trend, where only 1.9 percent excellent in published website in the internet and 3.3 percent each for develop web page and; form and database preparation. Also should be noted that, among all skills listed for 5 types of Microsoft Office applications, most of the respondents declared have no skills at all for the skills listed under Microsoft front page, specifically published website in the internet (20.9 percent).

Overall, respondents were largely familiar with Microsoft Word followed by Microsoft Power Point. In particular, the highest skill possess between moderate to excellent is document preparation skill (Microsoft Word) with 83 percent and closely followed by presentation preparation (Microsoft Power Point), 82.5 percent. Respondents skills for the remaining three Microsoft Office application are satisfied since all skills score between moderate to excellent are 52.1 percent and above. This finding is acceptable since students used Microsoft Word to type their assignment and used Microsoft Power Point for class presentation as requested by educators Still, we should pay attention to the all skills related to Microsoft Office Front Page and Microsoft Access since a number of respondents leveled their skill as weak and have no skills still high, above 40 percent in summary.

The finding is aligns with Gazely & Pybus (1997) and Stoner (1999), who discover that some students entering university are still lack of basic computing skills. This result proposes that students were not exposed to other complex software yet, and this should be covered in the higher education level.

Table 3: Respondents' perception on their skill in Microsoft programs

Type of skills						
		Excellent (%)	Good (%)	Moderate (%)	Weak (%)	Nothing (%)
Microsoft Word	Document preparation	11.0	30.3	41.7	14.2	2.8
	Usage of mail merge and database	2.3	18.0	48.8	24.4	6.5
	Other applications	21.1	36.7	29.4	10.6	2.3

	Publish website in the internet	1.9	15.0	35.2	27.7	20.2

# Relationship between Education and Previous Computer Usages with Microsoft Office Skills

In the way to link the result with the education and previous computer usage such as experience using computer, reasons for using computer, frequency and average length of using computer in a week, location used, the most frequent website visited and skills on Microsoft Office applications; the cross tabulation in frequency is used as part of analysis.

The result in Table 4 shows that academic background, matriculation has relationship with Microsoft skill. Where 95 respondents perceived their skills from excellent to moderate towards these softwares. This finding support the study by Turner (2001) where students perceived their skills as being better after assignment on IT-related subject during the first year of study. Here, respondents from the matriculation background are expected to improve their IT skills by doing series of assignment using computers more compared to those in high schools.

Secondly, the respondents' previous experience with computer usage is having positive link with the IT skills. Only 97 respondents perceived they are excellent with Microsoft office, means that the rest still perceived week and lack in these skills. Thus, this study is align with research finding by Gazely & Pybus (1997) and Stoner (1999), that some students who are entering tertiary studies are still lacking basic IT.

Next, study as a reason for computer usage is seem has influenced on Microsoft Office skills. 90 percent from total frequency admit their skills from excellent to moderate. Respondents were assume used these software to type the assignment, notes and slide presentation. These finding against support study by Turner (2010). However, the frequency computer usage and average time length per usage is reviewed as not contribute to much to skills. Even though the respondents which spent more than seven times per week and more than five hours per week, most of them perceived only as good towards this skills.

In terms of location, respondents' view their skills as excellent to moderate. Respondents are assumed has own computer or notebook and did not share with others and with no time limit of usage, are believed can improve their IT skills. It is disappointed when the computer usage at school doesn't much improve respondent's skill despite of free computer facilities, internet and teachers there.

Table 4: Relationship between Respondents' Education and Previous Computer Usages with Microsoft Office Skills

## 5. CONCLUSION

This study focused the relationship between academic qualification to enter USIM, previous computer usage and basic office application. Throughout cross tabulations analysis, it can be concluded that students who experienced used has basic IT skills, even though at weak skill level. This result consistent with previous study where new intake of students were brought in some basic IT skills with them but still lacking in mentioned skills. This might be they experienced with Microsooft Office application at beginning level, and not yet at intermediate or advance level.

One of important finding should be given careful attentions by USIM is on the students from STAM since majority of respondents perceived their skills as moderate to weak, and regretfully there are 2 respondent admitted have nothing skill at all IT skills.

Studies in this area should be expanded and it is suggested that the future study must be conducted to examine perception of the industries on IT skills that graduate has gained during their studies and identify the current IT skill actually required by industries. Besides, it is suggested to the lectures to conduct a proficient test to the new students in determine the actual skills IT level. These aspects are important to be investigated since these two parties may recognize the most updated IT skills and the level of computing skills that should be included in the course content that benefits students in the future.

## ISSUES ON THE IMPLEMENTATION OF TAX REBATE ON BUSINESS ZAKAT: THE CASE OF MALAYSIA

Mohamad Noor Sahidi bin Johari<sup>1</sup>

## **ABSTRACT**

Malaysian government has provided at least 2 incentives in their effort to promote zakat payment. Firstly, the tax authority under the federal government granted an income tax rebate for individual Muslim who had paid Zakat to state Islamic Religious Council (SIRC). Secondly, for companies, in 2005 Malaysian Government budget, it had been announced that any Zakat which is paid by company to SIRCs will be granted as an allowable deduction in the computation of the corporate tax. However, the amount of deduction is limited to 2.5% of the aggregate income which is very minimal. SIRCs and others zakat expertise try so hard to make the companies eligible to get claim rebate from their tax liability similar to rebate for individual Muslim. If government allows companies that pay zakat to claim rebate from their tax liability, this will consequently ease their financial burden. Furthermore, the tax rebate will serve as an incentive for Muslim majority owned companies which have not paid in the past to pay Zakat on business. Therefore, the main objective of this paper is to explain the several issues and challenges faced by SIRCs towards application for implementation of tax rebate on business zakat. Furthermore, this paper also will give suggestion that can benefit both of the federal government and companies towards the implementation of full tax rebate on business zakat.

**Keywords:** Zakat on business, allowable deduction, tax rebate, tax rebate, claim rebate from tax liability and several issues.

#### 1. INTRODUCTION

Zakat is one of the five pillars of Islam. Its importance can be judged by the fact that at different places in the Quran, the injunction to perform prayers is followed by the commandments regarding zakat. Zakat is mentioned in 30 places in the Quran and 27 of them are mentioned together in verses calling for solat (prayers).<sup>2</sup> This clearly shows the importance of zakat and solat. They are two pillars of Islam that can never be placed apart. Furthermore, zakat constitutes a special status in the pillars of Islam. A Muslim will not be a true believer in his faith if he has not performed any of these two pillars.

Basically, there are many types of zakat on wealth and one of them is zakat on business. Through Islamic economy and finance system, the implementation of justice in economic distribution can be done. Business can also be considered as ibadah. Profit from business can be share or distributed for those in need. This is why Islam encourages doing business. This is in line with surah Al-Taubah (verse 103) and Al-Baqarah (verse 267).

<sup>&</sup>lt;sup>1</sup> Pusat Pungutan Zakat-Majlis Agama Islam Wilayah Perseskutuan (PPZ-MAIWP)

<sup>&</sup>lt;sup>2</sup> Al-Oardawi, yusuf. 1996. Hukum Zakat. P.39

Take, (O, Muhammad), from their wealth a charity (zakat) by which you purify them and cause them increase, and invoke (Allah's blessing) upon them. Indeed, your invocations are reassurance for them. And Allah is Hearing and Knowing.

(Al-Taubah: 103)

O you who have believed! Spend from the good things which you have earned and from that which We have produced for you from the earth. And do not aim toward the defective there from; spending (from that) while you would not take it (yourself) except with closed eyes. And know that Allah is Free of need and Praiseworthy.

(Al-Bagarah: 267)

يَنَأَيُّهَا ٱلَّذِينَ ءَامَنُوٓ أَنْفِقُواْ مِن طَيِّبَتِ مَا كَسَبْتُمْ وَمِمَّاۤ أَخْرَجْنَا لَكُمْ مِّنَ ٱلْأَرْضِ ۗ وَلَاتَيَمَّمُواْ الْخَبِيثَ مِنْهُ تُنفِقُونَ وَلَسْتُم إِنَّا خِزِيهِ إِلَّا أَن تُغْمِضُواْ فِيةٍ وَأَعْلَمُوٓاْ أَنَّ ٱللَّهَ غَنِيُّ حَكِمِيدُ السَّ

TOTAL	1,196.87	100%	1,363.77	100%	1,641.09	100%

Collection zakat in Malaysia was increased every year. From year 2009 until 2011 (refer table 1), the collection was increasing tremendously. For the year 2009, the collection is RM 1.196.87 billion. State of Selangor was the highest collection with the amount is RM 283.65 million or 23.70% from the entire collection. Follow by Wilayah Persekutuan. For the year 2010, the collection is RM 1,363.77 billion or 13.94% increase from 2009. For the year 2011 the collection is RM 1,641.09 billion or 20.33% increase from 2010 and 37.12% from the year 2009. It shows that zakat collection in Malaysia increase every year. In the current situation, issue regarding zakat on business often debated and discussed among zakat expertise in Malaysia (Ram, 2010) especially related on how to increase the total payer of zakat on business and at the same time to attract more Muslim business community to pay zakat on business. This is because zakat institutions in Malaysia still facing some resistance to raise collection for business zakat. Businesses in Malaysia are mostly dominated by non-Muslim traders. But the increase in Muslim traders has also been encouraging. Zakat collection on business also increasing (Table 2).

<sup>&</sup>lt;sup>4</sup> Data is from Pusat Pungutan Zakat-Majlis Agama Islam Wilayah Persekutuan (PPZ-MAIWP)

\_

In 2009, collection on business zakat is amounted RM 277.49 million throughout Malaysia where the highest collection was in the state of Selangor which is RM 51.85 million or 18.69% of the entire collection. Zakat collection on business in Perlis is amounted RM 3.16 million which is lowest collection throughout Malaysia or 1.14% from entire collection. For the year 2010, collection on business zakat is amounted RM 301.78 million or 8.75% increasing from 2009. Throughout Malaysia where the highest collection still under state of Selangor which is RM 60.5 million or 20.05% of the entire collection. The lowest collection for the year 2010 is still under the state of Perlis amounting RM 4.18 million or 1.39% of the entire collection. For the year 2011, collection on business zakat is RM 389.92 million or 29.21% increasing from 2010 and 40.52% increasing from 2009. Selangor still lead the highest collection which the amount is RM 79.93 million or 20.50% of the entire collection. Perlis still the lowest state in zakat business collection amounting RM 7.61 million or 1.95% from entire collection.

The small number of zakat on business payer can be proved based on research paper, *Potensi Pembayar dan Kutipan Zakat di Malaysia*<sup>5</sup>. Based on this research, for the year 2010, has 59,470 potential Muslim entrepreneurs in Malaysia which the amount is (forecast) RM1082,048,462.00 collection in business zakat. This is huge amount for business zakat that can benefit to the asnaf. This data based on past statistic which is the ratio for each 20 income zakat payers (individual) are equal to 1 business zakat payer. (1:20). This data show that if the potential of income zakat payers for the year 2010 in Malaysia is 1,189,391 payers, it means the potential business zakat payer is 59,470 (1:20). In the year 2010, collection for business zakat in Malaysia is RM 301.78 million only which is 27.87% from potential business zakat payers which is RM 1,082,048,462.

The main issue regarding on this situation is why most of Muslim business community disregard pay zakat on business? Although a variety of efforts by zakat authority and government have been implemented but this scenario is still happened. Previous study by Rahman (2005) shows the reasons why this situation happened could be possibly due to burden of tax. This can be referred to research done by Abdul Rahman (2005, p.7):

"If government allows companies that pay zakat on business wealth to claim rebate from their tax liability, this will consequently ease their financial burden. Furthermore, the tax rebate will serve as an incentive for Muslim majority owned companies which have not paid in the past to pay zakat on business wealth"

The rebate on income tax equivalent to the zakat payment is a major issues that can only be resolved by the government. At present, according to income Tax Act of 1967, only individuals can claim for rebate from income tax on their zakat payments. This ruling is not applicable to companies or corporate bodies. Hence all companies, including Islamic banking and takaful institutions must not only pay zakat on business, which cannot be claimed for an income tax rebate, but they must pay income tax as well. This creates a double bind for companies that want to adhere to Islamic principles. At the moment, the only option for companies that want to pay zakat, while at the same time being liable to pay income tax, is that the amount paid as zakat are treated as tax rebate, subject to a maximum of 2.5% of aggregate income which is very minimal and not suitable with the zakat calculation which is based on balance sheet, not on aggregate income.

This paper is organized in several sections. The next section of this paper will look into the literature review. Section 3 looks into research findings which are issues on the implementation of

<sup>&</sup>lt;sup>5</sup> Abdul Hakim Amir Bin Osman, Pengurus Operasi, PPZ-MAIWP.

tax rebate on business zakat. Section 4 discuss on research recommendation and the last section concluding remarks.

#### 2. LITERATURE REVIEW

In Muslim countries especially Malaysia, it shows that an Islamic state has the right to charge other levies, besides zakat on its citizens. However, as reflected in Malaysia fiscal systems, they seem to regard taxation as more important compared to zakat. Taxation systems become an integral part of the fiscal system, whereas zakat become just a voluntary institution. This prevailing practice in Malaysia could be contributed by the colonialist influence in the past. Many contemporary Islamic scholars raise the above issues and try to promote a true Islamic institution such as zakat to play its prominent role as a divine practice in true Muslim societies. Al-Qardawi, in his monumental work, Fiqh al-Zakah (Law of Zakah), argued that taxes do not make up for zakat, since zakat, as pillar of Islam, must not be forgotten in the actual practice. Sincere Muslims must pay zakat in addition to taxes which they are obliged to pay by law.

In Malaysia, the companies have conflict between tax and business zakat. They are confused either to choose Allah s.w.t or Inland Revenue Board of Malaysia (IRB). According to En. Abdul Aziz Abu Bakar, President of Malaysiaan Association of Tax Accountants (M.A.T.A), zakat is recognized in tax system when tax rebate on individual for their zakat on income imposed for current assessment in 1978. Ironically, zakat be given the place after 30 years of tax system exists in Malaysia while zakat exists in Islam is more than 1387 years ago whereby since 2<sup>nd</sup> year of Hijrah. Companies facing difficulties to their obligation to pay zakat because of tax pressure which result most companies will choose to pay tax rather than zakat due to legal pressure. Business tax with zakat on business will burden the Muslim Traders compared to non-Muslim traders. Even though the government give 2.5% tax rebate on aggregate income, the collection on business zakat is still lowest. Tax rebate from aggregate income is actually not suitable with method used in calculation business zakat because the calculation is based on current assets not on aggregate income.

Government only recognized "Corporate Social Responsibility" (CSR) or donation compared to zakat which is mention in Al-Quran. This can be prove by IRB give 10% tax rebate on CSR or donation compared to business zakat which is 2.5% from aggregate income.

Table 3: Example Case: Business Zakat vs. Tax

TAX ONLY		TAX REBATE ON	ZAKAT*	TAX REBATE ON CSR**		
Aggregate Income	100,000	Aggregate Income	100,000	Aggregate Income	100,000	
Tax (25%)	25,000	(-) Zakat ( <b>Paid RM10,000</b> )	2,500	(-) Donation (10%)	10,000	
Income After Tax	75,000	Tax on Income	97,500	Tax on Income	90,000	
		Tax (25%)	24,375	Tax (25%)	22,500	

<sup>\*</sup>Business zakat amounted **RM10,000** but only RM2,500 was allowable to get rebate base on 2.5% from aggregate income.

<sup>\*\*</sup>CSR or donation was given maximum to 10% tax rebate.

```
*** Tax Only - Tax rebate on Zakat : RM25,000.00-RM24,375.00 = RM 625.00  
**** Tax Only - Tax rebate on CSR: RM25,000.00-RM22,500.00 = RM2,500.00
```

By refer to table 3, the example case income of the business is RM 100,000.00 for the current year. Let say that the companies choose to make zakat payment with the amount is RM 10,000.00 for their zakat on business, but the real calculation base on 2.5% aggregate income is allowed only RM 2,500.00. Then the taxes (25%) that need to be paid are RM 24,375.00 compared to RM 25,000.00 if the companies not choose to give a business zakat. Otherwise, if the companies choose tax rebate on CSR, maximum allowable from aggregate income is 10% which is 7.5% more than tax rebate on zakat with 25% income tax on business. If the company paid zakat with the amount of RM 10,000.00, the company can enjoy only RM 625.00\*\*\* from tax benefit compared if the company paid to CSR which the tax benefit is RM 2,500.00\*\*\*\*. This will make the company choose CSR rather than to paid zakat on business. If the companies still want to pay zakat with the amount of RM 10,000.00, the company actually will need to pay RM 34,375.00 (Zakat + Tax: RM 10,000.00 + RM 24.375.00).

#### 2.1 Income Tax Rebate for Business Zakat

Zakat is wealth purification and zakat paid to the state zakat authorities is treated favorably by the IRB of Malaysia. Foremost to understand is that zakat is the obligatory spending on charity for Muslims. It is the 3rd pillar of Islam. It is utmost importance for the Muslims to fulfill their duties of zakat before spending on other types of recommended charity. Therefor Muslims need to adhere to the rules of zakat and should not pay their zakat obligations randomly. Zakat paid to the state zakat authorities are treated favorably by IRB. The net effect is that, the total tax payable is reduced when there is zakat paid during the year assessment. When zakat is paid by individuals and sole proprietors, the amount paid is treated as tax rebate. When paid by companies, the amount paid as zakat is treated as tax rebate, subject to a maximum of 2.5% of aggregate income. Zakat paid by company is treated as follow:

If zakat paid is more than 2.5% of aggregate income then only the maximum is allowed. If zakat paid is less than 2.5% of aggregate income then fully deductible in arriving at the chargeable income

# 2.1.1 Chronology Income Tax Rebate for Zakat, Fitr or any other Islamic Religious Dues

- Y/A 1978 onward: Full rebate in respect of zakat, fitr or any other Islamic religious dues paid by tax resident individuals and evidenced by a receipt.
- Y/A 2004 onward: Tax rebate granted to a Labuan offshore company for any zakat paid subject to the maximum of tax changed (i.e. 3% of net profits, or RM20,000 upon election)
- Y/A 2005 onward: Tax rebate granted to companies (excluding labuan companies) for the
  payment of zakat perniagaan paid in the basis period for that relevant year to an appropriate
  religious authority established under any written law or any person authorised by such
  religious authority. The rebate is limited to 2.5% of the company's aggregate income in the
  relevant year.
- Y/A 2007 onward: Tax rebate granted to cooperatives and trust bodies for payment of zakat perniagaan to Islamic religious authorities is allowed subject to a maximum 2.5% of the aggregate income.

## 2.2 Business Zakat Calculation

Actually, data used for business zakat calculation method and business tax rebate is different. Business zakat calculation uses data from the balance sheet, while business tax rebate gains information from the income statement 6. In other word, those methods demonstrate none relationship between business zakat calculation method and tax on business income due to the different sources of information usage. The arising question here is, if the business zakat calculation depends on those methods, do companies get benefits from the tax rebate allowable to them? Principally, zakat is payable on the business irrespective of whether business operation running at loss or profit, if the business has positive working capital. The companies would not utilize their benefits in two situations. The first situation is when their business suffers a loss but still has a positive working capital. The second situation is when tax rebate is smaller than the amount of business zakat paid. In this case, what modification or adjustment should be done? It actually requires the harmonization between figh and law that was currently practiced in Malaysia. According to the Mufti of the Selangor State Government, Islamic scholars should be opened to new interpretations and changes of the edicts made which were formulated by earlier scholars especially in matters related to zakat. In fact, any changes to the section 44(11A) of the Income Tax Act 1967 requires a lot of deliberations.

## 2.3 Methods of Calculating Zakat

Accounts are prepared based on Generally Accepted Accounting Standards. Current standards have their own purposes and do not specifically address the issue of Zakat. Nonetheless, with proper disclosures and further inquiries from management, and with the appropriate adjustments made to existing accounts, the assessment of Business Zakat can still be done. The Department of Islamic Development Malaysia (JAKIM) has published a book in the year 2001 entitled "Panduan Zakat di Malaysia". According to this book, there are two highly recommended methods of business zakat calculation to be applied.

Method 1: Working Capital (Syari'yyah)

```
(Current Asset – Current Liabilities)
X % Muslim's Equity + / - Adjustments X 2.5%
```

This method is called the working capital model. It considers current assets and deducts current liabilities and makes the necessary adjustments. Adjustments are made by adding or deducting clarified items.

## Method 2: Growth Capital (Urfiyyah)

(Owner's Equity + Long Term Liabilities – Fixed Assets – Non Current Assets) X Muslim's Equity + / - Adjustments X 2.5%

This method is suitable for Islamic Banking and financial institutions, Takaful and private limited companies where current Assets and Current liabilities are not classified accordingly. Differences in both methods. It is based on the accounting equation below:

Equity + Long Term Liabilities - Fixed Assets - Non Current Assets =

-

<sup>&</sup>lt;sup>6</sup> http://zahrihamat.blogspot.com/2009/07/zakat-accounting-taxation-and-malaysian.html

## Current Assets – Current Liabilities

Both methods are derived from the same Balance Sheet with the resulting answer being the same. The Urfiyyah model looks from the all sources available, less the normal (*uruf*) exemptions. The Syar'iyyah model looks at the balance of resources available in the business, less the current liabilities. Both models will need adjustments of the same nature.

## 2.3.1 Worksheet for Business Zakat Calculation: Working Capital

## 2.3.3 Adjustment to Current Assets

Current Assets Zakatable are: Trade Receivables (net), Stock in Trade (net), Short Term Investment Securities, Time Deposits / Mudharabah Deposits (no encumbrances), and Cash. These items are subject to zakat on the basis of full ownership on growth potential assets. Current Assets not subject to zakat are due to:

- a. Partial ownership assets (Partial Owneship)
- b. Assets to be consumned not meant to be sold (Consumption Assets)
- c. Assets not yet in a normal form to be sold (Non Trade Assets)
- d. Assets ceased to be tradable; nonperforming (Non Business Assets)
- e. Assets not meant for business (Welfare)
- f. Non Halal Assets (Non Halal)
- g. Assets for which zakat has been paid (Zakat Paid)

## Deductions To Current Assets:

- i. "Other receivables" such as:
  - Loans given to 'others' (Partial Ownership)
  - Prepaid Insurance, building assessments, and road tax on vehicles (Consumption)
  - Advances/Deposits towards purchasing fixed assets (Partial ownership)
  - Sundry deposits telephone, water, electricity, rent on building, project deposits (Partial ownership)
  - Receivables on Al-Mustaghallat fixed assets rent, dividends (Partial ownership)
- \* ii. Office supplies to be consumed (Consumption assets)
- \* iii. Raw materials (Non trade assets)
- \* iv. Work in Progress assets (Non trade assets)
- \* v. Fixed Deposits as collateral for financial facilities (Partial ownership)
- \* vi. Doubtful accounts / NPL's (Non business assets)
- \* vii. Obselete / Non moving / slow moving Stock in trade / (Non business assets. If sold later on, then it will be assessed in the respective period sold)

## Exempted from zakat:

- \* i. Welfare funds (Welfare / Not intended for business)
- \* ii. Interest revenue, dividends for non-halal sources (Non Halal sources)
- \* iii. Dividends received from sources that have paid zakat (Zakat paid / no double zakatation)
- \* iv. Credit (Financing) Scheme Receivables (due to be collected next year) and is classified as a current asset (Partial ownership in current year for next year's zakat assessment)

## Added To Current Assets:

- \* i. Donations, using internal operating funds, given in the last quarter must be zakat cleansed first.
- \* ii. Purchase of fixed assets and non current assets in the last quarter (end of hawl) using operating funds will also be subjected to zakat in the current year only.

## 2.3.4 Adjustment to Current Liabilities

Current Liabilities Allowed to be deducted: Trade payables, various accrued expense payables, Current income tax payable and other liabilities obligated unto the business related to the year under assessment. Current Liabilities not Allowed to be deducted and needs to be added back are:

- a. Items defined as sources of fund (Sources / Full ownership)
- b. Items related to next year's operations (Reclassification)
- c. Accumulated items from previous years (Source)
- d. Returns to shareholders (Net of Zakat)

## Added Back:

- i. "Other payables" such as:
  - \* Loans from other parties (Source/Full ownership)
  - \* Other various deposits received (Source/Full ownership)
  - \* Prepaid received (Full ownership)
  - \* Any arrears of liabilities (accumulated) that were deducted in the respective years of occurrence. Only the current year's provision is deductible but the accumulated value up to the beginning of the year must be added back (Source/Full ownership)
- ii. Financial Liability (For Next Year) these items are for next year; zakat assessment is for the current year (Reclassification):
  - Hire Purchase
  - Ijarah Thumma Al-Bai' / Ijarah Wal Iktina'
  - Financial/Capital lease
  - Term loans (current portion)
  - Al Bai' Bithaman Ajil
- iii. Financial Liability Overdraft, Notes Payable, Short term financial liability instruments (Sources)
- iv. Current tax liability only to be deducted but taxes in arrears from previous years must be added back.(Source)
- v. Dividends payable; Return on membership dues (cooperatives); Return on compulsory savings and Honorarium payables (Net of Zakat / Pay Zakat first)

## 2.4 Zakat Obligation and Existing Laws

Nik Hassan (1991, P. 217) in describing the position of zakat in Malaysia fiscal management, had pointed out that:

"There is no synchronization between these two functions. The only relation between zakat and the country's fiscal management is through the provision in the tax system that zakat payers can obtain tax rebate for the amount contributed as zakat. Thus, the zakat system has no significant place in the Malaysia fiscal system. It seen solely as a religious activity and the running of the economy is considered as mundane responsibility. Islam is seen as a religion in the western sense and not as a complete system that governs the whole spectrum of the country's management"

The above can be attributed to the Federal Constitution in Malaysia. With regards to laws pertaining zakat in Malaysia, it is only covered under state enactments that makes it obligatory upon Muslim individuals to pay zakat but not that of companies. According to article write by

Tun Abdul Hamid Mohamad<sup>7</sup>, in Malaysia, a law which levies zakat on anyone, human beings or companies, other than persons professing the religion of Islam is unconstitutional. A company is clearly not. To place a legal obligation on a company to pay zakat of the owners or the shareholders is to impose an ever higher religious obligation on a company than human beings. Furthermore, companies are outside the jurisdiction of State Legislative Assembly and outside the jurisdiction of the Shariah Courts. The decision of the National Fatwa Committee held on 6<sup>th</sup> December 1992 titled "zakat on Companies", National Fatwa Committee dated 10<sup>th</sup> May 2001 titled "Zakat on Companies Owned by Different Types of Owners Mixed between Muslims and Non-Muslim", National Fatwa Committee on 16<sup>th</sup> August 2001 titled "Zakat on Shariah Compliance Banks and Business Companies where the parent Companies are owned by Non Muslim" is not a fatwa committee established under any law. It has no legal standing. Its decisions are not fatwas binding on anybody. In brief, the fatwa, though gazetted, is unenforceable on companies.

Companies are covered under the companies act. A zakat study by Aishah Bidin (2004)<sup>8</sup> on business zakat has shown that several avenues are available to make zakat on companies act, income tax act and also to even suggest a new zakat act. Other findings include passing a resolution in the Annual General Meeting, Board Resolution and also management resolution. Nevertheless, there is a necessary to stress that even without some form of incentives, zakat on business is an obligation that cannot be excused and tax too is also a responsibility.

## 3. ISSUES ON THE IMPLEMENTATION OF TAX REBATE ON BUSINESS ZAKAT

There are several issues pertaining to the implementation of tax rebate on corporate zakat.

## 3.1 Government Revenue Will Decrease

The government believes that zakat give negative impact on government revenue if tax rebate will impose on the company. The company will take an advantage to disbursed all their tax to zakat institutions in order to get full tax rebate from their business zakat payment.

## 3.2 Management of Zakat Institution

Although the administration of zakat in Malaysia has been institutionalized, this does not imply that its administration in various states is systematically synchronized and coordinated. The zakat administration for each state is still independent. The result is that several models of organizational structure have been adopted by various states in Malaysia. From the eyes of government, the problem with the management and organization of zakat is lack of qualified professional human resources and infrastructure to develop a good organization management. Inadequate manpower has been a problem for too long. This problem leads to the low level of trust among Muslims with zakat agencies.

## 3.3 Tax Manipulation by Companies

The main purpose to tax rebate is to increase business zakat collection in order to help the 8 asnaf.

-

Obligation of companies to pay zakat: Issues arising from effects of separate legal entity By Tun Abdul Hamid Mohamad (Former Chief Justice of Malaysia)

<sup>&</sup>lt;sup>8</sup> Aishah Bidin. Isu undang-undang Berkaitan pelaksanaan zakat terhadap Syarikat di Malaysia. Zakat Pensyariatan Perekonomian dan perundangan (UKM) 2006

But the government is worried that if tax rebate imposed, the business owner will manipulate the tax in order to pay more on zakat to get full rebate. This will decrease the revenue from tax itself. Have 4 scenarios that business zakat payer towards on zakat calculation on business made by zakat collection center:

- i. Zakat on Business calculation is made by zakat collection center and amount of business zakat paid is same like calculation made by zakat collection center.
- ii. Zakat on Business calculation is made by zakat collection center but the amount of business zakat paid by the company is **less** than actual calculation made by zakat collection center.
- iii. Zakat on Business calculation is made by zakat collection center but the amount of business zakat paid by the company is **more** than actual calculation made by zakat collection center.
- iv. Company paid zakat on Business without using calculation made by zakat collection center (self calculation).

## 4. RECOMMENDATION

This section will give recommendation and explanation why government should revise current tax rebate. The recommendation is as follow:

## 4.1 Economics and Social Impact

Zakat occupies an important place in Islamic economics. Throughout history, whenever Muslims truthfully applied the system of zakat, as ordained by Allah and Rasulullah s.a.w, the splendid objectives of zakat were fulfilled and its great efforts appeared within the lives of the individuals and the society. One excellent example is during the caliphate of Umar B. Abdul Aziz whereby the zakat system was so successful that it became difficult to find even one needy person to receive zakat collection. This shows how zakat if implemented properly could make wonders to the society. If zakat properly managed, the government may be relieved from significant social welfare expenditure.

## 4.1.1 Multiplier Effect on Zakat.

Some Muslim economists believe that a certain amount of zakat funds invested according to the overall production priorities of an economy would benefit the poor in particular and the economy, in general, through is multiplier effect on employment and incomes. In this way it would gradually eliminate poverty instead of providing recurring financial support to the same set of people. It would increase employment and income in the economy thereby raising the standard of living of the society. This multifold effect is not only exclusive to the payer but is also true from the economic perspective. The funds flow from the zakat paying entity to the zakat authorities, to the recipients to various vendors and traders, back to the zakat paying entity.

## 4.2 Tax Adjustment and Business Zakat.

2.5% tax rebate from aggregate income is given by IRB Malaysia to the companies that pay zakat on Business in Malaysia. This 2.5% tax rebate actually is very minimal and burden to the Muslim entrepreneur. There is recommendation in tax adjustment toward business zakat. IRB should give income tax rebate instead of tax rebate like tax rebate on individual income or increase tax rebate rate from 2.5% to 10% to make it same like CSR rate for tax rebate. Example: company ABC sdn bhd earned an aggregate income amounted RM 100,000.00. So the company tax is RM 25,000

(25%). If ABC sdn bhd paid zakat on business is RM 10,000.00, therefore the company tax is RM 15,000.00. (refer on table 4)

**Table 4: Recommendation for Tax** 

Tax Rebate on zakat				
Aggregate Income	100,000			
Tax Estimation (25%)	25,000			
(-) Zakat	10,000			
Tax	15,000			

This policy will attract the companies to paid zakat on business. From this perspective it shows that the government play an important role and responsible for development of Islam. Beside government can develop infrastructure like Islamic center, mosque, Islamic banking, Takaful institutions, investment banking and Tabung Haji, this policy also was the best way to help Islam be more established in Malaysia. If the government is reluctant to this policy, it shows that the government neglected the Al-Quran and Sunnah. For time being, the adjustment between zakat and tax is the right choice to help muslim entrepreneur to their obligation towards Allah s.w.t and at the same time towards Malaysia.

This policy will not reduce the tax collection in Malaysia. This is because zakat is not competitor toward on tax but vice versa. It can be complementary that can play an important role same like tax. As known before, zakat was like savings for special expenditure not like tax which is for government use. Zakat is more on to improve the social dimension like giving opportunity to the less privileged group such as poor, needy, unemployed, orphans, handicapped and so on. Its more like savings, the more zakat fund, the more government can help people especially the 8 asnaf as mentioned in Al-Quran.

## 5. CONCLUSION

This paper indicates that the government should revise the tax rebate on business zakat policy. Taxation has primarily legal and economic incentives and implications, as compared to moral and spiritual incentives, unlike in the case of zakat. The main objective of zakat is to purify and to bless Muslim's wealth and soul. Nevertheless, there is a necessity to stress that even without some form of "incentives" zakat on business is an obligation that cannot be excused and tax too is also a responsibility. There will be an outflow of cash, but that will be the natural way of showing the gratitude and thankfulness to Allah s.w.t. Studies are also greatly needed to evaluate the current fatwa and relevant laws like Companies Act 1965 in order to prevent any misunderstanding in future regarding the issues arising from effects of separate legal entity. The shariah scholars, lawyers who are well versed in companies' law, auditor, representative of the relevant authorities and the industry should sit together to discuss this issues. In Malaysia, even though the law does not require for the companies to pay zakat on business, the collection of zakat on business is increasing every year. During Prophet Muhammad s.a.w, there is no issue regarding the separate legal entity because at that time the economic situation is not complicated like nowadays and the main point is what we have now is not based on Al-Quran and Sunnah. Can we make a judgment that company act is more important rather than Al-Quran and Sunnah? Put aside the conventional law because the more important is to gain Allah s.w.t reward in hereafter. When companies paid zakat on business, the company will grow and earn more profit as mention in the Quran, Surah Al-Bagarah 2:261, Allah says (meaning):

"The example of those who spend their wealth in the way of Allah is like a seed (of grain) which grows seven spikes; in each spike is hundred grains. And Allah multiplies (His reward) for whom He wills. And Allah is all-encompassing and knowing".

## TOWARDS DEVELOPING A DISCLOSURE INDEX FOR MALAYSIAN ZAKAT **INSTITUTIONS**

Raedah Sapingi<sup>1</sup> Siti Normala Sheikh Obid<sup>2</sup> Sherliza Puat Nelson<sup>3</sup>

## **ABSTRACT**

In view of understanding zakat reporting practices this paper aims to develop a Zakat Disclosure Index (ZkDI) for Zakat Institutions (ZIs) in Malaysia. This is due to the finding of previous studies that highlighted zakat payers' dissatisfaction on the insufficient information especially on zakat distribution part. The paper uses holistic accountability concept as a conceptual lens in developing the index. In developing the index; this paper starts by reviewing past literature and conducting semi-structures interview with zakat payers and recipients. Which then, it is reconciled and validated by a panel of experts to obtain the final ZkDI. Based on the discussions with the respondents, this results indicate that the institutions shall give more emphasize especially on financial and non-financial categories in their reporting as to ensure accountability is discharged effectively and consequently the religious obligation is fulfilled. A suggestion that annual report of zakat institutions shall be disclosed to the public was another interesting finding revealed in this paper. Since the paper focuses solely in Malaysia, thus applicability of the ZkDI to other Muslim countries which have different laws and regulations need further examined. For future research, there is a possibility that the index can be improved by inviting more respondents to participate and eventually a better disclosure index can be created.

**Keywords** – Disclosure index, zakat institutions, accountability, reporting practices

#### 1. INTRODUCTION

Zakat (Islamic tax) is one of the five fundamental pillars of Islam, which specifies an individual Muslim is obliged to pay zakat with certain preconditions. This religious obligation has been addressed about 82 times in holy Quran (Azizah & Abd Halim, 2009). It is also clearly affirmed that the zakat funds collected should be distributed to the specified groups of recipients by Amil (administrator) in this case; Zakat Institutions (ZIs). These specified groups of zakat recipients have been clearly stated in the holy Quran, (At-Taubah 9:60):

"Alms are for the poor and the needy, and those employed to administer the (funds); for those whose hearts have been (recently) reconciled (to Truth); for those in bondage and in debt; in the cause of Allah, and for the wayfarer: (thus is it) ordained by Allah, and Allah is full of knowledge and wisdom"

In relation to the above, it portrays that ZI is accountable to distribute the funds to all the 8 eligible groups of recipients known as asnaf (al-mustahigqin). Nonetheless, there were many doubts have been raised in past literatures about efficiency of the ZI in discharging its accountability. For example Hairunnizam et al., (2009), pointed out one of the main reasons for dissatisfaction of zakat payers towards ZI was due to

<sup>&</sup>lt;sup>1</sup>The author, PhD candidate of the Kuliyyah of Economics and Management Sciences International Islamic University Malaysia (IIUM). Corresponding author: Raedah@uniten.edu.my <sup>2, 3</sup>, Lecturers, the Kuliyyah of Economics and Management Sciences International Islamic University Malaysia (IIUM)

the issue of inefficiency of distribution methods and lack of information being publish on zakat distribution by ZI. Insufficient of information highlighted previously shows there is a possibility of accountability issue and quality of reporting exists. As stated in holy Quran the believers are required to keep records and reporting of transactions, (Al-Bagarah 2:282)

"O ye who believe! When ye deal with each other, in transactions involving future obligations in a fixed period of time, reduce them to writing Let a scribe write down faithfully as between the parties: let not the scribe refuse to write: as Allah Has taught him, so let him write..."

From the Islamic perspective, providing accounting information is vital to the *umma* (Muslim community), as they have their own right to be acknowledged about the implication of the activities of an organization on its well-being as well as giving advices on how this has been achieved in accordance with *syariah* (*Islamic Law*) requirements (Lewis, 2006). He further clarified that accountability to ALLAH SWT by means of producing and establishing information that is freely available (Lewis, 2006). Hence, one of the methods that can be used to measure information disclosed by organizations is via

disclosure index (Saunah et al. 2012). Many past studies have developed and used index to measure the annual report and reporting practices of variety of organizations specifically non-profit type; such as Coy & Dixon (2004), Saunah et al. (2012), Hooks et al. (2012), Wei et al. (2008) and so forth. Marston & Shrives (1991), described "disclosures indices are extensive lists of selected item which may be disclosed in company report".

## 1.1 Background of the study

These days a call for greater accountability is regularly voiced especially for companies, government sector and non-profit organizations. It becomes critically prominence to the government and non-profit organization since its objectives is not for profit motives and the fund may easily misused by anyone in the organizations. The concept of accountability is a basic element of management and governance of any organizations (Cameron 2004). As described by Gray et al. (1996), stated accountability as "the duty to provide an account (by no means necessarily a financial account) or reckoning of those actions for one is held responsible"

While Robert & Scapens (1985) seen accountability as a relationship involving "giving and demanding of reasons for conduct". Generally the concept covers the relationship between accountor and accountee (Gray & Jenkins, 1993 Abdul Rahim 1998; Shahul Hameed 2000; Cameron, 2004). Although, there are a lot of discussion concerning on measuring accountability, it is essential to give consideration on accounting information which focuses on disclosure, and as stated earlier one of the methods of measuring the accountability of zakat institutions is via disclosure index. Hence, this paper uses disclosure index as a proxy to measure the reporting practices which ultimately may improve the accountability and transparency of ZIs.

Currently, research on disclosure practices not only concerning corporate sector instead it has caught attention of researchers to further investigate in Non-profit organizations (NPOs), Public Sector (PS), Non-Government agencies (NGOs) and other entities that may have similarities characteristic of non-profit making motives. Disclosure of information by Non-profit organizations (NPOs) is vital due to few factors; first the information disclosed can be used by stakeholders to assess the effectiveness and efficiency of the particular organization. Secondly, it can contribute to improve stakeholder's perception, which eventually will increase the level accountability and transparency of the organizations (Saunah et al. 2012). Despite the growth of the disclosure study on NPOs, NGOs and so forth a little attention have been given to religious non-profit organizations (RNPOs) sector or known as faith-based organization (Ruhaya et al.2012). In case of Malaysia RNPOs such as zakat institutions (ZIs), waqf, and mosque grant many rooms to be explored especially with regards to the disclosure aspects. One of the interesting

RNPOs that can be further discovered is zakat institutions (ZIs). Currently, there are a lot of past literatures have discussed on the issue of zakat management in Malaysia especially on collection and disbursement system. Diverse zakat practices and lack of appropriate system on both policies and practices of zakat system among all the states in Malaysia have brought many inconsistencies in collection and distribution to the 8 qualified recipients (asnaf).

As portrayed by (Kamil 2005) ability of ZIs in managing the fund of zakat is still doubtful and questionable. This is supported by Ahmad Shahir and Adibah (2010) discussed on the issues and challenges faced by the Lembaga Zakat Selangor (LZS), they clarified doubts of the zakat payers on the credibility of ZIs in managing the funds. They further explained that some of the zakat payers either individuals or organizations, refused to pay zakat at the institutions instead of paying directly to the eligible zakat recipients. Surprisingly, Ahmad Shahir (2007) further discovered that only 10% to 15% of the zakat payers in Selangor pay zakat through formal zakat institutions, these decisions have portrayed lack of trust by the public which eventually can jeopardize the reputation and image of ZIs.

Azman et al. (2012) addressed some of the essential issues relating to the ZIs, first on the inefficiency of distribution of zakat funds. Basically, zakat funds are distributed by the institutions to the eligible recipients based on certain criteria which are set by authority and also through a report made by a public. However, the institutions have received complaints and been criticized by the public since the funds did not reached the targeted group of recipients and lack of knowledge on the other part of community. The complaints and dissatisfaction with performance of the ZIs arose as the authority did not publicize the zakat information. Hairunnizam et al., (2009), further added on how dissatisfaction on the performance of ZIs affects' zakat payers channels in paying zakat. The result showed more than 50% of dissatisfied zakat payers did not commit for zakat payment which would may affect decrease in potential zakat collection. Interestingly, the main reasons for such disappointment were due to inefficient of distribution methods and insufficient information being publish on zakat distribution by ZIs as mentioned previously.

Marston & Shrives (1991), stated information is disclosed in many ways, the main one is the annual report, other types of information for instance interim, quarterly report, prospectus, employee reports, stock exchange's announcements and other printed material. Taylor (2006), further added the avenues of reporting covers media release, mailings to citizens groups, websites and annual reports.

The Annual Report of organizations is perceived as a vehicle of transferring the information, which be used for measurement, classification, quantification and evaluation of organization performance and position. One way of measuring the information disclosed is via disclosure index (Saunah et al. 2012). Marston & Shrives (1991), explained disclosure index has been used as research tool in number of research papers by many different researchers from 1960s till present and clarified it would not continue to exist if it shows poor results.

In view of understanding the reporting practices of ZI, the study is prepared to propose a Zakat Disclosure Index (ZKDI) for zakat institutions in Malaysia and with the intention to assist the ZIs in preparing the report as well as provides guidelines to Jabatan Zakat, Waqf Dan Haji (JAWHAR) or Department of Awqaf, Zakat and Hajj in reporting zakat information. JAWHAR's was established in 2004 "with the roles to coordinate and develop the management of awqaf and zakat as well as monitoring the management of hajj" (http://www.jawhar.gov.my)

Despite that it may also promote and suggest uniformity and harmonization between 14 ZIs in terms of disclosures of zakat information in the financial statements. As for the public, it can increase public accessibility to zakat information and encourage the awareness of eligible Muslim to pay zakat. Finally, it may improve the image of ZIs by enhancing its accountability and regain public trust and confidence in managing the zakat funds; which eventually would foster the economic growth of Muslim community.

## 2. LITERATURE REVIEW

In Islam, wealth held by individuals should be shared with others, as all property ultimately belongs to Allah as the real owner of the wealth. Sharing the wealth between the rich and poor people in Islam is expressed in a way of paying zakat or from conventional perspective is known as tax by distributing the fund to the qualified recipients. *Surah At-Taubah (9) verse 60* has disclosed 8 specific groups of qualified recipients who are entitled to receive zakat, they are the poor - Fugara', extreme poor Muslim (al-Masakin), those employed to administer and collect (the funds)- Aamillen, those whose hearts have been recently reconciled (to truth) i.e. those who have converted to Islam, to free the captives (Ar-Riqaab), those in bondage and in debt i.e. Al-Gharimeen, in the cause of Allah (Fi- Sabeelillah),and for the wayfarer: (thus it is) ordained by Allah – Ibnus –Sabeel.

Zakat legally means, 'a prescribed amount of a specific property paid for a specific category of people'. In other words, zakat is the amount of money or its equivalent taken from a specific type of wealth that must be spent on specific categories or group of people in specific ways (pay to *amil* directly), when the particular wealth reaches a specific amount at a specific time. The obligation to pay zakat among Muslims is established in the *Qu'ran*, *Sunnah and hadith*, the consensus of the companions and Muslim scholars. With the objective of distributing of wealth to the less fortunate Muslim community, zakat practices would therefore be able to eradicate poverty among members of the *ummah*.

Muhammad (1980) stated that the term of Zakat can be best explained in three different connotations; which are linguistic, theological and legal aspects. The linguistic perspective describes zakat as a process of purification and sanctification of heart from dirt and it also refers as praise, growth and increase, while theologically portrays the implication or consequences of practicing zakat where it leads to spiritual purification. Finally, from legal aspect zakat signifies transfer of ownership of specific wealth to individual or individuals under certain fulfilled conditions. In other words by fulfilling this obligation it can purify individual's wealth to get Allah's blessing.

In Malaysia, the political structure plays a great role in the administration of zakat system in Malaysia. State Islamic Religious Councils (SIRCs) is the body responsible for administering all matters pertaining to religious affairs including zakat, and it comes under the jurisdiction of the respective state government or the respective state ruler (Sultan). Most of the states have their own council of religious affairs that administers the collection and distribution of zakat, which refers to the advice and fatwa issued by the respective SIRCs. (NurBarizah, 2007). Zakat law and its administration are governed by the federal government under (JAWHAR), which is restricted to coordinating zakat matters among the states. Most importantly, the administration of zakat operations between states, where Federal government represented by JAWHAR plays limited roles in monitoring and coordinating zakat operations in all the states in Malaysia. Presently, each state in Malaysia formulates its own policies on zakat affairs which include method of collection, disbursement policy, administrative aspects, execution and also the degree of enforcement. As a result, Malaysia has a variety of zakat practices in collection and disbursement which eventually creates inconsistency which led to a difficulty in understanding on how zakat operations are being administered and monitored.

## 2.1 Previous study in Malaysia

Over the past few years academics have increased their attention on the issues of zakat management in Malaysia. Past studies (Abdul Halim et al., (2005): Ali, 1990; Azizah et al., (2005); Halidan (2006); Ismail (2006) Ismail (2000); Kamil (2005): Nurbarizah et al., (2006); Zainal Abidin (2006) have discussed about the efficiency and effectiveness of ZIs in managing the fund in their custody. While the issue on the effectiveness of zakat disbursement system to the qualified recipients have been debated and

discussed by previous studies such as (Mohd Dahan, 1998; Sanep et.al, 2006; Hairunnizam et.al, 2008; Hairunnizam et.al, 2009; Anuar, 2008).

Hairunnizam and Radiah (2010) reported that zakat disbursement system in Malaysia shows vagueness in terms of distributing the fund to the eligible recipients. They reported that every year an average of 26% or RM145millions of zakat proceeds were left undistributed to zakat recipients and they were kept in the zakat institutions. According to Muhammad Syukri (2006) such problems occurred was due on few causes. He explained the institutions failed to keep track and recognize their potential zakat recipients because of the connection gap especially in terms of information between institution and zakat recipients. Hairunnizam and Radiah (2010) shared the same views that one of the ZIs had failed to recognize those who are eligible to receive zakat money. Indeed, Mujani (1995) urged that the institution should put an initiative to distribute the surplus funds to the recipients giving the priority to the needy and destitute people.

Beside the issue of undistributed fund, Hairunnizam (2009) addressed the zakat payers were not satisfied with the performance of ZIs in terms of distribution of zakat funds. The reason was that the respective institutions were not disbursing the funds fairly to all the zakat recipients including the al-riqab, ibnSabil, al-gharimun. In term of information, another important weakness discovered is lack of data on collection and disbursement of zakat funds. Information relating to the total collection and its disbursement is considered essential to the public in evaluating the capability of ZIs in managing these funds. Nik Mustpaha (1987) highlighted that information on zakat collection and its disbursement were not all the time available. Even when some of the states revealed that information, most of them were vague and not complete. Furthermore, each state has different format in reporting the information pertaining to these and only latest figures were shown by some State Religious Councils.

Apart from that another factor that affects the process of distributing zakat funds is due to a bureaucracy problem (Azman et al., 2012). The study discussed how the student needs to make a new application every year even though they had applied for zakat funds in their first year and yet again they need to present all over again all the relevant documents as what they did earlier. Furthermore, in certain states students are initially required to apply for study loan in order to be eligible to receive zakat funds. With regards to these it will slow down the process of approval which was not practiced by Prophet Muhammad (*PBUH*). The practice and principle that should be followed is that once the zakat fund has been collected it should be disbursed as soon as possible to the eligible recipients. Hence, ZIs need to improve their disbursement process by having up-to-date register of the eligible recipients (asnafs) and a delivery system put in place and continuously monitored. Moreover, Anuar (2008) revealed generally the public and particularly the academics preferred to pay zakat directly to the beneficiaries rather than the zakat institutions. This indirectly portrays the current practices of zakat institution shows some weaknesses and factors contribute to the issue shall be further examined. This is important especially to the zakat payer who contributes money to the trusted institutions; they need a guarantee that their money has been distributed fairly to the designated group of people.

As a result many efforts and initiatives have been implemented by the ZIs to gain public confidence such as introducing management accounting practices which includes strategic planning and performance measurement. However the implementation of those initiatives is still questionable which grants a lot of spaces to be studied. (Azizah et al., 2005; Nurbarizah et al., 2006; Ahmad Shahir and Adibah, 2010). Again the accountability of the ZIs in managing those funds leaves many questions to be answered.

#### 2.2 Disclosure index

In accounting research, disclosure indices are often times used especially in studying annual reports of organizations. Marston & Shrives (1991), mentioned "disclosures indices are extensive lists of selected

item which may be disclosed in company report". Coy (2004), the roles of these indices are to present an insight i.e. a summary of indicator, sign, evidence and so forth to users whether the whole contents of the reports prepared is comparable or an interest of certain aspect of the study is covered such as voluntary and environmental disclosure. Botosan (1997) and Cheng (1992), highlighted past literature has regarded disclosure index as a practical and valid research instrument. Coy and Dixon (2004) defined an index as:

"Numbers that encapsulate in single figures, objects in the set that one wants to measure and that are capable of measurement. Each number in a valid and reliable index is reached uniformly by determine scores for each of, possibly many component items, which have been identified as relevant to the set and purpose if the index. These component item scores are then combined in a meaningful way in order to ascertain the index number for each object in the set."

In New Zealand, Coy & Dixon (2004), have developed a disclosure index *called Public Accountability Index* (PAI) for annual report of universities in New Zealand from 1985 to 2000. PAI is developed with the purpose to measure the quality of anual report produced by the public Universities since there was a little relevant information was revealed from universities authorities on educational and staff related aspects of university resource attraction and allocation. While Wei et al. (2008), have made a new effort by examining the reporting practices of museums in New Zealand (NZ) and the UK. Museum Performance Accountability Disclosure index (MPADI) had been developed by adapting MAD disclosure index, which then was modified to suit with the nature of the organization. Eventually, the index was developed uses a framework which represents on the Balance score card (BSC) system. The study revealed that, Museum in the UK shows slightly a better disclosure level than NZ in terms of the total score. On top of that many of the items listed in the MPADI are not sufficiently disclosed by them which eventually portrays that the annual reports prepared showing less information. Disclosure item such as "employee satisfaction" and "budget" information showed weakness item for both NZ and UK museum. While financial review disclosure signifies the weak item for NZ reports. Furthermore, UK reports found customer satisfaction item showed the poor result of disclosure.

In case of Malaysia, to ensure the accountability in government sector, the National Audit Department (NAD) has introduced *Accountability Index (AI)* or known as audit rating system. The index is issued for all Ministries and State treasuries starting from the year 2007. The index was developed with the objective to evaluate the quality performance aspect of all government agencies which subject to its audit. It was developed based on certain indicators and each indicator will have its own criteria. Marks will be given on each criterion and finally score rating will be awarded between score of one to four on level of accountability.

After 3 years implementation of Accountability Index (AI), Faridah et al. (2010), examined the auditees' perception on the implementation of AI in public university. They interested to do this study since there is a plan by NAD to implement the AI at public university. A group of 116 middle and top level of staff management of the university was involved in the survey and generally most of them perceive the AI as a good initiative for a basis of measuring performance and benefit the university in future. Apart from that Hooks et al. (2012), have put initiative by suggesting a best practice reporting performance for local government in Malaysia via disclosure index. As the assumption of the annual reports prepared are the main mechanism for discharging accountability as well as grants relevant and meaningful information to the stakeholders, the paper portrays that the best practice reporting performance demands more comprehensive on performance information which covers both financial and non-financial elements. Another study related to the government agencies, Nurbarizah (2011), has proposed an index for federal statutory bodies (FSB) in Malaysia and found the level of compliance on disclosure of FSB is considered fair. The result portrays Financial category of information shows the highest score while governance—related information represents the lowest which indicates least information being disclosed in the annual reports of FSB. The paper also further discusses about the determinants of the disclosure level, where

FSB size and accessibility have shown a positive relationship with the disclosure level, while board size was regarded as insignificant factor found in the study.

With regards to NPO/charity Saunah et.al (2012), introduced new approach in developing Malaysian Charity Disclosure index (ChDI) using stakeholder needs. This paper has used qualitative and quantitative methods in deriving the ChDI which focuses on literature review, interviews and online survey. In assessing validity of the proposed index the study has applied two steps; at first comments, suggestion and discussion have been made with panel experts from both local and international panels which then being revised and improved before distributing the ChDI survey through web or online survey. In this process, the target participants were institutional donors from main public listed companies in the Bursa Malaysia, and finally 117 listed companies participated in the survey. The paper revealed, two categories i.e. financial information and governance information showed the highest score which indicates these are essential information needed by stakeholders of charity organization.

Generally, academics have discussed a lot on the issue on zakat management system, the ways to overcome such weaknesses are also being highlighted but very few of them discuss the reporting practices aspect as a whole in depth. Based on the above discussion, it signifies there is a limited study done on disclosure index for religious institutions particularly for zakat institutions. Although, Saunah et al. (2012), have discussed about the disclosure levels towards improving the accountability and transparency among Religious Non-profit organizations (RNPO), but the study was concentrating on all existing religions organizations in Malaysia which are Buddhism, Islam, Christian and others (Sikhism, Daoism, Confucianism). Obviously, there is a need for disclosure index for zakat institutions which in turn will improve the image of ZIs to the public as a whole.

## 2.3 Accountability concept

There a rich literature on accountability concept can be gathered from various disciplines especially in management and psychology literatures. Accountability issues especially in corporate and government sector was widely being discussed, however to the NGOs this issue was recently brought up in 1990s (O' Dwyer 2007). Ahmad (2010), highlighted within the context of NGOs accountability literature, the debates and argument mostly focus on direction of accountability, which the well-known are; notion of upward accountability and downward accountability.

Upward accountability explains efforts to improve the management through upward directional for instance reporting to funder/donor. In other words it is about accountability to donors, the party that provides funds to the NGOs which is similar to the concept of corporate accountability i.e. accountability to shareholders (Ahmad, 2010). In relation to reporting, Ebrahim (2003a), revealed that donors frequently requires highly detailed quarterly and annual report on achievement from funded project and expenditure based on pre-specific line items. In addition to that he asserted certain NGOS that have multiple foreign donors; on which really concern the NGOs to comply with the auditing system of each donor. In satisfying donors demand, he realized at the end of that such effort may deviate the main NGOs' focus to fulfill their responsibilities towards its beneficiaries.

Apart from that, Edwards & Hulme (1995a), added there is a tendency that upward directional may distort accountability. Jepson (2005), further added that "the audit culture has failed in its goal of accountability and transparency..." He also explains, "The key to accountability regime is not an adoption of structural process such as audit trails, or the reporting of performance measurements, but in the engagement of public constituencies in informed discussion on values, issues and strategy". Based on the above argument, thus the idea of downward accountability is discussed below.

While downward accountability refers to the accountability to partners, beneficiaries, staff and supporters (Edwards & Hulme ,1996). Jordan & Tujil (2006) highlighted, public expectation on NGO accountability

is considered related to the mission and services to beneficiaries, in other words downward accountability is "a right based approach to NGO accountability could service the public expectation". Connecting right based approach with downward accountability provides a different view with regard to the roles and relationship between NGOs and beneficiaries. Sidoti and Frankovits (1995), discussed that this right based approach actually changed the perspective of all 3 parties: donors, NGOs and beneficiaries. Beneficiaries is perceived to be a right holder and not a passive group and waiting to be served anymore, while NGO is considered duty-bearer and donors are seems to be assisting supporter instead of being demanding aid giver. Due to this, combining to these 2 categories of accountabilities is called holistic accountability

A broaden concept of accountability is known as holistic accountability, which concentrates both short term functional accountability (privileged in upward accountability) and strategic accountability (downward accountability). Furthermore, the notion of holistic accountability is combining both views i.e. upward and downward accountability into one view, and at the same time employing both with balancing act is considered as a holistic approach. Ahmad (2010), explained holistic accountability basically "a form of accountability to a broader range of stakeholders".

Since there are limited studies have been done in reporting practices of ZIs and considering having similar characteristics of other entities such as NGOs, NPOs and so forth, this paper has used the notion of holistic accountability in developing the index. Thus, framing both upward and downward accountability offers a new room on which zakat institutions can improve the disclosure practices as well as enhance its accountability and transparency in disclosing zakat information.

## 3. RESEARCH METHODOLOGY

Discussions on issue of disclosure of non-profit organization and mismanagement of zakat institutions have led the study to propose a zakat disclosure index (ZKDI) for zakat institutions in Malaysia. In answering the objective discussed previously, the study uses mixed mode methods, i.e. both qualitative and quantitative methods. The journey starts with how the index is developed, methods to obtain desirable list of index, method employed for data collection and the approach used to measure the index level.

## 3.1 Developing Disclosure index

The purpose of ZKDI is to measure the level of disclosure of zakat information in their annual report. Marston & Shrives (1991) discussed a disclosure index is a list of selected items that have been developed using certain methods, used to measure the extents of disclosure of the company report. In developing disclosure index for zakat Institutions, the processes of developing ZKDI involves three stages: the process of identifying the list of disclosure items this is done by reviewing past literature and conducting semi-structured interviews with the zakat payers and recipients, next was assigning weight for each item and finally assessment of validity from panel experts to obtain the final disclosure index.

## First: Identifying the appropriate disclosure item

The list of items in the disclosure index was developed by examining past literature on NPOs area that particularly focused on developing disclosure index. As mentioned earlier to develop the disclosure index, identifying appropriate disclosure item was considered essential and due to that various sources of information from previous literatures as discussed above have been analysed and used to develop the index which may suit to the zakat institutions. The next process was combining the items to draft the ZkDI which consists of compilation of chosen items according to the theme.

## Second: Semi structures interviews with zakat payers and zakat recipients

After the draft of disclosure index has been identified i.e. through reviewing past literature and relevant documents, it has been summarized into 5 categories with a total of 74 disclosure items have been in the list. Then the list of 74 disclosure items and questionnaire on semi-structured interview were prepared for both groups; three zakat payers and recipients were participated in this study. Face to face interview with zakat payers and also recipients have been conducted, with the intention to get further information and ideas in identifying potential items to be in the index. The list of disclosure index according to its categories i.e. background of zakat Institutions, financial information, non-financial information, future information and governance information. The categories stated were similar to (Saunah et al., 2012,). The list of disclosure items has been given to the zakat payers and further interview discussion was carried out, while for zakat recipients only interview session was carried out, due to inadequate of accounting knowledge among them. Based on the face to face interview session, a revised disclosure index was then prepared according to the recommendation and suggestions given by both groups.

## Third: Assigning weights and Assessment of validity from academics

In order to be an index, a single number that represents total scores for all information need to be created, which means a weight for each disclosure item would be developed by referring to the level of importance of all information. To calculate the disclosure index, the items are measured based on a five-point scale (0: not at all important to 5: extremely important), which in line with the study done by (Hooks et al, 2012) which focuses on disclosure index for local authorities in Malaysia. Furthermore, some of the disclosure items might be identified more important than others by stakeholders (Saunah et al., 2012)

The draft of ZkDI was then submitted to the expert panels, in this case the accounting lecturers; those who have experience in teaching subjects which is considered relevant to the disclosure of accounting information such as auditing, zakat accounting and public sector accounting. The purpose of submitting the draft of ZkDI to this group was due to get confirmation and validation on the items prepared earlier, that was after considering zakat payer and recipients' feedbacks and recommendations. Despite that they were also requested to participate in giving views and suggestion on the level of importance of each item. In other words, they have to rank those items according to the degree of importance using five-point scale as stated above. Assigning weight for each item in the disclosure list would determine the total score of the index. Eventually, in future the proposed ZkDI will be used to analyse the latest annual report of all 14 zakat institutions in Malaysia.

## 4. FINDINGS

The results of this paper are organized into two parts; firstly it discusses about the process of finalising the ZkDI and then the total of score of each disclosure item according the importance of information is further explained. Originally there were 74 items identified in the first process and after conducting face to face interview with zakat payers, most of them agreed that all the proposed items should be included in the index, with four items were added to the existing ZkDI. The extra four items identified were fall under financial and non-financial information categories. For financial information two additional items are: classification of income/zakat funds of al-mal (wealth) and list & total of disbursement according to the 8 asnafs/beneficiaries. While the rest two items classified under non-financial information are: criteria and detail of zakat recipients for each category of asnaf and promotion activities. These resulted of 78 items in total of new ZkDI. The extra of these 4 items were discovered based on the following answers given by both groups:

"In my opinion, the current reporting of Zakat institutions is lacking in terms of giving detailed information to eligible recipients and Zakat payers about Zakat funds. Mostly they only give background information on the institutions and Financial information, while information concerning the non financial information is minimum. From my observations not many Zakat institutions issue annual report, for instance the state of Pahang, they just only recently started released their annual report for last year"

"I think there is a need to disclose the information pertaining to the collection and distribution of Zakat funds to the asnafs in more detail"

"The type of Zakats al-mal funds in the report were not informed. It's just shows the total amount collected in the report"

Based on the above, it depicts that both zakat payers and recipients raised on issue of lack of detailed information on zakat funds, especially information on zakat collection and disbursement. In addition information pertaining to the collection and disbursement of such funds require detail disclosure. Based on these answers additional items; classification of income/zakat funds of al-mal (wealth) was added in the disclosure list. Furthermore, the study also revealed the following:

"The existing report currently is considered fair but it need improvements especially the distribution of Zakat funds. Actually as the payers we need to know and be informed where and how the funds are spent and whether it has been channeled/reached to the eligible asnaf."

"Yes, they do inform such information according to the categories in the financial statements, nonetheless we just want to know more detail about the categories of Zakat recipients. In other words different categories have different criteria we want to know more detail whether the criteria according to the law of Shari'ah or not"

For both comments, it was clearly supported on the need of the item which is the list & total of disbursement according to the 8 asnafs/beneficiaries as well as criteria and detail of zakat recipients for each category which were added in the list.

Apart from that the last item discovered during interview session, was a result from answers given below:

"In my view LZS shall carry out more promotion so that public can understand clearly on LSZ function, definition and criteria for recipients"

"Further explanation is needed to the public especially on the 8recipients of Zakat categories, whether or not they are eligible to receive such assistance"

The last item added in the list was on promotion activities, zakat Institutions should effectively play their role in doing a lot of promotion by providing a clear view about the zakat funds especially on disbursement aspect. Having such information in the report would help both payers and recipients to have better understanding on how the funds are being distributed to the 8 beneficiaries.

The third stage was on validation and assigning weight to the item in the index. One of the panel experts has suggested that two items should not be in the list (list of names of major donors/zakat payers (individual/institutions) and number of the Board of trustees. The rationale of not including names of zakat payers in the index was due to the concept of zakat itself, because having the names either individual/institutions may result in zakat being paid for the wrong reasons and intention. Number of board of trustees was considered redundant as the other information relating to the trustees has been stated in the list. As a result the ZkDI has 76 items in total. Simple analysis has been used that is descriptive statistics to identify which of these items show relatively important as compared to the other. Overall

results portray both categories such as Financial and non-financial information has shown the items that are really essential and needed in the annual report of zakat institutions with the score of mean 4.00.

## Background of zakat Institutions

Based on the answers shared by the panel experts, the findings depict the item such as name of the organizations and main activity of the institutions were contributing to the highest score for the category. While minutes of the AGM falls under the lowest score, and according to comments by the panels; the item was considered important however it is advisable not to disclose to the public due to the nature of the institutions which involve public funds which eventually may create an issue later on.

## Financial Information Category

Financial information is vital as the information disclosed would provide idea whether the fund has been used efficiently and distributed to the zakat recipients accordingly. There were 12 items in this category that classified under "extremely important", this indicates an idea about how important this information shall be disclosed to the public. Especially information about the classification on collection and disbursement to the 8 qualified asnaf, cashflow information and statement of zakat funds. For profit sector Cashflow is an integral part of financial statements and is one of useful tools for measuring performance of an organization. Jooste (2006), discussed in measuring performance of companies, many researchers pointed the same views that cashflow information is a superior indicator as compared to traditional earnings. While all remaining disclosure items were grouped under "very important" and interestingly, none of them were weight below than 3.00 score. Hence, the study concludes that all the 23 items in the financial information category are vital information and future improvement shall be done by Zakat Institutions in order to regain public confidence.

## Non-Financial Information Category

Another important category in the ZkDI is the non-financial information, the findings for this category were mixed, three disclosure items were grouped as "extremely important", 15 items regarded as "very important" and two others were categorised as "quite important". The items that received highest scores were non-financial resources, participation in special project and criteria/details zakat recipients for each category of asnaf.

## Future Information

This category shows all 8 items in the list were considered "very important" and 3 items have gained highest score; budget information, Statement of future activities that benefit Zakat recipients and next year's coming target future zakat collection.

## Governance Information

The last category in the ZkDI is governance information, it is vital to have good governance information for accountability reason. In this category, only three disclosure items were grouped as "quite important" and the rest were categorized as "very important" by the panels.

## 5. CONCLUSIONS

The issue of accountability of zakat institutions in managing the funds has attracted a lot of attention and leaves many doubts. As the zakat institutions carrying out the religious duties it is important to them showing zakat information to the public as well as how they discharge their accountability. Claims to have a greater accountability and transparency towards improving zakat institutions performance is always spell out. Thus, in this case, efforts in measuring the accountability via disclosure index as a special designed disclosure measurement instrument has been proposed.

The study has offered new insight in developing the index, the disclosure item has been developed based on the mixed resources; reviewing paste literature, manual from JAWHAR and other sources such as brochures and pamphlet of zakat institutions, the index was further evaluated by interviewing both zakat payers and recipients which then validated by the panel experts. Eventually the study has developed the proposed index (ZkDI) by reference to both primary and secondary information in order to have more reliable results. However, the issue is whether it is applicable to all zakat institutions? since JAWHAR is the responsible body which coordinating zakat activities in Malaysia, hence the proposed ZkDI may be used as a reference by JAWHAR in harmonizing and standardizing the preparation of zakat reporting by zakat institutions.

Developing ZkDI has its own limitations; due to the number of the interviewees and panel experts involved in the study, and the use of researchers' discretion on certain disclosure items, however ultimately the panel experts' views have controls the overall results of the study. For further research, more participants such as zakat payers and recipients should be invited to participant in the research and maybe the list of the index can be send through website and to get the number of participants desired.

## ZAKAT POTENTIAL IN SABAH: ISSUES AND CHALLENGES

Dayangku Aslinah Abd. Rahim<sup>1</sup>

#### **ABSTRACT**

Zakat is one of economic commitments in Muslim society and one of five pillars in Islam. It combines the approaches to God through sacrifice in physical material and the willingness to pay from productive assets. In general, there is an increase of awareness among Sabahan Muslims to pay zakat (factors other than awareness can also be considered). This is due to the increase of zakat collection and number of zakat payers in Sabah every year. In zakat collection, for instance, Pusat Zakat Sabah (the centre to collect zakat in Sabah) has successfully accumulate RM33,891,152.97 of zakat in year 2011 compared to only RM32,856,749.96 in preceding year. This shows a growth of 3 percent. However, this is not an excuse to undermine the importance of awareness to pay zakat among Sabahan Muslims and Sabahan residents especially to those who are in the potential lists such as salaried people and businessmen. They can become part of zakat contributors in Sabah. Therefore, this paper will discuss on zakat potential is Sabah, by looking onto the issues and challenges in Sabah. The paper will use the preliminary study that has been done in Universiti Malaysia Sabah (UMS), where 140 of UMS staff have become respondents in this study. The study found that most of UMS employees have a high awareness regarding zakat duty. It also indicated that there is none an existence of serious problems in fulfilling the obligations to pay zakat either in term of payment facilities or the venue. Consequently, the study has shown that there is a high potential of zakat collection in UMS particularly, and in Sabah generally. Other issues and challenges will also be discussed in this paper, and the recommendations will be presented at the end of this study.

Keywords: Zakat, Economics, Islam, Sabah

#### 1. INTRODUCTION

The issues and challenges of zakat are not something new in Muslim society. Even after the deceased of the honorable prophet Muhammad (SAW) more than 1400 years ago, zakat obligation has become a struggle and battle among Muslim leadership and countries. The willingness to pay and sacrifice money and wealth eventhough in the name of God is not easy. Zakat is one of five pillars in Islam. Similar to other obligations as well, such as prayer and fasting, there are some Muslims who are reluctant to do zakat and be apart with their ringgits and other material wealth. Zakat has an ability to solve some economic problems among Muslim society, besides to cleanse spiritually the being of zakat payer. Zakat works both ways, either from the perspective of zakat payer and also from the angle of zakat receiver, physically and spiritually. Both have win-win situations, in the eyes of God, either in this world and the hereafter.

<sup>&</sup>lt;sup>1</sup> The author is a lecturer in School of Business and Economics, Universiti Malaysia Sabah (UMS). Corresponding author: asdayang@ums.edu.my

As become one of the pillars in Islam, zakat motivates Muslims to become part of world's economics solution. Only those with enough money or productive asset and self-sufficient will fulfill all five pillars in Islam. Bona fide Muslims will ensure to observe and conform all the perfect five pillars of Islam in their life. In reality, Muslims in Malaysia nowadays are more alert towards prayer and fasting. Besides that, zakat Eidul Fitri (zakat fitrah or zakat paid during Muslim festive season) is more popular compared to zakat on wealth, though both have the same obligations. Even, for some Muslims in Malaysia, they pay income tax but not zakat or they are more afraid of not paying country's tax compared to zakat. Others are also having thought that paying income tax is equal to paying zakat. This shows that for them, the act of paying income tax will forfeit the duty of paying zakat. All of these results of several studies will be discussed more throughout this paper.

## 1.1 PROBLEMS STATEMENTS

In Malaysia, the effort to increase zakat collection and distribution become tremendous and collective actions. Every state has put a remarkable endeavor in order to ensure that collection and distribution of zakat will amplify every year. But, the problems of lack of awareness to pay zakat among Muslims do still exist. The problem of not paying zakat is due to the failure of Muslims in understanding the basic conceptual of the obligation of zakat itself (Zakariah, 2000). This phenomenon is not supposed to exist in Malaysia, as a country with more Muslims in the population, and Islam as the official religion of the country, the society has already been exposed to the religious studies, formally or informally, even from the toddler and preschooler. Even, an Islamic study has become one of the compulsory curriculums in school, either in primary or secondary education. Besides that, other sources of Islamic teaching are also available everywhere, either from printed materials, recorded data or live sermon. Mass media also plays a huge role in educating and cultivating the society, besides the shaping and reshaping by the parents, teachers and peers.

Nevertheless, lack of awareness of fulfilling zakat obligations is still happening in Malaysia. This matter must be scrutinized seriously as it can have a chain effect. Rich parents who do not pay zakat on wealth, for example, might influence his descendants to avoid paying zakat as well. Well-established peers who refuse to pay zakat might also inspire other colleague. Lack of awareness to pay zakat on wealth is also present among Muslim intellectuals and scholars. This has been found in the study by Hairunnizam et.al (2004), which shows that the awareness of professionals to pay zakat only revealed a small percentage relatively. The professionals are very expert in their area, however, when it comes to zakat obligation, factors such as piousness and knowledge on zakat itself becoming crucial to determine their action of paying zakat. Mohd. Shukri (2001) has found in his study that income tax collection has increased with higher proportion in compared to the zakat collection every year. His study has shown that there is a low of awareness among Muslim society to pay zakat, as some of them do not differentiate between income tax and zakat. Those who pay income tax in between 10 percent and 40 percent of their income, had opinion that they do not have to pay zakat.

In Sabah, eventhough zakat collection has an incredible increase in the past ten years; however the proportion has a small raise, either in compared to Sabah income tax collection or the number

of Muslim population. Albeit zakat is not compulasory to all Muslims (the poor<sup>2</sup> is exempted). and Sabah is the poorest state in Malaysia with the Incidence of Poverty of 19.7 percent (Department of Statistics, Malaysia, 2011)<sup>3</sup>, however, this is not an excuse to overlook those Muslims in Sabah who are capable but still out of the statistics of zakat payers in Sabah. Tables below are the overall performance of zakat collection (on wealth and during ramadhan), income tax collection; both for year 2005 and 2006, and also the population in Sabah (estimated in 2004). Let us create one scenario as an example. Assuming due to Sabah as the poorest state, and the ratio of Muslims and non-Muslims in Sabah are 50-50, if suppose only 5 percent of Muslims in Sabah are those who are compulsory to pay zakat on wealth (other factors held constant; including the non-Sabahan residents in Sabah, who pay zakat in Sabah), the estimated number of zakat payer in Sabah (not including zakat fitrah) for 2005 is 71,558.

**Table 1.1.1:** Overall Performance of Zakat Collection (Wealth and Fitrah) and the Number of Payers in Sabah for 2005 and 2006

Year	Zakat Fitrah	Number of	Zakat on Wealth	Number of	Total Zakat
		Payer		Payer	Collection
2005	4,253,715.00	850,743	7,060,358.92	2,345	11,314,073.92
2006	4,575,725.00	915,145	12,073,068.71	4,135	16,648,793.71

## 1.2 RESEARCH OBJECTIVES

In general, the overall research objectives of this paper are to study the zakat awareness and identify the potential of paying zakat in Sabah. Specifically, the study involves various objectives as follows:

- 1. To identify zakat awareness among the employess of Universiti Malaysia Sabah (UMS).
- 2. To identify zakat potential in Sabah.
- 3. To study issues and challenges of zakat in Sabah.
- 4. To recommend various ways to increase zakat collection and zakat payer in Sabah.

## 1.3 SIGNIFICANCE OF STUDY

This paper aims to look into the level of zakat awareness among UMS employees and the zakat potential among them specifically, and in Sabah, generally. The final output of this study is expected to present important information for various authorities in identifying the socioeconomic and willingness to pay zakat of the target group. The study is also projected to increase the level of zakat awareness among Muslims and to recognize the importance of Pusat Zakat Sabah as an authority to collect zakat in Sabah. The result is also hoped to help those various related parties in drafting and implementing several efficient approaches through a variety of programs in order to enhance the efficiency of zakat collection and distribution especially in Sabah. The study will also add to a number of literatures available on zakat in Sabah, specifically and in Malaysia, in general.

## 2. LITERATURE REVIEW

According to Hamizul (2008), zakat potential in various states in Malaysia is very relative in comparison. This is due to certain differences in demographic background in many states. The development and modernization are more enhanced in West coast of Peninsular Malaysia such as Selangor, Johor and Penang while states in East coast of peninsular Malaysia are a bit of lagging behind. Other factor such as the dynamic approach by certain states in collecting zakat has also contributed to the higher collection and enhancing the role of Pusat Zakat in that states. The study by Kasim et.al (2006) about zakat collection in Sabah found that, relatively, zakat collection in Sabah is lower in compared to Sarawak and Peninsular Malaysia. The other states, for example, Selangor has a higher zakat collection and this is in line with the number of Muslim population in that area.

Lack of zakat awareness can also caused by low level of understanding on the obligation of the zakat itself. According to Mohamad (2006), his study found that the issue of minimal zakat awareness is due to the attitude of some Muslims who choose to disobey God's order. Similar with other obligations as well, such as prayer and fasting, some Muslims observe zakat as insignificance. To continue, they are more anxious of man-made rules and regulations in comparison to Allah's command. The awareness and manifestation to pay income tax is higher compared to pay zakat. In other study by Musa (2007), he found that there are some Muslims who pay zakat, not because of the obligation itself, but due to the rebate offered by the Inland Revenue Board of Malaysia (LHDN) when paying zakat. This attitude illustrates that the main motive of paying zakat is more to wordly reason, but not because of Allah's law. Furthermore, he

also found that some employers refuse to cooperate with zakat centre in terms of providing zakat payment through salary cut. The dissemination of zakat information through mass media is also inefficient and not optimum. Some of zakat websites is also having a low maintainence and the information inside is written poorly. This decreases the level of confidence of the potential zakat payer, especially if they are unsure on how the zakat money is distributed among the asnaf<sup>5</sup>.

## 3. RESEARCH METHODOLOGY

The study has been conducted in Universiti Malaysia Sabah, the headquarter of UMS, in Kota Kinabalu in 2009. Out of 300 questionnaires that have been distributed, only 140 set is completed and returned. The respondents are the university's Muslim employess regardless if their positions are permanent, temporary or in contract. The justification of choosing UMS is due to several reasons. These are because of its strategic location where it is situated near the capital of Sabah, i.e. Kota Kinabalu, the number of variation in terms of salary, from high-end to middle income (according to grade), and high Islamic exposure due to a lot of religious activities from UMS mosques and also other nearest mosques such as Masjid Bandaraya and Capital Mosque. The study has used two main sources to gain data, which are primary data (questionnaire and interviews) and secondary data (past literatures and al-Quran).

## 4. RESULTS AND DISCUSSION

In general, the study found that 88.6 percent of the respondents have a high level of understanding towards the importance of zakat obligation. 79.3 percent of the respondents asserted that they pay zakat, either zakat fitrah or zakat on wealth, formally and informally. This shows that awareness is high among UMS employees in terms of zakat obligation. When asked regarding the knowledge on zakat facilities such as through salary deduction and bank-in, 62.1 percent of the respondents have knowledge of that kind of information. However, only 40 percent of the respondents know that zakat can be rebated from income tax. Regarding problems in paying zakat, 79.3 percent said that there is no serious challenge in paying zakat. This shows that if they want to pay zakat, they can pay anytime, because they know how and where. Regarding of lack of choices in terms of the methods to pay zakat, 80.7 percent of respondents affirmed that this is not a serious problem to them, which explains that what they know about zakat payment method is enough for them to fulfil the obligation of paying zakat. Even, regarding lack of promotion and publicity about zakat, 77.1 percent of the respondents said this is not true. It shows that what they know and understand about zakat is good enough. Popular methods of zakat promotion chosen by respondents are short briefing, information counter and media electronic.

In brief, the pactice of zakat behavior among the employees of Universiti Malaysia Sabah demonstrates a positive attitude and this illustrates that they have a high level of awareness on zakat obligation. In addition, the study also found that there are not in existence of serious problems for the employees to pay zakat, either in terms of where to pay and how to pay. This indicates that zakat collection among UMS staff has a lot of potential to be developed and boosted. The performance of zakat collection in Sabah has a high possibility to be enhanced in the future.

<sup>&</sup>lt;sup>5</sup> Asnaf is the 8 types of zakat recipients, as mentioned in the Quran (At-Taubah, 9:60)

## 4.2 **RECOMMENDATION**

Based on the finding of the study, there are several suggestions and recommendation to improvise zakat potential and zakat practice in Sabah. The following recommendations are expected to increase the collection zakat in the future, not just among the UMS staff, but also to the other organizations and target groups.

- 1. The practice of periodic visits (or follow-up) by relevant authorities, for example, Pusat Zakat Sabah or its representatives (such as amil and officer), either to UMS or other organizations. The number of employess has increased from time to time.
- 2. Nurturing cooperations and partnership between zakat institution and university/organizations either through conferences, seminar, research, exhibition, promotion and announcements.
- 3. Opening information counter from time to time.
- 4. Participation in university's or organization's program, to promote and publicise.
- 5. Tabling target groups and classification of level I, II and III for instance. UMS can be classified as level 1, due to the existence of high level income among the employees.
- 6. Making moduls and learning/lecture slots regarding zakat to be shared and disseminated among another potential of zakat payers, i.e. university students.

The practice of identifying zakat potential and increasing awareness in Sabah are not just concentrated in Universiti Malaysia Sabah, but also through another departments and institutions regardless of public or private sectors or individual. One strategy of locating zakat potential that can be adopted is by identifying the size of organization, income of the employees and the position (grade) of the Muslim workers.

## 5. CONCLUSION

The practice of zakat behavior should be inbedded in every Muslims. For Muslims, this is a motivation to fulfil Allah's instruction and one motivation to perfecting the five pillars of Islam. By paying zakat, it is a sign of the Muslim's obedient towards Allah and self-satisfaction derived from this action has an incredible effect compared to the small amount of wealth that has been sacrificied. In this study, it is found that there is a high level of awareness to pay zakat among Muslims in Universiti Malaysia Sabah and there is a room of zakat potential to be explored in Sabah.

# SYSTEMATIC ZAKAT MANAGEMENT AND ADMINISTRATION: A FRAMEWORK FOR THE STATE OF KANO, NIGERIA

Sheriff Muhammad Ibrahim<sup>1</sup>
Amir Shaharuddin<sup>2</sup>

#### **ABSTRACT**

This paper intends to look into the theory of Zakat as a charity obliged by Allah on every rich Muslim to be given to prescribed category of people at a prescribed time following the possession of certain prescribed wealth and its blessing in the Islamic history, by reshaping the economic wellbeing of the Muslim communities in the past. The study will also look into the reported setback that is faced by the Zakat system that that leads to its partial collapse. And the recent renaissance in the zakat system by many Muslim states and communities that bring about many positive effects to the cotemporary Muslim communities. Although, many scholars have observed some shortcomings in the present zakat administration system, this paper intends to identify the historical backgrounds of Zakat Management from the classical Islamic period; examine the evolution of Zakat management in Kano and finally examine the entire system of Zakat administration in Kano. To achieve that, the paper would review historical traditions of Zakat administration; the impacts of Zakat on the contemporary Muslim societies identify the strength/weakness of the contemporary Zakat application systems. In order to achieve the development of systematic Zakat management and administration in Kano, recommendations would be made at the end of the paper on ways to improve the system.

#### 1. INTRODUCTION

Zakat is an Arabic word which is literally implies to purification, growth or increase, blessings and appreciation. Ibn Manzur (630 H) believes that the name zakat is a compound name and can be referred to the wealth being given by and to the giver of the zakat himself. It can therefore be deduced that zakat in Arabic means growing, increasing and purifying the givers wealth or soul. Ibn Faris (1979) relates that Zakat means "to grow" or "to increase" hence, the word Zakat is used to show the role it plays in purifying and increasing the wealth of the giver.

In Islam, Zakat is compulsory alms imposed on Muslims by Allah upon acquiring a minimum amount of wealth called Nisab, to be given to particular category of people called Asnaf, as explained in the Quran (Muhammad, Amin and Oladokun 2013).

Considering the stand of Quran and Sunnah, Zakat is the third pillar of Islam. It often goes hand in hand with Salat. These two religious obligations are considered as the backbone of Islamic spiritual obligations that a Muslim cannot do away with. Zakat is a compulsory and divine act obliged by Allah (SWT) on the rich Muslims to give out from their legitimate wealth to the poor, in order to better their lives and relief their poverty. The role played by Zakat in bringing a sustainable life and reducing poverty and income inequality can never be overemphasized. Zakat improves lives by bridging the gap between the poor and the rich in the society Patmawati (2005) believes that, apart from what zakat produces in giving out to poor, and helping him to sustain his basic necessities of life. It also serves as a means of creating equality and reducing poverty in the society at large. Kahf (1997) maintain that Zakat makes its recipient to be more productive in the society. It is noted to be a medium of supporting

<sup>&</sup>lt;sup>1</sup> A postgraduate student at Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia, Malaysia.

<sup>&</sup>lt;sup>2</sup> A senior lecturer at Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia, Malaysia.

the unemployed, orphans, widows, physically disabled, the sick and others. Generally, Zakat can serve as a social insurance for the members of the Muslim community in which a bright future is granted (Muhyiddin & AbdulGani 2011).

However, this instruction may be difficult to be followed by people who have weak faith in Allah and always have desire to accumulating wealth. Therefore, Zakat institution has been facing a lot of challenges such as lack of patronage by the eligible zakat payers since the early Islamic periods. It was reported that, the caliph Abubakr staged war against Zakat defaulters after the demise of the prophet (Qardawi 2006) (SAW). Other problems related to Zakat is negligence by the government and concerned agencies to ensure the systematic Zakat collection and distribution that is believed to draw the attention of the entire Muslim communities to the proper application of Zakat and its administration (Nur Hafizah and Sharifah 2012). Limited knowledge on Zakat it obligation, methods of application and its impacts on the life of Muslim communities is also contributing to problems faced by the Zakat application in contemporary Muslim communities (Wambai 1991).

In order to show the significance of Zakat and its role in bringing a sustainable lives full of love and affection among Muslim communities in Kano and the entire Muslim world, this paper intends to identify the historical backgrounds of Zakat Management from the classical Islamic period; examine the evolution of Zakat management in Kano and finally examine the entire system of Zakat administration in Kano. To achieve that, the paper would review historical traditions of Zakat administration; the impacts of Zakat on the contemporary Muslim societies identify the strength/weakness of the contemporary Zakat application systems. Recommendations would be made at the end of the paper on ways to improve the system.

### 2. ZAKAT MANAGEMENT AND ADMINISTRATION: HISTORICAL PERSPECTIVE

## 2.1 The Administration of Zakat during the time of the Prophet:

The history of Zakat administration began with the legislation of the institution of Zakat. The prophet (SAW) is reported to have assigned the duty of collecting and distributing of Zakat to some of his companions. He sent them to various vicinities after giving them the instructions on how to carry out the assignments. For instance, when the prophet (SAW) sent Mu'adh bn Jabal to another community and instructed him as follows:

..... then tell them that Allah has enjoined upon them five Salat (prayers) during the day and night; and if they accept it, then tell them that Allah has made the payment of Zakat obligatory upon them. It should be collected from their rich and distributed among their poor; and if they agree to it, don't take (as a share of Zakat) the best of their properties. Beware of the supplications of the oppressed, for there is no barrier between it and Allah." [Ibn Hajar 1494].

It has been the practice of the prophet, his companions and followers to assign the trustworthy persons in the Muslim community to collect and distribute Zakat dues. While the responsibility of accounting and auditing of Zakat funds is rested on the Muslim leader. The prophet (SAW) is reported to have audited and accounted Zakat collectors and distributors. Imam Bukhari reported that the Messenger of Allah, peace and blessings of Allah be on him, appointed a man called Ibn al-Lutbiyyah among the tribe of Asad to collect zakat of Banu Sulaim; when he came to him, he called him to account for it (Ibn Hajar 6979).

This tradition emphasizes that Zakat funds are normally collected and distributed by leaders or authority of the Muslim community. Ibn Hajar, in his explanation of the hadith reported by Muadh remarks that the prophet (SAW) sent Mu'adh to Yemen for the collection of Zakat has given the latter authority and charged him with leadership responsibility. It is therefore, understood from this that leaders may wish to collect Zakat or assign the duty to capable hands. In a situation where a person refuses to pay Zakat, the leaders should collect due from such a person forcefully.

Patmawati, (2005), stated that there were no records for the collection and distribution of Zakat revenues during the time of the prophet (SAW) and his companions and related this situation to the two main means of Zakat distribution; Firstly, that the Zakat collector distribute the Zakat revenue collected to the entitled people entitled to it in the community at the time of collection. And secondly, the prophet (SAW) distributed the Zakat revenue by himself; while the action was not recorded.

Umar ibn AlKhattab initiated another method of collecting Zakat during his time by setting checkpoints at the gates of the Muslim towns to collect Zakat from the Muslim traders and tax enforced on the non-Muslims. Umar also introduced a treasury for zakat and waqf revenues named Baytulmal in 15 A.H (Farah et al. 2012) and (Ahmed 2004).

## 2.2 The Historical background of Systematic Zakat Management in Kano

Kano is among the 19 Northern states of the federal republic of Nigeria. It lies between latitude 130 N in the north and 110S in the south and longitude 80W in the west and 100 E in the east. The state is made up of forty four local government areas. Its capital, called Kano City.

Kano state is one of the 12 states practicing Islamic legal system (Shari'ah) in Nigeria with about 95% percent Muslims (Barau 2006). It had been known for centuries as a commercial center and caravan terminus of Saharan trade (Farlex 2009). Kano is very rich with cultural heritage and many industrial activities. Local crafts, leather works, dyeing, embroidery, and agriculture are also parts of the economic activities of Kano people. In few decades back, Kano had been known to be providing employments via manufacturing companies making textiles, food and beverages, foot wears, suitcases, plastics, pharmaceuticals, and confectionaries (sweets and chocolates). Kano State has an international Airport which is considered as a busy transit center for international business-men, shuttling between Europe, Middle East and Asia. Unfortunately the airport has lost its glory recently, and most of the industries are either working below capacity, while others have been shut down or relocated. These unwanted situations are normally attached to problems related to smuggling of foreign goods, inconsistent fiscal policies of federal government, corruption, lack of manpower investment culture and declining of activities at Kano International Airport. Other issues are believed to be attributed to failure in public private partnership initiatives, market congestion, sporadic communal riots and low capacity utilization of public sector (Ado kurawa 2008).

In order to handle these problems, the state government initiates many poverty reduction agencies like Kano State Economic Empowerment and Development Strategy (K-SEEDS), and the intervention of government to establish a state's owned zakat commission in 2003 (Kano Gazette 2003). This is in addition to the introduction of community based zakat council since 1982 (Ostien 2008), and the federal government poverty reduction programs.

#### The Zakat Council

The first organized body for the collection and distribution of Zakat was a community based initiative that was found in 1982, as a result of communiqué that was released after a Zakat conference held at Bayero University Kano (BUK) on the 1st January 1982. The communiqué suggested the

establishment of a body called Zakat Council, the decision which was unanimously accepted and adopted. The council was inaugurated with its chairman and later the incorporation of other two hundred members from different parts of the state.

The impact of this council was not felt as its expected, this is for the reason that it was formed as voluntary means for giving Zakat, and there were no laws enforcing the giving out of Zakat through the Council, but Islamic scholars continued to propagates and enlighten people about its importance, though a reasonable amount was collected and distributed (Ositien 2008).

The following Table shows the statistics of Zakat collection and distribution from 1999 to 2002

Table 1: Zakat Collection by community Zakat Council, Kano

Year of collection	Amount collected	Amount distributed	
1999-2000	2,506.344.50	1.802,326.20	
2000-2001	2,887,819.00	2,292,649.44	
2001-2002	3,202,559.80	2,408,554.20	

Source: (Philip Osieten) Shariah implementation in Northern Nigeria 2008.

## The Zakat and Hubusi Commission

This program was carried out for twenty years before the intervention of government to establish an official body charged with collection and distribution of Zakat in Kano and named it Zakat and Hubusi Commission. By the introduction of this commission the services of Zakat Council stopped as the law establishing the Zakat Commission required as follows:

- a) From the commencement of law and without further assurances, the independent Zakat Council shall no longer collect Zakat in the state.
- b) All regular staff on the payroll of the Zakat Council shall transfer their services to the Chairman (Zakat Commission)
- c) This law may be cited as the Kano State Zakat and Hubusi Commission law 2003 and shall come into force on 7th November 2003. (Kano State of Nigeria Gazette NO 1 vol. 35, 20th Nov. 2003).

## 2.3 Zakat Administration in Contemporary Muslim Societies

Zakat has been discussed as a religious obligation and has played a vital role towards the eradication of poverty in the classical Muslim history (Dimas and Raditya 2010). Although, the system was faced with challenges that led to its decline and almost total collapse, a renaissance is observed in the recent attention given to the Zakat systems by many Islamic countries and Muslim communities; they recently attached much importance to it and refine the policies and regulations governing it (Zuhaili 2007).

## 2.4 Impact of Practical Application of Zakat System

Islam recognizes knowledge as a backbone of all actions and activities, while a Muslim is encouraged to seek for knowledge before embarking on any religious duty (Al-Akhdari 983 H.). Thus, theoretical facts and views about the Islamic concept of Zakat can only be better and intelligibly understood when

they are applied and practically demonstrated. Through this metamorphosis, the aims and objectives of Zakat coupled with its essence and importance will be unequivocally realized.

With the contemporary renaissance being made by the Muslim countries all over the world about the collapsing institution of Zakat, many countries have been fashioning out the proper means of collecting and distributing Zakat in line with the provision of Shari'ah (Kahf 1997). Meanwhile, Zakat collection and distribution in the contemporary Muslim society has, to some extent, brought about a positive change by alleviating poverty and income inequality in the Muslim communities, reinstating love care and affection among the Muslim communities and establishing a sustainable and accommodating environment. In order to know the degree of the validity of this proposition, the following points will be examined:

## a. Establishment of official Zakat governing bodies by Muslim governments:

Some countries have engaged in kind of reformation of Zakat system, as mentioned earlier, by establishing Zakat bodies to be managed by the government. This is considered as a laudable achievement. Countries like Sudan, Pakistan, Malaysia and Iran, Libya and Yemen have established Zakat system and made constitutional provisions imposing the payment of Zakat on the eligible Muslim citizens. Established organizations have been charged with the responsibility of Zakat collection and distribution with proper identification of the appropriate persons eligible for the payment and collection of Zakat. These countries have designed modalities for the collection and distribution of Zakat and other necessary official services, in order to facilitate a sound Zakat system (Zuhaili 2007).

These organizations have made a positive change in the life of people, by alleviating their poverty and income inequality, and improving their social welfare in the communities. Thus, Kano state emulated the Muslim countries by establishing her Zakat and Hubusi commission in 2003 (Ositien 2004)

## b. Nongovernmental Zakat organizations:

The establishment of Nongovernmental Zakat organizations aim at supporting the Zakat bodies established by government, or introducing the noble institution in a state that is yet to establish official Zakat bodies, but approved for (NGO's) to take charge of Zakat collection and distribution. These organizations have yielded a positive impact societies and communities concerned. (Mutasim Ahmed Abdelmawla 2011)

In Kano, for instance, before the establishment of Zakat and Hubusi commission, there was a community based established Zakat council since 1982 (Ositien 2006). Its impact was however, not felt. It was still considered a very good attempt towards the revival of Zakat institution in Kano state. (Muhammad 2010)

## c. Individual distribution of Zakat

Many Muslim communities prefer to calculate Zakat due from their properties, and give it to the eligible Zakat recipients by themselves willingly (Zuhaili 2007). The person who gives Zakat is conscious of his religious duties and by so doing; he gains love and affection of the people particularly the Zakat recipients. Individual payment of Zakat is the normal practice of the people of Kano as people believed that Zakat payment is a sacred duty imposed on Muslims, and that defaulting Zakat payment will cause Allah's wrath on the defaulter. This belief couple with the lack of proper management and administration of the Zakat Management might have force people to take charge of their Zakat individually. Although we have mentioned above that, Zakat is designed to be given to authorities for proper administration and management, individual payment shows the level of commitment of the giver and possibility of cooperating with the authorities where sound management is assured.

## d. Shariah advisory council for Zakat

In order to facilitate the Zakat collection and distribution system, some Muslim countries deem it necessary to establish a council of Shariah that would consist of the learned scholars in Islamic jurisprudence, this set of people would moderating the collection and distribution of Zakat dues to achieve Zakat objectives. They would equally be responsible for answering questions arising from the Zakat administration, payers as well as the collectors of Zakat (Zuhaili 2007).

## e. Poverty reduction

Zakat collection and distribution system has contributed in combating poverty in many Muslim communities. Zakat has positive effects on the life of people. Thus, many unemployed people have been employed in the Zakat collection and distribution services. It also relieves the debtor from their debts, helps the wayfarer, assist in marriages, and helps orphans in many Muslim communities (Ahmd 2004). In Kano the establishment of Zakat and Hubusi commission, shows the level of commitments by the government to use the Zakat means in its poverty reduction campaigns. (Kurawa 2008)

## f. Application of modern technological advancements

Some Zakat organizations apply modern technologies in managing Zakat collection and distribution; this is done by programming a database for the activities of the institution in order to avoid multiple payments or collection. This system is used for even distribution of Zakat revenues. (Basheer 2003).

## g. Establishment of Alhayah al-shariyyah al-Alamiyya (International council for Zakat) in Kuwait

Following the governments involvements in the Zakat systems, the organization of Islamic countries have established a body of Islamic scholars and jurist and charged them with the responsibilities of ensuring the proper application of Zakat managements in line with the provisions of Shariah based in Kuwait. This body is named as Al-Hay'ah al-Shari'yyah li al-Zakah. These bodies normally brings annual circulars of the Zakat amount (Nisab) and discuss any changes observed in the Zakat system over the periods past. (Zuhaili 2007).

In a nutshell, the aforementioned points show the positive impacts of the institution of Zakat in our contemporary society.

## 2.5 Weakness of Practical Application of Zakat System

While these contemporary efforts made by the Muslim countries and communities are seen as a positive commitment towards the institution of Zakat, others often believe that it is not free from weaknesses and shortcomings especially in terms of practical applications. Therefore, the shortcomings of Zakat collection and distribution will be discussed in this item, while solutions and recommendations would be made to address the problems associated with Zakat collection and distribution. This is necessary so as to avoid the re-occurrence of the negative effects in the course of establishing an ideal Zakat system.

- a. Negligence on the part of government against the management of Zakat management (Muhammad 2010).
- b. Part payment of Zakat dues by the rich who do not declare their exact assets for Zakat evaluation (Basheer 2003).
- c. Lack of orderliness and systematic approach to the collection and distribution of Zakat incomes (Kahf 1999).
- d. Lack of proper knowledge of Shari'ah on the institution of particularly by its practical

- application. (Wambai 1991).
- e. Distribution of Zakat revenues to wrong hands, which are not numbered among the Zakat recipients (Kuran 2002).
- f. Greediness of the poor and the needy leading to their multiple collection of Zakat Guermat and Tucker (2003).
- g. Negligence by the Zakat authorities to follow the prescribed guidelines Hairunnizam and Radiah (2010).

All the above points have negative effects and contribute to the failure of the Zakat collection and distribution system and consequently, the objectives of Zakat are being defeated. (Zuhaili 2007).

## 3. SUMMARY

Considering the foregoing hypothesis, the following analysis is to be understood:

- a. Zakat is a compulsory duty imposed on the Muslims and is one of the pillars of Islam.
- b. Zakat system welcomes new inventions and developments.
- c. Zakat is aimed at achieving spiritual, social, moral and economic objectives in an ideal Muslim society.
- d. The institution of Zakat gains momentum in the contemporary society through theoretical works, publication of books, thesis and dissertations, journals, articles, conferences and so on.
- e. Weakness of the theoretical researches on Zakat is observed especially through the consensus opinions. Repetition of researches and lack of coordination between governmental and non-governmental bodies of Zakat are also observed.
- f. The contemporary Zakat collection and distribution system has played a vital role in reducing poverty among Muslim communities, with the intervention of governmental bodies in the activities of Zakat.
- g. Problems related to the Zakat apart from its collection and distribution systems, include negligence by government and individuals, lack of sound knowledge of Shariah, distributing Zakat to the unqualified people and greediness by the poor and needy.
- h. Lack of proper coordination and cooperation among the different Zakat collection bodies.
- i. It could also be observed that, there were no enough information regarding the activities of Zakat and Hubusi commission in Kano, and this is related to lack of published reports and systematic recordings of its operations.

#### RECOMMENDATIONS

Among the major issues raised in this paper are problems attached to Zakat application in most Muslim communities, these includes; weakness in faith and submission to the commands of Allah and the desire to accumulating of wealth resulting to greed and envy by the rich Muslims. Governments are also reported to show negligence to look into the development of systematic Zakat management system that will help in facilitating the modernize system of Zakat collection and distribution as observed by other Muslim communities, this will assist in gaining the confidence of the Zakat givers to give their Zakat through the organized Zakat institution and avoid multiple payments or collections

and helps in maintaining the ethics of priority in distribution system. Another issue raised is the limited awareness on the religious implications of Zakat as religious duty, its principles, procedures and roles in reshaping the economic wellbeing of the Muslim society.

It could however be recalled that, the resistance in giving out Zakat has been originated since the early times of Islam, where it is reported that Caliph Abubakar fought Zakat defaulters and forced them to pay their Zakat dues according to Shariah guidelines, Umar Ibn Al-Khattab is also reported to have established checkpoints where Zakat is Collected at various caravan routes. All these are considered as efforts to ensure the collection of Zakat using the most suitable means in line with their time.

Considering the nature of Kano and its complexity, this study observed that, it could be difficult to apply the above methods observed by the companions of the prophet S.A.W. it therefore, suggest the following systematic Zakat management and believed that it will help in facilitating the Zakat collection and distribution in Kano:

- a. That the established Zakat and Hubusi Commission of Kano state is supposed to enjoy a full pledged autonomy in running its affairs and be given legal support to impose Zakat dues on the rich among business men, political office holders, senior civil servants, companies and industries. This right may include the previllage to suit under its name any Zakat defaulter as observed in Sudan (Basheer 2003) Malaysia (Zulkifli 2008).
- b. Considering the populous nature of Kano the Zakat and Hubusi Commission should look for decentralizing its activities especially the collection exercises in order to ease its coverage, this could be perfected using the services of Mosques, Islamic organizations and other trusted community based associations. In order to encourage these private Zakat collectors, a certain percentage should be allocated to them to fall under the share of Amil "people working for Zakat collection and distribution" see Al-Quran. Al-Taubah 9:60.
- c. The Zakat and Hubusi Commission should be organizing public lectures, workshops, seminars and advocate the entire Zakat concepts, its obligation, procedures, virtues, base, entitlements and etc. this will help in enlightening the general public about the importance of Zakat and giving it out to the recognized authorities.
- d. That the and Hubusi Commission should make all its activities especially those related to Zakat publically known and free for researchers to access, this publicity may be carried out via television, radio, journals, magazines and newspapers. Doing this will help in attracting the Zakat payers to give more corporation, defaulters and people giv9ng their Zakat individually will also be encouraged to give it through the Commission.
- e. The Commission should apply the use of modernized way of data and record keeping using computer machines by designing programs that will help in determining the amount and percentage of Zakat on each particular property regardless of its volumes or nature. Records of the Zakat payers and collectors including their addresses should be systematically kept.
- f. Finally the government should established an independent Shariah advisory council and charged them with the responsibility of ensuring that the entire operations of the Commission was carried out in line with Shari'ah and prescribed guidelines agreed upon by the Shariah advisory council. The council is also expected to account and audit the Commission in order to ensure the proper collection and allocation of funds to its rightful beneficiaries. The shariah council is to release annual reports the government and publish it for the public.

Ahmad Fahme Mohd Ali<sup>4</sup>

#### **ABSTRACT**

Malaysia, through the various State Islamic Religious Councils (SIRCs), has collected MYR 1,634,638,216.99 of zakat and successfully allocated MYR 1,372,830,789.10 to the targeted asnaf in the year 2011. The highest collection came from the state of Selangor with a total of collection of approximately MYR 393,538,755.00. Then, it is followed by the Federal Territory and Johor. Muallaf is listed among the top four recipients in zakat distribution after the asnaf of Fisabilillah, Fuqara' and Masakin. The question is then raised regarding the type of zakat distribution or programmes pertaining to the asnaf Muallaf. Is it true that the distribution to the asnaf of Muallaf is less important compared to the asnaf of Fisabillah, Fuqara' and Masakin? Thus, this study aims to identify programmes or activities that are involved in the distribution of zakat mainly for the asnaf of Muallaf. This research has revealed that a huge amount had been allocated for the development of asnaf Muallaf in the state of Selangor. On top of that, 31 different types of programmes have been assigned to ensure that the Muallaf can sustain and further become Mukallaf after five years.

### 1. INTRODUCTION

Islam brings justice to this world, as manifested with numerous evidences in Al-Qur'an in justifying the truth of its message through logical reasoning that has been truly proven in opening up the human hearts in accepting the purity of Islam. Muallaf is a person who has converted or as some have interpreted as having reverted to Islam regardless of their race and nation. Multi-religion, ethnicity and diversity are very important aspects in policy making, so this article attempts to highlight the uniqueness of zakat distribution in a multi-ethnic and multi-religion country. Indeed, Islam is for everyone and it is not restricted to any specific ethnicity.

Many muallaf had nowhere to go after converting to Islam. Most of them are lacking proper Islamic education and care. The muallaf community is really in need and should seek help from the Muslims in enhancing their faith. Al-Qardawi (1986)<sup>5</sup> stated that besides alleviating poverty among Muallaf, zakat distribution should improve and increase one's Tawhid (The Oneness of Allah), Iman (belief) and Tagwa (level of righteousness) to Allah (s.w.t). Furthermore, zakat should also bring about gratitude and thankfulness to God for the bounties that He had bestowed upon us. God has bestowed on humans both the spiritual and material bounties. Prayer and other physical worship express gratitude for the grace of creation, while zakat and other financial worship expresses gratitude for the material grace of God. How disgraceful is he who sees the obvious needs of the poor and does not graciously give one-fourth of a tenth of his wealth, or thank God who had given him enough bounty to remove him from the misery and pressure of poverty. Zakat, as one of the five pillars of Islam, has obliged certain people to contribute part of their wealth to the needy. Zakat has also become an important financial source, especially in dense Muslim population countries (Muhammad Firdaus et.al, 2012)<sup>6</sup>. Zakat fund could be an incentive to the Muallaf as part of an effort to assist them to become productive recipients economically if the fund is channelled in a sustainable form. Moreover, the zakat fund could free the recipients from poverty and improve their living standard.

## 2. ZAKAT FOR ASNAF MUALLAF

The administration of zakat involves at least two broad aspects, namely its collection and distribution. The role of the state in collecting and distribution of zakat fund began later during the Holy Prophet's (s.a.w.) time in Madinah. Zakat funds were distributed among the eight categories of beneficiaries as stated in the Qur'an. There are eight prescribed categories for the recipients<sup>7</sup> of Zakat. Allah s.w.t has determined these categories when He says:

"Sadaqat are for the poor and the needy, and those employed to administer (the Zakat), for those whose hearts are to be won over, and for the freeing of human beings from bondage, and (for) those who are burdened with debts, and (for every struggle) in Allah's cause, and (for) the wayfarer: (this is) an ordinance from Allah, Allah is All-Knowing, full of Wisdom."

(Al-Qur'an 9:60)

Some of the categories of distribution of Zakat have become more or less redundant with the passage of time. Reconciliation of hearts (*Muallafat-al-Qalub*) thus, referred to distribution of Zakat among the Muslims converted in the late Holy Prophet's time (s.a.w.). *Muallafat-al-Qalub* refers to persons newly converted to Islam. In principle, this includes those who give full co-operation in contributing and

<sup>&</sup>lt;sup>7</sup> Also known as Asnaf

strengthening Islam. This also includes those that are newly converted to Islam who might have lost their previous property and therefore need assistance and encouragement, and also the newly converted that are weak. Financial help may strengthen their belief (*iman*) and the sense of belonging to the Muslim Ummah. Also included are those that are aggressively against the Islam, that by providing money, they may cease from their aggression.

#### 3. CONCEPT OF MUALLAF

The word Muallaf as mentioned in al-Marbawi Dictionary<sup>8</sup> comes from two root words i.e. 'Allafa' which means "obedient, tamed, and submissive" and 'Alifahu' which means compliant. The combination of the two root words gives the definition of the word muallaf which means "to change or make somebody change his or her religion or beliefs." According to the Cambridge International Dictionary of English (1997)<sup>9</sup>, the term 'convert' means "someone who changes their beliefs or ways of living". In a multiracial country like Malaysia, Muslim converts are also known as muallafs. According to Webster's New World College Dictionary (1996)<sup>10</sup> 'conversion' refers to "a converting or being converted: specifically, a) a change from lack of faith to religious belief, adoption of a religion" and "b) a change from one's belief, religion, doctrine, opinion, etc. to another." According to McGuire (1997)<sup>11</sup>, "conversion is a process of religious change which transforms 'the way the individual perceives the rest of society and his or her personal place in it, altering one's view of the world.""

In theological studies, conversion has been associated with sociological terms. Donald Gelpi (1998)<sup>12</sup> elaborated conversion as a "social process" which consists of seven stages: (1) settlement within a particular social context that sets the tone for the conversion experience, (2) experience of personal crisis, (3) personal crisis leads to religious quest, (4) religious quest leads to a connection with an advocate of a particular religious tradition, (5) interaction within the religious community, (6) religious commitment, and finally (7) recognition of the consequences of the religious commitment. In this case, conversion is noted not only for producing interior change related to belief and conviction, but also for generating a significant ethical predisposition toward social transformation.

#### 4. MUALLAF DEVELOPMENT THROUGH ZAKAT DISTRIBUTION

Zakat is one of the pillars of faith in Islam that emphasizes socio-economic development. Any discussion on zakat in the context of worship cannot be disconnected from the socio-economic factor, especially in aiding the underprivileged based on the *maslahah* concept (al-Qardawi 1987)<sup>13</sup>. The definition of zakat has been done in various ways such as grow, blessing, pure, good and renowned. Furthermore, from the *fiqh* point of view, zakat can be extracted from a certain amount from a specific wealth for the benefit of those who are entitled to receive it as stipulated by Allah (Ibn Qudamah 1968). The primary purpose of zakat is to redistribute the wealth of the society among the poor (M.N. Siddiqui, 1978)<sup>14</sup>. Zakat is not purely welfare-oriented that relies on the contribution of the giver but an obligation that must be carried out to qualified recipients. Therefore, it is pertinent that the management of zakat should be made efficient to ensure that the rights of the recipients and the society, in general, will not be put in jeopardy.

<sup>&</sup>lt;sup>14</sup> Siddiqui, M.N. (1978), Some Aspects of the Islamic Economy, Second Edition, Lahore, Pakistan: Islamic Publications Ltd.

History has confirmed that one of the reasons that led to the fall of the Umayyad dynasty was its government's failure to manage the *Baitulmal* successfully (S.M. Hasanuz Zaman, 1991). As stated in Islamic Encyclopaedia, the word Muallaf comes from the Arabic 'Al-Muallafa Qulubuhum' which means "those whose hearts are won over" or "those hearts that need softening". On the other hand, the actual phrase is connected with the Qur'an in the Surah Al-Tawbah: 60, which means:

"Zakat is for: the poor, the destitute, those who collect it, reconciling people's hearts (Muallaf), frees slaves, spending in the way of Allah, and travellers. It is a legal obligation from Allah. Allah is all knowing, all wise"

Based from above phrase, Zakat plays a significant role 'to win' and 'to soften' the heart of the Muallaf to follow Islam as a way of life. Previous Islamic scholar agreed that the term Muallaf also includes non-Muslims, but only for the purpose of turning their hearts to Islam. For example, al-Qardawi states, the case where there is a group of infidels / unbelievers being courted in the hope that they will accept Islam, such in the case of Safwan. During the opening of Mecca, Safwan was given a period of four months by the Prophet (s.a.w.) to consider accepting Islam. When the battle of Hunayn occurred, he took part in it. The Prophet Muhammad (s.a.w.) then lent Safwan his sword and gave him a few camels, taken from a valley. Consequently, after that incident, Safwan became a good Muslim (Razaleigh Muhamat et.al, 2012)<sup>15</sup>. The authentic hadith referring to the event is found in Sunan al-Tirmidhi, which mentions: "From Safwan, son of Umayya r.a., who said: "On the day of the Hunayn war, the Prophet had given me something. Truly, he was the person whom I hated most but he always gave me (something) until he really became the person that I love most."The hadith mentioned above explained that Rasulullah s.a.w had transformed Safwan who hated him most at first, but through love, care and material wealth showered upon him by Rasulullah s.a.w, his hatred changed to love. As a result, almost all of the Islamic scholars agree to accept the non-Muslim as a part of Muallaf as a way to persuade them to embrace Islam. Al-Qurtubi (1954)<sup>16</sup> mentioned three of them, which are:

- 1. Those who have just embraced Islam. They need support in order to build up their confidence towards Islam. Al-Qurtubi also included the Jews and Christians who had newly accepted Islam, even though they were wealthy in this group.
- 2. The leaders and public figures amongst them who had many friends who were non-Muslims. By giving them a part of the Zakat, it was hoped that it would attract them and their friends to embrace Islam.
- 3. The middlemen who can persuade other non-Muslims to embrace and accept Islam. On this matter, they received a part of the Zakat to become such middleman.

## 5. LITERATURE REVIEW: ZAKAT AND MUALLAF DEVELOPMENT

.

<sup>&</sup>lt;sup>15</sup> Razaleigh Muhamat @ Kawangit, Abdul Ghafar Don, Salasiah Hanin Hamjah, Fariza Md.Sham, Badlihisham Mohd.Nasir, Muhammad Faisal Asha'ari, Siti Rugayah Tibek, Zainab Ismail, Ideris Endot, Anuar Puteh, A'dawiyah Ismail, Mohd Zulkipli Abd Ghani, 2012, Assimilation Level of Chinese Muallaf In Kuala Lumpur, Advances in Natural and Applied Sciences, 6(4): 524-533, 2012 ISSN 1995-0772.

<sup>&</sup>lt;sup>16</sup> al-Qurtubī, 1954. Al-Jami' Li Aḥkām al-Quran. Volume 8. Misr: Dar al-Kutub Misriyya.

Mahyuddin Haji Abu Bakar et.al (2011)<sup>17</sup> states that zakat distribution to the Muallaf can help strengthen their faith and creates a sense of belonging among Muslims to assist those who are in need like this group of people. Aishah M et.al (2011)<sup>18</sup> seeks to investigate the conversion patterns among muallafs in Malaysia. Its focus is to find out the demographic information of muallafs and to identify the popular conversion patterns among muallafs in Malaysia. From the study conducted, the following conclusions can be derived: a) majority of the muallafs come from Sabah and belongs to other ethnicities found in Malaysia such as Iban, Asli, Myanmar, Kadazan and Thai, b) many of them are unemployed despite having adequate academic level, c) majority of the new muallafs agreed that they had first obtained their information regarding Islam from people who are close to them like family members, friends, colleagues and neighbours, d) majority of the new muallafs associate their conversion process with the friendliness pattern, followed by the intellectual pattern and lastly the mystical pattern. This coincides with the first source of information they obtained regarding Islam.

Moreover, zakat distribution aims to change the lives of the poverty-stricken by enabling them to afford to live a comfortable life. al Kasani (n.d.) also mentioned that the distribution of zakat serves to cater for the needs of its recipient. For this purpose, zakat is not necessarily given to all recipients if there are those that are in need of more zakat. According to al Kasani, the government has the authority to identify ways to distribute zakat. With regard to this, Muhamad Abdul Mun'im (1997) maintains that the obligatory nature of zakat should become a catalyst to assist Muslims in four aspects through the goal of zakat distribution: to resolve poverty issue, to establish social justice, to develop a society based on love, mutual solidarity, brotherhood and to eliminate from the poor the feelings of hatred that they may harbour towards the rich. In this context, M. Shabri (1998) also argues that zakat has its own strength as it unites the Muslims, build better relations among them and encourage Muslims to work together. Zakat also should be for the purpose of being a welfare instrument to overcome economic issues or as a means to stabilize the economy of the Muslims.

Razaleigh Muhamat et.al (2012)<sup>19</sup> set outs to explore the exact level of the social aspect of assimilation between Chinese Muallaf and their Malay counterparts in Kuala Lumpur. It was certain that assimilation within the social aspect is a dilemma which the Chinese Muallaf face when they convert from their own religious belief to Islam. It suggests that when these converts begin to practice Islam, their behaviour changes in line with the identity of the Malays. This is because Islam is associated with the Malays in the Malaysian context. Whilst they are welcomed by their Malay counterparts, it is nevertheless hypothesized that they may not assimilate fully into the Malay community. Through this research, it was found/discovered that the social assimilation level of Chinese Muallaf is at the low level.

According to McGuire (1997)<sup>20</sup>, "conversion is a process of religious change which transforms 'the way the individual perceives the rest of society and his or her personal place in it, altering one's view of the world." Lofland & Skonovd (1981)<sup>21</sup>, describe the process of conversion from one religion to another; a)

<sup>&</sup>lt;sup>18</sup> Aishah M, Junaida I, Muna A. J, Siti Rafidah M. D, and Kamaruzaman Jusoff, 2011, Conversion Patterns among Mualafs at Pusat Bimbingan Islam Sultan Abdul Halim Mu'azam Syah Negeri Kedah Darul Aman (Pusba), Aishah et al./ Elixir Soc. Sci. 34 (2011) 2509-2511.

<sup>&</sup>lt;sup>19</sup> Razaleigh Muhamat @ Kawangit, Abdul Ghafar Don, Salasiah Hanin Hamjah, Fariza Md.Sham, Badlihisham Mohd.Nasir, Muhammad Faisal Asha'ari, Siti Rugayah Tibek, Zainab Ismail, Ideris Endot, Anuar Puteh, A'dawiyah Ismail, Mohd Zulkipli Abd Ghani, 2012, Assimilation Level of Chinese Muallaf In Kuala Lumpur, Advances in Natural and Applied Sciences, 6(4): 524-533, 2012 ISSN 1995-0772.

McGuire, M. B. (1997). Religion: The Social Context: Fourth Edition, .California: Wadworth Publishing Company
 Lofland, J. & Skonovd, N. (1981). Conversion motifs. Journal for the Scientific Study of Religion, 20 (4), 373-385.

Intellectual; 'response to teaching' (Kose,1994)<sup>22</sup> through reading, media, talks, b) Affection; through having good and positive personal experience with members of the Muslim society, c) Mystical; through visions and supernatural experiences, d) Experimental; going through the process of trial and error in the religion of choices, e) Revivalist; conforming to the crowd; involving emotional inspirations (Inaba, 2004)<sup>23</sup>; and f) Coercive; through pressure.

Meanwhile, Poston (1992)<sup>24</sup> came up with four (4) factors of conversion: "Example and imitation, the desire to follow out a moral idea, teachings of Islam and extra cult-affective-bonds". While Abdul Wadod Shalabi (2005)<sup>25</sup> further added three (3) common factors that lead to the decision to convert to Islam: "direction and discipline, lack of a priesthood and racial equality". However, Dawson (1990)<sup>26</sup> suggested that conversion process is 'a mixed type' of those patterns. In 1992, Bainbridge<sup>27</sup> pointed out two (2) theories on religious conversion ie; a) strain theory, b) social influence theory, and Lofland/Stark (1965)<sup>28</sup> conversion model brings about both of the theories. In Kose's (1994)<sup>29</sup> study on 70 English Muslim converts, it was found that the most common conversion patterns among them were the affection, intellectual and experimental. Among the three, most respondents associated their conversion with the affection and intellectual patterns.

#### 6. RESEARCH METHOD

This paper has is essentially based on the on-going academic research work and descriptive analysis to get an overview of Muallaf development through zakat distribution and programmes in contemporary times. An interview session was conducted on the 25<sup>th</sup> of June 2013, at 3.30 pm with two officers from The Selangor State Islamic Religious Council whom were Ustaz Mohd Helmi (Assistant Director for Muallaf Welfare in Selangor) and Ustaz Mohd Anwarulhaq (Assistant Director for Muallaf Education in Selangor). The purpose of this interview session is to get the response/feedback for the research question that had been raised. Data collection was for the period of 2002 until 2012. The Selangor State Islamic Religious Council was selected because of their achievement being the highest in the zakat fund collection in Malaysia. The question that was raised was that with the highest collection of zakat in Malaysia, why are the Muslims still putting blame and complaints to the Selangor State Islamic Religious Council regarding the distributions of zakat collection. Their concerns also focus on whether the asnaf of Muallaf have been protected accordingly through zakat funds. Malaysia was quite recently shaken by the controversial issue on the discovery of converted Muslims (muallafs / new Muslims) being investigated by the Selangor State Islamic Religious Council during their inspection based on the complaint received by Muslims on their involvement with activities organised by the Damansara Utama Methodist Church (DUMC) in Petaling Jaya on August 3<sup>rd</sup>, 2011 (Utusan: 16/10/2011). Majority of the Muslims placed the blame on the Selangor State Islamic Religious Council and questioned regarding Muallaf's rights on Zakat contribution. The blame had stressed upon the allotment of the zakat fund, as the general perception was that these Muallafs are not being supported by the authorities. Thus, this study aims to identify the

programmes or activities relating to the distribution of zakat funds, focusing mainly on the plight of the asnaf of Muallaf.

## 7. THE DISTRIBUTION OF ZAKAT ON MUALAF DEVELOPMENT IN SELANGOR

The Selangor State Islamic Religious Council is responsible to collect and distribute zakat in Selangor, and their role had shown impressive growth from time to time. This is proven by a stunning increase in the amount of zakat collection from 2008 to 2011 for all categories. Generally, most of the zakat distribution goes to the Fuqara and Masakin from 2008 and it is continually increasing through the years until 2010 totalling MYR 126 million, as shown in Figure 1.

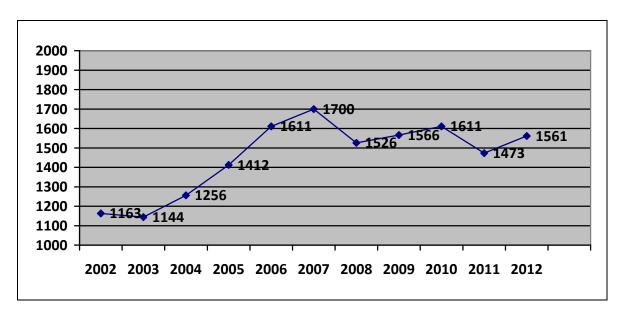

Figure 1: Selangor Zakat Distribution by Category (2008-2011)

Source: JAWHAR 2012 (unpublished)

Figure 1 shows that the amount of zakat distribution to the Muallaf is increasing from MYR 11 million (2008) to MYR 16 million (2009) and MYR 19 million in the year 2010. Only in the year 2011, the amount of zakat allocated to the Muallaf had a small decline which dropped from MYR 19 million to MYR 15 million. The rest, we can conclude that distribution of zakat to the muallaf in the state of Selangor (except for year 2011) is consistently increasing each year. The trend of zakat distribution to the Muallaf is actually reflected from the total amount of registered Muallaf in the state of Selangor every year. This research attempts to look into the amount of registered muallaf, zakat distribution and the programmes that are dedicated for the Muallaf. In general, what we can conclude is that the huge percentage allocated for the Muallaf indicated that zakat plays an important role in assisting new Muslims and helping them overcome their suffering and poverty as stated in the Qur'an (9:60). Zakat is provided to the Muallaf as a way of assisting and enabling them to start a new life in the way of Islam, as the total amount of registered muallaf increases every year, shown in Figure 2 below;

Figure 2: Amount of Registered Muallaf in the State of Selangor; 2002 -2012

Source: Department of Muallaf Development, MAIS

Figure 2 shows the increasing amount of registered Muallaf from year 2002 – 2012 in the State of Selangor. This illustration (Figure 2) supports the changes that occurred shown in Figure 1. It shows that zakat distribution is reflected by the amount of registered Muallaf in the State of Selangor. In the year 2011, the registered Muallafs were less than the previous years, and the declining distribution also may have occurred because in the same year, some of the Muallaf were transferred to the mukallaf status. Overall, this positive increment and practice serves as evidence to the view regarding the necessity of Zakat aid towards Muallaf as part of da'wah methodology since it is essential for Muslims to propagate Islam, in saving them from the swords of the Muslims here on earth and the Fire of Hell in the life after death (Al-Qurtubi, 1954)<sup>30</sup>. After that, Al-Qurtubi gave some emphasis by giving them priority in guidance, briefly as follows:

- 1. To prevent them from deeds that may spark social unrest.
- 2. To make them realize the wholesomeness (*Shumul*) of Islam as their constant guide on the right path.
- 3. To encourage them to hope for the blessing of Allah, so that their hearts are open to accept the teaching of Islam.
- 4. To show them how Islam always care for and love the Muallaf, and that the Prophet Muhammad s.a.w is a blessing for all and especially the new converts.

According to Ibn Hisham<sup>31</sup> the purpose of providing guidance to the Muallaf in the basic knowledge of the '*Deen*' (religion) and instilling them with qualities of precise moral behaviour is to encourage them to willingly embrace Islam, and to avoid evil deeds.

Resource: Selangor State Islamic Religious Council

Table 1 reveals that if the total number of registered Muallaf in Selangor from 2002 to 2012 (16,023) were distributed with the amount of zakat collected in 2011, each person will get MYR 936.15. This calculation is based on the assumption that the Selangor Islamic Religious Council (SIRC) will provide aid to the existing Muallaf and new Muallaf. And if we consider the number of Muallaf for a five year period (the period set by SIRC to provide monthly assistance of MYR 500.00 to Muallaf), between the year 2007 to 2011, the overall amount of Muallaf is 7,876 people and the distribution of that year is MYR 15 million, hence each Muallaf is assumed to receive aid amounting to MYR 1904.5. This means that there are various form of aid and programmes that are not only focused on monthly assistance because the average zakat funds received exceeds the monthly aid which is MYR 500.

The highest number of Muallaf is registered under the Muslim Welfare Organization Malaysia (PERKIM)<sup>32</sup>. In terms of district, Shah Alam recorded the highest number of registered Muallaf in Selangor, followed by Hulu Langat, Klang, West Gombak and followed by other districts. Based on the ethnicity for 2013, the largest number of Muallaf were the Indians with 404, followed by other ethnics (307), Chinese (293), Orang Asli (129), Iban (112), Filipino (83), Kadazan (65), Bidayuh (48), Indonesia (29), Cambodia (25), Murut (22), Myanmar (17), Thailand (12), Eurasian (8) and Punjabi (7).

## 8. ZAKAT DISTRIBUTIONS AND PROGRAMMES FOR MUALLAF

In the state of Selangor, the Selangor State Islamic Religious Council (SIRC) is responsible for educating, assisting and monitoring the Muallaf through various programmes beginning from the first day the they

\_

<sup>&</sup>lt;sup>32</sup> PERKIM is a semi government body which conduct Islamic Da'wah to Muslims and non-Muslims

become Muslim until they pass away. Thus the aid and education programs setup by SIRC can be categorized into short-term and long-term programmes. Table 1 shows the type of programmes and activities and the amount of zakat involved in the year 2013 as follows;.

Source: Selangor State Islamic Religious Council, 2013

Basically, Table 2 indicates that distribution zakat aid for the Muallaf begins from the first day that they become Muslims. For example, the new Muslim would be immediately helped with monthly allowance for five years until they become a Mukallaf. This aid is important for them to bear their cost of living. Besides monthly allowance, Islam is also concerned with the education and health of its devotee. Support from SIRC towards education covers the fees, pocket money allowance, book allowance, ticket and eyeglasses. This support package is comprehensive throughout the 10 types of educational institution such primary and secondary school, university and Muallaf educational center within and outside of Selangor. For medical aid, the Muallaf is eligible for assistance of up to MYR 50,000. For accommodation, the Selangor State Islamic Religious Council had provided several aids for house repair/restoration/renovation, paying rent and also purchasing low cost house. Another allowance includes funeral services, Islamic days celebration, contribution for Muallaf society and Muallaf encourage allowance whose purpose is to encourage, assist and educate the Muallaf in becoming better Muslims.

For non-monetary program, the SIRC had assembled several programs and educational classes for the Muallaf to learn about Islam. A class on Fardhu 'Ain<sup>33</sup> (individual obligations) for them to learn about performing the Solat (prayer), Zakat, Fasting and Hajj as well as a class on learning Fardhu Kifayah<sup>34</sup> (communal obligations) that teaches them practice about the moral responsibility upon a community, such that if someone undertakes or performs such practice, then the obligation has been fulfilled and the sin and responsibility of non-performance is lifted from the rest. Moreover, in encouraging the Muallaf to attend classes, allowance for attending the class is also given. Besides that there are few subventions on courses and training for improving their management skills. This clearly manifests the great concern from

<sup>&</sup>lt;sup>33</sup> A Fardhu 'Ain act is what Allah SWT requires from each and every morally responsible person. It is thus insufficient for someone to perform such an act on another's behalf - such as the solat, zakat, Hajj (except for special conditions), keeping agreements, and avoiding wine or gambling etc.
<sup>34</sup> A Fardhu Kifayah act is what Allah SWT requires from the collectivity of those morally responsible, not from each one of

<sup>&</sup>lt;sup>34</sup> A Fardhu Kifayah act is what Allah SWT requires from the collectivity of those morally responsible, not from each one of them, such that if someone undertakes it, then the obligation has been fulfilled and the sin and responsibility of non-performance is lifted from the rest; on the other hand - if no one undertakes it, then all are guilty of serious sin for neglecting the obligation. Examples include - praying over the dead, and building mosque.

SIRC in supporting, educating and nurturing the Iman of the Muallaf to become a better person and Muslim

Table 2 displays all 31 types of programmes and activities for asnaf Muallaf through zakat distribution. What we can summarize is that from all the various types of programmes and activities, we can categorise them to four main range of zakat distribution. The first category comprise of 25 programmes involving the amount ranging from MYR 20 – MYR 500.00. The second category consists of 12 programmes amounting within the range from MYR 500.00 – MYR 10,000.00. The third category has 13 programmes with amount ranging from MYR 10,000.00 and above. Finally, the last category is the remaining 16 programmes that are stated as others, whether according to the need and application, or depending on the approval or depending on the technical approval.

### 9. CONCLUSION

In conclusion, this research has clarified that a huge of amount been allocated to the development of asnaf Muallaf in Selangor. On top of that, 31 types of programmes have been assigned to ensure that the Muallaf can sustain in facing the various challenges being a new Muslim in a Muslim majority country like Malaysia in general, and particularly in the state of Selangor. Hence, this research has answered the big question that was raised by the majority of the Muslims claiming that the Muallaf are being neglected by the religious authority or the Islamic Religious Centre in particular. On top of that, it is truly hoped these development programmes through zakat distribution will facilitate the Muallaf in preparing and transforming them to become Mukallaf after five years. However, this study is only limited to the data that was available from the officers interviewed. Therefore, this study is suggested to expand its scope to include the Muallaf themselves as the respondents in the future.

## **Acknowledgement**;

A great appreciation and gratitude to Universiti Sains Islam Malaysia through the Islamic Finance and Wealth Management Institute (IFWMI) for providing the university grant: code (PPP/FEM/IWM/30/14012) for the research titled: "Membangun model pelan pembangunan ekonomi dalam membasmi kemiskinan di kalangan asnaf Muallaf: Kajian kes di negeri Selangor". A special thanks to the Selangor State Islamic Religious Council in providing us the information and interview session.

## PERANAN ZAKAT PERUBATAN DALAM MENINGKATKAN KUALITI KEHIDUPAN ASNAF FAKIR DAN MISKIN: SATU TINJAUAN AWAL

Zurina Kefeli<sup>1</sup> Nursilah Ahmad<sup>2</sup> Siti Nurazira Mohd Daud<sup>3</sup> Mohd Azlan Shah Zaidi<sup>4</sup> Fuadah Johari<sup>5</sup>

#### **ABSTRAK**

Tahap kesihatan yang baik bukan sahaja memberi kesan ke atas kualiti hidup individu tetapi juga kepada pembangunan ekonomi negara. Namun, kebelakangan ini kos perubatan yang semakin meningkat menjadi masalah kepada hampir semua negara di dunia. Di peringkat mikro, perbelanjaan poket (dalam pembiayaan penggunaan sektor kesihatan swasta) telah meningkat dengan kadar tinggi dan usaha mencari sumber pembiayaan lain yang boleh digembleng perlu dilaksanakan segera terutama bagi membantu umat Islam yang kurang bernasib baik. Antara sumber pembiayaan yang telah dikenalpasti dalam membantu meningkatkan taraf hidup umat Islam adalah bantuan zakat. Antara jenis zakat yang telah diperkenalkan adalah zakat perubatan. Walau bagaimanapun, sehingga kini bentuk zakat perubatan hanya terdiri daripada bantuan perubatan, bantuan rawatan dan mesin hemodialisis serta bantuan rawatan sakit kekal. Dengan menggunakan analisis deskriptif, kajian ini akan menumpukan kepada peranan zakat perubatan sebagai sumber penting dalam membantu meningkatkan kualiti hidup golongan asnaf fakir dan miskin di Malaysia. Melalui bantuan zakat perubatan yang lebih komprehensif, taraf kesihatan asnaf dijangkakan akan bertambah baik, dan seterusnya dengan kesihatan yang baik mereka dapat meningkatkan tingkat pendapatan keluarga. Apabila tingkat pendapatan meningkat, kualiti hidup seseorang asnaf akan meningkat dan kemungkinan mereka akan terkeluar dari kategori asnaf fakir dan miskin. Sekiranya hipotesis ini dapat dibuktikan maka zakat perubatan akan menjadi alat ekonomi utama dalam meningkatkan kualiti hidup dan seterusnya mampu membasmi kemiskinan di kalangan umat Islam di Malaysia.

**Kata kunci**: zakat, asnaf fakir dan miskin, tahap kesihatan

#### 1. **PENDAHULUAN**

Menurut World Health Organization (WHO), kesihatan adalah suatu keadaan yang sempurna dari segi fizikal, mental dan sosial dan bukan semata-mata ketiadaan penyakit dan cacat. Tahap kesihatan yang baik bukan sahaja memberi kesan ke atas kualiti hidup individu tetapi juga kepada pembangunan ekonomi negara. Menurut teori ekonomi kesihatan, tahap kesihatan mempunyai pengaruh penting ke atas tingkat pendapatan negara. Di peringkat makro, banyak kajian di negara-negara maju seperti Amerika Syarikat telah menunjukkan bahawa kesihatan mempunyai hubungan positif ke atas pembangunan ekonomi sesebuah negara (Bloom & Canning, 2000; 2001). Seterusnya, di peringkat mikro, kajian oleh Bloom, Canning & Savilla (2001) mendapati bahawa berbanding pendidikan, tahap kesihatan individu didapati lebih signifikan dalam menyumbang kepada agregat output negara.

Kebelakangan ini kos perubatan yang semakin meningkat menjadi masalah kepada hampir semua negara di dunia. Di peringkat global, peningkatan kos rawatan kesihatan adalah disebabkan oleh kemajuan teknologi dalam bidang perubatan selain jangkaan yang tinggi oleh pesakit terhadap rawatan yang diterima (World Health Organization, 2007). Sistem kesihatan di Malaysia juga terkesan dengan perubahan ini. Penduduk di Malaysia terpaksa menanggung kos perubatan dan

<sup>1, 2, 3, 5</sup> Pensyarah, Fakulti Ekonomi dan Muamalat, USIM; 4 Profesor Madya, Fakulti Ekonomi dan Pengurusan, UKM. (zurina@usim.edu.mv)

perbelanjaan ke atas kesihatan yang semakin tinggi. Statistik dari World Health Organization menunjukkan pada tahun 2006, perbelanjaan swasta ke atas kesihatan daripada peratusan jumlah perbelanjaan ke atas kesihatan telah meningkat dari 49% pada 1996 kepada 55.4% pada 2006. Dari tahun 1996 hingga 2006, peratusan perbelanjaan poket (*out-of-pocket expenditure*) kekal melebihi 73% setiap tahun. Dalam pembiayaan penggunaan sektor kesihatan swasta, perbelanjaan poket telah meningkat dengan kadar tinggi dan usaha mencari sumber pembiayaan lain yang boleh digembleng perlu dilaksanakan segera terutama bagi membantu umat Islam yang kurang bernasib baik. Antara sumber pembiayaan yang telah dikenalpasti dalam membantu meningkatkan taraf hidup umat Islam adalah bantuan zakat.

Zakat adalah sumber ekonomi terpenting umat Islam. Sesebuah negara Islam perlu menjana sumber zakat dengan sebaik-baiknya dalam membina kekuatan ekonomi, sosial dan pendidikan negara. Dalam aspek pembangunan ekonomi, agihan zakat kepada golongan berpendapatan rendah dapat meningkatkan permintaan agregat dan meransang pertumbuhan ekonomi negara (Zarina Kadri et al., 2012). Kajian oleh Zarina Kadri et al. (2012) juga telah mencadangkan fungsi zakat diperluaskan agar dapat menjadi pemangkin ke arah negara berpendapatan tinggi.

Justeru, usaha penambahbaikan berterusan dalam pengurusan zakat di Malaysia sentiasa dilaksanakan selari dengan perubahan ekonomi semasa. Antara penambahbaikan yang dilakukan adalah dengan mempelbagaikan corak dan bentuk bantuan zakat agar lebih komprehensif sesuai dengan kehendak dan keperluan baru asnaf. Di Selangor contohnya, selain lapan asnaf zakat yang qati'e (putus) di dalam nas naqli al-Quran, jenis bantuan zakat berdasarkan kepada keperluan asnaf kini meliputi enam aspek utama iaitu keperluan perlindungan, makanan, pakaian, pengangkutan, pendidikan dan perubatan. Bagi aspek perubatan, mereka yang layak akan mendapat biaya perubatan yang optimum memandangkan kos perubatan bagi pelbagai jenis penyakit kian meningkat saban hari. Sebagai contoh, di Selangor, Lembaga Zakat Selangor telah memperuntukkan dana yang besar bagi pembiayaan kos rawatan asnaf. Pada tahun 2010, RM25.24 juta telah dibelanjakan bagi tujuan perubatan. Jumlah ini telah meningkat berbanding hanya RM23.17 juta pada 2009 dan RM15.78 juta pada 2008 (Hamizul Abdul Hamid, 2011).

Dengan kos perubatan yang semakin tinggi, jumlah peruntukan zakat perubatan dijangkakan akan meningkat setiap tahun. Tanpa sokongan kewangan, umat Islam yang berpendapatan rendah malahan sederhana sekalipun akan menghadapi masalah bagi mendapatkan rawatan kesihatan. Apabila jatuh sakit, seseorang individu tidak boleh bekerja seperti biasa, oleh itu pendapatan isi rumah individu tersebut akan terjejas. Jika individu sakit dalam tempoh yang lama maka ekonomi isi rumah itu akan berdepan dengan masalah besar bagi meneruskan kelangsungan hidup. Sehingga kini bentuk zakat perubatan hanya terdiri daripada bantuan perubatan, bantuan rawatan dan mesin hemodialisis serta bantuan rawatan sakit kekal. Program bantuan zakat perubatan sewajarnya diperluaskan meliputi rawatan pencegahan, pendidikan dan pembangunan kemudahan kesihatan bagi menjamin taraf kesihatan yang lebih baik di kalangan asnaf.

Menyedari hakikat ini, kajian ini akan menumpukan kepada peranan dan potensi zakat perubatan sebagai sumber kewangan penting dalam membantu meningkatkan kualiti hidup golongan asnaf fakir dan miskin di negeri Selangor. Selain itu, kajian ini juga akan mengkaji sama ada dengan peningkatan kos perubatan, adakah bantuan perubatan oleh pusat zakat juga turut meningkat.

Kertas kerja ini dibahagikan kepada lima bahagian. Bahagian kedua membincangkan kajian-kajian lepas berkenaan sumbangan zakat dalam meningkatkan taraf ekonomi dan sosial umat Islam di Malaysia. Bahagian ketiga menerangkan kaedah kajian ini dijalankan dan diikuti oleh bahagian keempat yang membentangkan tentang keputusan analisis deskriptif. Kesimpulan kajian dibincangkan di bahagian terakhir.

### 2. KAJIAN LEPAS

Peranan zakat dalam pembangunan ekonomi negara adalah amat penting. Namun kajian lepas berkenaan zakat di Malaysia banyak tertumpu kepada isu-isu makro seperti pengurusan dan pengagihan zakat. Agak kurang kajian yang melihat kepada isu mikro seperti kesan zakat kepada pendapatan individu terutama di Malaysia.

Tidak dapat dinafikan bahawa agihan zakat yang cekap dan sistematik dapat menjadi pemangkin pembangunan ekonomi negara dan seterusnya memperbaiki tingkat pendapatan individu. Kajian awal oleh Ismail Muhd Salleh dan Rogayah Ngah (1980) mendapati zakat yang dipungut di Perak, Kedah, Kelantan dan Terengganu mampu memperbaiki agihan pendapatan kasar pengeluar padi di negerinegeri berkenaan. Seterusnya, kajian oleh Noor Ghani et al. (2002) menunjukkan bahawa faktorfaktor kejayaan perusahaan mikro di Selangor dan Wilayah Persekutuan Kuala Lumpur (KL) adalah melalui dana zakat.

Keberkesanan skim agihan zakat ke atas asnaf fakir dan miskin melalui Skim Bantuan Kewangan Bulanan di KL telah menunjukkan kesan yang besar (sehingga melebihi 100 peratus) terhadap pendapatan asnaf (Suhailiza Abd Hadi, 2003). Manakala kajian oleh Patmawati Ibrahim (2006) di Selangor dan Fuadah Johari (2004) di Melaka mendapati agihan zakat berjaya mengurangkan ketidakseimbangan agihan pendapatan di kalangan asnaf fakir dan miskin. Kesemua kajian yang telah dijalankan ini menunjukkan bahawa peranan zakat adalah amat penting dalam membantu meningkatkan tingkat pendapatan dan taraf hidup golongan asnaf di Malaysia. Hairunnizam Wahid et al. (2004) menjalankan kajian bantuan zakat ke atas kualiti hidup asnaf fakir dan miskin dan dengan menggunakan model logit mereka mendapati bahawa bantuan zakat memberi kesan yang signifikan ke atas kualiti hidup golongan miskin terutama dari aspek pendidikan dan penyertaan sosial.

#### 3. METODOLOGI

Kajian ini menggunakan data sekunder melalui kajian perpustakaan dan statistik berkaitan zakat perubatan dari laporan tahunan Lembaga Zakat Selangor (LZS). Analisis deskriptif dilakukan dengan menumpukan kepada agihan zakat perubatan di negeri yang terpilih. Negeri Selangor dipilih kerana mempunyai pangkalan data kutipan dan agihan zakat serta laman sesawang yang komprehensif berbanding negeri lain.

### 4. KEPUTUSAN KAJIAN

Nabi Muhammad SAW menegah orang Islam untuk meminta-minta seperti sabda baginda: "Meminta itu tidak dihalalkan, kecuali kepada tiga jenis orang iaitu orang yang sangat fakir, orang yang mempunyai hutang yang sangat banyak dan orang yang wajib membayar diyat (denda yang disabitkan kepada kesalahan qisas dalam syarak". Justeru, orang yang mempunyai kesihatan dan kekuatan tubuh badan adalah ditegah untuk menerima bantuan zakat (sehinggalah sekiranya telah dibuktikan bahawa disebalik kekuatan fizikal mereka memang layak menerima zakat). Zakat hanya layak diagihkan kepada yang berhak sebagaimana firman Allah SWT dalam Surah al-Taubah 9:60 yang bermaksud:

"Sesungguhnya zakat itu hanya untuk orang-orang fakir, orang-orang miskin, pengurus zkat (amil), muallaf yang dipujuk hati mereka, untuk memerdekakan hamba, orang-orang yang berhutang, orang-orang yang berjuang di jalan Allah, orang-orang yang sedang dalam perjalanan, sebagai ketetapan yang diwajibkan Allah dan Allah Maha Mengetahui lagi Maha Bijaksana".

Di Selangor, Fatwa Pengurusan Agihan Zakat Selangor tahun 2002 yang dikeluarkan oleh Majlis Fatwa Negeri Selangor mentakrifkan fakir ialah orang Islam yang tidak mempunyai harta atau pekerjaan atau ada pekerjaan tetapi tidak halal atau ada pendapatan tetapi tidak mencapai 50 peratus

daripada had kifayah, untuk keperluan diri atau keperluan diri tanggungannya. Takrifan miskin pula adalah orang Islam yang mempunyai harta atau pendapatan halal yang hanya boleh menampung 50 peratus untuk keperluan diri atau keperluan diri dan tanggungannya tetapi tidak mencapai had kifayah. Had kifayah digunakan bagi mengukur kecukupan perbelanjaan dengan membandingkan pendapatan kasar dan perbelanjaan minimum sesebuah keluarga atau individu bagi memenuhi keperluan hidup mereka. Enam aspek keperluan hidup manusia termasuklah tempat tinggal, makanan, pakaian, pendidikan, rawatan dan pengangkutan. Maka seandainya pendapatan isi rumah yang diperolehi setiap bulan tidak mampu memenuhi keenam-enam keperluan-keperluan ini maka seseorang itu layak dikategorikan sebagai asnaf fakir atau miskin.

Secara umumnya, bantuan zakat perubatan diberikan bagi membantu asnaf fakir atau miskin membiayai kos rawatan perubatan daripada mana-mana hospital kerajaan. Asnaf yang layak menerima bantuan perubatan perlu memenuhi syarat umum agihan zakat, tidak mendapat mana-mana bantuan yang mencukupi bagi membiayai kos perubatan serta perlu mendapat pengesahan bertulis daripada hospital kerajaan. Di Selangor, jenis bantuan zakat perubatan termasuklah untuk perubatan kronik seperti pembedahan akibat kemalangan, rawatan bulanan, peralatan (alat tiruan atau alat sokongan seperti kaki palsu) dan dialisis. Jadual 1 dibawah menunjukkan jenis bantuan zakat perubatan tersebut.

Jadual 1: Jenis bantuan zakat perubatan di Selangor

Kategori bantuan	Jenis bantuan
Perubatan kronik	Kemalangan yang memerlukan pembedahan, peralatan implan, rawatan
	kanser, pembelian ubat atau keperluan pesakit yang disyorkan oleh pegawai perubatan.
Rawatan bulanan	Pesakit yang memerlukan susu khas, lampin pakai buang serta keperluan pesakit yang disyorkan oleh pegawai perubatan.  Tambang kenderaan ulang-alik ke hospital untuk mendapatkan rawatan.
Peralatan	Bantuan alat tiruan atau alat sokongan seperti kaki palsu, tangan palsu, kalipers, tongkat tangan/ketiak, oksigen, kerusi roda, katil, alat pendengaran, cermin mata khas, kasut khas dan lain-lain peralatan yang disyorkan oleh pegawai perubatan.
Dialisis	Bantuan termasuklah hemodialisis, suntikan (Eprex/Recormon), APD dan CAPD.

Sumber: Lembaga Zakat Selangor

Agihan zakat perubatan di Selangor menunjukkan bantuan perubatan diberikan kepada asnaf fakir, miskin, muallaf dan gharimin. Jadual 2 menunjukkan agihan zakat perubatan kepada asnaf-asnaf tersebut pada tahun 2008 sehingga 2011 di Selangor. Jumlah keseluruhan kutipan zakat dari tahun 2008 hingga 2011 menunjukkan peningkatan dari tahun ke tahun. Walau bagaimanapun, peratus pertambahan kutipan zakat dilihat semakin menurun dari tahun 2009 hingga 2011 iaitu dari 48%, 32% dan 2%. Keadaan ini mungkin disebabkan oleh kesedaran yang tinggi untuk membayar zakat di kalangan masyarakat pada tahun 2009 di samping kaedah-kaedah baru pembayaran zakat telah diperkenalkan seperti e-zakat dan Skim Berkat iaitu pembayaran zakat secara potongan gaji bulanan. Selepas tahun 2009, didapati kadar pertambahan kutipan zakat kembali menurun. Bagi jumlah agihan zakat perubatan, Jadual 2 menunjukkan peningkatan dari tahun ke tahun kecuali pada tahun 2011. Trend yang sama ditunjukkan bagi setiap kategori asnaf.

Untuk agihan zakat perubatan mengikut kategori asnaf pula, peratusan jumlah zakat perubatan daripada jumlah keseluruhan kutipan zakat agak konsisten dari tahun 2008 sehingga 2011 iaitu lebih kurang 8.5% kecuali pada tahun 2011 iaitu sebanyak 7.9%. Dari segi peratusan pertambahan

peruntukan zakat perubatan, kadarnya didapati telah menurun dari tahun ke tahun sehingga mencecah -6.54% pada tahun 2011. Keadaan ini menunjukkan bahawa walaupun kos perubatan di Malaysia semakin meningkat dari tahun ke tahun namun bantuan zakat perubatan kepada asnaf di Malaysia didapati telah menurun. Hal ini perlu diberi perhatian oleh pihak kerajaan dalam memastikan kebajikan setiap anggota masyarakat terutama golongan yang tidak bernasib baik diberi perhatian yang sewajarnya.

Selain asnaf fakir dan miskin, zakat perubatan juga diberikan kepada asnaf gharimin iaitu mereka yang mengalami kesempitan hidup akibat hutang-piutang yang melibatkan hutang perubatan sakit kronik atau rawatan dialisis. Bagi rawatan dialisis LZS membiayai rawatan hemodialisis, suntikan (Eprex/Recormon), APD dan CAPD dengan kadar rawatan dari RM70 hingga RM3,960 bergantung kepada jenis rawatan yang diterima pesakit. Pada tahun 2011, LZS telah menyumbang sebanyak RM24.9 juta bantuan zakat untuk pesakit dialisis. Di bawah bantuan ini, 1,005 orang telah dibantu melalui bantuan hutang rawatan dialisis manakala 682 orang menerima bantuan bagi menampung hutang perubatan.

Jadual 2 juga menunjukkan berbanding asnaf fakir, miskin dan muallaf, asnaf gharimin dilihat menerima bantuan dengan jumlah paling tinggi dan semakin meningkat dari tahun ke tahun terutama bagi hutang rawatan dan sumbangan mesin dialisis. Pada tahun 2008, asnaf gharimin menerima RM12.7 juta bagi membiayai hutang rawatan atau sumbangan mesin dialisis meningkat kepada RM24.9 juta pada tahun 2011. Pada masa yang sama, bantuan kepada kategori asnaf yang lain didapati telah berkurang. Contohnya, bantuan perubatan kepada asnaf fakir adalah sebanyak RM196,664 pada tahun 2011 berbanding RM2,113,217 pada tahun 2010. Manakala, penerima bantuan perubatan bagi asnaf miskin pula adalah sebanyak RM364,063 pada tahun 2011 dan RM2,732,462 pada tahun 2010. Keadaan ini menggambarkan tahap kesihatan penduduk Malaysia yang semakin rendah dengan bilangan penghidap penyakit diabetes yang semakin meningkat dari tahun ke tahun. Pihak Kementerian Kesihatan seharusnya memberi perhatian serius kepada fenomena ini dengan mengambil inisiatif bagi membendung masalah penyakit diabetes di kalangan penduduk Malaysia, Hasil Kaji Selidik Kesihatan dan Morbiditi Nasional (NHMS) pada tahun 2011 mendapati kira-kira 2.6 juta penduduk Malaysia menghidap diabetes. Data kajian NHMS juga menunjukkan bilangan pesakit diabetes meningkat 31 peratus dalam lima tahun berbanding peningkatan 11.6 peratus pada tahun 2006 bagi orang dewasa berumur 18 tahun dan ke atas (Kementerian Kesihatan Malaysia, 2011).

Jadual 2: Agihan zakat perubatan mengikut kategori asnaf di Selangor bagi tahun 2008 hingga 2011

Kategori asnaf	2008 (RM)	2009 (RM)	2010 (RM)	2011 (RM)
Fakir	27,679	200,837	2,113,217	196,664
Miskin	355,080	423,959	2,732,462	364,063
Muallaf	66,766	89,538	813,678	51,616
Gharimin:				
<ul> <li>Hutang Rawatan/ Sumbangan Mesin</li> </ul>	12,662,988	17,886,064	21,458,408	24,869,413
Dialisis				
Hutang Perubatan	3,127,513	5,290,994	3,793,559	3,724,770
<ul> <li>Sumbangan Tabung Khas Penyakit</li> </ul>	-	-	660,000	299,640
Kronik				
Jumlah keseluruhan untuk Gharimin	15,790,501	23,177,058	25,911,967	28,893,823
Jumlah zakat perubatan	16,240,026	23,891,392	31,571,324	29,206,166
Jumlah keseluruhan kutipan zakat	188,988,771	279,191,041	364,946,019	373,465,626
% pertambahan kutipan zakat	-	48%	31%	2%
% zakat perubatan daripada jumlah	8.59%	8.56%	8.65%	7.9%
keseluruhan kutipan zakat				
% pertambahan peruntukan zakat perubatan	-	47.11%	32.15%	-6.54%

Sumber: Laporan Pengurusan Zakat 2009-2011, Lembaga Zakat Selangor

Selain itu, pada 14 Disember 2011, bantuan zakat perubatan sebanyak RM1 juta telah diberikan dalam bentuk Tabung Pesakit Kronik dan Kecemasan oleh LZS kepada 10 buah hospital terpilih di Selangor dan Kuala Lumpur bagi meringankan beban pesakit beragama Islam yang kurang berkemampuan bagi menjalani rawatan di hospital berkenaan. Jelas sekali secara keseluruhannya zakat perubatan mempunyai peranan yang besar dalam membantu meningkatkan kualiti hidup golongan asnaf di Negeri Selangor khususnya dan Malaysia amnya.

## 5. KESIMPULAN

Zakat adalah sumber ekonomi penting bagi umat Islam. Jika diuruskan dengan baik, zakat dapat menangani pelbagai masalah sosial dan ekonomi dalam masyarakat terutama umat Islam. Melalui bantuan zakat perubatan, taraf kesihatan asnaf dijangkakan akan bertambah baik, dan seterusnya dengan kesihatan yang baik mereka dapat bekerja dan meningkatkan tingkat pendapatan keluarga. Apabila tingkat pendapatan meningkat kualiti hidup seseorang asnaf akan meningkat dan kemungkinan mereka akan terkeluar dari kategori asnaf fakir dan miskin. Sekiranya hipotesis ini dapat dibuktikan maka zakat perubatan akan menjadi alat ekonomi utama dalam meningkatkan kualiti hidup dan seterusnya mampu membasmi kemiskinan di kalangan umat Islam di Malaysia. Oleh itu, satu kajian empirikal perlu dilakukan pada masa akan datang bagi melihat kesan zakat perubatan terhadap kualiti kehidupan asnaf iaitu dengan mengumpul data primer melalui kaji selidik atau temu duga kepada golongan asnaf fakir dan miskin. Input yang diperolehi boleh dijadikan sumber kepada pembentukan model zakat perubatan bagi membasmi kemiskinan di kalangan asnaf pada masa hadapan.

# ISTIHALAH: BROADENING THE HORIZONS FOR HUMAN IN SCIENCE AND TECHNOLOGY'S ADVANCEMENT

Nor Syafarah Zakariya<sup>1</sup> Harivaindaran K. Veeriah<sup>2</sup> Tajul Aris Yang<sup>3</sup>

## **ABSTRACT**

Istihalah is defined as change, transformation, transmutation and impossibility of a matter. It has been a topic of debate among the Islamic scholars for a long time; whether it is halal or haram after a matter has been through a changing process. In general, the scholars gave the description of istihalah along with examples that does not limited to transformation of wine to vinegar only. Instead, they also gave many variations including carcasses bone becomes ash and status of dogs' or pigs' carcasses buried in salt to name a few. In the case for halal and haram of istihalah products, there has been many opinions arose from the scholars; rigid, moderate, and loose. One thing that is clear is amidst the rigid opinions are being practiced in the society, the moderate opinions are considered as the most nearest to religion. Thus it is apparent that the objective of the Islamic syariah is to realize the moderate opinions in life.

Keywords: Istihalah, halal, haram, transformation, islam

### 1. INTRODUCTION

As Muslims around the world concern about halal and haram in their everyday life, the knowledge regarding that has been excavated throughout the years. This happens especially in this new era of science at the time of advancement through modern technology in order to enhance our life. The issue becomes more prominent when Muslims constitute 1.65 billion people around the world in 2010 and expected to increase by over one percentage point each decade with the ratio of one out of four by 2020 and increase by one out of three by 2075 (Kettani, 2010). The awareness does not only affect the Muslims, but the non-Muslims as well as the marketability of various products that is halal is more extensive then the haram ones since both Muslims and non-Muslims can acquire it.

Halal is an Arabic word derived from the verb *Hala* which bears the meaning of "opening a node, unwind, unscrew, unravel, untangle, disentangle, disengage, or resolving something". In Islamic concept, its definition is "things, food, or actions permitted by God's will or instruction, clean, pure, and opposed to haram" (al-Jallad, 2008)(Malboobi & Malboobi, 2010) (Latif, 2011). On the other hand, haram is derived from the verb *Harrama*; the opposite of halal which bears the meaning of "taboo, inviolable, sacred, holy, ill-gotten, sin, wrongdoing, offence, illegal, prohibited, not allowed" (al-Jallad, 2008) (Latif, 2011). The development of new technology in genetic engineering and modern biotechnology especially gave rise to religious concerns for ijtihad by Muslim scholars of various Islamic Schools of

<sup>&</sup>lt;sup>1,2</sup>Postgraduate students at Food Technology Division, School of Industrial Technology, Universiti Sains Malaysia (USM).

<sup>&</sup>lt;sup>3</sup> Senior Lecturer at Universiti Sains Malaysia. Corresponding author: taris@usm.my

Thought to describe the status of products produced from them. Even though halal and haram in Islam has been clearly defined in the al-Quran and Hadith, there are still elements which are still in need for more information. Alternative methods to determine halal and haram are *al-Istihalah* (transformation), *al-Istihlak* (decomposition), *al-Dharurah* (necessity), and *al-Istibra*' (quarantine) (Jamaludin, Zaki, Ramli, Hashim, & Rahman, 2011). But, this paper will be focusing on *istihalah* only.

The Al-Quran and As-Sunnah are two of the most important religious sources of Islamic teaching. In the Al-Quran, there are pointers and teachings which are definite (absolute) and then there are certain laws which are general and subject to interpretations and elaborations as provided by the As-Sunnah. Principles that are still not definite beyond the As-Sunnah are subject to interpretation by the Muslims, more specifically, those in the society that are qualified to dissect the laws (ulama') that are mentioned in both the Al-Quran and As-Sunnah via ijtihad.

Fiqh knowledge is the product of ijtihad by the ulama' on the Al-Quran and As-Sunnah which allow proper understanding of the sacred texts. Fiqh knowledge extents to encompass explanations on principles and laws in the Al-Quran and As-Sunnah, spanning situations and conditions that are relevant to those principles and laws. Activities related to ijtihad in various stages are documented in various Fiqh scriptures and is carried out in a frame responding to changes and dynamics in each generation. It is not uncommon that changes are made to previous ijtihad with the inclusion of the differences in opinion between the former and the latter.

## 2. UNDERSTANDING ISTIHALAH

Istihalah is derived from the root word of Arabic; *Hala* with the root word  $\supset \supset \bowtie$  which literally means changing from one form, state, nature or character to another (Malboobi & Malboobi, 2010) (Jamaludin, Zaki, Ramli, Hashim, & Rahman, 2011)(Mohamad, Sidik, & Omar, 2012). Scholars in Islamic School of Thought has been doing research or ijtihad regarding to its meaning by conceptual, thus it can be defined as transformation of materials to other materials (non-reversible transformation) that involves the conversion of compositions and properties includes the conversion of filth's (*najs*) physical appearance and its properties such as name, odour, taste, colour, and nature into pure (*thahir*) (Jamaludin, Zaki, Ramli, Hashim, & Rahman, 2011).

In a term of Fiqh Law, Al-Istihalah describes change in a substances etc, for example, the change from wine (khamar) to vinegar (khalil). Dispute arises in question of the halal/haram status of those things that undergo istihalah; both product (before undergoing istihalah) and end product (after istihalah). Among them, wine undergoes istihalah to produce vinegar whereby wine and vinegar are at two ends of the spectrum, the former haram for consumption, while the latter halal. Fiqh laws and the ijtihad concerning istihalah related products have been around since the early days of Islam and the growth of Fiqh laws. Disciples of the Prophet Muhammad S.A.W. have asked the Prophet in a friendly manner of the do's and don'ts that surround istihalah as in the change of khamar to khalil, which are found in several stories of the Prophet's life.

According to Wahbah al-Zuhayli, istihalah is the "process of change that occurs to a najs (ayn najasah) substance to a pure substance either naturally or through mediation". He also gave examples like "the change of deer blood to musk; the change of wine to vinegar through naturally or via mediation by some other (which speeds the fermentation); the change of animal carcass or dog to salt as a result of the dog falling into salt; the change of faeces to ash as a reault of burning it; the change of fats to soap; the change of soil from drains (tainted with faeces) which has dried and lost the trace of the faeces; the change of faeces that has been buried in soil and lost all traces of the faeces after a certain period of time" (Wahbah al-Zuhayli, 1997: 1:100).

# 3. THE OPINIONS OF 4 SECTS OF ISLAM ABOUT ISTIHALAH

Mentioned many times in ancient Fiqh scriptures, istihalah is often an issue that causes difference in opinion among ulamas. In general, the istihalah concept is accepted through means of ittifaq in only certain cases. A predominant part of istihalah is practiced within certain sects with discretion. Ulamas of the Hanafi sect mostly accept the concept of istihalah although there has been a bit of a dispute between Muhammad and Abu Yusuf. The view of the Maliki sect with regards to istihalah is similar to the Hanafi sect.

The Syafie sect however, only accepts three scenarios where istihalah is concerned;

- i) The natural conversion of wine to vinegar;
- ii) Dead animal skin (hide) except dog and pig after it is being tanned;
- Something that transforms into an animal, for example when a carcass is infested by maggot, thus becoming new life; (Wahbah al-Zuhayli: 1: 101).

Wine that is artificially transformed into vinegar (human act of adding fermenting agents etc. into it for speedy transformation) is rendered inacceptable.

The Hanbali sect stands similar to the Syafie sect point of view whereby istihalah is only accepted in the context of wine transformation to vinegar naturally. It is also accepted if wine is unintentionally put in a place (with certain conditions) that cause acceleration of transformation.

# 4. CURRENT ULAMA'S POINT OF VIEW

Points of views by current ulamas or Muslim scholars in this issue are abundant albeit not extensively documented. In the resolution of Muslim Ulama conference on medical issues, held in Kuwait in May 1995, it was decided that (Wahbah al-Zuhayli: 660-665);

- i) Gelatine formed by istihalah from najs animal sources (skin, bones and veins) are halal and safe for consumption.
- ii) Soap made by istihalah from porcine (or dead animal/carcass) fat is pure and should be used.
- iii) Cheese made from rennet originating from dead animal/carcass is halal and pure for consumption.
- iv) Cosmetics with porcine fats are not usable unless it has undergone istihalah process and has changed in form and in nutrients.
- v) Food (certain foods like cheese, oil, butter, yoghurt, biscuits, chocolate and ice cream) containing porcine fat as part of it ingredients without change in composition and nutrients is haram for consumption.

## 5. CONCLUSION

The fatwas by ulama' both from the past and current is an indicator that istihalah is indeed an important concept for application especially in existing situations where usage of non-halal food ingredients have come into play. Now more than ever, food technologists, biotechnologists, pharmaceutical experts etc, have a crucial role to play in giving invaluable input with regards to istihalah. Input that can further

reinforce the objectives of Syariah i.e. tolerance, flexibility and ease of realisation. Among the mercy of Allah 'Azza wa Jalla, towards His beings, is to ease general issues in Syariah as a broadened way for the livelihood of Muslims. Ulam salafus salih says, 'Don't say that difference in opinion is a dispute; rather say that it is a broadening of horizons.'

#### HALAL MARKETS IN CHINA: POTENTIALS AND CHALLENGES

Isa Ma<sup>1</sup>

## **ABSTRACT**

This paper aimed to evaluate Halal markets in China including Halal market potentials and challenges in China through analysis of Chinese Muslim populations (market size), purchasing powers, geographic locations (market places), and Chinese Muslim living situations in China (challenges). This paper also combated some problems relating to Halal markets in China and provided some basic information about Chinese Muslims and on Halal markets in China for potential Halal marketers.

Keywords: Chinese Muslims and Halal markets in China

## 1. INTRODUCTION

As companies head towards a global market that deals with people from many different cultural backgrounds, it has become essential for marketers to understand culture's influence on consumer behaviours. The recognition of the importance of culture on consumer behaviours has led to an increasing amount of research across cultures (Sojka and Tansuhaj 1995). More significantly, many studies have succeeded in establishing links between culture and consumer behaviours (McCracken 1986).

As the cultural variables and differences increase, the number of communication misunderstandings also increase. Barnlund (1989) suggests that a way to approach cultural understanding is to undertake a careful description of how people relate to one another in search of the norms that regulate social acts or behaviours. The most powerful elements of cultures are those that lie beneath the surface. Kluckhohn and Strodtbeck (1961) call these underlying cultural principles "value orientation". Each society has distinctive set of value and belief orientation. While each of these societies will certainly have significant variations on the mainstream culture, a dominant value prevails at any one time (Kluckhohn and Strodtbeck 1961, Hofsted 1981, Brislin 1990, Ramsey 1996). The dominant values are based on the frames of reference consisting of learned patterns of behaviours, assumptions and meanings, which are shared to varying degree of interest, importance and awareness among members of a group.

Numerous cultural studies on consumer behaviour have been conducted, especially in western context. In those studies, differences were found in consumption patterns or behaviours between people of various ethnic groups (e.g. Saegert, Hoover and Hilger 1985) and various geographic sub-cultural groups that hold differing cultural values (e.g. Gentry, Tansuhaj, Manzer and John 1988). For instance, researchers have found differences in various consumer behaviour aspects such as brand loyalty (Saegert et al. 1985), decision making (Doran 1994), novelty seeking and perceived risk (Gentry et al. 1988) across sub-cultural groups. Although previous studies have identified differences in various consumer behaviours across sub-cultural groups, most of the past studies dissected consumer behaviours and each study examined one or two specific aspects in a piecemeal-based way. There has been relatively little effort to examine the culture's influence on consumer behaviours in an integrated framework.

In the context of international marketing and globalization, marketers have to decide what market strategies to be adopted in order to address a particular group of people. For example, if Malaysian marketers want to promote their Halal products to Muslims in China, they must know this market with details including where

<sup>&</sup>lt;sup>1</sup> Isa Ma is a Chinese Muslim originally from China and currently is a lecturer in the Department of East Asian Studies, University of Malaya 50603 Kuala Lumpur, Malaysia. Isa Ma could be contacted through mobile phone: 012-9174033 and email: isama007@yahoo.com or maziliang@um.edu.my

these Halal markets are exactly located, how large the market sizes are, what the purchasing powers are etc., and more precisely they must know whether the Chinese Muslims in China do prefer to buy Halal products, including their Islamic values, beliefs and attitudes towards Halal products.

If the Chinese Muslims in China have low Islamic values, and beliefs in Halal products, they might not care about the nature of a particular product. If the research found that the sub-cultural groups are different in their Islamic values, and beliefs in Halal products, their attitudes toward Halal products will not be same too. As a result, their purchasing behaviours toward Halal products might be different, then individualistic marketing strategy is adopted for each target Muslim group in China; if the research found that the underlying sub-cultural groups are not significant different in their Islamic value, beliefs, ethnocentrism, trust, self-identity, dietary acculturation including their norms, attitudes and behavioural intentions towards Halal products, then a uniformed strategy across-cultural groups is acceptable.

Although there are very significant numbers of Chinese Muslims in China, their levels of understanding in Islamic values including religiosity, ethnocentrism, trust, dietary acculturation, norms and attitudes towards Halal<sup>2</sup> products are remaining unknown to us and this motives us to carry on this research.

We have been acknowledged from time to time that there are about 30 million of Muslim populations in China, which can be considered as a very significant market for anyone who wishes to penetrate their Halal products and services to this market. Especially, after 30 years of economic reform, average Chinese citizen's per capital income has increased to U\$D1500 (2008 figure).

Exchange rate\*: based on June 17, 2009, 1 US\$=\frac{1}{2}6.83.

Despite this, yet we have known if these Chinese Muslims possess certain level of purchasing power, and more precisely whether they are keen to seeking Halal products to fulfil their cultural needs. Neither do we know about their level of understanding about Islamic values and beliefs, nor do we know the degree of their understanding of Halal/Haram (CAP, 2006, pp17) and their attitudes toward Halal products. Marketing strategy theory suggests us that if the research finds that the underlying sub-cultural groups are significant different in their cultural value, beliefs, attitudes, and behaviours, then a individualistic strategy addressing for each of the sub-cultural groups is employed, otherwise a uniformed strategy should be adopted across the sub-cultural groups.

\_

<sup>&</sup>lt;sup>2</sup> Halal literarily means "lawful" or "permissible" according to Islamic laws/Shariah, and its opposite is Haram literarily means "unlawful" or "prohibited" according to Islamic Laws/Shariah.

China, with 1.3 billion people including thirty millions of Muslim population increasingly enhanced buying power, is one of the largest consumer markets in the world. Especially after China joined WTO in 2001, China has become the fastest growing country in terms of its economic development in the Asia-pacific region and world, average GDP growth rate was 9% per year in the past 30 years since it started economic reform in 1978 and real GDP per capital has increased almost four folds.

This development tread has led China increased international linkages with global world. As a result, the country's foreign trade system has undergone a complete reorientation, transforming China into a country where foreign trade serves as the primary engine for growing. Hence, from an insignificant pre-reform stage, China is today one of the major international traders and a significant participant to world capital market. How to handle China now is a hot topic among world political leaders. China is simply the biggest part of a new world. You cannot just switch it off<sup>3</sup>.

What we can do is be prepared well. Naturally, both academicians and marketing practitioners agree on the enormous influence and economic power, which China will exert in the 21<sup>st</sup> century. Indeed, with more foreign companies plugging into this market, their experiences through both success and blunders have greatly increased our knowledge about this previously untouched market. Unfortunately, Muslims in China have yet to be touched by overseas researchers until recent chaos happened in Xinjiang on July 5<sup>th</sup>, 2010. The world begins to pay attention on Muslims in China.

Today, China is said as a powerhouse for 500 world famous multinational corporations (MNCS), such as World Marts, Carrefour, GM, NEC, IBM, Microsoft Corporation, Boeing, Starbucks, KFC, and McDonald and so on, you just name it, and you will find all of them are operating in China, and this does not include millions of factories owned by the local Han Chinese, who are considered as Non-Muslims or heathens by Chinese Muslims.

This is not the problem, the problem is that each of them including millions of local Chinese firms produces something in one way another which is not considered as Halal or permissible to people who believe in Islam (Muslims), but Muslim consumers unconsciously consume these non-Halal products daily. For example, Starbuck Coffee is not considered as Halal<sup>4</sup>, KFC and McDonald restaurants in China serve pork burgers. Colgate and sweet candies are being sold in China containing animal fat which is not considered as Halal for Muslims.

China is becoming the largest manufacturer of goods in the world. It produces all kinds of goods on earth, and "made in China" is becoming a brand in the world marketplaces. Its membership to WTO has brought great impacts to Malaysian livelihood. Fifteen years ago when China requested investment from Malaysia (personal experience), many Malaysians ignored and turned down to that gold opportunity, but now China comes to Malaysia with flooded products including non-Halal and poised products.

A challenging scenario comes to Muslim consumers in Malaysia is uncountable Chinese made foodstuff/products now flooded in most supermarkets in Malaysia, and whose nature of Halal (Lawful or

<sup>&</sup>lt;sup>3</sup> "Mishandle China", Fareed Zakaria, News Week 2007

<sup>&</sup>lt;sup>4</sup> According to news circulated on internet Starbuck has not got Halal certificate from JAKIM: Department of Islamic Development Malaysia

permissible in Islam) status is unknown to many Malaysians. To some people, I mean Muslim consumers may not choose to be particular about the nature of a product. But, the fact is that thousands and thousands daily consuming goods such as foodstuff, beverage and wearing products (for example, wallet, shoes, jackets and handbags made of pig skins, perfume contained alcohol, and cosmetic contained alcohol and pig fat or unidentified animal fats) are available in Chinese markets as well as in Malaysian markets, and the nature of Halal of these products is unknown to us, but Malaysian are buying them daily. Hence, to buy or not to buy a type of products, especially foodstuff made by the Chinese (Non-Muslims) in China is not only a challenge to Muslims in China, but also to Muslims in Malaysia. As a matter of fact, Muslim consumers in Malaysia do really go to supermarkets and buy products made by the Chinese Non-Muslims (infidels) every day, and so do Muslims in China.

Even if one is not so particular about the Halal nature of a product, then, the Chinese poison milk (Sin Chew Daily, July, August and September 2008) case should be a hard lesson to all of us to learn irrespective or regardless an individual consumer is Muslim or not. To worry some or not, it is not a simple matter anymore, not only is it concerned to Muslims about Halal of a product, but more importantly it is a matter of life and death. "The big white rabbit sweet candies" once were available in most markets in Malaysia which were contaminated by melamine. Only after the case of Melamine worldwide renown, the products disappeared from the Malaysian markets.

For a Muslim any issue that concerns the question of Halal and Haram should be taken seriously. As the beliefs of a Muslim are set by Islam, there is nothing that can be taken lightly. Due to cultural assimilation taken place so long since the Manchurian dynasty and ignorance of Muslims in China, this basic principle in Islam might be also traded off or sacrificed.

Today's marketplaces in China and Malaysia are flooded with a wide range of foods made in China. Some of these are harmful to our health, for example, the poison milk and some are prohibited under Islamic law or Shariah, such as many processed foods containing high level of sugar and salt, various types food additives such as gelatine (CAP, 2006, PP98) whose Halal nature is unknown to us.

The issues of purity of a product or service (Halal) is something that is to be concerned to all of us, or at least it should be sensitive to Muslims in China if they want to continuously live as Muslims in a Communist Han Chinese dominated country. However, due to long term of enculturation with the Han Chinese, it can be noticed obviously that some Chinese Muslims adopt some Han Chinese habits such as heavy smoking and drinking alcohol in public places, especial the Uyghur Muslims who are general alcohol drinkers, they argued that it is their cultural heritage from their ancestors.

When the Uyghur look at the Hui, they would find that the Hui are more Chinese Han alike in appearance and dressing. If there is difference, that's religion. The Huis take Islam as their only religion. The other ethnic groups, such as Bao'nan, Salars and Dongxiang are remaining as myths to most Chinese as well as to Muslims, as their origins of race are unknown or debatable. So Muslims in China too today lead challenging lives. They do not only face political and economic harassments, but their socio-cultural aspects, for example, the food products that they commonly consume in everyday life are also facing threats. Social events and activities are dominated by the mainstream culture that is the Han Chinese culture.

The Han Chinese dominated culture is unknowingly and insensibly influencing and assimilating Muslim lifestyles. As a result, Muslim lifestyles are gradually disappearing and assimilated into Chinese Han culture that is the final goal of this regime wanted to achieve, they did it successfully in certain aspects such as in the area of education and culture. Brainwashing TV programmes and cultural shows dominated by ethnic Han Chinese are intensified in the region of Northwest China.

Parallel to the economic reform, religious freedom was declared within the same year. Since then, the Chinese Muslims have not wasted time in expressing their convictions. According to Malaysian External Trade Development Corporation (MATRADE), the Chinese Muslim population as 2006 has grown to approximately 30 million<sup>5</sup> people.

\_

<sup>&</sup>lt;sup>5</sup> Rizal, Mohd Adly (2007), "Investing in China-what you need to know" The Halal Journal, May-June

Has this presented a lucrative opportunity for foreign investments to enter into the Halal market in China? That depends entirely on which side of the fence you are on. There is currently a strong demand for Halal Products in China. However, with the exception of a few home grown small and medium scale enterprises which has successfully implemented international best practices for food processing and manufacturing, most of the small and medium enterprises (SMEs) in China still use traditional operating standards. This is due to the fact that Muslim SMEs in China lack the proper financing, business and technical expertise to compete in the local markets which we could see with our own eyes during the exhibition of Malaysian International Halal Showcase (MIHAS 2009) held from 7<sup>th</sup> -10<sup>th</sup> May 2009 at MATRADE.

Hence, assistance is required by the Chinese Muslims in China from foreign investors to expand and upgrade their processes to international standards and in this case the Chinese Muslims are eager to receive to investors from Muslim countries such as Malaysia. Generally, Muslims in China have positive attitude towards Malaysia. In addition, China currently lacks professional Muslims that are knowledgeable in international business and technical practices for the Halal industry. Investments from Muslim countries are required to upgrade the business management capabilities of the SMEs, manufacturing operations, acquire better technical expertise and introduce international best practices and standards (Rizal 2007).

The objective of the investments in Halal markets in China is to gain market share in the local markets in China and the gradual expansion into the international markets. A successful execution of these objectives will ensure lucrative returns to investors assisting local producers in developing the Chinese Halal market.

From the market demand perspective, 17<sup>th</sup> January 2003 marks a historical point for the development of Halal industry in the country with the unveiling of the first comprehensive Islamic supermarket in China. Located in the Niujie District in Beijing, the supermarket offers over nine thousand items with over three thousand products specific to the Muslim market. A small food court offers a range of tasty snacks, noodles and dumplings. The Niujie Islamic supermarket not only provides a one-stop centre for Muslims to fulfil their religious dietary requirements but also a channel for local Muslim enterprises to effectively market their Halal products to a wider range of consumers. Leveraged buyout on the low production costs prevalent most parts of China.

Chinese enterprises are more inclined in fostering partnership with foreign companies to the Halal industry locally and abroad rather than trading in imported products. Because of lack of transparency, my Malaysian friend Mr. Ahmad who has been studying in Beijing for the past decade told me in 2008 that most products being sold in Niujie Islamic supermarket were not Halal because product suppliers were non-Muslims. He argues how can non-Muslims supply Halal products for Muslims? It is ill-logic, he argued. I was shocked.

While companies from Malaysia with strong Halal product offering can still penetrate the Halal markets in China, this could be usually achieved by partnering with the local Muslim associations and Muslim companies in China through joint ventures.

Malaysian companies can leverage on the strong influence associations have over the Halal consumer markets in the area. For example, in Xinjiang, an organisation representing the Xinjiang Muslim food industry is the Urumqi Muslim Food Association. There are also thousands of Islamic associations spread all over of China across city, county and provincial level which can be sources for sorting out of Muslims owned or non-Muslims owned firms in a particular area for investment in the form of leveraging.

Fundamentally speaking, there are ten ethnic Muslim groups geographically located all over of China, although they are all Muslims, we believe that they will display great differences in preference of Halal products due to differences in their ethnic, cultural and geographical and educational backgrounds. Each of these ethnic Muslim groups across the regions, provinces, counties, cities, communities and neighbourhood in all over of China, has its own unique set of rules of behaviour (personal experience).

We also have the acknowledgment that there are 30 million of Muslim populations in China. By increasing average Chinese citizen's purchasing powers, we believe that there is a potential for Halal markets in China. However, we do not know much about this previously untouched market. Therefore, we need to do a

research particularly addressing on Halal markets in China by focus on Chinese Muslims' cultural values such as religiosity (beliefs), ethnocentrism, trust, Habits, self- identity, dietary acculturation, including their attitudes, norms, perceived controllable behaviours towards Halal products and their purchasing intention towards Halal products.

Globalization has led to the commercialisation and despiritualisation of all aspects of human life, including Muslim religious practices. In many traditions, consumption of food is not just to satisfy physical needs but has spiritual significance. Certain foods and products are considered lawful (Halal) while others are prohibited (Haram). Consumption of lawful foods and products promotes spiritual development (Sheikh Yusuf Al-Qaradawi). In information technology terminology this is called "GIGO"-garbage in and garbage out. Not long ago, we consumed foods that were produced by small famous using ecologically sustainable agricultural practices and that were free from chemicals. Natural farming based on millennia old wisdom of our farming tradition, was the prevalent practice until the appearance of industrial agriculture.

With the introduction of "scientific" farming practices promoted by Chinese bureaucrats trained in Western and Communist educational system, and under competitive pressure from big corporations, farmers in China began using increasing amounts of in-organic fertilizer, harmful pesticides, herbicides and other chemicals. For example, the poison rice<sup>6</sup> case was just a piece of iceberg from millions of such cases unveiled in China. Only now are we beginning to realize the harmful effects of the use of chemicals on our health and the environment. Based on theory of GIGO-Garbage in and garbage out, can consumption of foods which are produced by destroying our health contribute to the "illumination of our hearts"? There was once upon a time when we consumed largely fresh, wholesome natural food. But with the advent of food technology and food industry, we have been eating more and more processed foods containing chemicals, additives, preservatives and taste enhancers. Consequently, we are taking into our bodies more chemicals which could be injurious to our health. There is an emerging view among public health practitioners and researchers linking exposure to chemicals, whether in the food we consume or the air we breathe, to diseases like cancer. Besides, the health risks, in many cases, processed foods offend the dietary practice or regulations of certain groups. Many additives are from animal sources, sometimes from cows and pigs. Therefore, vegetarians, Hindus and Muslims cannot eat food containing such additives.

Because we do not have adequate laws on labelling in China, Chinese Muslim people are consuming food that violates their dietary practice or rules. The problem is compounded by the import of food items from regions that are subject to proper inspection and testing. For example, some types of sweet candies, e.g. Big White Rabbit, which contain pig milks, animal fats and gelatine, manufactured in Guangdong province and widely being sold in Northwest China where Muslims occupy a big majority comparatively as well as being sold in Malaysia.

The issue of Halal or Haram is of cruel important to Muslims in China as well in Malaysia, because it touches on their Iman or faith. They are required to be scrupulous in avoiding prohibited and suspect things. Unfortunately, we do not have adequate information about Muslims in China including Halal markets in China, Muslims' cultural values, beliefs, their attitude toward Halal products and their preference of Halal products.

When Muslims in China consume foods in public hotels and restaurants located in other than their own hometowns, or on trains and aircrafts travelling in China, or purchasing food items from supermarket and hypermarkets, very often, they are not sure whether the food conforms to Islamic dietary rules. There is no proper certification and they do not have access to information to form an opinion. The Muslims in China highly regard the Halal certification issued by the official Islamic institutions with full confidence and trust because they do not have adequate skilled personnel and testing facilities to conduct rigorous inspection and testing on food offered for sale to public.

The official Islamic institutions in China, such as China Islamic Association together with its branch offices in Provincial, County and City level should push for the enactment on different level of state legislation, regulating the production, transportation, storage, distribution and sale of Halal food and products. It must

<sup>&</sup>lt;sup>6</sup> Old rice polished with calcareousness and resold in the market as new.

provide for strict punishment of those who misrepresent non-Halal food and products as Halal and thereby deceive consumer into consuming or buying them. After the Shandong incident<sup>7</sup>, we cannot accept the mistakes made by the government by saying that the religion is not allowed to interfere the state affairs.

This is not a matter of Muslim religion is interfering the state affairs but the state is violating the freedom of religious practice of Muslims by allowing non-Halal foodstuff and products being sold to public as Halal. For Muslims, Halal and Haram is a matter of state affairs as well as personal religious matter, and more precisely it concerns its citizens' healthy matter, so the state must take stand on this issue. The World Health Organisation has come out with guidelines on Halal food which could be enacted as local legislation subject to amendments that we deem necessary.

Muslim scholars should not confine their studies and opinions only to how animals are slaughtered, meat is transported and stored, and food is prepared. Technological society has thrown up new issues that require authoritative answers rooted in Islamic teaching, and not Fatwa-s justifying what we have had in the name of value-free science and technology. Is it permissible to eat food loaded with chemicals injurious to health and produced by killing other living things, destroying the environment and fracturing the ecological balance created by God? Is it Halal (lawful) to consume meat from animals that are reared under extremely cruel conditions, for example, sheep slaughtered in the dark night using mechanic machines, in violation of the Shariah? Not only do we urgently need answers to these important questions to ensure that Muslims consume licit food, but also are we interested to know whether the Halal and Haram matters are indeed important to Chinese Muslims.

This research is a part of our effort to resist the homogenization of cultural values, attitudes, behaviours (taste and lifestyle) promoted by Sinocization process led by ethnic Han Chinese dominated governments and institutions. We believe in diversity and will struggle to preserve our way of life, culture, norms and values against the onslaught of capitalism, Chauvinism and Sinocization taken place on Muslims in China. On this backdrop, and faced by these challenges to Muslims in China, our research will focus on the following problems:

- (1) What is the level of Chinese Muslims' understanding in Islamic beliefs (religiosity)? Is there any difference of Chinese Muslims' understanding in Islamic beliefs (Religiosity) across ethnical Muslim groups and across geographical regions in China?
- (2) What is the level of Chinese Muslims' Cultural Adherence (ethnocentrism) to Islamic culture? Are Chinese Muslims proud of Islamic culture? Is there any difference of Chinese Muslims' Islamic culture across ethnic groups, and geographical regions in China?
- (3) What is the level of Chinese Muslims' trust towards Halal products available in the markets? Do Chinese Muslims trust those products being sold in supermarkets, aircrafts and trains as Halal? Is there any difference of Chinese Muslims' trust towards Halal products available in the market across ethnical Muslim groups and across geographical regions in China?
- (4) What is the level of Chinese Muslims' self identity being a Muslim? Are Chinese Muslims proud of their Muslim identity? Is there any difference of Chinese Muslims' self identity being a Muslim and being a Chinese across ethnical Muslim groups, across geographical regions in China?
- (5) What is the level of Chinese Muslims' Halal Dietary Acculturation (Familiarity to Halal products)? Are Chinese Muslims familiar with Halal and Haram matters? Is there any difference of Chinese Muslims' familiarity towards Halal products across ethnical Muslim groups and across geographical regions in China?
- (6) What are the Chinese Muslims' attitudes towards Halal products? Are they positive or negative towards Halal products? Is there any difference of Chinese Muslims' attitudes towards Halal products across ethnical sub-cultural groups and across geographical regions in China?
- (7) What are the Chinese Muslims' norms and perceived controllable behaviours towards Halal products in a Chinese environment and non-Halal surroundings? Are Chinese Muslims seeking for Halal products? Is there any difference of Chinese Muslims' norms and perceived behaviour towards Halal products across ethnical Muslim groups and across geographical regions in China?

<sup>&</sup>lt;sup>7</sup> Pork butcher shop labelled as Halal (pure and genuine) in Chinese and drawn wide range of protest in Shandong, then spread to Hebei and Henan provinces and created regional chaos in 2003.

#### 2. HALAL MARKET SIZE

Today, if you ask a Chinese Muslim or Chinese Muslim scholar, he will probably say that Muslim population figure in China is more than 65 million at least 30 million as conservatively, and if you ask the leaders of Chinese Islamic Associations in China and Communist government officials, they will say that Muslim population in China is not more than 20 million.

Many Chinese communist officials pointed out that the figure of 48 million (see table 2.1) before 1949 was incorrect and the figure of 20 million Muslim manufactured by the Chinese Communist regime in 1990 was accurate. However, that figure never changes in the past twenty years in Chinese government documents and official stances. Surely, the Chinese government downplayed the real figure of Muslim population in China as usually it did in its report on its military expenditure. Whereas in the case of Muslims in Taiwan, this would be another case where the Kuo Ming Tang (KMT: Chinese Nationalist Party) in Taiwan would play up the Muslim figures for international attentions.

In order to attract attention from international as well Muslim communities for the purpose to expand its diplomatic relationship, the Taiwanese government usually puffed up Muslim population figures in Taiwan. For example, there are only 20 thousand Muslims in Taiwan reported by Islamic Association in Taipei. However, the Taiwanese government often claims that there are about 200 thousand Muslims in Taiwan.

On the other hand, the Chinese Communist Regime in the mainland China downplayed Muslim figures in China in order to avoid international attentions. China has been condoned by international communities for violating human rights including Muslims' freedom of religious practice. As a result, China's report on Muslim population looks like its military expenditure, it is a state secret.

Today, the population of Muslims in China is estimated to be between 30 million to some 65 million, and some even estimate that Muslim population has reached 200 million according to unofficial counts. This big disparity may stem from the existing census method, although it is worth noting that before the liberation in 1949, the KMT government estimates were already at 48 million as Table 1.3 shows.

If you look at Chinese official documents on Chinese culture and history published by Chinese Ministry of Foreign Affairs, you would find that there were Buddhism, Daoism and Christianity in official documents, but no Muslims-if there were, there were only some minorities living in the northwest China. For ethnic Han Chinese, if there were Muslims in China, which meant that, the Chinese government's assimilation policy would have failed. For the Chinese communist regime, the less Muslim population, the better it is for it to fool international communities. We should not forget that Confucian culture excludes foreign cultures. In the Biography of Zuo, Confucius says: "if he who is not from our race must have different heart from us".

Nevertheless, neither Taiwanese KTM regime nor Chinese communist regime in the Mainland is speaking the truth. The Chinese communist regime in the mainland would insist that there are about 20 million Muslim populations in China. According to National Censuses conducted in 1990, 2000 and 2010, this figure never changes in the past twenty years.

The Chinese regime in Taiwan would also say there are 200 thousands of Muslims in Taiwan, although there are only 20 thousand Muslims in Taiwan and most of them have been assimilated into ethnic Han Chinese, which means that they speak Chinese, drinking alcohol, and eating pork?

Table 1.3 Muslim Populations in China before Liberation (1949)

	Province/Region	Muslim Population	Number of	Muslim Communities
		In China	Mosques	
1	Xinjiang/新疆	2,350,950	2045	2045
2	Gansu/甘肃	3,510,920	3891	3891
3	Ningxia/宁夏	753,400	655	655
4	Qinghai/青海	1,186,590	1031	1031

5	Dong San Sheng/东三省	7,533,680	6570	6570

Source: Fu, Tong Xian (1937), Islamic History in China, First published by Shanghai Commercial Publishing House and reprinted by Ningxia People's publishing House in 2000, pp111. Chinese government officials as well representatives of China Islamic Association (CIA) rejected these figures without given valid reasons and proper calculations.

Because of this, we would never really know the exact Muslim figures in China-unless we conduct an independent census on Chinese Muslim population in China and Taiwan, which would be impossible in China.

As Table 1.3 shows that the largest Muslim population in China is the Hui people. The Hui name derived from Islam which means "Min Aina ila Aina" indicating those who shall return to their origin- the Chinese Name for Muslims and Islam". The Huis comprise near half of China's Muslim population (48%) and are scattered throughout all over of China.

Source: National Census in 2000. Muslim Population in 2010 was estimated in 2008

When we look at the Huis from their appearance, we will find that the Huis are very much similar with the Han Chinese, the Huis eat food with chopsticks, they dress like the Hans, their appearances look like the Hans, and they speaks Han Chinese language, especially those Huis live in South China or big cities such as Beijing, Shanghai and Guangzhou etc. These are Chinese Muslims whose mother tongue is Chinese, whose religion is Islam, and they are called Hui or Hui Hui in Chinese.

We may simply say that Chinese Muslims are the Huis or Hui Hui, or the Hui people. So when we say Chinese Muslims, we mean that we are referring to people who are speaking Chinese language and believing in Islam. The Hui does not have a "common area" and a "common language", hence the definition of ethnic or nationality does apply onto the Hui. Nearly all of the Turkic Muslims are found in the Northwest provinces, such as Gansu and Xinjiang.

The autonomous administrative system is originally designed to give the minorities' political equality with the Han people and to help them maintain their distinctive identities at the same time, but this sweet promise has been broken since 1957. The Han Chinese language (Pu Tong Hua or Mandarin) is being promoted as the official spoken language of the country. All minority peoples are urged to learn it, which is the primary step to ethnic Han assimilation.

Generally speaking, all minorities live harmoniously with the Han people side by side. Recent cases in Xinjiang<sup>8</sup> and Tibet<sup>9</sup> shows that the government polices do not work well to promote economic development among minorities to enable them to catch up with the Han people.

Due to bias and prejudice, the Hans always assume themselves superior than other minorities in all aspects, and all the minorities were considered as backward, therefore they need rescue and salvation or saviours from the Han Chinese. Because of this bias, those state-owned corporations and companies operating in Xinjiang, Qinghai, Gansu and Ningxia traditionally take employees from those Han Chinese who are originally from East or South China, instead of employing the local Minorities who are indigenous people in these areas.

<sup>9</sup> In the month of June, July before the Olympic game started, Tibetans uprising in Lhasa, South Gansu and Aba in Sichuan against the Chinese Communist ruling.

<sup>&</sup>lt;sup>8</sup> Before the day of Olympic game started on 8.8.2008, bombing attack on Chinese armed forces occurred in Kashgar, Xinjiang on 4.8.2008. Source: Sin Chew daily, International, August 31<sup>st</sup> 2008.

Broadly speaking, the Hans always intentionally interfere in the ethnic minority affairs and try to convert them into Han Chinese. After having converted to Islam, a Han Chinese feels it is not right to call him as Han people continuously as he is Muslim now, so he decides to change his nationality status from Han to Hui, the government would say that he could not do so, even though he is a Muslim now and his Muslim (Hui) status cannot be recorded into his personal file or household account kept by the government. So long his Han nationality status does not change, his religion status will remain no change, although privately he is Muslim now, and the government records would maintain that he is still Han, therefore he is not counted as Muslim in the government statistics or census. Therefore a Han Chinese is not allowed to change his Han ethnic background to Muslim ethnic Hui background in the Northwest China.

However, if a Hui, somehow, because of marriage or other reason, has lost the religion of Islam and sense of belonging to Muslim community, and decided to change his nationality status from Hui to Han, he is most welcome, and he can do so very smoothly without facing any harassment.

Every time when the Government does national census survey, and the Muslim population announced by the government is always based on the accumulated figure of those ten minorities whose religion is Islam and other ethnic groups including the ethnic Han who might take Islam as their religions are not accounted. Whatever the government is trying to do, it eventually cannot cover up the fact that there is a huge Muslim population distribution in China.

Those small figures, less than one thousand, are planted by the Chinese government to show the world that China is the paradise for all ethnic groups. Figures such as, 1, 2, 3 and 4, most of them are students enrolling universities and schools in these regions.

# 3. GEOGRAPHICAL LOCATION/HALAL MARKET PLACES

The most recent economic thrust is the opening of the Great Northwest since 2000, primarily an area where Muslims reside. This has been complemented by a series of ongoing trade exhibitions in Lanzhou and Ningxia among others. Much work is needed to make this economic developmental opportunity for Muslims a reality. Ideally, Muslim population size (N) multiplies disposal per capital income will be the market size or potential (N\*\$). Although we know there is a considerable Muslim population in China, and we know the disposal per capital income in China, yet we do not know whether they understand the Halal products, whether there is a need and want for Halal products. That leads this research.

Source: Muhammad Daniel Wang Dianwen, a famous Muslim calligrapher in China and my friend.

Figure 1.1 Chinese Muslim Communities in China

Muslims in China traditionally live around mosques and mosques are community centers too. If you can find a mosque in any particular place in China, you are almost ensured to find out a Muslim community in that area including Halal restaurants and business centre, then your life would be easy there. Unlike Taoism and Buddhism temples in China which were normally built up in an isolated area or far away from community centers, but mosques in China were normally built in the gold places where commercial and community centers are usually standing, for example, Xiguan Grand Mosque in Lanzhou city, the capital city of Gansu province occupied the city centre and the most valuable and gold place in the city, no matter what price syndicates in the city wanted to pay for the place, Muslims there did not trade their mosque for money. A Fengshui master told ethnic Han Chinese in the city that the Xi Guan Grand Mosque sited exactly on the head of dragon worshiped by ethnic Han Chinese in the city, as a result, ethnic Han would never rise up their heads, so the ethnic Han used Chinese government power in Lanzhou and tried very best to reallocate the mosque to another place, the ethnic Han failed.

In China, each mosque represents a particular Muslim community and serves Muslim people in that particular community, and Muslim population in that particular community normally does not cross or conjoin with another mosque due to following different sects of the religion of Islam or geographical distance. It is therefore, a mosque means a community, a society, a market, more importantly.

There are now more mosques open in China than there were prior to 1949, one would finds among the Muslims in China today a wide spectrum of Islamic belief. Archaeological discoveries of large collections of Islamic artefacts and epigraphy on the southeast coast suggest that the earliest Muslim communities in China were descended from Arab, Persian, Central Asian, and Mongolian Muslim merchants, militia, and officials who settled first along China's southeast coast from the 7-10<sup>th</sup> centuries, and then in larger migrations to the North from Central Asia under the Mongol-Yuan dynasty in the 13-14<sup>th</sup> centuries, gradually intermarrying with the local Han Chinese populations, and raising their children as Muslims

Muslims in China are practicing Sunni, Hanafi Islam, residing in independent, small communities clustered around a central mosque. These communities are characterized by relatively isolated, independent Islamic villages and urban enclaves, who relate with each other via trading networks and recognition of belonging to the wider Islamic "Umma" headed by an Ahong (from the Persian, akhun) or Imam who was invited to teach on a more or less temporary basis. Muslims in China live dispersedly in nationwide, however, in a particular place they live in small communities or clusters concentrically.

Before 1949, based on KMT government estimation there were 42,371 Mosques all over of China. If we assume that there were one thousand Muslims living around each mosque on average basis, the population of Chinese Muslims in China then would be 1000X42, 371=42,371,000 (≈42 million) which was very close to the figure, 48 million, which was the figure given by the then government. If there were about 500 Muslims living around a mosque, we would have at least about 21 million Muslims in China before 1949.

Suppose if there were about 250 Muslims living around a mosque, we would have at least 11 million Muslims in China before 1949. Census on Muslim population might not be accurate as what the Chinese KTM regime released and CCP leaders criticised. Regardless, whatever a case might be, it is a deadly fact that there are potential and substantial Muslim populations in China which no one could deny.

As what the Chinese Communist cadres argued on the inaccurate of Muslim population estimated before 1949, but the number of mosques would be accurate as mosques per see were public places in those and now days under government watching and monitoring, how many mosques in a particular city, county or province are obvious. The number of mosques was public and open information, and the government could not play fool with. The only possibility was something happened in the period of 1957 to 1960 to Muslim populations in China, In this period, the Great Leap Forward campaign took place, it was a man-made tragedy, at least thirty-five million of Chinese people died in starvation, so did Muslim population.

According to the Chinese Communist propaganda writer and promoter, Stockwell<sup>10</sup> (1996, p144) there were more than 30,000 mosques in China in 1993. If we assume that the pro-communist western writer was correct because he got accurate data and sources from the Chinese Communist regime, if we assume on average there were one thousand Muslims living around a mosque, then the total Muslim population would be 1000 X 30,000=30,000,000 (30 million) in 1996.

The estimated figure of one thousand is based on our experience, because those mosques on official list usually would have some voltage such as huge population or long history. If it was a historical mosque, the Muslim population living around a mosque would be not less than 1000 after hundred years of historical process.

In China, on average, an officially listed mosque normally has at least one hundred years of history. Otherwise it would not be listed as officially, without sufficient Muslim population support and request, it is impossible to build up a new mosque in resident area. Furthermore, one thousand is a minimum unit for counting population in a particular village, district and city for building up a mosque.

Therefore, in any case, the number of mosques is more accurate if the figure of population might be manipulated by administration for political agenda or calculated mechanically, then, we would have 30 million of Muslim populations in China, and this figure is still conservative figure as some Chinese Muslim scholars estimated about 65 million. Other estimation says that mosques in China were more than 3700 or 4000.

As mosques were not built just like that, without enough Muslim population supporting and active participating in contribution, to build a mosque is as difficult as building up a house on the top of Himalaya. Whatever the Muslim population is in China, one thing we are very sure that there are potential and substantial Muslim markets or Halal markets all over of China since there are concrete Muslim consumers.

## 4. HALAL MARKET IN CHINA: PURCHASING POWER AND MARKET SIZE

We assume that Muslim population size in China is 30 million, if the disposable per capital income on average Chinese citizen is U\$D1500 (2008), we assume, average disposal per capital income for Muslim minorities is U\$D1000, then, Halal market in China would be about approximately: U\$D1, 000X30 million=U\$D30, 000 million or 30 billion which is surely a huge market.

Generally, there are two major factors which can determine the Halal market potentials in China. First, assuming the Government is pro-business, pushing political concerns aside and other factors are constant, then the first factor determining the Halal market potentials would be the Muslim populations in China, the size of consumer population really does matter; the second factor determining the Halal market potentials would be the purchasing power which is measured through the disposal per capital income, which could be obtained from the reports of China national statistics, and the data of these two factor can be retrieved and digested from various national statistic reports. Hence, Halal market potentials can be calculated thoroughly. In 2012, Muslim disposal income has reached a significant level of U\$D1500 (based on surveyed data).

However, the challenge is do Muslim consumers in China need Halal products? Do they have wants for Halal products? Do they hold those Islamic values? We do not have answers to these questions. Muslim consumers' Islamic values or the level of understanding of Islamic values will influence Muslim consumers' attitude towards Halal products, as a result, which will influence consumers' purchasing behaviours, such as buy or not to buy, prefer or not prefer Halal products.

# 5. WHY MUSLIMS IN CHINA?

Muslims in China take great pride in citing a Hadith that says "Seek knowledge even unto China".

-

<sup>&</sup>lt;sup>10</sup> Stockwell, Foster (1996), "Religion in China Today", New Word Press, Beijing, China. P144

Figure 1.2 Arabic Calligraphy "Seek knowledge even unto China"
By Chinese Muslim: Cheng Guang Yuan

This Hadith is a call for China studies. It points to the importance of seeking knowledge, even if it meant travelling as far away as to China. Especially, as at the time of the Prophet Muhammad (PBUH), China was considered the most developed civilization of the period. Islam in China began to spread and fruitful during the caliphate of 'Uthman ibn Affan (Allayhi Rahma, ra), the third caliph. After triumphing over the Byzantine, Romans and the Persians, 'Uthman ibn Affan, dispatched a deputation to China in 29 AH (650 C.E., Eighteen years after the Prophet's (pbuh) death), under the leadership by Sa'ad ibn Abi Waqqaas (Allah ArRahamuhi), Prophet Muhammad's (Suanlanlla Allahi Allaihi WaSuanllaimai (S.A.W). or PBUH) maternal uncle, inviting the Chinese emperor to embrace Islam.

Even before this, the Arab traders during the time of the Prophet (PBUH) had already brought Islam to China, although this was not an organized effort, but merely as an offshoot of their journey along the Silk Road (land and sea route). Now, the question is what has happened on Muslims in China after thousand years of evaluation? Are they still Muslims who follow Islamic values? Or have they been Sinocized by ethnic Han Chinese? Do they particular about Halal and Haram in products they consumer?

Although there are only sparse records of the event in Arab history, a brief one in Chinese history, The Ancient Record of the Tang Dynasty describes the landmark visit (Fu, 1937).

To Chinese Muslims, this event is considered to be the birth of Islam in China. To show his admiration for Islam, the emperor Tang Gaozong, in the Second Year of Yonghui (651 C.E) ordered the establishment of China's first mosque (Fu, 1937).

The magnificent Guangzhou city mosque known to this day as the 'Memorial Mosque.' still stands today, after fourteen centuries. One of the first Muslim settlements in China was established in this port city. The Umayyad and Abbasids sent six delegations to China, all of which were warmly received by the Chinese (Fu, 1937).

The Muslims who immigrated to China eventually began to have a great economic impact and influence on the country. They virtually dominated the import/export business by the time of the Sung Dynasty (960-1279 CE). Indeed, the office of Director General of Shipping was consistently held by a Muslim during this period. Under the Ming Dynasty (1368- 644 CE) generally considered to be the golden age of Islam in China, Muslims gradually became fully integrated into Han society.

An interesting example of this synthesis by Chinese Muslims was the process by which their names changed. Many Muslims who married Han women simply took on the name of the wife. Others took the Chinese surnames of Ma, Mai, and Mu - names adopted by Muslims who had the names Muhammad, Mahmud, Masoud and Mustapha. Still others who could find no Chinese surname similar to their own adopted the Chinese character that most closely resembled their name-Ha for Hassan, Hu for Hussein, or Sa for Said, La for Abdullah, Sha for Shamsuddin and so on.

In addition to names, Muslim customs of dress and food also underwent a synthesis with Chinese culture. The Islamic mode of dress and dietary restrictions were consistently maintained and not compromised. In time, the Muslims began to speak Han dialects and to read in Chinese. Well into the Ming era, the Muslims could not be distinguished from other Chinese other than by their unique religious customs. In spite of the

economic successes the Muslims enjoyed during these and earlier times, they were recognized as being fair, law-abiding, and self-disciplined. For this reason, once again, there was little friction between Muslim and non-Muslim Chinese. Over the years, many Muslims established Mosques, schools and Madrasahs attended by students from as far as Russia and India. It is reported that in the 1790's, there was as many as 30,000 Islamic students, and the city of Bukhara-the birthplace of Imam Bukhari, one of the foremost compilers of Hadith-which was then part of China, came to be known as the "Pillar of Islam."

The rise of the Manchurian Dynasty (1644-1911 CE), though changed this. The Qing was established by Manchurians (not Han) and who were a minority in China. They employed tactics of divide-and-conquer to keep the Muslims, Han, Tibetans, and Mongolians in struggles against one another. In particular, they were responsible for inciting anti-Muslim sentiment throughout China, and used Han soldiers to suppress the Muslim regions of the country. When the Manchurian Dynasty fell in 1911, the Republic of China was established by Sun Yat Sen, who immediately proclaimed that the country belonged equally to the Han, Hui (Muslim), Man (Manchurian), Meng (Mongol), and the Zang (Tibetan) peoples. His policies led to some improvement in relations among these groups.

Since the People's Republic of China was founded in 1949, tremendous upheavals occurred throughout China culminating in the Cultural Revolution. Muslims along with all the Chinese population suffered. After the third congress of the 11<sup>th</sup> Central Committee, the government greatly liberalized its policies toward Islam and Muslims. Since religious freedom was declared in 1978, the Chinese Muslims have not wasted time in expressing their convictions.

Under China's current leadership, in fact, Islam appears to be undergoing a modest revival. Religious leaders report more worshipers now than before the Cultural Revolution, and a reawakening of interest in religion among the young.

According to a publication on mosques in China (1998 edition), there are now 32,749 mosques in the entire People's Republic of China, with 23,000 in the region of Xinjiang. There has been an increased upsurge in Islamic expression in China, and many nationwide Islamic associations have been organized to coordinate inter-ethnic activities among Muslims. Islamic literature can be found quite easily and there are currently some eight different translations of the Qur'an in the Chinese language as well as translations in Uyghur and the other Turkic languages.

Muslims have also gained a measure of toleration from other religious practices. In areas where Muslims are a majority, the breeding of pigs by non-Muslims is forbidden in deference to Islamic beliefs. Muslim communities are allowed separate cemeteries; Muslim couples may have their marriage consecrated by an imam; and Muslim workers are permitted holidays during major religious festivals.

Muslims of China have been given difficulties to make the Hajj to Mecca. China's Muslims have no says n the country's internal politics. As always, the Muslims have been silenced. Islam is very much alive in a small area or village. China's Muslims have difficulties to manage and practice their faith, sometimes against great odds, since the seventh century.

However, few people outside China are aware of the presence of Muslims in the Middle Kingdom although China's Islamic population may be as large as sixty-five million. Even within the country many Han Chinese, the majority ethnic group, have real knowledge of their Muslim neighbours. Most of these Muslims are members of families and lineages which can trace their religious heritage back through many centuries. Many of them live in villages, towns, urban neighborhoods, and even whole regions in which the dominant culture has for centuries been Islamic rather than Chinese.

In Muslim communities, with their own mosques, Madrasah, Halal butchers and food stalls, and many other distinctive features, are found in almost every part of China, from the Southern coastal provinces of Guangdong and Fujian, here the first Muslims to visit China came as sailors and merchants, to the far northeastern provinces of Liaoning and Hei long jiang.

The Capital, Beijing, has its own long-standing Muslim quarters in the area around the Niujie (Ox Street) Mosque which is considered as National Mosque of Chinese government. There are at least forty other mosques in the Beijing city. Far in the Southwest, for example, Yunnan has a large and influential Muslim population that is part of the complex ethnic path-work in the province and it was this province once upon a time had an Islamic State.

Islam and its highly visible culture have left the deepest impressions in China's remote northwest, along what has become known as the Silk Road-the ancient system of trading routes affording access to Central Asia, the Middle East and Europe. It is on the region, the present-day provinces of Gansu, Qinghai and Shaanxi and the autonomous regions of Ningxia and Xinjiang are situating. Northwest of China has had a complex history, as ancient remains still visible today testify.

Over the centuries it has been home to speakers of the Tibetan, Turkic, Mongolian, and Chinese language families. Evidence of the Manichaean, Nestorian, and Buddhist beliefs that preceded Islam survives in works of art such as the Buddhist cave shrines of Mai ji shan, in Southern Gansu province, and the cave paintings of Bezeklik, just off the road between Urumqi and Turpan in Xinjiang.

The eerie ruined cities of Gaochang and Jiaoche in the Turpan basin are redolent of ancient pre-Islamic civilizations. It was in this intricate cultural, religious, and ethnic matrix that many of the most important development of Islam in China took place.

Since starting the years of Qianlong, Chinese emperor (1735-1796) of the Qing dynasty, the ethnic Han have been penetrating and colonizing the northwest region through immigration of the ethnic Han people from the East and South of China systematically. Through 300 years of immigration of the ethnic Han from East and South of China, today we can see the ethnic Han is all over of China.

It is not accident that Muslim communities and cultures are more distinctive and highly developed in China's northwest than in other parts of the country, for it is this region that is closest to the Central Asian and Middle Eastern origins of Chinese Islam. In many ways the existence of these communities can be regarded as an extension of main stream Central Asian culture into China. The mainstream Central Asia consists of the states of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. The independent Muslim khanates which ruled these lands were conquered by Russia and incorporated into the Russian empire during the nineteenth century. The states as they existed in those days were created as separate Soviet Socialist Republics under Stalin's government as a means of controlling their Turkic and Iranian speaking populations, and they have achieved a measure of independent statehood since the collapse of Soviet power in 1991. So had these had happened in China too. Most of Xinjiang, ruled by the Manchurian state since the power of the Qing dynasty was extended westward during the eighteenth century under the rule of the Qianlong emperor is clearly that Central Asian states in language, religion and culture, and the neighboring regions of Gansu, Qinghai, Ningxia and Shaanxi have been profoundly affected by Central Asian civilization.

Today Central Asian culture, subsumed for more than a century into a generalized imperial Russian, and later Soviet, identity, still remains relatively unknown outside of a small circle of specialists. Russian became the language of the empire, and subsequently of the whole Soviet Union and displaced many of the minority languages. The Muslims of Central Asia were discouraged from retaining their traditional languages and cultures, since these were so closely connected with Islam. Muslim beliefs were intolerable both to the imperial Russian state, based on the Orthodox Church, and to its successor, the Soviet Union, which promoted atheism.

The very existence of Muslim communities often was regarded as a threat to the unity of the state. Consequently, Central Asian cultures were severely damaged by a process of Russification and Sinocization in Xinjiang, Gansu, Ningxia, Qinghai and Shaanxi in China. There was once a Muslim led rebellion community by Ma Zhongying, popularly referred by Chinese Muslim as "little commander" from Linxia, Gansu and once settled down in Kazakhstan after it failed to attempting to establishment of the independence of Northwest of China in 1918 was cracked down and cleansed by the Stalin regime with the request of Mao Zedong, and once upon a time the Russian Communist Party was respected as "big brother" by the Chinese Communist party in China.

#### 6. CONCLUSION

In this paper we have evaluated Muslim populations in China including their geographical distributions and their disposal incomes (purchasing power). Based on these data, we could calculate Halal market size and potentials in China and some challenges. We confirm that there are at least 30 million of Muslim populations in China; we also confirm that an average disposal income of Chinese Muslims in China is about U\$D1500 in 2012. We also confirm that Halal markets in China everywhere, but majority of Chinese Muslims are living in the Northwest China. Due to constant food poison incidents and crisis, Halal food products producers and marketers may take the whole China as their potential markets, Halal not just for Muslims but for all, for humanity.

**Acknowledgement:** the author expresses his great attitude to University of Malaya for sponsoring this research project under UMRG277-11HNE. This paper serves as an introductory chapter from six chapters of the project.

# KEBOLEHLAKSANAAN SISTEM JAMINAN HALAL DI KALANGAN PENGUSAHA RESTORAN DI MALAYSIA: ISU DAN CABARAN

Dr. Sazelin binti Arif<sup>1</sup> Dr. Safiah binti Sidek<sup>2</sup> Dr. Norain binti Ismail<sup>3</sup> Puan Norun Najjah binti Ahmat<sup>4</sup>

#### **ABSTRAK**

Malaysia telah berjaya memperkenalkan standard halal pertama di dunia dan adalah antara negara pengeksport produk halal utama. Atas faktor permintaan tinggi dunia terhadap produk halal menyebabkan ramai pengusaha makanan berlumba-lumba ingin mendapatkan pensijilan halal Malaysia. Untuk mendapatkannya sesuatu produk makanan perlu mematuhi aliran prosedur kerja dan standard yang ditetapkan oleh JAKIM.Bagi syarikat multinasional, mereka diwajibkan untuk membuat Sistem Jaminan Halal (SJH) terlebih dahulu. Dan tidak menjadi kesukaran untuk mereka mematuhi keperluan pensijilan halal yang ditetapkan. Ini terbukti apabila kajian menunjukkan sebahagian besar eksport produk halal adalah disumbangkan oleh syarikat multinasional dan syarikat bersaiz besar. Manakala bagi premis makanan yang ingin memohon pensijilan halal, pelaksanaan SJH dalaman amat digalakkan. Justeru, kertas kerja ini akan membincangkan kebolehlaksanaan SJHdi kalangan pengusaha restoran. Perbincangan secara kritis akan dibuat dengan menyenaraikan beberapa kemungkinan permasalahan dan isu yang akan dihadapi oleh para pengusaha restoran dalam proses mereka melaksanakannya. Dicadangkan agar prosedurpengurusan SJHsecara umumnya mungkin boleh dipermudahkan untuk kategori restoran kerana latar belakang dan ketidakmampuan mereka tanpa merosakkan sifat halal yang syumul.

Kata kunci: konsep halal, premis makanan restoran, sistem jaminan halal

## 1. PENGENALAN

Produk halal tidak dinafikan mempunyai pasaran yang luas bukan sahaja dalam Malaysia malahan di pasaran antarabangsa.Malaysia telah berjaya mengeksport produk halal bernilai RM33 bilion pada tahun 2012 dan sebahagian besar eksport produk halal itu, iaitu sebanyak 71 peratus adalah disumbangkan oleh syarikat multinasional dan syarikat bersaiz besar (Harian Metro, 4 April 2013). Permintaan produk halal yang tinggi menyebabkan ramai pengusaha termasuk bukan Islam berlumba-lumba ingin mendapatkan pensijilan halal Malaysia.

Bagaimanapun, pengusaha kecil dan sederhana (IKS) mungkin menghadapi masalah untuk bersaing menjadi pengeksport atas faktor kesukaran mendapatkan sijil halal. Ini kerana pensijilan Halal Malaysia dikeluarkan antaranya berdasarkan standard bagi makanan halal iaitu Pengeluaran, Penyediaan, Pengendalian dan Penyimpanan - Garis Panduan Umum (MS1500). Pengusaha kecil dan sederhana sering gagal mendapatkan sijil Amalan Pengilangan Baik (GMP) yang merupakan salah satu daripada keperluan di bawah manual dan standard halal. Berbanding pengeluar yang mempunyai kilang pemprosesan yang besar, mereka mudah mendapat sijil GMP (MStaronline, 9 Februari 2010).

Pensyarah Kanan, Pusat Bahasa dan Pembangunan Insan, Universiti Teknikal Malaysia Melaka (UTeM), corresponding author sazelin@utem.edu.my

Pensyarah Kanan, Pusat Bahasa dan Pembangunan Insan, Universiti Teknikal Malaysia Melaka (UTeM).

Pensyarah Kanan, Fakulti Pengurusan Teknologi dan Teknousahawanan, Universiti Teknikal Malaysia Melaka (UTeM).

Pensyarah, Pusat Bahasa dan Pembangunan Insan, Universiti Teknikal Malaysia Melaka (UTeM).

Senario yang sama juga berlaku di kalangan pengusaha restoran. Banyak restoran yang menjual makanan halal tidak memiliki pengiktirafan sijil halal atas faktor kesukaran mereka untuk mematuhi keperluan dan standard halal yang telah ditetapkan (Dayang Aniza, 2012). Terdapat banyak restoran yang pemiliknya beragama Islam tidak mendapatkan sijil halal kerana yakin bahawa makanan yang disediakan sudahpun halal, namun secara hakikatnya ramai yang meragui sama ada restoran mereka benar-benar mengutamakan kebersihan atau tidak malah ada yang tidak mengambil berat daripada mana datangnya sumber makanan (Berita Minggu, 13 November 2011; Harian Metro, 14 Julai 2011).

Terdapat juga restoran yang menggunakan bahan mentah makanan seperti kicap tanpa logo halal, menggunakan alkohol sebagai bahan ramuan masakan dan proses pengendalian makanan yang tidak menepati konsep halal (Jabatan Agama Islam Selangor, 2010). Dari aspek peralatan memasak dan menghidang makanan pula, ada restoran yang menggunakan peralatan memasak dan menghidang makanan diperbuat daripada campuran tulang khinzir untuk menjadikan peralatan tersebut lebih berkilat dan kelihatan cantik (Faiza Zainudin &Siti Haliza Yusop, 2009).

Pembuktian ini menunjukkan bahawa terdapat pengusaha premis makanan dan restoran yang mengambil sikap sambil lewa dan tidak serius dalam menjaga persoalan halal dan haram makanan yang dijual. Sedangkan jaminan kehalalan sesuatu produk makanan adalah bermula dari awal proses penentuan bahan mentah, proses penyediaan sehinggalah ia siap dihidangkan. Justeru, Jabatan Kemajuan Islam Malaysia (JAKIM) telah mengarahkan setiap pengeluar makanan halal berskala besar dan multinasional yang ingin mendapatkan pensijilan halal untuk membangunkan Sistem Jaminan Halal (SJH) dalaman mereka tersendiri. Pada masa yang sama JAKIM juga menggalakkan pengeluar makanan halal berskala kecil termasuk premis makanan seperti restoran untuk melaksanakan SJH dalaman terlebih dahulu (Jabatan Agama Islam Melaka, 2012). Adalah sesuatu yang cukup meyakinkan jika sesebuah restoran mengambil inisiatif untuk membangunkan SJH dalaman bagi restoran mereka dan melaksanakannya secara akur atas rasa tanggungjawab terhadap kepentingan umat Islam. Ini kerana tuntutan hidup masyarakat hari ini yang sibuk bekerja menjadikan restoran adalah tumpuan utama untuk mendapatkan makanan siap. Kerana itu, tentunya kita tidak mahu makanan yang disajikan di restoran ini tidak menepati kriteria halal.

Justeru, kertas kerja ini dibuat bertujuan untuk menghuraikan dengan jelas tentang keperluan pelaksanaan SJH dalam prosedur pensijilan halal Malaysia. Kertas kerja ini juga membincangkan kebolehlaksanaan SJH dalaman di kalangan pengusaha restoran memandangkan mereka adalah pembekal utama jenis makanan siap. Perbincangan secara kritis akan dibuat dengan menyenaraikan beberapa kemungkinan permasalahan, isu dan cabaran yang akan dihadapi oleh para pengusaha restoran dalam proses mereka melaksanakannya. Cadangan agar prosedur pengurusan SJH mungkin boleh dipermudahkan untuk kategori restoran juga dikemukakan sebagai alternatif dalam pelaksanaannya.

# 2. KEPERLUAN SIJIL JAMINAN HALAL DALAM PROSEDUR PENSIJILAN HALAL MALAYSIA

JAKIM telah terbabit dalam memberi pengesahan dan pensijilan halal kepada makanan dan barang gunaan di Malaysia sejak tahun 1974. Sebagai agensi pusat yang menjaga hal ehwal industri halal dan badan pelaksana pensijilan halal sejak berpuluh tahun lamanya, JAKIM bertanggungjawab melaksanakan prosedur pensijilan halal menggunakan garis panduan dan standard ini dengan kerjasama beberapa jabatan kerajaan lain seperti Kementerian Kesihatan Malaysia (KKM), Jabatan Perkhidmatan Veterinar (JPV), Jabatan Kimia Malaysia dan Institut Penyelidikan Produk Halal (IPPH) UPM.

Secara asasnya, prosedur pensijilan halal melibatkan dua (2) aspek utama. Aspek pertama berkaitan dengan standard dan garis panduan yang dijadikan rujukan. Aspek kedua pula adalah menyentuh pelaksanaan operasi berdasarkan aliran prosedur pensijilan halal yang telah ditetapkan secara seragam sama ada di peringkat JAKIM atau negeri.

Standard berkaitan makanan halal telah dibangunkan secara rasminya pada tahun 2000 dan telah dikemaskini sebanyak dua kali iaitu pada tahun 2004 dan 2009. Walaupun standard ini wujud. Manual Prosedur Pensijilan Halal Malaysia (MPPHM) juga dijadikan rujukan utama dalam Standard Operating Procedures (SOP) secara tidak rasmi oleh para pegawai JAKIM sebelum ia diterbitkan pada tahun 2005. Kedua-dua manual dan standard ini perlu dirujuk bersekali kerana kedua-duanya adalah saling melengkapi bersama dengan beberapa standard lain iaitu MS 1514:2009 (Amalan Pengilangan Yang Baik atau GMP) dan MS 1480:2007 (Keselamatan Makanan Berdasarkan Sistem HACCP). Semua standard, manual prosedur dan garis panduan ini digunakan dalam menentukan status halal sesuatu makanan dalam prosedur pensiiilan makanan halal di Malaysia (Portal Rasmi Halal Malaysia. http://www.halal.gov.my).

Operasi pelaksanaan proses pensijilan halal di JAKIM atau di Jabatan Agama Islam Negeri (JAIN) adalah dilaksanakan oleh auditor atau pegawai syariah (Unit Syariah) dan auditor atau pegawai teknologi makanan (Unit Teknikal). Pegawai syariah adalah terdiri daripada pakarpakar syariah manakala pegawai teknikal adalah kebanyakannya pegwai yang dipinjamkan dari Kementerian Kesihatan Malaysia (KKM). Dari sudut pelaksanaan dalam menentukan status halal makanan, pegawai syariah adalah lebih terfokus kepada aspek halal dari sudut hukum syarak sementara pegawai teknikal akan lebih tertumpu kepada aspek keselamatan dan kebersihan makanan berdasarkan standard MS 1514 dan MS 1480. Pegawai atau auditor akan dihantar untuk mengikuti kursus dan latihan serta wajib menduduki peperiksaan dan lulus bagi standard GMP dan standard HACCP. Pensijilan halal hanya diberikan setelah pemeriksaan dilakukan secara terperinci dengan menggunakan pendekatan 'product traceability' di mana tiga (3) elemen akan digunapakai iaitu 'supplier traceability', 'process traceability' traceability' dan 'costumer (Portal Rasmi Halal Malaysia, http://www.halal.gov.my).

Setiap permohonan bagi mendapatkan pensijilan halal, pemohon akan melalui prosedur dan proses tertentu. Proses kerja pensijilan halal ini merangkumi perkara-perkara di bawah:

Sumber: JAKIM, 2013

Proses kerja ini akan digunapakai oleh setiap pemohon dari setiap kategori sama ada industri kecil, kecil dan sederhana serta multi nasional. Apa yang membezakan adalah jumlah bayaran yang dikenakan iaitu mengikut kategori sesebuah industri sebagaimana dalam Rajah 2 di bawah:

Rajah 2: Kadar Caj Industri Mengikut Kategori

Sumber: JAKIM, 2013

Berbeza dengan premis makanan atau restoran. Kadar caj yang dikenakan adalah mengikut unit atau dapur.

Jadual 1: Kadar Caj Premis Makanan / Restoran / Katering dan Hotel

Premis Makanan / Restoran / Katering Hotel	Kadar (RM)
setiap satu unit premis	100
setiap satu unit dapur (kitchen) - bagi hotel	100
setiap satu unit restoran - bagi hotel	100

Sumber: JAKIM, 2013

Untuk memudahkan proses mendapatkan pensijilan halal, mulai 1 Julai 2013 JAKIM telah mewajibkan semua permohonan baru pensijilan halal Malaysia dalam kategori Multinasional untuk melaksanakan Sistem Jaminan Halal (SJH) (*Halal Assurance Management System*) sebelum membuat permohonan pengesahan halal. Manakala, bagi permohonan sediaada dalam kategori berkenaan, mereka diberi tempoh sehingga 31 Disember 2013 untuk mewujudkan dan melaksanakan sistem tersebut. Adalah tidak mustahil perkembangan positif untuk meningkatkan integriti produk halal menjadikan SJH ini diaplikasikan kepada seluruh pengusaha makanan lebih-lebih pengusaha kecil dan sederhana (PKS) dan pengusaha restoran.

SJH adalah satu sistem yang dirangka untuk membantu memastikan status kehalalan bahan mentah, proses dan produk yang mendapat pengiktirafan sijil halal adalah dijaga dan dipantau sepanjang masa secara berterusan. Ianya perlu diurus dengan Perancangan Pengurusan Jaminan Halal (PJH) yang merangkumi objektif SJH, struktur pengurusan SJH, garis panduan Halal (seperti pengertian halal haram, dasar al Quran, Hadith, Fatwa, Manual Prosedur JAKIM, MS 1500, panduan halalharam bahan mentah dan proses pengeluaran produk), prosedur piawaian operasi (SOP) halal (merangkumi SOP untuk bahan mentah, R&D, permohonan halal), rujukan teknikal SJH, sistem pentadbiran dan sistem dokumentasi (mencakupi pembekal, pembelian, penggunaan bahan mentah, proses, stor serta penilaian, pemantauan dan tindakan pembaikan) (Guidelines For Halal Assurance Management System, 2012).

Pengenalpastian Titik Kawalan Cara Kawalan Kritikal (Halal & Langkah Critical Point) Pembetulan Sistem Dokumentasi Proses dan Kawalan Pengesahan Dokumen Pengurusan Jawatankuasa Program Sistem Jaminan Latihan Halal Dalaman Halal

Rajah 3: Pengurusan Sistem Jaminan Halal

PJH ini mestilah dilaksanakan dan difailkan dalam bentuk *hardcopy* bagi tujuan semakan pihak JAKIM. Antara 5 fail penting yang perlu ada:

- 1. Fail Utama profil syarikat termasuk pemegang saham, polisi syarikat, carta organisasi, semua sijil berkenaan, senarai pembekal, senarai pekerja termasuk rekod suntikan *typhod&* latihan, aliran proses produk, pelan premis, lain-lain (kawalan perosak, rawatan sisa air, eksport, rekod penyembelihan (yang berkenaan sahaja), laporan kewangan (untuk tentukan kategori syarikat).
- 2. Fail Bahan mentah/ Ramuan sijil halal, bahan kritikal
- 3. Fail Isu Halal surat masuk keluar, laporan audit JAKIM
- 4. Fail Jawatankuasa Halal minit mesyuarat, rekod latihan/seminar/kursus/praktikal Halal
- 5. Fail Permohonan Halal dokumen-dokumen penting semasa memohon e- Halal online (bentuk *hardcopy* termasuk sijil pendaftaran syarikat, lessen perniagaan, surat pengesahan jawatan & salinan IC pegawai bertanggungjawab, laporan kewangan tahunan, senarai produk, jenama dan bahan mentah, lampiran sijil Halal, spesifikasi atau COA, aliran proses produk, peta ke kilang dan pelan kilang.

Bagi industri multi nasional, mereka perlu mewujudkan Jawatankuasa Halal Dalam (*Internal Halal Committee*) yang terdiri daripada:

- i- Pengerusi (pengurusan kilang)
- ii- Eksekutif Halal Muslim
- iii- Pegawai di bahagian pembelian
- iv- Wakil bahagian pengeluaran.
- v- Minima 2 orang pekerja Muslim.

Mewujudkan Eksekutif Halal adalah salah satu daripada syarat dan tanggungjawab pengurusan jaminan halal dalam industri. Keperluan mengadakan Eksekutif Halal ini adalah selaras dengan MS 1500 versi 2009 di mana 'Pihak Pengurusan hendaklah mewujudkan sebuah jawatankuasa atau pegawai eksekutif Halal yang terdiri daripada orang Islam yang bertanggungjawab memastikan keberkesanan sistem kawalan Halal dalaman' (MS 1500:2009).

Antara tanggungjawab Eksekutif Halal termasuklah menyusun PJH (dalaman) secara bertulis, menyelaras pelaksanaan PJH di syarikat, mengadakan program latihan PJH di syarikat, melaksanakan audit dalaman secara berkala dan/ atau berdasarkan keperluan, menyediakan

laporan hasil audit dalaman, membuat laporan kepada pengurusan tertinggi berkenaan urusan berkaitan PJH serta berhubung secara langsung dengan pihak JAKIM/JAIN (Guidelines for Halal Assurance Management System, 2012).

#### 3. ISU DAN CABARAN DALAM MELAKSANAKAN SISTEM JAMINAN HALAL

Sistem Jaminan Halal adalah merupakan garis panduan yang dibangunkan bagi memandu industri atau pengusaha dalam mewujudkan sistem halal dalaman yang akan mengawal pelaksanaan dan pengeluaran produk halal. Terkini, SJH ini telah diwajibkan untuk industri pengeluar makanan berskala besar (multi nasional). Manakala bagi kategori premis makanan atau pengeluar berskala kecil ianya masih dalam perancangan pihak JAKIM. JAKIM telah mengeluarkan satu garis panduan untuk melaksanakan SJH dalaman. Garis panduan ini sewajibnya menjadi asas kepada setiap pemilik industri multi nasional dalam membentuk SJH dalaman mereka. Pelaksanaan garis panduan SJH ini sesuai jika ianya diterapkan di kalangan pengusaha multi nasional yang ternyata mempunyai nilai pendapatan tahunan melebihi RM25 juta.

Adalah sesuatu yang cukup menggembirakan jika SJH ini turut dilaksanakan oleh pengusaha restoran atau premis makanan. Ia secara asasnya dapat bertindak dalam mengawal pelaksanaan konsep halal secara menyeluruh dari dalam sesebuah restoran itu. Persoalan di sini ialah sejauhmana kebolehlaksanaan SJH ini di kalangan pengusaha restoran? Adakah pengusaha-pengusaha restoran yang ingin mendapatkan pensijilan halal boleh melaksanakan SJH dalaman mereka sebagaimana yang telah dilaksanakan ke atas pemilik industri multi nasional? Ini kerana SJH ini hanya akan berjaya dilaksanakan jika pengusaha yang terlibat mampu melaksanakannya. Kemampuan di sini adalah melihat kepada faktor kewangan yang mencukupi, kecukupan tenaga manusia, kemahiran yang dimiliki, prasarana dan sebagainya.

Secara asasnya, jangkaan awal kajian menafsirkan bahawa para pengusaha restoran boleh melaksanakan SJH dalaman untuk restoran-restoran mereka. Apatah lagi SJH dalaman ini amat-amat dituntut untuk dibangunkan oleh setiap pengusaha yang ingin mendapatkan pensijilan halal Malaysia. Namun, kemampuan untuk melaksanakannya agak sukar jika para pengusaha restoran terpaksa mengikut secara keseluruhan dan secara rigid garis panduan SJH yang telah ditetapkan oleh JAKIM pada tahun 2012. Ini kerana terdapat beberapa isu dan cabaran yang akan dihadapi oleh mereka dalam proses pelaksanaan tersebut.

Sebagaimana yang dibincangkan sebelum ini, garis panduan SJH yang dikeluarkan oleh JAKIM adalah satu garis panduan untuk memastikan status kehalalan bahan mentah, proses dan produk yang mendapat pengiktirafan halal dijaga dan dipantau sepanjang masa dan berterusan. SJH adalah satu sistem pengurusan yang bersistematik merangkumi aspek kawalan dokumen, pengenalpastian titik kawalan kritikal, cara kawalan dan langkah pembetulan, proses pengesahan, pengwujudan jawatankuasa halal dalaman dan program latihan.

Melihat kepada pengoperasian restoran-restoran di Malaysia hari ini, rata-ratanya rutin harian mereka adalah sangat mudah. Kebanyakan restoran hanya mempunyai beberapa orang pekerja di dapur (bahagian proses atau tukang masak), beberapa orang di bahagian cuci, beberapa orang pelayan dan seorang di bahagian kewangan. Tugas harian mereka adalah rutin yang sama iaitu melibatkan aktiviti memasak, mengambil pesanan, melayan pelanggan, mencuci dan membersih. Kebanyakan mereka mungkin sedar dan tahu tentang kepentingan halal namun tidak ada satu sistem pengurusan operasi halal yang tersusun dalam pengawalan sumber bahan mentah, proses dan produk makanan siap yang dihasilkan. Justeru, sukar bagi mereka untuk mematuhi secara tegar dan rigid garis panduan SJH yang telah ditetapkan. Terdapat beberapa kebarangkalian isu dan cabaran yang boleh dijangka dalam mereka melaksanakannya. Beberapa pengubahsuaian mungkin boleh dicadangkan untuk membolehkan SJH dalaman dilaksanakan.

Sebagai contoh, salah satu syarat dalam garis panduan SJH adalah menubuhkan Jawatankuasa Halal Dalaman yang berfungsi untuk memantau dan melaksanakan SJH dalaman. Untuk kategori industri multi nasional, JAKIM menetapkan jawatankuasa itu merangkumi Pengerusi (pengurusan kilang), Eksekutif Halal Muslim, pegawai di bahagian pembelian, wakil bahagian pengeluaran dan minima dua (2) orang pekerja Muslim. Adalah sesuatu yang sukar bagi pengusaha restoran yang rata-ratanya adalah di dalam kelompok industri kecil yang mempunyai nilai pendapatan tahunan kurang daripada RM500,000 untuk menggajikan seorang Eksekutif Halal Muslim dan pada masa yang sama mempunyai beberapa orang pekerja yang akan memantau bahagian-bahagian tertentu.

Jawatankuasa Halal Dalaman untuk kategori restoran boleh diwujudkan namun perlu dikaji dari segi keperluan menggajikan seorang Eksekutif Halal atau beberapa pegawai. Apa yang mungkin termampu oleh mereka adalah meletakkan minima dua (2) orang pekerja Muslim di bahagian dapur (bahagian pemprosesan), seorang pekerja Muslim di bahagian bahan mentah (bermula dari mendapatkan sumber bahan mentah hingga ke dapur) dan seorang Pengerusi (pemilik restoran) bagi memantau pelaksanaan secara keseluruhan.

Dari segi keperluan mewujudkan sistem dokumentasi dan kawalan dokumen, tidak dinafikan ia sangat penting bagi tujuan semakan oleh JAKIM. Sistem dokumentasi yang digariskan oleh SJH adalah menyeluruh merangkumi fail profil syarikat, fail bahan mentah dan ramuan yang digunmakan, fail isu halal dan ia perlu difailkan dalam bentuk *hard copy*. Melihat kepada pengoperasian premis-premis restoran di Malaysia, tugas ini mungkin agak sukar memandangkan mereka tidak mempunyai bilik khas untuk menempatkan dokumen dan tidak mempunyai pekerja atau kerani yang boleh membuat sistem dokumentasi dengan teratur.

Oleh kerana para pengusaha retoran rata-ratanya tidak mempunyai sistem pengurusan halal yang sistematik, adalah sukar juga bagi mereka untuk mewujudkan satu sistem kawalan dan langkah pembetulan bagi mana-mana prosedur yang tidak mematuhi garis panduan halal. Pengenalpastian mana-mana prosedur yang tidak mematuhi garis panduan halal juga sepatutnya dilakukan oleh orang yang mempunyai ilmu dalam bidang tersebut. Mungkin inilah juga antara cabaran yang akan dihadapi oleh pengusaha restoran. Selain itu, pengusaha restoran juga mungkin sukar untuk melaksanakan program latihan secara menyeluruh untuk semua pekerja sebagaimana yang ditetapkan. Mungkin mereka hanya perlu menghantar beberapa orang pekerja untuk mendapatkan latihan dari mana-mana agensi yang menyediakan khidmat tersebut dan kemudiannya berkongsi ilmu dari latihan tersebut secara *in-house training* bersama pekerja lain yang mungkin tidak memerlukan perbelanjaan yang banyak. Ini kerana faktor kemampuan dari segi kewangan dan prasarana serta faktor masa banyak memainkan peranan dalam melihat kebolehlaksanaan SJH di kalangan pengusaha restoran.

#### 4. PENUTUP

Secara asasnya, SJH dalaman dibangunkan berdasarkan keperluan yang terdapat dalam standard halal MS1500 dan Manual Prosedur Pensijilan Halal Malaysia. Sistem ini merupakan garis panduan yang dibangunkan bagi memandu industri dan pengusaha untuk mewujudkan sistem halal dalaman yang akan mengawal pelaksanaan dan pengeluaran produk halal. Sesuatu yang sungguh menggembirakan pengguna Islam khususnya jika SJH dalaman ini dapat dilaksanakan oleh setiap kategori industri tidak kira kecil, sederhana atau multi nasional. Ini kerana SJH berfungsi untuk memastikan status halal bahan mentah, proses produk halal benar-benar dipantau sepanjang masa secara berterusan.

Namun begitu, realiti semasa menunjukkan pengusaha restoran tidak mempunyai kemampuan yang besar sebagaimana industri multi nasional dari segi kewangan, prasarana, tenaga pekerja dan lain-lain. Ini boleh membawa kepada permasalahan dalam pematuhan pengurusan SJH yang telah ditetapkan dalam garis panduan JAKIM. Justeru, kertas kerja ini telah

menyenaraikan beberapa jangkaan isu dan masalah yang mungkin akan dihadapi oleh para pengusaha restoran dalam melaksanakan SJH dalaman. Pada masa yang sama, disarankan beberapa cadangan untuk memudahkan garis panduan SJH yang telah ditetapkan oleh JAKIM untuk kategori restoran tanpa merosakkan kesempurnaan maksud sebenar halal dalam Islam.

# THE CONCEPT OF HALAL ECONOMY: AN INITIATIVE TO INTEGRATE THE HALAL PRODUCTS INDUSTRY AND ISLAMIC BANKING AND FINANCE

Irfan.IS<sup>1</sup>
M. Daud Awang<sup>2</sup>
Suhaimi Ab. Rahman<sup>3</sup>

#### **ABSTRACT**

In Islam there is no separation between the principles of *halal* products industry and Islamic banking and finance. Both should complement each other in order to provide a holistic *halal* economy. However, in practice it shows that both industries do not communicate with each other. This paper is an attempt to discuss the issue with a special focus on the developing of the concept of *halal* economy based on the Qur'an and the Hadith of the Prophet Muhammad. The paper further attempts to discuss the initiatives that have been made by the Malaysian government to integrate both industries. To achieve the first objective a reference has been made to the Qur'an, the Hadith of the Prophet and the exegesis of both. For the second objective a reference has been made to current literatures including papers presented in seminars. The paper concludes that a holistic *halal* economy needs to be established in order to serve the *maslahah* (public interest) for the *ummah*.

**Keywords**: Halal Economy, Halal Industry, Islamic banking and finance.

## 1. INTRODUCTION

'Halal Economy' is a new term that is being discussed especially in recent Halal's conferences. This term serves to integrate the production of halal products with the Islamic finance. In Malaysian experience, halal product industry (HPI) and Islamic banking and finance (IBF) have their different historical background and regulation. For instance, IBF was established in Malaysia in early 80's² and governs by the Islamic Banking Act 1983 and Takaful Act 1984; whereby HPI is regulated by the Ministry of Domestic Trade, Co-operatives and Consumerism and the Department of Islamic Development Malaysia (JAKIM) under the Trade Description Act 2011 and MS1500:2009. The HPI is now being put as a new agenda for national economic growth.<sup>3</sup>

In 2011, World *Halal* Research and World *Halal* Forum held in Kuala Lumpur Convention (KLCC) Centre, was promptly placed "Towards *Halal* Economy" as the theme of the event; then it was known as *Halal* 2.0. Then, this term yet again debated in World *Halal* Week Summit 2013 which was also held in KLCC with the intention to strengthen the momentum of integrating the HPI and IBF.

<sup>&</sup>lt;sup>3</sup> Senior Lecturer, Faculty of Economics and Management and *Halal* Products Research Institute, Universiti Putra Malaysia, 43400 Serdang, Selangor Tel: 013-6778410

Apart from this, there are also other factors that support the *halal* economy initiative. With regard to this the Security Commissioner through its Shariah Advisory Council (SAC), established in 1996 under section of the Securities Commissioner Act 1993 obviously adopts the criteria - the manufacture or sale of non-*halal* products or related product – as one of the criteria to determine the involvement or non-involvement of a company in *halal* activities so as to be listed in the Shariah compliant lists. This listing of Shariah Compliant Company could be considered as one of the attempts that have been made by the SC to integrate the HPI and the IBF. As such the IBF also does not allow any activities that contradict with Shariah.

The spirit of *Halal* Economy in other part of effort was spread out directly with the developing of private equity through the launching of Social Acceptable Market Investment (SAMI) *Halal* Food Index during World *Halal* Forum 2011 held in Kuala Lumpur. SAMI *Halal* Food index is the world's first *Halal* Food Index was unveiled at the opening of the forum by Tun Abdullah Ahmad Badawi, the former Prime Minister of Malaysia.<sup>5</sup> Interestingly, the Malaysian listed food companies form over a third of the 274 companies which represent two-fifth or US\$53 billion<sup>6</sup> (RM161 billion) of the index's total market capitalization of US\$114 billion (RM345 billion). Regarding the launching of SAMI *Halal* Food Index, Rushdi Siddiqui explained that this platform adds feather (further) to Malaysia's Islamic finance hub and the convergence of both IBF and the HPI.<sup>7</sup>

# 2. THE MEANING OF HALAL ECONOMY FROM THE QU'RAN AND HADITH

The term 'Halal Economy' is not specifically mentioned in the Qu'ran and the Hadith. However, there are many verses of the Qu'ran and the Hadith of the Prophet Muhammad that explains halal and haram products to be consumed by the Muslims. There are 56 verses of the Qur'an that mention the word 'halal' and its root words and out of this 21 verses stress on food consumption. In addition there are many hadiths of the Prophet mention about halal in different contexts and meanings in the treaties of the Hadith of the Prophet Muhammad. As such, there are some indicators that help to understand the importance of integration of HPI and IBF. The indicators are discussed below:-

# 2.1 Prohibition of Riba'

Allah forbids Muslims to involve with *Riba*'. He asserted *Riba*' and trading is almost different. Indeed, the sin of *Riba*' war declared by Allah and His Messenger. This shows that sin and the effects of *Riba*' on the lives of mankind. It is based on some evidence from the Qur'an as follows:

"Those who take (take) Riba' will not stand except as stands one whom Satan by his touch swinging (Satan) is. That is because they say: "That indeed is the same deal as Riba'". but Allah hath permitted buy and sell (trade), and prohibits Riba'. so anyone wh has come to a reminder (of) from his Lord, then it stops (in obedience thereto), then what has taken the first (before the ban) is a right, and the case is up to God. and those who repeat (the act of taking the laptop) so that the Fire, to dwell therein."<sup>8</sup>

Similarly, Allah gives strong admonition to those who believe and fear to die for *Riba'* in daily activities. Offense of *Riba'* implies a great and large enough for allowing Allah and His Messenger to fight these people in the afterlife. Evidence is taken from the verses of Surah Al-Baqarah:

"O ye who believe! Fear Allah and leave (your demand) Riba' (which are still in the people who owe) that, if you and those who believe."

"So, if you do not also do (order of prohibition of Riba' is), then you know: will the war from Allah and His Messenger, (as a result you will not find a safe). and if you repent, then your right (the real) is the original tree from your property. (Such a) you do not unjustly, and you do not mistreated by anyone."

According to Imam Malik, in interpreting above verses, he said, "verily, I flipped through the pages of Quran and Sunnah of His Prophet, yet I did not find anything worse than riba', as Allah has declared war against it."

In other part of Quran, Imam Al-Qurtubi in interpreting the verse 168 of Surah Al-Baqarah states that all things *halal* except it has been proved non *halal*. He also mentioned that non-*halal* is any property involves the six elements which are of *Riba*', sacred, *Suht* (bad), fraud, contempt and *syubhah* (uncertainty).<sup>10</sup>

In a Sahih hadith that warning Muslim the big sinners of Riba':

"those who eat Riba' even a dirham, it is as the sin of adultery 33 times, one that grows out of the meat from illegal sources, then the hell is the key for him." <sup>11</sup>

This Hadith shows us Allah prohibits totally to commit *Riba*' and the very ultimate consequence to those who involve in Riba' is a sin that tremendously impact to all mankind. Not surprisingly strong warning from Allah to give warning to Muslims to avoid the occurrence of *Riba*'.

For the *halal* products, Quran has mentioned to all mankind to consume *halal* and *tayyib* (hygiene, safe and pure). The verse 168-169 *al-Baqarah*, has been interpreted by many *Tafsir* (interpretation of Quran) books by citing Hadith narrated by Sa'ad bin Abi Waqqas:

"Narrated by Ibn Mardawaih, Ibn Abbas said: Al-Baqarah verse 168-169 read to Saad bin Abi Waqqas said, "O Messenger of Allah, how can God accept my prayer?" The Prophet said, "Look for good food then your prayer will be granted, indeed a man who swallowed an illegal gratification in his stomach, then his prayer will not be accepted for 40 days, that a slave who grows his life from "suht" (forbidden food) and Riba', the fire was most deserve to him" 12

This hadith was recorded in several different Hadith books according to the status of narrators who had narrated the hadith.

There are other hadiths that have different utterance but to the purpose and the same message using *halal* products and Islamic finance. The hadiths as below:

"Knowingly consuming a dirham of riba is worse for a man than committing adultery thirty-six times, those who grow meat of what is prohibited, then the hell is primary for him." <sup>13</sup>

### 2.2 The Rules of Halal

In Quran, there are four verses which clearly mentions the term *Halal*an Tayyiban. The verses state that we are required to obtain *halal* products based on the word 'minma' (ممن ) which the word 'min' (من ) to mean '*liltab'idh*' (من ) that means 'from a' or 'half of'. This has meant that all the things which God gave to man in part is clean and *tayyib* and some are not *halal* and not *tayyib*. This is because God does not use the word 'ma' (ما ) only which means 'anything' in this verse. <sup>14</sup> The four verses are:

"O people! enjoy what the earth that is lawful and good, and do not follow the footsteps of Satan: for Satan is the clear enemy to you." 15

"... and eat of the things that God has given you, lawful and good, and fear God whom you believe." 16

"... so eat of what you have to (in war), as the lawful and good things, and fear Allah for Allah is Oft-Forgiving, Most Merciful." <sup>17</sup>

"... therefore, eat (O and those who believe) of what Allah has given the you from the things the lawful and good, and grateful for the favors of Allah, if you only serve." <sup>18</sup>

To specify the meaning of "mimma" in the above verses, Umar bin Abdul Aziz, the Umayyad caliph in interpreting it with a very famous saying:

"good on the way and not merely an effort to get good nutrition is" 19

Thus, the way of Allah revealed the commands requires to seek the truth that *halalan tayyiban* (*halal* and pure) is not merely consumption of *halal* product, but also including the sources and services involved.

In other context, a Hadith has mentioned the description of people who are refused their prayer by Allah.

"Narrated Abu Huraira: r.a. Allah has said: "O people, verily Allah is Tayyib, and He did not receive good except only for Allah order any of the people believe the same as ordered to the Apostles. God has said, "O Messengers, eat of the good kind." He said "O you who believe, eat of the good things that have given to you." Then he mentioned the long journey of a man lifting hands and prayed, "O Lord, O Lord, with clothes, blankets and dusty, food from illegal sources, drink from a source that is unlawful, his clothing from the illegal, given food from the illegal, then how prayer will be granted a God?"<sup>20</sup>

Looking into the hadith, the Prophet Muhammad used word *Masdar* (derivatives) in the Hadith, prayer denied because of practicing unlawful in the life.

"... about food, drink, clothes and fed the illegal, then how prayer will be accepted?"

According to the Arabic version of the hadith, it clearly use *Masdar* noun ( الإسم المصدر ) for the word ( مطعمه ), ( مطعمه ) and (ماسبه) shows that matters relating to the description of the act itself. As the hadith above, the use of *Masdar* expresses to not consume the illegal food, water and the attire, but anything that describes the prohibited food, drink and clothing.

Thus, the Prophet indicated that prayer rejection cause is not only the illegal or less nutritious of food, drink and the clothes alone, but it involves also the resources, processes and ways to get it. The hadith shows the description of food and drink consumption are the cause of rejection of Muslim prayer.

The citation further showed inclusive term *halal* means the ways and means of earning income is as stated by Shaykh Uthaimain in its interpretation:

"Halal means any lawful manner, and efforts to get it, Tayyib will mean good things on the substance of things." <sup>21</sup>

# 3. MALAYSIA'S INITIATIVE IN *HALAL* ECONOMY

People in *halal* industry always said the integrated *halal* famously called 'from farm to fork' that shows the integrated supply chain throughout of the sources of product until to the consumer. However, for *Halal* Economy, they extend it to be '3F'- 'from farm to fork to finance'. It has been cited by CEO of HSBC Amanah Malaysia, Rafe Haneef to comment on *Halal* Economy said:

"If we are going to move Towards a Halal economy, we have to take a holistic approach; the whole cycle, the whole chain has to be Halal from the production to the financing."<sup>22</sup>

Malaysia has also witnessed significant growth of Islamic banking asset which total banking industry has grown from 6.9 percent in 2000 to 22 percent in 2011. The contribution of Islamic finance to the Malaysian economy has also been significant, accounting for 2.1 percent share in the country's gross domestic product (GDP) in 2009, when compared to 0.3 percent in 2000.<sup>23</sup>

In conjunction with IBF, HPI in Malaysia considered a new growth area, has also shown significant development. *Halal* industry is considered one of the fastest growing business segments in the world today. <sup>24</sup> Research by World *Halal* Forum Secretariat reveals that the global trade of *halal* food and non-food products is estimated US\$2.3 trillion (excluding banking). *Halal* and Islamic finance, two Shariah-based trillion dollar industries, are growing 15 to 20 per cent annually, with massive mainstream potential complementing each other perfectly. <sup>25</sup> In terms of positioning Malaysia as Global *Halal* Hub, former Prime Minister of Malaysia, Tun Abdullah Ahmad Badawi said:

"The initiative to merge the Halal sector, comprising Halal food, products and services with Islamic finance industry will further top entrench Malaysia's leading position in the global Halal industry. These industries formed the foundation of the new economic paradigm of the Halal Economy."<sup>26</sup>

Converging HPI and IBF considered as reuniting twins separated at a birth.<sup>27</sup> Both industries will set a new drive of economy. CEO of Global Futures & Foresight, David Smith mentioned:

"The convergence of Halal food and Islamic Finance industry is actually a bigger issue. It's about people running THEIR lives, living THEIR lives According to their value sets. For the Muslim population, According to Halal, Shariah-compliance, Tayyib ... tied to the Qur'an. The important thing here is it is not one or two industries converging, it's 10 and 20 converging industries."<sup>28</sup>

Beyond that, current Prime Minister of Malaysia, Datuk Sri Mohd Najib Tun Abdul Razak describing the merging of *Halal* and Islamic finance is a real economy and very realistic to the needs of *ummah*. He said:

"We need to think beyond industries and move into the larger Realm of a Halal Economy, a value-based economy rooted in trust, integrity and fairness."<sup>29</sup>

Regarding to statements above, Muslim should admit that these industries are gifted by the Creator of all creation. For Muslim, they are responsible to realize the instruction of Allah that order to Islam followers. Thomson Reuter's Head of Islamic finance (Asia) Rafiza Ghazali said:

"There is a disconnection between the halal industry and Islamic financing, which is ironic since we're working within the same religion, but are not talking to each other."

Today, we can see that the impact of Islamic finance and *Halal* to the real world, Muslim and Non-Muslim countries. When both sectors merge, it will design a new model of economy with its own fundamental value and will shape a unique power to Muslim countries, as well as to global people. Current Prime Minister of Malaysia said:

"The twin pillars of this economy are the Halal products sector and the Islamic Financial services sector. The convergence of these two Shariah-based industries forms a strong economic platform that is built on a shared set of values - values that will play an increasingly strategic role in the global Shaping markets in the coming decade"<sup>31</sup>

## 4. CONVERGENCE OF HPI AND IBF

The convergence of HPI and IBF would be looked into several elements. First, education and training should be integrated in order to understand the complimentary of both sectors towards Halal economy. Second, laws, regulations and standards that applied in HPI and IBF to be revised and amended in order to harmonize and linkage to each other's. Third, to increase awareness amongst people, the promotion actions should be taken place from many parties, government and private sectors. Table 1, Table 2 and Table 3 show the connection of both sectors with the respective elements.

#### 5. CONCLUSION

As conclusion, *Halal* Economy is a new term to describe the convergence of *Halal* industry and Islamic finance which comes from one source - Islam. The using of '*Halal* Economy' is not new and alien area in Islamic economy, but it has been used as an introduction of new concept of economy that has been recognized as potential global business. The using of '*Halal* Economy' is more acceptable and reliable. *Halal* has been accepted globally as a product of quality, hygiene, pure, safety and clean. Furthermore, to accommodate foods to the third 'one billion' of Muslim people, the *Halal* logo has very high market value. In Malaysia, non-Muslim stakeholder companies are more dominant rather than Muslim stakeholder companies. In order to remedy Islam phobia that has been spread throughout the globe, '*Halal* Economy' might be the reliable term to been used to harmonize Muslim and the rest of the people in the world. Thus, *Halal* economy becomes an agenda of community and economic catalyst for the best alternative solution for most global crisis twines. In addition, the recent World *Halal* Forums promote combination of the Islamic financial system and branded as "*Halal* Economy", which would be a new concept of the world economy.

## THE TRENDS IN CONSUMPTION OF ORGANIC FOODS IN MALAYSIA: AN OVERVIEW

Muhammad Azman Ibrahim<sup>1</sup> Muhamad Idham Mohd Razak<sup>2</sup> Sharina Shariff<sup>3</sup> Norazira Mohd Abas<sup>4</sup> Rafiatul Adlin Muhd Ruslan<sup>5</sup>

#### **ABSTRACT**

Several of literature is available that discusses determinants of organic food consumption. However different models and determinants are used in the literature. This paper aims to focus on the importance of affective attitude, emotions, personal norm, involvement and uncertainty related to organic food consumption. The paper is based on primary data sources, which 500 sets of questionnaires will be distributed randomly all over Peninsular Malaysia concerning personal determinants of organic food consumption. Both the values theory and the theory of planned behavior have been referred to as relevant theories for better understanding consumers' choice for organic food. Organic food consumption decisions can be explained by relating attributes of organic food with more abstract values such as "security", "hedonism", "universalism", "benevolence", "stimulation", "self-direction" and "conformity". Appealing to these values can positively influence attitudes towards organic food consumption. Besides attitude, subjective and personal norm and (perceived) behavioral control influence consumption of organic food.

Keywords: Organic food, Consumption decision, RASCH Model

# 1. INTRODUCTION: OVERVIEW

Over the past decades there has been increased awareness among the consumers including environmental consciousness that has a considerate result on consumer behavior. The subject about the environment is not new, as indeed, destructing the environment has always been a part of human nature, which has influenced humans' lives at both individual and community level (Khwaja, 2008). In addition the issue has been significant to every country, when it is observed that people mostly are concerned or very fretful about these existing problems (Diekmann&Franzen, 1999; Dunlap &Mertig, 1995). The concept of green marketing has been introduced in order to address the environmental issues whereby it gives opportunities to marketers to create green products and influencing the consumers to purchase the products especially to the green users that are very alarmed about the environment.

Organic food is one of green products that has become common to consumers who claimed environment and health conscious whereby there has been increased in the organic food market. The organic food market in the US has reached new heights, with retail sales in the year 2010 total of USD26.6 billion, which this represents a significant increase from USD6.1 billion in just ten years earlier (Nutrition Business Journal, 2011). Underlying this increased level of sales is the US consumers, whose increase demand for organic food is responsible for propelling rapid expansion in the organic food market. According to Lohr (2011), the organic food markets are expanding to globalization with annual growth rate of 15 to 30 percentages especially in Europe countries, United States and Japan.

<sup>&</sup>lt;sup>1</sup> University of Technology MARA, Alor Gajah, Melaka.

Related to the organic food, the National Organic Standards Board of the U.S Department of Agriculture (USDA) defined organic food as how it cannot be made rather than how it can be made, must be produced without the use of sewer-sludge fertilizers and pesticides genetic engineering focusing more on biotechnology, growth hormones, irradiation and antibiotics. There is no legal definition as to what constitutes a "natural" food. However, the food industry uses the term "natural" to indicate that a food has been minimally processed and is preservative-free. Natural foods can include organic foods, but not all natural foods are organic (Ahmad &Juhdi, 2010).Indeed, the consumer nowadays have prefer organic foods that preservative free whereby it is an important component in the green products, and plays a key role in consumer behavior.

By looking at the consumers' intention to purchase the organic products, there are several factors that would influence the consumers purchase organic food products for example organic knowledge, attitudes, environmental concern, subjective norms and price consciousness. Several researchers have reported that greater awareness and additional knowledge concerning organic food has a positive influence on attitudes towards organic food and levels of consumption (Chryssochoidis, 2000; Padel and Foster, 2005; Bonti-Ankomah and Yiridoe, 2006; Gracia and De Magistris, 2007; Stobbelaar et al., 2007). In addition, the consumers are willing to pay the organic foods that have environmental and food quality attributes which is it can be a good predictor of organic food demand (Krystallis, and Chryssohoidis, 2005).

In the context of Malaysian consumers, they are becoming more conscious and aware of the healthy foods that come from the changes in socio-demographic and economic whereby a lot of various foods that been produced in Malaysia (Mansori, and Zhen, 2012; Saleki, and Saleki, 2012). Therefore, this study is to examine the determinants of the consumer behavior in Malaysians towards the intention to buy organic foods as well to have better understanding the trends of organic foods consumption in Malaysia.

According to Ahmad &Juhdi (2010), in Malaysia organic food is consider at the introductory stage where not all many people aware about. The studied been conducted to have better understanding among urban Malaysian consumers' choice of food products. The findings of the studied showed women were more likely than men to agree that they would purchase more organic foods if they were less expensive and more available. In fact, the broad range of possible factors that influences organic food decision making, there are others that might considered as barriers to organic food consumption among Malaysian instead of price.

Malaysia is a multi-cultural nation which is formed majority by Malays, Chinese and Indian with the population approximately 28 million, which estimated it will reach 30 million by 2015 (Euromonitor, 2011). The organic food industry in Malaysia is still new and the consumers in Malaysia are convincing that organic food could give benefits to those who consume it. In fact, according to the (Malaysian Industrial Development Authority, 2009) consumers' demand for functional and healthy foods has grown due to the increased awareness of nutritional value and fortification of foods.

Furthermore, majority people in Malaysia especially Malays are Muslim and the consumption from this cohort is based on the Halal concept whereby there are many variety of selection of products and services in Malaysian markets. The key of the Halal concept is "permissible" that not only focuses on health or quality but also emphasizes on how food is processed and prepared to the consumers. According to Hassan, (2011)Syed Marzuki, Hall, and Ballantine, (2012) Shah Alam, and Sayuti(2011) the consumers are very concern and careful when deciding the food they want to consume by referring the guidelines that been provides in Al-Quran as well by looking for the authentic Halal certification issued by Malaysia's Department of Islamic Development (JAKIM) which under the of the Ministry in the Prime Minister's Department.

Although a number of studies have investigated with concentration on developed countries but still in Malaysia there are only few studies that have been done on the organic foods. Factors such as organic knowledge, attitudes, environmental concern, subjective norms, and price consciousness that related to these consumers in buying organic foods in Malaysia are being overlooked (Saleki, and Saleki, 2012). In addition, previous studies are inadequate and not in-depth compared to the studies that have been done in Europe countries especially understanding consumers' perception and behavior on organic foods.

#### 2. LITERATURE REVIEW

According to Liu (2003), green foods is the food that are safe to be consumed, are fine quality, are concerned with humane animal treatment are nutritious foods and are produced under the principle of sustainable development. In fact, the methods of the processing food are not involving material that can give negative effect to the consumers such as pesticides and chemical fertilizers. In 1980s the production of organic food is part of the "green consumerism" movement. Organizations and customers that promote green consumerism wish to use the impact of the market to cut down the damages to the environment caused by the increasing rate of consumption worldwide (Allen and Kovach, 2000).

Consumers of organic food can be classified into 3 categories which are: a) Greens, these consumer hold interest in protecting the natural environment and ecosystem; b) Food Anxious, these people are concerned about using pesticides, additives, and chemicals in their food; c) Humanists, these people are against the agricultural systems and processes of factories; and d) Hedonists, these people take pleasure in eating good food, and look for improved taste and quality in their food (Davies, et al., 1995).

Magnusson et al. (2001) investigated purchase frequency, purchase criteria, perceived availability, and beliefs about organic products in Sweden. As a research method a survey was used. Questionnaires were mailed to a sample of 2,000 respondents, aged from 18 to 65 years.

The findings found out that only small proportion of consumers purchase organic food regularly. Although the majority of respondents stated positive attitudes toward organic products, the intention to buy organic food was expressed by small number of respondents. A good taste was the most important purchasing criterion followed by long shelf-life and healthiness.

Similar results about healthiness and positive attitudes toward organic products have been found by Zanoli et al. (2002). The research focused on consumer perception and knowledge of organic products and related behavior in Italy. Data were collected from 60 respondents through semi-structured interviews. The results showed that consumers perceive organic products as difficult to find and expensive. However, most of the respondents perceived organic food positively and associated them with health.

Tarkiainen et al. (2005) applied an extension of the Theory of Planned Behavior (TPB) to examine the intention to buy organic products. The studied were examined relationships between attitudes, subjective norms and intention to buy organic food. The findings indicated positive relationships between subjective norms and attitudes, and between attitudes and buying intentions. The hypothesis about relationship between perceived availability and intention to buy was rejected. That finding was explained by sufficient availability of organic products on the Finnish market. Also the hypothesis about relationship between importance of price and intention to buy organic food was not supported. However, this finding might be due to the fact that price premium for organic food is almost non-existing in Finland.

Furthermore, Lodorfos et. al. (2008), the study also focused on determinants of the intention to buy organic products and the TPB model was used as a conceptual framework. The purpose of the article was to examine appropriateness of the TPB model for organic food market and to identify other factors which

influence the intention to buy organic food. Overall, the authors provided empirical evidence supporting relevance of the TPB model and showed that price, availability of organic food, and product information are important predictors of the intention to buy organic products.

The organic food purchases are positively and significantly linked with the intention to purchase organic food, a positive attitude towards organic products with respect to health and environmental benefits, and there were higher levels of behavioral control. Also Tarkiainen and Sundqvist (2005) find a positive and significant relation between the attitude towards buying organic food and the intention to buy.

Studies on organic consumer behavior as well as food safety and its correlation to sociodemographic and attitudinal factors have received widespread attention in the literature. Nonetheless, previous researches verifying the role of ethnicity on organic food product consumption have mostly relied on U.S. data (Misra, Huang, and Ott 1991; Knight and Warland 2004; Dettmann and Dimitri 2007; among others). The Hartman Group (2006) further concluded that it may be erroneous to assume the stereotypical profile of a single ethnic group (e.g., Caucasian Americans) to be the main consumer, as those of other ethnicities may actually exhibit higher levels of organic usage or are more likely to be consumers committed to an organic lifestyle. These results could be rationalized by the relatively heterogeneous ethnic backgrounds (Caucasians/whites, African Americans, Hispanics, Asians, and others) of the U.S. population.

Quah and Tan (2009), conducted an exploratory study to examine organic food product purchase decisions in Penang, Malaysia. The studied focused on the consumer decision making process, while focusing on socio demographical and attitudinal differences may have important implications to marketers and consumer-insight analysts in order to develop effective marketing strategies and to predict future trends in the Malaysian organic product food industry. The findings of the studied show that consumer sociodemographics and attitudes are found to be important determinants of organic food products purchase decisions, although the effects may not identical for each ethnic group.

# 3. METHODOLOGY

### 3.1 The RASCH Model and Consumer Behavior

Rasch modeling techniques were developed to take account of differences between different consumers in the extent to which they perform correct behaviors for different tasks (Bond & Fox, 2001; Kaiser, 1998). This prevents important information being lost when item scores are averaged across the entire sample as is the case in most scales. Rasch models differ from additive scales that they do not rely on the following assumptions common in most other scaling techniques: (1) all items have the same impact on the scale score (i.e. in Rasch scales simple averaging of scores is not the way forward), (2) all item response categories or "levels" have the same distance from the next response category (i.e. in a Rasch scale the distances between the levels in, for example, a 7- point scale point Likert type scale, are not necessarily the same). Furthermore, Rasch models give probabilistic rather than deterministic values for their parameters. The estimated parameters describe the difficulty (reflecting the likelihood that people correctly conduct a behavior) associated with each practice (d), the differences between the levels of an item (by estimating the socalled Thurstone like thresholds tk), and the performance (b) of participants on the scale (a measure similar to a persons' score on a traditional scale).

# **3.2** The Proposed Methods of Research

Rasch model will be proposed as the research methods in order to analyze parameters: first, how to check item and response categories validity through estimated parameters; secondly, how to introduce in a multilevel model the measures of customers' behavior obtained by Rasch to investigate which – and how – some independent variables influence behavior towards organic food.

The Rasch model is a latent structure model by means of which it is possible to derive continuous measures on an interval scale from total scores obtained by a set of subjects on a set of items. This situation is common in social sciences, as stated, for example, by Molenaar in a fundamental book on Rasch Models which it is easy to find examples of observable human behavior indicating that a person has more or less of such a general property, but the concept has a surplus value, in the sense that no specific manifest behavior fully covers it (Fischer and Molenaar, 1995).

#### 4. CONCLUSION

The research will give implications for the Malaysian food and Halal industry especially in general and for the organic food sector in particular. It also can be implies for market segmentation strategies in order to ensure effective marketing outcomes. In addition, it is important to increase awareness among the consumers towards the organic food product value and benefits in order to develop health consciousness.

Furthermore, the marketers will know how consumers in Malaysia perceived organic food product by understanding the reasons of buying with using a proper communication message. Hopefully the intended message would be appealing for consumers who fall within the same category of buyers who exhibit their interest towards organic food products. In addition, education of consumers must become one of the first objectives for organic producers.

The study will give contribution to socioeconomic research, market actors and policy makers whereby it can create consumer awareness on organic foods and to develop an effective communication plan including the marketing strategies. In fact, the result from the study can be use for marketing planning of organic food products to effective marketing strategies, sales channel and promotion to be targeted to these groups of consumers.

Moreover, by using the Rasch model for the analysis will give insightful and knowledge in the future research especially organic food sector because Rasch model have several advantages such as it permits object-free instrument calibration and instrument-free object measurement, which makes it possible to generalize beyond the calibrated sample (Wright, 1967). In addition, not only does the Rasch model permit traditional item analysis (e.g., item difficulty and reliability), it has the added advantages of test linking and equating. For a large-scale testing program, where the overexposure of items seems certain, the ability to equate items onto a common scale and replace poor functioning ones becomes a necessary component to help ensure exam security and integrity.

# A FAMILY BUSINESS SUSTAINABILITY: LESSONS FROM A MUSLIMPRENEUR'S JOURNEY<sup>1</sup>

Ummi Salwa Ahmad Bustamam<sup>2</sup>

#### **ABSTRACT**

Strategy research in entrepreneurship is generally concerned with individuals or groups pursuing lucrative opportunities and driving the strategic decision making process particularly in new and emerging enterprises. However, scholars claim that research on family business is also an imperative area to be explored. This is due to the importance of survival for family business. This paper aims to explore on how a Muslimpreneur's family business strategize the business that could be sustained for generations. Using a qualitative approach, this paper narrates the business journey of a Muslimpreneur, Haji Dahlan, who is the third generation of a family-owned business known as Mesti Best Co. This paper concludes with a discussion of the lessons and implications as well as the accomplishments of this particular family business venture.

**Keywords**: family business, sustainability, Muslimpreneur, strategy, case study

# 1. INTRODUCTION

Family business is defined as a business that owned and managed by one or more members of a household of two or more people related by blood, marriage or adoption (Olson et al., 2003). Generally, about one third of family businesses make it to the second generation of family owner/managers, and around a tenth is transferred to the third generation (and beyond) of ownership/management (Poutziouris et al., 2001).

De Geus (1997) viewed companies as living beings that must adapt, have moral dimensions, and have a desire to survive to withstand the changes inherent in the environment. However, as Astrachan (2010) discovered, there are many factors that complicate the task of assuring long-term survival. For example, as family and business grow older and larger over time, family ties often retreat making norms, obligations and informal control more difficult to maintain. As ownership diffuses, control over the business becomes harder to exercise (Schulze et al., 2003).

Apart from business vitality, research shows that consistent family values and a synthesis between family and business values are crucial for maintaining family ownership in the long run (Pieper, 2007). The most important finding by Olson et al (2003) on family business sustainability was that the success of the business depended on family processes and how the family responded to disruptions rather than simply how the owner managed the business alone.

<sup>&</sup>lt;sup>1</sup> This case presents the actual business and identities have been changed to protect business privacy. This case was written for academic purpose only and the author disclaims any legal responsibilities.

Despite the importance of survival for family business, there are relatively few publications dealing with the subject in any organizational context (Astrachan, 2010). Hence, this paper seeks to explore how a Muslimpreneur's family business strategize the business in order to sustain in the dynamic economic environment in Malaysia.

#### 2. METHODOLOGY

This study employed a qualitative approach whereby a case study research strategy was adopted to gain an in-depth study about the research topic (Yin, 2009). This paper specifically illustrates how a Muslimpreneur strategizing his family business for sustainability. The idiographic explanations inherent in the case study approach enabled a deeper understanding and detailed indepth information that provided credible and valuable knowledge about the case. Primary data were gained through in-depth interview sessions with the Muslimpreneur. For data analysis, the research will be using the five-phased cycle, namely: (1) compiling, (2) disassembling, (3) reassembling (and arraying), (4) interpreting, and (5) concluding as proposed by Yin (2011). At the end, case study will provide lessons which learnt from the interviewee's unique experiences (Yin, 2009). This paper narrates a Muslimpreneur's family business journey.

## 3. THE CASE STUDY

# • Entrepreneurial Background

The entrepreneur in this study, Haji Dahlan, is part of a third generation family-owned business known as Mesti Best Co. Beginning as a *halal* soy sauce manufacturer, Mesti Best Co. was previously known as Elok Co. The company was founded in 1950 by Sheikh Muhammad, Haji Dahlan's grandfather. According to Haji Dahlan, Elok Co. was the sole company that sold *halal* soy sauce in Kelantan and was famously known for its 'Sedapnya'. The company grew as a family business and the market was concentrated in a small town called Kota Bharu, Kelantan, a state on the east coast of Malaysia.

After operating for 20 years, in 1970, the company was transmitted to Sheikh Muhammad's second generation, Haji Dahlan's parents, Sheikh Mahmud. During the 1980s, Elok Co. produced more than just a soy sauce and had expanded to sell chilli and tomato sauce. R&D activities were conducted with the assistance and support from the Malaysian Agricultural Research and Development Institute (MARDI). This time, the company started expanding its market outside Kota Bharu such as Pasir Puteh, Tanah Merah, and Machang. This market expansion had increased the sales and at the same times the 'Sedapnya' sauce had spread by the customers' words of mouth.

Over the years, the business went well but market penetration was still limited to Kelantan. After 49 years of operation, in 1999, Haji Dahlan, the third generation of Sheikh Muhammad's family, took over the management of Elok Co. from his father. He managed the company with the collaboration from his cousin, Roslan, who has been very close to him since childhood. Both of them pursued their Diploma of Accountancy at the Polytechnic of Ungku Omar in Ipoh, Perak.

# • Family Business – A Business Opportunity

Haji Dahlan has been actively engaged in the construction sector for several years after finished his studies. Due to the Asian financial crisis in 1997-1998, his business slowed down. As Haji Dahlan had never been employed anywhere else, he kept searching for a business opportunity. One day, while having lunch in a restaurant, he thought of opening his own food business company. However, his father's family business was on his mind, and from that moment, he decided to take over the family business.

Everyone has to eat every day. Even during war people have to eat. So, I think food business will be the best option and is secured, especially during the economic crisis. Before this I was busy with my construction business and forgot about my family soy sauce business. But during the economic crisis, many projects were cancelled or postponed. Well, on the other hand, when you were in a difficulty, you will try your best to find a solution. And as for myself, I found the solution in front of my eyes. So, now, here I am, managing my family business.

There are push and pull factors which drive an entrepreneur to pursue a business. In this case, Haji Dahlan found that during the economic crisis, his previous business was not successful. This push factor alerted him to be opportunistic during the uncertain economic conditions, in particular during the late 1990s economic crisis which then provided him with an opportunity to 'take over' his family business.

I did not take over my family business because of responsibility or obligation towards my family. Business is about making money. If you are doing business because you feel responsible then it would not last long. You have to love it. It is just like a marriage. You would not get happy if your parents forced you to marry somebody that you don't love. Do you agree with me?

Haji Dahlan emphasised the importance of passion in pursuing business to ensure the long-lasting success of the business (Bradley, 2010).

# • Strategizing the Business

The first step that Haji Dahlan and his cousin, Roslan took after seized over his family business was to make planning to market Elok's products throughout the country. Their first step was to rebrand Elok's name. According to Haji Dahlan, they made the decision to rebrand the product layout since it was outdated.

The first thing I did after I took over the company management was rebranding the company name as well as the brand of the product. We came into decision to rebranding our family business brand name since it had been used for almost five decades. We thought that if we wanted to go for a modern market,

specifically to enter hypermarket such as Carrefour, Tesco, and Giant, we have to do rebranding. Before this my father concentrated on traditional retailers. So, we sat together, me and my partner, and we called upon our big clients and discussed about this idea of rebranding.

We conducted market survey as well. After several brainstorming to get the best name, we shortlisted a couple of suitable names and finally we came out with a new name; Mesti Best. The rebranding process took around three to four months. But I think it is worth it. Now we have a new brand name to attract new customers.

As asserted by Haji Dahlan, the company's name was changed to Mesti Best Co. and the brand was changed to Mesti Best. The rebranding of the company had opened many eyes to the company's products. Currently, the family business operate on a larger geographic scale. Haji Dahlan is an entrepreneur who sees long-term planning as an essential element for business growth. Haji Dahlan saw his collaboration with his cousin, Roslan, as an opportunity to realise business growth (Lee & Tsang, 2001).

They divided the responsibilities and shares into two major divisions - Mesti Best Manufacturing and Mesti Best Marketing. Mesti Best Manufacturing is under Roslan's management. The division focused on productions which to maintain and retain the product's quality. On the other hand, Haji Dahlan manage the Mesti Best Marketing. He concentrated on marketing such as product expansion and networking development.

Whilst the company's production is still in Kelantan, Haji Dahlan moved the marketing division to Kuala Lumpur. The decision to move was made due to the strategic location of Kuala Lumpur as the capital city of Malaysia. In Kuala Lumpur, he managed to widen his network contacts as this activity will have a positive impact on venture growth (Tsang, 1998; Lee & Tsang, 2001). Haji Dahlan further asserted that the division of the two main functions has been fruitful and made his company profitable.

In terms of employment, Haji Dahlan currently employs 15 people who work in his office. In 2006, he employed almost 30 people. However, due to the strategic change that he made, the company retrenched some employees. Previously, Mesti Best utilised retailers to distribute their products, such as going to small shops throughout the country. However, they came across many problems such as accrued debts and also high turnover due to the job environment. Thus, Haji Dahlan decided to distribute his products through large hypermarkets such as Mydin, Carrefour and Giant. This marketing strategy resulted with reducing the number of employees in his company as well as the operating costs.

Besides manufacturing the core product which is soy sauce, in 2006 Haji Dahlan introduced tapioca chips, the local root vegetable, which is packed with anti-oxidants. MARDI has helped Haji Dahlan with R&D on tapioca because they noticed the growth potential of tapioca chips. Haji Dahlan further asserted that the nutritional value of tapioca is well-known in Western markets.

We have taken tapioca for granted, but the Westerners had already knew about its nutritional value and are consuming them more. At first they might have mistakenly thought the tapioca chips for potato chips. Do not get surprise if you were served with tapioca chips during Christmas.

A recent growth strategy employed by Haji Dahlan is exporting his products overseas. He wanted to convince the local people, especially the Malays, that he can sell his products overseas. To date, the Mesti Best product has penetrated the United Kingdom, Canada, Ireland, China, Brunei, Singapore, Cambodia, Vietnam, Morocco, and Iran. This internationalisation process require collaboration among several small and medium enterprises, known as *Konsortium Usahawan Makanan dan Industri Asas Tani* (KOMITA), a consortium of agriculture-based industries and food entrepreneurs. Studies of entrepreneurial networks have supported the view that entrepreneurs' networks may play a significant role in giving advice, providing resources, and access to expertise, etc. (for example see Aldrich, 1999; Hansen, 1995, 1999).

Incorporated in 2006, KOMITA was initiated by a group of food producers in a climate of fast changing biotech and agriculture-based industries. Being the first of its kind in Malaysia, it has not only established networking for the industry, but also changed the direction of the local agrobased industries' venturing international markets. KOMITA, whose corporate culture is "strength through unity," to date has grown into a group of over 60 fully certified companies, and boasts more than 250 products of international standard.

Haji Dahlan is the Executive Chairman of KOMITA and he is fully dedicated to make his dreams come true. He believed that the corporate culture will create positive attitudes among KOMITA's members and thus promote business growth. He also believed that when a local product is acceptable overseas, it will change the misperception among consumers of Muslim products. This is a psychological war that he has had to face and it is hard for him to solve alone. Therefore, the internationalisation process by collaboration among the SMEs is hoped to be a way to counter-attack the problem.

# • Obstacles and Challenges to Business Growth

There is no business without challenges. When he began his business, Haji Dahlan had to make Mesti Best products globally profitable. He asserted that his intention was to make Mesti Best Co. like Nestle Company.

Wherever Malaysian food goes, Mesti Best follows.

Haji Dahlan's vision is to ensure that Mesti Best products are accepted by consumers worldwide. He wanted to change consumers' assumptions of *halal* food products. For him, every *halal* product must be certified not only as *halal* but also as a high quality product. He did not want people to treat Malay products as a second class ones. Furthermore, Haji Dahlan stressed that the hardest challenge he has ever faced is to change the mentality of his potential buyers.

The problem that I am facing now is the Malay consumers since they themselves resist buying and supporting the products manufactured by the Malay manufacturer. I am wondering why this scenario is happening. Sixty per cent of the total population in Malaysia is Malay but why is the majority of the Malay still in the middle class? I believe that this is because 70 per cent of consumers are Malay but they are not buying Malay products. They always keep in mind that Malay products are low quality. That is why we go abroad to convince the local customers that we have succeeded in penetrating overseas market. I know it is hard to change the mentality of my community.

What I have observed was that as there are many promotions done by the government, there shows more failure among the Malay businesses. Why? Because the government promoted the slogan of "Entrepreneur Assisted by FAMA or MARA"... why don't they change to "Entrepreneur Selected by FAMA or MARA". I am sure that people will get attracted to this slogan. It is more convincing that the entrepreneur is selected by the government agency, not only being assisted. So, for me, this is more a psychological war.

The issue raised by Haji Dahlan concerned consumer mentality. He asserted that Malay consumers did not have a genuine identity and this hinder them in appreciating products manufactured by Malays. He further noted how Chinese businesses can survive in the Malaysian market.

The government did provide grants to purchase machinery but they forget to put allocation for promotion purposes. Because the promotion cost is as high as the cost to purchase machinery and other equipments. So, we are in a dilemma. Promotion needs money. However, the Chinese businessmen do not have to do much promotion because the Chinese consumers are buying their own products. I have been in situations where many Malay customers rejected my product. I am so curious why this is happening. When I compared my products to the Chinese products, I think mine is better in packaging and pricing, and even good in taste.

Haji Dahlan has suggested that one way to solve market problems is by marketing his products overseas. He hoped that local consumers will be impressed with his products being successful on the international market. He also believed that education can help if the government nurtures a patriotic spirit in everyone to buy Malaysian products.

Besides these marketing issues, Haji Dahlan has emphasised government assistance to Malay entrepreneurs. He argued that although the government provide grants and funding for business growth, some bureaucrats do not have much integrity and this slow down the grants approval process.

Don't be surprised if I tell you that bribery is so common among the bank officers. We have to allocate five per cent of commissions for the officer to approve our application. It happened to my vendor himself. The bribery index among Malays is very high.

Haji Dahlan's argument underscore the Corruption Perception Index (CPI) in 2010 which was 4.4. Bribery and corruption in Malaysia were high and deteriorating. This can be seen from the Corruption Perception Index for 2010, where Malaysia was ranked at number 56, similar as in 2009 (Transparency International, 2010). Whilst in 2008, Malaysia has been ranked at number 47. It demonstrated that corruption among Malaysians is worsening.

#### • Growth Orientation

Mesti Best's growth has seen the company expand from a small traditional family business to an established exporting company. Haji Dahlan, the third generation family member who during his management has eyed his company's market penetration becoming much larger. His long-term projects are intended to help other Muslimpreneurs.

We targeted for long-term benefits. First, we try to get market penetration, then we move forward by getting the right distributor and might be forming trading house at certain countries. Secondly, we have developed "Anchor Model Program" in Pengkalan Chepa, Kelantan to help small Malay businesses to market their products under MB. The government will allocate RM 13.5 million grants so that we will be able to develop new products and get HACCP and GMP to explore the US market.

Haji Dahlan's current plan is to enter the Morocco and Iran markets and to reach 70 per cent in export turnover. Haji Dahlan wanted to educate Malay consumers by emphasising a *halal* campaign. He believed that Malay brands can become global once consumers are convinced of his products' quality and only on the basis of *halal* logo certification. Furthermore, Haji Dahlan believed that as a Muslim, he has to work hard in life to survive because there is no such thing as luck in life. He emphasised his view of life.

There is no luck in life. We have to be committed in work. Today's failure is a postponed success for tomorrow. This is my principle. We would not succeed by counting the stars in the sky.

#### 4. CONCLUSION: LESSONS AND IMPLICATIONS

From the outset, it might be concluded that a number of issues arise from this study that could equally be drawn from an investigation into a successful Muslimpreneur. Haji Dahlan is very passionate about business and thus he strategically plan and manage the company to ensure the sustainability of his family business. Prophet S.A.W. stressed that, "Allah likes that when someone does anything, it must be done perfectly well." As such, planning in business must be deliberately prepared for a better outcome and in this case, for the family business sustainability.

The following are several lessons that could be learned from the case of Haji Dahlan:-

# • Specialisation

An efficient company management style is essential for business growth (Brush et al., 2009; Merz et al, 1994). Decentralisation and specialisation have been empirically researched and their explanatory richness established within the small firm's domain (for example, see Miller, 1987; Miller & Toulouse, 1986a, Miller & Toulose, 1986b). In this case, Haji Dahlan specialised the family business into two major divisions and these are production and marketing, which are controlled by him and his cousin. The production division can concentrate on product quality assurance whilst the marketing division can concentrate on channelling the products into more markets. According to Haji Dahlan, people often assume marketing is easy but in reality it needs strategy and time to ensure products are marketable. This specialisation has proved to be successful.

#### • Business consortium networks

Although Mesti Sedap Co. has been operating for almost 60 years, the company really took off when Haji Dahlan took over its management. His good networking with government agencies has led him to chair KOMITA, a business consortium which supports many Malay entrepreneurs. This consortium is a platform for them to take on potential overseas markets. Their collaboration is essential to ensure everyone benefits by it. For example, Vietnamese businesspeople bought five product ranges in one container and this cost RM 50,000. As asserted by Haji Dahlan, "united we stand, divided we fall." According to a longitudinal study by Bergh et al. (2009), when entrepreneurs build trust with one another, they can experience cognitive, emotional, and social changes by participating in a network. This kind of business consortium and social networks may have positive potential outcomes for Malay entrepreneurs especially in terms of marketing strategy (Harris & Rae, 2009). Indeed, a recent study conducted by Franco and Haase (2010) find that one of factors that contribute to SME failure is because of lack of co-operation and networking.

On the other hand, the following *Quran* verse mentions globalisation, multiculturalism, international trade and business, groups and team work.

O mankind! We have created you from a male and a female, and made you into nations and tribes, that you may know each other (Al-Hujurat: 13).

Haji Dahlan initiated the business consortium that could provide a platform for small business entrepreneurs to market their products globally. His enthusiasm for business is also because he does not want people to have bad impression of the Islamic brand:

I wanted to make Muslims products not only as halal product, but also clean and high quality. All products should be produced better than HACCP standard. I want to make it a global brand. I don't want people to see the Muslim brand as a second class brand.

# Market saturation as an opportunity

As noted in his case, Haji Dahlan noted the challenges in penetrating the local market as most of his potential consumers, particularly Malays, did not want MB products. He argues that the market is dominated by Chinese businesses. Therefore, one way to get out of this situation is to concentrate on exporting products overseas. He sees this market imbalance as an opportunity to explore the international market. Furthermore, with just 27 million people in Malaysia, the local market is limited. Therefore, searching for markets abroad would be the best alternative for Malay entrepreneurs (Moha-Asri, 2002; Sieh, 2000).

Apparently, the issue of opportunity recognition and exploitation for future family business can take a variety of forms and will be subject to different external influences. Prospective Muslimpreneurs must be able to proactively identify and address opportunities, and case histories such as Haji Dahlan's provide a learning vehicle for this to take place.

The case study also offers avenues for future research. Research could be undertaken into the training requirements of Muslimpreneurs firms. This is vital for the government in encouraging more Muslimpreneurs to independently grow and develop their business.

It is also useful as an educational vehicle to further investigate characteristics associated with entrepreneurs from various ethnic communities, e.g. the generation of ownership, previous experience, sector operating, etc. Stories from successful entrepreneurs can be shared at national level that can be disseminated to various regions. It is also recommended to offer more effective ways and provide solutions of barriers to family business growth, which is, based on the particular ethnic composition of communities.

## EXPLORING MALAYSIAN MUSLIM WOMEN CLOTHING CONSUMPTION

Syadiyah Abdul Shukor<sup>1</sup>

#### **ABSTRACT**

Studies have shown that women purchasing behaviour differ from men. In emerging market such as in Malaysia, women tend to spend extra money on clothing as compared to women in developed market. Given that clothing is useful in providing information to others and it can make a statement about an individual's personal and social identities, understanding clothing consumption among women in Malaysia is essential in targeting this market. This paper is based on an on-going research which intends to explore Malaysian Muslim women clothing consumption. The research aims to examine Malaysian Muslim women important criteria in purchasing clothes, the role of religion on clothing consumption and influences of social factors (reference groups and media) on purchasing of clothing. This paper will provide a review on existing studies concerning consumer clothing choice, the concept of modesty in clothing and reference group influences on consumer clothing choice. The study employs library and archive research to achieve the objective of the paper.

**Keywords:** Clothing consumption, Malaysia, Religion, Reference group influences

#### 1. INTRODUCTION

Previous studies have shown that women purchasing behaviour differ from men (Schiffman and Kanuk, 2007, Solomon et al., 1999). In Malaysia, women represent 49.24% of the total Malaysian population (Trading Economics, 2012) and the discretionary spending by women is expected to grow to US\$5 billion (RM18.45 billion) in 2014 from under US\$3 billion (RM11.07 billion) (Hamid, 2006). According to a report by AC Nielsen (2011), female respondents in emerging markets such as in Malaysia were found to spend extra money on clothing as compared to women in developed market. Malaysian tourists were also reported to spend on luxury brand and designer clothes and accessories while they were on vacation (Shop West End, 2011). According to Levy (1959), consumers may adopt or purchase certain clothing for its symbolic meaning. Clothing is useful in providing information to others (Kefgen and Touchie-Specht, 1986) and it can make a statement about an individual's personal and social identities to others (Chattalas and Harper, 2007). Given the importance of spending on clothing by Malaysian women and purchasing clothing may give different meaning to the wearer, this research intends to explore Malaysian Muslim women clothing consumption. Specifically, this paper will provide a review on existing studies concerning consumer clothing choice, the concept of modesty in clothing and reference group influences on consumer clothing choice.

Clothing Choice: Studies have shown that consumers make clothing purchase decisions based on several criteria (Kawabata and Rabolt, 1999, Hsu and Burns, 2002, Eckman et al., 1990, Zhang et al., 2002). The studies show that consumers placed different importance on several attributes when purchasing clothes. For instance, study by Shim, Morris, & Morgan (1989) found that United States non-employed women placed more importance on suitability of the clothes to the individual, good fit, attractiveness, appropriateness for occasion and quality of construction in selecting clothing. In another research,

\_

<sup>&</sup>lt;sup>1</sup> Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia

Chinese consumers placed importance on function (warmness, permeability, fabric softness, thickness, fiber content, easy care, durability and comfort), price and appearance (fit, style, colour and workmanship) when purchase casual wear (Zhang et al., 2002). Kawabata and Rabolt (1999) study showed that the United States consumers placed more importance on i) colour, style/design, quality, good fit, price and fashion; ii) care/maintenance, durability, and fibre content; iii) brand or designer name and iv) country of origin while the Japanese are more concern on preference and suitability, care and durability, brand and country of origin in purchasing clothing. The same findings were also found in studies involving Taiwanese and United States college women (Hsu and Burns, 2002), Korean and United States respondents (Lee and Burns, 1993) and Russia (Elena et al., 2007).

As been suggested by Levy (1959), "people buy things not only for what they can do, but also for what they mean". As such, people purchase a particular product to cater different needs beyond the functional use. These needs can be derived from utilitarian benefits and hedonic/experiential benefits (Engel et al., 1995). Utilitarian benefits are objective and related to the functional product attributes. On the other hand, hedonic/experiential benefits encompass subjective responses, sensory pleasures, daydreams, and aesthetic considerations (Engel et al., 1995). In the context of buying clothes, aesthetic considerations refer to the prettiness or aesthetic experience that the apparel item can bring about, whether on a sensory level (e.g. whether the fabric's colour is pleasing to the wearer or that the fabric feels soft against the skin), emotional (evoking specific feelings for the wearer), or cognitive (in that it has a certain symbolic significance for the wearer) (De Klerk and Tselepis, 2007, De Klerk and Lubbe, 2008). Previous studies indicate that people wear clothes not only to be modest (Horn and Gurel, 1981), but clothes are able to express the wearer's identity (Elliott and Wattanasuwan, 1998, Horn and Gurel, 1981), act as a mechanism of conformity (Piacentini and Mailer, 2004), communicate one's self concept (Sirgy et al., 1997, Goldsmith et al., 1996) and express an individuals' affiliation to a particular social group as well as differentiation from peers (Piacentini and Mailer, 2004, Elliott and Wattanasuwan, 1998). The findings from these studies are significant as clothing is high in visual display and it is widely recognised as product which 'communicates' about a person (Holman, 1980). While a substantial amount of research has studied the clothing choice among various different consumer groups, no studies have examined the clothing consumption among the Malaysian Muslim women. In view of this deficiency, the current study explores Malaysian Muslim women clothing consumption, particularly investigating the important criteria considered when purchasing clothes.

Modesty in Clothing from the Islamic Perspective: Clothing for the purpose of modesty is the fundamental basis for all clothing (Horn and Gurel, 1981). Modesty theory suggests that people wear clothing to conceal the private parts of their body (Solomon and Rabolt, 2009). In other words, modesty revolves around the idea that certain body parts are indecent or shameful and should be covered so that they cannot be seen (Barnard, 1996). It has been argued that modesty differs from culture to culture (Horn and Gurel, 1981). What is covered or left uncovered varies among societies (Horn and Gurel, 1981).

In the context of this study, modesty in clothing among Muslims means that dress must cover the whole body except for the areas specifically exempted (Badawi, 1980). Although modesty has not been identified as the most important underlying motives in women's choice of dress (Barr, 1934, cited in Horn and Gurel, 1981), it is expected that modesty would be very much important in this study because individuals who place great emphasis on religious values will place importance on modesty (Creekmore, 1963, cited in Horn and Gurel, 1981). Modesty in clothing is expected to be an important criteria considered in purchasing clothing among Malaysian Muslim women because the importance of religion in Malaysian consumer's lives (Alam et al., 2011).

The foundations regarding Islamic clothing are mentioned in the Quran (the divinely – revealed Scripture of Islam) and through the Prophet Muhammad's teachings and practices:

"Say to the believing of men and women that they should lower their gaze and guard their modesty: that will make for greater purity for them: and Allah is well acquainted with all that they do." [24:30].

"And say to the believing women that they should lower their gaze and guard their modesty that they should not display their beauty and ornaments except what must ordinarily appear thereof; that they should draw their veils over their bosoms and not display their beauty to their husbands...." [24:31].

"O Prophet! Tell thy wives and thy daughters and the women of the believers to draw their cloaks close round them. That will be better, so that they may be recognised and not harassed. Allah (SWT) is ever Forgiving, Merciful." [33:59].

The above three verses require Muslims to dress according to the Islamic requirement whereby they are expected to dress modestly. Modesty in clothing includes several aspects. Firstly, clothing should not be worn for the purposes of attracting attention or to show off. It should not be a dress of fame, pride, and vanity. Such fame may be sought by wearing an excessively fancy dress as a status symbol or by wearing an excessively ragged dress in order to gain others' admiration of one's own selflessness. Both motives are improper by Islamic standards (Badawi, 1980). The Prophet Muhammad says:

"Whoever wears a dress of fame in this world, Allah will clothe him with a dress of humiliation in the day of resurrection, then set it afire".

Secondly, for women, clothing must cover the entire body; only the hands and face may remain visible for women (Badawi, 1980). In addition, the dress must be loose enough so as not to describe the shape of a woman's body. This is consistent with the intent of the verses cited above (24: 30-31). These verses require women to cover the whole body except for the areas specifically exempted.

Thirdly, in terms of the material, it should not be so thin that one can see through it. This requirement can be seen from the intention of the verses cited above (24: 30-31) whereby the dress should be thick enough so as not to show the colour of the skin it covers or the shape of the body which it is supposed to hide. Other than that, women's clothing must not resemble men's clothing, nor should the men's clothing resemble the women's. Ibn' Abbas narrated this point:

"The Prophet cursed the men who act like women and the women who act like men."

In addition, a Muslim should not wear clothing to look like a non-Muslim because the Prophet Muhammad was against Muslims copying these styles. Moreover, the design must not consist of bold designs which attract attention (Badawi, 1980).

In summary, modesty in clothing from the Islamic perspectives includes the following; a) clothing should not be worn for the purposes of attracting attention or to show off; b) clothing must be loose and cover the entire body, only the hands and face may remain visible for women; c) material used to cover the body parts should be thick so that no one can see through it; d) women's clothing must not resemble men's clothing, nor should the men's clothing resemble women's; and, e) Muslims should not wear clothing to look like a non-Muslim.

Based on the Islamic requirement on clothing, Muslims are not constrained to wear a particular form of dress and they are free to improve on or invent new types of dresses as long as it meets the Islamic guidelines and requirements. Therefore, it is expected that Muslim consumers are particular in terms of their clothing choice because they are required to observe the dress requirements as laid down in the Quran (the divinely – revealed Scripture of Islam) and Sunnah (the practice of the prophet, consisting of

what he himself did, recommended or approved of in others). Although modesty in clothing may reflect the fundamental basis for all clothing (Horn and Gurel, 1981), wearing modest clothing among Muslims may symbolise the wearer's commitment to his or her religion. In this sense, modesty in clothing should be considered as one of the important clothing criteria among Muslims. Hence, this study intends to investigate the influence of religion on Malaysian Muslim women consumers.

Reference group influence: Reference group is a person or group of people that significantly influences an individual's behaviour (Bearden and Etzel, 1982). Numerous researchers have examined reference groups as an influence to clothing choice and buying behaviour (Childers and Rao, 1992) and young consumers are more influenced by the reference groups (Park and Lessig, 1977). Numerous researchers have examined reference groups as an influence to clothing choices and buying behaviour (Childers and Rao, 1992, Shim and Bickle, 1994). Muslim, and more specifically Malaysian Muslim women consumers, are underrepresented in this literature. Therefore, the influence of reference groups on Malaysian Muslim women consumers should be explored.

## 2. METHODOLOGY

This study will employ a qualitative research method as it aims to explore clothing consumption among Malaysian women. Focus groups and in depth interviews will be conducted to achieve the study objectives. These two techniques will be used as the primary data collection tool, because it focuses on the participants' own expression of experience (Denzin and Lincoln, 1994).

Participants will be selected among women aged between 18 and 30 years old to reflect the median age of Malaysian women. Participants will be asked on several topics concerning their clothing consumption which include the role of religion on their clothing consumption, influences of social factors (reference groups and media) on purchasing clothing, and important criteria in purchasing clothes. In this study the analysis of the focus group discussions and interviews were based on the methods suggested by Casey (1998). All of the focus groups discussions and interviews will be audio taped and transcribed. After the focus groups discussions and interviews have been carefully typed, the transcripts will be reviewed so that the researcher could become familiar with the flow of the dialogue. All transcripts will be merged and then all of the answers to question one from all the groups and interviews will be moved to the same master document. This will be done for each topic and question. From this master document (which contains all of the relevant responses) the patterns, trends or themes across all of the responses will be examined.

#### 3. CONCLUSION

This paper is based on an on-going research which intends to explore Malaysian Muslim women clothing consumption. The study aims to make practical contributions by discussing implications for marketing mix developed by the retailers and manufacturers of clothing in Malaysia. In this sense, retailers and manufacturers of clothing may develop an effective marketing programme which consists of 'product', 'price', 'promotion' and 'place' that blends to target the Malaysian Muslim women.

# RELATIONSHIP BETWEEN RELIGIOSITY AND CONTROVERSIAL PRODUCTS AND OFFENSIVE NATURE OF ADVERTISING APPEALS

Svadivah Abdul Shukor<sup>1</sup> Mohammad Noorizzuddin Nooh<sup>2</sup> Muhammad Ridhwan Ab. Aziz<sup>3</sup> Khairil Faizal Khairi<sup>4</sup> Mahdhir Abdullah<sup>5</sup>

#### **ABSTRACT**

Studies have shown that religiosity is an important variable in determining consumer behaviours. This research paper attempts to investigate the relationship between religiosity and controversial products and offensive nature of advertising appeals. A survey of 278 undergraduate students was conducted at a local university located in the South of Peninsular Malaysia. Descriptive analysis and correlations analysis were performed to analyse the data. Results showed that religiosity is positively related to controversial products and offensive nature of advertising appeals. Limitations and directions for future research are discussed towards the end of this paper.

Keywords: Religiosity, Offensive advertising, Consumer

#### 1. INTRODUCTION

Religiosity is defined as the degree to which a person adheres to his or her religious values, beliefs, and practices and uses them in daily life (Worthington Jr. et al., 2003). In consumer behaviour field, researchers have used religiosity construct to determine a number of consumer behaviour. This paper aims to investigate the relationship between religiosity and controversial products and offensive nature of advertising appeals. The paper begins by providing literature related to the role of religion in determining consumer behaviour. Then, the methodology section provides the data collection procedure along with measures adopted followed by a presentation of results. A final section discusses limitations and directions for future research.

Religiosity and Consumer Behaviour. A number of studies support the application of religiosity construct in consumer research (e.g. Sood and Nasu, 1995, Delener, 1994, Delener, 1990). For instance, Sood and Nasu (1995) examine the effect of religiosity on shopping behaviour between Japanese and American consumers. They found that there is no difference in consumer shopping behaviour between devout and casually religious Japanese individuals. Sood and Nasu (1995) attributed this to the fact that religion is not an important element in the overall Japanese culture. On the other hand, in the USA devout Protestants were found to be: more economic, they bought products on sale, shopped in stores with lower prices, were open to buying foreign made goods, believed that there was little relationship

<sup>&</sup>lt;sup>1</sup> <sup>2,3,4,5</sup> Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia

between price and quality, tended not to believe advertising claims while preferring subtle and informative advertisements.

The significant role of religiosity on perceived risk in purchase decision has been explored by Gentry et al. (1988) whose study reported that residents in areas with higher levels of religiosity perceive higher levels of risk with new products. Their findings are corroborated by Delener's (1994, 1990) two studies which indicate that pro religious consumers tended to perceive higher risks than non-religious consumers. Delener (1994) concluded that marketers should emphasise the decision maker's religiousness in decision making process.

Siguaw and Simpson (1997) examined the effects of religiosity among Catholic, Protestant, Fundamentalist and others on two important shopping characteristics: Sunday shopping and outshopping. The results of their study verify that religiosity has a significant effect on outshopping behaviour and attitudes as well as on Sunday shopping behaviour and beliefs. Individuals scoring high on the spiritual and devotional dimensions spent significantly fewer of their retail dollars outshopping than their less religious counterparts. Similarly, McDaniel and Burnett (1990) suggest that religiosity may be significant in predicting the importance individuals place on certain store evaluative criteria. The results from their study show that consumers with a high degree of cognitive religious commitment viewed the friendliness of sales personnel, shopping efficiency, and product quality as being of greater importance in selecting a retail store than did those low in cognitive religious commitment. Study by Choi et al. (2010), on the other hand, investigates how the consumer's use of various product information sources can differ depending on their levels of religiosity (i.e. high, low, and none). Highly religious Korean consumers are more likely to choose members of their same religious group when they look for product information than those consumers who are less religious. This finding indicates that when consumers are more religiously devoted, they are more likely to hear opinions or thoughts about products from those who believe and practise the same religion.

Vitell et al. (2005) investigate the role of religiosity in determining consumer attitudes and beliefs in various situations regarding questionable consumer practices. Two dimensions of religiosity were studied, which are: intrinsic and extrinsic religiousness. Their results indicate that an intrinsic religiousness was a significant determinant of consumer ethical belief while extrinsic religiousness was not related to those beliefs.

Religiosity and Advertising. The influence of religiosity on consumer behaviour has also been investigated in the aspect of consumer attitudes toward advertising (Fam et al., 2004, De Run et al., 2010, Michell and Al-Mossawi, 1995, Rice and Al-Mossawi, 2002). For instance, Michell and Al-Mossawi (1995) investigated the religiosity effect on consumer attitudes toward advertising messages among Christians and Muslims. They found that both Christian and Muslim respondents with higher levels of religiosity had significantly less favourable attitudes towards a contentious message, and conservative Muslims had much lower recall scores than liberal Muslims. In another study which used four main religious groups as samples, namely: Buddhism, Islam, Christian and non-religious believers (mainly Taoists and Confucians), Fam et al. (2004) found that Muslims and religiously devout respondents found the advertising of gender or sex related products (e.g. female and male underwear) more offensive relative to other religions. De Run et al.'s (2010) study of Malay Muslims in Malaysia found similar results. In this case the authors found that the more religious groups will react more intensely if the products advertisements contain nudity, sexist images, violence, or subject matter that is too personal. More recently, Akhter (2011) found that level of offensiveness towards advertisements of controversial products was found to be significantly associated with religious perceptions and nature of advertising appeals. Nudity and sexist images as advertising appeals were found to have significant association with the level of offensiveness of the consumers. Based on the previous findings, this study investigates the relationship between religiosity and controversial products and offensive nature of advertising appeals.

#### 2. METHODOLOGY

The present study employed quantitative (i.e. survey questionnaire) method in the collection of the primary data. The data collection process was conducted over a period of six weeks. For the purpose of this study, survey questionnaires were distributed to students aged between 18 and 25 year old studying at a local university in the South of Peninsular of Malaysia. Students studying at this university come from all over Malaysia. A total of 278 survey questionnaires were received and accepted to be analysed.

The survey questionnaire was divided into 3 main sections. First section contained a list of controversial products, second section contained a list of five advertising appeals used in advertisements to attract customers and third section contained measuring the level of religiosity. Items for these sections were based on previous studies (De Run et al., 2010, Abdul Shukor and Jamal, 2013, Akhter et al., 2011). All items were measured by asking respondents questions in the form of a five point Likert scale ranging from '1' (strongly disagree or not offensively at all) to '5' (strongly agree or extremely offensive). SPSS software was used to analyse the data. Descriptive statistics, correlation and t-tests were applied to analyse the data. Reliability of the data was measured and the value of Cronbach's Alpha was 0.869 which above the recommended value of 0.7 (Hair et al., 2010).

#### 3. FINDINGS AND DISCUSSION

### Descriptive Analysis

This section will report on the frequency for all items related to all constructs in this study. As depicted in Table 1, among the lists of controversial products, it was found that alcohol, cigarettes, condoms and gambling were deemed as offensive by the respondents as evidenced by more than 60% of the respondents answering "offensive" and "extremely offensive". Alcohol was found to be the most offensive among all these controversial products. On the other end, products such as charities, pharmaceuticals, funeral services, weight loss programs and sexual diseases were deemed by the respondents to be not offensive. In terms of advertising appeals for controversial products, sexist images was found to be on top of the list of being the most offensive advertising appeal, with 69.5% of the respondents claimed that sexist images were "offensive" and "extremely offensive" as summarised in Table 2. Another advertising appeal that was found to be controversial was nudity as shown by 61.9% of the respondents answered "offensive" and "extremely offensive". The other advertising appeals such as indecent language, western or US images, and anti-social behaviour were not deemed to be offensive. The descriptive analysis for religiosity shown in Table 3 showed that the majority of the respondents agreed or strongly agreed that religion was important.

Table 1: Descriptive Analysis for Offensiveness towards Controversial Products

# Correlation and t-test Analsysis

Table 4 showed the results of correlation analysis between religiosity and controversial products. For the correlation between religious perception and the controversial products, the results showed that there were significant associations between religiosity and the following controversial products namely cigarettes (r=0.139, p=0.05), condoms (r=0.133, p=0.05), guns and armaments (r=0.132, p=0.05), and male underwear (r=0.172, p=0.01). Table 5 shows the results of correlation analysis between religiosity and advertising appeals for controversial products. Results showed that there is a significant positive association between religiosity and anti-social behaviour (r=0.132, p=0.05). Although there were positive correlation between religious perception and other advertising appeals such as indecent language, nudity, sexist images and western/US images, the correlations between each pair was not significant.

## 4. LIMITATIONS AND FUTURE RESEARCH

This study revealed that religiosity is positively related to controversial products and offensive nature of advertising. Findings from this study are consistent with previous studies that show a significant relationship between religiosity and consumer behaviours. The results obtained from this empirical work must be interpreted in the light of the study's limitations. In this study, survey questionnaires were distributed at a religious-based institution; hence its results might reflect only a section of the whole society. Future studies might want to explore the relationship between religiosity and across generations. Studies examining relationship between these two constructs will have important implications for segmentation, targeting and advertising strategy.

<sup>\*.</sup> Significant at the 0.05 level (2-tailed).

## GOVERNMENT SUPPORT AND ITS EFFECT ON FACTORS OF GROWTH OF SME – PRELIMINARY FINDINGS

Mustafa Gunto<sup>1</sup> Prof. Dato' Dr. Mohammad Haji Alias<sup>2</sup>

## **ABSTRACT**

The main purpose of this paper is to investigate the influence of government support on factors of growth of small and medium enterprise in Malaysia. This paper also aims to evaluate the relationship between the capability of firms to access to finance and human resources on its ability to growth. Survey method for 58 SMEs in in manufacturing sector in Malaysia who are registered in SME Corp have been undertaken. The data obtained is analyzed using Structural Equation Modeling (SEM) using smartPLS program. This paper found that the government support in finance and human resources have influenced positively and significantly the ability of SMEs to access to finance and human resources which subsequently influence positively and significantly the ability of SMEs to achieve growth.

**Keywords**: firm growth, government support, SMEs, finance, human resources.

#### 1. INTRODUCTION

The SMEs represent an important part of the business system and form a vital component of the economy in Malaysia. The SME sector plays an important role in Malaysian's economic development as 97.3 % of businesses consist of SMEs and they contribute 28.5 % to gross domestic product (Department of Statistics, 2011). The value of gross output and value added generated by SMEs in 2010 was RM507.1 billion and RM213.9 billion respectively. Despite accounting for 97.3 per cent of total businesses in the country, the share of SMEs to gross output was only 28.5 % per cent and the share of SMEs to value added was 30.2 %, DOS(2011). The study carried out by Saleh and Ndubisi (2006) presented that SMEs in Malaysia are facing domestic and global challenges, which could obstruct their flexibility and competitiveness. These challenges include: difficulty in obtaining funds from financial institutions and the government, lack of human resources, a high level of global competition, high level of bureaucracy in government agencies, a low level of research and development and a lack of access to modern technology. To overcome these challenges, the Malaysian Government has implemented numerous strategies and schemes under industrial master plans (IMPs). The IMPs were framed to improve the growth of the manufacturing sector through the whole value chain and cluster-based industrial developments. Hence, this plan provides an integrated approach to the development of industrial areas and opportunities for growth of SMEs (MITI, 2005).

## 2. LITERATURE REVIEW

## Firm growth

There are several ways to measure the firm growth such as sales, employment, assets, market shares, and profits. Robson and Bennett (2000) argued that the aim of the study being carried out affects the technique to be used in measuring the small firm growth. For government policy scholars, the growth of small firms is typically measured based on the changes in the number of employees, whilst the owner/managers prefer to measure the growth of their firms based on the firms' financial performance rather than changes in the number of employees (Smallbone and Wyer, 2000). Sales and employment are widely used to measure firm growth among other measures (Wiklund, 1998). This is because growth in sales and employment reflect both short-term and long-term changes in a firm. Furthermore, compared to other indicators such as market shares, sales and employment are more objective measures (Delmar, 1997). Sales have been recognized by several researches as the most common measure of growth of small firms (Davidsson and Wiklund,1999). Nevertheless, a shortage of sufficient data on sales and profits, combined with their ability to recording mistakes create the difficulties in using such values in research that are conducted in many developing countries (Wolf, 2004).

## The growth factors

According to the literature, the factors determining firm growth can be classified in four general groups: characteristics of the firm industry-specific factors, factor prices and several exogenous factors that reflect conditions outside the domestic industry. This study will clarify many of the factors that are linked with small firm growth. It will discuss about access to finance, access to market and Government support which is provided by SME Corp.

#### Access to finance

Limited access to and cost of finance from financial institutions and commercial banks may especially constrain firm performance of microenterprises and SMEs because of collateral requirements and inadequate credit histories (Hong and Steve, 2010). The small firms in developing countries do not obtain formal bank loans regularly; so they in common depended on other kinds of credit for example trade credit, overdrafts, and unofficial loans (Bigsten et al., 2003). Smallfirms also receive important foundations from Microfinance institutions, but their services is frequentlyinsufficient and inadequate (Swinnen, 2005). Smallfirmsafter overcome the start-up difficulty; a lack of credit hinders their growth for initial stages (Schiffer&Weder, 2001). Herna'ndez-Trillo et al (2005) argued that the growth can also be hindered by credit constraints that restraint investments in the improvement of technology. Guiso et. al (2004) studied the significances of differences in local financial progress on the firms in developed country and they found that local financial development increases the possibility that an individual starts a firm, increases competition, and enhancing the firm growth.

## Human capital

Human capital represents knowledge, skills and experience. Human capital of the total workforce plays a more determined role when compared to the entrepreneur alone (Chandler & Hanks, 1994). Employees are considered as the most important resource for SMEs. Knowledge of employees plays an essential part in constructing competitive advantage of a firm. Small firms are more likely to engage in innovation activities due to their constraints in available resources, and therefore high quality workforce is very important for such firms. Wiklund and Shepherd (2003) in their investigation of human capital and its influence on small firm growth illustrate a difference between general and specific human capital. They debate that specific human capital relates to the skills and knowledge that support the management of the firm to attain growth. Certain specific human capital namely start-up experience, management experience have been found to be positively connected with the growth of small firm (Wiklund and Shepherd 2003). A study done by Persson (2004) showed that educational level of employees has impacted positively on firm growth, in other words, firms that

recruited employees with university degree will grow faster. The study by Wijewardena and Cooray (1996) in Japan, presented that the firms with more skilled workers in small-scale sector are better in sales growth. Also the consequences of another fragment of the same study declared that the efficiency of management, and the owner's knowledge and experience are to be greatly associated with the growth of small firms. Honjo (2004) provides also evidence on the impact of general human capital on new firm turnover growth in the Japanese manufacturing. Firms where the entrepreneur possesses a technical college or a university degree are found to grow faster than other firms. In addition to the level of education, there is some evidence that the field of education may affect the performance. Chu and Siu (2001), indicatedthat Workforces in a small businesses may be worthybasis of information and ideas, and their productivity can improve, if managementpermit them to share ideas.

## **Government Support**

Support policies for SMEs vary from country to country and from developed countries to less developed countries due to differences in business contexts, culture, and the level of industrialization.Batra and Mahmood (2003) presented that the SMEs in developing countries in East Asia gainsupport from local governments in the form of smallfunding, private sector training, technology improvement, and market information. Based on the policy reforms, and the new support infrastructure in China, Malaysia, Indonesia and Thailand have benefited small businesses (Tambunan, 2005). Some studies in Asian Industrialized Countries have showed the increasing in the significance of SMEs, such as in Korea, Taiwan, Singapore, and Australia. The government in Malaysia has continued to support the SMEs by delivering financial incentive, improve the technologies, support entrepreneurial development, enhancing business management and human resource management, increase the consultancy and marketing services (Abdullah, 2002). According to the study done by Gregory (2002) in Korea, the government has applied many programs to boost the growth of SMEs to make them more competitive in face of global competition. This was done by ensuring access to finance, supporting human resource development program, developing technology and scientific achievements so that business can develop extensive relationship with global market. In Vietnam, policy supports including financial aids have played a critical role to SMEs' growth (Harvie, 2001). Zhou and Wang (2002) review the influence of local financial improvement on economic growth, employing a district data over the period 1978-2000, and noticed that local financial development is significantly connected with economic growth. In the study of the factors that influence e-commerce adoption levels among SMEs in Malaysia found that external support is significant across all e-commerce adoption levels among SMEs in Malaysia. These results recommend that upcoming strategy to inspire e-commerce application in Malaysia should focus on providing support to facilitate e-commerce adoption efforts. The findings also show that owners or CEOs of SMEs who are less experienced, high-school leavers, and who used computer less frequently, ought to be targeted in future e-commerce initiatives (Thi, Lim, 2011).

## Finally four hypotheses are developed for this study.

Hypothesis 1: Government support in finance impact the access of firm to finance.

Hypothesis 2: Government support in human resources impact the access of firm to human resources.

Hypothesis 3: The access to finance influence the growth of firm.

Hypothesis 4: The accesses to human resource influence the growth of firm.

## 3. RESEARCH METHODOLOGY

This study used closed ended questionnaires survey to obtain data to measure the growth of SMEs. The constructs of the questionnaires were designed based on the further information from literature review, 300 sets of self-administered questionnaires were distributed among micro-sized SMEs registered with SME Corp. The researchers received 62 responses and 58 were suitable for analysis. The data was collected on a Likerttype scale, where 1 indicated minimum agreement and 5 indicated

maximum agreement. The data analysis is conducted by employing Structure Equation Modeling (SEM) using SmartPLS program. Since the sample size used for the study was small the researchers were not sure whether the respondent data will be normally distributed. Hence, SmartPLS is suitable for small size sample and for non-normally distributed data; the model testing method was adopted for this study. In SEM process, model and structure measurement were conducted as validity and reliability test also significant relationships for hypothesis. Both the measurement model and structural models were evaluated simultaneously through SmartPLS.

## 4. ANALYSIS OF RESULTS

#### Measurement model

The hypotheses were tested using a partial least squares (PLS) structural equation model. PLS provides a latent variable structure similar to LISREL structural models, but it is based on components instead of the covariance matrix, which makes it more flexible for small sample sizes (Tuten& Ashley, 2011). Partial Least Squares (PLS) model analyzes and interprets in two stages. In the first stage measurement modelevaluates and in the second stage structural model evaluates. The measurement model evaluates the relations between observed items and latent variables. The measurement model examines through assessment of validity and reliability of the construct measures in the model. This ensured that only reliable and valid constructs' measures were used for assessing the nature of relationships in the overall model (Hulland, 1999). Structural model specifies relations between latent constructs. Estimating and analyzing the path coefficients between the constructs test the structural model. The PLS model for this study was analyzed using SmartPLS version 2.0 M3. First, the measurement model was tested to ensure the measures used to capture the constructs are valid and reliable.

## **Reliability Test**

The method used to assess reliability is Cronbach's alpha (Table 1). The construct can be identified as of good reliability if its value more than 0.70. In Table 1, shown each construct contains a good reliability because it is more than 0.70, indicating that the constructs are internally consistent and hence reliable. In addition to Cronbach's (1951) alpha, reliability of each variable was assessed through Fornell and Larcker's (1981) measure of composite reliability. This measure is preferred over Cronbach's alpha because it offers a better estimate of variance shared by the respective indicators (Hair et al., 2006). In this study the composite factor reliability coefficients of the constructs exceeded 0.80 (see Table 1), which met the standard of  $\geq$  0.80 as suggested by Fornell and Larcker (1981).

Table 1: Factor loading, Cronbach's alpha, Compisate reliability and AVE

	factor loading	cronbach's alpha	compisate reliability	AVE
Government suppo	rt in finance	0.925	0.941	0.7614
GSF1	0.8282

F6	0.8205			
Human resource		0.8917	0.9202	0.6974
H1	0.848			
H2	0.8326			
Н3	0.8276			
H4	0.8378			
H5	0.8295			
Growth		0.928	0.9417	0.6978
growth 1	0.8067			
growth 2	0.8081			
growth 3	0.8282			
growth 4	0.859			
growth 5	0.7943			
growth 6	0.8634			
growth 7	0.8836			

## Validity test

## Convergent validity

Convergent validity refers to the degree of agreement in two or more measures of the same construct (Camines and Zeller, 1979). To examine the convergent validity of this study, can be realized from the correlation between the score of the indicator with its constructs. Individual indicators were considered valid a correlation value above 0.70. However, for loading from 0.50 to 0.60 are still acceptable. In this study, researchers took loading value 0.70. The results of PLS output after a revised have met convergent validity because the entire loading factor is above 0.70 (cross loading Table 1).

#### Discriminant validity

Discriminant validity is the degree to which any single construct is different from the other constructs in the model (Carmines and Zeller, 1979). Discriminant validity is to compare the Square Root of Average (AVE) for each construct and as the correlations between constructs with other constructs in the research model. The model has sufficient discriminant validity if the root of AVE for each construct is greater than the correlation between the constructs and other constructs in the model. If the value is the root of AVE is higher than the correlations between other constructs, so it can be inferred that constructs have a good level of validity. Therefore, it can be concluded that each construct has a high validity. It can be seen from the root of AVE is higher than the value of the correlation between other constructs (Table 2).

Table 2: Correlation Matrix of Latent Variables, (Square Root of AVE in Diagonal)

	AVE	GSF	GSH	finance	growth	human
GSF	0.761	0.872				
GSH	0.729	0.238	0.853			
Finance	0.696	0.771	0.185	0.834		
Growth	0.697	0.456	0.073	0.407	0.835	
Human	0.697	0.185	0.772	0.078	0.222	0.835

## Structural model

Once the reliability and the validity of the measures are assured, path coefficients can be reported based on the results of a PLS structural model. The structural measurement shows in Table 3.

The relationship between government support in finance and access to finance was significant with = 0.7717 and t = 45.365 (table value is 1.96 at 0.05) indicating that the government support in finance has direct positive significant influence on the access to finance. The access to finance changes in direct proportion to government support in finance with a coefficient of 0.772. This clearly indicates that a 100 points change in government support in finance will bring 77.2 points change in the access to finance.

The relationship between government support in human resource and access to human resource was significant with = 0.773 and t = 37.85 (table value is 1.96 at 0.05) indicating that the government support in human resource has direct positive significant influence on the access to human resource. The access to human resource changes in direct proportion to government support in human resource with a coefficient of 0.773. This clearly indicates that a 100 points change in government support in human resource will bring 77.3 points change in the access to human resource.

The relationship between access to finance and growth was significant with = 0.393 and t = 8.628 (table value is 1.96 at 0.05) indicating that the access to finance has direct positive significant influence on the growth. The growth changes in direct proportion to access to finance with a coefficient of 0.393. This clearly indicates that a 100 points change in access to finance will bring 39.9 points change in the growth of firm.

The relationship between access to human resource and growth was significant with = 0.192 and t = 3.45 (table value is 1.96 at 0.05) indicating that the access to human resource has direct positive significant influence on the growth. The growth changes in direct proportion to access to human resource with a coefficient of 0.192. This clearly indicates that a 100 points change in access to human resource will bring 19.2 points change in the growth of firm.

**Table 3: Structural Measurement and Hypothesis Testing** 

Hypothesis	observed t-level	
Government support in finance Access to finance	45.365	Supported
Government support in human resources Human	37.85	Supported
resources		
Access to finance growth	8.628	Supported
Human resources prowth	3.45	Supported

## 5. CONCLUSION

This study examined the influence of government support on the growth's factors of firm and examined the influence of growth's factors on the growth of firm. The results ofthis paper supported the hypothesis which are that the government support in finance and human resources have effected

positively and significantly the capability of SMEs to access to finance and human resources which impact positively and significantly the capacity of SMEs to growth in Malaysian circumstance.

## LAKARAN PERJALANAN SEBUAH SYARIKAT KONTRAKTOR BUMIPUTERA

Intan Fatimah Anwar<sup>1</sup> Suzana Samsudi<sup>2</sup> Sumaiyah Abd Aziz<sup>3</sup>

#### **ABSTRAK**

Kes ini merupakan sebahagian daripada dapatan awal kajian mengenai faktor kritikal kejayaan (*critical success factor*) kontraktor Bumiputera di Malaysia. Penulisan kajian kes ini adalah berdasarkan proses temubual yang telah dijalankan bersama pemilik syarikat dan juga data sekunder yang telah diperolehi daripada syarikat dan laman sesawang. Kes ini berkisarkan kepada persoalan kajian iaitu apakah faktorfaktor yang kritikal dalam menentukan kejayaan kontraktor Bumiputera di Malaysia. Kes ini diketengahkan berdasarkan kisah sebenar dari titik mula sehinggalah kepada permasalahan yang timbul. Hasil kajian mendapati beberapa kekuatan yang menjadi teras kepada kejayaan syarikat kontraktor Bumiputera adalah seperti hubungan erat antara pengurus, tidak menanggung kos pinjaman bagi modal permulaan, penjanaan pendapatan melalui kepelbagaian bidang perniagaan, hubungan yang baik dengan pembekal dan mutu kerja yang berkualiti. Kesimpulan yang dapat dibuat ialah kontraktor Bumiputera mampu memberi saingan yang sengit dalam industri pembinaan negara dan seterusnya menjadi penjana kepada kekukuhan ekonomi Malaysia sekiranya mendapat peluang dan galakan yang sewajarnya.

Kata kunci: Kajian kes, kontraktor Bumiputera, industri pembinaan, faktor kritikal kejayaan

## 1. PENGENALAN: INDUSTRI PEMBINAAN DI MALAYSIA

Selaras dengan visi Malaysia untuk menjadi sebuah negara berpendapatan tinggi, Program Transformasi Ekonomi (ETP) telah diperkenalkan pada tahun 2010. Program ini mensasarkan peningkatan Pendapatan Kasar Negara (GNI) sebanyak tiga kali ganda, iaitu daripada RM660 bilion pada tahun 2009 kepada RM1.7 trilion pada tahun 2020. Melalui program ini, 131 projek dan 60 cabang perniagaan meliputi pelbagai bidang termasuklah infrastruktur dan *Greater Kuala Lumpur* mampu memberi peluang kepada para kontraktor untuk mengembangkan perniagaan dan menambahkan pendapatan di dalam bidang pembinaan. Selain itu, Program Rumah 1Malaysia (PR1MA) yang diperkenalkan untuk menyediakan kemudahan perumahan kepada golongan pertengahan turut menyumbang kepada para kontraktor umumnya, dan kontraktor Bumiputera khasnya, untuk menceburi bidang pembinaan.

Pusat Perkhidmatan Kontraktor (PKK) merupakan agensi kerajaan pertama yang telah diwujudkan bagi tujuan melaraskan khidmat pelanggan untuk sektor pembinaan. Melalui sistem PKK, kontraktor berdaftar dapat bernaung di bawah satu agensi yang akan melaksanakan polisi dari semasa ke semasa untuk meningkatkan imej perniagaan serta menjaga kebajikan berkaitan perniagaan pembinaan mereka. Namun begitu, bermula pada 15 Oktober 2012, kerajaan telah mengumumkan sistem pendaftaran yang mengeluarkan Lesen Kontraktor yang selama ini di bawah seliaan PKK telah dibatalkan dan digantikan

\_

<sup>&</sup>lt;sup>1,2,3</sup> Universiti Sains Islam Malaysia (USIM)

Sijil Perolehan Kerja Kerajaan (SPKK) yang dikeluarkan oleh Lembaga Pembangunan Industri Pembinaan Malaysia (CIDB). Walau bagaimanapun, PKK masih lagi mengawal Sijil Taraf Bumiputera. CIDB diwujudkan untuk membantu proses pengawasan dan koordinasi aktiviti-aktiviti syarikat pembinaan. Usahawan pembinaan yang berhasrat untuk mengambil peluang meraih tender dan projek pembinaan perlu mendaftarkan syarikat mereka dengan CIDB di bawah klasifikasi kerja pembinaan, kerja kejuruteraan atau kerja mekanikal dan elektrik. CIDB juga telah menstruktur semula pengkelasan kontraktor. Pengkelasan yang sebelum ini mempunyai tujuh kumpulan telah digantikan dengan tujuh gred.

Selain daripada itu, sebagai sebuah negara berbilang kaum, Malaysia juga telah memperkenalkan beberapa polisi ekonomi untuk mengurangkan jurang ekonomi di antara golongan Bumiputera dan bukan Bumiputera. Untuk memastikan kesamarataan agihan kekayaan ekonomi di antara semua kaum, Dasar Ekonomi Baru (DEB) misalnya, telah digubal dengan meletakkan sasaran untuk mencapai 30 peratus pegangan ekuiti Bumiputera. Bagi sektor pembinaan pula, pihak kerajaan telah memberikan insentif untuk kontraktor Bumiputera melalui sistem kuota. Sebagai contoh, gred G1 hanya terbuka kepada kontraktor Bumiputera.

Walaupun pelbagai usaha dan polisi kerajaan telah dibuat untuk membantu dan meningkatkan daya persaingan kontraktor Bumiputera, masih terdapat persepsi bahawa kontraktor Bumiputera masih kurang berupaya untuk bertahan di dalam cabang perniagaan di bawah sektor pembinaan. Di antara masalah yang dikenal pasti adalah kurang kepakaran dan pengalaman, pembidaan tender yang terlalu optimistik, kenaikan harga bahan binaan, masalah kewangan, masalah jaringan pembekal, kekangan tenaga buruh mahir, kekurangan bahan binaan dan jentera peralatan, perancangan dan pengurusan yang tidak cekap dan efisien serta masalah komunikasi (Othman, 2010).

Justeru kajian yang lebih mendalam dan berterusan perlu dilakukan bagi mengenalpasti punca sebenar masalah-masalah yang wujud di kalangan kontraktor Bumiputera. Ini bagi memastikan polisi-polisi yang berkaitan dapat dibentuk untuk mengatasi kelemahan dan memberi kekuatan kepada kelompok usahawan ini dan seterusnya memberi kesinambungan terhadap perniagaan mereka.

Untuk memenuhi keperluan kajian berkenaan daya kompetitif kontraktor Bumiputera, kertas kerja ini telah ditulis berdasarkan kes kajian salah sebuah syarikat kontraktor Bumiputera gred G1 di Malaysia. Segala kejayaan dan cabaran yang dilalui oleh syarikat Taming Services telah dikongsikan bersama oleh pengurus syarikat berkenaan. Seterusnya, hasil kajian dan penemuan telah dibincang di antara para penyelidik dan disertakan di bahagian akhir kertas kerja ini.

## 2. METODOLOGI KAJIAN

Kajian ini dijalankan menggunakan kaedah kajian kes bagi mendapatkan maklumat menyeluruh (*indepth*) mengenai faktor kritikal kejayaan (*critical success factor*) kontraktor Bumiputera di Malaysia (Yin, 2009). Bagi tujuan penulisan kertas kerja ini, penyelidik menfokuskan kepada persoalan kajian iaitu apakah faktor-faktor yang kritikal dalam menentukan kejayaan kontraktor Bumiputera di Malaysia. Data primer diperolehi melalui sesi temubual yang dijalankan bersama pemilik syarikat. Di samping itu, data sekunder seperti rekod syarikat dan laman sesawang dari agensi yang berkenaan turut digunakan bagi pembinaan kes ini.

Hasil daripada sesi temubual dan juga dokumen sokongan sedia ada yang telah diberikan oleh pihak syarikat, penyelidik menggunakan pendekatan kitaran lima-fasa (*five-phased cycle*) oleh Yin (2011) untuk menganalisis data kualitatif iaitu (1) *compiling*; (2) *disassembling*; (3) *reassembling* (and arraying); (4) *interpreting* and (5) *concluding*.

## 3. LATARBELAKANG SYARIKAT

Taming Services (bukan nama sebenar) telah ditubuhkan pada tanggal 9 Februari 2000 yang mana ianya merupakan sebuah syarikat pemilikan perkongsian Bumiputera sepenuhnya. Aktiviti utama syarikat ini adalah menjalankan kerja-kerja kejuruteraan awam atau pembinaan dan kerja-kerja pembekalan am. Syarikat ini mempunyai lesen kontraktor Kelas F (kini dikenali sebagai gred G1), berdaftar dengan Kementerian Kewangan Malaysia dan mempunyai taraf Bumiputera.

Pada awal penubuhan, syarikat ini menjalankan kerja-kerja pembinaan sub-kontrak daripada syarikat-syarikat lain. Namun begitu, bermula pada tahun 2004, syarikat ini mula menjalankan kerja-kerja yang ditawarkan dari sektor kerajaan mahupun sektor swasta.

Misi syarikat adalah seperti berikut:

- 1. Berusaha untuk memenuhi kehendak pelanggan dengan menawarkan perkhidmatan dan kerja yang berkualiti dan kompetitif.
- 2. Bertanggungjawab ke atas kebajikan kakitangan syarikat.
- 3. Memberi bantuan kepada masyarakat sekeliling.
- 4. Berusaha untuk meningkatkan perkhidmatan ke tahap yang paling optimum.

Taming Services juga berwawasan dalam usaha berikut:

- 1. Untuk menjadi syarikat yang maju dan berdaya saing.
- 2. Meningkatkan pulangan kepada syarikat melalui aktiviti pembangunan.
- 3. Menguatkan kedudukan dengan memberi hasil kerja yang terbaik kepada para pelanggan.

Taming Services menjalankan dua aktiviti utama iaitu dalam bidang kejuruteraan awam dan pembekalan am. Secara ringkasnya, kerja-kerja kejuruteraan awam yang dijalankan adalah seperti pengubahsuaian pejabat, rumah, hiasan dalaman (perabot dan kelengkapan), permaidani, ambar dan lain-lain. Di samping itu, syarikat turut menjalankan aktiviti kerja-kerja am seperti penyelenggaraan bangunan — membina longkang, membaiki atap bocor dan mencuci bangunan dan juga kerja-kerja kejuruteraan besi — *stainless steel*, mengecat dan menggilat jeriji besi.

Bagi pembekalan am pula, syarikat terlibat selaku pembekal barangan keperluan pejabat (alat tulis) seperti *rubber stamp*, pen, kertas, fail-fail dan sebagainya, pembekalan mesin pejabat seperti mesin fotostat, mesin *laminate* dan mesin perakam waktu, dan pembekalan perabot pejabat seperti kerusi, meja mesyuarat, almari, rak buku dan rak majalah. Syarikat turut melibatkan diri selaku pembekal cenderamata dan hadiah seperti pen bercetak, kemeja-T, payung, beg seminar, kalendar dan sebagainya serta membekal peralatan dan pakaian sukan. Dari tahun 2008 sehingga 2012, syarikat telah berjaya menyelesaikan sebanyak 51 projek berkadar sederhana dan ke atas yang telah diamanahkan kepada mereka

## 4. LATARBELAKANG PENGURUS SYARIKAT

Sebagai salah sebuah syarikat berasakan perkongsian, Taming Services dinaungi oleh dua bersaudara selaku rakan kongsi iaitu Encik Tuah (bukan nama sebenar) dan Encik Jebat (bukan nama sebenar). Taming Services turut dibantu oleh seorang eksekutif pentadbiran, seorang eksekutif perakaunan, dua orang pengurus projek, seorang pembantu am, seorang penyelia tapak dan seorang pembantu penyelia tapak. Carta organisasi syarikat adalah seperti di Lampiran 1.

#### **Encik Tuah**

Encik Tuah merupakan rakan kongsi yang bertindak selaku pengurus syarikat dan pengurus kewangan Taming Services. Beliau berkelulusan Ijazah Sarjana Muda Perakaunan dari Universiti Utara Malaysia (UUM) dan merupakan pemegang Diploma Akauntansi dari Politeknik Ungku Omar. Sebelum terlibat secara serius dengan syarikat sendiri, Encik Tuah pernah menimba pengalaman bekerja di syarikat audit dan perakaunan, menjadi pengurus kafe siber serta menjadi akauntan kepada sebuah syarikat kontraktor Kelas D. Pengalaman sebagai akauntan di syarikat kontraktor banyak memberikan ilmu pengetahuan yang diaplikasikan dalam syarikat yang ditubuhkan ini.

#### **Encik Jebat**

Encik Jebat pula merupakan rakan kongsi yang bertindak selaku pengurus projek dan pengurus operasi Taming Services. Beliau berkelulusan Sijil Kontraktor Binaan dari Fakulti Kejuruteraan Awam, Universiti Putra Malaysia (UPM). Beliau juga banyak menghadiri kursus-kursus berasaskan pembinaan seperti kursus binaan jalan dan jambatan. Sebelum bergiat secara aktif di Taming Services, beliau terlebih dahulu menimba pengalaman selama empat tahun sebagai penyelia tapak di sebuah syarikat pembinaan dan pernah juga bekerja sebagai juruteknik di Mint Hotel, Sungai Besi, Selangor.

#### 5. LAKARAN PERJALANAN TAMING SERVICES

## Semangat Titik Permulaan

Meskipun syarikat sudah berdaftar pada tahun 2000, namun pengoperasian sebenar hanya bermula pada tahun 2004. Penglibatan besar Taming Services adalah lebih tertumpu kepada kerja-kerja pembekalan am manakala sebahagian kecil iaitu dalam 20 peratus sahaja bagi kerja-kerja perkhidmatan yang melibatkan kejuruteraan awam dan penyelenggaraan. Encik Tuah dan rakan kongsi iaitu Encik Jebat yang mana adalah adik beliau sendiri perlu memikirkan strategi yang berkesan bagi memastikan dan membuktikan tahap serius dan komitmen mereka kepada Taming Services. Adalah menjadi impian si abang untuk memajukan Taming Services sebagai syarikat kontraktor Bumiputera yang disegani seperti Kamal Bina, Lebar Daun dan beberapa nama hebat di arena pembinaan Malaysia. Persoalannya, bagaimanakah pengurusan kontraktor kelas G1 yang seperti kais pagi makan pagi ini boleh pergi lebih jauh?

Encik Tuah sedar untuk pergi lebih jauh dalam perniagaan ini, mereka perlu membuat jualan berdasarkan projek. Sesebuah projek untuk beroperasi pula memerlukan modal yang besar. Memikirkan tentang modal, beliau tidak mahu meminjam daripada bank. Apatah lagi bank tidak mudah memberi pinjaman kepada syarikat yang baru setahun jagung dan belum melakar pengalaman yang memberangsangkan. Maka, beliau menebalkan muka meminta pinjaman daripada ahli keluarga dan saudara-mara lain. Berkat ringan mulutnya, sebanyak RM50,000 berjaya dikumpulkan bagi memulakan projek berkadar sederhana untuk gred G1 yang mempunyai had projek yang tidak melebihi RM200,000.

Tidak terhenti di situ, beliau mendapati amat sukar untuk bergerak pantas seiring dengan kehendak klien dan keperluan projek sekiranya hanya beliau dan adiknya sahaja yang perlu membuat keseluruhan kerja meliputi proses merancang, mendapat dan menjaga projek sehinggalah kepada kerja-kerja buruh. Selain itu, mengupah tenaga luar memerlukan mereka mengeluarkan sejumlah modal yang besar. Encik Tuah pantas teringatkan akan dua adik lelakinya yang sedang berkhidmat sebagai juruteknik di syarikat swasta. Di fikirannya, terfikir sayang kiranya pengetahuan dan kemahiran yang dimiliki adik-adiknya tidak digunakan untuk membangunkan Taming Services. Mengimbau zaman kanak-kanak mereka yang hidup di kampung serba kekurangan mengharapkan gaji hanya dari ayah yang bekerja sebagai askar,

membuatkan hati Encik Tuah nekad untuk menjadikan Taming Services sebagai lambang kejayaan dan kemegahan keluarga yang pasti membuatkan orang tua di kampung tersenyum puas. Lamaran beliau disambut baik oleh adik-adiknya dengan menjalankan tugas sebagai pengurus projek dan turut mendapatkan projek di agensi-agensi yang belum ditembusi Taming Services. Selang dua tahun kemudian, Encik Lekir dan Encik Lekiu turut dinamakan sebagai rakan kongsi memandangkan operasi syarikat sudah melangkaui gred G4 iaitu tidak melebihi RM500,000. Semangat saling bantu-membantu dan berbincang tentang sesuatu permasalahan projek menjadikan mereka lebih maju, padu dan mempunyai ukhwah yang tiada tolok bandingnya. Kasih sayang abang dizahirkan dalam bentuk perniagaan yang dirancang bersama. Mereka berkongsi sama rata dari segi gaji, bonus dan elaun-elaun yang telah dipersetujui.

## Meraih Kegemilangan

Tahun 2004 telah menyaksikan dengan modal RM50,000, mereka mendapat projek perkhidmatan awam dan membekalkan hampir apa sahaja yang diminta oleh agensi-agensi kerajaan mahupun swasta. Di antaranya ialah kerja pengubahsuaian pejabat di Lembaga Getah sebanyak RM160,000, kerja pembekalan dan perkhidmatan awam di Jabatan Perkhidmatan Awam (JPA), Universiti Malaya, Jabatan Perdana Menteri dan beberapa agensi besar kerajaan di sekitar Lembah Klang dan Putrajaya. Nama Taming Services semakin dikenali dan reputasinya semakin meningkat. Ini kerana mereka berjaya mengekalkan momentum persembahan mutu kerja yang baik dalam hampir setiap projek dan menyebabkan syarikat Taming Services sendiri telah disyorkan oleh JPA kepada Jabatan Kerja Raya (JKR) sebagai kontraktor yang mempunyai rekod yang baik dalam menjalankan kerja-kerja pengubahsuaian.

Sayap yang sudah ada kini perlu terbang lebih tinggi untuk mencapai matlamat. Mereka adik-beradik sedar perlu ada perancangan lebih kemas dan kreatif bagi meredah persaingan yang sengit. Mereka membuat analisa harga projek untuk memenangi tender dan menghantar sebut harga. Antara keputusan yang rumit adalah membuat pilihan keuntungan atau mendapatkan kerja. Maka dengan itu, teori ekonomi digunapakai dengan menentukan margin keuntungan siling dan lantai bagi setiap jenis projek agar keuntungan yang dibuat adalah munasabah dan tidak mendatangkan kerugian kepada syarikat. Kesemua pengurus iaitu empat beradik itu melengkapkan diri dengan pelbagai jenis kursus untuk meningkatkan tahap kemahiran dan pengetahuan. Sehinggakan Encik Tuah sendiri yang berkelulusan sarjana muda perakaunan mahir melukis plan dan hiasan dalaman mengunakan perisian 3D dan AutoCad. Ini telah menjadi faktor-X Taming Services bila mana kertas cadangan yang dihantar bukan sahaja mengandungi harga dan preskripsi barang tetapi turut memuatkan lukisan-lukisan 3D yang boleh dilihat oleh klien.

Taming Services turut mengamalkan hubungan yang baik dengan para pembekal seperti kedai perkakasan, pembekal karpet, perabot dan lain-lain. Berdasarkan pengalaman dan rekod bayaran yang baik, Taming Services mudah mendapat khidmat kredit daripada pembekal-pembekal yang mana ini telah mengurangkan keperluan modal bagi sesuatu projek. Pembayaran kepada pembekal diselesaikan terus sebaik sahaja mendapat tuntutan berperingkat daripada agensi-agensi terbabit. Seiring dengan perkembangan projek, modal turut diperlukan. Antaranya Taming Services telah mendapatkan pembiayaan Al-Tijari daripada Bank Rakyat bagi projek di bawah RM200,000, iaitu pembiayaan 70 peratus daripada harga projek kerajaan yang diperolehi. Di samping itu juga, Taming Services membuat pinjaman dengan Amanah Faktor bagi kerja-kerja yang telah selesai tetapi belum mendapat bayaran kerana karenah prosedur dan birokrasi. Namun semakin lama di kancah permainan ini, Taming Services sudah bijak menguruskan modal dan dana yang diperolehi, maka selagi boleh mereka akan mengelakkan mengambil pinjaman daripada bank kerana tidak mahu membayar faedah yang tinggi. Pada tahun ketiga pengoperasian, Taming Services sudah boleh bermegah dengan hasil jualan sebanyak RM3 juta setahun dan hasil ini digunakan sebahagiannya untuk mengembangkan lagi perniagaan mereka. Kebanyakan hasil jualan yang diterima pada waktu ini dilakukan oleh Encik Tuah.

Tahun 2007 menyaksikan Taming Services mengambil langkah berani dengan menambah satu lagi bidang perniagaan dalam kejuruteraan besi dengan mengupah beberapa orang tenaga buruh dari Indonesia. Ini membolehkan kerja-kerja yang berkaitan dengan besi dapat dilaksanakan dengan cepat pada harga yang murah. Kerja-kerja besi yang Taming Services jalankan termasuklah kerja memasang jeriji rumah atau pejabat, memasang bumbung bangunan, penutup longkang dan apa jua kerja berkaitan dengan kerja besi. Ternyata keputusan itu tepat sehinggakan tempahan yang diterima daripada projek dan individu sudah tidak menang tangan. Kini Taming Services mempunyai 14 orang tenaga kerja dan lapan daripadanya adalah tenaga buruh rakyat Bangladesh dan Indonesia manakala bakinya adalah pekerja tempatan di bahagian pentadbiran dan operasi. Setahun selepas itu, Encik Jebat mula menunjukkan taringya dan sudah pantas bergerak seiring dengan Encik Tuah sehinggakan hasil jualan beliau pula melangkaui apa yang pernah dicapai oleh abang kandungnya. Ini akhirnya menyebabkan Encik Tuah menyerahkan urusan kewangan syarikat kepada Encik Jebat.

## Konflik dan Kepincangan

Menjelang awal tahun 2013, Encik Tuah mendapat panggilan telefon daripada Encik Jebat yang memaklumkan syarikat Taming Services tidak dapat membayar gaji pengurus-pengurus yang seramai empat orang. Duit yang ada di dalam syarikat perlu digunakan untuk membayar gaji pekerja dan para pembekal yang telah memberi mereka fasiliti kredit. Berita ini bukanlah kali pertama tetapi telah berlaku hampir setahun. Setelah lama termenung, Encik Tuah membuat satu pesanan ringkas kepada rakan-rakan kongsinya untuk duduk semeja bagi mencari jalan penyelesaian. Baginya perkara ini tidak boleh dibiarkan. Banyak benda yang perlu dibayar bukan setakat gaji mereka sahaja.

Perjumpaan diatur dan masing-masing datang untuk memberi pendapat dan idea bagi menyelesaikan masalah. Encik Tuah berpendapat, mungkin sudah tiba masanya pekerja-pekerja asing ditamatkan perkhidmatannya kerana keperluan mereka adalah dalam kerja-kerja penyelenggaraan dan kerja-kerja tersebut pula mendapat bayaran yang sangat lambat daripada sesebuah agensi kerajaan atau badan berkanun. Permasalahan ini lebih rumit kerana salah seorang rakan kongsi mahu terus-terusan mengambil kerja daripada agensi tersebut meskipun tahu pembayaran lambat dan boleh membantutkan pembayaran hutang kepada pembekal yang suatu ketika dahulu sangat mempercayai mereka.

Lebih mengusutkan keadaan apabila rakan-rakan kongsi yang lain termasuk Encik Tuah sendiri tidak dapat mengambil projek lain kerana masalah kewangan yang ketat. Ada juga yang menyalahkan sesama sendiri kerana mudah membenarkan pengaliran wang untuk pembelian harta-harta persendirian dan membuat pelaburan yang tidak bijak seperti pembelian kebun di kampung yang kini payah untuk diusahakan dan dipantau. Pekerja pentadbiran juga silih berganti menyebabkan kecekapan syarikat sering terganggu kerana terpaksa memberi tunjuk ajar semula kepada pekerja baru. Encik Tuah sendiri menyedari yang sudah lama pekerjanya tidak diraikan walaupun dengan jamuan berbuka puasa di restoran seperti yang dilakukan pada awal permulaan perniagaan mereka. Gaji pekerja juga tidak diberikan kenaikan pada kadar yang sepatutnya. Encik Tuah runsing dan tidak tahu di mana silapnya dan hanya ingat sudah lama dia tidak mengambil tahu tentang kewangan syarikat. Kewangan syarikat sudah lama diserahkan kepada rakan kongsinya, Encik Jebat. Apakah rakan kongsinya itu silap perhitungan atau dia yang gagal mengenalpasti punca masalah? Keengganan rakan-rakan kongsi terutamanya Encik Jebat dalam mengambil langkah yang dicadangkan olehnya turut dikesali. Di pihak Encik Tuah masih ada lagi agensi-agensi dan badan berkanun yang ingin menawarkan kerja dan projek tetapi bagaimana dia mahu menerima sekiranya modal yang diperlukan tidak mencukupi? Mesyuarat pada hari itu hanya mencapai kata sepakat bahawa setiap rakan kongsi perlu mengeluarkan sejumlah wang sebagai modal semula bagi pembiayaan projek dan kerja-kerja yang tertangguh. Bukan sekadar gaji sahaja tidak diperolehi, bahkan mereka terpaksa pula mengeluarkan sejumlah wang untuk menjana semula kewangan syarikat. Mereka

amat terdesak dan merasakan mungkin itulah langkah terbaik untuk menyelamatkan Taming Services buat masa ini.

#### 6. HASIL PENEMUAN DAN PERBINCANGAN

Berdasarkan maklumat yang diperolehi seperti di atas, para penyelidik berbincang dan menganalisa hasil dapatan penyelidikan menggunakan kaedah analisis SWOT. Jadual berikut merupakan hasil penemuan penyelidik yang diringkaskan kepada faktor dalaman (kekuatan dan kelemahan) dan juga faktor luaran (peluang dan ancaman).

## **KEKUATAN (STRENGTH)**

- 1. Hubungan erat antara pengurus-pengurus
- 2. Tidak menanggung kos pinjaman bagi modal permulaan
- 3. Penjanaan pendapatan melalui kepelbagaian bidang perniagaan
- 4. Hubungan yang baik dengan pembekal
- 5. Kualiti kerja membuatkan syarikat sentiasa menjadi pilihan klien

## **KELEMAHAN (WEAKNESS)**

- 1. Pengurusan aliran tunai
- 2. Pengabaian kebajikan staf
- 3. Kekangan modal
- 4. Percanggahan kepentingan

## **PELUANG (OPPORTUNITY)**

- 1. Insentif kewangan daripada kerajaan bagi kontraktor Bumiputera
- 2. Kuota projek bagi kontrak gred G1 hanya untuk kontraktor Bumiputera
- 3. Kestabilan ekonomi negara

## **ANCAMAN (THREAT)**

- 1. Kebergantungan terhadap harga semasa bahan binaan
- 2. Persaingan harga yang kompetitif dalam pemberian tender
- 3. Lambakan kontraktor dalam gred yang sama terutamanya G1

Kekuatan yang ada pada syarikat Taming Services adalah faktor utama yang mendorong kepada pengukuhan nama syarikat dan menyumbang kepada kejayaan yang dicapai dari awal penubuhan syarikat sehinggalah kini. Memandangkan para pengurus adalah adik-beradik, hubungan mereka sangat erat dan ini memudahkan mereka mencapai kata sepakat dalam menyelesaikan semua isu yang timbul. Di samping itu juga, hubungan yang baik dengan pembekal adalah sangat penting kepada syarikat. Ini adalah kerana kemudahan fasiliti kredit yang diberikan pembekal kepada syarikat amatlah penting untuk menyiapkan sesuatu projek yang diterima. Kemudahan kredit daripada pembekal juga penting sebagai salah satu cara mengurangkan keperluan modal awal bagi sesuatu projek. Taming Services juga sentiasa memastikan hasil kerja mereka amat baik dan memenuhi spesifikasi klien yang mana ini membuatkan syarikat sentiasa menjadi pilihan klien. Cadangan dari agensi ke agensi turut member impak positif kepada reputasi syarikat. Ini adalah sangat baik untuk jangka masa panjang sesebuah syarikat.

Namun begitu, tidak dinafikan juga bahawa terdapat beberapa kelemahan syarikat yang dapat dikenalpasti. Kelemahan yang ada pada syarikat sedikit sebanyak akan merencatkan perjalanan operasi syarikat. Kelemahan utama Taming Services adalah dari segi pengurusan aliran wang tunai, yang mana apabila projek semakin berkembang, pengagihan kewangan tidak dapat diuruskan secara berhemah. Kebajikan staf juga agak terabai dan ini jelas digambarkan melalui beberapa insiden yang berlaku seperti

kenaikan gaji pada kadar yang tidak sepatutnya serta staf sudah agak lama tidak diraikan walaupun untuk majlis kecil seperti majlis berbuka puasa. Pengabaian ini seterusnya telah mengakibatkan pekerja tidak memberi kesetiaan untuk bekerja dengan lebih lama di syarikat. Ini juga bertentangan dengan apa yang dinyatakan dalam misi syarikat iaitu "bertanggungjawab ke atas kebajikan kakitangan syarikat".

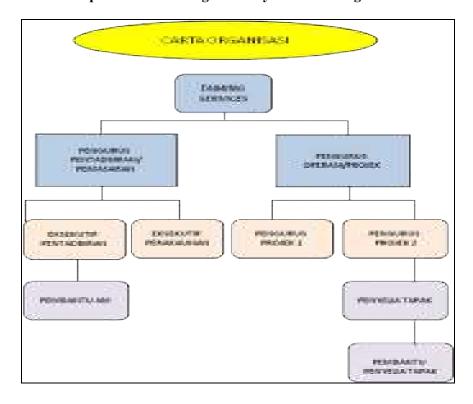

Dari segi peluang, banyak insentif yang disediakan oleh kerajaan seperti insentif kewangan yang telah disediakan. Tambahan pula, gred G1 dikhususkan buat kontraktor Bumiputera sahaja. Melihat kepada perkembangan negara yang agak stabil, ditambah dengan bilangan projek yang pesat dibangunkan seperti Projek Koridor Raya Multimedia Cyberjaya, dapat membuka peluang kepada kontraktor-kontraktor untuk terlibat aktif dalam projek-projek seperti ini.

Walau bagaimanapun, terdapat juga ancaman bagi syarikat ini. Ancaman yang utama ialah kebergantungan syarikat pembinaan terhadap harga semasa bahan binaan seperti simen dan besi. Di samping itu juga, dalam usaha merebut tender, syarikat perlu membida tender dengan harga yang rendah dalam persaingan yang kompetitif. Ianya juga disebabkan oleh lambakan kontraktor dalam gred yang sama terutamanya G1.

## 7. KESIMPULAN

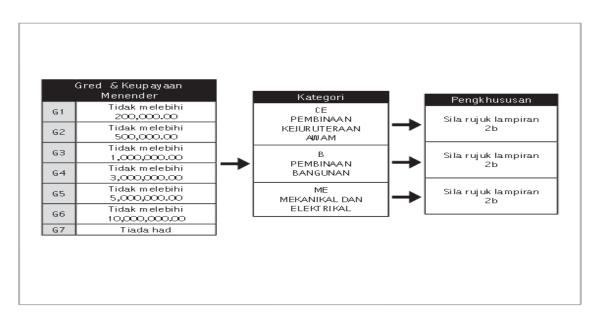

Dalam mengukuhkan industri pembinaan di Malaysia, banyak pihak perlu memainkan peranan antaranya kerajaan yang perlu menyediakan insentif-insentif dalam bentuk kewangan dan bukan kewangan bagi meneruskan kelangsungan sesebuah syarikat kontraktor. Kerajaan juga boleh membantu dalam pengawalan harga bahan mentah sekiranya diperlukan. Ini bertujuan untuk mengelakkan kos sesebuah projek menjadi terlalu tinggi disebabkan oleh harga bahan mentah yang mahal. Selain itu, pihak pembekal perlu lebih fleksibel dalam memberi dan menyediakan fasiliti-fasiliti yang diperlukan oleh kontraktor seperti fasiliti kredit, pengangkutan dan penghantaran. Klien yang mana terdiri daripada agensi-agensi kerajaan dan swasta perlulah memastikan kurangnya karenah birokrasi dan prosedur terutamanya dalam pembayaran sesebuah projek. Sungguhpun isu rasuah tidak dibangkitkan di dalam kes ini, namun semua pihak di atas termasuklah kontraktor sendiri perlu mengambil berat dalam memastikan pertumbuhan yang baik dan bersih bagi industri pembinaan di Malaysia. Jika tidak dibendung, rasuah mampu menjadi faktor utama yang mengganggu gugat bukan sahaja perkembangan industri pembinaan tetapi ekonomi Malaysia secara keseluruhannya.

Berdasarkan kajian kes di atas, boleh disimpulkan masalah kewangan dan kebergantungan modal boleh merencatkan sesebuah syarikat pembinaan. Kekangan ini boleh mengakibatkan ramai kontraktor Bumiputera menjadi muflis. Persepsi orang awam juga seringkali melabelkan bahawa kontraktor Bumiputera tidak mampu menghasilkan mutu kerja yang baik, tidak efisien dan tidak pandai mengurus sumber kewangan yang diperolehi. Namun begitu, dapatan awal penyelidik ke atas beberapa syarikat kontraktor Bumiputera (termasuk kes ini) amatlah mengejutkan. Ini kerana syarikat-syarikat kontraktor Bumiputera amatlah kompetitif dan berusaha keras untuk meningkatkan taraf ekonomi mereka. Ini sekaligus telah memotivasikan kontraktor-kontraktor Bumiputera dalam menambah ilmu pengetahuan, kemahiran dan pengalaman untuk menjadi syarikat yang berjaya dan ternama.

## ROLE OF ISLAMIC BANKING SECTOR IN TRANSMITTING THE MONETARY POLICY TO THE REAL ECONOMY: EVIDENCES FROM MALAYSIA

Omar Alaeddin<sup>1</sup> Ginanjar Dewandaru<sup>2</sup>

#### **ABSTRACT**

This paper aims to show the magnificence of Islamic banks in the monetary transferring process within the Malaysian economy. Particularly, the paper tests the significances of deposit and financing by Islamic banks in controlling how the monetary policy affects the real economy. The paper depends on various methods in the analyses process such as variance decomposition analysis, co-integration test and impulse response functions that concentrate on the period from January 1999 to September 2011. The results show that Islamic banks' financing take a big part in the monetary transmission process in the Malaysian economy. Statistically, Islamic deposit and financing are showing an essential relation between the monetary policy indicator and the real output. The results suggest that the monetary authority in Malaysia have to take into account the Islamic banks within the implementation of monetary policy. As well as, the results are entailing that the stability of Islamic financial institutions is vital like the conventional financial institutions, for the purpose of achieving a valuable transmission of monetary policy in the Malaysian economy.

**Keywords:** Monetary policy, Financing, Malaysia, Islamic Banks, Islam Economics

#### 1. INTRODUCTION

The effects of monetary policy on the real economy take place through several main channels, which include exchange rate channel, credit, asset price and interest rate. The impact of each channel on the transmission process theoretically relies on the structural characteristics of the economy. For example, when a country depends highly on bank credit to finance its economic activities, the credit channel will serve as a key driver to control the monetary policy transmission. In Malaysia, the credit channel dominates the overall economy, particularly within the context of financial intermediary development where the composition of credit market vis-à-vis capital market is 70% and 30% respectively (BNM, 2007), thereby suggesting the important role of banks in monetary policy transmission. In addition, with regard to the importance of Malaysia as one of the most potential emerging country that has experienced its transformation from being a raw material producer to a multi sector economy, the monetary policy will serve as an essential mechanism to promote further growth as well as maintain its stability and resiliency.

Focusing on the micro-sector of the financial infrastructure, Malaysian government has made a substantial contribution in developing Islamic banking with the main aim to make Islamic finance having a major role in the economy. The target of 40% market share for Islamic banks in the year 2020 seems aggressive yet achievable due to the strong commitment from the government. With a high development of Islamic banking's products and innovations, supported by a strong demand from public and private entities, the role of Islamic banks therefore should considerably be taken into account the macro-framework related

<sup>&</sup>lt;sup>1</sup> CIFP holder, PhD student at INCEIF, Islamic finance lecturer at Business school of UniKL- Malaysia and previously a Shariah Supervisor on Syria International Islamic Bank- Syria <sup>2</sup> PhD student and research assistant at INCEIF.

policy, especially dealing with monetary mechanism and transmission. Even though there have been a substantial researched pertaining to the performance of Islamic banks, to the best of our knowledge, there are only few prior studies which focuses on the contribution of Islamic banks to monetary policy.

Therefore, this article attempts to address the issue by using a more-robust methodology as an added value. Specifically, the objectives of this paper are to: (i) determine the importance of the Islamic banks in the monetary transmission process in the Malaysian economy, and (ii) analyses the relevance of Islamic banks' financing and deposit in channelling the monetary policy effects to the real economy. The length of observations will be monthly data from January 1999 to September 2011, where our analysis will cover cointegrated-VAR, vector-error correction model, VDCs, IRF and persistence profile in order to observe the long-run equilibrium relationships as well as short-run dynamic between variables, thereby providing useful interpretation with regards to policy implication. The research is structured as follows: Section 2 outlines the literature review on the subject; Section 3 describes the data and methodology used in the analysis; Section 4 presents the main findings and analysis. Lastly, we conclude and make some recommendations for future research.

## 2. LITERATURE REVIEW

As to a short-brief history of Islamic banks in Malaysia, the government has made a substantial contribution in developing Islamic banking with the main aim to make Islamic finance having a major role in the economy. The institution of Pilgrims Management and Fund Board (PMFB) was the first step in the Malaysian history with Islamic banking and finance industry. This institution acts as the major interest-free financial institution in Malaysia (Ariff, 1989). In August 1969 the PMFP was established. The core behind this institution is to collect and manage the reserve from the people who plan to leave for pilgrim (hajj) in Mecca. Accordingly, from the beginning of 1980s, the Malaysian Muslims have been constantly asking for Islamic banking. In other world Shariah-compliant products and services that supply an option to the conventional banking services.

In 1982, the Malaysian government answered for these desires through the establishment of a particular board to study them. This process has ended by the new Islamic banking Act (IBA) during 1983. Bank Islam Malaysia Berhad (BIMB) was the first Islamic bank to be settled and started operating at the first of July 1, 1983. For making sure that BIMB was operating within the shariah rules and principles, during that time, the Shariah advisory council (SAC) of Bank Negara Malaysia (BNM) was taking care of the monitoring process.

As to the linkage between banking sector and monetary mechanism, several studies have been done mainly focusing on conventional banks. Specifically, prior studies have empirically justified the importance of banking sector in transferring the influence of monetary policy, for example, Tang (2000, 2002), Vaithilingam et al. (2003), Azali (2003) and Ibrahim (2005). The study related to the dual-banking system adopted by Malaysia has been done by Kassim and Abdul Majid (2008), which suggest the role of Islamic banks in monetary policy. Due to only few studies that have concerned on the context of Islamic banks, our study attempt to empirically address this issue, and fill the gap, specific to the contribution of Islamic banks in monetary policy.

## 3. DATA AND METHODOLOGY

#### 3.1. Data and theoretical foundation

To investigate the importance of the Islamic banks in the transmission process of monetary policy, we take the theoretical relationship derived from major studies on the monetary transmission mechanism such as Bernanke and Blinder (1988), Garretsen and Swank (1998), Gertler and Gilchrist (1993) and Suzuki (2001). The studies analyse a model comprising of variables representing the real economy and monetary policy, and focus variables being considered as possible channels of monetary policy.

In view of this, the following model is being considered:

$$IPI = f_{c}(FIN; DEP; INT; CPI)$$

where IPI is industrial production index, FIN is Islamic financing, DEP is Islamic deposits, INT is the 3 months interest rate and CPI is consumer production index as a proxy of the inflation. In this model, the IPI is being used as a proxy for economic output, FIN and DEP are the Islamic banks' two major balance sheet items being Islamic financing and Islamic deposit, respectively, and INT is the indicator for the monetary policy interest rate.

In terms of data frequency, the study employs monthly data series for the period from January 1999 to September 2011. All data are sourced from the various issues of the Bank Negara Malaysia's (1999-2011) Monthly Statistical Bulletin and the DataStream for the IPI and CPI.

Table 1.1 List of the variables

## 3.2. METHODOLOGY

## 3.2.1. Econometrics modelling

Traditionally, multivariate regression analysis has been widely used to examine the relationship between variables, which has serious limitations because of non-stationarity nature of most of the macroeconomic and financial variables. With the non-stationary variables traditional regression provides either spurious relationship (ifthe original ''level'' form of the variables was non-stationary) or a short run relationship (if the variables were ''differenced'' to make the original variables stationary) (Masih, Al-Sahlawi, & Mello, 2010). This study, because of the damaging shortcomings of multivariate regression analysis, employs the Johansen multivariate cointegration approach to examine the cointegration among the Islamic equity index prices with a view to check the long run theoretical relationship of the Islamic indices.

After checking cointegration, this study applies vector error correction model (VECM) to determine the speed of the short-run adjustment towards long term equilibrium by the size of the error correction coefficient. VECM also helps to identify the endogenous and exogenous indices. Endogenous equity index is a dependent variable, the movement of which depends on the changes in the exogenous equity indices, which are independent variables. In addition, this study uses the impulse response and error variance decomposition technique to examine the relative exogeneity/endogeneity of the selected Islamic equity indices. Furthermore, this study employs persistence profile (PF) test to find out the time horizon required for the cointegrating relation to move back to equilibrium point following an economy wide shock. Finally, This study employs Multivariate Beveridge-Nelson decomposition technique in a cointegrating framework in order to decompose the price trends of Islamic equity indices into their permanent and transitory parts. Charting of the permanent and transitory parts of the trend would be very much conducive to track the price movement style of the indices due to the performance (fundamentals) of the firms in the indices and the temporary shocks in the economy.

## 3.2.2. Johansen Cointegration and other related tests

The Augmented Dickey-Fuller (ADF) and Philips-Perron (PP) tests are used to check the stationarity of the variables as a starting point of the Johansen cointegration test. The lag length for the time series analysis is determined by choosing the lag length given by the minimum Akaike Information Criteria (AIC) and Schwarz Information Criteria (SBC). The Augmented Dickey-Fuller (ADF) (1979, 1981) test involves the estimation of the following general specification:

$$\Delta X_{t} = \alpha_{0} + \alpha_{1}T + \beta X_{t-1} + \sum_{I=1}^{p} \delta_{I} \Delta X_{t-I} + \varepsilon_{t}$$
(1)

The Phillips-Perron (PP) (1988) test suggests a non-parametric method of controlling for higher order autocorrelation in a time series and is based on the following equation:

$$\Delta X_{t} = \alpha_{0} + \beta T + \beta_{1} X_{t-1} + \sum_{J=1}^{p} \delta_{J} \Delta X_{t-J} + \varepsilon_{t}$$
(2)

In both ADF and PP equations,  $\Delta$  represents the difference operator,  $\alpha$ ,  $\beta$ , and  $\delta$  are coefficients to be estimated. X stands for the variable whose stationarity should be checked and  $\epsilon$  is the residual term. The critical values for the Phillips-Perron test are the same as those for the Dickey-Fuller test (DF) and depend on whether the DF regression contains an intercept term or a time trend.

After testing the stationarity of the variables, Johansen cointegration technique is employed to examine the cointegration of the concerned Islamic equity indices. Johansen (1988) and Johansen and Juselius (1990) suggested considering the vector autoregressive (VAR) model of the following form:

$$\Delta Y_t = C + \sum_{i=1}^k \Gamma_i \, \Delta Y_{t-1} + \Pi Y_{t-1} + \varepsilon_t \tag{3}$$

Where,  $Y_t$  is a vector of non-stationary variables and C is a constant term. The matrix  $\Gamma_i$  consists of the short run adjustment parameters and matrix  $\Pi$  contains long run equilibrium relationship information between the Y variables. The  $\Pi$  could be decomposed into the product of two  $n \times r$  matrix  $\alpha$  and  $\beta$  so that  $\Pi = \alpha \beta$ , where  $\beta$  matrix contains r number of conintegration and  $\alpha$  represents the speed of adjustment parameters. Johansen (1988) and Johansen & Juselius (1990) developed two statistics for identifying the number of cointegrating vectors, which are Trace statistic ( $\lambda_{Trace}$ ) and the maximum Eigenvalue statistic ( $\lambda_{Max}$ ). These two statistics can be expressed as follows:

$$\lambda_{Trace} = -T \sum_{i=r+1}^{N} \ln(1 - \hat{\lambda}_i) \tag{4}$$

and,
$$\lambda_{Max} = -T \ln(1 - \hat{\lambda}_{r+1}) \tag{5}$$

Where,  $\lambda_i$  is the estimated value of the ith characteristics root obtained from the estimated parameter matrix  $\Pi$  and T is the number of usable observations. The  $\lambda_{Max}$  statistic tests the null hypothesis that there are at least r cointegrating vectors as against the alternative of (r+1) cointegrating vectors.

Presence of cointegration indicates that there exists a theoretical relationship among the variables and they are in equilibrium in the long run in spite of short-run deviation from each other. Masih et al (2010) stated that a test of cointegration can also be considered as a test of the extent of the level of arbitrage activity in the long-term. Cointegration implies that these variables are interdependent and highly integrated (as if they are constituents of one integrated market). Cointegration also implies that each variable contains information for the prediction of other variables. Moreover, the evidence of cointegration has implications for portfolio diversification by the investors. The possibility of abnormal gain through portfolio diversification is limited in the long run in a cointegrated market.

Presence of cointegration, however, cannot express the direction of Granger causality between the variables as to which variable is leading and which variable is lagging (i.e., which variable is exogenous and which variable is endogenous) (Masih, et al, 2010). The Vector Error Correction Model (VECM) is applied to determine the endogeneity/exogeneity of the variables. The error correction term (ECT) stands for the long term relations among the variables. At least one of the ECT terms should be significant for the validity of the cointegrating relationship among the variables in the long term. If the error correction term is insignificant, the corresponding dependent variable is 'exogenous'. On the contrary, if the error correction term is significant, the corresponding dependent variable is 'endogenous'. This study estimates Vector Error Correction Model (VECM) following finding cointegration among the indices. The VECM implies that changes in the dependent variable are a function of the level of disequilibrium in the cointegrating relationship i.e., the departure from the long-run equilibrium as well as changes in other explanatory variables. Considering the variables of this study, the VECM can be represented as follows:

$$\Delta Y_t = C + \Pi Y_{t-k} + \Gamma_1 \Delta Y_{t-1} \dots \dots \dots + \Gamma_{k-1} \Delta Y_{t-(k-1)} + \varepsilon_t (6)$$

In equation (6),  $\Pi = \left(\sum_{i=1}^k \beta_i\right) - I_g$  is the long run coefficient matrix of the lagged  $Y_t$  and  $\Gamma_i = \left(\sum_{j=1}^i \beta_j\right) - I_g$  is a coefficient matrix of k-1 lagged difference variables,  $\Delta Y_t$ .

For intensive analysis, the generalized (reduced) form of VECM is derived as follows:  $\Delta Y_{t} = C + \Pi Y_{t-k} + \sum_{i=1}^{k-1} \Gamma_{i} \Delta Y_{t-i} + \varepsilon_{t}$ (7)

In equation (7),  $\Delta Y_r$  is the vector of first differences of the variables. The long run parameter matrix,  $\Pi$  with r cointegrating vectors ( $1 \le r \le 5$ ),  $\Pi$  has a rank of r and can be decomposed as  $\Pi = \alpha \beta$ , both  $\alpha$  and  $\beta$  are  $5 \times r$  matrices.  $\beta$  matrix contains the parameters in the cointegrating relationships and  $\alpha$  matrix contains the adjustment coefficients which measure the strength of the cointegrating vectors in the VECM. Following estimation of VECM, this study performs variance decomposition technique to break down the variance of the forecast error for each variable into proportions attributable to each variable in the model including its own. The variable which is explained mostly by its own past is the most leading

variable. The graphical representation of variance decomposition is called impulse response. This approach is to determine how each endogenous variable responds over time to a shock in that variable and in every other endogenous variable. The impulse response function traces the response of the endogenous variables to such shocks.

#### 4. EMPIRICAL RESULTS

Our study will perform several empirical tests that include unit root, cointegration, vector-error correction model, variance-decomposition analysis, impulse response function and persistence profile as follows.

## 4.1. Unit root test and order of VAR

The stationary of variable should be checked before proceeding to the cointegration test. This study applied Augmented Dicky Fuller (ADF) unit root tests to check the stationarity of the variables at level and difference form. The requirement is that the level-form variable should follow unit root (non-stationary) while the difference form has to be stationary. The ADF basically tests the null hypothesis  $\rho = 0$  given by the t-ratio of the coefficient of xt-1. If the t-ratio of the coefficient is not statistically significant, we can accept the null that  $\rho = 0$ . Then, the variable is non-stationary and is a random walk which has a long term memory. The advantage of ADF test is that it takes care the autocorrelation which means that it will test with free of autocorrelation problem. Table 2 summarizes the unit root test results.

Table 2.1: ADF test for level-form variables

#	Variable	Statistical value	Critical value	Null Hypothesis, Ho
1	LIPI	-2.5673	-3.4409	Accepted
2	LINT	-2.3294	-3.4409	Accepted
3	LFIN	-1.6948	-3.4409	Accepted
4	LDEP	-1.4800	-3.4409	Accepted
5	LCPI	-2.1883	-3.4409	Accepted

Table 2.2. ADF test for difference variables

#	variable	Statistical value	Critical value	Null Hypothesis, Ho
1	DLIPI	-4.9968	-2.8812	Rejected
2	DLINT	-4.9868	-2.8812	Rejected
3	DLFIN	-4.4700	-2.8812	Rejected
4	DLDEP	-7.3294	-2.8812	Rejected
5	DLCPI	-5.7770	-2.8812	Rejected

Both tests assume null hypothesis of non-stationarity against the alternative hypothesis of stationarity. Stationarity of the variables necessitates in accurate and efficient prediction in future. The above test results conclude that all variables are non-stationary at level and stationary at first difference, implying that the variables are integrated of order one, that is, I(1).

As to the order of VAR, the test will include AIC and SBC that determine how many lags of each variable we should take for our model. The result shows the best optimum lags of 2 based on AIC (1614.7).

## 4.2. Johansen cointegration test and Long Run Structural Modeling (LRSM)

The study applied the standard Johansen Cointegration test in order to check the cointegration among the variables with a VAR order of 2. The VAR order was determined by the appropriate lag length criteria of AIC

Table 4. Johansen Cointegration Test Cointegration LR Test Based on Maximum Eigenvalue

	_	omittegi merom zart	Tost Buseu on Humani Bigen	,
Null	Alternative	Statistic	95% Critical Value	90%Critical Value
R=0	R=1	67.8614	37.8600	35.0400
R=1	R=2	23.2869	31.7900	29.1300

Cointegration LR Test Based on Trace Stochastic Matrix

		<b>7</b>		
Null	Alternative	Statistic	95% Critical Value	90%Critical
				Value
R=0	R=1	128.7124	87.1700	82.8800
R=1	R=2	60.8510	63.0000	59.1600

Both maximum eigenvalue test statistic and trace test statistic indicate presence of one cointegrating relationship among the I(1) variables. Results show that calculated eigenvalue statistic null hypothesis (H0): r = 0 against alternative hypothesis (H1): r = 1 is 67.8614 >37.8600 (95% critical value), which implies rejection of H0 and acceptance of H1, and we conclude that there exists one statistically significant cointegrating relationship among the I(1) variables (theoretically cointegration does exist if both Trace and Maximum Eigenvalue statistic or either of the two measures shows the presence of cointegration). Trace statistic also shows presence of one cointegrating relationship among the concerned variables. Relationship among the variables is not spurious when they are cointegrated. This implies that there is a theoretical relationship among the variables and they are in equilibrium in the long run even though their movement may deviate from each other in the short run. Intuitively, our variables (IPI, INT, CPI, DEP, FIN) theoretically move together in the long run, as well as each variable contains information to predict another variable when they are cointegrated. Therefore, it helps the policy makers to recognize this relationship in their decision as each variable serve as its indicator in our study (real economy growth, monetary policy, inflation, banking sector). An evidence of cointegrating relationship also implies that there exists a common force that brings each variable to equilibrium in the long term.

## 4.3. Vector Error Correction Model (VECM)

Presence of cointegration, however, does not indicate the direction of Granger causality between the variables as to which variable is leading and which variable is lagging, i.e. which variable is exogenous and which variables is endogenous. This study applied vector error correction modeling technique in order to precisely identify the exogenous (independent) and endogenous (dependant) variables. If the coefficient of the lagged ECT in any equation is insignificant, it means that the corresponding dependent variable of that equation is exogenous. This variable does not depend on the deviations of other variables. It also means that this variable is a leading variable and initially receives the exogenous shocks which results in deviations from equilibrium and transmits the shocks to other variables. On the other hand, if the coefficient of the lagged ECT is significant, it implies that the corresponding dependent variable of that equation is endogenous. It depends on the deviations of other variables. This dependent variable also bears the brunt of short-run adjustment to bring about the long term equilibrium among the co-integrating variables. At least one of the ECT terms should be significant for the validity of the co-integration relationship among the variables in the long term. Table 5 summarizes the results of vector error correction modeling.

Table 5. VECM

Variable	ECM(-1) t-ratio p-value	At 5% significance level
DLIPI	-4.5086[.000]	Variable is endogenous (follower)
DLINT	5.1285[.000]	Variable is endogenous (follower)
DLCPI	.82860[.409]	Variable is exogenous (leader)
DLFIN	1.9457[.054]	Variable is exogenous (leader)
DLDEP	-4.0472[.000]	Variable is endogenous (follower)

From the above results, we found the exogenous variables (leader) are the CPI (consumer production index) and LFIN (Islamic bank Financing) at the 95% level, while the other variables namely (IPI, DEP, INT) are endogenous (followers). Intuitively, when there is a shock to the (CPI or FIN) they will deviate from the equilibrium and transmit the shock to other variables, whereas if the shock occurs to the IPI, INT, and DEP, the long run combination will correct it through the short run adjustment to the equilibrium. However, before deriving any useful information, we need to evaluate the response of each variable to the shock in order to observe the relative exo/endogeneity amongst variables.

## 4.4. Variance Decompositions (VDCs)

Error correction models, although tend to indicate the endogeneity/exogeneity, are unable to distinguish the relative degree of endogeneity or exogeneity of the variables. This study applies variance decomposition technique in order to figure out the relative degree of endogeneity or exogeneity. The relative endogeneity or exogeneity of a variable can be recognized by the proportion of the variance explained by its own past. We recognize the most exogenous or endogenous variable by looking at the proportion of the variable explained by its own past. The variable that is explained mostly by its own past, as compared to other variables, is supposed to be the most exogenous or endogenous variable.

In this study, we will not use Orthogonalized Variance Decomposition Analysis. The orthogonalized VDCs are not unique and depend on the particular ordering in the VAR. It also assumes that when a particular variable is shocked, all other variables in the system are switched off. Therefore, we use the Generalized Variance Decomposition.

Table 6. Generalized VDCs (40 months-forecast errors)

	LIPI	LINT	LCPI	LFIN	LDEP
LIPI	17.43%	43.11%	0.71%	6.42%	32.33%
LINT	12.70%	61.00%	0.27%	5.38%	20.65%
LCPI	48.87%	24.11%	15.96%	6.72%	4.34%
LFIN	8.42%	9.62%	1.28%	72.71%	7.98%
LDEP	22.93%	5.44%	0.93%	6.06%	64.64%

The empirical result is quite interesting as Islamic financing (LFIN) turns out to be the most exogenous since it depends mostly on its own past (72.7%). It is in line with the economic theories which ensure the importance role of financing in leading the other economic and financial indicators.

On the other hand, we can find inconsistency between VECM and VDCs as CPI turns out to be the most endogenous, which is understandable as the short-run adjustment to the equilibrium for inflation should be highly sensitive in response to any shock both in the real economic growth and financial sector development.

The ranking of exo/endogeneity will follow: LFIN 72%, LDEP 64%, LINT 61%, LIPI 17%, and LCPI (15%). Therefore, policy maker should recognize the importance of the Islamic financing playing a vital role in influencing the economic growth. Overall, this result is quite in line with the theories which study the significance of the financing and the lending channel in the monetary transmission process in Malaysia due to the critical role that the banking sectors plays in financing economic activities in the economy.

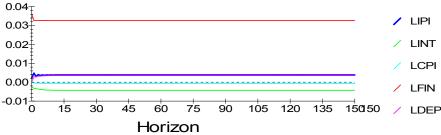

## 4.5. Impulse Response Functions (IRFs) and Persistence Profile (PP)

IRFs portray the dynamic response path of a variable due to one standard deviation shock to another variable. The IRFs are normalized such that zero represents the steady-state value of the response variable. In other words, IRFs map the dynamic response path of all variables owing to a shock to a particular variable. The IRFs trace out the effects of a variable-specific shock on the long-run relations.

The following figure 1 reports graphs of the impulse response functions, where we focus on the shock of Islamic financing and observe the impacts on other concerned variables.

Figure 1. IRF

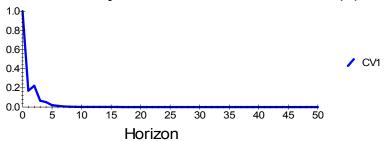

Generalized Impulse Response(s) to one S.E. shock in the equation for LFIN

The figure indicates the deviation of our concerned variables when there is a positive shock to the Islamic financing. We can observe the deviation of each variable with the positive/negative relationship in line with the established theory.

Moreover, we proceed with persistence profile test that indicate the time horizon required for all variables to get back to equilibrium when a system-wide shock occurs. The main difference between the persistence profiles and IRFs is that the persistence profiles trace out the effects of a system-wide shock on the long-run relations. On the other hand, the IRFs trace out the effects of a variable-specific shock on the long run relations. In the persistence profiles, we shock our whole equation whereby this shock comes from external factor outside our equation or our system.

## Persistence Profile of the effect of a system-wide shock to CV'(s)

When there is an external shock, the result shows that all variables will deviate from the equilibrium, meaning that each of variables will move differently in the short run. In other words, they are temporarily not co-integrated. However, all variables in the equation will require approximately 6 periods (months) for them to co-integrate again and return to the long-run equilibrium, thereby signifying their long-run equilibrium relationship.

#### 5. CONCLUSION AND POLICY IMPLICATION

This paper attempts to find out the impact of the Islamic banks on the Malaysian economy throughout the monetary transmission process. The paper is taking into concern how monetary policy affects to the real economy by analysing the consequence of Islamic banks' financing and deposit.

Theoretically, banks' lending means are surviving when the policy is assigned in line with the bank deposit and the real economy as well. Particularly in Malaysia where the dual banking system prevails, the study stresses whether Islamic institutions react in a similar as their conventional parts once a specific monetary policy is implemented by the central bank. Therefore, the purpose of this study stresses on policy implementation where a dual banking system is existed.

The results suggest that Islamic banks play a vital role in the monetary process transmission in Malaysia. Hence, it is essential for the Malaysian policymakers to consider the Islamic banks in their implementation of a specified monetary policy. Furthermore, the efficiency of the monetary policy transmission is affected by both Islamic and conventional banks.

Additionally, results also show the high degree of reliance on Islamic deposit within the Islamic financial institutions. This may attributes adversely to the field providing the existence of commercial risk and short-term period deposits by customers.

Accordingly, Islamic banks should attempt to raise funds in a certain way rather than deposits. One of the proposed solutions is the development of an Islamic money market in order to achieve a healthy alternative source of fund.

This study suggests that other empirical studies within different markets are worth pursuing. The interpretation within the economy may help policymakers to make an accurate decisions aligned with the intended monetary policy. Limitations attached to this study such as the theoretical foundation leave something to be desired or otherwise such a study may be considered as a statistical data mining.

The underlying theory within the Islamic financial sector would appear to be challenging due to the fact that Islamic financial institutions are in the development stage and therefore directed efforts are required.

As a human effort relies on the limited knowledge and experience, I hereby admit my weaknesses and imperfection in this humble work, which includes the errors, misrepresented and flaws in argument. Allah knows best and only ALLAH has the perfection.

# IS ISLAMIC FINANCING AN EFFECTIVE MONETARY POLICY TRANSMISSION CHANNEL? EVIDENCE FROM MALAYSIA

Salina H. Kassim<sup>1</sup> Zamrah Hasin<sup>2</sup>

#### **ABSTRACT**

This paper aims to empirically determine if Islamic financing is an effective channel for monetary policy transmission by focusing on the case of Malaysia. The paper adopts the autoregressive distributed lag (ARDL) bound testing and innovation accounting approaches on quarterly data spanning from 1999:Q1 to 2010:Q4. The co-integration results indicate a long-run relationship among the variables, while the ARDL model clearly shows that the interest rate has a significant negative impact on the Islamic financing. The impulse response functions and variance decompositions also point towards the same findings. The results provide the support for the importance of the Islamic financing channel in the monetary transmission process in the case of Malaysia. This implies that in designing monetary policy, t he central bank may consider Islamic financing as an alternative or complement channel for monetary transmission since this channel is just as active as conventional lending channel.

**Keywords**: Islamic banking, bank lending channel, monetary transmission, ARDL, innovation accounting

## 1. INTRODUCTION

The monetary policy conducted by central banks targets to influence the overall performance of the economy in order to achieve its objectives i.e. sustainable economic growth, stable price, full employment, and exchange rate stability. Meanwhile, the channel of monetary transmission in affecting economic activities is also important and much relevant to the effectiveness of monetary policy.

The bank lending is one of conduits through which monetary policy can be transmitted. In boom period with high inflation, a central bank might implement tight monetary policy by increasing the statutory reserve requirement (SRR) in order to reduce inflation. Upon this regulation, bank reserve decreases, causing fewer bank loans to be made available. Thus, investment spending declines, because of which fewer number of investors will be getting loans. Consequently, aggregate demand decreases, affecting output to decline. Hence, in this channel, banks play an important role as financial intermediary that have specialized knowledge in making credit which cost them less than other sources. In market imperfection, there are some borrowers who depend on loans of banks. In other words, loans are perceived as imperfect substitution for other types of credit, i.e., raising money in

<sup>&</sup>lt;sup>2</sup> Department of Economics, Kullivyah of Economics and Management Sciences, International Islamic University Malaysia.

capital market. Hence, the reduction of loans leads to the decline in investment spending, and consequently, output decreases.

The bank lending channel has captured the attention of many economists and researchers. There is substantial literature in this area for developed countries, such as those by Bernanke and Blinder (1992), Gertler and Gilchrist (1993), Kashyap and Stein (1997), and Brissmis et al. (2001). Many studies documented evidences supporting the existence of the bank lending channel in many countries. Altunbas et al. (2002), for example, have found the bank lending channel in Europe. Also, many aspects of the bank lending channel have been analyzed, among them are: the issue of sensitiveness of bank lending with different size, capital strength and liquidity on monetary policy (Brissmis et al., 2001; Gambacorta, 2005; Worm, 2001), and also the issue of sectoral effects of monetary policy (Dale and Haldane, 1995; Dedola and Lippi, 2001; Arnold and Vrugt, 2002).

Furthermore, many studies on monetary transmission for developing countries were also conducted by those such as Arena et al. (2006), Agung (1998) and Ramlogan (2004). Various channels of monetary transmission are investigated in those countries. The results vary from one country to another, yet all of these studies seem to suggest the existence of credit channel (Ramlogan, 2004; Huang and Pfau, 2008; Ahmad, 2008). Some studies also document on the factors affecting the activeness of the bank lending channel, i.e. size, liquidity and origin of banks (Arena et al., 2006; Agung, 1998). However, these studies mainly focus on bank lending from conventional banking system only.

Unlike other countries, Malaysia is operating under the dual banking system, namely conventional and Islamic banking systems. This makes Malaysian banking system unique. Therefore, the bank lending channel in Malaysia can be viewed in two aspects. The first aspect is traditional lending channel through conventional banks, while the second one is financing channel through Islamic banks. But there are very limited researches on Malaysia.

In this light, both bank lending and Islamic financing channels are investigated. In term of bank lending channel, existing studies show that monetary transmission through the bank lending channel is active, for example Goh and Yong (2007), Kassim and Majid (2009), Kassim (2006) and Sayuti (2009). With regard to the Islamic financing channel, hardly there are any studies. This may be due to the recentness of the establishment and improvement of Islamic banking system in Malaysia. The limited existing studies, however, investigate mainly to prove the existence of Islamic financing channel for monetary transmission in Malaysia (Said and Ismail, 2007; Sukmana and Kassim, 2010; Sayuti, 2009). Some researchers employ methodologies such VAR model, structural VAR model in producing empirical results (Sayuti, 2009; Said and Ismail, 2007; Kassim, Majid and Yusof, 2009). Then, there are few studies which analyze the causality between interest rate and Islamic financing by using Toda-yamamoto approach. The results show strong causality between the interest rate and Islamic financing (Ibrahim and Sukmana, 2011).

The remainder of this paper is organized as follows: the next section provides some background information of Islamic banking in Malaysia. Then the paper elaborates data and empirical approaches used in this paper. Subsequently, empirical results and analysis are presented. Lastly, the paper ends with the conclusion and some implication of the findings.

#### 2. BACKGROUND INFORMATION

The financial system in Malaysia is operating under two systems namely, conventional and Islamic financial systems. Both are moving in parallel that make Malaysia being in dual banking environment. The Islamic financial system in Malaysia consists of Islamic banking system, Islamic money market, Islamic capital market, Islamic insurance, and the special financial institutions that provide sources of financing. However the backbone of the Islamic financial system is the Islamic banking system (BNM, 2003).

The early stage of Islamic banking in Malaysia started from the establishment of Pilgrimage Fund Corporation or known as "Tabung Haji" in 1963. The main objective of this fund was to encourage people to save for their pilgrimage since it is one of their ritual obligations. In addition, the establishment also served the need of people for institutions free from interest rate and for channeling their deposits in permissible activities. Therefore, the main activities of Tabung Haji are depository, investing accumulated funds, and monitoring the investment and serving for pilgrimage. Following the success of Tabung Haji, the first full fledge Islamic Bank was established in 1983. It was Bank Islam Malaysia Berhad.

In order to increase the players in the Islamic banking industry, in 1993, the Malaysian government allowed the conventional banks to offer Islamic products. This concept was known as Islamic banking window. This move was launched by BNM under the scheme known as "Skim Perbankan Tanpa Faedah" (SPTF/ interest-free banking scheme). Encouraging from its expansion and success, in 1999, Bank Muamalat Malaysia Berhad (BMMB) was established as the second full fledge Islamic bank (Ladin, 2008).

In term of regulation framework, the Islamic banks are regulated under the Islamic Banking Act 1983 (IBA) while the conventional banks which involve in the Islamic Banking Scheme are regulated under the Banking and Financial Institutions Act 1989 (BAFIA). In addition, both the Islamic and conventional banks are supervised by the BNM.

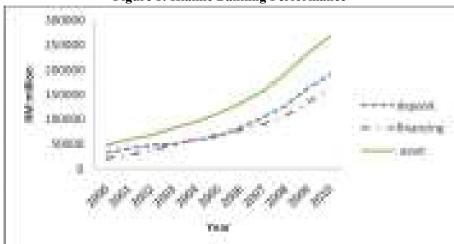

Figure 1: Islamic Banking Performance

Source: BNM monthly statistical Bulletin, various issues.

To evaluate the Islamic banking system, Figure 1 presents the performance of the system. Three Islamic banking measures are depicted in the Figure 1, namely total deposits, total financing and total asset spanning from 2000 to 2010. All the three have exhibited an upward trend over time. The total deposit had increased more than 6 times when it was only RM32,107 million in 2000 and shot up to RM190,483 million in 2010. Meanwhile, total financing had increased approximately by 8-fold. In 2000, it registered about RM21,050 million, while it rose to RM162,110 million in 2010. The volume of the total asset is also very remarkable. The total asset was RM47,068 million in 2000 and was reported to have RM267,632 million in 2010. These figures could clearly reflect the rapid development in the Islamic banking industry in Malaysia.

#### 3. DATA AND EMPIRICAL APPROACH

#### 3.1 Data

This paper focuses on Malaysia. We only take the data period spanning from 1999Q1 to 2010Q4. This is due to some inconsistency in the data and also to avoid the cyclical impact of crisis 1997 on the analysis. The study uses five main variables namely (1) overnight interest rate, (2) total Islamic financing, (3) Gross domestic product (GDP), (4) Consumer price index (CPI), and (5) real effective exchange rate. Overnight interest rate as a proxy for monetary policy was chosen in line with many other studies (Kassim and Sukmana, 2010; Kassim, 2006; Sayuti, 2009). The total Islamic financing and GDP is used as a proxy for the Islamic financing and economic growth respectively. CPI as a proxy for the inflation rate is included in the set of variables in order to reflect eventual effects of monetary policy (Karim et al., 2006) and also to control variable to account for the impact of the macroeconomic environment on banking credit (Lupious et al., 2001). The index uses 2005 as the base-year. Lastly, the exchange rate variable is selected to reflect the open nature of Malaysian economy. Except overnight interest rate, all data are expressed in natural logarithm.

## 3.2 Unit root test

As a requirement for the time series analysis, it is necessary to examine the property of time series, i.e., the stationary properties. We employ augmented Dickey-Fuller (ADF) unit root test. Since this approach is well known among researcher, the details are omitted in this study. The next step proceeds to Cointegration test.

## 3.3 Cointegration test

After testing the stationarity of the time series variables, the next step is to conduct cointegration test. The test examines the existence of long-run equilibrium relationship among variables. For this test, we rely on autoregressive distribution lag (ARDL) framework. It was recently developed by Pesaran et al. (2001). There are numerous advantages of the ARDL approach. Firstly, it employs only one single reduced form equation. Secondly, it does not require pre-testing variables. This means that the cointegration test is applicable to underlying regressors regardless of its integration whether purely I(0) or purely I(1) or mixture of both. Thirdly, the ARDL is also applicable for small number of observations. Fourthly, it avoids the larger number of specification made in the conventional cointegration (Duasa, 2007). Lastly, it takes sufficient of lags to capture the data generating process whereby it estimates  $(p + 1)^k$  number of regressions to obtain optimal lag-length for each variable, where p is the maximum lag and k is the number of variables in the equation (Karim and Majid, 2010). Having a small number of observations of 48 as well as considering the advantages of ARDL, it is justified to employ the ARDL approach for cointegration test.

ARDL bound testing approach involves estimating the conditional error correction version of the ARDL model relating to Islamic financing and its dependent variables in our study as stated below:

$$\Delta \text{fnc} = \alpha_0 + \sum_{i=1}^{p} \lambda_{1i} \, \Delta fnc_{t-i} + \sum_{i=1}^{p} \lambda_{2i} \, \Delta int_{t-i} + \sum_{i=1}^{p} \lambda_{3i} \, \Delta rex_{t-i} + \sum_{i=1}^{p} \lambda_{4i} \, \Delta inf_{t-i} + \sum_{i=1}^{p} \lambda_{4i} \, \Delta inf_{t-i} + \sum_{i=1}^{p} \lambda_{5i} \, \Delta gdp_{t-i} + \emptyset_1 \text{fnc}_{t-1} + \emptyset_2 \text{int}_{t-1} + \emptyset_3 \text{rex}_{t-1} + \emptyset_4 \text{inf}_{t-1} + \emptyset_5 \text{gdp}_{t-1} + \varepsilon_t$$
(1)

Where  $\Delta$  is the difference operator, fnc is total Islamic financing, int is overnight interest rate, rex is real exchange rate, inf is consumer prices, gdp is aggregate GDP,  $\varepsilon_t$  is white noise error term.

In order to test the long-run relationship among variables, F test is used. The null hypothesis is that there is no cointegration among variables:  $H_0: \emptyset_1 = \emptyset_2 = \emptyset_3 = \emptyset_4 = \emptyset_5 = 0$ . It is tested against the alternative hypothesis:  $H_1: \emptyset_1 \neq \emptyset_2 \neq \emptyset_3 \neq \emptyset_4 \neq \emptyset_5 \neq 0$ . Given small sample size of this study, the critical value bounds used are obtained from Narayan (2005). The critical value bounds can be applied whether the regressors are purely I(0) or I(1) or mixture of both. If the calculated F-statistics exceed their respective upper critical values, we conclude that there is evidence of long-run relationship which the null hypothesis cannot be accepted, and vice versa.

If the long-run relationship exists among the variables in the system, the long-run model is estimated as followed:

finc<sub>t</sub> = 
$$\alpha_1 + \sum_{i=1}^p \beta_{1i} fnc_{t-i} + \sum_{i=1}^p \gamma_{1i} int_{t-i} + \sum_{i=1}^p \delta_{1i} rex_{t-i} + \sum_{i=1}^p \theta_{1i} inf_{t-i} + \sum_{i=1}^p \sigma_{1i} lgdp_{t-i} + \mu_t$$
 (2)

## 3.4 Innovation accounting approach

Lastly, we turn to the innovation accounting approach. In this paper we employ impulse response functions (IRF) and variance decomposition (VD). The IRF measures the time profile of the effect of shocks at a given point in time on the expected future values of variables in the system (Sukumana and Kassim, 2010). This will permit us to make inferences on the direction of response of the variables (i.e. Islamic financing) to a one standard deviation shock in another variable (i.e. overnight interest rate).

In the same time, variance decomposition analysis indicates the percentage of a variable's forecast error variance attributable to innovations in all variables considered in the system (Ibrahim, 2005). In other word, VD's results allow us to make inferences of the relative strength of innovations in the variables of interest.

#### 4. EMPIRICAL RESULTS AND ANALYSIS

#### 4.1 Unit root test

The results of the Augmented Dickey-Fuller (ADF) unit root tests are presented in Table 1. The variables are tested both in level and in first difference in three different models, namely with intercept, intercept and trend and without intercept.

	Augmented l	Dickey-Fuller	-	<del>-</del>		
Variable	level			1 <sup>st</sup> difference	;	
	Intercept	Trend &	None	Intercept	Trend &	None
		Intercept			Intercept	
Int	-2.321	-2.254	0.038	-10.109***	-9.626***	-10.382***
fnc	-2.501	-2.228	2.696	-3.863***	-4.303***	-2.476**
gdp	-0.793	-2.079	2.787	-4.363***	-4.319***	-3.065***

**Table1: Unit Root Tests Summary Statistics** 

Inf	0.468	-2.489	4.657	-5.415***	-5.416***	-4.069***
rex	-2.226	-1.536	0.350	-5.069***	-5.000***	-5.110***

*Note*: \*,\*\*,\*\*\* denote significance at 10%, 5% and 1% level respectively. Critical values are based on MacKinnon (1996). Lag lengths are based on Schwarz Info Criterion (SIC) with maximum lag of 10.

Table 1 summarizes the results of the ADF unit root test for the data series. All the time series variables are not significant at level, but they are significant at first difference. At level, the null hypothesis of having unit root cannot be rejected at any significance level. However, they are rejected at first difference with at least 5% significance level. In other words, the data series are non-stationary at level, but stationary at first difference.

## 4.2 Cointegration test

Having conducted the unit root tests, the study now proceeds to cointegration tests. The test means to examine the existence of long-run relationship among variables. We adopt bound testing approach and Autoregressive distributed lag (ARDL) model for cointegration test. In Table 2 the computed F-statistics for each lag length are presented. The last column of each table also includes the critical values bounds for unrestricted intercept and no trend, which are obtained from Narayan (2005), for sample size between 30 and 80. If the F-statistics exceed their respective upper critical values at any lag-length, it implies that there exists the long-run relationship among variables and vice versa.

**Table 2:ARDL Cointegration Test** 

Lag	F-statistics	Bound critical values
1	9.121***	(unrestricted intercept and no trend)
2	4.845**	
3	5.209**	k= 4 & n=48
4	4.748**	1%; 4.306-5.874
5	4.841**	5%; 3.136-4.416
6	3.653	10%; 2.614-3.746

Notes: \*,\*\*,\*\*\* denote significance at 10%, 5% and 1% level respectively.

Table 2 shows calculated F-statistics from lag length 1-6. At lag length 1-5 are found to be significant at least at 5% level. This implies that the null hypothesis of no cointegration cannot be accepted at 5% level. Therefore, there is a cointegration relationship among the variable in aggregate system. It implies that the variables tend to move together in the long-run.

Based on ARDL framework, if the variables have the long-run relationship, then the long-run model can be established. Table 3 presents the long-run model using the ARDL approach. By estimating it, the study follows Majid and Yusof (2007), Majid (2007) and Karim and Majid (2010) in identifying the maximum lag order. The lag order of 1 is chosen as it reveals the highest F-statistics value. The ARDL (1,0,0,0,0) is selected based on Schwarz Bayesian Criterion (SBC).

Table 3:Long-run Model

Dependent	Independent variables				
variable	int <sub>t-1</sub>	rex <sub>t-1</sub>	inf <sub>t-1</sub>	$gdp_{t-1}$	
fnc	- 0.041***	0.284**	- 0.294	0.254***	
	(0.009)	(0.105)	(0.194)	(0.086)	

Notes: \*,\*\*,\*\*\* denote significance at 10%, 5% and 1% level respectively. Standard error is in parentheses.

Table 3 presents the long-run model. It seems that overnight interest rate has a negative relationship with Islamic financing. If the interest rate increases by one percent, the Islamic financing will decrease by 0.04 percent. This suggests that interest rate as a proxy of monetary policy can affect Islamic financing and it proves the existence of the active of financing channel for monetary transmission. This result is also consistent with many studies (Said and Ismail, 2007; Sayuti 2009; Sukmana and Kassim, 2010).

The model also indicates positive relationship between the real exchange rate and Islamic financing. One percent increase in real exchange rate will increase Islamic financing by 0.28 percent. The explanation for this could be indirect. When the currency depreciates (i.e. real exchange rate index increases), the domestic good becomes cheaper than foreign goods, thereby causing net export to increase, and hence in aggregate demand (Mishkin, 1996). This, in turn, raises the demand for money thereby increasing Islamic financing. For the GDP, it also shows a positive relationship with Islamic financing. When GDP rises by one percent, Islamic financing will increase by 0.25 percent. When aggregate output increases, it raises the demand for credit thereby causing the financing to increase. This may infer that Islamic financing cannot shun away from the fluctuation in the real economic activities (Ibrahim, 2005).

## 4.3 Impulse response functions

Figure 2: Impulse Response Functions: Aggregate System

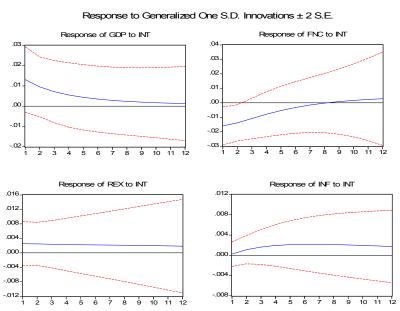

Figure 2 depicts the variable's responses to one-standard deviation shock of overnight interest rate in the aggregate system. It shows that the real output initially increases in response to positive interest rate shock and slowly decreases and dies away after 8 quarters. This result is consistent with the

existing evidence where real output responds to tightening monetary policy shock with some lags. The finding reconfirms the results documented by Ibrahim (2005).

The interest rate shock seems to affect Islamic financing negatively. In response to an increase in interest rate, Islamic financing decreases immediately but quickly bounds back and dissipates at 8 quarter afterwards. This seems to suggest that monetary policy is able to influence Islamic financing. On the other hand, it can be inferred that the Islamic financing channel exists in the case of Malaysia. This finding is also consistent with other studies (Sukmana and Kassim, 2010; Sayuti, 2009; Said and Ismail, 2007). In addition, it may also be observed the behavior of Islamic banking. The results seem to suggest that the operation of Islamic banking, i.e. Islamic financing activities, can be influenced by the interest rate movement same as conventional banking. This implies that the Islamic banking does not shun away from the effect of the interest rate, although its operation claims to be interest-free. Similar studies also support this result (Ibrahim and Sukmana, 2011; Khan, 2010; Chong and Liu, 2009).

In response to the interest rate shock, exchange rate and prices do not seem much to be affected. The response of exchange rate is suggestive for depreciation of the currency at less than one percent, meanwhile the response of prices to interest rate innovation seems to suggest for increase in prices at approximately less than 1 percent above baseline as well. Nevertheless, these two findings seem to contradict the theory and also appear to produce price and exchange rate puzzle. However, in case of price puzzle, Ramaswamy and Sloek (1997) believe that it does not invalidate the conclusion about real effect of monetary policy. The explanation could be that the prices may be set in accordance with cost mark-up strategy. An increase of interest rate indirectly affects the variable costs, i.e. via cost of debt services or via wages, thereby the prices increase at least in the short-run (Dale and Haldane, 1995).

## 4.4 Variance decomposition

Table 4 reports variance decomposition. In case of Islamic financing, more than 14 percent of its variation is attributable to the interest rate shock until 4 quarters and approximately about 7 percent after 12 quarters. Similarly, GDP and exchange rate account for 9 and 3 percent for the fluctuation in Islamic financing until 4 quarter and they decline at 6 and 2 percent respectively in the long-run. In contrast, the inflation shows to have the forecast error variance of Islamic financing about more than 12 percent in long term horizon. These results imply that monetary policy can affect the financing at least in the short-run which supporting the result found in the IRF where financing's responses significantly decrease about 2 quarter to the interest rate shocks.

The forecast error of exchange rate is accounted for 10 and 9 percent of inflation and GDP in the long-run horizon, whereby 4 and less than 1 percent of interest rate and Islamic financing attribute to the fluctuation in exchange rate respectively. The major contributor explaining the forecast error of inflation is GDP, which is about 24 percent after 12 quarter onwards. Besides that, 8 and only 5 percent of Islamic financing and interest rate explain the fluctuation in inflation. Lastly, 22 percent of the variation in GDP is attributed to Islamic financing in the long-run. The result also indicates high fraction of fluctuation in output, where approximately 20 percent is accounted by the inflation shock after 12 quarters. In the same vain, 6 and 8 percent of interest rate and exchange rate contribute to the forecast error variance of output.

#### 5. CONCLUSION

The empirical results seem to suggest that Islamic financing channel for monetary transmission exists in case of Malaysia. The conintegration results indicate that there is long-run relationship among the variables; monetary policy, Islamic financing, GDP, inflation and exchange rate. Based on the ARDL model, it is proved that the interest rate has a significant negative relationship to Islamic financing in the long-run model. To provide more evidences, impulse response functions and variance decompositions also point into the same direction. In response to an increase in interest rate shock, Islamic financing decreases immediately, but rather quickly bounds back and dissipates at eight quarters onwards. Meanwhile, the interest rate shock is accounted for 14 percent in the fluctuation in Islamic financing at four quarters, but then the effect declines in the long-run horizon. In other words, these results indicate that monetary policy is able to affect Islamic financing in such a way that tighten monetary policy could influence Islamic financing to decline.

All in all, it could be inferred that monetary transmission through Islamic financing exists in Malaysia. Monetary mechanism runs from tight monetary policy affecting the quantity of Islamic financing to decrease, thereby causing economic activities to decline. Furthermore, the findings also reflect that Islamic banking as operating in dual banking system is not spared from the interest rate and monetary conditions of the country (Ibrahim and Sukmana, 2011). When interest rate increases, it affects Islamic financing to decrease. This clearly shows the behavior of Islamic banking which cannot shun away from the interest rate while its operation delinks from the interest rates.

From the study it could be suggested that in designing monetary policy, the central bank may consider Islamic financing as an alternative or complement channel for monetary transmission since this channel is just as active as conventional lending channel. This means that the BNM can implement monetary policy by influencing Islamic financing to overcome the recession and inflation in the economy (Said and Ismail, 2007). In addition, the findings may also suggest Islamic banking to follow the pricing strategy in competing with the conventional banking since the evidences show that Islamic banking shares the similar risk, i.e. interest rate exposure and monetary condition, with conventional one (Ibrahim and Sukmana, 2011).

## EXPLORING A NEW CONCEPT OF EMBEDDING GOLD DINAR AS MECHANISM FOR HAJJ TRAVELLING

Mohd-Nazri Muhayiddin<sup>1</sup> Mohd-Fadil Yusof<sup>2</sup> Mazne Ibrahim<sup>3</sup>

#### **ABSTRACT**

Oftentimes consumers are complaining if they have (own) gold dinar, how they can use it to buy things or services. This study is intended to address this issue by introducing a new concept of embedding gold dinar as mechanism for Hajj travelling. It is foreseen that those who keep their money in a form of gold would be able to travel faster (i.e. earlier) than those who keep it in the form of paper money. Therefore, this research is intended to explore whether consumers would be willing to adopt the new concept of using gold dinar as mechanism for travelling. The research framework will be based on Innovation Diffusion Theory (IDT) with two new variables added, namely anxiety, and attitude toward using. It will measure the user acceptance from this theoretical framework i.e. intention to use, relative advantage, compatibility, complexity, trialability, observability, anxiety, and attitude toward using. Questionnaire surveys and interviews will be used for data collection. Structural equation modelling (SEM) will be used to analyse the data. The results will be useful for Hajj travellers, frequent (air) travellers, Tabung Haji, travel agents, local banks, and the public who may be travelling in the future.

Keywords: Inflation, gold dinar, Hajj (pilgrimage), Innovation Diffusion Theory

## 1. INTRODUCTION

Since its first inception in 1971, it has already been a known fact and being reported in many literatures that paper money is highly inflationary in nature (Barisheff, 2006; Lewis, 2007; Turk and Rubino, 2004). Barisheff (2006) has reported that US dollar has lost 82% of its purchasing power, as measured by the Consumer Price Index (CPI) since 1971. Mathematics calculation would reveal even more startling figures about paper money's inflation. Back then in 1971 the price of gold was \$35 per ounce (Lewis, 2007). At its highest price (05 September 2011), one needs to fork out \$1,896 (Kitco Inc., 2011) to buy exactly the same one ounce of gold. Thus, from 1971 to 2011 (in 40 years), in terms of US dollars, the inflation has gone up by 5317% i.e. (1896-35)/35 x 100%. Or equivalently, for the duration of 40 years, the US dollar has lost 5317% of its purchasing power.

Due to the ability of central banks to print paper money practically with "no limit", the existing (paper) money would therefore be subjected to continuous and boundless price inflation. According to Merriam-Webster dictionary (Merriam-Webster, 2012), inflation is defined as "a continuing rise in the general price level usually attributed to an increase in the volume of money and credit relative to available goods and services". The highly inflationary nature of paper money was strongly insisted by Paarlberg (1993) whom had claimed that inflation is the world's greatest robber. He stated that inflation steals from widows, orphans, bondholders, retirees, annuitants, beneficiaries of life insurance, and those on fixed salaries by decreasing the value of their incomes. Furthermore, he had analyzed 15 major inflations throughout the history. He recorded historical prices of important commodities for 30 countries, from year 1937 to 1988, in order to illustrate the disastrous effect of paper money inflation. Jastram (2009) reported that in the last third of the twentieth century, United

<sup>&</sup>lt;sup>1</sup> Faculty of Entrepreneurship & Business, Universiti Malaysia Kelantan, 16100 Kota Bharu, Kelantan Email: mnazri@umk.edu.my<sup>1</sup>, fadil@umk.edu.my<sup>2</sup>, mazne@umk.edu.my<sup>3</sup>

States had experienced increase in price levels by more than five-fold and the U.K. had it by more than eleven-fold. Table 1 below illustrates this point further. For an instance, in the year 2007, U.S. prices were almost 25 times greater than that in the year 1900 (base year) while for the U.K., the prices were almost 90 times greater than that in the year 1900.

**Table 1: Consumer price levels in the twentieth century** 

Indices, 1900 = 100

	1900	1935	1965	2000	2007
USA	100	164	378	2,063	2,484
UK	100	173	635	7,302	8,859

Adapted from Jastram (2009).

Most of the times ordinary people are complaining if they have (own) gold or dinar; how they could use it to buy things or services. This study is intended to address this issue by introducing a new concept of embedding gold dinar as mechanism for Hajj travelling. It is foreseen that if people can keep their money in a form of gold rather than in paper money, they would be able to buy things or services with greater appreciating value (Muhayiddin et al., 2011). As in the case of travelling activities, it is expected that consumers who save their money in gold or dinar would be able to travel faster (i.e. earlier) compared to those who save it in the form of paper money. The research objectives for this proposed study are as follows:

- To explore the perception of consumers with regards to the new concept of gold dinar for travelling.
- 2) To investigate various factors that influence consumers to adopt gold dinar for travelling.
- 3) To investigate the effect of two new added variables on the original Innovation Diffusion Theory.
- 4) To develop a new concept of gold dinar as mechanism for travelling.

## 2. REAL PRICES BASED ON SECONDARY DATA

In order to be as close to a practical situation as possible, this study uses actual data (from real Malaysian market) to show the superior performance of gold's purchasing power when compared to that of Ringgit Malaysia (RM). Prices of a few inflationary items are shown in RM as well as their corresponding prices in dinar (gold). In this case, the price performance (purchasing power) between these two competing currencies can be compared side by side. The readers can therefore make a straight-forward comparison on the performance of purchasing power between fiat currency and that of sound money (dinar).

Tables 2 to 4 below illustrate the performance of dinar as compared to the performance of fiat currency (i.e. RM) for various critical consumer items and services. It is to be noted that dinar is to be used for high-priced items whereas dirham is used for low-priced items. Table 5 shows salary comparison -- paid in dinar versus that paid in Ringgit Malaysia (RM).

Table 2: Fuel price comparison (in RM and Dinar)

Petrol (50 liter)	RM	Dinar
2000	60.00	0.428
2011	95.00	0.146
Price increase/decrease	+ 58%	- 66%

Diesel (50 liter)	RM	Dinar
2000	35.50	0.253
2011	90.00	0.138
Price increase/decrease	+ 154%	- 46%

#### Note:

- Prices of gold are USD270 and USD1592.50 respectively per ounce in Oct. 2000 and July 2011 (London fix spot price).
- Prices of petrol are RM1.20 and RM1.90 respectively per liter in 2000 and 2011.
- ❖ Prices of diesel are RM0.71 and RM1.80 respectively per liter in 2000 and 2011.

Table 3: Electricity price comparison (in RM and Dinar)

Electricity (Domestic, 400kWh)	RM	Dinar
2000	92.52	0.660
2011	160.00	0.245
Price increase/decrease	+ 73%	- 63%

Electricity (Commercial, 1000kWh)	RM	Dinar
2000	288.00	2.054
2011	430.00	0.659
Price increase/decrease	+ 49%	- 68%

## Note:

- ❖ Prices of gold are USD270 and USD1592.50 respectively per ounce in Oct. 2000 and July 2011 (London fix spot price).
- Please refer to <a href="http://www.tnb.com.my">http://www.tnb.com.my</a> for electricity tariff.

Table 4: Construction-related items price comparison (in RM and Dinar)

Cement (4 bags=200 kg)	RM	Dinar
2000	39.60	0.282
2011	74.00	0.113
Price increase/decrease	+ 87%	- 60%
Steel (25 mm, 1 ton)	RM	Dinar
2000	1085.00	7.740
2011	2400.00	3.676
Price increase/decrease	+ 121%	- 53%

## Note:

Prices of gold are USD270 and USD1592.50 respectively per ounce in Oct. 2000 and July 2011 (London fix spot price).

Table 5: Salary comparison in RM and Dinar

Salary Paid (Malaysia)	Dinar	RM
Jan 1992	15.50	1,800*
Jan 2007	15.50	4,968
Feb 2009	15.50	6,975
Oct 2009	15.50	7,838
Jun 2010	15.50	8,560
July 2011 (1 dinar=RM652)	15.50	10,119

#### Note:

- ❖ Price of gold in Jan. 1992 is USD340 per ounce.
- ❖ Price of gold in Jan. 2007 is USD690 per ounce.
- ❖ Price of gold in Feb. 2009 is USD915 per ounce.
- Price of gold in Oct. 2009 is USD1050 per ounce.
- ❖ Price of gold in Jun. 2010 is USD1241 per ounce
- Price of gold in July 2011 is USD1592.50 per ounce.
- \*RM1800 is an average starting salary for a fresh engineer in Malaysia in 1992. (All gold prices are based on London fix spot price)

It is to be noted that oil and electricity prices are two inflationary items whereby any price increase in these two items will subsequently give rise to prices of other daily food items (Barisheff, 2006; Leeb and Strathy, 2006). Similarly, construction items will give subsequent price rise to construction-related markets such as commercial (office) and residential (house) buildings. As for the case of salary, Table 5 clearly shows that dinar preserve the value of salaries over time. Apparently, salaries paid in dinar appreciate over time automatically, even without annual increments.

It should be noticed from the tables above that the performance of dinar is much superior as compared to that of RM (or other fiat money). Apparently in all tables, what appears to be a "price increase (inflation)" in RM is simply a "price decrease" in dinar. It becomes obvious from the above tables that dinar (gold) is able to preserve their "intrinsic value"; whereas the paper (fiat) money just could not do that. All of the tables above (Table 1 to 5), shows the price inflations based on secondary data in Malaysia. Other countries had also experienced very similar situation with price inflations albeit much worst case scenario compared to Malaysia. Paarlberg (1993) had analyzed a total of 15 major inflations throughout history. He had recorded historical prices of important commodities from 1937 to 1988 for 30 countries. Table 6 below depicts the 15 inflations as per reported by Paarlberg (1993).

**Table 6: The Fifteen Inflations** 

		Dates of inflation	Commodity Price Index at End of Upsurge (beginning date = 1)	Annual Percentage Rate of Increase
1.	Ancient Rome	150-301	200.0	5.6
2.	Black Death (most of Europe)	1348-1351	2.4	5.8
3.	Spain	1501-1600	4.2	1.5
4.	John Law (France)	1717-1720	2.0	26.0
5.	American Revolution	1775-1780	32.0	100.0
6.	French Revolution	1790-1796	285.0	157.0
7.	U.S. Civil War, North	1861-1864	2.1	28.0
8.	U.S. Civil War, South	1861-1865	91.0	209.0

9.	Germany	1910-1923	$143 \times 10^{10}$	1174.0
10.	Russia	1913-1924	$171x10^{8}$	752.0
11.	Hungary	1945-1946	$400 \times 10^{25}$	$3x10^{27}$
12.	China	1937-1949	$126 \times 10^{13}$	1451.0
13.	Bolivia	1972-1985	$103x10^{3}$	143.0
14.	Brazil	1937-1988	$800 \text{x} 10^7$	56.0
15.	United States	1933-1987	7.7	3.8

Adapted from Paarlberg (1993)

Based on the presented tables above that the paper money has obvious weaknesses in preserving the true value of money itself. Therefore this study is proposing a new concept to counter that effect of price inflations; by focusing on embedding gold dinar as mechanism for Hajj travelling. Historical prices for cost of Haji for Muassasah and for lowest Package are shown in Table 7 and Table 8 respectively. In Table 7, the price increase in cost of Hajj for Muassasah is not so significant considering a portion of the prices are subsidized by the Malaysian government. However Table 8 reflects the true prices of cost for performing Hajj. From 1989 to 2009 (20 years), the price of performing Hajj had increased by exorbitant rate of 216.8% i.e. (19,990-6,309)/6,309 x 100%. In order to counter this disastrous effect of inflation in paper money, this study is proposing the saving for performing Hajj be kept in gold dinar instead of in paper money. Based on the performance of gold dinar in Table 1 to 5 above -- it is forseen that the price of performing Hajj in terms of gold dinar -- will at least remain constant. Or gold dinar may give even better result i.e. cost of Hajj in terms of gold dinar will be decreasing. This is due to the appreciation of gold dinar's value compared to the value of paper money. Table 9 clearly depicts this superior performance of gold dinar compared to paper money. Referring to Table 9, from 2002 to 2011 (9 years), the cost of Hajj in Ringgit Malaysia has increased by +52%. Ironically, the same cost of Hajj in gold dinar for the same years has decreased by -66%. So no inflation in gold dinar in this particular case.

Table 7: Historical Cost of Hajj\* in RM (Muassasah)

Cost of Hajj (Wang Naik Haji)	RM
1987-1989	5,000
1993-1994	5,930
1995	5,630
1996-1997	6,000
2000-2001	8,585
2002-2003	9,445
2004-2008	8,973
2009-2012	9,980
2013 (first time)	9,980
2013 (second time onwards)	15,555

Source: Tabung Haji (TH) Annual Report.

Note:

In general, the cost to perform Hajj is very similar to the cost of travelling (by air).

Table 8: Historical Cost of Hajj in RM (Package)

Cost of Hajj (Lowest Package)	RM
1989	6,309
1994	8,990
2002	13,500
2007	14,990
2008	16,490
2009	19,990
2010	19,490
2011	20,490
2012	23,490

Source: Tabung Haji (TH) Annual Report.

Note:

All prices are based on the lowest THTS package, except for year 1989 which is operated by Al-Hussam (THTS: TH Travel & Services)

Table 9: Cost of Hajj in RM and Dinar

Cost of Hajj (lowest package THTS)	RM	Dinar
2002	13,500	93.53
2011	20,490	31.39
Price increase/decrease	+ 52%	- 66%

Source: Tabung Haji (TH) Annual Report.

Note:

Prices of gold are USD278 and USD1592.50 respectively per ounce in 2002 and 2011 (based on London fix spot price).

## 3. THEORETICAL FRAMEWORK

An understanding of user acceptance models is very important in order to fully appreciate why one model is chosen over the other. Researchers are always confronted with choosing the most appropriate model for their particular researches. Most of the times, they must "pick and choose" constructs among the various models available. Alternatively, they may choose one "favored model" and largely ignore the possible contributions from other models. Since 1960s, IDT (Rogers, 1995) has been used to study various innovation elements in several fields of studies. Rogers (1995) insisted that each innovation is unique in a sense that some new technologies require only a few years to be successfully adopted whereas others may require much longer time. The element of attributes as perceived by an individual may explain why different innovations require different rate of adoption. Several factors have been identified to have influence over adoption of innovations (Rogers, 1995). Those factors are:

- (1) Relative advantage;
- (2) Complexity;
- (3) Compatibility;
- (4) Triability; and
- (5) Observability

The research framework for this work is adapted from IDT with two additional variables added. This study intends to find out the consumer acceptance of using gold dinar for Hajj travelling based on the

five original constructs of IDT model. Those constructs are relative advantage, complexity, compatibility, trialability, and observability. The two additional variables, anxiety, and attitude toward using, are hypothesized to be very relevant to this study and therefore their influence is expected to be significant in the proposed model. Anxiety is adapted from Compeau and Higgins (1995) as well as Venkatesh et al. (2003). Attitude toward using technology is adapted from Davis et al. (1989), as well as Taylor and Todd (1995). The constructs used in this research framework are explained in Table 10 below.

**Table 10: IDT core constructs** 

<b>Core Constructs</b>	Definitions
Relative Advantage	"the degree of which an innovation is perceived as being better that its precursor" (Moore and Benbasat, 1991, p. 195).
Complexity	"the degree of which an innovation is perceived as being difficult to use" (Moore and Benbasat, 1991, p. 195).
Compatibility	"the degree of which an innovation is perceived as being consistent with the existing values, needs, and past experiences of potential adopters" (Moore and Benbasat, 1991, p. 195).
Trialability	"the tangibility of the results of using the innovation, including their observability and communicability" (Moore and Benbasat, 1991, p. 203).
Observability	The degree of which usage of the system in the organization can be visibly observed by others (Moore and Benbasat, 1991).
Anxiety	"Evoking anxious or emotional reactions when it comes to performing a behavior (e.g., using a computer)" (Venkatesh et al., 2003, p. 432).
Attitude Toward Using	"defined as an individual's overall affective reaction to using a system" (Venkatesh et al., 2003, p. 455).

Therefore, the research framework will be based on IDT with two new variables added, namely anxiety, and attitude toward using. There shall be 8 variables involved, namely intention to use, relative advantage, complexity, compatibility, trialability, observability, anxiety, and attitude toward using. The hypotheses of the study are as follows:

No.	Hypothesis	References
H1	Relative advantage would have positive influence on consumers'	Tan & Teo (2000);
	intention to adopt gold dinar for Hajj travelling.	Venkatesh et al. (2003)

#### 4. METHODOLOGY

This research focuses on quantitative results whereby an analysis and classification of numerical data will be collected from survey questionnaires. The questionnaires will be developed based on various literature reviews and based on IDT with two new variables added namely anxiety and attitude toward using. All surveys consist of a closed-ended question. Respondents will only choose answers already provided with the questions. Initially, the survey will be distributed to 30 respondents as a form of pilot study. Eventually, after considering various feedbacks from the pilot study, final survey questionnaires will then be developed and distributed to 400 respondents in Klang Valley and Kelantan areas. Klang Valley is chosen because it is expected that the highest number of Hajj travelers are coming from this area. Whereas Kelantan is selected to represent a sample of a rural-state area. 400 samples is decided based on Dillman et al. (2009) which shows that for a population of 1,000,000,000 in number, only 384 sample is needed to represent the population (with  $\pm 5\%$  sampling error). It is to be noted that since this research is still at exploring stage, the convenience sampling method will thus be applied. Section A of the survey consists of questions related to respondents' information such as gender, race, age, monthly income, educational attainment, marital status, employment status, e-commerce usage experience, and average use of e-commerce applications. Other sections contain questions related to 5 variables coming from IDT namely, relative advantage, compatibility, complexity, trialability, and observability. As well as sections which contains questions coming from the anxiety, and attitude toward using variables. Lastly, there will be questions which measure behavioral intention to use gold dinar for travelling.

Qualitatively, an interview questionnaire will be developed (based on IDT) to be used for interviewing Tabung Haji and several travel agents personnel. Their perception on this new concept of gold dinar for travelling would be very important for this research. The questions will include the feasibility of implementing such system, the acceptance of the consumers and other related issues. SPSS Statistical Software Package will be used to carry out descriptive analysis of the collected survey data. AMOS and PLS would be employed to investigate multiple regression analysis.

## 5. CONCLUSION AND LIMITATIONS

This research will propose a new research framework for user acceptance study of gold dinar payment concept in Malaysia, with specific application of using gold dinar for Hajj travelling. The framework for this research is adapted from IDT model with an addition of two new constructs; to suitably explore an 'intention to use' gold dinar for Hajj travelling. The results of descriptive analysis and hypothesis testing will be taken up later in future publications. There appears to be some limitations on this study. Firstly the survey is based on convenience sampling thereby limiting its generalization to the whole population of Malaysian people. Secondly, the choice of physical gold dinar denominations has to be correctly selected such that it shall give the highest returns upon selling it later on for the purpose of Hajj travelling. The more the return of investment (ROI) it accumulates upon the point of sale/purchase; the more significant would be the effect of this concept of embedding gold dinar as mechanism for Hajj travelling.

## MONETARY POLICY INSTRUMENTS AND INFLATION: AN ISLAMIC PERSPECTIVE

F. Elias Elhannani<sup>1</sup> N. Gherbi<sup>2</sup> A. Bouteldja<sup>3</sup> M. Benbouziane<sup>4</sup>

#### **ABSTRACT**

The efficiency of the monetary management of any government is assessed by its ability to reduce and stabilize the inflation rate. Hence, this latter is the first target of any monetary policy. Although that the term « inflation » is recent, this monetary phenomenon has been observed many centuries ago. In this context, Islamic thinkers described the phenomenon as the cheapness of money. This research discusses the management of money to fight inflation in an Islamic finance framework focusing on the prohibition of interest « RIBA » against the classical monetary policy which concentrates on this factor « interest » as a key channel to reduce inflation. The paper starts with the traditional view to the inflation phenomenon and a comparison between conventional and Islamic finance principles. Then, it discusses the instruments of the Islamic monetary policy and their effectiveness to reduce inflation by providing some recent experiences. Our main findings clearly show that the traditional monetary management is less effective than the one based on Islamic principles, but however such effectiveness depends on the human factor and its ability to apply such monetary instruments.

**Keywords**: Inflation, Money, Monetary policy, Islamic finance, Interest.

## 1. INTRODUCTION

One of the most important challenges of any government is the sustained increase in the price level or the higher inflation rates. Regarding macroeconomic policies, inflation is the first target of any monetary policy and the efficiency of this policy is assessed by its ability to reduce inflation. As it represents a sustained rise in the price level, inflation results in a reduction of the money value. Although that the term « inflation » is recent, this monetary phenomenon has been observed many centuries ago. In the context of Islamic finance, inflation is defined as a cheapness of money.

In the conventional economic system, there exist several direct and indirect instruments of monetary policy to fight the inflation where the interest rate is the key channel. However, the recent financial crises revealed the failure of the conventional monetary system. Alternatively, there is a rapid growth in the practices of Islamic finance in Muslim and non-Muslim countries. Inflation and the monetary management take an important part in Islamic economic framework in which there exists a large literature which provides a set of monetary policy instruments working under the Shari'ah (Islamic law).

This research discusses the management of money to fight inflation in an Islamic finance framework focusing on the prohibition of interest « RIBA » against the classical monetary

<sup>1,2,3,4</sup> University of Tlemcen, Algeria. F. Elias Elhannani's email: <a href="mailto:faraheliaselhannani@yahoo.fr">faraheliaselhannani@yahoo.fr</a>, N. Gherbi's email: <a href="mailto:mgherbi@yahoo.fr">mgherbi@yahoo.fr</a>, M. Benbouziane's email: <a href="mailto:mbenbouziane@yahoo.fr">mbenbouziane@yahoo.fr</a> and A. Bouteldja's email: <a href="mailto:bouteldja\_nacer@yahoo.fr">bouteldja\_nacer@yahoo.fr</a>

policy which concentrates on this factor « interest » as a key channel to reduce inflation. Our paper is divided into the following sections: the first section tackles the problem of inflation in the different economic theories and Islamic history. The second section provides the Islamic finance principles while the third one explains the monetary policy under these principles. In the forth section we show the practices of Islamic monetary policy in four Muslim countries and assess the inflation trend in those countries.

## 2. THE TRADITIONAL VIEW OF INFLATION

Inflation as a phenomenon is not really new, it has been observed many centuries ago when the price level and money value changed responding to changes in gold and silver available quantities. However, this phenomenon started to take interest since the occurrence of the fiat money. In practice, inflation; the condition of a continually rising price level; has become a major concern of economists and politicians. It is one of the most important monetary policy targets.

## 2.1 Inflation in the quantity theory of money

The quantity theory of money is one of the oldest economic doctrines. It has been developed by the classical economists in the 19th century. Under the assumption that the velocity of money is constant and the level of aggregate output *Y* produced in the economy during normal times would remain at the full-employment level, the theory asserts that an increase in the price level results solely from the increase in the quantity of money. This can be shown clearly by the equation of Irving Fischer (1876-1947):

$$MV = PY \implies \uparrow M = \frac{1}{7} \uparrow P \overline{Y}$$

The equation implies that if M ( the quantity of money) doubles, P (the price level) must also double in the short run because V and Y are constant<sup>2</sup>

## 2.2 Demand-pull theory of inflation

Demand-pull theory focuses on the Keynesian theory of aggregate demand. Keynes and his followers emphasize the increase in aggregate demand as the source of demand-pull inflation. Aggregate demand is composed of consumption, investment and government expenditure.

According to the Keynesian theory, an increase in money incomes will lead to an excess of aggregate demand over aggregate supply at the full employment level<sup>3</sup>. On the other hand, Keynesians argued that even before reaching the full employment production factors, an increase in the aggregate demand can lead to a small rise in prices. This fact is due to the non-ability of producers to respond to the increasing demand. In this case, the policy that is effective to decrease the price level is the increase in taxes which will reduce the pressure demand.

## 2.3 The monetary theory of inflation

Referring to the quantity theory of money, Milton Friedman 1956 developed the monetary theory and argued that only money matters. Friedman held that: inflation is always and everywhere a monetary phenomenon that arises from a more rapid expansion in the quantity of money than in total output.

<sup>2</sup> Mishkin F., « The economics of money, banking and financial markets », Colombia University, Seventh edition, 2004, P519

<sup>&</sup>lt;sup>3</sup> Totonchi J., « Macroeconomic theories of inflation », International conference on economics and finance, Singapore2011, P460

According to Friedman and followers (monetarists), the monetary policy is a more potent instrument than fiscal policy in economic stabilization.

## 2.4 Islamic view of inflation

In an Islamic framework, inflation is the cheapness of money. The phenomenon was experienced in early Islamic history because of the influx of gold and silver and the occurrence of new copper coins known as "Fulus". Indeed, the ratio between the gold and silver coins has declined to 1:12 in the second half of the Ummayad period and to 1:15 in the Abbasid period after being stabilized over the era of the prophet Muhammad (P.B.U.H) and the four caliphs with 1:10<sup>4</sup>.

Al-Makrizi (845/1442) argued that the instability in gold-silver ratio enabled bad coins to drive good coins out of circulation3 and he added that the fact of copper coins (Fulus) abundance worsened the situation. Accordingly, inflation phenomenon is due to the abandonment of gold and silver standard<sup>5</sup>.

The supply and demand analysis to explain the rise of price level has also taken a place in Islamic thought. For instance, Ibn-Khaldun emphasized that both increase in demand or fall in supply leads to a rise in prices. (for more details refer to Chapra 2008).

#### 3. ISLAMIC FINANCE PRINCIPLES

Islamic finance as an important part of Islamic economy, is broadly based on some principles (prohibitions and encouragements) which any institution in the Islamic financial system should take them seriously, referring to the sources of Sharia'ah (Holy Quran and Sunnah):

## 3.1 Avoiding interest (Prohibition of Riba)

In contrast to the conventional system which focuses on the interest rate, the Islamic theory of finance prohibits this factor. The interest factor is called in Sharia'ah "Riba" and means any excess return derived on a loan or debt. It represents the return on transactions involving exchange of money for money, or an addition, on account of delay in payment, to the agreed price on sale debts/debts<sup>6</sup>. The prohibition of interest (Riba) is mentioned in a clear verse in the holy Quran: "Allah has allowed trade and prohibited Riba" 2:275. Hence, lending on interest is alien to Islamic banks and financial institutions.

## 3.2 Avoiding Gharar

The second pillar of Islamic finance is to avoid Gharar. Gharar refers to entering into a contract in absolute risk or uncertainty about the ultimate result of the contract and the nature and/or quality and specifications of the subject matter or the rights and obligations of the parties. In fact, Islamic banks should not enter in any bargain or contract in which the results are hidden. Furthermore, this principle (prohibition of Gharar) requires Islamic banks not to engage in speculative trade in shares, short-selling, discounting of bills and securities or trading in unidentified items. This prohibition is mentioned in the Sunnah "Don't buy fish in the sea, it is Gharar" Cited by Ahmed.

## 3.3 Alternative principles

\_

<sup>&</sup>lt;sup>4</sup> Chapra M.U., « Monetary management in islamic economy », Islamic economic studies, Vol4 No1, December 1996, p.1.

<sup>&</sup>lt;sup>5</sup> Ben Daas D., « Monetary policy in conventional and islamic systems : comparative study », Dar ELKHALDUNIA, Algeria, 2007, P134. (Arabic version)

<sup>&</sup>lt;sup>6</sup> Ayub M., « Understanding Islamic finance », Wiley and sons, England, 2007, p.73.

In the absence of interest and other prohibited transactions, Islamic financial institutions have several tools and techniques to do their business based on profit sharing and participation principles. Islamic scholars argued that the profit and sharing risk concepts are more efficient. Abdu-Alhamid Alghazali defined the profit as a standard which conducts the use of capital under more logic; socially equal and economically efficient principles<sup>7</sup>.

The different tools available for Islamic banks are defined briefly:<sup>8</sup>

- 1. Mudarabah is a partnership arrangement in which one party provides capital to the partnership while the other party provides entrepreneurial skills. Any loss is borne by the financier; any profit is shared by the partners according to a pre-agreed ratio.
- Musharakah may take the form of a permanent equity investment, a partnership in a specific project having a fixed duration or a diminishing partnership (the bank's share is reimbursed over time by the company acquiring funds), especially for housing and other fixed asset financing that could be leased.
- 3. Murabaha–Mu'ajjal involves acquiring goods upon a customer's demand or otherwise and their credit sale at a profit margin. It results in debt covering the cost plus a profit margin. This debt has to be paid back irrespective of profit or loss to the person or institution that purchased on credit and suffered loss or the wares destroyed in his ownership. To this effect, we come across a very important reference relating to the period of the second Pious Caliph of Islam Umar (Gbpwh). As reported by Ibn-e-Jarir Tabari (d. 310 AH), "Hind bint-e Utbah came to Umar and asked for a loan of 4000 (dinars) from the public exchequer so that she could trade with it and became liable to pay back the same. After getting the amount, she went to the area of Banu Kalb and engaged in trading; but she suffered loss. Umar (Gbpwh) said the loan could not be waived as it was from the public exchequer."
- 4. Salam involves providing funds against the forward purchase of precisely defined goods with prepayments.
- 5. Ijarah involves leasing an asset and receiving rentals; so long as the asset is on lease, the lessor owns the asset and the risk and reward of its ownership.
- 6. Istisna'a involves engaging a person that could also be a financing agent to manufacture or construct and supply an item at some future date for an explicit sum on periodic payment. The agent contracts with a manufacturer to produce the commodity and the customers make payments to cover the production price and the profit margin.
- 7. *Qard Al-hasan* (benevolent loan) are zero-return loans that Muslims are encouraged to make to those who need them. Financial organizations that provide these loans are permitted to charge the borrower a service charge to cover the administrative costs of handling the loan so long as the charge is not related to the amount or the maturity of the loan.

<sup>&</sup>lt;sup>9</sup> Khan M. and Mirakhor A., "Monetary management in an Islamic economy", *J. KAU: Islamic Econ.*, **Vol. 6**, pp. 3-21 (1414 A.H./1994 A.D.).

#### 3.4 Role of ethics

In addition to the main prohibitions (interest and Gharar), Islamic Shari'ah provides a set of ethnical norms that govern the rights and obligations of economic parties and conduct economic and financial transactions. These norms are related to the accountability of human beings and their behaviour between them. Giving people their due right is the cardinal principle of the Islamic system of ethics namely equity and justice. Some encouragements like benevolence, purification of income, proper transparency and disclosures, documentation of transactions leading to precision about the rights and liabilities of the parties and comprehensive ethics requiring care for others are also part of the Islamic framework of business norms<sup>10</sup>.

## 4. ISLAMIC MONETARY POLICY

Inflation has always been a challenge for the economic society particularly for monetary authorities that try to fight it and keep prices stabilized. Unlike the conventional system, Islamic financial system applied in many countries deals with the inflationary phenomenon taking into consideration the principles discussed above. Hence, the Islamic theory of finance gives to central banks a set of monetary instruments to fight inflation and get the other objectives of monetary policy.

## 4.1 Islamic monetary policy instruments

It is the prohibition of interest which makes the difference between Islamic monetary policy instruments and conventional ones:

#### a- Required reserve ratio

This ratio is the percentage of deposits that a commercial bank must hold in a form determined by the central bank<sup>11</sup>. The required reserves preserve the depositors' rights and push them to invest their money in banks. This instrument does not conflict with Shari'ah, it is free from interest. The central bank under Islamic principles can use it to curtail the availability of the loanable funds and money supply so that it can sterilize the uprising prices (inflation):

$$\uparrow RRR \rightarrow \downarrow credits \rightarrow \downarrow MS \rightarrow \downarrow P$$

The Islamic central bank can also use these reserves in the economic activity either by financing some sectors with priority or to give them to governments as "Qard Hassan".

## b- Profit sharing ratio

This instrument is available just for Islamic central banks and it replaces the interest rate as a tool of credit control in the conventional central banking. In an Islamic banking system, the money supply and the level of economic activity will be governed by profit sharing arrangements between the commercial banks and their clients on the one hand, and the banks and their depositors on the other. Thus, the central bank will regulate the "investments' share ratio" and the "depositors' share ratios" has a direct effect on money supply and the central bank can change it according to the economic activity situation. In IFS money creation is backed by increase in production that leads to no

\_

<sup>&</sup>lt;sup>10</sup> Ayub M., ibid, p.64.

<sup>&</sup>lt;sup>11</sup> ZANGENEH Hamid and SALAM Ahmed, « Central banking in an interest-free banking system", Islamic economics, Vol.5, 1993, P29

<sup>&</sup>lt;sup>12</sup> Ben Daas D., « Monetary policy in conventional and islamic systems : comparative study ", ibid. p.242.

<sup>&</sup>lt;sup>13</sup> ZANGENEH Hamid and SALAM Ahmed, « Central banking in an interest-free banking system", ibid, P31.

inflation, Laliwala (1982). That is, the central bank can raise the investors and depositors share ratios to enhance the investment and production and to absorb the excess money supply from depositors.

## c- Open market operations

Open market operation is the fact of buying and selling government securities, gold and currency reserves by the central bank in order to influence the availability of credits and money supply. Because of the prohibition of Riba, securities with interest rate are not permissible in the open market operations in IFS. Ariff (1982) talked about interest-free bonds, in his side, Siddiqi (1982), visualised that the central bank could buy or sell commercial papers in the open market. It is also permissible for the central bank to deal with stocks since they have profit principle instead of interest rate. However, other Islamic scholars find these tools particularly commercial papers unacceptable because they offer an unlimited scope for wild speculation and all speculations are un-islam (Khan Akram 1982). This divergence in the Islamic views about open market operations implies a very limited scope for open market operations as an instrument of monetary policy in an Islamic economy.

#### d- Refinance ratio

The Refinance Ratio'<sup>14</sup> refers to the offer of the Central Bank to provide additional cash to the commercial banks to the extent of a certain percentage of the interest-free loans granted by them. Raising or lowering this ratio will have the effect of expanding or contracting the supply of short term credit by the commercial banks. For example, in order to encourage *Qard Hasan*, the central bank may lay down that it would refinance, free of charge, to the extent of, say 30 percent, or any other percentage of total loans of that particular type granted by commercial banks to the public.

#### e- Moral suasion

This qualitative instrument does not differ to the one in the conventional system. This method is used to influence and/or persuade member banks to implement the central bank policies in true spirit. This can be a greatly useful instrument of control in an interest-free Islamic system that must depend on collective consensus building for its affairs.

## 4.2 IS-LM analysis under Islamic framework

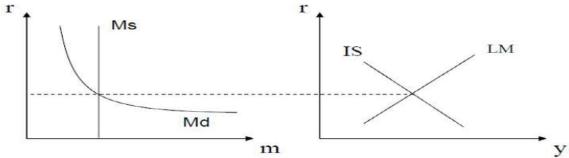

As we have shown in the first section, inflation is always a monetary phenomenon. Majority of Islamic scholars believe that the monetary policy should be executed through stock of money. Although the interest rate is forbidden in Islamic system, but it is possible to use the IS-LM analysis in Islamic perspective by including the profit sharing ratio instead of the interest rate in the conventional system.

In the conventional system, IS-LM model displays the aggregate supply and aggregate demand analysis in which the IS curve shows the combinations of total output and interest rates that ensure goods market equilibrium, and the LM curve shows the combinations of total output and interest rates that ensure money market equilibrium.

-

<sup>&</sup>lt;sup>14</sup> Siddiqi M.N. "Islamic Approach to Money, Banking and Monetary Policy - A Review", Arrif book, 1982, p.59.

Figure 1: equilibrium in money market and IS-LM curves

Source: kiaa H., "monetary policy in islamic economic framework: the case of Islamic republic of Iran", P6. The central bank intervenes with its monetary policy to control the inflation by declining the volume of money using monetary instruments. A contractionary monetary policy declines the money supply directly by using aggregate money control instruments<sup>15</sup> or by increasing the interest rate in open market operations which in turn leads to a decrease in money supply because of the negative relationship between interest rates and speculative demand for money. Thus, the LM curve will move to the upward which creates a new equilibrium point of the model.

In an Islamic economics framework, the IS-LM analysis for monetary policy does not totally differ. The Islamic scholars included the concept of profit loss sharing ratio (PLS) in the place of interest rate. Iqbal and Alasaly (1991) modified an IS-LM model for Islamic economy: Equilibrium in the Goods Market – The IS Curve:

$$Y = C + I + G_t + G_Z$$
 
$$C = f(Y_d) \qquad f' > 0 \qquad Y_d = Y - T - Z$$

Z = z.S - - - - [Zakah is on savings.]

$$I = I(P)I' < 0)$$
 - - - P is a PLS ratio

Gt and Gz are tax- and zakah-based government

expenditures, respectively (Exogenously given)

Equilibrium in the Money Market – The LM Curve:

$$M_s = M_d$$

 $M_s = M_0$ 

 $M_d = m(Y,P)$ 

(Zakah-based government is not the interest of our paper, it belongs to the fiscal policy).

<sup>&</sup>lt;sup>15</sup> kiaa H., "monetary policy in islamic economic framework: the case of Islamic republic of Iran", p.10.

Figure 2: IS-LM equilibrium in an interest free system

Source: Igbal Mehdi and Al-Asaly (1991)

As shown in figure 2, the shape of the curves is similar to their shape in a conventional system. The downward slopping of IS curve in the Islamic system is due to the negative link between investment and profit sharing rate of the bank, while the upward slop of LM curve is due to the negative relationship between profit rate and money demand in Shari'ah contracts (speculative demand is forbidden). In this context, when the central bank targets inflation, it can lower the money supply Ms using the monetary instruments cited in the previous section which will increase the profit sharing ratio (PLS) which in turn decrease the investment moving the LM curve to left and leading to a new equilibrium level. We showed that the central bank in a conventional system should control also the interest rate of open market operations, so, is this possible for Islamic system?. The Islamic central bank should be prudent in its open market operations to control inflation and it should keep into consideration the abolition of interest and speculative transactions. The monetary officials use commercial shares or Musharakah certificates as a substitute tool for interest based control and open market operation. Usually the Islamic government issues commercial shares or Musharakah certificates on the base of profit sharing. So, whenever the government wants to decline the volume of money in the economy, it sells these certificates to the public. Here the profit rate of these commercial shares plays the role of interest rate in the monetary policy process and by changing this rate, central bank can persuade people to buy or sell these certificates. The important point is that, central bank should issue all papers and certificates based on some productive economic projects otherwise the profit sharing principle does not work.

# 5. MONETARY POLICY PRACTICES AND INFLATION TREND IN SOME MUSLIM COUNTRIES

Islamic banking and finance field has grown appreciably among Muslim and non-Muslim countries especially after the global financial crisis of 2008 which confirmed the failure of the conventional systems. The use of Islamic rules in banking goes further to macroeconomic policies namely the monetary policy. Many Muslim countries now succeed to manage the money supply and economic stability based on *Shari'ah* rules.

## 5.1 Islamic monetary policy practices

## a- Monetary policy in Iran:

After the Islamic revolution in Iran, at 1979, there were comprehensive attempts by government to use Islamic rules and regulations. At 1983 economic experts and Shari'ah scholars provided the Interest Free Banking System Bill to the parliament that used Islamic contracts as instruments for attracting and allocating money in the banking system. After approving process by parliament, from the 1984, the whole economic and banking system of

country changed to Islamic one. Unlike some Islamic countries which have both Islamic and non-Islamic banking system, there is no bank in Iran that works according to interest rate system.

The central bank in the Islamic republic of Iran uses five important instruments to execute its monetary policy in which Musharakah certificates instrument is the most important:

1-Musharakah certificates; 2-controlling profit rates of commercial banks; 3-legal reserves; 4-special deposits to central bank and 5-credit ceiling.

Table 1: evolution of Musharakah certificates published and sold values and their expected returns

Year <sup>6</sup>	Published Certificate (Billion Dollars)	Sold Certificate (Billion Dollars)	Expected Return (Percent)
2002	2.96	2.78	15-17

## b- Monetary policy in Malaysia

Malaysia now is operating under a dual financial system; conventional and Islamic. The monetary strategy of Bank Negara of Malaysia is currently the interest rate targeting. In the Islamic context, the BNM uses Islamic interbank money instruments to achieve its target: Government Investment Issues; Bank Negara Negotiable Notes; Wadiah Acceptance; Mudharabah; Interbank Investment; Bai Al—Inah Transaction; Rahnu Agreement; Sell and Buy Back Agreement and Sukuk BNM Ijarah<sup>16</sup>

Some of these instruments are summarized in the following table which shows also the challenges facing Islamic instruments in Malaysia although their usefulness.

Table 2: summary of Malaysian monetary policy instruments

Instruments	Description	Challenges	
Wadiah deposit acceptance	Cash funds placed on custody	Hibah is prerogative of

#### c- Sudan

Sudan started the full application of Islamic modes in finance in the first half of the 1990s. The Islamic monetary instruments used by the central bank of Sudan since 1990<sup>17</sup>: 1-profit and loss sharing ratio; 2- credit ceiling policy stipulated 80 percent of total bank ceiling for priority sectors; 3- reserve requirements policy and other indirect instruments such as margins on letters of credits and foreign exchange transactions.

The economic and financial reform program starting in 1997 in Sudan allowed the BOS (Bank of Sudan) for the modification of some existing instruments and introduction for new ones. In 1998, the BOS opened a liquidity financing window as an overdraft facility that also fulfils its function as a lender of last resort. That is, benevolent loans are available to the commercial banks for up to two weeks and for a maximum of 10% of its current deposits. There has been also an introduction of government and central bank Musharaka certificates (GMCs and CMCs) in 1998 for developing tools of indirect liquidity management in the banking sector.

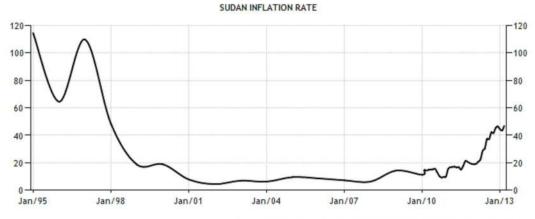

#### d- Saudi Arabia

The monetary policy of Saudi Monetary Agency (SAMA) relies primarily on variations in the reserve ratio requirements, since it is debarred from using the re-discount facility under Islamic law and cannot use open market operations as the Kingdom does not have any public debt in the form of government securities which can be used for such operations. A significant secondary tool is selective credit controls which include regulation of credit ceilings, cash margins, terms and conditions of customer transactions, limits, prohibitions on specific categories of loans, and fixing the assets to be held within the Kingdom by each bank. SAMA also deploys its own accounts and government deposits with commercial banks to regulate the money supply. SAMA uses ORR (Official Repo Rate) for short term liquidity management. Saudi Monetary system also has Government Development Bonds and Treasury Bills for fiscal deficit financing and liquidity management.

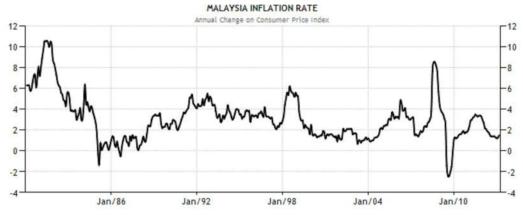

#### 5.2 Inflation trend

In this last section we present the inflationary trend in the countries which applied Islamic monetary policy cited above.

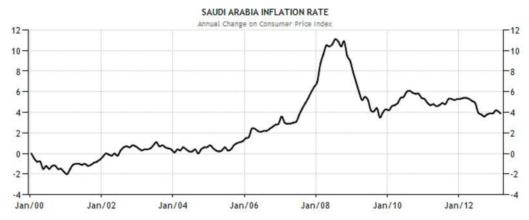

<sup>&</sup>lt;sup>17</sup> Alheraika A.B., « on the design and effects of monetary policy in an Islamic framework: the experience of Sudan", Islamic Development Bank, 2004, p.30.

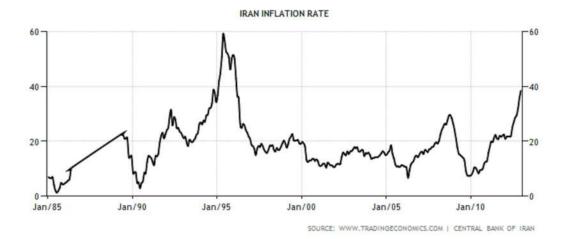

SOURCE: WWW.TRADINGECONOMICS.COM | SUDAN CENTRAL BUREAU OF STATISTICS

SOURCE: WWW.TRADINGECONOMICS.COM | DEPARTMENT OF STATISTICS MALAYSIA

SOURCE: WWW.TRADINGECONOMICS.COM | SAUDI ARABIAN MONETARY AGENCY

From the figures above we notice that the four countries using Islamic monetary instruments could manage their inflation for some periods after starting the application of Islamic financial systems which confirms that the use of Islamic principles is more useful than the conventional ones. However, the periods of crises especially the recent global financial crisis affected these rates. The inflation rate of Malaysia and Saudi Arabia seems to be the lowest (between 2and 6%) except the highest spike during the 2008 crisis. For Sudan, the stability of the inflation rate is very clear in the graph after the Islamization of the monetary system (after 1994), but the rate of inflation started to increase largely after the crisis. The Iranian inflation has more response to the crises where it reached high spikes in addition to its higher rates (above 10%).

The instability in the inflation rates of countries applying Islamic systems does not belong to Islamic principles but for other reasons which are the conditions of the success of Islamic monetary policy:

- -The absence of an appropriate fiscal policy with the monetary one in those countries;
- -The globalization and openness to international financial markets operating under interest rate (Riba) principle; and absence of developed Islamic financial tools which makes Islamic countries more sensible to the global financial crisis;
- -The role of ethics; as we have seen in the second section Islamic economics and law (Shari'ah) focuses on the ethnical aspect as a pillar to achieve social objectives. The fact is that most of Islamic countries record higher ranks of corruption which is against Islam and then it impedes the success of any Islamic policy executed in such countries.

## 6. CONCLUDING REMARKS

This paper discussed the management of money to fight inflation in an Islamic finance framework focusing on the prohibition of interest « RIBA » against the classical monetary policy which concentrates on this factor « interest » as a key channel to reduce inflation. From the four sections we conclude the following remarks:

- The set of the monetary policy instruments working under Islamic law (Shari'ah) approved efficiency from the principles (prohibitions and encouragements) which provide equity and justice.
- The prohibition of "Riba" where there is no interest to be paid can reduce the production costs which in turn will decrease the price level and reactivate the economic cycle and reduce the inflationary gap between money supply and production.

- Unlike the Islamic commercial banking which is spilled over Muslim and non-Muslim countries, the central banking and monetary policy is applied in some Muslim countries that have succeeded to manage their inflation rate. However, the financial interdependence of financial markets, corruption and the large use of conventional systems still impede the success of Islamic policies. Thus, the success of Islamic monetary policy instruments to fight inflation depends on the human factor in applying these instruments and not on the Islamic principles themselves.

## THE IMPACT OF INTEREST RATE CHANGES ON MALAYSIAN ISLAMIC HOME FINANCING

Nor Haziah Binti Hashim<sup>1</sup> Nursilah Ahmad<sup>2</sup> Safeza Mohd Sapian<sup>3</sup> Norhazlina Ibrahim<sup>4</sup>

#### **ABSTRACT**

**Purpose** – This paper investigate the impact of interest rate changes, specifically the base lending rate (BLR) on the demand for Islamic home financing (BBA) in a dual banking system. Theoretically, when the BLR is low, customers who are driven by profit would substitute BBA for conventional home loans, as the BBA monthly payments is relatively higher. Conversely, when the BLR is high, customers would prefer the BBA financing because of the lower monthly instalment.

**Design/methodology/approach** – Using a 109 monthly data from January 2002 to January 2011, this study employs a time series technique, in particular, cointegration, error correction modelling and variance decomposition, to find empirical evidence of the impact of interest rate on Islamic home financing. A formal unit root test and cointegration test have been conducted to proof the long-term relationship between the variables. Next, the long-run structural modeling (LRSM) has been applied to ensure that the estimation is in line with theoretical expectation. Then, in order to determine the properties of endogeneity and exogeneity of variables, vector error-correction model has been employed followed by generalized variance decompositions, generalized impulse response and persistence profile

**Findings** - The study found that any increase in the BLR would trigger customers to obtain financing from Islamic banks. Conversely, any decrease in the base lending rate would induce customers to shift to the conventional home loans. The paper concludes that because customers are profit motivated, Islamic banks in the dual system, such as in Malaysia are exposed to interest rate risks despite operating on an interest free principle. This finding supports the earlier work done on the topic.

**Keywords**: Islamic financing, Bai-Bithaman Ajil, interest rates, base lending rates (BLR)

## 1. INTRODUCTION

Islamic banking refers to a system of banking that complies with the Islamic law or Shariah. The underlying principles governing the Islamic banking are mutual risk and profit sharing between parties, the assurance of fairness for all and that transactions are based on an underlying business activity or asset. In addition to that, activities that involve interest (riba), gambling (maisir) and speculation (gharar) are prohibited. Islamic banking has played an important role in the overall growth of Islamic finance, with overall growth of 15 to 20 percent per annum globally. With the commendable growth, Islamic banking industry is expected to promote the alternative form of financial intermediation.

Malaysia's Islamic finance industry has been around for over 30 years. The enactment of the Islamic Banking Act 1983 has enabled Malaysia's first Islamic bank to be established and thereafter, with the liberalisation of the Islamic financial system, more Islamic financial institutions have been

<sup>1,2,3,4</sup> Faculty Economics and Muamalat, Universiti Sains Islam Malaysia (USIM)

established. The long term objective of the Islamic Bank Act 1983 is that a full-fledged Islamic banking system would operate in parallel with the conventional financial system. Islamic banks in Malaysia can be categorized into four groups. Firstly, the full-fledged local and foreign Islamic banks which include Bank Islam Malaysia Berhad, Bank Muamalat, Kuwait Finance House and Al-Rajhi Bank. Secondly, the Islamic subsidiary banks among which include CIMB Islamic bank, MayBan Islamic bank, RHB Islamic bank and EON Capital Islamic bank. Thirdly, the Islamic windows in foreign conventional banks, such as Citibank, HSBC, Deutch Bank and finally the International Islamic banks, such as the Bank Muamalat Indonesia.

For Islamic banks to be competitive, the initial strategy adopted in Malaysia has been for Islamic banks to offer financial services which match those offered by the conventional banks (Bank Negara Malaysia 2005). In most cases, the Islamic products were repackaged and adapted along features of conventional products with the non-shariah aspects eliminated. Hence, on the asset side, it is found that Islamic financing is dominated by property and asset term financing (Radiah and Yap ,2009).

Table 1: Islamic Financing by Products as of January 2011

Products	RM million	Percentage (%)
Bai Bithman Ajil (BBA)	54,662.2	33.6
Ijara (leasing)	3,999.5	2.4
Ijara Thumma Al-Bai (AITAB)	43,992.2	27.1
Murabaha	23,734.3	14.6
Musharaka	4,104.4	2.5
Mudaraba	273.9	0.16
Istisna	1,613.5	0.9
Others	29,845.4	18.3
Total	162,225.40	100

Source: BNM Monthly Bulletin January 2011

From Table 1, we can see that he most popular financing product is Bai Bithamin Ajil (deferred payment sale) followed by Ijarah Thumma Al-Bai (leasing). Al-Ijarah Thumma Al-Bai (AITAB) on the other hand, is a type of lease contract, which concludes with the purchase of an asset, in which the legal title of the leased asset will be passed to the hirer at the end or at the completion of the rental period.

Bai Bithamin Ajil (BBA), on the other hand is a sales contract whereby the bank purchases the asset required by the customer at the market price and then sells it to the customer at a mark-up price. As required by Shariah, the profit rate and the selling price are fixed throughout the financing period. In addition to that, the repayments paid by the customer to the bank are by instalments. In practice, BBA financing is collateralized which implies that the profit to the bank is almost certain. In this respect, BBA financing is not much different from conventional bank loans (Radiah and Yap, 2009).

Conventional home loans is highly decendent on the market interest rates. So, when the market interest rates increase, the cost of conventional loans will also increase, hence, induces new customers to choose for the relatively cheaper BBA financing because the profit rate is fixed. The reverse occurs when interest rates falls. Such substitution effect implies that Islamic banks are exposed to interest rate risks even though operating on interest-free principles (Radiah and Yap, 2009). Theoretically, a dual banking system provides customers a relative advantage in terms of bank choice. Whilst pious Muslim customers are expected to stay with the Islamic banks, other customers, especially those who are profit-motivated would tend to compare between the cost of Islamic and conventional bank financing. These group of customers would choose the banking scheme that offers the lower financing rate. It is important to understand this phenomenon because a negative consequence if not mitigated, would slower the growth of Islamic financing and eventually affects the competitiveness of Islamic banks in the dual system.

The research question for this study is **whether bank customers in the dual system are influenced by the substitution effect.** This will be done by analysing the **impact of BLR on the Islamic home financing.** If it is proven that the base lending rate (BLR) have an impact on Islamic home financing, then there is a substitution effect. If however, the Islamic home financing is not affected by the changes in BLR, then there is no substitution effect.

This study is significant due to two reasons:

- i. The focus of this paper is the impact of interest rate changes on the demand for Islamic bank financing. It is found that past studies have only concentrated on the impact of interest on Islamic bank deposits (Sudin & Ahmad 2000, Obiyatullah 2004, Rahmatina 2007). Only one past studies by Radiah and Yap (2009) have looked at the impact of interest changes on Islamic bank financing. However, this study covers a longer, more recent time period and a more robust analysis was undertaken. In addition to that, this study specifically look at the impact of interest rate on the Islamic home financing. Hence this paper extends the earlier research.
- ii. The context of this paper is the period after the Asian financial crisis when interest rates are falling or remain low. It is of interest to investigate if the financing behaviour of customers in the dual banking system during such period is consistent with that in theory.

This paper is organised into five sections. Section two provides a review of existing literature. The data and research methodology is presented in section three. The empirical analysis and findings are discussed in section four, while the conclusion and recommendations are given in section five.

## 2. LITERATURE REVIEW

Past studies have only concentrated on the impact of interest rates on Islamic bank deposits (Sudin & Ahmad 2000, Obiyatullah 2004, Rahmatina 2007). Only one past studies by Radiah and Yap (2009) have looked at the impact of interest changes on Islamic bank financing. The study found that the Islamic bank financing is affected by the market interest rate, therefore the substitution effect exist in the scheme. However, this paper covers a longer time period and a more robust analysis was undertaken. Hence this paper extends the earlier research.

Rosly (1999) provides the theoretical explanation of the impact of interest rate changes on Islamic bank performance in the dual system. He emphasized that Islamic banks are exposed to interest rate risks and the root cause of this phenomenon is the overdependence of Islamic banks on Bai Bithaman Ajil (BBA) financing, where the profit rate (financing rate) is fixed. Rosly (1999) also explains that when interest rates are rising, the base lending rate (BLR) and rates of return on deposits of the conventional banks would change accordingly to the changes in the market interest rate. As a result, the profit margin of the conventional banks will not be affected.

On the other hand, the Islamic bank cannot increase the rate of return on its deposits because the BBA profit margin is fixed. As a consequence, the deposit returns given by the Islamic banks are lower. The substitution effect comes into play where depositors prefer the conventional banks. On the asset side, customers may find that the instalments for existing BBA financing are relatively cheaper than the instalments for existing conventional loans during times of rising interest rates. Hence, profit motivated customers would choose BBA financing if they expect interest rates to rise in the future. This will make the demand for BBA financing rising. However, the Islamic bank may not be able to fulfil this increased demand for BBA financing due to the fall in total deposits. The Islamic bank may not be willing to borrow from the Islamic inter-bank money market because the cost of funds in the money market is usually higher than that of bank deposits.

In the case of falling market interest rates, the conventional bank is able to adjust both its deposit and base lending rates downwards, thus, maintaining its profit margin. Islamic bank, on the other hand,

also would reduce the rates of return on deposits in line with conventional deposit rates. Since the profit rate of BBA financing is fixed, it is rational for the Islamic bank to lower the deposit rates, hence, widening its profit margin.

In the case of Islamic financing, because existing BBA profit rates remain fixed, customers would find that existing BBA financing is relatively more costly than existing conventional loans. If customers expect the market interest rate to decline further, they would prefer conventional loans rather than BBA financing. Hence, the demand for conventional loan increases while the demand for BBA financing falls.

The above explanation theoretically shows that any changes in the market interest rate would, on the asset side, lead to a substitution effect between Islamic and conventional bank financing. It is recognised that the root cause of this problem is the weakness of the fixed BBA mechanism. Thus, overdependence on BBA financing by the Islamic bank has limited the bank's ability to compete with the conventional bank in the dual system.

#### 3. DATA AND RESEARCH METHODOLOGY

#### 3.1 Data

To examine the impact of interest rate changes (BLR) on Islamic home financing, data on total monthly residential property of Islamic banks (ISFIN), total monthly housing loans of conventional banks (CVFIN) and the monthly base lending rate (BLR) are used. These are the main variables of this study. Total residential property financing of Islamic banks is chosen because Islamic bank home financing is mainly dealt with the BBA contract. In comparison to this, the level of conventional housing loans is used to represent the conventional bank.

Data for this study is taken from the Monthly Statistical Bulletin, published by Bank Negara Malaysia. The data is spread over monthly observations, from January 2002 to January 2011, a total of 109 monthly observations.

## 3.2 Methodology

This study employs a time series technique, in particular, cointegration, error correction modelling and variance decomposition, in order to find empirical evidence of the impact of interest rate on Islamic home financing, as explained in the introductory section. This method is favoured over the traditional regression method for the following reasons. Firstly, most finance variables (including interest rates as will be evident below) are non-stationary. This means that performing ordinary regression on the variables will render the results misleading, as statistical tests like t-ratios and F statistics are not statistically valid when applied to non-stationary variables. Performing regressions on the differenced form of these variables will solve one problem, at the expense of committing an arguably even bigger mistake. When variables are regressed in their differenced form, the long term trend is effectively removed. Thus, the regression only captures short term, cyclical or seasonal effects. In other words, the regression is not really testing long term (theoretical) relationships.

Secondly, in traditional regression, the endogeneity (for dependent variable) and exogeneity (for independent variable) of variables is pre-determined by the researcher based on the underlying theories. However, in this case, as we are discussing a relatively new area, there is notable absence of established theories. Cointegration techniques are advantageous in that it does not presume variable endogeneity and exogeneity. In the final analysis, the data will determine which variables are in fact exogenous, and which are endogenous. In other words, with regression, causality is presumed whereas in cointegration, it is empirically proven with the data.

Thirdly, cointegration techniques embrace the dynamic interaction between variables whereas traditional regression methods, by definition, exclude or discriminate against interaction between variables.

#### 4. EMPIRICAL RESULTS

## 4.1 TESTING STATIONARITY OF VARIABLES

**Unit Root Test:** Time series data are often assumed to be non-stationary and thus it is necessary to perform a pre-test to ensure there is a stationary cointegrating relationship among variables to avoid the problem of spurious regression<sup>2</sup>. Based on the error correction mechanism as indicated by Johansen (1990), it is necessary for the variables to be of the same order of integration.

The tests for stationarity or unit roots employ the augmented Dickey-Fuller (ADF) and Phillips-Peron (PP) test performed on the variables in levels and first differences. The ADF test for testing the unit root is utilised. *ADF tests with null hypothesis of existence of unit root, which implies the variable, is non-stationary*. The results for the level form variables are represented in Table 2.

Table 2: Testing Stationarity of Variables in the Level Form

Variables	Test statistic	95% Critical Value	Implication
LISFIN	-2.3079 (AIC)	-3.4535	Variable is non-stationary
	-2.0603 (SBC)	-3.4535	Variable is non-stationary
LCVFIN	-1.3005	-3.4535	Variable is non-stationary
LBLR	-2.3184	-3.4535	Variable is non-stationary

In the level log form all the variables represent a lower t statistic than the critical value, thus accepting the null hypothesis, that there is unit root. At 5 % significance level all variables are non stationary.

For the differenced form of the log variables, as represented in Table 3, the t statistics are higher than the 5 % significance value and thus the null hypothesis is rejected and the alternate hypothesis of no unit root accepted. For details please refer Appendix 1A to 1F for details.

Table 3: Testing Stationarity of Variables in the Differenced Form

Tuble of Testing Stationarity of Fariables in the Emplement of in					
Variables	Test statistic	95% Critical Value	Implication		
LISFIN	-2.991 (AIC)	-2.8897	Variable is stationary		
	-3.0947 (SBC)	-2.8897	Variable is stationary		
LCVFIN	-7.0769	-2.8897	Variable is stationary		
LBLR	-4.2971	-2.8897	Variable is stationary		

<sup>&</sup>lt;sup>2</sup> A variable is stationary when its mean, variance and covariance are constant over time

Relying primarily on the AIC and SBC criteria, the conclusion that can be made from the above results is that *all the variables we are using for this analysis are I(1)*, and thus we may proceed with testing of cointegration<sup>3</sup>. Note that in determining which test statistic to compare with the 95% critical value for the ADF statistic, we have selected the ADF regression order based on the highest computed value for AIC and SBC.

#### 4.2 DETERMINATION OF ORDER OF THE VAR MODEL

Before proceeding with test of cointegration, we need to first determine the order of the vector auto regression (VAR), that is, the number of lags to be used. As per the table below, results show that AIC recommends order of 2 whereas SBC favours 1 lag (see Appendix 2 for details)<sup>4</sup>.

Table 4: Order of VAR

	Choice Criteria		
	AIC	SBC	
Optimal order	2	1	

Given this apparent conflict between recommendation of AIC and SBC, the paper addresses the problem by choosing the lower order of the VAR between the two criteria, which is the recommendation by the SBC (order of VAR of 1). This is due to the relative small sample size consisting of 120 observations and to avoid the risk of over parameterization and loosing number of degrees of freedom.

## 4.3 TESTING COINTEGRATION

Once we have established that the variables are I(1) and determined the optimal VAR order as 1, we are ready to test for cointegration. Cointegration implies that the relationship among the variables is not spurious, for example there is a theoretical relationship among the variables and that they are in equilibrium in the long run. Employing the Cointegration LR Test based on Maximal Eigenvalue and the Trace of the Stochastic Matrix, the results imply that there exists one cointegrating relationship at 5% significance level (95% critical value) between the variables. (See Appendix 3)

Table 5: Cointegration LR Test based on Maximal Eigenvalue of the Stochastic Matrix

Null Hypothesis	Alternate Hypothesis	Statistic	95% Critical Value	Implication
r = 0	r = 1	97.7382	25.4200	Reject null hypothesis Accept alternate hypothesis Exist one cointegrating vector
r=1	r = 2	3.5007	19.2200	Accept null hypothesis Reject alternate hypothesis No cointegrating vector

Table 6: Cointegration LR Test based on the Trace of the Stochastic Matrix

Null	Alternate	Statistic	95% Critical	Implication
				•

<sup>3</sup> The null hypothesis for the ADF test is that the variable is non-stationary. In all cases of the variable in level form, the test statistic is lower than the critical value and hence we cannot reject the null. Conversely, in all cases of the variable in differenced form, the test statistic is higher than the critical value and thus we can reject the null and conclude that the variable is stationary (in its differenced form).

1174

<sup>&</sup>lt;sup>4</sup> Based on highest computed values for AIC and SBC, after stipulating an arbitrary relatively high VAR order of 6.

Hypothesis	Hypothesis		Value	
r = 0	r = 1	103.8875	42.3400	Reject null hypothesis Accept alternate hypothesis Exist one cointegrating vector
r=1	r = 2	6.1493	Accept null hypothesis Reject alternate hypothesis No cointegrating vector	

Based on the above result and as well as our intuition, we believe that there is one cointegrating vector or relationship. The economics interpretation would be that the Islamic home financing, the conventional home loans and the interest rate (BLR) are theoretically related, in that they tend to move together in the long terms. Their relationship to one another is nor merely spurious or by chance. This conclusion suggest that although the conventional loand and Islamic financing operated on different principles, being the latter is free from the element of interest (riba free), on the long run, the Islamic financing are also exposed to the interest rate risk

# 4.4 LONG RUN STRUCTURAL MODELLING (LRSM)

In this step, the author attempts to quantify the theoretical relationship among the three variables, proven in the cointegration step. This step is necessary in order to compare the statistical findings with the underlying theory. Arising from the theoretical base, the Islamic home financing value is normalised in the Long Run Structural Modelling (LRSM). Uptil now, the author have run the assumption that all variables are endogenous. With the identifying rescriction of A1 = 1 (A1 is Islamic home financing), the result is expressed in Table 7 below. For detail see Appendix 4A.

Calculating the t-ratios manually, it is found that only one variable, which is the conventional home loan (CV) to be significant. The other variable, which is the base lending rate (interest rate- BLR) is insignificant.

Table 7: Long Run Structural Modelling (LRSM) Normalize Islamic Home Financing

Variable	Coefficient	Standard Error	T Ratio	Implication
ISFIN	-	-	-	-
CVFIN	1.1158	0.22305	5.002	Variable is significant
BLR	0.0046816	0.25289	0.189	Variable is insignificant

From the table it is concluded that the variable for conventional home loan (CVFIN) is significant with a t-ratio of 5.002, showing that it actually affects the normalised variable, the Islamic home financing (ISFIN), thus, we keep this variable in the equation.

However, a huge question arises when the variable of base lending rate (BLR) is proven to be insignificant, with a t-ratio of 0.189. it means that BLR does not affect the normalised Islamic home financing value. Driven by curiosity, the author decided to verify the significance of the variable by subjecting the estimates to over-identifying restrictions. The over-identifying restriction applied is A3=0 (A3 is BLR). We also did this for the conventional home loan (CVFIN). For detail see Appendix 4B-4C

Table 8: Long Run Structural Modelling (LRSM) Over-identifying Restriction: CVFIN and LBLR

Variable	Chi-Sq p-value	Implication
ISFIN	-	-
CVFIN	0.000	Variable is significant
LBLR	0.854	Variable is insignificant

The result depicted in Table 8 confirmed earlier findings that only CVFIN is significant, and LBLR is proven insignificant. Although the statistical result showed that the base lending rate (BLR) is not significant, the author however, is more inclined to include the variable in the equation. This is because firstly, the variable is proven to be cointegrated in step number three above. In addition to that, according to theory, base lending rate is an important variable in determining the demand of loans, specifically the conventional loans. When the BLR is high, the demand for loans generally will fall, as the cost to borrow is higher, conversely, when BLR is relatively low, the demand for loans tend to increase, as the cost of borrowing is cheaper. Thus, for the above reason, the author would still prefer to keep the BLR in the equation, despite the statistical result.

From the above analysis, we arrive at the following cointegrating equation. The numbers in parenthesis are standard error.

## 4.5 VECTOR ERROR CORRECTION MODEL (VECM)

From our analysis thus far, we have established that the Islamic home financing, conventional home loans and the base lending rate are cointegrated to a significant degree. However, the cointegrating equation reveals nothing about causality, that is, which variable is the leader (exogenous) and which is the laggard variable (endogenous).

In light of this, the next part of our analysis involves the Vector Error Correction Model (VECM). The vector error correction model allows us to identify that which variables are exogenous and which are endogenous. The vector error correction model can be employed by the interpreting of the coefficient where if the error-correction term  $(e_{t-1})$  for each variable equation is insignificant, that implies that the corresponding dependent variable of that equation is 'exogenous. We have taken the approach of interpreting the probability numbers and the t-ratio.

The null hypothesis states that all the variables are exogenous and the alternate stating that the variable is endogenous<sup>5</sup>. At a 5 % confidence level, if the probability is higher than 0.05 it means that we would be making a greater error in rejecting the Null hypothesis, and thus we accept the Null Hypothesis. The other way of looking at it is by looking at the t-ratio, where if the t-ratio of a variable is more than 2, it is significant, therefore, the variable is endogenous. On the other hand, if the t-ratio of a variable is less than 2, it is insignificant, therefore, the variable is exogenous.

The resultant probability for the variables is summarized in the Table 8. From the table we are able to interpret that there are two exogenous variables, which are the base lending rate (BLR) and the conventional home loan (CVFIN), hence, leaving the Islamic home financing (ISFIN) as the endogenous variable. We can also make a conclusion that, the three VECM equations can be considered are more or less well-specified, with no serial correlation, no functionality form, no normality and no heteroscedasticity. For details see Appendix 5A to 5C).

Table 8: Vector Error Correction Model (VECM) 6

Variable	ECM(-1) t-ratio p- value	Probability	Conclusion	Implication
ISFIN	-11.8973	0.000	Significant	Variable is endogenous
CVFIN	0.75723	0.451	Insignificant	Variable is exogenous
LBLR	1.7031	0.091	Insignificant	Variable is exogenous

The implication of this result is that, the variable of interest to the borrowing public (customers) and to the loan/financing providers (conventional banks and Islamic banks) would be the base lending rate (BLR). In tandem to the underlying theory, interest rate, specifically the BLR plays an important role in determining the demand of loans and financing. As have explained in the above section, when the BLR is high, the demand for loans generally will fall, as the cost to borrow is higher, conversely, when BLR is relatively low, the demand for loans tend to increase, as the cost of borrowing is cheaper.

In addition, the VECM produces a statistic that may be of interest to the customers and banks. The coefficient of  $e_{t-1}$  tells us how long it will take to get back to long term equilibrium if that variable is shocked. The coefficient represents proportion of imbalance corrected in each period. For instance, in the case of the BLR, the coefficient is 0.01684. This implies that, when there is a shock applied to this index, it would take, on average, 059.38 months for the BLR to get back into equilibrium with the other variables..

## 4.6 VARIANCE DECOMPOSITION (VDC)

Whilst we have established that the Islamic financing (ISFIN) is the endogenous variable, and the base lending rate (BLR) and conventional home loan (CVFIN) are the exogenous variables, we have not been able to say anything about the <u>relative</u> exogeneity between BLR and CVFIN. In other words, of the two, which is the most exogenous (leader) variable compared to the other?

.

<sup>&</sup>lt;sup>5</sup> Ho: All variables are exogenous Hi: All variables are endogenous

<sup>6</sup> t ratio > 2 : significant, variable is endogenous t ratio < 2: insignificant, variable is exogenous

As the VECM is not able to assist us in this regard, we turn our attention to variance decomposition (VDC). The Variance Decomposition Method, decomposes the variance of the forecast error of a particular variable into proportions attributable to shocks (or innovations) in each variable in the system including its own. The <u>relative</u> exogeneity/endogeneity of a variable can be determined by the proportion of the variance explained by its own past shocks. The variable which is explained mostly by its own shocks (and not by others) is deemed to be the most exogenous of all.

We started out applying orthogonalized VDCs and obtained the following results (see Appendix 6A -6C for detail).

#### Forecast at Horizon = 10 months

	ISFIN	CVFIN	BLR
ISFIN	20.72%	79.23%	0.04%
CVFIN	7.19%	92.81%	0.00%
BLR	2.44%	2.50%	95.06%

For the above table, the rows read as the percentage of the variance of forecast error of each variable into proportions attributable to shocks from other variables (in columns), including its own. The columns read as the percentage in which that variable contributes to other variables in explaining observed changes. The diagonal line of the matrix (highlighted) represents the relative exogeneity. According to these results, the ranking of variable by degree of exogeneity (extent to which variation is explained by its own past variations) is as per the table below:

Table 9: Ranking of Variables by Degree of Exogeneity

No.	Variables
1	BLR
2	CVFIN
3	ISFIN

From the above table we can see that base lending rate is the most exogenous variable, compared to conventional loan. Therefore, even though in step 4, the LRSM, statistically, BLR was proven insignificant, in the above, it is proven otherwise, hence the decision to keep the variable in the equation is correct.

In order to make sense of this result, we need to recognize two important limitations of orthogonalized VDCs. Firstly it assumes that when a particular variable is shocked, all other variables are "switched off". Secondly and more importantly, orthogonalized VDCs do not produce a unique solution. The generated numbers are dependent upon the ordering of variables in the VAR. Typically, the first variable would report the highest percentage and thus would likely to be specified as the most exogenous variable.

Following this discovery, we decided to rely instead on Generalized VDCs, which are invariant to the ordering of variables. We obtained results as per Appendix 7A to 7C. In interpreting the numbers generated by the Generalized VDCs, we need to perform additional computations. This is because the numbers do not add up to 1.0 as in the case of orthogonalized VDCs. For a given variable, at a specified horizon, we total up the numbers of the given row and we then divide the number for that variable (representing magnitude of variance explained by its own past) by the computed total. In this way, the numbers in a row will now add up to 1.0 or 100%. The tables below show the result.

## Forecast at Horizon = 10 months

	ISFIN	CVFIN	BLR
ISFIN	24.29%	75.56%	0.14%
CVFIN	6.71%	93.20%	0.09%
BLR	2.36%	3.70%	94.00%

The Generalized VDCs, also confirm the earlier result, whereby the most exogenous variable is BLR, followed by CVFIN, and the endogenous variable is ISFIN.

# 4.7 IMPULSE RESPONSE FUNCTIONS (IRF)

The information that has been tabulated in VDC can be equivalently represented by Impulse Response Functions. IRFs essentially map out the dynamic response path of a variable owing to a one-period standard deviation shock to another variable. It is also can be explained as a variable specific shock. Figure 1 shows the generalised IRF for Islamic financing, where we shock the variable Islamic financing and see the effect on the conventional home loan BLR. Figure 2 shows the generalised IRF for conventional home loan, and the effect on the Islamic financing and BLR. Figure 3 shows the generalised IRF for BLR and the effect on the conventional home loan and Islamic financing.

From the three figures, it can be concluded that when we shock the most exogenous variable, which is the BLR that we can see the biggest difference in the other two variables. It is because the leader variable, BLR will naturally give the most impact to the other following variables.

Generalized Impulse Response(s) to one S.E. shock in the equation for LIS

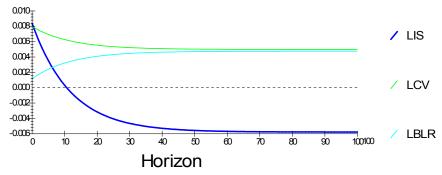

Figure 2
Generalized Impulse Response(s) to one S.E. shock in the equation for LCV

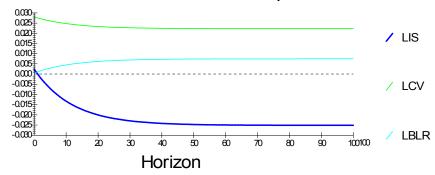

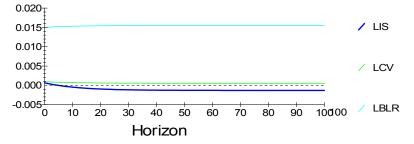

Figure 3:

Generalized Impulse Response(s) to one S.E. shock in the equation for LBLR

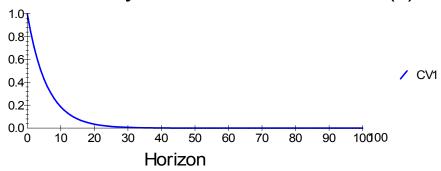

## 4.8 PERSISTENCE PROFILE

The persistence profiles traces out the effects of a system-wide shock on the long-run relations in an equation. In difference with the Impulse Response Function which is variable

specific shock, it indicates the time horizon that it takes to get back to equilibrium for a system wide shock.

# Persistence Profile of the effect of a system-wide shock to CV'(s)

In our model the persistence profile represents that it takes between 25 to 30 months for the equilibrium to be achieved again after a system wide shock.

#### 5. CONCLUSION

Ideally, customers of Islamic banks should not be guided by the profit motive; hence, any changes in BLR should not trigger them to shift to conventional banking. If the above scenario was adhered the level of Islamic banking financing will not have any significant changes. However, this paper found that the Islamic financing, specifically BBA (Al-Bai Bithaman Ajil), seems to be affected by both conventional home loans and BLR. However, the response to BLR is more apparent. It implies that Islamic bank's customers are profit motivated and their decisions to obtain Islamic financing (BBA) will be influenced by the substitution effect based on the changes in BLR. Our findings supports earlier research done, where during rising interest rates, BBA financing would be more popular, and during falling interest rates, customers would turn to conventional banking.

# ISLAMIC HOME FINANCING PRODUCTS IN MALAYSIA: SHARI'AH ISSUES AND POSSIBLE CAUSES

Abul Azaheem Ahamed Azwar<sup>1</sup> Nurul Aini Muhamed<sup>2</sup>

#### **ABSTRACT**

Home is a basic necessity of human-being, so provision of such support is considered as promoting welfare to the people in need. Thus, facilitating shari'ah compliant home financing in the Islamic banking industries is an Islamic imperative in order to prevent larger chunks of middle class people's income, from unjust financial transaction. According to Islamic law, all Islamic financial transactions should imply risk, liability and effort to reflect the sense of justice and equity into a business transaction. Any practice contrary to above requirements is considered as non shari'ah compliant. This paper is a theoretical analysis of the existing shari'ah issues in both Bai' Bithaman Ajil (BBA) and Musharaka Mutanaqisah (MM) home financing and its possible causes in the practice. The paper found many shari'ah issues in BBA and MM model such as Bai al-Inah, Bai al-Madum, Bai wa-Sharth, Khiyar al-Ayb, ownership, pricing, purchase undertaking, combination of two contracts, forward Ijara and others. The paper concluded that several solutions should be initiated by government and other related parties to preserve rights of both Islamic banking institutions and their clients.

**Keywords:** Islamic home financing, Bai' Bithaman Ajil, Musharaka Mutanaqisah, Shari'ah issues

#### 1. INTRODUCTION

Shelter is an essential need for human beings. Hence Islam encourages possessing a shelter to live a stable family life in a society. Thus, provision of such support to the people in need is an enormous responsibility kept upon the whole Muslim community in general and in particularly upon Islamic bankers. Allah the Almighty says:

"Indeed, it is [promised] for you not to be hungry therein or be unclothed. (20:118) And indeed, you will not be thirsty therein or be hot from the sun." (20:119).

Since Islamic banks are obliged to pay profits to their depositors and investors, in addition to covering their overhead / operating costs, the only solution that can be provided by Islamic bankers is, facilitating a *Shari'ah* compliance mode of home financing to those whom in need, in order to promote social welfare of the people. *Shari'ah* compliance is a backbone of Islamic financing, hence the global Islamic financial institutions are using various types of *Shari'ah* contracts to provide Islamic Home Financing (IHF) such as sale, lease or partnership contracts. However, practical aspects of an IHF mode differ from one country to another or even one bank to another, even though they apply the same Islamic concepts under the same jurisdiction, regulation and legal rules. This paper attempts to theoretically analyse the *shari'ah* issues in BBA and MM home financing practices by Malaysian Islamic banks.

<sup>&</sup>lt;sup>1</sup> PhD candidate of Universiti Sains Islam Malaysia (USIM). Corresponding author: azrath87@yahoo.com

<sup>&</sup>lt;sup>2</sup> Dr. Nurul Aini Muhamed is a senior lecturer at the Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia.

#### 2. ISLAMIC HOME FINANCING PRODUCTS IN MALAYSIA

The concept of *Bai`al-ina'h* in BBA Islamic home financing has been used for the last few decades in Malaysia as a dominant alternative model for conventional mortgage. Nevertheless, the *shari'ah* issues in BBA and present dissimilarities in judgements have led to confusion among the public concerning the compliance status of BBA contracts. At the same time the BBA practice is disputed by Muslim jurists internationally.

In the year 2006 the *Musharaka Mutanaqisah* (MM) model has been introduced by Kuwait finance house in Malaysian market. However, due to higher risk weight requirement in this model and some other problems occurred in the practice, MM was not favourably used in the county except in few Islamic banks such as Kuwait finance house, May Bank Islamic, RHB Islamic and few others, while the majority of bankers were continuing the *Bai`al-ina'h* BBA model even though the practice was not accepted by majority jurist such as *Hanafiyyah*, *Hanbaliyyah*, and *Malikiyyah*.

However, the application of *Bai`al-ina'h* in BBA home financing resulted in facing many problem in Islamic home financing practice. So the Bank Negara Malaysia (BNM) issued a new resolution for *Bai`al-ina'h* on 19 December 2012, which requires the bankers to practice real sale contract fulfilling its pillars and conditions, without using invalid terms in the contracts. The resolution also required an acceptable interval between two sale contracts involved in *Bai`al-ina'h* transaction. Interestingly, at present majority of Islamic banks have launched MM mode for home financing in the market either simultaneously with BBA or with any other mode *such as Murabahah*, *Ijarah Mausufah Fi Zimmah*, *Ijarah Muntahiyah Bi Tamlik* (Asmadi 2011), whereas a few banks still prefer to use some other debt based instruments such as *Tawarruq and Istisna'* home financing (See appendix 1).

Although the MM home financing theoretically seems much fairer than BBA, the practical aspect of this model is vastly criticized by scholars. Some literatures argue that the MM home financing model is not an alternative for conventional mortgage or BBA but it is similar to *riba* as it does not reflect the objective of *Shari'ah* (Sadique 2008, Osmani and Abdullah 2010, Hassan 2011, Hassan 2012, Boon ka 2009).

## 3. ISLAMIC HOME FINANCING AND SHARIAH ISSUES

## 3.1 Bai' Bithaman Ajil (BBA) home financing

Bai' Bithaman Ajil (BBA) is a deferred instalment sale. This is an extension of Murabaha (cost plus mark-up) contract which is mainly used in banking practice for medium and long-term financing. Murabaha is simply a sale contract in which the seller discloses the cost of object and its mark-up (profit margin) to the buyer. In the actual sense, the Murabaha contract does not necessarily require the customer to settle the payment in deferred basis, but it can be paid on the spot as well.

In BBA home financing, the concept of *Murabaha* is used together with *Bai'Mu'ajjal and Bai Al-Ina'h*. Besides that some other supporting contracts are in use under this facility, such as *Wakala*, *Wa'd* and *Rahn*. Moreover, in Malaysian practice certain legal documentations are mostly used in BBA home financing; Letter of Offer, Property Sale Agreement, Property Purchase Agreement, Legal Charge or, Assignment and power of attorney or any other Islamic financing documents that are required for the home financing.

The structure of BBA home financing facility in Malaysia is as follows. The customer identifies the house that he or she wants to purchase and enters into a Sale and Purchase Agreement (S&P) with the property developer by paying 10 percent deposit. Subsequently, the customer approaches the bank for financing to settle the remaining balance of purchase price to developer. Upon customer's request being approved by the bank, the customer as a beneficial owner of the house sells his beneficial

ownership of the house or the house itself through Property Purchase Agreement (PPA) to the bank by cash, for a lower price which is equal to the financing amount. However, prior to PPA, the customer signs in an undertaking to re-purchase the same house based on selling price from the bank. Pursuant to that the customer re-purchases the house from bank through PSA for a cost plus mark up price which is computed based on BFR. The purchase price will be paid by customer on an instalment basis throughout the agreed tenure (Dusuki 2011).

#### 3.1.1 Shariah Issues in the Use of Murabaha contract

Murabaha is not a mode of financing but a particular kind of sale transaction. However concerning some practical difficulties in the current banking practices, the contemporary *Shari'ah* scholars allowed to use *Murabaha* as a mode of financing with following conditions; It should be used as a device to escape from interest in the circumstances that the *Mudaraba* and *Musharaka* are not practicable, it should fulfil all implications of *Murabaha* concept and basic element of a valid sale contract and it should be applied for real sales, not to provide fund to pay purchase price for the commodities that has been purchased by the customer prior to apply for financing (Usmani 2002).

The section five of *Murabaha Shari'ah* parameter reference (2008) issued by BNM, facilitate guidelines on *Murabaha* asset providing some important statements. Firstly the asset should be in existence, so the asset which is yet to be completed is considered as non eligible for *Murabaha* sale. Secondly the Islamic financer must legally or beneficially own the asset prior to *Murabaha* sale. Thirdly the selling object must be physically or constructively possess by seller.

#### 3.1.2 Shari'ah Issues in BBA

It is mandatory for property purchasers in Malaysia to execute statutory standard formatted Sale and Purchase Agreements <sup>3</sup>(S&P) with developer prior to seeking home financing from Islamic banks or any other financial institutions. Similarly, the taxes, stamp duty and other expenses related to the property in home financing transactions in Malaysia fall under liability of the purchaser (Dahlan and Kader 2010).

At first, the customer pays 10 percent deposit and executes S&P with developer. Subsequently the customer concludes Property Purchase Agreement (PPA) with Islamic bank. Dahlan and Kader (2010) argue that neither Islamic law nor civil law provide the customer full ownership or rights to sell the property by paying 10 percent deposit to the developer. This is evidence for the fact that the S&P between vendor and customer is not conferring the customer the title of the property but there is clear term which allows the vendor to forfeit the deposit, in the event of inability to settle the balance amount (Murshida and Marhaini 2011).

Similarly, since the BBA IHF is a sale contract, holding the ownership title of the house is important for seller, but in the banking BBA practice the ownership of the bank in the interested property is ambiguous since the bank does not purchase the house from the developer and does not take any ownership liability related to real sale agreement, such as risk of non-completion, damage and market value depreciations. Hence this practice appears as providing finance to the customer to settle remaining balance to developer for already purchased house. Accordingly, Hassan (2011) argues that as many believe, the Islamic banks do not purchase the property from vendor and sell it back to the customer at mark-up price. In fact, it is a loan arrangement between bank and customer.

Secondly, Islamic law does not recognise tying arrangement in a financial contract, which literally means one contract being referred to another contract. In BBA practice the PPA is executed between

\_

<sup>(3)</sup> Statutory standard formatted sale and purchase agreements provided by housing development control and licensing act 1966

bank and the customer with customer's undertaking to repurchase the same asset for selling price, which is disallowed in Islamic law as it is a condition sale (Tarmizi 2007).

"Yahya related to me from Malik that he had heard that the Messenger of Allah, may Allah bless him and grant him peace, forbade two sales in one sale" (Hadith. Muwatta. Business Transactions: Prohibition against Two Sales in One Sale #73)<sup>4</sup>

Thirdly, the BBA home financing uses *Bai` al-ina'h* contract by means of property purchase agreement and Property Sale Agreement (PSA). For example, a customer sells his property to an Islamic bank on cash basis and then buys back the same house at a deferred price which is higher than the cash sale price.

The majority of Muslim jurist such as *Hanafiyyah*, *Malikiyyah* and *Hanbaliyyah* disallowed the practice of *Bai`al-ina'h*. According to literatures *Bai`al-ina'h* is a trick used in BBA contract to legalize interest bearing loan. The bank uses this contract to avoid stamp duty and, ownership risk and liability in Islamic home financing transaction. Similarly, the *Bai`al-ina'h* BBA home financing has been ruled by high court as a non Bona fide sale transaction and equal to *riba* (Rosly, Sanusi and Norhashimah 2001, Dahlan and Kader 2010). According to Rosly and Seman (2003) *Bai al-ina'h* contract contains features of interest as it is not exchanging a value to an equivalent counter value.

However some Southeast Asian scholars contend that according to Imam Al-Shafi'i this contract is valid and it can be practiced in a region where its people are followers of that particular school of thought. Nevertheless, Imam Al-Shatibi says that in his *al-Muwafaqat fi usul al-Shari'ah*:

"it is absolutely incorrect to say that Imam Al-Shafi'i allowed the adoption of means that lead to usury. He does not presume the existence of an intention to do something forbidden unless there is manifest evidence to that effect" (Dusuki 2012).

Similarly, Zulkifli (2009) argues that, although the contract of *Ina'h* is confirmed from Shafi'i point of view, it is even hard to prove with satisfactory evidence that he has expressly declared its validity or not.

Fourthly, in the process of BBA home financing, initially the developer sells the uncompleted house to the customer through S&P. Subsequently, the same object will be purchased by the bank through PPA from customer, which is immediately followed by the bank selling it back to the customer through PSA. Above mentioned all three agreements are executed without the existence of subject matter, (Mahal Al-'Aqd) / object of the sale.

With the exception of *Hanbaliyyah*, Ibn Taymiya and his student Ibn Al-Qayyim, the majority of scholars from all schools of thought do not permit a sale of an object without its existence. This is based on the narrations of Prophet (PBUH) which has prohibited the sale of unborn foetus when the mother is not part of the sale (Zuhayli 2003). Similarly, there is another Hadith Narrated by Abu Dawud which is prohibiting the sale of an object without ownership (Zuhayli 2003).

On the other hand, Ibn Taymiya and Ibn Al-Qayyim opine that the wisdom of prohibition in the *Sunnah* is not for its nonexistence but it is because of its excessive risk and uncertainty *(Ghar'ar)*. Therefore, it is permissible, if the subject matter is certain in its future existence, such as selling an uncompleted house (Dusuki 2012, Al-Faddad 2000).

Similarly, Dahlan and Kader (2010) argue that Islam has forbidden the *Ghar'ar* to protect the well-being, rights and interest of both parties involved in the transaction and that the existence of *Ghar'ar* in the transaction causes injustice, hardship and disputes among contracting parties. So, the question

<sup>(4)</sup> Translation by A'isha `Abdarahman at-Tarjumana and Ya`qub Johnson , Volume: Business Transactions <a href="http://www.theonlyquran.com/hadith/Malik-Muwatta">http://www.theonlyquran.com/hadith/Malik-Muwatta</a>

to be asked here is, whether or not the Islamic bank can protect customers' interest and prevent them from harm in the abandoned housing project. Dahlan and Kader (2010) found that there are 141 housing projects that have been abandoned in Malaysia since 1990 till 2005 due to 22 reasons such as financial problems, loss of license approval, conflict among the developers, lack of coordination, fraudulent practices, insufficient experience, absence of better housing delivery system and many more.

Fifthly, the BBA home financing is a sale contract executed between the bank and the customer. As a result, the bank ideally becomes the seller of the property and liable for any defect that may be found in the sold object. In banking practice, the BBA documentation excludes *Khiyar al-ayb* and discounts the principle of *al-Kharaj bil Daman* where all the risks and liabilities come from this sale contract transferred to the purchaser and the bank merely act as a financer (Rosly, Sanusi, and Norhashimah 2001). Ariff and Rosly (2011) argue that risk and liability taking are fundamental for legitimate profit in Islamic financial transaction.

Finally, according to Islamic Law, the price should not be fixed by the state or any other authorities, but it must come from free operation of market force. In contrary the price of Islamic home financing asset computes in the current practice based on the volume of financing and period of financing tenure, not based on the market value of the property.

A Hadith narrated by Anas ibn Malik; "the people said: Apostle of Allah, prices have shot up, so fix prices for us. Thereupon the Apostle of Allah (Peace be upon him) said: Allah is the one Who fixes prices, Who withholds, gives lavishly and provides, and I hope that when I meet Allah, none of you will have any claim on me for an injustice regarding blood or property." (Sunan Abu Dawud. Kitab Al-Ijarah: Book 23: Hadith 3444)

Similarly, the Islamic law did not permit to have two prices in one single contract, even though the cost of fund changed in the banking practice due to market movements. Hence the selling price must be fixed and known to contracting parties in the sale contract at the time of concluding contract (Ariff and Rosly, 2011). However Islamic bankers in Malaysia prefer to finance at variable rate, which leads to uncertainty in the asset price as the BFR is subject to change according to BNM's monetary policy.

Meera and Abdul Razak (2005) state that many BBA home buyers are showing their dissatisfaction to over floating rate of BBA, because application of floating rate system not only lead the system to depend on interest rate, but it also creates a cash flow problem to the customer as it is required to pay high monthly instalments compared to conventional system. Equally, they establish that the selling price in BBA sale contract is not reflecting the market value.

Likewise, Hassan (2011) claims that the pricing mechanism used in BBA home financing is equal to conventional method. In general, both modes use the concept of Time Value of Money, Net Present Value and others. Hence, the selling prices in both the systems depend on financing tenure. Therefore, the longer the tenure incurs the higher the profit to Islamic or conventional bank. Besides the above discussed issues, the computing profit rate and default penalty are some other issues criticized by scholars in BBA home financing practice (Meera and Abdul Razak 2006).

# 3.2 Musharaka Mutanaqisah (MM) home financing

The *Musharaka Mutanaqisah* (MM) / Diminishing Partnership is a form of partnership contract in which customer and the bank jointly purchase the house from developer, where the customer agrees to rent the particular house and undertakes to purchase bank's undivided shares periodically. The *Musharaka Mutanaqisah* Home financing (MMHF) technique had been approved in 1991 during the workshop organized by IRTI in Jeddah and Sudanese Estate bank in Khartoum (Haneef, Kunhibava and Smolo, 2011). Moreover, both International *Fiqh* Academy of OIC in its 15<sup>th</sup> session and *Shari'ah* Advisory Council of Bank Negara Malaysia in its 56<sup>th</sup> meeting recognized MM home

financing (Osmani and Abdullah, 2010). Nevertheless, only in the last decade, this model gained attention from the practitioners and scholars in Malaysia.

The existing MM home financing mode combines three main Islamic contracts in the practice which are partnership, leasing and sale. In addition, some other supporting contracts are used by Islamic banks to smoothen the practice. Therefore, the sequence of the contract execution is mostly performed as follows: 1) Letter of invitation; 2) Letter of acceptance; 3) MM home financing facility agreement; 4) Share purchase agreement; 5) Property *Ijara* agreement; 6) Deed of covenant; 7) Trust deed; 8) Charge of assignment.

#### 3.2.1 Musharaka contract

The *Musharaka* (partnership) contract can be divided into two types: *Al-Amlak* (joint ownership) and *Al-Uqud* (contractual partnership). The joint ownership means, two or more partners purchase an asset and become joint owners on that particular asset, or two or more partners unwillingly become coowners of an asset through inheritance or gift. However, the contractual partnership is absolutely in the asset and there is no such agreement between the partners to involve in any commercial activities such as leasing and others. Meanwhile the contractual partnership is an agreement, where two or more partners willingly enter into commercial activities on the basis that the profits and losses arise from that particular business shared between partners. Moreover, according to Islamic law the generated profit in a partnership agreement can be divided among partners according to pre-agreed. However the losses should be shared proportionate to capital contribution of the partners in the contract. This is based on one type of *Muharaka* contract, which is *shirkah al-inan*. Similarly, in the partnership agreement the capital of one partner should not be guaranteed by others (Zarqa 2004; Naim 2011).

#### 3.2.2 Shari'ah issues in MM

First of all the current MM home financing practice does not seem to be clear on whether it falls under joint ownership or Contractual Partnership, because each has its own futures and conditions to apply in the practice. Naim (2011) concludes in a study that the current MM practice in its initial stage is joint ownership, but it is not permanent as the said contract does not comply with all the futures of joint ownership. On the other hand, Usmani (2005) and Haneef, Kunhibava and Smolo (2011) opine that, the current practice of MM home financing is joint ownership and is not contractual partnership since there is no such agreement to involve in commercial activities. In parallel Aris, Othman, Azli, Arshad, Sahri and Yaakub (2012) opine that the existing MM practice take the form of contractual partnership.

However, according to Islamic law a partner in a contractual ownership should not guarantee the other's capital. Naim (2011) and Sadique (2008) argue that the purchase undertaking agreement in the MM home financing to buy financer's share gradually or in the event of default, is similar to guaranteeing the capital of financer, which is not allowed in contractual partnership contract. Also, the said arrangement excludes the financer's risk and ownership liability in the transaction.

Secondly, in MM home financing the *Ijara* rental does not reflect the market rental rate. Islamic banks compute its rental rate based on BFR, by using the similar conventional formula, which is not recommended by Muslim scholars. Similarly, in the floating rate MM home financing the rental amount is uncertain (*Ghar'ar*) because the BFR is subject to change from time to time (Meera & Abdul Razak, 2009).

Thirdly, when the bank provides MM home financing for uncompleted house, the purchaser pays advance rental to the bank, without using usufruct of the asset, which contradicts with the nature of *Ijara*. The question to be asked here is whether the bank pays back the advance rental and takes constructional risk proportionate to its shares if the property is abandoned, or will the bank require the customer to payback the total financing amount. Haneef, Kunhibava and Smolo (2011) argue that it is

not possible for Islamic banks to take constructional risk in the abandoned project, because the said banking practice is obliged for more capital requirement. In addition to that, in the current MM facility the documentation used for under construction property is replicated from completed property documentation without more concerning Shari'ah requirements of under construction properties (Haneef, Kunhibava and Smolo 2011).

Fourthly it is ambiguous in the MM home financing that, neither the customer nor the bank knows which part of the house the customer is purchasing from the bank for paid monthly instalment (Sadique 2008). This situation may lead to *Ghara'r* in the transaction and dispute among the partners if any defect was found to be in the sold property. For example there is a possibility to claim defect option by the customer in said property from the bank even after 20 years of financing, because under MM home financing the last portion of bank share will be purchased by the customer in the end of the financing tenure. Since the purchasing share is not specified in the property, the customer can claim defect option within three days or agreed period arguing that the defected part of the house is the lastly purchased portion.

Fifthly, in MM home financing the customer is a co-owner of the property, so that the ownership responsibilities and risks arising from said property in *Musharaka* as well as *Ijara* contract in MM home financing should be shared proportionately by both parties. It is notable that except in KFH the property title is registered under customer's name in the existing BBA and MM practice in Malaysia (Sollehudin, Azam & Taqiuddin 2011). Therefore, ownership risks or responsibilities are not born by Islamic banks at all. Boon Ka (2009) points out in his article that, in MM home financing, all costs related to interested property are paid by the customer in *Musharaka* contract as he is a legal owner in the document of title. It is also pointed that in property *Ijara* contract the basic and structural maintenance are 100 percent borne by the customer, besides bearing routing and operational maintenance of the asset as well (Boon Ka, 2009).

Similarly, Sadique (2008) argues that in the MM home financing the banks do not involve in any trade activities in the existing practices, but they limit their involvement merely for financial interest. Therefore, it can be seen that the legal documentation of this contract is very much different from normal agreements. It is also pointed by Sadique (2008) that in the current practice the property title is directly transferred from developer to the customer, thus the financer does not take ownership or possession on the property in order to avoid the ownership risk and liability. He further argues that sharing responsibilities and liabilities pertaining to the ownership is a key differentiating factor between conventional leasing and MM.

## 4. DISCUSSIONS

The literatures in this field discussed many *Shari'ah* issues in both BBA and MM home financing practice in Malaysia such as; *Bai al-Inah*, *Bai al-Madum*, *Bai wa-Sharth*, *Khiyar al-Ayb*, *Ibra*, ownership, pricing, purchase undertaking, combination of two contracts, forward *Ijara* and others. At the same time some other authors found considerable relationship between those issues and tax burden, stamp duty, asset liability mismatch, capital cost, risk weight, market force and other legal and regulatory requirements. The below discussion briefly illustrates relationships between the issues and its causes.

a) Bai al-Inah: Islamic law requires the bank to purchase the property from developer through a valid contract (fulfilling its pillars and conditions) in BBA mode, which means S&P should be executed between Bank and Developer prior to PSA and PPA. Then the bank should sell the property with mark-up to customer. The said requirement is not favorable among practitioners, because they are obliged to pay legal fee, stamp duty and other expenses related to the property purchase agreement twice on a single asset, when the S&P is concluding between the developer and the bank and between the customer and the bank. Similarly the risk weight requirement for a true sale is 100 percent, while a loan or Bai'al-ina'h transaction

only requires 50 percent risk weight, because a true sale entails for financing risk and business risk so that applying true sale in Islamic banking business require more capital than *Ina'h* sale. Therefore Islamic bankers preferably use *Bai'al-ina'h* in BBA home financing to cut their capital cost and reduce the price of the financing asset in order to compete with conventional mortgage price.

- b) Ownership: According to Islamic law the property owner is liable for defect option in a true sale contract and responsible for structural maintenance in true *Ijarah* contract. Similarly, it is not permissible in Islamic law to sell something which is not under the ownership of the seller. Nonetheless according to regulatory requirements risk weight of true sale and operating leasing (together with ownership risk and liability) are 100 percent and 150 percent respectively, while mortgage loan only requires 50 percent risk weight (Rosly 2011). So practicing true sale and true *Ijarah* would increase in overall cost of financing, compared to conventional mortgage loan. Hence it is not easy for Islamic bankers to practice true sale and true *Ijarah* in a dual banking setting. Therefore the ownership liability and risk does not seem to appear in Islamic home financing practices.
- c) Bai al-Madum: It is a trite practice in Malaysia that the S&P execute between developer and customer in home financing before the construction started. On the other hand, according to majority of jurists, existence of subject matter is a condition for Islamic contracts except in Istisna and Al-Salam. Meanwhile, application of Istisna' contract in the Islamic home financing is not preferable for practitioners due to some practical problems and risk and liability obligations existing in the practice. So, said customary practice in the market led the Islamic banks to involve in Bai al-Madum transaction.
- d) Khiyar al-Ayb: according to Islamic legal maxims all the benefits lay a liability (Al-Kharaj Bil Daman). However taking constructional risk and defect option in Islamic banking business again brings the need for higher risk weight and larger economic capital. So the Islamic banks are not willing to take liabilities which may arise in sold or rented asset in the Islamic home financing practice.
- e) Pricing: Beside asset and liability mismatch problem, the above said all four issues equally influence on the pricing issue of Islamic home financing product.

Based on above discussion it is obvious that the existing *shari'ah* issues in BBA and MM home financing are very much related with negligent of risk and liability in the Islamic home financing practice. According to Islamic legal maxims "*al-ghorm bil ghonm*" (reward can be taken without risk) and "*al-kharaj bil daman*" (all the benefit lays a liability) are twin-principles of Islamic financial transaction (Sanusi, Rosly and Norhashimah 2011). Rosly (2005) argues that the legitimate profit in an Islamic transaction must come from exchange of a value against an equivalent value ('*iwad*) in order to reflect the sense of justice and equity into a business transaction. According to him the profits arise from *al-bay*, *al-ijara*, *al-salam*, *istisna'*, *mudaraba and musharaka* should imply the existence risk, liability and effort. Likewise Ibn al-Arabi states that: "*Every increase which is without 'iwad or an equal counter value is riba*" (Sanusi, Rosly and Norhashimah 2011).

## 5. CONCLUSION

This paper theoretically analyzes the existing *shari'ah* issues in both BBA and MM home financing and its possible causes in the practice. The study found that the tax burden, stamp duty, asset liability mismatch, capital cost, risk weight, market force and other legal and regulatory requirements in the banking practice, lead the Islamic bankers to neglect the twin principle of Islamic financial transaction, which is "al-ghorm bil ghonm" (reward can be taken without risk) and "al-kharaj bil daman" (all the benefit lays a liability). On the other hand neglecting said principles in an Islamic financial transaction rendered the transaction unlawful and equal to *riba*'. It can be concluded that, the

shari'ah issues in Islamic home financing is not possible to eliminate in the practice unless three of the following matters take place: At first the government and regulators should smoothen the law and regulation required for Islamic home financing practice. Second, the Islamic bankers should try to take risk and liability in the Islamic home financing transaction. Third, rising the customers' awareness to avoid unlawful financing and to accept Islamic financing product even though the price is comparatively expensive than conventional mortgage, due to their involvement in the real Islamic financial transaction.

# EARNINGS QUALITY IN PRIVATE AND PUBLIC FIRMS: EVIDENCE FROM MALAYSIA

Amilia Syuhada Abdul Majid\*

#### **ABSTRACT**

This study reviews the extent of earnings quality in both public and private companies in Malaysia. Greater demand of information by stakeholders and higher scrutiny by regulatory board expect influences for greater earnings quality in public compared to private companies. Private companies also have emerged in its existence and contribution to the economy, hence perceived as increased importance in its earnings quality. This study addresses the gap of earnings quality study in private companies in comparison to the public companies. This study covers 50 public listed and 50 privately held companies for the period 2002 until 2007; results in 600 firm-year observations. Earnings quality is proxy by accruals based accounting as developed by Dechow and Dichev (2002) from the modified Jones (1991). The method is widely adopted such as by Dechow and Schrand (2004), Ball and Shivakumar (2005) and Givoly, Hayn and Katz (2010). The results confirm, despite of emergence of private companies in the economy, public companies in Malaysia generate lower accruals hence reflect better earnings quality in corporate financial reporting.

**Keywords**: Earnings quality, public and private companies

#### 1. INTRODUCTION

This study examines earnings quality in private and public companies in Malaysia. Earnings are widely use and highly rank as the most important measure of corporate performance to the outsiders (Graham, Harvey and Rajgopal, 2005). Investors, institutional owners, analysts and regulators rely on the quality of reported earnings in making inform decision on the company performance and value.

Public and private companies are the economic engine of the country (Economic Planning Unit, 2001). Prior studies mostly study earnings quality in the public company setting. However, private company has raises its contribution towards the economy<sup>1</sup> of the country. Public and private companies' reporting needs and application are differs. Hence, this raises the needs to study the adequacy, effectiveness and quality of private company financial statements reporting in comparison to the public company (Lev and Zarowin, 1999; Healy and Palepu, 2001).

<sup>\*</sup> Tutor, Islamic Science University of Malaysia. Corresponding author: amiliasyuhada@usim.edu.my

<sup>&</sup>lt;sup>1</sup> 99% of registered Malaysian companies are private companies. Based on data on the first quarter of 2008, there are 805,910 registered companies in Malaysia (source: Companies Commission of Malaysia website; www.ssm.com.my) of which 855 companies are listed in the main and second board of Bursa Malaysia (source: Bursa Malaysia website; www.bursamalaysia.com). In addition, 70% companies from the list of Malaysian top 1000 corporate directory in 2007/2008 were private companies.

In view of the above, section 2 discusses the similar importance and different application in public and private companies. Section 3 presents research sample and methodology of the study. The results and discussions are describes in section 4, whilst section 5 concludes the study.

#### 2. LITERATURE REVIEW

### **Earnings quality**

Earnings are widely used and highly ranked as the most important measures to corporate outsiders (Grahams, Harvey and Rajgopal, 2005). Investors, institutional owners, analysts and regulators rely on the quality of reported earnings in making inform decision on the company performance and value. This is because earnings reflect company's current operating performance and predict its future performance and value (Dechow, 1994; Dechow and Schrand, 2004; Ball and Sivakumar, 2005).

Earnings derive from accrual basis of accounting. It arises from timing and matching principles in recognizing accounting transactions which eventually requires discretionary assumption and estimation made by corporate managements (Dechow, 1994; Dechow and Dichev, 2002). The principles may allow corporate management to opportunistically manage and manipulate the recognition and match between earnings and its expenditure. This raises reliability concern on accounting numbers as they may contain estimation errors made by corporate management. Such of accounting estimation errors would consequently reduces the persistence of accounting numbers, hence may become less relevant for company's valuation. This is because any estimation errors would affect true corporate value during the accounting period and hence need to be corrected using the future earnings. These results in corporate earnings become less reliable in measuring the company performance (Dechow, 1994; Dechow and Schrand, 2004; Givoly et al., 2010).

## Earnings quality in public and private companies

Quality of earnings in financial statements may differ between public listed and privately held companies. Among the studies that compare earnings quality of public and private companies are Ball and Shivakumar (2005), Burgstahler, Hail and Leuz (2006) and Givoly et al. (2010). They highlight the issue of earnings quality in public and private companies based on demand and supply of information as well as opportunistic behavior hypotheses.

Public company's greater separation between corporate management and shareholders results in greater information asymmetry between them. This leads to greater demand on quality information disclosure in public company reporting (Ball and Shivakumar, 2005; Givoly et al., 2010). The information is highly use by investors in making inform decision on the company's performance and value in deriving investment decision on the corporate share capital trading activities. Public company's management also willing to supply high quality of information in reflecting good corporate performance and value, hence attracting greater capital financing for the company (Ball and Shivakumar, 2005; Burgstahler et al., 2006; American Accounting Association's Financial Accounting Standards Committee (AAAFASC, 2006). In addition, corporate stakeholders also demand greater information disclosures as a medium to monitor corporate managements performance and accountability on the resources entrusted to them (AAAFASC, 2006).

As public company's performance is scrutinized by corporate investors and shareholders, its management is pressured to report the corporate expected results and performance. Opportunistic behavior hypothesis suggests management may compel to opportunistically adopt certain accounting method to yield the expected corporate performance results in meeting investors and shareholders expectation and forecasts (Givoly et al., 2010). For instance, management has the incentive to manage stock prices to meet analysts' forecasts, avoid reporting losses and earnings decreases.

Higher demand and supply of financial information as well as potential opportunistic behavior of management in public company results in its information disclosures faces stringent monitoring by the regulatory governing bodies (Givoly et al., 2010). High scrutiny of public company financial reporting is because their financial information has significant impact to investors and potential shareholders on the security trading activities decision making.

Private company in Malaysia, on the other hand, is commonly manages by the owners (Claessens, Djankov and Lang; 2000). The private's owner-managed companies has less information asymmetry issue (Arunnada, 2010) as it is quickly resolves through informal private communication during the course of business operation (Ball and Shivakumar, 2005). This leads to less likely for private company adopting opportunistic behavior in its accounting practices and reporting. As such, there is lower demand and supply of high quality information disclosures in private company (Givoly et al., 2010).

A summary of demand and opportunistic behavior hypotheses predict quality of public and private companies financial reporting are indicated in following table.

	Demand and supply hypotheses	Predicted quality of financial reporting	Opportunistic behavior hypothesis	Predicted quality of financial reporting
Public listed company	Strong demand and supply for quality financial reporting	High	Strong incentives to manage accounting numbers	Low
Privately held company	Weak demand and supply for quality financial reporting	Low	No incentive to manage accounting numbers	High

Source: Adapted from Givoly et al. (2010).

#### 3. RESEARCH METHOD

# Sample companies

This study matches 50 public and 50 private companies of a similar size and within the same type of industry. The method ensures consistency and comparability of the two groups of companies. The method has been widely adopted in comparative public and private companies' studies such as Penno and Simon (1986), Ball and Shivakumar (2005) and Givoly et al. (2010).

Controlling for the company size, only companies with at least RM1 million sales is covered in the sample study. Public and private companies are matched-pair using a factor of 3<sup>2</sup>. The list of the sample companies is obtained from the Malaysian 1000 Top Corporate Directory<sup>3</sup>. The period of study covers from 2002 until 2007 (6 years); results in 600 firm-years observation.

### Earnings quality

This study adopts accruals as a measure of earnings quality as it has been widely adopt in measuring corporate earnings quality (Hashim and Devi, 2009). Accruals (total accruals; TA) can be divided into discretionary (DA) and non discretionary accruals (NDA) (Jones 1991; Dechow, Sloan and Sweeney 1995), hence reflects as TA = DA + NDA. Non-discretionary accruals (NDA) are accounting transaction arises from normal business operations (Ronen and Yaari, 2008). Discretionary accruals (DA) are accounting transactions made in managing earnings recognitions. Jones (1991), based on De Angelo (1986), proposed non-discretionary accruals are constant from period to period. Hence, the difference between current and prior period accruals is solely due to changes in discretionary accruals. As such, discretionary accruals (DA) reflect the absolute value from the result of residual value of the total accruals (TA). The model is adopted in various earnings quality study such as Dechow, Sloan and Sweeney 1995, Dechow and Dichev 2002, Ball and Shivakumar 2006, Burgstahler et al., 2006, Francis, Nanda and Olsson, 2008, Givoly et al., 2010) using modified Jones (1991)<sup>4</sup> approach as follows.

```
TA_{i,t}/Assets_{i,t-1} = \alpha_0 + \alpha_1(I/Assets_{i,t-1}) + \alpha_2\left[\Delta Rev_{i,t}/Assets_{i,t-1}\right] + \alpha_3\left[PPE_{i,t}/Assets_{i,t-1}\right] + \varepsilon_{i,t} Where: TA_{i,t} = \text{total} accruals in year t for firm i \Delta Rev_{i,t} = \text{revenue} in year t less revenue in year t-1 for firm i PPE_{i,t} = \text{gross} property plan and equipment in year t for firm i Assets_{i,t-1} = \text{total} assets in year t-1 for firm i \varepsilon_{i,t} = \text{error} term in year t for firm i
```

The result of the model is use in descriptive analysis of public and private companies.

-

<sup>&</sup>lt;sup>2</sup> The method uses sales ratio between two matched-pair group of companies is not less than one-third nor greater than three from each other (Penno and Simon, 1986).

<sup>&</sup>lt;sup>3</sup> The method is consistent with Penno and Simon (1986). Penno and Simon obtained their sample company listing using the 1983 edition of Dun and Bradstreet's Million-Dollar Directory. The directory provides a comprehensive listing of public and private companies with at least \$1 million in revenue (that is similar in size) and of the same industry group.

<sup>&</sup>lt;sup>4</sup> Jones (1991) model developed a linear regression, controlling for non discretionary components, between total accruals (TA) and changes in revenue and property, plant and equity, scaled by lagged on prior year total assets (Dechow et al., 1995). Dechow et al., (1995) modified the Jones (1991) model by including changes in net receivables to adjust for changes in revenues. Both Jones (1991) and modified Jones models outperformed other models (such as Healy, DeAngelo and Industry models) in detecting induced earnings manipulation (Dechow et al., 1995; Guay et al., 1996). The modified Jones model reflects higher test in detecting management discretion on accruals/earnings management as compared to the original Jones model (Dechow et al., 1995; Bowman and Navissi, 2003). However, this study is unable to perform modified Jones model due to unavailability of net receivables data.

## **Regression model**

This study also performs regression analysis to study corporate characteristics which may influence earnings quality of public and private companies is as follows.

Accruals<sub>i,t</sub> =  $\alpha_0 + \alpha_1 Size_{i,t} + \alpha_2 CFO_{i,t} + \alpha_3 Sales$  growth<sub>i,t</sub> +  $\alpha_4 Profit_{i,t} + \alpha_5 Leverage_{i,t} + \alpha_6 Intangible$  intensity<sub>i,t</sub> +  $\alpha_7 Capital$  intensity<sub>i,t</sub> +  $\alpha_8 Total$  assets growth<sub>i,t</sub> +  $\alpha_9 Industry_{i,t} + \varepsilon_{i,t}$  Where:

Accruals<sub>i,t</sub> is accruals of the company i in year t. The model alternately regress the total accruals  $(TA_t)$  and discretionary accruals  $(DA_t)$  of the company. TA is represented by change in revenue over prior period total assets, whilst DA is represented by absolute value from the results of residual value of total accruals. The model is as discussed above.

 $Size_{i,t}$  is log of total assets of company i in year t.

 $CFO_{i,t}$  is cash flows from operation over total assets of company i in year t.

Sales  $growth_{i,t}$  is ratio of changes in sales of company i in year t and t-l.

 $Profit_{i,t}$  is represented by return of assets. It is measured by net income over total assets of company i in year t.

Leverage<sub>i,t</sub> is debt equity over total assets of company i in year t.

Intangible intensity<sub>i,t</sub> is intangible assets capitalized over total assets of company i in year t.

Capital intensity<sub>i,t</sub> is property, plant and equipment (PPE) over total assets of company i in year t. Total assets growth<sub>t</sub> is ratio of changes in total assets of company i in year t and t-l.

Industry<sub>i,t</sub> is industry that company *i* operates in. 1 is coded for industry sensitive towards intellectual capital development (manufacturing, trading and services) and 0 otherwise (infrastructure, construction and transportation).  $\varepsilon_{i,t}$  is error term.

## 4. RESULTS

The descriptive mean results of total accruals (TA), discretionary accruals (DA) and non-discretionary accruals (NDA) reflecting the extent of earning quality are presented in Appendix 1.

The overall results show private companies in Malaysia have higher accruals, hence lower earnings quality in corporate annual report as compared to public companies. The result of TA in Malaysia is consistent with Burgstahler et al. (2006) that studied 13 European countries between year 1997 and 2003. TA in Malaysia reflects 0.660 and 0.607 while TA in European countries reflects 0.691 and 0.565 in private and public companies respectively. This may relate to lower level of monitoring by the accounting legislation to private company as compared to public company (Burgstahler et al., 2006). It also may relate to greater demand of higher quality of information disclosure by stakeholders as public companies traded its shares in open securities market (Ball and Shivakumar 2005). Consistently, this study also noted similar results for DA (private: 0.005; public -0.006), hence supported the above propositions. The mean difference of DA between public and private companies is significant at 1% level.

Next, this study test validity of accruals (TA and DA) on variables that may influence the extent of earnings quality as adopted in other studies such as Francis et al. (2008) and Givoly et al. (2010). The variables are company size, cash flows, sales growth, profitability, leverage, intangible assets intensity, capital intensity, total assets growth and industry the company operates in. The results are as shown in Appendix 2. The explanatory power the variables towards total accruals (TA) are fairly high at adjusted R<sup>2</sup> of 83% and 60% in public and private companies

respectively. The explanatory power of discretionary accruals (DA) of public and private companies is fairly acceptable at 20% and 26% respectively.

In general, the coefficient's directive results are similar between public and private companies. The results show companies with larger size and higher operating cash flows have better earnings quality. This is because bigger size companies normally have better accounting systems monitoring its accounting framework. Higher operating cash flows reflect actual cash inflows, hence there is less accruals based assumption and adjustments were conducted in such companies.

Companies with higher sales growth and profitability tend to have poorer earnings quality. Corporate management may induce timing and assumption recognition of earnings transaction; hence reflect lower quality of corporate information disclosure. Companies with lower debt (leverage) tend to have better quality of financial statements. This serves debt covenants as have been agreed with debts providers such as banks (AAAFASC, 2006).

Companies with higher intangible assets intensity (ratio of intangible assets capitalized over total assets), capital intensity (proxy of property, plant and equipment (PPE) over total assets) and total assets growth tend to have poorer quality. These are in relation to the timing and assumption of assets recognition such as depreciation, amortization, impairments and provisions provided by the management of the companies.

Industries that companies belong to influence the extent of earnings quality. Industry prone to intellectual capital development may recognize higher intangible assets in its financial statements. This may involve management assumption on amortization and impairments recognition, hence relates to poorer earnings quality.

Based on the significant correlation for both public and private companies, TA related to both income statements and balance sheet items. This is because non-discretionary accruals (NDA) are reflected in most income statements components (i.e. balance sheet, cash flows and income statements). Discretionary accruals (DA), on the other hand, mostly involve in the cash items that reflected in the cash flows, income statements and leverages.

#### 5. CONCLUSION

Public and private companies in Malaysia, whilst governed by similar accounting standards, differ in the quality of information disclosure in their annual reports. The results of this study found public company has higher quality of information disclosure than private company. It relates to higher demand and supply of information as well as greater monitoring by the regulatory bodies in public compares the private companies (Ball and Shivakumar, 2005; Burgstahler et al., 2006; Givoly et al., 2010).

This study also found private companies have more accounting transaction in the income statements items and lesser in the balance sheet items. This results in greater avenue for accruals based accounting transaction in the income statements of private companies, but less in the balance sheet of the private companies as compared to the public companies. The results suggest balance sheet of private companies in Malaysia is more reliable to measure its quality of financial statements whilst income statement of public companies in Malaysia is more reliable to measure its quality of financial statements.

This study contributes in understanding of application of accruals, hence the quality of information disclosure in public and private companies in Malaysia. The study raises several avenue for future research. The understanding factors influencing the quality of information disclosure in public and private companies in Malaysia can be enhanced by interviewing relevant personnel in public and private companies.

Accruals represent accruals of sample companies. The model alternately regress the total accruals (TA) and discretionary accruals (DA) of sample companies. TA is represented by change in revenue over prior period total assets, whilst DA is represented by absolute value from the results of residual value of total accruals. Size represents by log of total assets during the period. Cash flow from operation (CFO) is the CFO divided by total assets during the period. Sales growth; measured by ratio of changes in sales during the period. Profitability (Profit) is represented by return on assets (ROA) is measured by net income over total assets during the period. Leverage is measured by debt equity divided by total assets during the period. Intangible intensity is measured by total intangibles capitalized divided by total assets during the period. Capital intensity is measured by property, plant and equipment (PPE) divided by total assets during the period. Total assets growth is represented by ratio of changes in total assets during the period. Industry is where manufacturing and trading and services industries are noted as sensitive towards intellectual capital development, hence coded as 1, whilst infrastructure, construction and transportation industries are otherwise coded as 0.

# THE INFLUENCE OF *TAWHIDIC* PARADIGM ON THE DEVELOPMENT OF A UNIFIED THEORY OF THE FIRM

Suhaimi Mhd Sarif<sup>1</sup>

#### **ABSTRACT**

This study argues on the influence of *Tawhidic* paradigm to a unified theory of the firm from for a comprehensive theory to describe the nature of the firm, the scope and boundaries of assessment on organizational environments, and the assessment of internal organizations to formulate, implement and evaluate organizational strategies. The conventional approach to the theory of the firm is not adequate to respond to external, internal, and human dynamism. The study used qualitative method via personal interview 15 senior managers of Islamic financial institutions that listed in Bursa Malaysia. The informants argued that the vision, mission and objective statements that differentiate the *shari'ah* compliant and non-*shari'ah* compliant companies. The *shariah*-compliant companies apply *Tawhidic* paradigm in terms of companies' continuous improvement in all functional aspects, value added services to the stakeholders, and enhancing social welfare to the humanity. The use of qualitative method through personal interviews is appropriate for exploratory nature of the study to develop a unified theory of the firm. Nevertheless, the findings cannot be generalizable. However, the study contributes a contemporary framework of the theory of the firm from *Tawhidic* paradigm, which adds into the sustainability principles and business continuity.

**Keywords:** Theory of the firm, Competitive advantage, *Tawhidic* paradigm.

#### 1. INTRODUCTION

The theory of the firm has been subscribed as comprehensive theory to describe the nature of the firm. the scope and boundaries of assessment on organizational environments, and the assessment of internal organizations to formulate, implement and evaluate organizational strategies. This theory cannot stand alone in the strategic management process due to its emphasis on the industrial organizational perspective only of the firm. The sustainability of the business, business continuity, and sustainable competitive advantage depends on both external and internal factors of the firm. The resource-based and knowledge-based of theory of the firm attempted to offer unified theory of the firm from evolutionary economics. However, the evolutionary economics view also is unable to provide a unified theory of the firm. Indeed, a unified theory of the firm is necessary to provide insights for rigorous, dynamic and comprehensive strategic management analyses. As an alternative, this study will develop a unified theory of the firm the Tawhidic paradigm approach as a mean to achieve organizational sustainable innovation and competitive advantage. The knowledge-based view offers an integrative framework to achieve sustainable knowledge management and organizational learning that are driven by knowledge-based view of firm innovation. The KBV view lacks of spirituality foundation to sustain intellectual contribution from knowledge workers. The Tawhidic approach contributes to the theoretical and practical understanding of the development of a unified theory of the firm.

#### 2. LITERATURE REVIEW

Businesses continue to struggle to achieve sustainable competitive advantage for better profitability and strategic positioning in the competitive markets. The underpinned understanding in achieving sustainable competitive advantage is driven by organizational objectives. Garrouste & Saussier (2005) argued that organizational driven objectives are related to understanding of the theory of the firm. The theory of the firm that introduced by Coase (1937) rationalized by the theory of agency, theory of property rights and the theory of finance to develop a theory of the ownership structure of the firm (Aoki, 1986; Aghion & Tirole, 1997). In fact, the theory of the firm in Coase's seminal work had argued only on transaction cost, contract, nature of the firm, boundaries, and internal organizations (Coase, 1937, 1960, 1988). Coase (1937) and the scholars that follow his seminar work defined the firm as an economic entity that provides incentives and structure to solve organizational coordination (Hart, 1990; Holmström, 1999), the firm as a collection of assets, the firm as a collection of assets and incentive mechanims, and the firm as a collection of capabilities of the past (Coase, 1937, 1960, 1988).

The firms were formalized to avoid inefficiency in terms of moral hazard by internally organized through authority and hierarchy, assets ownership and hierarchy, and communication in hierarchy. By integrating and formalizing the problems in the agency, property rights, and ownership structure (Aoki, 1986; Aghion & Tirole, 1997). The firms are still unable to cope with internal and external organizational choices (Garrouste & Saussier, 2005). The trade-offs and assumptions of operationalizing the firm are still between risk and uncertainty, which is lacking of the role of the market players and entrepreneurs. Thus, there is insufficient element to a have a unified theory of the firm. The theory of the firm based on Coase (1937) has serious flaws, namely (a) unable to clearly define the nature and the boundaries of the firms because some transactions are internalized while others are externalized, and yet others are both internalized and externalized; (b) internal structure of the firm was not clearly and formally organized in terms of the production, incentives, controls and internal hierarchies; and (c) the relations between the firms and the market are not clearly defined whether firms are substitutes for the market or firms are not the market but players of the market with some limitations (Garrouste & Saussier, 2005).

The theory of the firm by Coase (1937) that being subscribed by the economists and business educationists are not unified theory due to its bounded rationality approach that made roles of entrepreneurs become uncertain (Kay, 1992). In addition, the role of institutional environment that affect the firm's decision is also unclear and vague. In fact, Coase's theory of the firm is very simplistic in which it assumed that the existence of the firm is due to the existence of transaction costs, and the firm's boundaries are defined by a simple calculus of transaction costs that are related to the Property Rights Theory and the Incentive Theory.

In short, Coase's theory of the firm and it formalized theories are unable to offer a unified theory of the firm due to lack learning processes both at the individual and organizational levels. Thus, the alternative theory of the firm that based on evolutionary theory and resource-based view of the firm can fill in the gap of learning and capacity building in the firm (Nelson & Winter, 1982; Kogut & Zander, 1996; Langlois & Garrouste, 1997). These two views have a common assumption, namely the behavioral assumptions (learning and rule-guided behavior) and assumed that knowledge and capabilities represent the firm's critical and distinctive resources (Foss, 1996; Poppo & Zenger, 1999). They argued that the resource-based and knowledge-based views of theory of the firm are more unified and comprehensive due to three arguments, namely knowledge is generated as the result of learning and experience; the result of learning, it is context (local) and path-dependent (historical), and it is partly tacit, and the organization is partly unaware of its existence because it is embedded in organizational routines and individual skills (Garrouste & Saussier, 2005).

#### 2.1 YET TO A UNIFIED THEORY OF THE FIRM

The resource-based and knowledge-based theory of the firm attempted to offer a unified theory of the firm based on the evolutionary perspectives. However, given the background of the contemporary business world that is full with uncertainty due to the globalization process, rapid changes are rampant due to the fast paced of technological development, high mobility of society, and high intensity in competition (Mahutga & Smith, 2011; Vergragt, 2012). This situation makes the business world competitive due to the increasing of enterprises that are competing on the uniqueness (Liu, Chen, & Tsai, 2004). The evolutionary perspectives emphasized on the importance of knowledge and innovation in facing the still competition to achieve sustainable competitive advantage (Karim & Hussein, 2008), but the firms are not able to do so with the increasing moral hazard events that hampered firms to create and sustain competitive advantage. There is increasing need to go back to the root of intellectual development, which lies in the soul of human. Lewis (2006) argues that the current business world can gain and sustain its competitive advantage when it is imbued with the soul (spirituality). Osman-Gani and Sarif (2011) argued that the excellence in spirituality leads to better worldview, far sighted and continuous improvement that guided by commendable values. Figure 1 summarizes the evolutionary process to develop a unified theory of the firm.

Not vet a Resource-based view & unified Coase theory of knowledge-based view theory of theory of the the firm Nature of the firm Individual External factors \*Global Boundaries Learning changes & Dynamism Internal Capacity/strength dynamism \*Ethical Internal Culture & External External Value capacity opportunitie opportunitie \*Uncertaint building Competitive Sustainable Competitive

Figure 1: The evolutionary process to develop a unified theory of the firm

Source: Developed based on Coase (1988), Mahutga & Smith (2011), Vergragt (2012).

Based on the flaws in the attempt to offer a unified theory of the firm as depicted in Figure 1, this research proposal offers an insight from Islamic perspective that a unified theory of the firm can be developed to gain and sustain competitive advantage via Tawhidic-based theory of the firm is based on Islamic monotheism worldview that the dynamism is actually part of the process to attain ultimate victory in this worldly and the hereafter life. Mohd Kamal Hassan (2010, p.187) explains that Tawhidic paradigm is about Islamic monotheism thinking to serve as the true servant of Allah ('*ibād al-Rahmān*), vicegerents (*khulafā' fī al-ard*), true believers (*al-mu'minūn*) for the sake of betterment of mankind (*khayra ummatin ukhrijat lil-Nās*) (Qur'ān, 3:110) and 'balanced community' (*ummatan wasatan li-takūnū shuhadā' 'alā al-nās*) (Qur'ān, 2:143).

According to Al-Faruqi (1992, p.5), the subscription to Tawhidic paradigm manifests the readiness and willingness to fulfill the Divine trust (*al amānah*) and obligatory duties (*al farā'id*) that are accompanied by the Divine guidance and human unique capability (Qur'ān, Surah Hud, 11: 6 and *Sura Az Zumar* 39: 41).

Given the dynamic contents of the business world, managers need comprehensive and rigorous theory of the firm to make the business continues to make profit on sustainable basis. The production-based economy provides the competencies to maximize profit through cost minimization and resources

optimization. Resources in today's world are not only physical and organizational resources, but also human potentials that are transformed into competencies and capacity building.

Realizing the need for human potential in the business and economy, business strategists are gradually subscribing knowledge-based economy that are capable of responding to fast paced globalization. In other words, organizations must be able to advance their technology and competencies so that they can cope with the knowledge-intensive business services, very fast acceleration of product cycles, and changes of customers' tastes and preferences. In facing the competitors, knowledge about the industry, market and customers is essential.

Organizations must always acquire knowledge and continuously learn from various stakeholders to gain competitive advantages. The knowledge intensive business requires the unique competencies to be innovative. Innovation capability is not with the organizations, but with the individual knowledge workers and who possess knowledge and other intellectual derivatives. The classical innovation works on linear basis, less interactive and within the formal organizational network. Unlike the contemporary innovation, it works on dynamic mode, highly interactive and hybrid organizational network.

#### 2.2 TAWHIDIC PARADIGM

This section elaborates on the *Tawhidic* paradigm perspectives. Mohd Kamal Hassan (2010, p.187) explains that Tawhidic paradigm is about Islamic monotheism thinking to serve as the true servant of Allah ('*ibād al-Rahmān*), vicegerents (*khulafā' fī al-ard*), true believers (*al-mu'minūn*) for the sake of betterment of mankind (*khayra ummatin ukhrijat lil-Nās*) (Qur'ān, 3:110) and 'balanced community' (*ummatan waṣatan li-takūnū shuhadā' 'alā al-nās*) (Qur'ān, 2:143).

According to Al-Faruqi (1992, p.5), the subscription to Tawhidic paradigm manifests the readiness and willingness to fulfill the Divine trust (*al amānah*) and obligatory duties (*al farā'id*) that are accompanied by the Divine guidance and human unique capability (Qur'ān, Surah Hud, 11: 6 and *Sura Az Zumar* 39: 41).

The theory of the firm can be unified based on the unified paradigm of the Tawhidic perspective. According to Zarkasvi (2010), unification of knowledge is the basis for unity in wisdom and action. Based on Al-Ghazālī's approach of organizational and human wisdom and soul development, knowledge can be divided into religious and rational knowledge. Religious knowledge includes the science of the practical religion ('ilm al-mu'amālah), God's guided knowledge on how the religion can be executed ('ilm al-shar'ivy), and knowledge that derived from human intellect ('ilm al-'aglivy). The scope of the practical religion ('ilm al-mu'amālah) is available in two forms, exoteric (zāhir) and esoteric (bātin) sciences. The exoteric (zāhir) sciences include the act of worship ('ibādat), social ethics ('ādat), and matters pertaining to dangerous act (muhlikāt). As for esoteric (bātin) sciences, it is about spirituality dimension. The second category of knowledge is the rational knowledge ('ulūm al-'aqliyyah/'ulūm ghayr shar'iyyah). This type of knowledge can be divided into fundamental (usūl) and subsidiary (furū'). The fundamental knowledge includes mathematics/logic, natural science (observation and experiment), and investigation science of existence. The theoretical classification of knowledge allows organizations to identify priorities, resources, and efforts to convert the knowledge into absorptive capability. Zarkasyi (2010, pp.162-164) argued that there are two ways knowledge can be acquired by individuals, namely through human teaching (al-ta'lim al insaniyy) and Divine teaching (al-ta'lim al rabbāniyy). People learn from other people via face-to-face and other instructional ways (Zabeda, 2004, 2008) with monetary or non-monetary rewards (Zabeda, 2008). However, the Divine teaching is highly spiritual when the learners acquiring knowledge based on Divine revelation (alwahv), inspiration (ilhām), reflection and contemplation (al-ishtighal bi al-tafakkur). The absorptive capacity to acquire human and Divine teaching is through five capabilities (power), namely common sense (al-hiss al-mushtarak), representative power (al-quwwah al-khayāliyyah), estimate power (alquwwah al-wahmiyyah), retentive power (al-quwwah al-hāfidah wa al-dhakirah), imaginative power (al-quwwah al-mutakhayyilah/ al-quwwah al mutafakirrah).

## 2.3 TAWHIDIC PARADIGM (TP) AND THE THEORY OF THE FIRM (TOF)

This section elaborates Tawhidic paradigm can be integrated with the theory of the firm upon the foundation of Islamic faith. The Islamic faith is based on *kalima shahaada*, which is to recognise Allah as the only universal God and Prophet Muhammad (Peace Be Upon Him) as the messenger of Allah. With this foundation, the ultimate aim of Islamic management system is to gain the pleasure of Allah by executing all of the duties prescribed by Him. The discussion of this paper begins with the explanation on the major components of *Tawhidic* paradigm. According to *Tawhidic* paradigm, man's multiple relationships revolve around *Tawhid*. In fact, there are prerequisites to *Tawhid* and the roles of the believers of the paradigm. Figure 2 depicts the integrative linking role of *Tawhid* with worship (*'ibadat*), submission of mankind to Allah for the sake of securing His Pleasure vis-à-vis the roles of mankind as servant (*'abd*) and vicegerent (*khalifa*) of Allah.

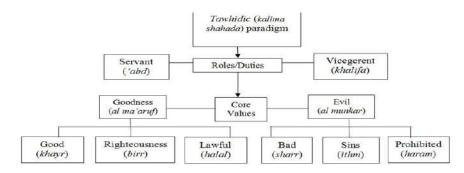

Faith \*Knowledge Servant ('abd) of \*Certainty Justice Allah \*Sincerity **Tawhidic** Worship \*Truthful (kalimah ('ibadah) Shahadah) \*Love \*Adherence Vicegerent Trust (amanah) (khalifah) Society of Allah (mujtama')

Figure 2: The integrative role of Tawhid in executing worship ('ibadat) with trust and justice.

Source: Sarif & Ismail (2011)

The development of a unified theory of the firm is in line with the main reason the creation of man, which is to worship ('ibadat) Allah, in which it has to be performed with trust and justice is depicted in Figure 3 to be consistent with the job description of vicegerent (khalifa) as stated in Sura al Baqarah 2: 30. This assignment is in line with the purpose that Allah has created mankind to be His servant and also His vicegerent on earth.

Figure 3: Fundamental Principles of Duniawi-Ukhrawi View

# 2.4 INTEGRATING THE THEORY OF THE FIRM AND THE MANAGEMENT OF THE FIRMS

This section elaborates KMS nature from organizational perspectives. The development of a unified theory of the firm requires comprehensive assessment on internal, external, explicit and implicit aspects of the firms (Garrouste & Saussier, 2005; Debowski, 2006). Debowski (2006) contended that contemporary theory of the firm for knowledge management development includes the organizational process and support. Five phases of knowledge development are knowledge sourcing, knowledge abstraction, knowledge conversion, knowledge diffusion and knowledge refinement. Knowledge sourcing involves organizational task to identify relevant information from the market and feedback from stakeholders. Knowledge abstraction is about making sense of the information obtained from the market into theories and assumptions. The next step will do knowledge conversion, to codify tacit and embodied knowledge into explicit and codified knowledge. The codified knowledge is transferred, transmitted and diffuse for greater use.

Firms develop a unified theory of the firm in order to mobilise economic scarce resources and transform them into goods and services to benefit mankind. Gibbons (2005) said that firm is basically a vehicle for entrepreneur to mobilise resources to create wealth sustainably. Williamson (1971, 1979, 1985) argued that firm is used to generate continuous income for the owners of the firm; he called this activity as 'rent-seeking' behavior of the firm. Similar observations are made by Klein (1988, 1996). Firm is also being used as formal vehicle to own resources or 'property-rights' so that it can continue to be the beneficiary of the resources (Hart & Moore, 1990, and Hart, 1995). Other scholars argued that firm provides 'incentives' to economic system to generate wealth (Holmstrom, 1982, 1999). Cyert and March (1992) argued that firm sets the foundation for organisation to create goals, provide expectations and choices. Goals are very important for members of organisation to make commitment and shape the required behavior in order to achieve desired outcomes. Expectations are related to the potential benefits or advantages in the future that can be envisaged so that people can adjust the present behaviour in order to fulfil the future target. The firms make choices or solve problems based on goals and expectations so that the choices maximize the potential goals (Cyert & March, 1992; Cyert, Dill & March, 1958).

Firms could attain objectives and goals if they are managed efficiently and effectively. Management can be defined as the process of working with and through people via planning (P), organizing (O), leading (L), and controlling (C) - P-O-L-C - the people and other resources to achieve the objectives or goals (Daft, 2010; Dyck & Neubert, 2009). This definition is based on the classical theory of scientific management (Dyck & Neubert, 2009). In other words, there are four functions involved when managing firms or any organizations, i.e. to determine the goals, to arrange the task and structure, to

work with other people collectively, and to ensure results are achieved (Daft, 2010; Dyck & Neubert, 2009).

Daft (2010) argued that managers apply management functions of planning, organizing, leading and controlling to achieve goals of their organization. Planning is defined as the process to formulate goals for future performance together with the resources required. Organizing refers to the arrangement of tasks, responsibilities, accountability, and resources allocation to enable the organization to execute activities that attaining the goals. Leading is about the use of influence on employees so that they are motivated, willing and ready to perform the tasks assigned to them. As for controlling, it is about monitoring employees and resources so that they are on the right track to achieve the goals of the organization.

Managers perform the management functions on daily basis by carrying out various activities to achieve organizational goal of their organization. In other words, managers perform certain roles in carrying out the management functions – P-O-L-C.

## 3. METHODOLOGY

The objective of the study is to develop a unified theory of the firm based on *Tawhidic* paradigm approach. The nature of the study is not to test the existing theory of the firm, but to develop from the ground (field) a unified theory of the firm based on *Tawhidic* paradigm approach. The objectives of the study are (a) to explore the nature, factors, boundaries, and insights that contribute to the development of a unified theory of the firm from *Tawhidic* paradigm; and (b) to obtain the views of the policy makers, trade representatives, and business decision makers the criteria for a unified theory of the firm from *Tawhidic* paradigm. The study asked two questions to the informants, firstly (a) How do business decision makers address the challenges of the contemporary nature of business activity to sustain competitive advantage? Secondly, in what ways, the understanding of *Tawhidic* paradigm influences business strategists to formulate firm strategies to be more comprehensive, rigorous and dynamic?

The study used qualitative method via personal interview 15 senior managers of Islamic financial institutions that listed in Bursa Malaysia about the nature of the firm, the scope and boundaries of the companies that contribute to a unified theory of the firm. The use of qualitative method through personal interviews is appropriate for exploratory nature of studies. Miles and Huberman (1994) argued that qualitative method is appropriate to examine complex and difficult contexts of study because they can put the situation/s in question into the right perspective. In addition, Marshall and Rossman (1989) recommended the use of qualitative methods to enable researchers to ask more questions in order to explore the context of the study in greater detail.

The nature of business activity is dynamic because it involves different perspectives and understanding of different individuals. Such situations are best understood utilising qualitative method (Ezzy, 2002; Lee, 1999). Further, qualitative method also enables the researcher to identify and understand the complex relationships in knowledge transfer between firms (Lee, 1999; Rist, 1994). By asking questions in personal interviews, the researcher will get varieties of answers that are relevant to the interview questions (Patton, 2002; Silverman, 1993).

There are many techniques to obtain data using qualitative method, such as active or passive participation and observation, personal interviews, content analysis on various documents, and case study (Patton, 2002; Lee, 1999; Creswell, 1998). The researcher will use personal interviews. Such method provides greater opportunity for the researcher to understand the perceptions and preliminary assessments of technology-based firms towards social entrepreneurship and sustainable wealth. Nevertheless, the researcher is aware of the challenges and constraints in using the qualitative method in this study.

The data collection method is a qualitative research method. The qualitative method enables the study to explore a context deeply, which could not be done adequately by quantitative methods, such as survey (Wainwright, 1997; Patton, 1990). The study solicited the views, perceptions, insights, and advices of 15 senior managers of Islamic financial institutions that listed in Bursa Malaysia about the nature of the firm, the scope and boundaries of the companies that contribute to a unified theory of the firm.

#### 4. FINDINGS AND DISCUSSION

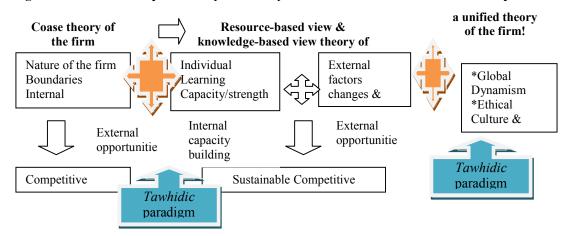

The study asked two questions to the informants, firstly (a) How do business decision makers address the challenges of the contemporary nature of business activity to sustain competitive advantage? Secondly, in what ways, the understanding of *Tawhidic* paradigm influences business strategists to formulate firm strategies to be more comprehensive, rigorous and dynamic? The findings are based on the feedback of the personal interview with 15 senior managers of Islamic financial institutions that listed in Bursa Malaysia about the nature of the firm, the scope and boundaries of the companies that contribute to a unified theory of the firm. Table 1 summarizes the profile of the informants. Most of the informants are located in Kuala Lumpur.

**Table 1: Informants' Profile** 

Code	Post	Location
M1	General Manager	Kuala Lumpur
M2	Senior Manager	Petaling Jaya
M3	Vice President	Kuala Lumpur
M4	Branch Manager	Ampang
M5	Regional Manager	Ipoh
M6	Senior Manager	Shah Alam
M7	Senior Manager	Subang Jaya
M8	General Manager	Petaling Jaya
M9	Executive Director	Kuala Lumpur
M10	Chief Operations Officer	Kuala Lumpur
M11	Senior Manager	Kuala Lumpur
M12	General Manager	Kuala Lumpur
M13	Assistant General Manager	Kuala Lumpur
M14	Marketing Manager	Kuala Lumpur
M15	General Manager	Kuala Lumpur

The nature of the firm at the Islamic financial public companies is not much different from the conventional operations. According to M1, these companies appointed shariah advisory committee to advise the business model, policy, directions, and objectives. In essence, all the functional areas must follow the shariah requirements. M2 argued that some companies' directors perceived that the shariah compliant requires them to change their faith from non-Muslim to become Muslim. In fact, M3 emphasized that the main objective for the shariah requirement is to discipline the managers and employees to practice good universal values such as honesty, transparent, trustworthiness, and good behaviour. M4 contended that the nature of Islamic banking and finance companies is the services, to collect deposits from the public and to disburse the money through Islamic financing activities. M5 pointed out that the primary responsibility of the company remains to generate profit, growth and prosperity. M6 argued that the shariah values governed the responsibility of any company into four levels, namely economic, legal, ethical and social responsibilities. As for M7-M15, business continuity remains the struggle for the business. Based on the feedback of the informants, the Tawhidic paradigm glues the nature of the firm with the processes and functional areas of the firm to enable it survival and sustain with universal good values. Figure 4 shows the presence of *Tawhidic* paradigm into the unified theory of the firm for Islamic financial companies in Malaysia.

Figure 4: Informants input to unify the theory of the firm from Islamic finance companies

Based on Figure 4, the essence of *Tawhidic* paradigm is vital. The informants argued that the vision, mission and objective statements that differentiate the *shari'ah* compliant and non-*shari'ah* compliant companies. The *shariah*-compliant companies apply *Tawhidic* paradigm in terms of companies' continuous improvement in all functional aspects, value added services to the stakeholders, and enhancing social welfare to the humanity.

#### 5. CONCLUSION

The study asked two questions to the informants, firstly (a) How do business decision makers address the challenges of the contemporary nature of business activity to sustain competitive. Secondly, in what ways, the understanding of *Tawhidic* paradigm influences business strategists to formulate firm strategies to be more comprehensive, rigorous and dynamic? The findings are based on the feedback of the personal interview with 15 senior managers of Islamic financial institutions that listed in Bursa Malaysia about the nature of the firm, the scope and boundaries of the companies that contribute to a unified theory of the firm. The informants argued that the vision, mission and objective statements that differentiate the *shari'ah* compliant and non-*shari'ah* compliant companies. The *shariah*-compliant companies apply *Tawhidic* paradigm in terms of companies' continuous improvement in all functional aspects, value added services to the stakeholders, and enhancing social welfare to the humanity. The main contribution from this study is the framework of the theory of the firm from *Tawhidic* paradigm, which adds into the sustainability principles and business continuity.

# THE EFFECT OF TRANSFORMATIONAL LEADERSHIP IN ACHIEVING HIGH-PERFORMANCE WORKFORCE THAT EXCEEDS ORGANISATIONAL EXPECTATION

Samir Ali Trmal<sup>1</sup> Ummi Salwa Ahmad Bustamam<sup>2</sup> Zainal Abidin Mohamed<sup>3</sup>

#### **ABSTRACT**

The focus areas of transformational leadership in organisational settings have undergone a significant evolution in terms of both theory development and empirical investigations over the last decade and a half. As a result, our knowledge about this leadership style has deepened, and there are several dominant theories that are now established paradigms in the leadership field. Consequently, despite the progress, there are numerous dimensions of this leadership form that we are still in the dark. Given this moment in the field's evolution, it is only appropriate that we take stock of where we have been and where we need to go into the future. Whilst leaders play the primary role in establishing and motivating employee's performance, little research has examined the specific processes which engender the effect of transformational leadership that result in high-performance workforce that exceeds organisational expectation. This paper conceptualises the ways and the process taken by transformational leaders and the effect of transformational leadership in achieving high-performance workforce that exceeds organisational expectation.

**Keywords**: Transformational leadership, high performance work force, organizational expectation.

## 1. INTRODUCTION

Creating high-performance workforce has become increasingly vital and to do so business leaders must be able to motivate organizational members to go beyond their task requirements. An important characteristic of leadership is using human talents to grow performance, trust and integrity in employees and the organization (Daft, 2005). As a result, new notions of leadership have surface - transformational leadership being one of them.

Transformational leadership has been defined as "leader behaviours that transform and inspire followers to perform beyond expectations while transcending self-interest for the good of the organization" (Avolio et al., 2009). Transformational leadership has become one of the most outstanding theories of organizational behaviour simply because organizations need leaders of excellence to steer the company's objectives and goals. In contrast to leadership based on individual, transformational leaders direct and motivate employee effort by raising their awareness of the significance of organizational values and the end results. In doing so, such leaders activate the higher order needs of their employees and encourage them to go beyond their own self interest for the organization and its clients. Research has not only authenticated the existence of transformational leadership but also has consistently

<sup>&</sup>lt;sup>1</sup> PhD student at the Faculty of Economics and Muamalat, USIM. Corresponding address: smertrmal@yahoo.com

<sup>&</sup>lt;sup>2</sup> Senior lecturer the Faculty of Economics and Muamalat, USIM

<sup>&</sup>lt;sup>3</sup> Professor at the Faculty of Economics and Muamalat, USIM

linked the practice of these transformational leadership behaviours with employee performance and satisfaction (Bass and Riggio, 2006).

Transformational leaders, guide the way by stimulating intellectual curiosity and inspiring achievement. Additionally, transformational leaders empower team members to develop their own leadership skills by paying attention to individual needs and development. The result is that team members are often motivated to achieve more than they originally thought possible. They are also more satisfied with the results. As Bass and Riggio (2010) point out, research shows that transformational leadership is an effective model for a broad range of fields and cultures.

New businesses are established everyday but these businesses sometimes fail to take seriously the need to develop leaders' attributes which may affect their employees' performance because many are only concern about profit making. Transformational leaders play a very important role to lead their followers or co-workers to fulfil organizational goals effectively. Transformational leadership influences behaviours associated with leadership effectiveness in driving change and transform organization to success. It is the fundamental attitudes that leaders in organizations create which is a common mentality to achieve organizational goals and satisfy stakeholders.

The goals of the organizations are expressed in profits, growth in the market, or innovation is met through a combination of resources that are organized and mobilized by leaders. Leadership theorists have proposed a myriad of characteristics, behaviours and styles to profile effective leaders. Leadership is a dynamic concept, is about transformation, inspiration, vision, goals, cultural adaptation, and knowledge. Leadership styles change with the type of organization, the characteristics of followership, the relationship between followers and leaders, the resources used to generate actions from the followers and environmental factors.

#### 2. REVIEW OF THE LITERATURE

# TRANSFORMATIONAL LEADERSHIP

Much literature suggests that numerous variables affect a leader's effectiveness. It indicates that specific leader behaviours such as the ability to motivate to generate high-performance workforce, communicate, and build teams are factors of successful implementation of organizational change. These is critical when the ability of leaders becoming the change agent for the organization and by acting as change agent, they empower workers to higher motivation stages.

Therefore business leaders must be able to motivate organizational members to go beyond their task requirements. As a result, new understanding of leadership have emerged and transformational leadership being one of them. Transformational leaders who are visionary, inspiring, daring and thoughtful thinkers can be found at all levels of the organization. They may be in teams, departments, divisions, and organization as a whole with charismatic appeal. But there's so much more needed for a leader to make changes in the way an organization operates. According to Bass and Riggio (2006), transformational leaders must exhibit the four factors to bring major changes. Also known as the "four I's", the four factors of transformational leadership is idealized influence, inspirational motivation, intellectual stimulation, and individual consideration.

For anybody to propel teams or the organization forward, organizations need to emphasize the concept of leadership in training managers or group leaders. Transformational leadership involves a committed four basic elements that underlie it. In 1985 an industrial psychologist

named Bernard Bass wrote about the four components describing the characteristics that are valuable to the "transformation" process. According to Bass, when managers are strong role models, encouragers, innovators, and coaches, they are utilizing the "four I's" to help "transform" their associates into better, more productive and successful individuals. Northouse (2001) states that in 39 studies of transformational literature, individuals who exhibited transformational leadership were more effective leaders and with better work outcomes. This was true for both high-and low-level leaders in the public and private sectors (Hou, 2001).

#### **Idealized Influence**

Transformational leaders act as role models and display a charismatic personality that influences others to want to become more like the leader. Idealized influence can be most expressed through a transformational leader's willingness to take certain degree of risks and follow a core set of values, convictions and ethical principles. It is through this concept of idealized influence that the leader builds trust with his followers and the followers, in turn, develop confidence in their leader. In these aspects the leader has empower their subordinates creating trust and be seen as role model for the workers to excel in their duties.

#### **Inspirational Motivation**

Inspirational motivation refers to the leader's ability to inspire confidence, motivation and a sense of being receptive to followers' ideas and thoughts. The transformational leader articulates a clear vision for the future, communicate expectations of the group and demonstrate a commitment to the goals that have been laid out for the group to achieve. This aspect of transformational leadership requires superb communication skills as the leader must convey his messages with precision, power and a sense of authority. Other important behaviours of the leader include his continued optimism, enthusiasm and ability to point out the positive sides of organizational visions and goals.

#### **Intellectual Stimulation**

Transformational leadership values creativity and autonomy among the leader's followers. The leader supports his followers by helping them and involving them in the decision-making process and stimulating their efforts to be as creative and innovative as possible to identify solutions. They also challenges assumptions and solicit ideas from followers without criticizing instead helps change the way followers think about and frame problems and obstacles. The vision the leader conveys helps followers see the bigger picture and succeed in their efforts.

### **Individualized Consideration**

In any business organization, follower or group member has specific needs and desires. Some maybe motivated by money while others by change and excitement. The individualized consideration element of transformational leadership recognizes these needs and quickly attends to it. The leader must be able to recognize or determine by way of observation and evaluating motivates of each individual. Through one-on-one coaching and mentoring, the transformational leader provides opportunities for customized training sessions for each team member. These activities allow team members to grow and become fulfilled in their positions. The common examples of transformational leaders are Mahatma Gandhi and Barrack Obama. Effective transformational leadership results in performances that exceed organizational expectations.

The current business environment is very much characterized by economic uncertainty, global turbulence, organizational instability and political instability. Because of the uncertain landscape, transformational leadership has to prevail at all levels of the organization. In this case the followers of such leaders demonstrate high levels of job satisfaction and organizational commitment, and engage in organizational citizenship behaviours. With such a devoted workforce, it will definitely be useful to consider making

efforts towards developing ways of transforming organization through leadership. And thus for the purpose of this research the researcher will look into the four components of the leadership theory.

#### 3. ORGANIZATIONAL PERFORMANCE

Rowe et al. (2005) said that there is a common belief that leadership can enhance the performance of organizations. The style of leadership is also considered crucial in achieving organizational goals, learning, and performance (Barling et al., 1996). Each organization has its own goal, and workers have to utilize different control activities and effective operation to achieve their organizational goals.

In the for-profit organizations, performance is to measure revenue, production, and profit making. In the non-profit organizations, they do not evaluate performance by profits. They do not have to make an imminent improvement whether the decision is right or not, whether the resource is used properly, and whether the mission is being achieved. However, the non-profit organizations need performance management to control organizational operation (Section, 1999).

# 4. TRANSFORMATIONAL LEADERSHIP AND ORGANIZATIONAL PERFORMANCE

Transformational leaders will pay attention to take care and to respect their followers. Transformational leaders will motivate followers and lead those to achieve group performance thus followers become competent to execute task assigned to them. Morrow (1983) proposed that transformational leader will help to promote employees' work abilities, organizational involvement, self-determination, delegation, and self-achievement. If leaders and followers reciprocate, it will promote a higher recognition to the organizational goals and objectives. The followers will contribute their best efforts to the organization and hope to keep a good relationship with peers. Hence, job satisfaction can be promoted by transformational leadership while followers will perform better than expected and the degree of satisfaction increases. This is supported by Lee (1996). He found that transformational leadership in the government agencies is positively related to the followers' job satisfaction. So, performance and job satisfaction of followers in the work place will be elevated.

Hu (2001) found that organizational culture and types of leadership will influence job satisfaction of employees, and job satisfaction acts as a mediator of leadership and organizational culture to influence organizational performance. When transformational leaders promote the involvement and achievement of the employees, job satisfaction and organizational identification will also be raised. Therefore, the organization and employees will work closely and the job efficiency will be also lifted.

According to Sendjaya and Pekerti (2010) an empirical research related to organizational performance, with the impact of ethical leadership style such as servant leadership would enrich the understanding of the issue. By doing so, organizational performance can be measured in terms of return on asset, return on equity, net growth rate and return on sales etc., while the efficiency and effectiveness might also be measuring tools for organizational performance (Ho, 2011). With more advance in research regarding servant and transformational leadership, a clear distinction would be possible (Stone et al., 2004).

Wallach (1983) identified that performance and job satisfaction depend on the match of personal characteristics and organizational culture while Harris and Mossholder (1996) asserted that organizational culture is the core of the human resource management and it will

influence on job satisfaction. Huang and Chi (2004) concluded that job satisfaction can make employees work hard and increase operational performance of the organization. Therefore, when the employee's requirements are consistent with organizational culture, it can motivate them to work hard.

#### 5. CONCLUSION

Despite transformational leadership enjoying success and attention as an exceptional leadership theory, few scholars have investigated a specific link between transformational leadership theory and team performance. As such, this paper discusses how transformational leadership theory can provide a framework in which to investigate the effect of transformational leadership in achieving high-performance workforce that exceeds organisational expectation. We conceived that idealized influence/inspirational motivation, intellectual stimulation and individualized consideration could produce intermediate outcomes such as shared vision, team commitment, an empowered team environment and functional team conflict. However what is most important is we need to find out the process by which the transformational leaders are able to carry out his role in order to achieve high performance workforce. Further study will be conducted to study this particular research question.

# THE STRUCTURE OF *SUKUK IJARAH*: AN INITIAL ANALYSIS FROM THE PERSPECTIVE OF *MAQASID AL-SHARI'AH*

Muhammad Ridhwan Ab. Aziz<sup>1</sup> Mohd Shahid, M.N<sup>2</sup> Mohd Faisol Ibrahim<sup>3</sup>

#### **ABSTRACT**

Sukuk Ijarah is a common asset based securities for sukuk issuance before 2008. However in 2008, Syeikh Mufti Taqi Uthmani has criticized on the prevailing sukuk Ijarahand concluded that almost allsukuk in the market are not in line with Shari'ah guidelines. Accordingly, several progressive developments have been made in the practice of sukuk where it was witnessed the shifting mode of sukuk issuance from the ijarah structure to the musharakah or murabahah for commodities. Therefore, this paper tries to share the suitable method in analyzing structure of sukuk Ijarah from the view of maqasid al-Shari'ahthat considers and reflects directly to theapplication of several principles and concepts such maslahah, mafsadah, hardship elimination, sad al-zara'i and al-Istihsan. The general finding shows that a proper consideration from the perspective of Maqasid al-Shari'ah is needed in order to structure Sukuk Ijarah.

**Keywords:** Magasid al-Shari'ah, sukuk Ijarah, sukuk, structure

#### 1. INTRODUCTION

Sukuk has experienced tremendous growth since 1990 when Shell MDS, a foreign-owned and non-Islamic company issued 125 million sukuk. The trend in issuing sukuk by corporate company was followed ten years later by the big conglomerate in Malaysia Kumpulan Guthrie Berhad with the worth of USD 150 million, also as the first global corporate sukukand has matured at 2006 under the concept of Sukuk Ijarah. The sukuk securities markets have grown rapidly, with both public issues and private sector issues, and have been a very popular fund raising mode in Malaysia since 2000 (Mohamad Ariff and Shamsher Mohamad, 2012).

*Sukuk* are still in an early stage of development relative to conventional capital markets. *Sukuk* often share the same pool of investors as conventional bond- that is, conventional investors subscribeto *sukuk* not necessarily because of *Shari'ah* compliance or ethical aspects, but for commercial considerations (Rahail Ali and Imran Mufti, 2011).

Sukuk is extremely flexible product that can be used to create a variety of instruments, ranging from straight unsecured debt to subordinated issues that can count towards the lower tier two capital of Islamic banks. Sukuk also provides access to an incremental investor base that cannot participate in conventional bond issues. In order to sustain issuance momentum, a greater diversify of structures, issuers and investors must be found while increasing awareness among traditional bond investors (Yavar Moini, 2011).

The Shari'ah's uppermost objectives rest within the concepts of compassionand guidance, which seek to establish justice, eliminate prejudice, and alleviate hardship by promoting cooperation and mutual support within the family and society at large. Both of these concepts are manifested by realizing the public interest that Islamic scholars have generally considered to bethe Shari'ah's all-pervasive value and objective that is, for all intents and purposes, synonymous with compassion (Asyraf Wajdi and

<sup>&</sup>lt;sup>3</sup> Senior lecturer at Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia.

Nurdianawati, 2007). Thus, this paper is an initial analysis for the proposal of studying the *sukuk Ijarah* structure from the view of *maqasid al-Shari'ah* where the objective is to define the principles of *maqasid* and the considerations given to the instrument in order to meet the objective of *Shari'ah*.

# 2. MAQASID AL-SHARI'AH AT GLANCE

Maqasid (the plural of maqsad means objective) al-Shari'ahare the objectives, spirit and the rationale of the Shari'ah. A comprehensive and careful examinations of the Shari'ah rulings entails an understanding that Shari'ah aims at protecting and preserving public interests (maslahah) in all aspects and segments of life. So, Shari'ah laws in general are designed to protect these benefits, and to facilitate improvement and perfection of human lives' conditions on earth. This fact suggest that we are required to maintain maqasid al-Shari'ah when implementing Shari'ah rulings, and to observe these maqasid when deducingrulings for the new arising matters (Abdul Azeem Abo Zaid, 2010).

The very objective of the *Shari'ah* is to promote the well-being of the people, which lies in safeguarding their faith ( *din* ), their self ( *nafs* ), their intellect ( *aql* ), their posterity ( *nasl* ) and their wealth ( *mal* ). Whatever ensures the safeguard of these five serves public interest and is desirable and whatever hurts them is against public interest and its removal is desirable ( Aliya Dahiru Muhammad, 2010 ).

'Alal al-Fasi draws wide picture that covers each angles in *maqasid al-Shari'ah*s 'the overall objective of *Shari'ah* is to populate and civilize the earth and preserve the order of peaceful coexistence therein, to ensure the earth's ongoing well-being and usefulness through the piety of those who have been placed there as God's vicegerents, to ensure that people conduct themselves justly, with moral probity and with integrity in thought and action, and that they reform that which needs reform on earth, that they tap its resources and plan for the good of all (Al-Raisuni, 2005).

Kamali (1999) explains that Al-Shatibi accentuated the knowledge of the *maqasid* as a prerequisite of attainment to the rank of a *mujtahid*. Those who neglect acquiring mastery of the *maqasid*do so to their own peril as it would make them liable to error in *ijtihad* included among these were the proponents of pernicious innovations (*ahlu al-bid'ah*) who only looked at the apparent text of the *Ouran* without pondering over its objective and meaning.

From the historical background, it was not until the early 4th Century of the *Hijrah* (the Islamic calendar) that the term 'maqasid' was used in the juristic writings of Abu 'Abd-Allah al-Tirmidhi al-Hakim. Recurring references to this then appeared in the works of Imam alHaramayn al-Juwayni (d. 478H), who was probably the first to classify the maqasid of the Shari'ah into the three main categories of the daruriyyah,hajiyyah and the tahsiniyyah, which has ever since been generally accepted. Al-Juwayni's ideas were then further developed by his pupil, Abu Hamid al-Ghazzali (d. 505H), who wrote at length on the doctrines of Maslahah (Public Interest) and Ta'lil (Ratiocination) in his works Al-Shifa' Al-Ghalil and Al-Mustasfamin 'Ilm Al-Usul. Sayf al-Din al-Amidi (d. 631H) identified the science as al-targih, a studied grid or criteria to ascertain preference amongst conflicting interests.

Next, the Maliki jurist Shihab al-Din al-Qarafi (d. 684H) was the first to add a sixth to the existing list of the five essential maqasid, namely, the protection of *al-'ird*( pride ). Izz al-Din Abd al-Salam al-Sulami's (d. 660H) renowned work, *Al-Qawa'id Al-Ahkam*, was in his own characterization a work on the *'maqasid al-ahkam'*. The work provides a comprehensive treatment of the various aspects of *al-Maqasid*, and especially in respect of the doctrines of *'Illah* (Effective Cause) and *Maslahah* (Public Interest).

Taqi al-Din ibn Taimiyyah (d. 728H) was probably the first scholar to depart from the notion of confining the *maqasid* to a specific number. He added to the existing list of the *maqasid* such things as the fulfillment of contracts, the preservation of the ties of kinship and respect for the rights of one's

neighbors. In relation to the Hereafter, he added an inventory of qualities, including love of God, sincerity, trustworthiness and moral purity (Kamali, n.d.).

In the 20<sup>th</sup> century, Al-Tahir Ibnu Ashur (d.1325H) is a prominent scholar who proposed that the universal *maqasid* of the Islamic law is to maintain orderliness, equality, freedom, facilitation and the preservation of pure natural disposition (*fitrah*). Muhammad al-Ghazali (d. 141H) also contributed unforgettable idea to the knowledge of *maqasid al-Shari'ah*by his critique on the literalist tendencies that many of today's scholars have. Al-Qaradawi concluded from Al-Quran the universal *maqasid*; preserving true faith, maintaining human dignity and rights, calling people to worship God, purifying the soul, restoring moral values, building good families, treating women fairly, building a strong Islamic nation and calling for a cooperative world (Jasser Auda, 2008).

Today, this science still in infant stage and need for the extensive development effort where it can be the guidance of scholars today in finding the solution for problems, issues and challenges that seem keep on increasing and compounding time to time. Furthermore, the science of *maqasid* also will protect the universality of *Shari'ah* law and ensure the acceptance of people globally in various sectors and fields of interest.

# 2.1 Maqasid al-Shari'ah in Islamic Finance

Islamic finance is a crucial portion of the discussion in the science of Islamic economic nowadays. Before entering the maqasid al-Shari'ah in Islamic finance, it is better to revise at glance to the maqasid al-Shari'ah in overall of Islamic economic.

Mustafa Omar and Syahidawati (2013) draw a table of general economic-based of *maqasid al-Shari'ah* that derived fromseveral influence scholars in Islamic economic and finance. Among the objective are eliminate poverty and deprivation, provide basic human needs, to achieve moral and material development, to circulate wealth, to achieve *falah* in economic and to achieve economic well-being and Islamic moral norms.

One if the biggest challenges in Islamic banking and finance industry today is to come up with products and services that is *Shari'ah* compliant or legitimate from Islamic point of view without undermining the business aspects of being competitive, profitable and viable in the long run (Asyraf Wajdi and Abdulazeem Abozaid, 2007). Habib Ahmad (2011) identifies two aspects to be configured and arranged in line with the requirements of *maqasid al-Shari'ah* in Islamic finance, first, is the *Shari'ah* requirement relates to the legal aspects of transactions whereas the second aspect is the dimension that relates to the social requirement.

Islamic law introduces many rulings aimed at realizing the preservation of wealth in both material and social-psychological dimensions. Muslim jurists have asserted that preservation of wealth is to be achieved in at least five main dimensions.

- 1. Preservation of wealth through the protection of ownership;
- 2. Preservation of wealth through its acquisition and development;
- 3. Preservation of wealth from damage;
- 4. Protection of wealth through its circulation;
- 5. Preservation of wealth through protection of its value (Asyraf Wajdi and Said Bouheraoua, 2011).

Islamic Finance is subject to rules and ethical values which are directly supportive of *Shari'ah* complementary *Maqasid*. Most important of these rules areand ethics which are derived from Shari'ah and 'Aqidah ( Islamic faith ):

- a. Prohibition of *riba* (interest)
- b. Prohibition of trade in debt
- c. Prohibition of *Ghabn* and *Gharar* (uncertainty)
- d. Promoting justice
- e. Enjoining the principle of leniency
- f. Recognition and respect of private property rights (Abdul Rahman Yousri Ahmad, 2009)

Akram Laldin and Hafas Furqani (2012) differentiate between the goals (maqasid) and the means (wasail) in Islamic finance activities. For the goals, they list three main maqasid in applying Shari'ah law, first, wealth circulation that comprises all processes related to its creation, consumption and distribution; second, fair and transparent financial practices whereas the last is justice in the macro and micro dimensions. The micro dimension related to transactional instruments and mechanisms. The means to achieve these goals are; facilitating financial contracts, establishing values and standard and instituting social responsibility.

In implementing the spirit of *maqasid al-Shari'ah*, there are several resolutions made by authority bodies that based on the consideration of *maslahah*, *mafsadah* and the general theory of *maqasid al-Shari'ah*, *as follows:* 

- 1. Application of *bai'* al-dayn which can safeguard the *maslahah* ( interest ) of the market participants.
- 2. Application of *ujrah* on *kafalah* based on *maslahah* and society's needs.
- 3. Application of iqta' with the objective of *maslahah* and deemed not contradict with *maslahah* 'ammah.
- 4. The permissible of regulated short selling when the prohibited element of *gharar*can be overcome in RSS system and the shares sold will be delivered.
- 5. The securities borrowing and lending based on the principle of *istihsan* and *maslahah* that provides liquidity to the share market.
- 6. Crude palm oil futures contract that often contains *gharar* and *ghalat* (false) elements. However, *ghalat* that involves a wrong assessment of an individual (*ghalat 'aqid*) cannot be used to terminate a contract.
- 7. Through the interpretation of *hikmah tashri'iyyah*, the composite index futures contract will create *maslahah* to the investor in particular and to the economic system in general, as it acts as a hedging instrument.
- 8. *Maslahah* is the best reasonto permit the mixed companies provided the core activities of company must be activities which are not against the *Shari'ah* principles or the public perception of the company must be very good and the portion of harama element is very small ( Ahcene Lahsasna, 2013).
  - Briefly speaking, the *maqasid al-Shari'ah*in Islamic finance aims to protect all parties' rights simultaneously together with their wealth and property by relying on the law of financial transantions ( *fiqh al-mu'amalat* ) that have been regulated and designed uniquely and comprehensively for the main purpose of every human in this world is to achieve happiness and fortunate in this temporary life and be granted by Allah with the reward and paradise in the hereafter.

### 2.2 The Elements to be Considered and Examined in Magasid Al-Shari'ah

Maqasid al-Shari'ah means the objectives aimed by the Lawgiver from the legislated law to the mankind and it constitutes the concept of enjoining benefits and avoiding difficulties ( Jalbu al-Masalih and Dar'u al-Mafasid) worldly and the hereafter.

1. According to Asyraf Wajdi (2008), many prominent Islamic economists, like Chapra, Ahmad and Siddiqui and Naqvi have asserted that Islamic banking and finance is a subset of the overall Islamic economic system, which strives for a just, fair and balanced society as envisioned and deeply inscribed in *maqasid al-Shari'ah*. Accordingly, the many prohibitions are to provide a level playing fieldto protect the interests and benefits (*maslahat*) of all parties involved in market transactions and to promote social harmony.

Ibnu 'Ashur(2006) gives a detail definition in his book with regard to al-Maslahah and al-Mafsadah: "An attribute of the act whereby righteousness and goodness (solah) takes places, that is to say utility and benefit (naf') always or mostly for the public or individuals. By "always" I refer to the maslahah that is absolute and regular, while by "mostly" I mean the maslahah is predominant in most of the cases. As for the expression "for the public or individuals" its means that maslahah is of

two kinds, namely public interest ( maslahah 'ammah ) and private interest ( maslahah khassah ). As for mafsadah, it is the opposite of maslahah, meaning that it is an attributeof the act whereby corruption or harm happens always or mostly to the public or to individuals".

2. One of the objectives of *Shari'ah* is to achieve comprehensive communal prosperity in the society. In order to achieve that, every member in the society should enjoy a reasonable satisfaction and maximum security while all types of harm and hardship must be either removed from the society or minimized. It is understood that that preventing harm is a result of putting into practice most of the objectives of *Shari'ah* in business and finance, because those objectives lead to the achievement of security in society (Ahcene lahsasna, 2013).

Asyraf Wajdi and Said Bouheraoua (2011) mention that Islamic scholars classify harm or damage into two broad types; the first type is the harm or damage which occurs as a result of a deliberate action by a person upon parties or entities. The second type is an action permissible in the *Shari'ah* and performed by a person with an honorable intention which, despite that, may directly or indirectly cause harm to other parties. While the former is strictly prohibited, the latter has to be examined in light of differing contexts and degrees of harm to determine whether the action is permissible or not.

3. Al-Raisuni (1995) addresses that *al-Istihsan* is protection of *maslahah* and '*adalah* (justice). This means the scholar should always alert with the objective of *Shari'ah* in judging any *fiqh* issue by preserving both, *maslahah* and '*adalah*. When in the circumstance of *maslahah* is being neglected, *al-Istihsan* will guide the scholar to perform *ijtihad* (independent opinion) in order to open an opportunity to avoid hardship and harm. When the text is understood in the way of bringing hardship or difficulty, or *qiyas* (analogical deduction) is comprehended in contrast with the spirit of *Shari'ah* law whereby *maslahah* and '*adalah* are neglected, Hence, the understanding upon the text and the *qiyas* should be revised by the concept of *al-Istihsan*m where it relied on the general principles of *Shari'ah* law.

In summary, *al-Istihsan* aims to protect *maqasid al-Shari'ah*whether by leaving *qiyas* and finding another method that more appropriate for the sake of *maslahah* or promoting leniency in judgment in general and particular condition or creating flexibility and neglecting rigidity or implement tolerant and eliminate hardship or shifting to easiness in facing difficulty (Al-Sarakhsi, 1978).

4. Al-Qarafi (1972) explains that *al-zari'ah* (plural for the word *al-zara'i*) is needed to be blocked in certain circumstance and also compulsory (*wajib*) to be opened or not recommended (*makruh*) to be allowed, where sometime it is recommended (*mandub*) to be encouraged, . This is because *al-zari'ah* is a mean whereby the mean to the prohibited practice is prohibited as well as, the mean to the compulsory act also considered compulsory (*wajib*) such walking to the mosque for *jum'ah* prayer and *al-haj* themselves.

Al-Yubi (1998) demystifies that the concept of sad al-zara'i is always reflects to its ma'al (consequence). The consideration on ma'al al-af'al (the consequence of action) is one of the significant magasid in Shari'ah law.

Taking ma'al al-af'al into the account of Shari'ah law is a significant step in determining any particular action whether it is complying with the Shari'ah requirements or vice versa. Therefore, Islamic scholars not judge on one action or practice based on weak assumption or aimlessly unless after they have considered and measured with the scale of Shari'ah the impact of the action consequently. The purpose is for creating maslahah and avoiding mafsadah. Sometime, the action is seemed non-permissible but the consequence of it might be in contrast where it can uphold the principle of creating maslahah and avoiding maslahah, so it is unacceptable to judge it merely relied on its form and substance. However, this duty is very difficult to perform it accurately except for whom experts in the sciences of Islamic jurisprudence with the branches of knowledge and it is applied in the path of maqasid al-Shari'ah (Al-Shatibi, 2003).

# 2.3 Structure of Sukuk Ijarah

Sukuk is better described as 'trust certificates' or participation securities' that grant the investors a share of an asset along with the cash flows and risks commensurate with such ownership. From a

practical point of view, it is believed that securitization is better placed to help in achieving this objective provided it remains adherence to the Islamic finance principles (Muhammad Al-Bashir, 2012).

Securitization is a funding technique whereby investors ultimately invest their capital in credit or performance of a pool of assets rather than the credit of corporates or other entities. Investors take a risk on the performance of the asset themselves rather than risk on the performance on the entity that previously owned the asset ( Debashis Dey and Greg Man, 2009 ).

Although the concept of securitization is derived from conventional bond application, Islamic securitization has distinctive features that distinguish it from asset securitization. Following the spirit of *Shari'ah*, Islamic securitization must be free from three prohibited practices, which are *riba*, *gharar* and *maysir*. Thus, anything leading to these practices is not tolerated such as debt and financial assets trading ( *bai' al-dayn* ), *haram* activities, interest bearing collateral and so forth. Furthermore, Islamic securitization must involve the funding or the production of real assets rather that financial securities, which causes irresponsible leverage as well as speculation, through derivatives lending ( Wilson, 2004 ).

Financing using securitization has significant advantages. First, it enables conventional institutions to efficiently remove assets from their balance sheet, to monetize previously illiquid assets, recycle cash to be reinvested and, hence, expand the volume of their business without a corresponding increase in their equity capital. In simple terms, securitization allows financial institutions to serve more customers without having to raise new funds in the form of either equity or deposits. Secondly, securitization helps financial institutions to raise cheaper capital for their businesses at the asset level instead of the enterprise level. Thirdly, in some jurisdictions, this allows originators to benefit from tax savings such as tax on capital (Chris P. Sioufi and Samer Y. Amro, 2006)

There are two famous types of *sukuk* securities that always be an underlying concept in *sukuk* issuance. First, is asset backed securities (ABS), which *sukuk Ijarah* conceptually based on this structure, created by the pooling of various categories of assets which the ABS derives their values and income stream. The pooled assets would be ring-fenced so that the securities would not be impaired by the financial behavior of the originator as the investors would rely on those assets for payment. The feature of an ABS is the securitization transaction which involves the true sale and transfer of the assets from the originator to a third party, which is normally an SPC (Nik Norzrul Thani et al., 2012). In contrast, with asset-based *sukuk*, there is no sale transaction taking place, rather one just transfer of financial rights to the asset and the income is derived from the financial rights to obligations attached to the debt (Aziz et al., 2010).

According to Abdullah Saeed and Omar Salah( 2012 ) The *sukuk al-Ijara* structure is based on the contract of *Ijara*. An *Ijara* contract allows the transfer of the usufruct of an asset in return for rental payment; as such , it is similar to conventional lease contract. Thus, the sukuk are based on the underlying tangible assets that the SPC ( Special Purpose Company ) has acquired rather than being debt securities, which is the case with the issuance of conventional bonds. Instead , the *sukuk al-Ijara* structure uses the leasing contract as the basis for the returns paid to investors, who are the beneficial owners of the underlying asset and as such benefit from the lease rentals as well as sharing in the risk.

Muhammad Al-Bashir (2012) explains the differences between Islamic and conventional lease by listing three major things where *al-Ijara* concepts differs from conventional lease. First, the Islamic lease must be free from any reference to interest or any provision that may contain any element of interest payment. Second, the nature of the leased asset must also acceptable from Islamic perspective and as such the asset must be permissible in itself and shall be used for permissible functions. Third, *al-Ijara* draws clear distinction between the roles and responsibilities of the lessor (owner of asset) and the lessee (hirer) where the all capital costs and major maintenance are the responsibility of the lessor as he is the owner of the asset, while day to day expenses and maintenance would be the responsibility of the lessee / hirer as he is benefiting from the usufruct.

Sukuk holders

seller

Stage 2 : Contract of leasing ( *al-Ijara* )

- (2) SPC rents property to the government for specific period
- (6) SPC collects rental

Stage 3: During the tenure

(9) SPC passed the rentals to investors in the form of periodic distribution or coupon

Stage 4: At maturity

- SPC sells the property to the government at an agreed price
- Government pays cash to the SPC
- SPC simultaneously pays investors cash for *sukuk* redemption

From the diagram and its description above, we understand in general the operation flow of *sukuk al-Ijara* other than recognize some variables of parties in executing the *sukuk*. The SPC which stands for special purpose company or vehicle is a legal entity typically formed as a limited company to carry out specific, narrow business purpose. SPC has been widely used in the financial services industry for off-balance sheet transactions, and issues securities to investors and utilizes the proceeds to acquire asset from the sponsor, and payments are made on the securities from the cash flow derived from the asset acquired. By transferring the asset to SPC, the assets are safeguarded from the financial ( or bankruptcy ) risk of the sponsor. Besides that, SPC is also used to raise capital as investment funds, reinsure and transfer risks as captive insurance companies and acquire and hold assets as holding and / or leasing companies ( Manuela Belmontes and Tahir Jawed, 2011 ) .

The roles of delegate trustee and the agents in a *sukuk* transaction are vital, not only from a functional perspective, but also for fundamental legal reasons. A *sukuk* issuer will inevitably be a special purpose company (SPC). This is for both legal and tax liability reasons, stemming from the fact that a *sukuk* transaction must be based on income-producing asset.

Accordingly by investing in a such trust certificates because *sukuk* represents, in essence, their ownership of the *sukuk* assets- it is not a debt from the issuer. Unsurprisingly, almost all *sukuk*transaction are governed, at least in part, by English law (Sema Kandemir and Daniel Renkin, 2011).

English common law and civil law each present distinctive problems when they collide with *Shari'ah*. The problem in using *Shari'ah* finance under common law; the national law/ common law always prevails over *Shari'ah* law when there are disputes. As a consequence, the contract is interpreted solely based on what is written in the contract in respect to *Shari'ah* regulations (Nazar, 2012).

However, in Shamil Bank of Bahrain vsBeximco Pharmaceuticals Ltd and otherscase on the basis of default payment in a *murabahah* agreement, The High Court and Court of Appeal of England consequently referred to the law of country, not to a non-national system of law such as *Shari'ah* without identifying those aspects of *Shari'ah* which were intended to be incorporated into the contract. From the above judgment, it is clear that resort to conventional courts by Islamic financial institutions is not without shortcomings. While the fundamental clauses of contract in Islamic finance are based on *Shari'ah* principles and the conventional court is unfamiliar with such principles and this will definitely affect its decision (Muhammad Al-Bashir, 2008).

The sale and lease back structure is a common method used in executing *sukuk al-Ijara*.It is aboutrenting an asset to the party who sold it. The issue is also at the core of the *Ijarasukuk* structures. Through this structure, the originator seeking financing 'sells' the asset to the *sukuk* SPC for a value equal to the financing provided, and then leases it back. The lease payments provide the fixed income stream which may be benchmarked to an index (Khalid Howladar, 2006).

#### 2.4 An Initial Analysis

In this initial analysis of the *sukuk al-Ijara* structure, it needs to be evaluated on the scale of *maqasid al-Shari'ah*that was explained above. First, in the form of *maslahah* and *mafsadah*, second,the element of hardship elimination or harm avoidance in the structure, third, *sad al-Zarai'* or blocking the means to prohibited element in the structure while the forth is how far *hiyal* or legal stratagemsis being used in the structure of the *sukuk*.

Initially, the first issue need to be analysed through the light of maqasid al-Shari'ah is sukuk securitization. As we understood from the previous discussion, sukuk is a form of financial securitization where it has been structured that way in order to meet the financial obligation to its holder as well as the issuer. But, how this securitization fits with the principle of maqasid al-Shari'ah? whether it for the maslahah of sukuk issuer, or to avoid any hardship in executing financial transaction in that kind of mechanism? Then, is the maslahah that we defined through sukuk securitization is not represent a forbidden hilah (legal stratagems) that scholars unanimous in prohibiting it in financial transaction? The concept of sadal-Zara'i also need to bereflected in this issue whereby it provides precautions for the parties involve in sukuk to protect their rights and wealth as mentioned by scholars as one of the objective of Shari'ah.

The formation of SPC (special purpose company) in the structure, despite it is an imitation from the conventional lease concept, aims to fulfil the duty of the sukuk issuer to the sukuk holders in a good manner and well-managed. Other than its role as bankruptcy remoteness to avoid any negative financial implication to its mother company, the purpose also to ensure the smoothness and transparency in governing the project in order to preserve the right of *sukuk* holders to get better return under the provision of wealth preservation. The *maqasid* view on SPC will go around the discussion about *maslahah* in creating SPC, the priority of creating SPC that costs highly from the investors' money than without SPC that may reduce the cost in *sukuk* issuance where it can allow the high return of investment, how SPC deals with the concept of *sad al-Zara'i*and *izalah al-doror*(hardship elimination). Through this analysis, we will understand the application of *maqasid al-Shari'ah* in SPC as one variable in *sukuk al-Ijara*.

The appointment of trustee in representing the *sukuk* holders which is invariably carried out by a corporate company which specialises in performing duties in capital market transactions. Similar to the appointment of variety of agents to undertake administrative functions on it behalf. As we understand, in general the appointment is likely applies the concept of *wakalah* ( agent ) beside promoting the transparency and leniency in related financial transactions in *sukuk* issuance. However, the cost that involve in that appointment may trigger *maqasid al-Shari'ah* view to determine whether they are really needed in this transaction for wealth protection purpose or the elimination of the agent and trustee will be more profitable for the investors as well as the issuer.

The other things that need to be examined in the light of *maqasid al-Shari'ah*, are the pricing and listing the *sukuk*. As we know, the sukuk follows the pricing mechanism that determined by LIBOR (London Interbank Offered Rate) that incorporate variables such as time, maturity and currency rates (Muhammad Al-Bashir, 2011). This practise also should be judged by the principles of *maqasid al-Shari'ah*, in particular the *maslahah* of taking LIBOR as benchmark in *sukuk* pricing, the hardship that will be faced by *sukuk* player by neglecting LIBOR or any other prevailing rate and what is the needs of *sukuk* to the rate, either *doruriyat* (compulsories) or *hajiyat* (necessities) or *tahisiniyat* (embellishments). Regarding to the *sukuk* listing,

In assuring the due diligence of *sukuk* process, the governing law plays a vital role that leads to the establishment of credibility of the issuer and protection of holders' rights. Therefore, the governing law of *sukuk* should consist of the special characteristics of *Shari'ah* law in order to perform its duties as the regulator and judge over all the transactions in that instrument. From here, it have raised up several questions such how far the governing law which dominantly derived from the British law or other common law, or in other word non-*Shari'ah* law can perform justly as well as *Shari'ah* law. Then, how *maqasid al-Shari'ah*solves the problemthat emerged from this scenario and what its stand and point of view on it based on *maslahah* and *mafsadah* concept, *fiqh al-awlawiyat* ( the science of prioritization ), *sad al-zara'i* and hardship elimination. The finding of this analysis not necessary to be on the side or support the prevailing practice in *sukuk* market today despite with the opinions and fatwas issued by many regulatory and authority bodies pertinent to the permissibility of the application.

According to Abradat Kamalpour (2008), the other shortcomings of the *sukuk Ijarah*those need to the evaluation process from the view of *maqasid al-Shari'ah*are:

- 1. Appropriate underlying asset available for such a transaction
- 2. The asset is locked up for the term of the transaction and the owner cannot simply sell it to a third party.
- 3. Even if an issuer does have the underlying asset, in some jurisdictions there could be adverse taxation costs associated with introducing the asset into the structure.
- 4. Not all assets can be used for leasing purposes.
- 5. There could be ongoing Shari'ah audits in connection with the asset. This can be time consuming and costly for the issuer.
- 6. The structure is not easily usable for a *sukuk* programme structure.

In summary, all the elements those involve in *sukuk al-Ijara* structure might be measured based on *maqasid al-Shari'ah* view where it can inform us how the application on the *sukuk* meets with thespirit of Islamic law. By fulfilling the criteria of *maqasid*, the instrument could be considered as *Shari'ah* based product that always upholds the principals in wealth preservation within the upmost important objective, the preservation of *din* (religion) that guides us in achieving the truly happiness worldly and the hereafter.

#### 3. CONCLUSION

Fulfillment the requirements of *maqasid* is expected to be difficult for any new financial product in the capital market furthermore the market itself is predominated by the conventional financial product such bond, derivative, debenture, stock and others. Even though, it is not the hurdle to the Islamic scholars, practitioners, experts and *sukuk* players to strive the best effort in structuring and designing the *sukuk* based on the needs of *maqasid al-Shari'ah* with the intention to spread the *Islamalazation* philosophy to the entire world of economic for the human well-being.

# SUKUK IJARAH: KONSEP DAN AMALANNYA DALAM PASARAN MODAL ISLAM DI MALAYSIA

Muhd Azizur Rahman Ramli<sup>1</sup>

#### **ABSTRAK**

Sukuk Ijarah merupakan sebahagian daripada produk pasaran modal Islam. Bagi mewujudkannya, dua pendekatan diambil iaitu; mengekal cara konvensional yang diterima oleh Islam dan mengambil prinsip syariah sebagai instrumen baru dalam pasaran modal. Sukuk adalah sijil pelaburan Islam yang amat berbeza dengan bon kerana ia perlu membuang dalam strukturnya riba dan gharar. Ia distruktur melalui konsep pensekuritian dan kontrak pertukaran. Hutang yang terbit dari kontrak tersebut disekuriti pada kadar yang ditetapkan dan diketahui. Kontrak-kontrak itu adalah seperti ijarah, mudarabah, bay' bithamin ajil dan lain-lain. Prinsip syariah ini, digunakan bagi membentuk instrumen yang baru dalam pasaran hutang Islam seperti Sukuk Ijarah.Sukuk Ijarah yang mewakili aset sewaan boleh dimanfaatkan sebagai aset kewangan bagi tuiuan pelaburan tetap. Walaupun ja diambil dari prinsip syarjah namun cara konvensional yang tidak bersalahan dengan syara' diterima pakai, seperti bidaan tender, rebet dan dendaan sekiranya ingkar pembayaran. Di Malaysia, saiz penerbitan Sukuk Ijarah yang diterbitkan oleh pihak swasta berkembang dari 2% pada tahun 2004 kepada 11% pada tahun 2007. Sukuk Ijarah yang diamalkan telah menggunakan pelbagai prinsip yang ada dalam konsep ijarah. Oleh itu beberapa sukuk yang diterbitkan dikaji bagi menjelaskan bagaimana konsep ini boleh diaplikasi dalam pasaran modal Islam di Malaysia.

Kata kunci: Sukuk Ijarah, Pasaran Modal Islam

# 1. PENGENALAN

Sekuriti yang diniagakan di pasaran modal boleh dibahagikan kepada dua iaitu sekuriti hutang seperti bon dan nota hutang. Kedua, sekuriti ekuiti seperti pemilikan saham syarikat. Kebanyakan Ulama' dan sarjana Islam sepakat berpendapat bahawa bon konvensional haram. Kebanyakan negara Islam mula mewujudkan pembiayaan hutang awam Islam. Di Malaysia, pensekuritian hutang bermula dengan struktur bay' bithamin ajil, bay' 'inah dan bay' dayn dalam jumlah yang besar. Pada tahun 2005, Sukuk Ijarah pertama diterbitkan dalam jumlah yang sedikit iaitu hanya 2.9% dari jumlah terbitan Islam yang lain. Penerbitan yang sedikit di Malaysia berbanding instrumen yang lain menimbulkan pertanyaan adakah penerbit dan pelabur memahami dengan sebenarnya konsep bon Islam dan konsep Sukuk Ijarah serta peluang pelaburan yang boleh diambil? Sukuk Ijarah kini menggunakan konsep sewaan Islam yang menggunakan rangka kerja sewaan konvensioanal dan hal ini tidak disebut secara jelas oleh fuqaha' terdahulu. Bagaimanakah proses penerbitannya dan adakah ia menepati kehendak syara'?. Oleh itu kertas ini mengkaji konsep-konsep asas dan proses terbitan Sukuk Ijarah serta aset pendasar (underlying asset) yang boleh digunakan dalam Sukuk Ijarah di pasaran modal Islam di Malaysia.

#### 2. KAJIAN LEPAS

Di Malaysia, struktur ijarah digunakan bagi mengelak kontroversi hukum bay inah dan bay dayn dalam struktur Sukuk. Struktur Ijarah boleh digunakan dalam pembangunan jangka masa panjang. Ia mempunyai aset sandaran yang kuat dan bukan semata semata janji pembayaran. Bahkan ia digunakan di Malaysia, Timur tengah dan Asia sebagai insentif dalam pembiayaan projek-projek pembangunan ekonomi. Walaubagaimanapun ia masih kurang digunakan dalam pasaran sekunder yang boleh menggantikan konsep bay muajjal dan bay murabahah. Isu kemungkiran pembayaran dan bayaran pampasan sekiranya juga perlu diberi perhatian pengawasan syariah seperti tuntutan yang membebankan penyewa dengan tuntutan yang tidak munasabah. (Kamali, 2007, p. 20)

Tidak semua struktur Sukuk diaplikasi dalam sesebuah negara. Hanya beberapa struktur sukuk sahaja yang boleh digunakan secara aktif. Seperti contoh pembangunan di negara-negara teluk seperti Kuwait, UAE, Arab Saudi dan lain lain amat pesat. Demikian itu, Sukuk Ijarah diperlukan bagi menampung kewangan pembangunan hartanah. Produk yang ada bagi pembiayaan pelaburan hartanah (Real Estate Investment) hanyalah Ijarah, Mudarabah dan Musharakah. Satu kajian persepsi terhadap ketiga-tiga pembiayaan ini dikalangan pemain-pemain industry hartanah seperti , konsultan hartanah dan para pelabur di negara teluk mendapati 93% menyukai dan bersetuju dengan cara Ijarah dan sukuk untuk membiayai Real Estate, 86% bagi Mudarabah dan 81% Musharakah. Walaubagaimanapun kedua-dua pembiayaan Mudarabah dan Musyarakah tidak ditawarkan oleh pihak bank di negara-negara Teluk (MohdFaishalIbrahim, 2012).

Situasi ini berbeza di Malaysia. Kajian yang dilakukan oleh Christiophe Jgodlewski terhadap pencapaian portfolio Sukuk dan Bon mendapati pelabur pelabur akan memilih Sukuk sebagai satu alternatif kerana mengetahui wujudnya permintaan bank-bank Islam diperingkat antarabangsa. Beliau juga mendapati bahawa pelabur-pelabur lebih cenderung kepada pemilihan songsang. Iaitu bertindak memilih menggunakan mekanisma perkongsian untung-rugi bagi syarikat-syarikat yang menerbitkan sukuk yang tidak berdaya saing dalam pasaran bon (Christiophe, 2013)

Situasi di Indonesia pula berbeza apabila Isu harga sukuk ditimbulkan. Harga Sukuk ditetapkan dan bukannya mengikut harga pasaran. Satu kajian dilaksanakan dengan kaedah Metodhologi Pearson Corelation bagi dana mutual pada tahun 2008-2009 di Indonesia mengkaji adakah Islam melarang pengubahan harga dalam sukuk? Hasil kajian mendapati harga bagi sukuk perlulah mengikut tanda aras yang ditetapkan iaitu mesti menghampiri harga Sukuk Ijarah. Hasil kajian juga mencadangkan agar harga Sukuk dan sukuk mutual fund perlu disesuaikan pada harga yang sebenar (Siswantoro, 2012).

Manakala dari sudut pengiraan keuntungan satu kajian perbandingan keuntungan diantara sukuk ijarah dan musharakah dilakukan. Kajian mendapati bagi pelabur yang membeli sukuk ijarah ianya lebih menguntungkan daripada pembelian sukuk Musyarakah pada tempoh jangka masa panjang. Kajian ini berdasarkan kepada kaedah model matematik. Walaubagaimanapun kajian ini tidak menunjukkan perbandingan diantara struktur sukuk-sukuk ijarah yang ada (MariamJamilahAbdulJalil, 2012). Dari sudut pematuhan industri dan pihak pasaran terhadap panduan Syara'. Satu kajian terhadap peranan agensi dan pihak-pihak lain terhadap pematuhan Syara' dilakukan. Hasil kajian mendapati pihak penilaian seperti Moody dan pasaran mula mengambil berat tentang teguran ulama khususnya teguran Syeikh Uthman Taqiuddin terhadap isu pematuhan Syariah dalam penerbitan Sukuk disemua peringkat (Maurier, 2010). Berdasarkan kajian lepas, Sukuk Ijarah berpotensi untuk dijadikan sebagai pemangkin pembangunan pasaran modal Islam di Malaysia.

#### 3. KAEDAH KAJIAN

Kajian ini bersifat deskriptif dengan kaedah kajian perpustakaan, temubual dan melayari internet untuk mendapatkan bahan dan sumber rujukan yang diperlukan

#### 4. DEFINISI SUKUK IJARAH

Sukuk Ijarah ialah alat kewangan Islam yang boleh dijual-beli dan ditebus apabila sampai tempoh matang. Ia diterbit dengan mengenal aset pendasar yang boleh dijual beli bagi menjayakan pensekuritian ini. Pemilik aset akan menyewakan aset kepada SPV iaitu sebuah syarikat yang ditubuhkan bagi menguruskan harta aset. Aliran tunai sewaan diantara keduanya akan ditulis dan diterbitkan oleh SPV bagi menarik pelaburan daripada pelabur dalam bentuk hakmilik unit yang tidak boleh dipecahkan. Diakhir sewaan pemilik aset akan membeli aset dari SPV dan seterusnya pelabur boleh mendapat hasil pelaburan dari jual beli tersebut (Mohd Hashim Kamali, 2007)

Berdasarkan kepada Standard Syari'ah No.(17)<sup>2</sup>, perkataan Sukuk Ijarah tidak disebut secara jelas, tetapi disebut sebagai sijil pemilikan dalam aset sewaan (Certificates of Ownership in leased Assets), sijil pemilikan manfaat (Certificates of Ownership in usufructs) dan sijil pemilikan manfaat bagi aset pada masa akan datang (Certificates of Ownership in usufructs of described future Assets). Sijil pemilikan dalam aset sewaan didefinisikan oleh AOOFI sebagai<sup>3</sup>:

> "These are certificates of equal value issued either by the owner of a leased assets or a tangible asset to be leased by promise or they are issued by a financial intermediary acting on behalf of the owner with the aim of selling the asset and recovering its value through subscription so that the holders of the certificates become owners of the assets.

#### 5. KONSEP MU'AMALAH ISLAM DALAM SUKUK IJARAH

Dalam Sukuk Ijarah moden konsep *mu'amalah* Islam digunakan. Diantaranya ialah konsep pensekuritian, konsep ijarah, ijarah muntahiyah bi tamlik dan ijarah thummal bay'. Pensekuritian bermaksud proses menukar sesuatu kepada wang tunai dalam bentuk dokumen yang boleh diniagakan di pasaran sekunder. Dalam bahasa arab ia diistilahkan sebagai tawriq atau taskik<sup>4</sup>. Ia adalah proses menukar sesuatu alat kewangan berasaskan aset kepada tunai iaitu dengan mempakejkannya dalam bentuk sijil dan mengedarkannya untuk dijual kepada pelabur<sup>5</sup>. Juga ia adalah proses membahagikan pemilikan aset dan manfaat yang bernilai kepada unit-unit yang sama nilainya ke dalam satu sijil yang boleh dijual beli dikalangan pelabur<sup>6</sup>. Dalam *ijarah* atau sewaan Islam, aset yang disewa boleh dibahagikan kepada unit-unit asalkan ianya dikenalpasti oleh pemiliknya<sup>7</sup>. Sekiranya ia disewa oleh ramai penyewa ia dikenali sebagai i*jarah musya* i

<sup>2</sup> Iaitu satu standard pelaburan Islam yang memberi panduan perundangan syariah terhadap penerbitan sijil pelaburan Islam,jenis sijil, ciri-ciri, syarat dan bagaimana ia didagangkan

<sup>5</sup> Wan Abdul Rahim Kamil (2005), "The Challenges of Securitisation for Islamic Financial Institutions", (Kertas kerja bengkel Islamic Bonds, Sukuk & Securitization, Product and Instruments in Islamic Securities, Hotel Renaissanse, Kuala Lumpur, 6-7 September 2005), h. 4

<sup>6</sup> Accounting and Auditing Organisation For Islamic Financial Institutions (2003),

<sup>7</sup> Accounting & Auditing Organisation for Islamic Financial Institutions (2002), Standard Shari'ah 1423H-2002. Bahrain: AAOFI, h.142.

(sewaan secara beramai-ramai)<sup>8</sup>. Dalam konteks Sukuk Ijarah, pemilik kepada manfaat dan aset sewaan adalah pelabur-pelabur dan ia dibenarkan oleh syara'.

Konsep ijarah muntahiya bitamlik hampir sama dengan konsep ijarah. Bezanya ialah pemberi sewa (pemilik aset) berjanji untuk memindahkan pemilikannya kepada penyewa diakhir tempoh sewaan melalui tiga cara. Pertama, janji untuk menjual aset tersebut kepada penyewa pada harga pasaran atau pada harga yang sama nilai sewaan. Kedua, janji untuk memberikan aset kepada penyewa sebagai hadiah. Ketiga, janji untuk memberikannya kepada penyewa sebagai hadiah apabila sampai tempoh ansuran terakhir<sup>9</sup>. Kontrak sewaan yang diamalkan dalam Sukuk Ijarah hendaklah dilaksanakan oleh pihak yang cukup keahliannya dalam syara', tidak dipaksa dan sekiranya melibatkan orang kafir dan orang islam, maka janya sah kerana ia tidak melibatkan perkhidmatan seliaan. Ia hanya melibatkan perkhidmatan kewangan yang boleh menguntungkan kedua belah pihak. Walaubagaimanapun barangan yang diharamkan oleh syara' tidak boleh disewa, seperti haram menyewakan bangunan atau rumah untuk tujuan pelacuran, perjudian dan kedai minuman keras. Barangan yang tidak kekal seperti makanan dan tidak boleh digunakan untuk sewaan. Begitu juga dengan wang kerana ia boleh menyebabkan riba<sup>10</sup>. Dalam konteks Sukuk Ijarah, manfaat boleh disekuriti seperti manfaat tempat tinggal dan manfaat menggunakan tanah asalkan aset dan tanah itu tidak musnah dan rosak. Bayaran sewaan Sukuk Ijarah boleh ditentukan dengan dua cara. Pertama, bayaran sewaan tetap seperti tercatat di dalam propektus dan kedua, kadar sewaan disandarkan pada kadar terapung (floating rate) seperti kadar tawaran antara bank (Interbank Offered Rate) ditambah dengan kadar keuntungan contohnya KLIBOR + 0.25%<sup>11</sup>. Penyewa bertanggungjawab untuk menjaga aset ijarah dengan amanah kerana penyewa hanya memiliki manfaat aset dan bukannya aset. Penyewa perlu menjaga amanah aset tersebut yang dimiliki oleh pemberi sewa dengan sebaik mungkin. Manakala pemberi sewa pula perlu memberikan perkhidmatan penjagaan terhadap aset sewaan (*ijara*h) dengan sebaik mungkin<sup>12</sup>. Dalam konteks Sukuk Ijarah, pihak pemegang amanah yang dilantik iaitu pihak bank dan SPV dan akan memberikan perkhidmatan penjagaan aset dan menguruskan segala pembayaran sewaan dan pulangan modal kepada para pelabur. Pada masa kini, konsep ijarah telah berkembang kepada ijarah bi muntahiyah bitamlik yang hampir kepada konsep sewaan kewangan konvensional (financial leasing). Perbezaan diantara Islam dan konvensional adalah penalti kelewatan pembayaran yang ditetapkan hanyalah 1% sahaja. Sedangkan dalam sistem konvensional kiraan lewat adalah dikira seperti kiraan faedah diatas baki tertunggak.

#### 6. AMALAN SUKUK IJARAH DALAM PASARAN MODAL ISLAM DI **MALAYSIA**

Sukuk Ijarah telah diamalkan dalam pasaran modal Islam Malaysia sejak tahun 2004 dengan jumlah terbitan sebanyak RM310 juta dan Prinsip *ijarah* digunakan bagi menstruktur bon Islam dengan pendekatan program nota kewangan (Comercial Paper) dan program nota kewangan berjangka sederhana (Medium Term Note). Melalui dua program tersebut, pihak swasta boleh mendapatkan dana atau menstruktur hutang mereka berdasarkan amalan *mu'amalah* Islam<sup>13</sup>. Ia berkembang dari 2.5% pada tahun 2005 kepada 34% pada tahun 2011. Dengan adanya program penerbitan bon Islam, maka pelabur Islam yang taat kepada perintah Allah boleh melabur dalam

<sup>9</sup> Accounting and Auditing Organisation For Islamic Financial Institutions (2003), op.cit., h. 146

<sup>&</sup>lt;sup>10</sup> Institute of Islamic Banking & Insurance (1995), op.cit., h.139

<sup>&</sup>lt;sup>11</sup> Accounting and Auditing Organisation For Islamic Financial Institutions (2003), op.cit, h.306

<sup>12</sup> Wahbah al-Zuhaili (1995),op.cit.,h.770-774 13Suruhanjaya sekuriti, www.sc.com.my, 17 Disember 2008

pelaburan pasaran modal Islam berbanding dengan pelaburan konvensional. Sebuah syarikat yang ingin menerbitkan sukuk di Malaysia perlu merujuk dan memohon kepada Suruhanjaya Sekuriti bagi kelulusan penerbitan sukuk. Bagi tujuan penerbitan, Suruhanjaya Sekuriti telah mengeluarkan panduan penerbitan sekuriti Islam<sup>14</sup>. Perkembangan Sukuk Ijarah yang perlahan pada tahun 2004-2007 disebabkan pihak industri banyak menggunakan prinsip bay' al-dayn dan bay al'-inah dalam pensekuritian hutang Islam di Malaysia. Walaubagaimanapun kedua-dua instrumen itu ditolak oleh sarjana Islam dari timur tengah dalam penerbitan bon Islam dan Sukuk. Kontroversi itu menyebabkan pihak industri dan sarjana syariah Malaysia mula meliberalisasi Sukuk menyebabkan perkembangan Sukuk Ijarah mula mendapat perhatian di Malaysia. Bagi menerbitkan sukuk, penerbit perlu mematuhi Syeksen 32 Akta Sekuriti 1993 dan juga mematuhi garis panduan yang dikeluarkan oleh Suruhanjaya Sekuriti. Diantaranya ialah penerbit perlu mengemukakan dan mengamalkan prinsip syariah yang diluluskan oleh Suruhanjaya Sekuriti dalam setiap permohonan mereka bagi menerbitkan sekuriti Islam atau sukuk. Bagi kelulusan penerbitan, proposal penerbitan *sukuk* perlu dikemukakan oleh pihak bank perdagangan dan bank saudagar<sup>15</sup>. Setelah pihak penerbit memahami garis panduan dan akta-akta berkaitan dengan penerbitan sekuriti Islam atau sukuk, penerbit perlu menyediakan dokumen-dokumen untuk kelulusan. Diantara dokumen-dokumen yang perlu dihantar ialah:

# a) Maklumat Syarikat dan Struktur Terbitan<sup>16</sup>

- 1. Maklumat syarikat penerbit dan profil ahli lembaga pengarah
- 2. Keterangan transaksi dan struktur sekuriti yang ingin diterbitkan
- 3. Kegunaan dana yang diterbitkan secara lengkap
- 4. Kelulusan tertentu dari penasihat syari'ah
- 5. Bagi terbitan sekuriti yang ingin membayar hutang pembiayaan yang lain perlu mengemukakan maklumat pembiayaan hutang semasa.
- 6. Maklumat yang berkaitan dengan terbitan yang dikemukakan.
- 7. Nama, telefon dan no fax pegawai penasihat kewangan bagi terbitan perlu dikemukakan.

#### b) Terma dan Syarat proposal

Terma dan syarat utama perlulah di tulis nama pihak yang terlibat dalam transaksi yang dicadangkan. Pihak tersebut ialah syarikat asal (*originator*), peniaga utama (*principle dealer*), penyelaras kewangan, peguam, penasihat kewangan, penasihat teknikal, penjamin, nama agen yang menguruskan kemudahan. Dalam terma dan syarat proposal juga perlu disertakan nama penasihat syariah, agen pembayaran dan laporan akauntan bagi tahun kewangan semasa. Bagi menstruktur terbitan sekuriti Islam, perlu juga dinyatakan prinsip Islam yang diguna pakai, keterangan kemudahan, saiz dan jumlah terbitan dalam nilai Ringgit Malaysia, harga terbitan, tempoh matang terbitan, pembayaran kupon atau keuntungan sehingga tempoh matang, kegunaan terbitan, penarafan dari syarikat penarafan (*Rating Company*), cara terbitan, had jual beli, langganan minimum, aset yang digunakan bagi tujuan terbitan, harga atau sewaan bagi aset yang

<sup>14</sup> Suruhanjaya Sekuriti, "Guidelines On The Offering Of Islamic Securities", http://www.sc.com.my/eng/html/bondmkt/guidelines-islamic\_PDF.pdf, 17 Disember 2008, h.1

dijual beli, jaminan dan waranti, pengakuan penerbit dan penasihat utama serta penyata akaun yang terkini yang telah diaudit<sup>17</sup>

## c) Maklumat yang dihantar selepas pra lulus suruhanjaya sekuriti

Bagi kelulusan satu-satu terbitan penerbit perlu menghantar maklumat tentang saiz terbitan, cara terbitan sama melalui tender atau jualan atas kaunter atau melalui sistem FAST<sup>18</sup>. Maklumat langganan minimum bagi terbitan, tempoh matang, harga sebenar dan kadar keuntungan atau sewaan juga perlu dihantar ke suruhanjaya sekuriti bagi tujuan kelulusan. Maklumat tentang aset dan jenis aset serta terma dan syarat utama transaksi yang dilakukan juga perlu dihantar. Selain daripada itu, maklumat latar belakang syarikat dan SPV perlu dinyatakan seperti nama penerbit, alamat, No pendaftaran syarikat, Tarikh penubuhan, Status syarikat, Aktiviti utama, Ahli lembaga pengarah, struktur pegangan saham, modal berbayar<sup>19</sup>. Menurut En. Wan Rahim Bin Kamil<sup>20</sup>, garis panduan ini digunakan bagi kelulusan dan penyeliaan Sukuk Ijarah di Malaysia. Sekiranya Sukuk Ijarah distruktur menurut standart dan garis panduan yang dikeluarkan oleh AOOFI maka ia diterima pakai seperti prinsip *ijarah mausufah fi zimmah* yang dipersetujui oleh AOOFI. Menurut beliau, bagi struktur Sukuk Ijarah kedua-dua garis panduan ini tidak bersalahan antara satu sama lain.

# 7. SUKUK IJARAH DAN PELABURAN HARTANAH (REIT) DI MALAYSIA : SUKUK AL-AQAR CAPITAL

#### a) Struktur Sukuk Al-Aqar Capital

Bentuk Sukuk al-Aqar Capital berbeza sedikit dengan struktur Sukuk Ijarah yang lain kerana ia melibatkan sewaan yang kedua pada transaksi sewaan yang pertama. Sukuk Al-Aqar capital akan menandatangani perjanjian jual beli dengan REIT Trustee iaitu satu syarikat amanah untuk membeli hospital-hospital tertentu. Bagi tujuan pembelian tersebut. Al-'Aqar Capital akan mengeluar *sukuk* atau sekuriti iaitu surat keterangan perjanjian jual beli tersebut kepada pelabur bagi menyelesaikan pembayaran pembelian hospital tersebut. Al-Aqar Capital sebagai pemilik aset akan menyewakan kepada REIT Trustee dengan satu perjanjian sewa diantara kedua-dua belah pihak Dalam masa yang sama Al-Aqar Capital mengeluarkan surat atau sijil perakuan kontrak sewaaan dan kontrak jual beli aset hospital tertentu diantara kedua-dua belah pihak bagi dan memperaku akaun dan surat hak milik aset kepada para pelabur yang berminat. Secara umumnya , sukuk tersebut mewakili kepentingan aset dan keuntungan pelabur yang dibahagikan secara kolektif<sup>21</sup>. Kumpulan Pemegang Amanah Reit juga bertanggungjawab untuk membeli semula aset hospital yang ditentukan daripada al-Aqar Capital sekiranya kumpulan tersebut tidak

<sup>18</sup> Fully Autamated for Tendering System ( Sistem Tender Automatik)

<sup>20</sup> Temubual dengan En. Wan Rahim Bin Kamil pada 18 Mac 2009 (Beliau merupakan pegawai di Jabatan Pasaran Modal Islam, Suruhanjaya Sekuriti)

<sup>21</sup> Suruhanjaya Sekuriti, "Al-Aqar Principal Term and Condition of The Proposal", http://www.sc.com.my/SC/search\_issuer.asp?stype=S&stype2=Q&skey=aqar#, 15 Disember 2008, h. 6-8

membayar obligasi sewaan tersebut. Sekiranya tidak berlaku keadaan diatas atau kegagalan membayar sewaan Al-Aqar Capital menjual aset tersebut pada tempoh matang yang dipersetujui kepada vendor pada nilai rata iaitu RM 1<sup>22</sup>. Kemudian terdapat 5 aset hospital akan dicaj masuk kedalam sijil amanah kepada pemegang *sukuk* atau pelabur dan bank sebagai jaminan tambahan yang akan dimasukkan ke dalam akaun pembahagian keuntungan kepada para pelabur. Dimana sekiranya berlaku kemungkiran pembayaran sewaan kumpulan Pemegang amanah *reit* akan membeli keseluruhan 11 aset sebagai jaminan kepada deposit pelabur atau pemegang *sukuk*<sup>23</sup>. Al-Aqar KPJ REIT juga akan menyewakan kepada operator hospital pakar dalam satu transaksi sewaan yang berlainan. Pembayaran sewaan tersebut akan dimasukkan ke dalam akaun kutipan. Hasil dari akaun kutipan tersebut akan dimasukkan kedalam akaun pembahagian keuntungan kepada para pelabur. Setiap pelabur akan mendapat pendapatan tetap mengikut langganan unit sukuk mereka masing-masing<sup>24</sup>.

#### b) Nilai terbitan, Aset, Kadar sewaan dan Siri Terbitan

Sukuk Ijarah Al-Aqar Capital ini berjumlah RM 300 juta yang diterbitkan secara bersiri. Kadar keuntungan sewaan akan ditentukan semasa tarikh penerbitan pertama yang akan diumumkan oleh pihak suruhanjaya sekuriti. Manakala aset yang disekuritikan adalah bangunan hospital yang akan disewakan kepada operator dan pengusaha hospital lain. Hasil dana dari pensekuritian akan digunakan untuk dilaburkan dalam Real Estate Investment Trustee (REIT). Tempoh matang bagi *sukuk* ini bermula dari satu bulan dari tarikh terbitan sehingga 7 tahun.

# c) Operasi Sukuk Ijarah al-Aqar Capital

Sukuk Ijarah al-Aqar Capital ini diterbitkan melalui dua program iaitu program islamic medium term note (IMTN) dan islamic comercial paper (ICP). Melalui ICP, sukuk yang diterbitkan mempunyai tempoh matang dari 1 bulan sehingga 48 bulan dan melalui program MTM sukuk mempunyai tempoh matang sehingga 7 tahun. Bagi memudahkan pembayaran sewaan kepada para pelabur, akaun FSRA iaitu *Finance Service Reserve Account* akan dibuka dan diuruskan. Juga segala urusan dagangan sukuk ini akan didagangkan melalui sistem FAST<sup>25</sup>.

## 8. RISIKO SUKUK IJARAH

Amat penting bagi penerbit dan pelabur perlu memahami risiko apabila Sukuk Ijarah distruktur. Beberapa risiko yang perlu diambil kira sebelum para pelabur membeli Sukuk Ijarah. Diantara risiko tersebut ialah risiko pasaran, risiko tukaran wang asing, risiko kemungkiran pembayaran sewaan, risiko ketidakpatuhan syariah dan risiko operasi<sup>26</sup>. Risiko pasaran wujud apabila pelabur

membeli Sukuk Ijarah, sudah tentu pelabur inginkan hak pulangan sewaan dan keuntunganya. Katakan kadar pulangan sewaan semasa adalah 10%. Apabila penerbitan Sukuk Ijarah semakin popular kadar pasaran bagi pulangan balik sewaan sudah tentu berbeza katakan 15%. Sekiranya kadar pulangan sewaan adalah tetap sehingga tempoh matang, para pelabur sudah mengalami kerugian<sup>27</sup>. Risiko tukaran wang asing pula wujud apabila para pelabur membeli Sukuk Ijarah yang didagangkan di pasaran antarabangsa pelaburan tersebut biasanya didagangkan dalam matawang US dolar. Namun, apabila nilai wang US dolar jatuh sudah tentu pulangan terhadap keuntungan sewaan akan menjadi kurang. Oleh itu para pelabur perlu memerhati dan menilai kadar tukaran wang asing sebelum membuat keputusan membeli sukuk<sup>28</sup>. Sukuk Ijarah juga tidak terlepas dari risiko kemungkiran pembayaran sewaan seperti juga bon. Sekiranya syarikat asal (originator) tidak membayar sewaan kepada SPV maka pelabur akan mengalami kerugian. Oleh itu pelabur perlu memilih sukuk yang telah diberi penarafan yang baik oleh syarikat penarafan (rating company)<sup>29</sup>. Di Malaysia sebelum Sukuk Ijarah diterbitkan, Suruhanjaya Sekuriti perlu memeriksa dan mengawal selia proposal Sukuk Ijarah agar ia mematuhi kehendak syara' melalui Mailis Penasihat Syariah Malaysia. Namun sekiranya berlaku kontroversi terhadap keputusan majlis penasihat syari'ah seperti berlakunya khilaf dan percanggahan pendapat di arena antarabangsa, sukuk tersebut sudah pasti mempunyai risiko terhadap pasaran antarabangsa kerana para fuqaha dan sarjana Islam tidak menyokong kelulusan terbitannya. Begitu juga sekiranya Mailis Penasihat Syariah membatalkan kelulusan sukuk kerana terdapatnya unsur tidak patuh seperti hasil dana digunakan untuk perkara yang haram.Oleh itu sebelum menstruktur Sukuk Ijarah, penerbit dan penasihat syariah perlu memeriksa samada sukuk yang diterbitkan tidak kontroversi dan menepati pendapat kebanyakan para fugaha dan sarjana Islam di dunia pada masa kini<sup>30</sup>. Selain dari risiko di atas, risiko operasi juga perlu diambil kira oleh penerbit dan pelabur. Diantaranya ialah risiko semasa proses penebusan *sukuk*. Apabila sampai tempoh matang sewaan (ijarah), para pelabur boleh menebus sijil (Sukuk Ijarah) mereka. Walaupun begitu, ia berisiko sekiranya syarikat asal (originator) membeli aset ijarah semula dengan harga pasaran yang berkemungkinan lebih rendah dari harga muka Sukuk Ijarah (face value). Ini menyebabkan pelabur tidak boleh menebus keseluruhan unit Sukuk Ijarah kerana risiko tersebut. Dalam operasi sukuk, kecairan ataupun keupayaan untuk didagangkan di pasaran kedua perlu diambil kira oleh para pelabur kerana sekiranya *sukuk* tersebut tidak boleh didagangkan di pasaran kedua pelabur akan menghadapi kesukaran untuk mendapatkan tunai sebelum tempoh matang. Oleh itu pelabur yang inginkan tunai sebelum tempoh matang perlu memilih sukuk yang boleh didagangkan di pasaran kedua<sup>31</sup>.

Apabila sampai tempoh matang dan tamat tempoh sewaan, syarikat asal (*originator*) perlu membeli semula aset *ijarah* daripada penerbit (SPV). Apabila syarikat asal menebus semula aset

ijarah, pelabur tidak akan mendapat hak manfaat iaitu bayaran sewaan kerana pelabur menebus kembali wang modal mereka dengan menjual aset ijarah kepada syarikat asal<sup>32</sup>. Namun adakah harga jualan dan belian tersebut mengikut harga pasaran atau harga yang dipersetujui iaitu nilai muka bagi setiap unit sukuk<sup>33</sup>?. Mengikut standart Sharia no.17 penerbit boleh menebus semula sijil tersebut dan menjual aset *ijarah* samada pada harga pasaran atau harga yang telah dipersetujui iaitu nilai muka bagi setiap unit sukuk.Bagi tujuan penebusan sukuk sekiranya berlaku kemungkiran pembayaran, jumlah dan nilai tebusan semula Sukuk Ijarah boleh diketahui melalui formula seperti dibawah<sup>34</sup>:

#### $RV = FV [1+{(r+p) \times (n/365)}]$

#### Dimana:

RV : Nilai tebusan (redemption value).FV : Nilai muka bagi IMTN dan ICP.

r : Kayu ukur bagi kadar hasil hingga matang (Yield to maturity/Kadar pulangan dalam kiraan peratus (%) per tahun).

p : Nilai ganti rugi termasuk ganti rugi (ta'awidh) kepada kemungkiran pembayaran.

n : Bilangan hari diantara hari berlakunya kemungkiran pembayaran dan tarikh akhir tebusan keseluruhan sukuk.

Dengan adanya formula ini, pelabur boleh menjangkakan pulangan dan tebusan sukuk mereka apabila tiba tempoh matang nanti.

# 9. KESIMPULAN

Berdasarkan data yang diperolehi dari tahun 2005-2011 Sukuk Ijarah berkembang dari 2.9% kepada 34% pada tahun 2007. Perkembangan ini menunjukkan bahawa usaha-usaha untuk memantapkan lagi pasaran hutang Islam Malaysia. Suruhanjaya sekuriti telah memperkenalkan peraturan dan garis panduan bagi mempercepatkan kelulusan sesuatu sekuriti baru. Suruhanjaya juga menerima pakai standart dan garis panduan yang disepakati diperingkat antarabangsa seperti garis panduan yang dikeluarkan oleh pihak AOOFI. Sukuk Ijarah di Malaysia tidak hanya menerima pakai prinsip *ijarah* dan *ijarah thumma bay*' dalam pencairan asset semata-mata bahkan ia boleh diaplikasi dalam bidang hartanah. Di Malaysia, suatu terbitan itu tidak terhad kepada satu prinsip sahaja bahkan boleh digabungkan bersama seperti *ijarah mausufah fi zimmah* dan *mudarabah* seperti Sukuk PLSA. Terbitan *sukuk* di Malaysia juga boleh diterbitkan secara bersiri bagi mengurangkan risiko kemungkiran pembayaran. Walaupun begitu, Sukuk Ijarah terdedah kepada risiko operasi, pasaran, ketidakpatuhan syariah dan risiko tukaran wang asing.

34 "Al-Aqar Principal Term and Condition of The Proposal" (15 Disember 2008), op. cit., h.12

\_

Oleh itu, pelabur, bank dan Suruhanjaya Sekuriti perlu mengurangkan risiko dan mengembangkan prinsip agara terus dapat berdaya saing dalam pasaran global. Secara kesimpulannya, Sukuk Ijarah di Malaysia begitu unik kerana hampir setiap prinsip sewaan Islam telah diamalkan dalam pasaran modal Islam yang melibatkan pihak kerajaan, agensi dan swasta. Bahkan ia boleh diamalkan secara gabungan bersama prinsip Islam yang lain seperti prinsip *mudarabah-ijarah*.

# MACROECONOMICS FACTORS OF CREDIT RISK IN ISLAMIC BANKS: THE CASE OF MALAYSIA

Safeza Mohd Sapian<sup>1</sup> Norhazlina Ibrahim<sup>2</sup> Nor Haziah Hashim<sup>3</sup>

#### **ABSTRACT**

**Purpose** – This paper makes an attempt to investigate which macroeconomics factor would be the most influential that could contribute to credit risk exposure and non-performing financing (NPF) as well as affecting the performance of Islamic banks in Malaysia for the period of 2002 - 2010.

**Design/methodology/approach** – This study uses quantitative methods of Time Series Analysis. A formal unit root test and cointegration test have been conducted to proof the long-term relationship between the variables. Next, the long-run structural modeling (LRSM) has been applied to ensure that the estimation is in line with theoretical expectation. Then, in order to determine the properties of endogeneity and exogeneity of variables, vector error-correction model has been employed followed by generalized variance decompositions, generalized impulse response and persistence profile. Data used in this study are secondary data in the form of quarterly time series statistics and period used is from January 2002 to December 2010 drawn from the website of Bank Negara Malaysia<sup>3</sup>.

**Findings** – Among the factors that have been chosen for the study are gross domestic products (GDP), Non-Performing Financing rate, Islamic financing rates (IFR) and unemployment rates (UMPT). However, the finding shows that Islamic Financing rate (IFR) has become one and only factor that would give a significant impact to the credit risk exposure and non-performing financing as well as the performance of Islamic banks in Malaysia.

Keywords: Credit Risk, Non-performing Financing, Islamic Banks, Time Series Analysis

#### 1. OBJECTIVE AND MOTIVATION OF STUDY

Since Islamic banks deal with a set of unique product characteristics and bound by the *Shariah* requirements, it is important to note that the level of exposure to credit risk for Islamic banks could be different if to compare with the conventional banks.

The evolvement of Islamic Banks in Malaysia since the first set up of Bank Islam Malaysia Berhad in 1983 (incorporated under companies act 1965) has shown various efforts by the government, regulators in particular Bank Negara Malaysia (BNM) and the Islamic Banks themselves to strengthen credit risk management in line with local and international best practices. The adoption of Basel II (International Convergence of Capital Measurement Standard) which is in line with the practices adopted by the G10 countries, has paved the way for BNM to establish Capital Adequacy Framework of Islamic Banks (CAFIB) in 2005 to be adopted by the Islamic Banks in Malaysia to better manage banking risk and compliant with regulatory capital requirement. On top of that BNM through

<sup>&</sup>lt;sup>3</sup> http://www.bnm.gov.my

numerous circulars and guidelines such as Best Practices for the Management of Credit Risk which was issued in 2001 and guidelines on Classification and Impairment Provision issued in 2007, has continuously guided the Islamic banks to improve the credit risk management standard to be at par with the conventional counterparts.

Credit risk is one of the common and significant risks in banking institutions which can be simply said is the ability of borrowers to meet it their financial obligation when they fall due. The inability could be due to personal specific factors such as mismanagement, fraud or due to systematic or economy wide factors such as recessions, high inflation etc. While the specific factors would normally being addressed by the banking institutions in Malaysia through best practices on credit risk management in line with regulatory requirements, there is lack of studies conducted to identify the default behavior owing to systematic or macroeconomic factors. Therefore, this paper will try to identify and investigate the contributing factors to the credit risk for Islamic banks in Malaysia in terms of macroeconomics perspective.

Lack of attention and understanding in credit risk management would expose the banks to serious credit risk exposure as what happened in the US mortgage prime crisis in the past few years and even worst it has led to the global financial crisis. The nature of credit risk in Islamic banks is no different from its conventional counterparts and same goes with its management is also rooted from the same analysis as the conventional banks. However, due to uniqueness of the products and their strict compliance with *Shariah* requirements, Islamic banks credit risk management tools are limited. While some of the fiqh related issues have to be resolved by the *Shariah* scholars, setting up infrastructure need to be continuously carried out by the government and regulatory authorities in the country. Credit risk arises due to borrowers' inability to meet financial obligations as they fall due. The inability could be due to personal as well as macroeconomic factors. Therefore, this paper will try to identify and investigate the contributing factors to the credit risk for Islamic banks in Malaysia in terms of macroeconomics perspective for the period of 2002-2010.

#### 2. LITERATURE REVIEW

There were quite numbers of studies has been conducted to analyze the relationship between the macroeconomic factors against the behavior of the default of the credits. While the impact of the credit risk being studied elsewhere, it is hardly to be found that such a study has been carried out in the case of Malaysia.

Ali and Daly (2010) use econometric models to analyze the macroeconomic determinants of credit risk using a recent evidence from selected cross-country study in the US and Australia. The result indicates that same set of macroeconomic variables (GDP, interest rate, industrial production as well as debt to GDP ratio) display different default risk of the two economies. More importantly, the study reveals that the US economy is much more susceptible to adverse macroeconomic shocks. Australian GDP variable is highly significant and negatively correlated with the default rate. The short term interest rate (nominal) and cyclical indicator has a negative coefficient yet insignificant to the default rates. Level of debt as indicated by the Debt-to-GDP ratio is positively correlated with the default rate. US GDP variable has negative coefficient with default and highly significant in explaining aggregate default. The nominal interest rate and Industrial production variables are both insignificant in explaining the default rate for the US economy. Debt to GDP ratio has a positive sign and is highly significant in explaining the default rate for the US economy.

Kunt and Detragianche (1998) studied the factors with regard to systemic banking crises in a large sample of develop and developing countries in developing countries for a 14 year period from (1980 – 1994) using a multivariate logit econometric model. From the study, it was noted that the banking crises tend to erupt when the macroeconomic environment is weak in particular when the growth is low and inflation is high. On top of that, it was also found that high real interest rates were also closely related to the systematic banking problems. It is argued that vulnerability to aggregate output shock is

not necessarily the sign of the inefficient banking systems but due to its very nature which involves risk taking activities. With regard to the inflation, it was argued that it could be possibly due to the high and volatile nominal interest rate make it difficult for the banks to perform maturity transformation. The high real interest rates may be the result of host factors such as financial liberalization which is often associated with the fragility in the banking system.

Tang and Yang (2009) studied the impact on the interaction between markets and default risk on corporate credit spreads. The studied revealed that the GDP is significant determinant of average credit risk. Credit default swap (CDS) spreads decline in GDP growth rate. Other than it was also argued that the investors' sentiment is negatively associated with the credit spread. Although the study were concentrated more on the firm level as implied volatility due to investors sentiments are the most significant determinant of default risk, it also recognized macroeconomic variables are directly responsible albeit on a lesser portion.

Volainen (2004) studied on the macro stress testing with a macroeconomic credit risk model for Finland. In the studied they employed data on industry specific corporate sector bankruptcy for 18 years period from 1986 to 2003. They used estimated model to analyze corporate credit risks reflective the current economic conditions during the study. The samples include data from severe recession period with significantly higher than average default rates in early 1990s. It was revealed for the study that, there are significant relationships between corporate sector default rates and macroeconomic factors which include GDP, interest rates and corporate indebtedness. The Interest rates shock and extreme GDP shock would significantly increase the default rates for the corporate debts.

Gerlach et. al (2004) studied the impact of macroeconomic conditions and banking performance in Hong Kong with a focus on the impact of macroeconomic developments on the net interest margin and asset quality. The study employed financial information on all retail banks in Hong Kong between the years 1994 – 2002. It was found that both the interest margin and asset quality are affected by the macroeconomic and financial development. It was revealed from the study that the default rates rises with increase in GDP, inflation and nominal interest rate. However the rises in the property prices reduce the NPL ratio as a result of the related bank's exposure to the real estate sector.

Babouchek and Jancar (2005) conducted a study to investigate transmission involving set of macroeconomic variables describing the development of the Czech economy and the functioning of its credit channel from 1995 to 2004. It provides the first systematic assessment of the links between loan quality and the macroeconomic shock in the Czech Republic. Unemployment, real GDP growth, exports, imports, the real effective exchange rates, the CPI and credit growth has been chosen as indicators of ratios performance against an unrestricted VAR methodology. It was showed from the study that the appreciation of real effective exchange rate does not deteriorate the NPL ratios; increasing unemployment and Inflation would increase the NPL ratio, whiles fasters GDP growth would decelerates NPL ratio. Thus the importance factors indirectly influencing financial stability and loan portfolio quality are the dynamic of inflation and interest rate.

## 3.0 METHODOLOGY

# 3.1 Data Descriptions

For the purpose of this study, the 3 months gross non-performing financing (NPF) would be taken as dependent variables while macroeconomic determinants would be considered as independent. Based on the literatures discussed above, we have decided to select some macroeconomic determinants that reflect the macroeconomic forces onto the behavior of the default rates in credits that are quarterly gross domestic products (GDP), Islamic financing rates (IFR) and unemployment rates (UMPT). All the data are obtained from the Bank Negara Malaysia's website<sup>4</sup>.

\_

<sup>4</sup> http://www.bnm.gov.my

#### 3.2 Stationarity of Variables Test

The first step in time series techniques is the unit root test. Under this test we need to determine the stationarity or non-stationarity of variables chosen. Generally, economic data of a stochastic time series or a trend is not stationary, meaning that the data have unit roots. So, in order to estimate a model using these data, we need to test the stationarity of the variables or known by the unit root test. If the variables used contain root element of the unit, it will be difficult to estimate a model because these data trends not tend to fluctuate around its average value. Then it can be concluded that the variables which are stationary will have a tendency to approach the average value round mean values (Guiarati, 2003).

#### 3.3 Determination of Order of the VAR Model

Before proceeding with test of cointegration, we need to first determine the optimal order lag of the variables which means the number or lags to be used. We use the most recommended Akaike Information Criterion (AIC) as well as Schwarz Bayesian Criterion (SBC) test to determine the lag length of the VAR system to make sure the model is well specified. The lag will commonly be determined by the "Highest" value of AIC where as the SBC test is more refined and extended test. On top of that, in determining the level of optimum lag, number of sample observations need to be considered as the number of lag will minimize the degree of freedom.

#### 3.4 Cointegration Test

Once we have determined the optimum order lag of the variables, we should be ready for the next step which is to test whether the variables are cointegrated with each other or not or in other words is to evaluate whether there have a linear combination of integration variables that is stationary in their long-term relationship. Therefore we can say that our variables are cointegrated if they are non-stationary integrated of the same order and yet their linear combination is stationary. Cointegration test not only tells us information on the long run relationship between the variables it also tells us that the variables have some significance in the economic theory and it does not happen spuriously.

#### 3.5 Long-Run Structural Modelling (LRSM)

After we have determined the number of lags and cointegrating relationship between variables, we need to move on to Long-Run Structural Modelling (LRSM). The purpose of conducting this test is to determine the coefficient of variables against theoretical expectations in the long run. In this test we will start by assuming which variable that we want to treat as a dependent variable and put a restriction on it relations within other variables.

## 3.6 Vector Error-Correction Modelling (VECM)

Under this step, it holds an assumption that all variables are "endogenous" (dependent) in the long run. "Exogenous" variables can be observed when the error correction coefficient in any equation shows an insignificant result. On the other hand, if the coefficient is significant, it implies that the corresponding dependent variable is "endogenous". The size of the coefficient of the error correction term indicates the spread of a short-term adjustment to bring about long-term equilibrium and it represents the proportion by which the disequilibrium in the dependent variable is being corrected in each short period.

#### 3.7 Variance Decompositions (VDCs)

After we have determined which variables are endogenous and which variables are exogenous, we will proceed to the next step, Variance Decompositions (VDCs). Both VECM and VDCs are testing on causality but VDCs test is more specific where it will determine which variables is the most exogenous and which variable is the most endogenous. On the other hand, VECM does not give us any information about the relative exogeneity or endogeneity of each variable. The variable which is explained mostly by its own shocks is deemed to be the most exogenous of all variables. The variable that have a lot of decomposed proportions in other variables are said to be endogenous.

#### 3.8 Impulse Response Functions (IRFs)

The Impulse Response Functions (IRFs) essentially produce the same information as the VDCs, except that they can be presented in graphical form. It will show us when we shocked one variable, what will happen to the other variables or in other words, it mapped out the dynamic response of a variable owing to one period standard deviation shock to another variable.

## 3.9 Persistence Profiles (PP)

The Persistent Profile trace out the effects of a system wide shock on the long run relations between the variables. Under this step we would be able to see how long it will take to get back to equilibrium when the entire cointegrating variables are shocked.

#### 4. ANALYSIS AND FINDINGS

Under this section, we will explain in great details on the analysis and findings in this study.

#### 4.1 Step 1: Testing the non-stationarity/stationarity of each variable

As mentioned in the earlier section, most of macroeconomic series appeared to be non-stationary. Thus, in order to start running the data, first and foremost we need to check for the stationarity of the series whether it is stationary or non stationary. Here, we have applied the Augmented Dickey-Fuller (ADF) (1981) test to examine the stationarity characteristics of the series. The test will be done for each variable (in both level and differenced form). In Table 1 below show the summary of the results.

Table 1: Unit root test

Variable	Test Statistic	Critical Value	Implication		
	Variables in Level Form				
LGDP	-1.3172	-2.9499	Variable is non-stationary		
N TOP	2 0050	20100	** ***		
NPF	-2.8879	-2.9499	Variable is non-stationary		
UMPT	-2.4397	-2.9499	Variable is non-stationary		
IFR	-2.4808	-2.9499	Variable is non-stationary		
95% critical value for the augmented Dickey-Fuller statistic = -2.9499					
Variables in Differenced Form					
LGDP	-3.8847	-2.9528	Variable is stationary		
NPF	-7.6401	-2.9528	Variable is stationary		
UMPT	-4.1793	-2.9528	Variable is stationary		
IFR	-3.0827	-2.9528	Variable is stationary		
95% critical value for the augmented Dickey-Fuller statistic = -2.9528					

Thus, from the above table, the result has suggested that, at 5% significance level, the null hypothesis of a unit root (i.e., non stationary) is accepted when the series LGDP, NPF, IFR and UMPT are in

level form, but it is rejected when they are in first differences form. Therefore, we can move to the next step that is to determine the lag order.

#### 4.2 Step 2: Determination of the order (or lags) of the VAR model

In order to investigate whether there is cointegration between LGDP, NPF, UMPT and IFR we need to know the lags order of Vector Auto Regression (VAR) to be used. **Table 2** below shows the summary of the result.

Table 2: The order of lags

	Choice Criteria	
	AIC	SBC
Optimal order	6	0
6	60.92	13.90
5	58.38	4.47
4	41.36	9.52
3	37.49	1.42
2	35.00	8.06
1	60.21	5.65
0	27.65	24.65

Given the limitation of the number of our observation which is total of 40 observations as well as looking at this apparent conflict between recommendations of AIC and SBC, we have decided to choose order 2. This is due to the fact that, the more lag we take, the more we will lose the degree of freedom and again due to this, the order of lag 2 is chosen.

#### 4.3 Step 3: Testing the Cointegration

The third step is to determine the value of cointegrating relationship of the current model. We use 'multivariate' with VAR order 2 to get the results based on 'Eigen values' and the 'trace' statistics to determine the value of r (cointegrating relationship). Basically, this test is conducted to see whether NPF, LGDP, IFR and UMPT have long-term relationship or not. Both cointegration tests, the Engle Granger and Johansen methods are applied in this analysis. In Engle Granger method we are testing the stationary on the residual where as under Johansen method, determination of cointegration seen from the trace statistic and maximum Eigenvalue statistics. Eigenvalue and trace statistics that exceeds the critical value indicate that there is cointegration in the model used. However, in residual-based method, we can only draw a conclusion for one cointegrating relationship.

As summarized in the Table 3 and Table 4 below, it shows the result for Engle Granger Method (Residual-based) and Johansen Method.

**Table 3: Engle Granger Cointegration test** 

Error Term	Test Statistic	Critical Value	Implication
ADF(1) (based on SBC)	6.8849	-4.4347	Variable is stationary

From the result, looking at the error term test of stationarity on the residual we found that at lag 1 the stationarity test on residual found to be stationary which implies that there is one cointegrating relationship between variable Y and independent variables or the regressors. As time goes by, if the

error term found to be stationary, it implies that the error term is not permanent and transitory in nature.

**Table 4: Johansen Cointegration Test** 

Но	$H_1$	Statistic	95% Critical	90% Critical Value	
			Value		
1. Ma	ximal Eigenvalue				
r = 0	r = 1	49.5752	31.7900	29.1300	
r<= 1	r = 2	29.4432	25.4200	23.1000	
r<= 2	r = 3	12.4495	19.2200	17.1800	
r<= 3	r = 4	3.8656	12.3900	10.5500	
2. Tr	2. Trace Statistic				
r = 0	r= 1	95.3335	63.0000	59.1600	
r<= 1	r= 2	45.7584	42.3400	39.3400	
r<= 2	r= 3	16.3151	25.7700	23.0800	
r<= 3	r = 4	3.8656	12.3900	10.5500	

From the result above, both Eigenvalue and trace statistic states that there are 2 cointegrating relationship. Statistical value in bold, denote significance at the 5% and 10% significance level respectively, while r stands for the rank or the number of cointegrating vectors present. However, this particular study is focusing on contributing factors to credit risk that emphasized on one variable to be endogenous. Thus, it is more practical to assume only one cointegrating relationship.

#### 4.4 Step 4: Long-Run Structural Modelling (LRSM)

The fourth step is to test the Long Run Structural Modeling. This test is needed in order to compare our statistical findings with theoretical (or intuitive) expectations by imposing on those long-run relations (and then testing) both identifying and over-identifying restrictions based on theories and information of the economies under review. Please refer to Table 5 below for the summary of the results.

**Table 5: LRSM (exact identifying test)** 

Variable	Coefficient	Standard Error	t-ratio	Implication
LGDP	-2.6535	2.1669	-1.225	Variable is insignificant
IFR	0.37794	0.13557	2.788	Variable is significant
UMPT	-0.15348	0.11712	-1.310	Variable is insignificant

<sup>\*</sup>The dependent variable (NPF) has been normalized.

From the table above (exact identifying test), after calculating the t-ratios manually, we found two variables to be insignificant – LGDP and UMPT and one variable to be significant – IFR.

Looking at the result, we were very curious as to why the LGDP and UMPT were found to be insignificant. Therefore, driven by curiosity, we have decided to verify the significance of the variables by subjecting the estimates to over-identifying restrictions. We did this for all the variables (making one over-identifying restriction at a time) and the results confirmed the earlier findings that only IFR were significant, as detailed in the Table 6 below:

**Table 6: LRSM (over identifying test)** 

Variable	Chi-Sq p-value	Implication

Variable	Chi-Sq p-value	Implication
LGDP	0.089	Variable is insignificant
UMPT	0.066	Variable is insignificant

# 4.5 Step 5: Vector Error-Correction Modelling (VECM)

The vector error correction models (VECM) is an econometric model used to capture the evolution and the interdependencies between multiple time series. It specifies the short-run dynamics of each variable in the system, and in a framework that anchors the dynamics to long-run equilibrium relationships suggested by economic theory.

In this test, if the error-correction coefficient is insignificant, the corresponding dependent variable is 'exogenous'. But if that coefficient is significant, that implies that the corresponding dependent variable is 'endogenous' (it does depend on the deviations of other variables). In other words the ECM term contain long run information. If the ECM term is found to be significant, the variable is endogenous. On the other hand, if the ECM term is found to be insignificant, the variable is exogenous. Therefore, IFR is an exogenous which it does not depend on the deviation of other variable. It also implies that is a leading variable and initially receives the exogenous shocks resulting in deviations from equilibrium and transmits the shocks to other variables. Please refer to Table 7 below for summary of the results. This result implies that the variable is endogenous. Therefore in this particular study, the NPF is an endogenous variable and IFR is an exogenous variable. To make it more clearly, NPF is depending on other exogenous variable which is IFR. This shows that, IFR would have significant bearing on the expected movement of NPF.

**Table 7: VECM** 

Variable	ECM(-1) p-value	Implication
NPF	0.000	Variable is endogenous
IFR	0.294	Variable is exogenous

#### 4.6 Step 6: Variance Decompositions (VDCs)

In previous step, we have found that IFR is the exogenous variable but we have less assurance on the relative endogeneity of the other variable. According to Masih (2008), the Vector Error-correction Modelling can tell us which variable is exogenous (i.e., leader) and which variable is endogenous (i.e., follower), but the error-correction model cannot tell us the relative exogeneity or endogeneity of the variables. Since the VECM test could not give the relative endogeneity of the variable, we need to move to the next test which is Variance Decomposition (VDCs).

The decomposition results have been summarized in **table 8** below:

Table 8: VDCs

Horizon	NPF	IFR			
Relative variance in NPF (Follower)					
5	5 0.76302 0.23698				
10	0.62938	0.37062			
15	0.53868	0.46132			
20	0.47194	0.52806			
Horizon	NPF	IFR			
Relative variance in IFR (Leader)					
5	0.043199	0.95680			
10	0.034072	0.96593			

15	0.030980	0.96902
20	0.029427	0.97057

From the table shows that as the time horizon increased, the follower variable (NPF) is depending on IFR which explains the variance forecast error of IFR keep on increasing as the horizon increased whereas, for the leader variable (IFR), as time horizon increased, we can see that the variables (IFR) is explained mostly by its own shocks which shows it is exogenous where it depends on its own past and not depending on NPF. For example, from the result, variance of forecast error for horizon 20, IFR is 97% explained by itself which deemed to be most exogenous whereas NPF is only 2%.

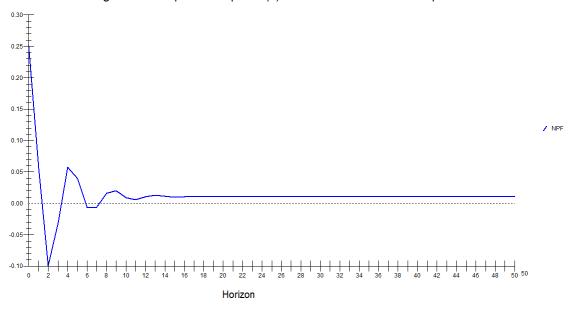

# 4.7 Step 7: Impulse Response Functions (IRFs)

In this section a series of impulse respond analysis functions and their interpretations are presented. Impulse Response Functions described the time profile of all variables returning to its equilibrium value after a one period shock to a particular variable (Masih, 2006).

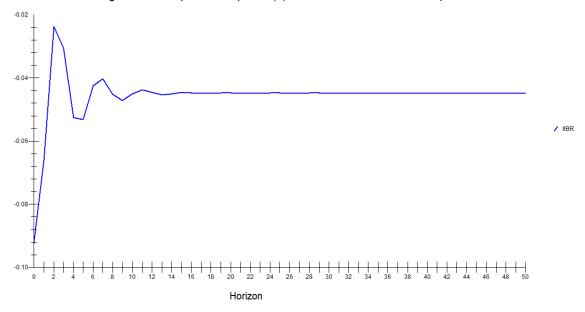

The information contained in the VDCs can be equivalently represented by IRFs only that it has presented in graphical manner (Please refer to the graphs below). IRFs essentially map out the dynamic response path of a variable owing to a one-period standard deviation shock to another variable. The IRFs are normalized such that zero represents the steady-state value of the response variable (Masih and Masih, 2008).

# i) Orthogonalized Impulse Response

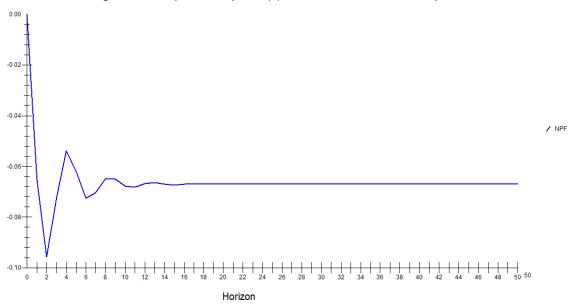

Orthogonalized Impulse Response(s) to one S.E. shock in the equation for NPF

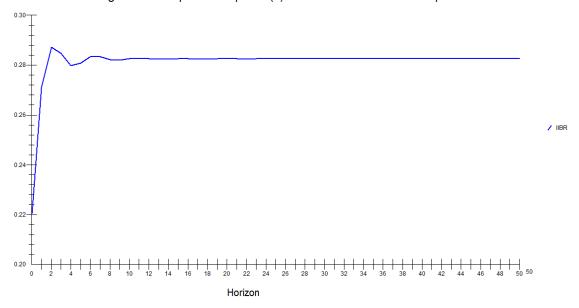

# Orthogonalized Impulse Response(s) to one S.E. shock in the equation for IIBR

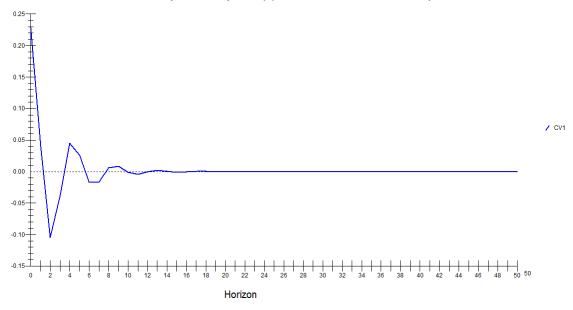

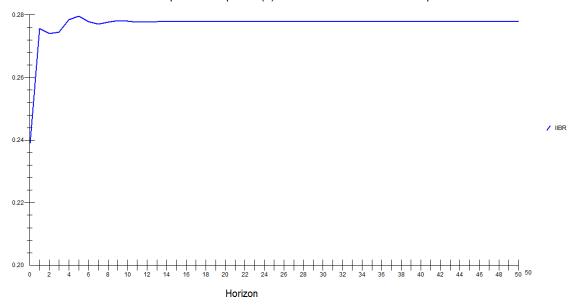

# i) Generalised Impulse Response

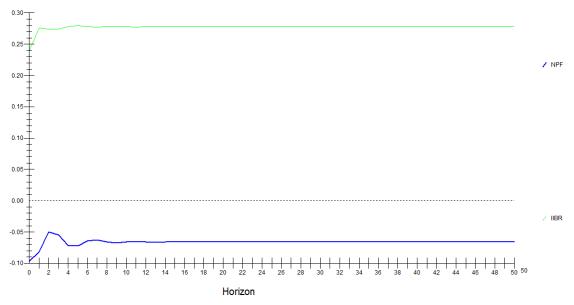

Generalized Impulse Response(s) to one S.E. shock in the equation for NPF

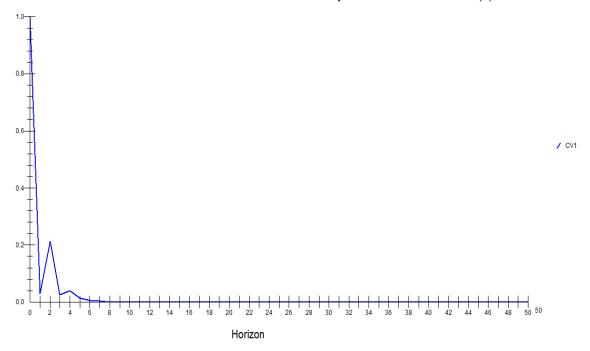

# Generalized Impulse Response(s) to one S.E. shock in the equation for IIBR

## 4.8 Step 8: Persistence Profiles (PP)

Persistence Profiles (PFs) presented a view of the model in the long run under the external force whole shock of the entire equations. It gives the dynamic response over the shock and tells us on how long does it takes for the whole equation to return to equilibrium after the shock. It will explain that variables are cointegrated in a vector for the long run. The Persistent Profile trace out the effects of a system wide shock on the long run relations between the variables. In the graph below, it shows that after the shocked was made for NPF and IFR, it will converge to equilibrium at 7.5 periods.

#### 5. CONCLUSION

The objective of this study is to identify and investigate which macroeconomics factor would be the most influential that contribute to credit risk exposure and non-performing financing (NPF) as well as affecting the performance of Islamic banks in Malaysia for the period of 2002 - 2010.

Among the factors that have been chosen for the study are gross domestic products (GDP), Non-Performing Financing rate, Islamic financing rates (IFR) and unemployment rates (UMPT). However, the findings shows that Islamic Financing rate (IFR) has become one and only factor that would give a significant impact to the credit risk exposure and non-performing financing as well as the performance of Islamic banks in Malaysia.

The cointegration test has proved that NPF and IFR both have cointegrating relationship. This shows that both variables are cointegrating in the long- run. The results in both analyses have documented a positive long-run association between NPF and IFR. The IFR appears to be significant and exogenous in nature from the VECM test. From the VDCs test shows clearly that the NPF is the follower and highly depending on IFR that indicates a very strong causality relationship of IFR. IFR is explained mostly by its own shocks that show its exogenous characteristic where it depends on its own past and not depending on NPF.

Overall, the findings has led us to conclude that even though the GDP and UMPT has been rejected to be the contributing factors to the credit risk, my intuition and personal beliefs still thinks that GDP and UMPT could also become the contributing factors maybe not so significant but at least there are small percentage that the two factors are also macroeconomic determinants for credit risk. Referring to the study done by Babouchek and Jancar (2005), they found that increasing in unemployment and Inflation would increase the NPL ratio, whiles fasters GDP growth would decelerates NPL ratio.

# ESTIMATING OUTPUT GAPS IN SUKUK ISSUING OIC MEMBER COUNTRIES: THE CASE OF MALAYSIA AND UAE

Nursilah Ahmad, PhD<sup>1</sup> Nor Haziah Hashim<sup>2</sup> Razak Mohd<sup>3</sup>

#### **ABSTRACT**

The aim of this study is to estimate the size of output gaps for two sukuk issuing countries namely Malaysia and the United Arab Emirates. These two countries represents about two-third of total value international sukuk issuance during 2001 to 2010. The output gap is measured based on univariate Hodrick-Prescott (HP) filter for the period 1980 until 2011 using annual data. Data are sourced from the World Economic Outlook Database. The findings indicate that Malaysia has smaller average percentage changes in CPI and output gaps estimations. The estimated output gaps track the changes in inflation quite well for both countries. The findings would be useful to the policy-makers since output gap can be used to assess inflationary pressures. For cross-border sukuk issuance countries, the ability to sustain economic growth in the long run without inducing inflation will boost investors' confidence.

**Keywords:** Sukuk, output gap, Hodrick-Prescott filter, inflation

#### 1. INTRODUCTION

One of the important issues in macroeconomics is understanding macroeconomic fluctuations. One way to measure the fluctuations is by estimating output gap. Output gap, or business cycle, is defined as the difference between actual and potential output. Potential output is an unobservable variable that reflects the maximum output an economy can sustain without inducing inflation. It is the level of Gross Domestic Product (GDP) that is consistent with full utilisation of all factors of production under conditions of stable inflation. Since output gap is unobservable, it has to be estimated.

The estimations of output gap is a useful tool for policy analysis. Monetary and fiscal policy will affect actual output while structural output will affect potential output (Coe and McDermott, 1997). Output gap captures the effect of shifts in domestic demand thus represents demand shocks. The argument is higher domestic demand would tend to raise domestic and import prices (Bussiere, 2006). Output gap captures the notion that with increasing sales, firms are more likely to pass-through increases in costs to final prices. The reverse is also true. Theoretically, the current output gap should provide information regarding future inflation.

Potential output and output gap estimates also help to assess macroeconomic policies. The estimate of output gap can contribute to identifying and assessing patterns of monetary policy framework over time. A positive output gap is indicative of demand pressures and a signal that inflationary pressures are increasing and that policy may need to tighten. A negative output gap has the opposite implication.

The present study attempts to measure the size of output gap in Malaysia and United Arab Emirates (UAE). This is because these two countries represent approximately two-thirds of the total value of

international sukuk issuance for the period 2001 to 2010 (IIFM Sukuk Annual Report 2011). The findings will indicate whether the output gap is a good indicator of inflationary pressures (as measured by CPI) for these countries. It would also be interesting to examine the effectiveness of these economies in managing their macroeconomic policies over time since the degree of excess capacity in the economy is an important determinant for inflation. In turn, inflation is an important determinant for sukuk performance.

The paper is organized as follows. After the Introduction, Section 2 discusses literature review. Section 3 examines research method while Section 4 presents the findings. Section 5 concludes the discussion.

#### 2. LITERATURE REVIEW

#### Output Gap

There are at least five different methods of estimating output gap namely linear time trends, Hodrick-Prescott (HP) filter trends, multivariate HP filter trends, unobservable components models and a production function model. In general, these methods produced similar broad time profile of the output gap (De Brouwer, 1998). The inclusion of output gap produce better estimates of inflation. Coe and McDermott (1997) find the estimated output gap is in the range of  $\pm 3$  percent for the 13 Asian economies they have investigated.

Output gaps are estimated for two reasons. Firstly is to provide information about excess capacity in the economy at a particular point in time. From the perspective of monetary policy, the output gap over the forecast horizon is of most interest. Secondly, time series of the output gap is to be used in modelling exercises. For example, given that excess demand pressures are a key cause of rising inflation, the output gap can be included in price or wage inflation equations to obtain a more precisely estimated equation and more accurate forecasts (De Brouwer, 1998). Hence, the importance of output gap in macroeconomic models is due to its importance in assessing inflationary pressures; cyclical position of the economy and convergence criteria of the countries trying to form a currency union.

#### Sukuk Issuance

Table 1 below shows the regional break-up of sukuk issuance country over the period 2001 to 2010. The Gulf Cooperation Council (GCC) and Middle East Countries dominate in terms of number of issuance and percentage of total value. The United Arab Emirates (UAE) has the highest percentage of total value (in USD million) of 52 percent, followed by Malaysia and Bahrain each contributed 12 percent and Saudi Arabia - 11 percent. The United States, United Kingdom, Japan and Turkey represent only two percent of the overall international issuance. Based on the current trend, sukuk are most likely to be issued in the Asia and the Far East and the GCC and Middle East economies in the future

ASIA & FAR	Amount		
EAST	(USD million)	Number of Issues	% of Total Value
Malaysia	5,496	12	12%
Indonesia	650	1	1.4%
Pakistan	600	1	1.3%

#### Exchange Rate Arrangement

The majority of the OIC member countries are classified under "other conventional fixed pegged regime." Other exchange rate arrangements for all other member countries include currency board, pegged exchange rate within horizontal bands, crawling peg, managed-floating with no pre-determined path for the exchange rate and independently floating. In addition, they belong to different monetary policy framework of 'Exchange Rate Anchor', 'Monetary Aggregate Target', 'Inflation Targeting Framework' or 'Other' category (SESRICb, 2012).

Malaysia adopts a managed-floating with no pre-determined path for the exchange rate arrangement under 'Other' category. Meanwhile, the UAE falls under exchange rate anchor with conventional peg and the currency is pegged to United States dollar (USD). The selection of exchange rate regime would depend, among others, on the level of its financial development. For an exchange rate regime to maintain a stable and competitive real exchange rate, it should be supported by a robust financial sector. This is because foreign exchange exposure is one of the types of risks present in sukuk structures. Exchange rate flexibility can act as a shock absorber against external shocks in order to maintain competitiveness and stability.

In short, the economic structure and level of development of a country will determine the appropriate exchange rate regime. In developing countries, with fairly new financial systems, trade variables will most likely determine the exchange rate. For the developed economies, the movements of capital and financial assets will affect exchange rates. Exchange rate stability is an important currency attribute in

long-term international capital markets in minimizing exchange rate risk exposure due to currency fluctuations.

Besides Shariah requirements, sukuk are also affected by supply and demand, risk and return, economic objective and credit rating of the issuer, legal framework in the jurisdiction and tax implication of a structure, among others. It is also a function of the regional and global debt market. The general rule is that bonds tend to perform well when inflation is low, interest rates are expected to fall and company profits are under pressure. Bond prices rise and fall in cycles, doing well in a low inflationary environment and low interest rates (or the Shariah-compliant investment issues, GIIs's yields for sukuk). They perform badly when the first two indicators are rising. Rising inflation is particularly damaging to both bonds and sukuk because their return is fixed in money terms and inflation erodes their value. At certain times in the stock market and economic cycle, sukuk can be a good investment choice since their prices are generally less volatile than shares.

#### 3. METHOD

The sample consists of two OIC sukuk issuing member countries namely Malaysia and the UAE. Data are annually, covering the period 1980 to 2011 and are sourced from the World Economic Outlook Database. For annual data, Gross Domestic Product (GDP) is used as the proxy for real output and to estimate potential output. The study also includes data on annual percentage changes in Consumer Price Index (CPI) for both countries. Data for GDP are in log values, constant USD 2005 prices. Output gap is defined as actual minus potential output as measured by Hodric-Prescott filter. The output gap is measured in growth rates and CPIs are measured in percentage changes.

Output gap is estimated as the log difference between actual output and its Hodrick-Prescott (HP) filter. The Hodrick-Prescott filter (HP henceforth) decomposes output into permanent and transitory components generating a smoothened trend of output. The generated smoothened series is the estimated potential output. The HP filter is defined as follows. Suppose a time series  $ygap_t$  can be decomposed into trend (growth) component,  $ygap_t^s$  and cyclical component,  $ygap_t^c$ :

$$ygap_{t} = ygap_{t}^{g} - ygap_{t}^{c} \tag{1}$$

The HP filtering process will choose the growth component,  $ygap_t^g$  that minimize the following problem:

$$Min(1/T)\sum_{t=1}^{T}(ygap_{t}-ygap_{t}^{g})^{2}+(\lambda/T)\sum_{t=2}^{T-1}[(ygap_{t+1}^{g}-ygap_{t}^{g})-(ygap_{t}^{g}-ygap_{t-1}^{g})]^{2}$$
(2)

where T is the sample size. The first term is the sum of the squared deviations and indicates the goodness of fit. The second term is the sum of the squares of the trend component's second differences and measure the degree of smoothness. The parameter  $\lambda$  is the smoothness parameter, set at 100 for the annual data, following the literature in the subject.  $\lambda$  penalizes the variability in the growth component. If the value of  $\lambda$  is zero, then the second term becomes zero, the sum of squares is minimized when  $ygap_t - ygap_t^g$ ,  $\forall_t$ , and the HP filter would return the original series  $ygap_t$  as the growth component. Meanwhile, the second term is minimized when  $ygap_t^g - ygap_{t-1}^g$  is the same  $\forall_t$ . The objective of the minimization problem is to select the trend component that minimize the sum of squared deviations from the observed  $ygap_t$  series, subject to the constraint that changes in the trend component ( $ygap_t^g$ ) vary gradually overtime.

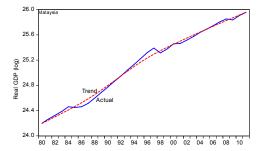

#### 4. RESULTS

The output gap based on HP filter is conducted for each country and results are presented below in Figure 1 for Malaysia and Figure 2 for the UAE. Real GDP and its estimated trend (in log values) are displayed in the left panels and annual rates of inflation and the estimated growth rates of output gaps are presented in the right panels. For the right panel, the visual plots indicate whether real GDP and its estimated trends are relatively smooth. Note that the scales differ across countries in each figure.

For the study, we focus on whether the change in the gap is related to the change in inflation, which in turns implies that the level of inflation will remain stable if the level of the gap is unchanged (Coe and McDermott, 1997). This is done by examining the volatility of inflation and gaps variables and whether the spikes in output gap are followed by the spikes in inflation. The visual plots would indicate to what extent the estimates of output gap explain inflation developments in the countries under study.

Based on the visual plots, the estimated trends are relatively smooth for both countries after the 1997 Asian financial crisis. There was a sign of economy being overheated as indicated by excess capacity where potential output exceeded actual output several years prior to the crisis. The situation was more obvious in UAE as compared to Malaysia.

On the other hand, visual inspections on the output gap and inflation suggest that inflation has been volatile in early 1980s for Malaysia with spikes of 10 to 12 percent. Afterwards, inflation has generally been lower – below 6 percent in Malaysia. On the other hand, UAE experience much higher inflation rate with spikes of 12 percent during the recent 2007 global financial crisis and remained relatively higher at below 8 percent throughout the period. For both countries, many of the inflation spikes tend to be associated with smaller spikes in the output gaps, sometimes with delayed reactions. However, there are certain periods where the spikes in output gap are not accompanied by similar rise in inflation. Examples are in 1985 and 1998 for UAE and Malaysia, respectively. For the UAE, it might be due to the rising oil prices and for Malaysia, the period of great recessions saw both a decline in output yet rising prices. These situations require further empirical investigations. The average CPI percentage change is 3.5 percent and 4.89 percent for Malaysia and UAE, respectively. The average size of changes in output gap is a +1 percent for Malaysia and -0.99 percent for UAE. This might indicates that in general, Malaysia is operating above the capacity while UAE is operating below capacity. Therefore, if the trend continues, inflation is expected to rise in Malaysia and to decline in the UAE.

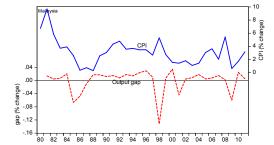

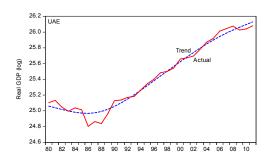

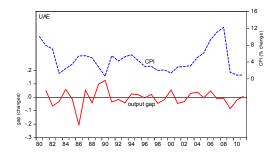

Figure 2: Output Gaps and Inflation for UAE, 1980-2011

The countries under 'exchange rate anchor' arrangement might learn 'other' monetary policy framework. The literature suggests that output gaps have valuable information content about movement in price and wage inflation (de Brouwer, 1998). However, the information should be used along with other broad set of information in policy setting. Assessing model predictions based on output gap produce better results when policy has clear targets.

### 5. CONCLUSION

The study compares the size of output gap in two selected OIC sukuk issuing member countries. The findings suggest that in general, Malaysia is doing better due to smaller percentage changes in both output gap estimations and CPI. The two countries under study here both adopt different exchange rate arrangements and monetary policy framework. This might explain the different results obtained. Therefore, the output gap estimations here could be incorporated in the preparation of inflation forecasts and assessments of the economic outlook and the stance of macroeconomic policies. The size of output gap helps policy-makers design appropriate policies to sustain economic growth in the long run without inducing inflation. A more accurate forecast of inflation would help improve formulation of monetary policy in these economies.

For future research, since the output gap discussed above were all obtained based on univariate data analysis, other factors might be included such as inflation and capacity utilization rate. In addition, the output gap could also be decomposed into observables as suggested by recent literature. This is to see how individual observables such as unemployment or GDP contribute to the estimation of output gap.

#### THE IMPACT OF TAXATION ON THE CAPITAL DEVELOPMENT OF A STATE

Muhibat, A. O.<sup>1</sup>

#### **ABSTRACT**

The objective of this paper is to investigate and identify how an effective and efficient tax system could serve as a source of government revenue for the development of a state. Tax is considered as a main source of government revenue in public finance for the development of a state, which made government to make high expectations from it in its budget. Therefore, the paper is concerned with the assessment of taxation as a source of government revenue and how it is use for the development of a state, Lagos State. One hundred (100) sample was drawn from the population which comprised of all the entire employees of Lagos State Internal Revenue Services (LIRS) and the tax payers The critical value of  $X^2$  0.05 at 1 degree of freedom from the statistical table 3.84. Since 41.0 which is the computed value is greater than 3.84 which is the statistical value, we reject the null hypothesis and accept the alternative hypothesis. Statistical analysis means that taxation as a source of government revenue serves as tools for development of a state. From the results analysis for secondary data, using 5% level of significance at 1 degree of freedom r = (0.98) calculated (12.706) table, there is a significant relationship between taxation and capital development. It was also gathered that good tax administration is an important factor which determines the level of revenue of any state. This means that revenue generation as well as good tax administration is the most important factor which leads to development. Taxation as a source of Lagos state government revenue is quite encouraging as the Lagos state government ensures efficiency collection of taxes; this in turn leads to capital development in the state. But there are still rooms for improvement if the recommendations are implemented. The study will have policy implication to the Lagos State and will also be a source of reference for other state in Nigeria in formulating and implementing the similar concept of effective and efficiency taxation for development of a state.

**Keywords:** Taxation, Capital development, Tax payer, Government revenue, Lagos State Internal Revenue Services (LIRS).

## 1. INTRODUCTION

Taxation in Nigeria has been a revenue instrument to Nigeria government since pre-colonial era to date. Also, there is no doubt that the government of any nation be it under developed or developed is faced with a lot of challenges and responsibilities. The citizens are expecting the government to provide various social amenities such as roads, construction of building, redistributing income, protecting the infant industries, controlling inflation and meeting other

<sup>&</sup>lt;sup>1</sup> Lecturer, Crescent University Abeokuta, Ogun State. Nigeria and currently PhD student at Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia (USIM) (muhibat@yahoo.com)

social and economic policies. The government is also obliged to pay the public servant salaries and allowance for the services rendered. Every state government belongs to the public sector of the economy with aims and objective of providing basic economic and social amenities at reduced rate. In order to finance the above various obligations, the governments therefore, have it as its disposal various way of sourcing funds. One of these means of sourcing funds is "taxation" **Tax** is a compulsory levy on the resident of a society by the government of that society Dye (1963). Two things must be born in mind about tax.

- i. Its payment is compulsory as the government has an enforcing law and can force people to pay it. Non-payment of tax carries penalties.
- ii. It is only the government that can levy taxes and this is done through various government agencies like Board of Inland Revenue.

Tax is also a compulsory contribution imposed by government authorities on goods, individuals, corporate bodies etc. Irrespective of the exact amount of services rendered to the tax payer in return and not imposed as penalty for loyal offence Ilesanmi (2001). Revenue is defined as "the income which accrues to the government Aboyade (1995). Relating the above definition to Lagos state government, revenue can therefore be redefined as "the income which accrues to the Lagos state government from various sources during a given development, according to Lagos state government as stated in the speech delivered by the Lagos state governor Babatunde Raji Fashola. To butter this, Owuama (2010) stated that there are three (3) main categories of finance (funds):

- i. Tax: This is the most important source of government revenue. It includes direct and indirect tax.
- ii. Fees, fine, charges and rates: These are income derived from the use of environment services such as vehicle licenses, water rate, stamp duties, toll fess etc.
- iii. Rent, Royalties and profit: These are income derived from the use of government properties, income received in form of aid from other countries, from international organizations like the World Bank, International Monetary Fund (IMF).

From these three sources of finance, Owuama (2010) establish that highest revenue comes from Tax; also Lagos state government has a percentage for it in its budgets. This has therefore necessitated this research work on the appraisal to taxation on Lagos state development. There are various reasons for the imposition of taxes in Lagos state. They are:

- (a) To provide public good
- (b) To redistributed income and wealth
- (c) To promote social and economic welfare
- (d) Economic stability

Given these general responsibilities taxation can be a powerful tool in the hands of any government as a means of ensuring that the social, political and economic policies of the government in power are brought to fruition through:

- Revenue raising
- Redistribution of income and wealth
- Economic regulator
- Harmonization.

The implementation process of Lagos State Internal Revenue Service's (LIRS) (formerly known as Lagos State Board of Internal Revenue) autonomy was completed and her new log unveiling by his Excellency, the governor of Lagos state Babatunde Raji Fashola (SAN) in

2011. Members of staff who opted remain in the civil service have been transferred to other ministries. Lagos State Internal Revenue Service being the major financing arm of the government has taken on the challenges of increasing the Internal Generated Revenue (IGR) for the development of the State through the adoption and implementation of various strategies which have impacted positively on revenue generation for the development of Lagos state, with the IGR moving from 30,093,974.65 in 2008 to 94,854,379,863.51 in 2011 a percentage increase of about 315% (LIRS, 2012). The establishment of a new corporate headquarters at Good Shepherd House, Alausa Ikeja equipped with up-to-date infrastructure facilities to enhance productivity development and adoption of a vision statement by all the staff. Establishment of a virile operational procedure that ensure proper and timely coordination of activities between the assessing and enforcing arms of the Board. Ensure adequate dissemination of board's activities and expectation from the citizenry in the tax deduction and remittance. LIRS management completed the construction of Mushin Tax complex through direct labour and commences operations from the complex. This complex now houses the training school for LIRS staff-one of the cardinal instrument of enhancing efficiency of the service. The LIRS has introduced self Assessment filling system for individuals the first of its kind in Nigeria to make tax payment convenient, boost the state's IGR and expand payers list. In partnership with collecting banks, and individual tax payer can conveniently pay his tax at any of the over 1200 branches of those banks and LIRS 36 tax stations and receive their receipt and e-tee within 72 hours of payment. The LIRS took its tax campaign to the traditional rulers thereby co-opting them into the tax drive and also met the major trade association including the tailors, Tyre merchants, patient medicine dealers and butchers amongst others. In addition flyers were distributed by specially trained promoters across Lagos state.

Although in most countries of the world, taxation is one of the major sources of government revenue. It attracts execution in its drive and thus explains why an increase or decrease in any area, marginal or otherwise, attracts serious and judicious consideration. But in Nigeria context, tax evasion and avoidance and falsification of account are the problem facing taxation, thereby bringing low volume of revenue accruing to the government. Therefore, The general objectives of this paper is to exhaustively highlight, investigate and identify how an effective and efficient tax system could serve as a source of government revenue for the development of a state. To achieve this objective, the paper will focus on the following specific objectives.

- i. To establish the relationship between revenue generation and tax system
- ii. To ascertain the relationship between revenue generation and state development.

The result of the study will have policy implication to the Lagos State and will also be a source of reference for other state in Nigeria in formulating and implementing the similar concept of effective and efficiency taxation for development of a state. The paper is divided into five sections. Section one introduces and explains the motivation for study. In section two is the literature review. Section three discusses research methodology. Result analysis in section four. While the fifth section concludes.

# 2. LITERATURE REVIEW

#### Taxation and Income redistribution

A fundamental objective of taxation is the redistribution of income and wealth. As the fingers of our hands are not equal, so we all endowed differently in terms of material effects. The role of taxation in this regard is to readjust the equilibrium of the society by adopting 'confiscatory' rates in favour of the poor. Thus the higher the income of the citizen, the higher the tax he pays into the coffers of the government. Similarly, basic consumables which are

required as a matter of necessity by every person are usually exempted from consumption tax. On the other hand the so-called luxury items which are usually patronized by the rich are liable to these taxes. Our Value Added and Consumption taxes are typical examples. In addition, the burden of taxation is invariably heavier on the rich than the masses. Thus the wealth of the well-to-do members of the society is used to pay for social services enjoyed by the less privileged Kehinde, (2005). As a tool of social engineering, taxation goes a long way to keep the society moving. As government gets more revenue and commission more projects, more money is put in circulation, more employment opportunities arise and more business opportunities are created which impact positively on generality of the society. This is how every little contribution to the tax purse helps to keep the economy growing.

# Taxation as a Tool for Infrastructural Development

This is perhaps an area where the role of taxation is very obvious. We all desire quality medical facilities, qualitative education, uninterrupted power supply, security of lives and property, and food production. These are however the practical manifestations of the uses of taxes. Without prompt and accurate payment of our taxes, it will be a Herculean task for the government to finance these projects. Adeola R. Ipaye (2009) special adviser to Lagos state governor on tax and revenue pointed out that infrastructural development is also a useful index of how well the government is performing. They enable the citizens to gauge the use or the misuse of public funds. The degree of fiscal legitimacy directly reflects the confidence that the people show in their government's performance in collecting and spending tax revenue. The credibility of the tax system suffers when expenditure is regressive and widens rather than narrows the gap between rich and poor. There is a direct relationship between the quality of expenditure and the readiness of citizens to meet their tax obligations. According to Michael J. Ross, who is a professor at University of California, Los Angeles, "people may dislike taxes, but they appear to loathe paying more while receiving less form their governments Pandy (2000). Ironically, this loathing may be a good thing: when citizens are faced with an undemocratic government that is charging unreasonably high prices for its services, they tend to demand democratic reforms." Hence, expenditure must be better targeted to improve access to services like water and sewerage, health care and education, for the broad population base. It is when this is done that the government has scored a pass mark.

### Taxation and Accountability

In its September 2008 quarterly magazine, Finance and Development, the International Monetary Fund (IMF) underscored the importance of taxation to economic development, it states that "Tax increases incentive for public participation in the political process and crates pressure for more accountability, better governance, and improved efficiency of government spending. Domestic revenue mobilization can help strengthen fiscal institutions... stronger revenue mobilization (TAX) contributes to economic stability, particularly if countries depend on external financial flows." The effect of the above quotation is that taxation transforms a citizen from a passive bystander in the affairs of his country to active stakeholders. When you see taxpayers' money in action, you know that you are one of the people that made it happen. It even makes you interested in who takes over the rule of government at every level, because you want to see efficiency in the way governments handle your affairs.

As noted above, that tax increases incentives for public participation in the political process and create pressure for more accountability. The question then: what is accountability? In governance, accountability is the acknowledgement and assumption of responsibility for actions, products, decisions, and policies including the administration, governance, and implementation within the scope of the role and encompassing the obligation to report,

explain and be answerable for resulting consequences (Ilesanmi, 2001). In Lagos state, taxpayers have the opportunity to interact with government officials without let or hindrance, both formally and informally. Perhaps for the first time in Nigeria, contacts details of government officials (mobile telephone numbers and e-mail addresses), including that of His Excellency and all his Cabinet Members are made public.

This information is placed at strategic places including publication in national dailies and government diaries. This singular steps goes a long way in making the government to be accountable to the people.

In another bold step, the government has made it a tradition to organize Taxation Stakeholders' Conference on an annual basis. The conference is always an opportunity for taxpayers to have personal interaction with Revenue Officers of the state including the Governor himself. The conference always took place every year with a spectrum of taxpayers' representatives in attendance. At the conference, Lagosians met with officers of the Lagos State Internal Revenue Services, motor vehicle administration agency, Lands bureau, Lagos state signage and outdoor advertising agency, amongst others the general objective of the study is to investigate from the foregoing, how an effective and efficient tax system as mentioned above could serve as a source of government revenue for the Lagos State.

#### 3. RESEARCH METHODOLOGY

The population for the study comprised of all the entire employees of Lagos State Internal Revenue Service's (LIRS) and the tax payers. A sample has been made from the population and the number were One-hundred (100) to represent the whole population of both workers of Lagos State Internal Revenue Service (LIRS) and taxpayers. The study adopted both the primary and secondary data as the instruments for collecting data, above all questionnaire where distributed to all staff at Lagos State Internal Revenue Service (LIRS) and the tax payers in accordance with the specifications of the research questions and hypothesis. Results indicate that 82% of the questionnaire were returned and filled while the remaining 18% were either not filled or not returned.

#### 4. RESULTS

#### Personal Data

Large proportion (40%) of the respondents fall between the ages of 31-40 years. The male constitute 63% of the total respondents, while 37% of the total respondents of the sample selected are female. 32% of the actual respondents were single, 60% were married while divorced were 0% and 8% were widowed. Most of the respondents have HND/BSC degree 40%, this is followed by holders of post graduate degree and above, were 24%, ND/NCE holders were 16%, holders of professional certificate were 20%. Large number of the respondents have spent 6-10 years in services. The percentage of various employments in which the respondent belong to, 40% were self employed, 30% were privately employed 20%, were civil servant while 10% belong to others. Most of the respondents were senior staff with 52% followed by the junior staff of 40%, top management were 8%.

Test of Hypotheses and Interpretation

Hypothesis one

The effectiveness of revenue generation is not dependent on effective tax administration

Table 1: Do you agree that efficient and effective administrative of tax have a positive contribution on government revenue?

RESPONSES	NO OF RESPONSES	PERCENTAGES(%)
YES	80	98
NO	2	2
TOTAL	82	100

Table 2: Frequency table

Variables	Observed Frequency	Expected Frequency	Fo – Fe	$(Fo - Fe)^2$
YES	80	41	39	1521
NO	2	41	-39	1521
TOTAL	82	82	0	3042

From tables 1 and 2:

Where: Fo = Observed Frequency

Fe = Expected Frequency

$$X^2 = 3042 = 74.2$$

With degree of freedom (Df) = V - 1

Where V = Variables

$$2 - 1 = 1$$

The critical value of  $X^2$  0.05 at 1 degree of freedom from the statistical table 3.84. Since 74.2 which is the computed value is greatest than 3.84 which is the statistical value, we reject the null hypothesis and accept the alternative hypothesis. Accepting the alternative hypothesis (H<sub>1</sub>) and rejecting the null hypothesis (H<sub>0</sub>) based on the above statistical analysis means that the effectiveness of revenue generation is dependent on effective tax administration. i.e. H<sub>1</sub> should be accepted.

Hypothesis two

Taxation as a source of government revenue does not serve as a tools for development of a state

Table 3: Do you thing the revenue from tax has any effect on the development of Lagos state?

RESPONSES	NO OF RESPONSES	PERCENTAGES(%)
YES	70	85
NO	12	15
TOTAL	82	100

**Table 4: Frequency table** 

Variables	Observed Frequency	Expected Frequency	Fo – Fe	$(Fo - Fe)^2$
YES	70	41	29	841
NO	12	41	-29	841
TOTAL	82	82	0	1682

From tables 3 and 4:

Where: Fo = Observed Frequency Fe = Expected Frequency  $X^2 = \underline{1682} = 41.0$ 

With degree of freedom (Df) = V - 1

Where V = Variable 2 - 1 = 1

The critical value of  $X^2$  0.05 at 1 degree of freedom from the statistical table 3.84. Since 41.0 which is the computed value is greater than 3.84 which is the statistical value, we reject the null hypothesis and accept the alternative hypothesis. Accepting the alternative hypothesis ( $H_1$ ) and rejecting the null hypothesis ( $H_2$ ) based on the above statistical analysis it means that Taxation as a source of government revenue serves as tools for development of a state. i.e.  $H_1$  should be accepted.

Analysis of Secondary Data for Hypothesis Number Two (2)

# Model Building

Taxation (X) is exogenous variables determined autonomously by the Relevant Tax Authority that is Lagos State Internal Revenue Service (LIRS) and the behaviour of citizen towards the payment of tax. The study specifies the model and treats taxation as the independent variables while other variables as dependent variable. The specification is as follows:

Taxation (X1) is a function of Capital development.

These relationship can be formally written as X1 = F(Y)

To make the relationship empirically testable we make them more specific by suggesting that they are positive and in form of a straight line. To test model (1) above we now represent that yearly data collected from the various bodies as specified on the methodology as shown table 5.

**Table 5: Secondary Data** 

Years	Total Revenue	Revenue from Tax (IGR)	Capital Development
	(#) BILLION	(#) BILLION	(#) BILLION
2007	192,942	83,020	192,721

**Table 8: Regression Calculation Table** 

Years	Tax (IGR)	Capital Development	XY(%)	$X^{2}(\%)$	$Y^{2}(\%)$
	X(%)	Y(%)			
2007	43.0	43.1	1853.3	1849	1857.6
2008	46.6	46.8	2180.9	2171.56	2190.2
2009	50.4	50.2	2530.1	2540.2	2520.0
2010	49.4	51.1	2524.3	2440.4	2611.2
2011	51.8	53.5	2771.3	2683.2	2862.3
TOTAL	241.2	244.7	11895.9	11684.4	12041.3

Calculation of Co-Efficient of Correlation

Taxation and Capital Development

Coefficient Correlation Equation

Formula: 
$$r = n$$
  $(\Sigma xy) - (\Sigma x)(\Sigma y)$   $\sqrt{[n(\Sigma x^2) - (\Sigma(x)^2][n(\Sigma y^2) - (\Sigma(y)^2]]}$ 

Where n = 5

r = 
$$\frac{5(11859.9) - (241.2)(244.7)}{\sqrt{[5(11684.4) - (241.2)^2][5(12041.3) - (244.7)^2]}}$$

$$r = \frac{59299.5 - 59021.64}{\sqrt{[(58422) - (58177)][(60206.5) - (59878.1)]}}$$

$$r = \frac{277.86}{\sqrt{(244.6)(328.4)}}$$

r = 277.86

$$\begin{array}{rcl}
 & \sqrt{283.42} \\
 r = & \frac{277.86}{283.42} \\
 r = & 0.9804 & 4.d.p
 \end{array}$$

Test of significance of correlation coefficient

Then 
$$t = \frac{r}{\sqrt{1 - r^2}} \times \sqrt{n-2/n-3}$$
  
 $t = \frac{0.9804}{\sqrt{1 - 0.9804^2}} \times 1$   
 $t = \frac{0.9804}{\sqrt{0.03882}} \times 1$   
 $t = \frac{0.9804}{0.197017359} \times 1$   
 $t = 4.98 \quad 2.d.p$ 

From the above analysis using 5% level of significance at 1 degree of freedom r = (0.98) calculated (12.706) table. Therefore, we reject Ho and accept H1 that says there is significant relationship between taxation and capital development.

Calculation of Constant for Regression Co-Efficient

Formula: 
$$\beta = \frac{n \sum xy - \sum x \sum y}{n \sum x^2 - (\sum x)^2}$$

Where the above table

$$\beta = \frac{5(11859.9) - (241.2)(244.7)}{5(11684.4) - (241.2)^2}$$

$$\beta = \frac{59299.5 - 59021.64}{58422 - 58177.44}$$

$$\beta = \frac{277.96}{244.56}$$

$$\beta = 1.136140638$$

$$\beta = 1.1361 (4.d.p)$$
So therefore: 
$$\alpha = \frac{244.7 - 1.1361406388 (241.2)}{5}$$

$$\alpha = \frac{244.7 - 268.604}{5}$$

$$\alpha = -4.7808$$

$$\alpha = -4.7808$$

$$\alpha = -4.78 (2.d.p)$$

The study dealt with the effect of tax as a source of government revenue for the development of the state in which Lagos state was the case study. It was also gathered that good tax administration is an important factor which determines the level of revenue of any state. This means that revenue generation as well as good tax administration is the most important factor which leads to development.

#### Recommendations

The following are the recommendation as suggested by the current study:

- i. The government should provide law enforcement in order to eradicate tax evasion and to have improvement in tax revenue collection.
- ii. The government should provide improvement in the general administration of tax by training personnel that can implement the tax law (CITA, PITA etc).
- iii. The government should continue to ensure that the tax generated should be use to provide necessary infrastructure facilities for the citizens.
- iv. Employees of the LIRS should be appraised from time to time for effectiveness and efficiency.
- v. Government should try to review the tax law by increasing the amount to be paid for any offences because the amount under tax law are too small where by any offender can intentionally refuse to follow the rule.
- vi. The issue of bribery and production of fake tax clearance should be discouraged and any staff found guilty should be dismissed from job.

#### 5. CONCLUSION

The evidence obtained in this study and analysis has shown through logical deduction assumption and interview that in order for the government to finance its various obligation such as providing basic economic and social amenities, the government needs to source for funds, one of these means of sourcing fund is "TAX". The process of collecting this tax is called taxation. Taxation as a source of Lagos state government revenue is quite encouraging as the Lagos state government ensures efficiency collection of taxes; this in turn leads to capital development in the state. But there are still rooms for improvement if the recommendations are implemented.

# EMPIRICAL EVALUATION OF CONTRIBUTION OF VALUE ADDED TAX (VAT) TO TOTAL REVENUE GENERATION AND GROSS DOMESTIC PRODUCT (GDP) IN NIGERIA

Muhibat A. O.<sup>1</sup> Abdul Azeez O. A.<sup>2</sup> Tope Lawal. O.<sup>3</sup>

#### **ABSTRACT**

The objective of this study is to examine the impact of Value Added Tax (VAT) on revenue generation and Gross Domestic Product (GDP) in the Nigerian Economy. Value Added Tax as a consumption tax has been embraced by many countries worldwide, and because it is a consumption tax it is relatively easy to administer and difficult to evade. This study through an empirical model formulated, tested the relationship between Value Added Tax, GDP and total revenue generated in the country since the inception of VAT. Based on the regression analysis carried out, it shows that a unit change in the Value Added Tax will lead to about 12.54 unit change in the total revenue. Results analysis shows that a unit change in the Value Added Tax for the country will lead to about 0.99 unit change in the growth of the economy (GDP). The R-squared shows about 92% the probability value (0.0000) of the F-statistics further confirms this since it is less than 0.05, the significant level. The study found that VAT significantly influenced the growth and revenue generation of Nigerian economy which led to the decline of the null hypothesis respectively and the acceptance of the positive hypothesis that confirms the study.

**Keywords:** Value Added Tax (VAT), Total Revenue Generation, and Gross Domestic Product (GDP), Federal Inland Revenue Service (FIRS).

#### 1. INTRODUCTION

There is a growing recognition among developing countries of the crucial role of Value Added Tax revenue as an instrument of economic development. Value Added Tax (VAT) revenues are increasingly accounting for significant proportion of government revenue to finance the required level of public expenditure both at federal, state and local government levels. Value Added Tax as a consumption tax has been embraced by many countries worldwide. Because it is a consumption tax, it is relatively easy to administer and difficult to evade (Owolabi and Okwu, 2011). It has been adopted by several countries of the world because of the growing concern about economic efficiency and tax simplicity in a competitive and integrated world economy (Jenkins and Kuo, 1995).

The foundation of VAT could be traced back to the French Economist, Maurice Lauré, in 1954, originally referred to as "taxesur la valeur" (Wikipedia.org). He envisioned a sales tax on goods that did not affect the cost of manufacture or distribution but was collected on the final price charged to the consumer. In France, it is the most source of state finance, accounting for approximately 45% of state revenues. It did not matter how many transactions the goods went through; the tax was always a fixed percentage of the final price. The tax was finally adopted by France in 1954. Upon the formation of the Common Market in Europe (now the European Union) it was decided that one requirement of joining was the imposition of a

<sup>&</sup>lt;sup>1</sup> Lecturer Crescent University Abeokuta, Ogun State. Nigeria and currently PhD student at University Sains Islam Malaysia (USIM). <u>muhibat@yahoo.com</u>

<sup>&</sup>lt;sup>3</sup> Tope Owolabi Lawal, Crescent University Abeokuta, Ogun State, Nigeria.

form of VAT. In 1973 the UK joined the European Union and replaced the existing Sales Tax with VAT (BBC Edited Guide Entry, 2005).

The Value Added Tax system in Nigeria was created as a replacement or substitution for the sales tax that was in operation before<sup>4</sup>. It was imposed on all goods that were manufactured in the country as well as goods that had been made outside the country and were selling there. As per the VAT Decree No. 102 1993, certain goods and services have been exempted from the purview of Value Added Taxation. Such goods include all exported goods, medical and pharmaceutical products, products meant for kids, basic food items, commercial vehicles and their spare parts, books and other educational materials, fertilizer, farming machines, agricultural products, farming transportation equipments and veterinary medicines and magazines and newspapers (Owolabi and Okwu, 2011). The Nigeria Federal Government enacted the VAT Amendment Act in 2007.

VAT has been referred to as an 'efficient and fair' system of taxation (IMF, 2002). In order to judge the efficiency of VAT systems worldwide, the IMF conducted a study to ascertain whether countries with VAT systems had higher tax revenues to GDP ratios. The idea behind the study was the fact that if VAT systems did result into higher efficiencies and a consequent lower cost of collection, then countries with VAT systems should be able to collect higher revenues and the study found that countries following the VAT system did have higher general government revenues and grants to GDP, holding other things constant. The impressive performance of VAT in virtually all countries where it has been introduced which includes the United States of America, Britain, Japan and others clearly influenced the decision to introduce VAT in Nigeria in January 1994. Despite the performance of VAT in these countries and the subsequent introduction in Nigeria, does this VAT revenue performance hold in Nigeria? An important question raised is that whether VAT has lived up to its early promise as an efficient, fair source of revenue? Efficiency gains associated with the use of VAT are hard to observe directly, so this study aims to tackle this question through the indirect route of asking whether the country with the advent of VAT tends to have a higher ratio of total tax revenues to GDP. Therefore, the objective of this study is to examine the contribution of value added tax to revenue generation and Gross Domestic Product (GDP) in Nigeria since its adoption as a tax system. The study through empirical and theoretical disposition examines the efficiency of VAT as a system of generating revenue in Nigeria, the trend of the inflow of revenue through VAT.

One of the significance of this study is the impact it may have on the revenue generation and allocation policies of the three tiers of government in Nigeria. The recurrent problems of the three-tiers of government in Nigeria is the continuous dwindling revenue generated as characterized by annual budget deficits and insufficient funds for meaningful growth and viable development of projects. Moreso, the near collapse of the National Economy has created some sort of financial stress for the government. Hence, the adoption of value added tax as an alternative to the existing sales tax in the country was among the means of combating the revenue mobilization crisis being faced by the country. This objective to a large extent has however been achieved though there are some teething problems especially in the distribution formula to be adopted in sharing the VAT proceeds among the federal, states and local governments (Olatunji, 2009; Economy Watch, 2010). Thus, the current study will shed light on the impact and contribution of VAT to the revenue generated by the government in the long run/term.

As a result of the uncommon nature of the VAT system of taxation in Nigeria, majority of the populace perhaps may not be aware of its existence. Consequently, the low credibility of the government makes people scorn the payment and collection of VAT. This study will therefore serve as a watershed for the people on significance of payment and proper administration of VAT revenue in Nigeria. However, since VAT has been declared an "efficient and fair" system of taxation (IMF, 2003) which was judged by the

-

<sup>&</sup>lt;sup>4</sup> Introduced through the VAT Act No. 102 of 1993 but actually began in 1994 (Federal Inland Revenue Service, FIRS, 1999).

findings of the IMF conducted on countries that adopted VAT, this study therefore is to re-examine in order to confirm (or not) the results of the previous studies on the contribution of VAT to the Nigerian government revenue since its inception. The incoming researchers who may find it hard to acquire information on VAT and revenue generation will see this study as a part of the body of knowledge which can be reviewed and used to gain more insights in the course of their research work.

### 2. LITERATURE REVIEW

The impressive performance of VAT in virtually all countries where it has been introduced clearly influenced the decision to introduce VAT in Nigeria in January 1994. Specifically, the Federal Inland Revenue Service (FIRS) pointed out that VAT is a consumption tax that is relatively easy to administer and difficult to evade and it has been embraced by many countries world-wide which includes France, Europe, United states of America, Japan, New Zealand, Australia, Canada and others (FIRS, 1993: 4). Evidence so far supports the view that VAT is already a significant source of revenue in Nigeria. For example, actual VAT revenue for 1994 was N8.194 billion, which is 36.5% higher than the projected N6 billion for the year. Similarly, actual VAT revenue for 1995 was N21 billion compared with the projected N12 billion. In terms of contributions to total federally collected revenue, VAT accounted for about 4.06% in 1994 and 5.93% in 1995. Thus, it was an indication that Nigeria would join the growing list of developed countries where VAT contributes at least 20% of total government revenue. Hence, assisting in the diversification of revenue sources and reducing dependence on oil for revenue (Ajakaiye, 1999).

The yield from VAT is fairly accurate measurement of the growth of an economy since purchasing power (which determines yield) increase with economic growth. VAT is a self-assessment tax that is paid when returns are being rendered. In-built in the new tax is the refund or credit mechanism which eliminates the cascading effect that is a feature of the retail sales tax. The input-output tax mechanism in VAT also makes it self-policing. In essence, it is the output tax less input tax that constitutes the VAT payable. It is the equivalent of the VAT paid by the final consumer of the product that will be collected by the government. Value Added Tax, also known as Goods and Services Tax (GST) proves to be beneficial for the government. Through implementation of this tax system, government can raise revenues invisibly, where the tax is not shown on the bill paid by the buyer. VAT differs from sales tax in various aspects. While sales tax is to be paid on the total value of the goods and services, VAT is levied on every exchange of the product, so that consumers do not have to carry the total cost of tax. However, VAT is generally not applied on export goods to avoid double taxation on the final product. However, if VAT is charged on export goods, the tax amount is usually refunded to the tax payer (Ojo, 2003). The individual consumers cannot recover VAT on purchases made by them. However, businesses can recover VAT on the services and materials, which are bought by them in order to continue the supply of the products and services.

Value Added Tax is administered in Nigeria by the Federal Inland Revenue Service (FIRS) through the VAT Directorate located at its Head office Abuja. Thus, jurisdiction of VAT lies with the Federal Government of Nigeria and the proceeds of VAT are distributed among the three-tiers of government in a particular ratio. For instance, the initial policy on the distribution of VAT was that 80 percent of it would be shared among the states and federal capital territory and the federal government would retain 20 percent as administrative charges (Sanni, 2011). However, due to its successful implementation and as reactions to protests from state governments, the distribution of VAT was altered and local governments were included in the distribution formula and it was presently distributed as follows; 15 percent to the Federal Government, 50 percent to the State Governments and the Federal Capital territory, Abuja, and 35 percent to the Local Governments (Sanni, 2011).

Despite the numerous sources of revenue available to the various tiers of government as specified in the Nigerian 1999 Constitution, since the 1970s till now, over 80% of the annual revenue of the three tiers of government come from petroleum. However, the serious decline in the price of oil in recent years, coupled with the fall in demand for Nigerian oil, has led to a decrease in the funds available for spending by the government, and one of the objectives of VAT introduction in Nigeria was that of the advantages that would accrue to governments in the form of higher tax revenues. The government expected that the greater transparency and wider tax net of VAT would result into plugging of taxation loopholes and hence would result into higher revenues for state governments. Now that VAT has been under implementation for many years since its introduction in Nigeria, has this expected objective been achieved? Hence what has been the impact of VAT on the revenues of the Nigerian government?

In order to meet the inescapable need for increased revenue, the Nigerian government introduced the use of external tax consultants under a program known as the Accelerated Revenue Generation (ARG) Program. Consultants/Monitoring agents were appointed on the Value Added Tax and withholding tax in the oil industry, professional import duties administrators for the collection of import duties alongside the custom officials. However, taking a critical scrutiny of these efforts, has the nation really generated the optimum amount of revenue expected from the VAT? Has all this consultants and monitoring bodies been able to reduce the tax evasion and other sharp practices by the tax payers? Therefore, the current study aims to evaluate the contributions of VAT to Nigerian revenue since its inception in the Nigerian economy.

# VAT and Revenue Generated in Nigeria

Observation of the movement in the contribution of VAT to the revenue of the Nigerian government as shown in table 1 reflects that the amount generated from value added tax and its ratio to the revenue of the country has been fluctuating over the years since its inception. For instance, the percentage change in the amount generated from VAT from 1995 to 1996 was about 185.9%, and increasing from N20,761.0m (1995) to N31,000m (1996), the following year (1997). The change from military rule to democratic government further witnessed a positive increase in the compliance by tax payers as the amount generated rose from N36,900m (1998) to N47,100m (1999) amounting to about 27.6% increase. The Figure 1 further compliments the table 1, by showing the trend of VAT to revenue generated in Nigeria. This figure reflects the fact that the direction of its movement have been fluctuating, such that it goes up at some point and falls at other years.

# 3. RESEARCH METHODOLOGY

## 3.1. Sources of data

In order to generate adequate and relevant data for the study, the data requirements for this study are principally secondary data relating to the amount of Value Added Tax and revenue generated and GDP since its inception. Relevant data was sourced from the publications of the Central Bank of Nigeria (CBN) such as the CBN Statistical Bulletin and CBN Annual Statement of Accounts as well as the publications of the Federal Inland Revenue Service (FIRS). An eighteen-year summary 1994 to 2010 (since the inception of VAT) of the revenue generated VAT revenue and GDP which was retrieved from the publications of the Central Bank of Nigeria (CBN) statistical bulletin were used to evaluate the impact of VAT on the revenue generated by the Nigerian government, as shown in Table 2. Although, the authors are aware that eighteen (18) years is not enough for time series analysis, since the rule of thumb is 30 years, but this is due to the data available at the time of this study. The data was regressed using the Ordinary Least Squares (OLS) regression technique to ascertain relationship between the variables of interest.

# 3.2. Model specification and definition of variables

In trying to analyze the contribution of Value Added Tax to revenue generation in Nigeria, the perceived functional relationship between the matrix Value Added Tax and revenue generation is developed as used in the study of Adereti *et al.*, (2011). From microeconomic perspective, the model for this project states that revenue generation depends on VAT revenue. The model as modified from the works of Golit (2008), Owolabi and Okwu (2011) and Adereti *etal.*, (2011) is functionally specified as:

$$G_{Rev} = f(VAT)$$

Where  $G_{Rev} = Government Revenue$ .

VAT = Value Added Tax

 $\alpha_0 + \alpha_1 = \text{Coefficients (indicate constant number)}$ 

 $\mu$  = Stochastic error term

From the above functionally relationship, the stochastic model can be specified as:

$$G_{Rev} = \alpha_0 + \alpha_1 VAT + \mu$$

Model 1

Where  $\alpha_0$  and  $\alpha_1$  are model parameters and  $\mu$  is the stochastic error term.

However, to further evaluate the impact of Value Added Tax on the growth of the economy, a second model of the relation between VAT and economic growth is formulated as:

$$GDP = \beta_0 + \beta_1 VAT + \mu$$

Model 2

Where GDP = Gross Domestic Product.

VAT = Value Added Tax

 $\beta_0 + \beta_1 = \text{Coefficients (indicate constant number)}$ 

 $\mu$  = Stochastic error term

The model 2 above presents the relationship between VAT and Gross Domestic Product (GDP), which is a measure of the growth of the economy, it is also expected that VAT influences economic growth (GDP) positively. However, other explanatory variable cannot be included in the model due to inavailability of data and time constraint.

# 3.3. A Priori Expectation

In line with existing studies See Golit (2008), Owolabi and Okwu (2011) and Adereti *et.al.*, (2011) the *a priori* expectation is that the model parameters (model 1), that is the constant term and coefficient of the independent variable, is positively signed. The implication is that the country is expected to generate some revenue even if no VAT revenue is collected (Adereti*et. al.*, 2011). For model 2, the expected relationship is also positive. Since it is expected that VAT influence total revenue positively and total revenue is a positive component of the growth of the economy, it is also expected that VAT influences economic growth (GDP) positively.

# Research Hypotheses

- 1. **H**<sub>0</sub>: VAT revenue does not significantly influence the revenue generation of Nigeria.
- 2.  $H_0$ : VAT revenue does not significantly influence the growth of the Nigerian economy (GDP).

# 4. RESULTS

4.1. Ordinary Least Squares (OLS) Regression Result

The Impact of VAT on Total Revenue

Dependent variable: Nigerian Government Revenue

Sample: 1994 to 2010

From the result Table 3, the estimated regression equation can be given as:

$$G_{Revenue} = 945123.2 + 12.5375VAT$$

The estimated regression equation above reveals that there has been a significant positive increase in Nigeria revenue over the years. This is shown by the constant term having a positive and significant value. This implies that if for any reason, the value of the nation's Value Added Tax is zero, the country will still have positive revenue from other revenue source available for the country different from the Value Added Tax. This estimate shows a statistical significant result at 10% level, since its estimated probability value is less than 0.10 the significance level. The relationship between Value Added Tax and revenue generation is given by the coefficient of VAT in the above equation. From the result obtained, the 12.53752 coefficient of VAT implies that a unit increase in value added tax for the country will generate about 12.54 unit increase in the revenue generated in the country. In addition, the statistical significance of this estimate is established both at 1% and 5% level of significance since the probability obtained (0.0000) is less than 0.01 and 0.05 (at 1% and 5% significant level respectively).

However, the value of R-squared and the F-statistics shows the statistical fit of the estimated model. The R-squared which is the coefficient of determination used to ascertain the goodness of fit as well as the explained variation of the explanatory variables of the model; shows that about 75.43% of the variation in revenue is explained by the explanatory variable of the specified model (VAT). The F-statistics also meant to show that the coefficients have simultaneous statistical significance or otherwise. However, going by the fact that the model includes only one independent variable, the result of the F-statistics approximates to the R-squared explained above. The probability value (0.0000) of the F-statistics further confirms this since it is less than 0.05, the significant level.

The Impact of VAT on Economic Growth
Dependent variable: Gross Domestic Product

Sample: 1994 to 2010

From the result table 4, the estimated regression equation can be given as:

### GDP = 297181.2 + 0.9969VAT

The estimated regression equation above reveals that there has been a significant positive increase in Nigeria's gross domestic product over the years. This is shown by the constant term having a positive and significant value. This implies that if for any reason, the value of the nation's Value Added Tax (the independent variable in the model) is zero; the country will still have positive GDP which is an indication of growth. This estimate shows a statistical significant result at 5% level, since its estimated probability value (0.0000) is less than 0.05 the significance level. The relationship between value added tax and GDP is given by the coefficient of VAT in the above equation. From the result obtained, the 0.9969 coefficient of VAT implies that a unit increase in value added tax for the country will cause an increase in the value of GDP by about 0.9969 units. In addition, the statistical significance of this estimate is established both

at 1% and 5% level of significance since the probability obtained (0.0000) is less than 0.01 and 0.05 (at 1% and 5% significant level respectively).

Hence, the value of R-squared and the F-statistics shows the statistical fit of the estimated model. The R-squared which is the coefficient of determination used to ascertain the goodness of fit as well as the explained variation of the explanatory variables of the model; shows that about 92% of the variation in GDP is explained by the explanatory variable of the specified model (VAT). The F-statistics also meant to show that the coefficients have simultaneous statistical significance or otherwise. However, going by the fact that the model includes only one independent variable, the result of the F-statistics approximates to the R-squared explained above. The probability value (0.0000) of the F-statistics further confirms this since it is less than 0.05, the significant level.

# Discussion of Findings

The findings of this study agree with the studies of Adereti *et al.*, (2011). The study employed regression analysis among other techniques used in their study and they found that a positive and significant correlation exist between VAT revenue and the growth of the economy. Though they measured the growth using GDP, it is however, established that revenue is a major component of GDP. Hence, the finding of this study conforms to their study. Furthermore, going by the findings of the study by Owolabi and Okwu (2011) in their study on the contribution of VAT to the development of Lagos state economy, their analysis showed that VAT revenue contributed positively to the development of the respective sectors of the state with statistical significant in some sectors. This study's findings support this, though it was carried out on the revenue generation of the entire economy. Finally, it is apparent that the impact of VAT on the economy depends critically on the way VAT able organizations treat the VAT. In the specific case of Nigeria and based on the methodology adopted in this study, the relationship between Value Added Tax and revenue generation estimated using the time series data available in the National publications shows that VAT has been on an increase since its introduction in the country. Also, is the fact that, the sharing formula adopted for sharing the proceeds from VAT has been adjusted several times since its inception to enable equity among states where such revenue is coming from.

#### Future research

Since the reliability of the results is questionable due to eighteen (18) years data available which was used by the study, the study therefore, call for further research in which 30 years (i.e the rule of thumb) would be used.

#### Recommendations

After a close study and review of literature on the subject, the following recommendations are hereby prescribed:

- i. Federal Inland Revenue Service must henceforth perform the management functions of tax administration
- ii. From the above, it is expected that in a given tax system such as VAT, an efficient tax administration would yield maximum revenue with a minimum cost. This however depends on the quality of the machineries for tax administration which include the manpower devoted to tax collection and assessment, the equipment and the VAT decree. When the people come to understand VAT better, its benefit to the economic compliance would be greater and therefore compliance cost would be smaller. On the other hand, when the voluntary compliance is great, the VAT administration would be easier and giving the tax structures the greater revenue yield
- iii. There is need to embark on business enumeration in each state with a view to having data base on business

- iv. Seminars and workshops so far organized on this issue are narrow in scope and design. There should be functional VAT offices in every council area to coordinate a vigorous campaign to educate people and seek their cooperation. This will no doubt erode the negative attitude that some of the consumers have developed towards VAT
- v. The government should adequately make provision for retrieving the proceeds of VAT form companies and other agents of collection
- vi. VAT has a good chance of working in Nigeria if it receives the cooperation
- vii. However, if people continue to evade tax colluding with tax through collectors as witnessed on sales tax, no meaningful achievement would be made
- viii. Again enforcement of penalties and addition returns assessment provision could go along way in enhancing VAT collection
- ix. A good system of taxation must ensure that tax laws which include VAT laws must satisfy the following basic principle:
  - a. The language must be simple and clear so that an average person can understand it. A tax law, which cannot be read and understood, does not serve any useful purpose
  - b. All the existing VAT laws should be confided and made easily available to all concerned
  - c. Every word used must convey its ordinary, everyday meaning. This will enable the VAT payer to know how and where he stands in relations to the returns authority and tax collector. The only accepted departure from this is where, the law itself is combining definition of any technical word
- x. The list of VAT items exemptions should be clearly defined in simple language. This should be properly articulated to ensure that only luxury goods are VATable while all locally manufactured goods items must be exempted.

# 5. CONCLUSION

The objective of this study was primarily to investigate the impact of Value Added Tax on revenue generation in Nigeria. With a view to achieve this, the peculiar feature of the Value Added Tax which serves as a replacement to the abrogated sales tax was evaluated. The study, through the specification of an econometric model explains the relationship between VAT, GDP (the economy) and revenue generation. This model was further estimated and evaluated through the classical linear regression analysis. The following findings are inferred from the analysis:

- i. There is a significant positive relationship between Value Added Tax and revenue generation in Nigeria;
- ii. There has been a positive increase in revenue generated through Value Added Tax in the country over the years, since its inception.
- iii. There is a significant positive relationship between Value Added Tax and the growth of the economy.
- iv. There has been a more effective and balanced distribution of the VAT revenue between the three tiers of government, based on the current sharing formula adopted.

Currently, the impact of VAT on government revenue is significant and as such attempt should be made to increase revenue from this source. However, if the under mentioned recommendation can be given adequate consideration, the burden, which its execution is causing manufacturers and final consumers, will be appropriately ameliorated.

#### ABSTRACT

The role of an audit program in a modern tax administration extends beyond merely collecting tax revenue (Biber, 2010; OECD, 2006a). Besides having a comprehensive legal framework, well-defined organisational and management processes and compliant taxpayers, the effectiveness of tax audit programs depends as much or more on tax auditors' actions and reactions to the actual tax audit environment (Bahl and Bird, 2008; Long and Swingen, 1991; OECD, 2006a, 2006b). Tax auditors are a tax authority's 'public face' (OECD, 2006b). They possess a great deal of discretionary power; in many instances, tax auditors are in effect prosecutor, judge and jury in tax assessments matters (Roberts, 1995). Despite of tax auditors' important roles in tax administration, studies on tax auditors' behaviour have been dearth. Instead, tax researches have been focusing on taxpayers' compliance behaviour and tax professionals' ethical behaviour. More research on tax auditors needs to be conducted urgently because their behaviour is so intimately intertwined with taxpayers' compliance and tax administration efficiency (Long and Swingen, 1991). This study aims to motivate tax researchers to focus on tax auditors' behaviour. It presents public's negative perceptions on tax auditors, reviews tax auditors' behaviour literature and suggests area of studies for future research.

**Keywords:** tax administration, tax auditors, tax compliance.

### 1. INTRODUCTION

The potential amount of revenue that a tax authority can raise depends in part on the effectiveness of its tax audit programs (Daly and Gravelle, 2005). From the tax authority's perspective, tax audit is an essential tool for ensuring tax compliance. It typically requires tax authorities to examine taxpayers' records and tax affairs to determine whether taxpayers' correct liability is reflected in returns and assessments (IRBM, 2009; OECD, 2006a). Tax authorities have the power to amend taxpayers' original tax returns and impose penalties on taxpayers when they find noncompliance activities (OECD, 2006a). The IRBM, for example, collected 2,870.62 million Malaysian ringgit (RM)—approximately 920.67 million United States dollars (USD)—in additional taxes and penalties in 2010 (IRBM, 2010). The audit collection contributes 3.6 per cent to total net direct tax collection (RM79.54 billion) during a year (IRBM, 2010). This makes audit programs an important tool for securing government revenue.

However, the role of an audit program in a modern tax administration extends beyond merely collecting tax revenue (Biber, 2010; OECD, 2006a). An effective audit program should also have a significantly wider effect on compliance through deterrence (influencing the behaviour of an audited taxpayer or group of taxpayers to be compliant in the future) and prevention (persuading the broader community to comply) (Appelgren, 2008; Biber, 2010; OECD, 2006a). Besides having a comprehensive legal framework, well-defined organisational and management processes and compliant taxpayers, the effectiveness of tax audit programs depends as much or more on tax auditors' actions and reactions to the actual tax audit environment (Bahl and Bird, 2008; Long and Swingen, 1991; OECD, 2006a, 2006b).

#### 2. TAX AUDITORS' RESPONSIBILITIES

Tax auditors are a tax authority's 'public face' (OECD, 2006b). They are the ones who implement the audit policy, interact with different behaviour of taxpayers and determine audit outcomes (Bahl and Bird, 2008; Long and Swingen, 1991). They possess a great deal of discretionary power; in many instances, tax auditors are in effect prosecutor, judge and jury in tax assessments matters (Roberts, 1995). In addition to their primary role of scrutinising taxpayers' records and documents, tax auditors are often required to interpret complex tax law and carry out extensive examinations of taxpayers' books and records (Isa and Pope 2011; OECD, 2006a). Tax auditors' tasks might become complicated when audit issues encroach on the grey area separating tax evasion<sup>3</sup> and acceptable tax avoidance<sup>4</sup>—for example, lack of audit evidence due to a paperless system (Gilbert et al., 2001).

Moreover, in the new millennium, Tanzi (2000) asserted that tax authorities are facing more challenging issues with the globalization that require tax authorities to have different structures of tax system. He classified globalization issues as "fiscal termites" and reviewed the possible impact to tax revenue. Eight "fiscal termites" identified by Tanzi (2000) was electronic commerce and transactions, use of electronic money, intra company trade, off-shore financial centres and tax havens, derivatives and hedge funds, inability to tax financial capital, growing foreign activities, and foreign shopping. He strongly believed that these fiscal termites would affect the revenue from various taxes and the tax systems of the future will have different structures and probably lower levels than those of today. For example, the growing importance of multinationals trade in different countries creates for tax authorities deriving from the potential use and abuse of transfer-pricing. Although OECD (1995)<sup>5</sup> provides guidelines and suggestions on how to conduct transfer pricing arrangements, Mihaly (1998) and Reynolds (2007) argued that procedural rules of transfer pricing may vary significantly depending on the nature of the case (e.g. the business's country of ownership). These issues require tax auditors to understand taxpayers' business intentions and use suitable audit strategies in determining the correct amount of tax. Their behaviour and decisions reflect how tax law is actually implemented.

Tax authorities normally issued the code of ethics to the tax auditors in ensuring the tax audit process is conducted professionally. For example, the Inland Revenue Board of Malaysia (IRBM) issued the Tax Officers' Guidelines and Work Ethics as a general work ethics procedure. The guidelines are shown in Table 1 below.

Table 1: The IRBM Tax Officers' Guidelines and Work Ethics (IRBM, 1999, p.5)				
DOs	DON'Ts			
<ul> <li>Honest, diligent, trustworthy, discipline and responsible</li> <li>Professional, efficient and committed in providing a fair and quality service</li> <li>Vigilant to the changes related to the profession</li> <li>Continuous learning</li> </ul>	<ul> <li>Corruption and any dubious act</li> <li>Any act that may conflict with organisation interest</li> <li>Abuse of power</li> <li>Extreme involvement in any activities outside the scope of IRBM 's core affairs</li> <li>Any act that may emphasize on self</li> </ul>			

<sup>3</sup> Tax evasion is illegal arrangements where liability to tax is hidden or ignored by taxpayers, For example, a taxpayer pays less tax than he is legally obligated to pay by hiding income or information from the tax authorities (OECD, 2013).

<sup>&</sup>lt;sup>4</sup> Tax avoidance is the arrangement of a taxpayer's affairs that is intended to reduce his tax liability and that although the arrangement could be strictly legal it is usually in contradiction with the intent of the law it purports to follow. It also often involves contrived, artificial transactions that serve little or no purpose other than to produce a tax advantage (OECD, 2013).

<sup>&</sup>lt;sup>5</sup> The Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations were originally approved by the OECD Council in 1995. They were completed with additional guidance on cross-border services, intangibles, costs contribution arrangements and advance pricing arrangements in 1996-1999.

- Helpful, tolerance with no discrimination and team spirit
- Innovative and creative to enhance the quality service
- Consistent improvement of quality and productivity
- Give priority to organization's interest by adapting to the task assigned
- Keep secret the confidentiality of the Government and organisation materials

interest and ignore the public duty

- Any discreditable act to the organisation
- Involvement in gambling and misconduct
- Disobey the superior's instructions

In performing their specific tasks as tax auditors, auditors must adhere to the tax audit framework guidelines (IRBM, 2009). The audit framework stipulates that tax auditors must carry out their duties in the following manner:

- professional, well mannered, trustworthy, honest and acting with integrity,
- always ready to give explanations of tax audit objectives and taxpayers' rights and responsibilities,
- knowledgeable and fair in administering tax laws,
- co-operative and always ready to give advice and guidance to taxpayers,
- ensuring that tax audits are carried out smoothly with minimal disruption to taxpayers,
- explaining the proposed tax adjustments and providing reasonable time for taxpayers to respond to issues raised and
- ensuring that the rights and interests of taxpayers and tax agents and the documents of taxpayers are safeguarded.

An audit officer is prohibited from doing the following:

- having any personal or financial interest in the business of a taxpayer being audited,
- recommending to a taxpayer that a certain tax agent be appointed as agent for an audit case and
- abusing his position or power in carrying out his duties as indicated in s. 118 of the *Income Tax Act 1967* (IRBM, 2009).

Tax auditors also have the power to make an assessment based on a taxpayer's estimated income. Best judgment assessment is under the provision of s. 90(2) of the *Income Tax Act 1967*. Instances where best judgment assessment is made are as follows:

- No assessment has been made because the taxpayer failed to lodge a return as required by law
- An annual return form has been submitted, but in the tax auditors' opinion, it is incorrect or incomplete—for example, a means test revealed that net assets accumulated over a period are not commensurate with the income returned for that period.
- There is dispute over the taxability of a certain income source, such as gains from rental income held to be taxable under s. 4(a) (Business Income) or s. 4(d) (Rental Income) of the *Income Tax Act 1967*. Both types of income have a different tax calculation method.

Before tax auditors can raise a best judgment assessment, they must consider the following factors:

- quantum of income assessed in the previous year or years,
- nature and size of trade.
- individual cases should be differentiated from those of companies—in individual cases, accretion of capital over the years could be compared with income returned using a means test,
- average rate of profits made by taxpayers carrying on a similar trade within a certain locality and
- specific information that could be in tax auditors' possession (Kasipillai and Shanmugam 1996).

### 3. PUBLIC'S PERCEPTIONS ON TAX AUDITORS

Around the world, taxpayers and tax professionals witnessed different tax auditors' behaviour. Stalans and Smith (1992) conducted the first post-tax audit procedural justice<sup>6</sup> research in the United States. Their objective is to describe the perceived fairness of the procedures involved in decision-making and the perceived treatment taxpayers received from tax auditors. Stalans and Smith found that taxpayers had dissimilar experience dealing with the IRS auditors. Some taxpayers received fair treatment from tax auditors; tax auditors were helpful, competent and gave dignified treatment (e.g. polite and friendly) and explanations. However, the majority of the respondents had bad experienced. Some respondents mentioned that the auditors were rude, insulting, hostile or belligerent, and disrespectful. Tax auditors also treated taxpayers as they were uneducated and taxpayers had a hard time convincing tax auditors about their business transactions motives.

Stalans and Lind (1997) examined taxpayers and tax professionals' perceived fairness of tax audit. Stalans and Lind found that taxpayers and tax professionals held negative views on tax auditors. They claimed that tax auditors did not treat honest taxpayers with dignity, unable to understand taxpayers' business, and had a preconceived mind that taxpayers are wrong. Cummings (2007) supported these negative views. As a tax professional, who always communicate with tax auditors to resolve taxpayers' audit cases, Cummings (2007) asserted that tax auditors had a "tunnel vision" – viewing all taxpayers' business transactions in tax savings as abusive. Cummings (2007) believed that tax auditors also failed to measure taxpayers' intentions thus difficult for all tax audit participants to achieving a favourable outcome in resolving tax audit cases.

Some tax auditors had excellent attitude, but they were hardly notified by the public. In a one-page article by Rose (2008), he reported that some tax practitioners believed that IRS' tax auditors were very reasonable, dedicated and fast in completing the audit. Some respondents considered that tax auditors were underpaid as they had to do multiple tasks (e.g. bank reconciliation, documents checking and writing reports). Rose also (2008) suggested that taxpayers should engage tax professionals if they have difficulties in resolving issues with tax auditors.

Murphy (2003) conducted a procedural justice study on taxpayers audited by the Australian Tax Office (ATO) auditors. Taxpayers regarded the letters sent by tax auditors as too technical (full of tax jargons), unsympathetic (letters sent near to festival days), and demanding (need prompt reply) that left taxpayers feeling overwhelmed, confused and angry (Murphy, 2003). Taxpayers also reported that some tax auditors accused taxpayers as tax cheat and did not offer for a help or find a fair solution. Instead, tax auditors made their own decisions. Taxpayers asserted that high tax liabilities, which comprise of penalties and accrual of interests, were due to tax auditors' delaying the audit settlement. Some taxpayers chose to disengage from the tax system due the negative experiences. For example, a taxpayer used more cash transactions, which provide opportunities for unreported income, in business.

In Malaysia, the public tends to have negative perceptions of the IRBM tax auditors' behaviour. In regular meetings between the IRBM and members of the Chartered Tax Institute of Malaysia (CTIM),<sup>7</sup> the CTIM made several complaints to the IRBM regarding its tax auditors (CTIM, 2003). The CTIM claimed that the audit process conducted by the tax auditors lacks transparency and consistency. Moreover, the CTIM perceived that the IRBM's tax auditors do not carry out tax audits in a professional manner, adopt different treatments for the same subject matter, refuse to accept

<sup>&</sup>lt;sup>6</sup> Procedural justice theory is used to describe the perceived fairness of the procedures involved in decision-making and the perceived treatment one receives from the decision-maker (Lind and Tyler, 1988, Tyler, 1994, Tyler, 2000).

Previously, the CTIM was known as the Malaysian Institute of Taxation (MIT).

commercial justification even though supporting documents are provided, lack accounting and business knowledge, and are unable to provide convincing rationales for tax audit adjustments (CTIM 2003, 2005, 2007). Findings from empirical studies by Choong and Lai (2009) and Choong et al. (2012) supported the CTIM's complaints. They found that tax agents felt the tax audit process took too long to finalise. The main problems faced by tax agents were that tax auditors were not happy with taxpayers' explanations and that taxpayers had to provide tax auditors with various documents that were not used or reviewed. Tax agents believed that tax auditors intend to find fault to impose penalties for incorrect returns or understatement of income during the tax audit. The study also reveals several tax audit weaknesses, particularly regarding the tax audit approach, audit processes and tax auditors' competency and mentality (Choong et al., 2012; Choong and Lai, 2009). An unpublished study by Abdul Wahab et al. (2005) found that IRBM tax auditors tended to make emotional judgments and show less concern about being fair to the other party. A recent study by Isa and Pope (2011) found that corporate taxpayers perceived IRBM tax auditors as more being interested in finding fault and penalising a company for wrongdoing than helping them comply with tax law.

The public's negative experience and perceptions on tax auditors signify that it is imperative for tax authorities to address issues regarding tax auditors' efficiency to gain the public's respect and confidence. Furthermore, the failure to subject tax collectors to serious study has resulted in undermining tax authorities' ability to understand not only tax administration efficiency but the behaviour of all parties (taxpayers and tax agents) since their conduct is so intimately intertwined (Long and Swingen, 1991).

### 4. PRIOR STUDIES ON TAX AUDITORS' BEHAVIOUR

Tax auditors have not been treated as a proper subject of research in tax administration and tax compliance studies. The popular stereotype of the taxman is an official who collects 'revenue through the process of detecting noncompliance and imposing penalties' (Braithwaite, 2003, p. 15). However, Braithwaite (2003, p. 35) argues that this stereotype provides a simplistic account of the realities of modern tax administration. A modern tax administration, she claimed, is characterised by detecting noncompliance and meeting with responsiveness 'that recognizes and deals with the wrongful act, but at the same time works to bring the more co-operative motivational postures to the fore'. Indeed, implicit in many existing studies is that regulators such as tax officials are highly dedicated and committed in their work and differ only in their approaches to getting their jobs done (Tang et al., 2003). However, it is doubtful whether the same assumptions apply to tax auditors. At the time of this research, there are only nine published studies on tax auditors' behaviour, shown in Table 2.

Table 2: Prior Studies on Tax Auditors' Behaviour

Author(s)	Objective	Findings
Smith and Stalans (1994)	To examine tax auditors' negotiation strategies in resolving disputes	Tax auditors used different negotiation strategies according to the phases of negotiation:  • First phase—convergence-oriented  • Second phase—compromise by finding new correct solution  • Final phase—hold firm and stick with their decisions.
Roberts (1995)	To examine tax auditors' judgment and decision making behaviour.	Tax auditors' judgment and decision making behaviour was influence by taxpayers' education level, size of audit adjustment, number of years of tax returns involved and whether or not the taxpayer was represented by a Certified Public Accountant (CPA)

Pentland and Carlile (1996)	To gather tax auditors' experience in conducting tax audit cases	Tax audit is an 'expression game'. Tax auditors and taxpayers entered into a game whereby taxpayers' 'facts' were negotiated. While tax auditors used the tax Code to prove the 'facts' were true, taxpayers challenged the 'facts' as they certainly knew when they had committed fraud.
Hite and Sawyer (1998)	To examine criteria of choosing audit cases from tax investigators' perspective	The likelihood for commercial tax service preparers was lower than for returns prepared by chartered accountants.  Most tax investigators believed that tax agents caused more aggressive tax reporting than did taxpayers and that CPAs were more aggressive than commercial tax service preparers.
Hite and Sawyer (2000)	To examine the effect of verbal and numerical standards on tax auditors' judgment and decision- making	Team leaders assessed relatively more penalties than their counterparts when the reporting standards were numerical.
Hasseldine and Hansford (2003)	To examine tax auditors' attitudes to the specific tax auditing process	Initial interview: a crucial information-gathering stage. Final interview: their motives were to reach a final settlement and avoid the case being taken to appeal.
Job and Honaker (2003)	To gather tax auditors' experience on the introduction of CM	A major change under CM was that tax auditors have open communication and negotiation with taxpayers and inter-staff. Some agreed that CM was useful and improved the quality of communication. Some staff did not have the communication, negotiation and decision-making skills; thus, adopting CM was a big challenge.
Waller (2007)	To examine the challenges that come with introducing responsive regulation into tax administration	Using evidence from a qualitative study of ATO 'walk-ins' with used car dealers, the authors found the unintended consequences that can occur without institutional integrity at the level of design and at the level of everyday ATO field-officer practises.
Muhammad (2013)	To explore tax auditors' enforcement regulatory styles in resolving audit settlement disputes.	Tax auditors apply different enforcement regulatory styles—firm, explain and educate, bargaining and threatening. This study also has identified 'avoiding' as tax auditors' enforcement regulatory style when dealing with the public.

Smith and Stalans (1994) examined the IRS auditors' enforcement regulatory approach in resolving disputes. The authors used enforcement regulatory theory to hypothesise that tax auditors allowed limited negotiation before they asserted their decision-making power and issued final determinations, regardless of citizens' views on audit issues. Figure 1 shows five possible negotiation strategies used by tax auditors to resolve disputes: to persuade to go along, to convince that the tax auditors were

right, to find compromise, to find a new correct solution and to change opinion. If tax auditors chose not to negotiate, they would hold firm with their decisions.

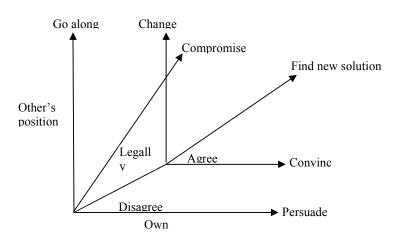

Figure 1: Negotiation Strategies (Smith and Stalans 1994, p.349)

Smith and Stalans (1994) conducted semi-structured interviews with 48 IRS tax auditors. They found that the tax auditors did not stick to one negotiation strategy in resolving tax disputes, but used different negotiation strategies according to the phases of negotiation. During the first phase, the tax auditors chose convergence-oriented strategies more likely to convince taxpayers that they were right. If that strategy did not work, they moved to the negotiation phase, where the tax auditors would compromise by finding a new correct solution. When both parties still did not reach an agreement, at the final phase of negotiation, the tax auditors would hold firm and stick with their decisions. This finding showed that the tax auditors could not easily close audit cases without taxpayers' agreement. The tax auditors would compromise by offering alternative solutions and if the taxpayers still did not agree, the auditors would finalise the cases using their power. Smith and Stalans' (1994) study set a precedent for future studies on tax audit negotiation. They suggested more work should be done on how the nature of disputes and the disputants' roles affect the relationship between this motivational dimension and the preferred strategies.

Roberts (1995) was the first to investigate tax auditors' judgment and decision-making (JDM). One hundred IRS tax auditors participated in an experiment examining the factors that influence tax auditors' assessment of taxpayers' negligence penalty. They were given a series of 16 cases that contained variations of the four factors tested: taxpayers' education level, size of audit adjustment, number of years of tax returns involved and whether or not the taxpayer was represented by a Certified Public Accountant (CPA). The results demonstrated that the hypothesised interaction of the four factors was significant. Three of the factors were significant as main effects: taxpayers' education level, size of audit adjustment and the number of years of tax returns involved. In general, the size of the audit adjustment had the largest effect on the decision to assess a negligence penalty and representation by a CPA had the least effect. The main weakness of Roberts' (1995) study was its concentration on subjective judgments. He failed to incorporate tax auditors' objective uniform application of tax law or accounting that Smith and Stalans (1994) expected in terms of how tax auditors would perform in their tasks. Perhaps due to a major disadvantage of using the experimental approach, Roberts (1995) had to place a limit on the number of factors examined in his study.

Pentland and Carlile (1996) explore IRS audit process. From their interviews with one hundred and forty two IRS tax auditors, Pentland and Carlile (1996) found that the tax auditors were in favour of practicality and informal judgments. The tax audit game implies that tax auditors and taxpayers contested the 'facts' to determine the 'truth' of taxpayers' returns. While the tax auditors used the tax Code to prove the 'facts' were true, taxpayers challenged the 'facts', as they knew when they had committed fraud. Both parties had strengths and weaknesses in terms of power, time, resources and information; therefore, the best outcome was for them to tolerate each other. As a result, the IRS tax auditors let the audited taxpayers walk away from some portion of their tax burden as a way of getting the job done and encouraging voluntarily compliance in future. Pentland and Carlile (1996, p. 284) asserted that 'the revised tax assessment is merely good enough for all practical purposes'. They concluded that tax audit is an 'expression game'. In the expression game, taxpayers attempt to maintain a front as honest, compliant citizens while tax auditors attempt to maintain as a front as fair, competent professionals just doing their job. However, Pentland and Carlile (1996) were perhaps overambitious in their claims, concluding as though all tax audit cases are resolved using this game. Their study might have been more convincing if they had considered different types of taxpayers (e.g. corporate and individual taxpayers) and explained the issues in dispute.

Hite and Sawyer (1998) examined New Zealand Inland Revenue Department (NZIRD) auditors' behaviour in selecting audit cases. Eighty-two auditors completed a tax audit case, which had a three levels of independent variable for type of preparer – self, commercial tax service or chartered accountant. The results indicate that tax auditors were likely to select tax returns prepared by commercial tax service preparers than for returns prepared by chartered accountants. Experienced auditors believed that the factors in the case were likely to be associated with noncompliance (high income, high level of education, balance due and a questionable deduction).

Hite and Sawyer (2000) examined the effect of verbal (for example 'about as likely as not') and numerical (for example '51 per cent') standards on the NZIRD auditors' decisions. One hundred and sixteen tax auditors' participated in the experimental study. They were required to assess a penalty rate on an ambiguous hypothetical case. Team leaders<sup>9</sup> were included as the control variable. Hite and Sawyer (2000) found that the team leaders assessed relatively more penalties than their counterparts (i.e. tax auditors) when the reporting standard was numerical. In contrast, when the reporting standard was verbal, the team leaders were not as willing to recommend a penalty. Similar to Roberts' (1995) study, the experimental approach omitted other contributing factors that could possibly influence tax auditors' behaviour.

Hasseldine and Hansford (2003) examined tax auditors' attitudes to the three stages of the tax auditing process: the initial interview with the taxpayer (planning stage), collection of private account details (execution stage) and the final interview with the taxpayer (judgment formation stage). They adopted a mixed-methods approach in their questionnaire survey, conducting group discussions and telephone interviews with both tax agents and tax auditors. They found that tax auditors' motives in the final interview were to reach final settlement and avoid the case being taken to appeal. Tax auditors needed to close the file and move on to other audits, and the final interview was seen to be beneficial in terms of both cost and time. The authors supported Pentland and Carlile's (1996) notion of the 'expression game'. They suggested that more studies on tax auditors' behaviour and the audit process were necessary to ensure the efficiency and effectiveness of tax programs in tax administration.

Job and Honaker (2003) were concerned with tax auditors' reactions to the newly implemented CM in the ATO. The researchers interviewed 14 ATO auditors and found that tax auditors' personality

.

<sup>&</sup>lt;sup>8</sup> The expression game is a less formal model for strategic interaction, where the parties involved in face-to-face communication join together to sustain normal social interaction. In expression game, it is not just the 'facts' that are at stake: the identities of the participants are being tested and negotiated (Goffman 1969).

<sup>&</sup>lt;sup>9</sup> Team leaders are responsible for overseeing and handling administrative details. They are often consulted on ambiguous issues and their approval is required before penalties can be recommended. It is believed that the team leaders may react differently from the average IRD investigator. Given their important role in an organisation, team leaders with experience of assessing relatively high levels of penalties were separately analysed by Hite and Sawyer (2000).

influenced their behaviour in settlement of audit cases. Tax auditors with a 'rulebook' mentality are confused with the idea of helping and educating taxpayers in the CM. They are uncomfortable with the idea of using higher levels of personal judgment that would contribute to losing their specialised skills and ability to maintain the quality of their auditing work. Audit work has traditionally been regarded by the ATO as the real work of a tax administration. Auditors have had a particular status within a tax office and been seen as members of an elite club. Audit staff possess specialised skill sets, often developed through formal education or training as well as on the job. Further, auditors have competed with each other to raise revenue. The auditor who raised the highest amount of revenue during the year would receive organisational recognition and a 'good-like' reputation (Job and Honaker 2003). They have been used to command and control administration and have had difficulties striking a balance between being an enforcer and an educator at the same time. Contradicting specialist and generalist roles create conflict for tax auditors. One devastating finding was that some staff used personal judgment rather than following policy and established guidelines (Job and Honaker 2003).

Waller (2007) examined tax officials' challenges in performing fieldwork after the implementation of responsive regulation<sup>10</sup> by the ATO. Some of the respondents in Waller's study were tax auditors. Using evidence from a qualitative study, the authors found that field officers seemed to be receiving mixed messages on how to do their jobs. On the one hand, they are encouraged to be flexible in their approach, asking additional questions if anything seems amiss. On the other hand, they are constrained by the ATO's quality assurance requirements, which translate into pressures on field officers to stick to written procedures. This commitment to the written procedures seems contrary to the spirit of responsive regulation, which uploads flexibility of approach. Moreover, the study shows that sticking to the procedures limits the opportunity to detect non-compliance, and also has the unintended consequence of reducing taxpayer trust and confidence in the tax system.

Muhammad (2013) explored IRBM auditors' enforcement regulatory styles using the grounded theory methodology. The researcher conducted in-depth interviews with forty-nine IRBM tax auditors that explored their enforcement regulatory styles in resolving audit settlement disputes, reasoning and underpinning beliefs. Consistent with enforcement regulatory theory, the analysis of data shows that tax auditors apply different enforcement regulatory styles—firm, explain and educate, bargaining and threatening. This study also has identified 'avoiding' as tax auditors' enforcement regulatory style when dealing with the public.

# 5. DISCUSSIONS AND CONCLUSIONS

Tax auditors possess a great deal of discretionary power; in many instances, tax auditors are in effect prosecutor, judge and jury in tax assessments matters (Roberts, 1995). Other than studies of the public's negative perception of tax auditors' behaviour that influences taxpayers' compliance and the tax administration system's inefficiency, scholars have given little attention to tax auditors' behaviour. This is in contrast to other fields such as regulatory justice, where agents are treated as proper subjects of research. The failure to subject tax auditors to serious study has resulted in undermining our ability to understand not only the government's behaviour but the behaviour of all parties (i.e. taxpayers and tax agents) since their conduct is so intimately intertwined (Long and Swingen 1991, p. 673).

The review of literature clearly shows that various areas of study on tax auditors' behaviour are still unexplored or required further analysis. An important area of study is tax auditors' compliance behaviour towards audit framework/procedure. Compliant to tax audit framework is vital to ensure the

<sup>&</sup>lt;sup>10</sup> Responsive regulation is an approach that moves away from a command-and-control approach (Braithwaite, 2003) and moves regulators towards having several acts (Ayres and Braithwaite, 1992). Regulators are expected to adopt a suitable enforcement style according to a regulatee's compliance behaviour. Ayres and Braithwaite (1992) suggest that regulators using responsive regulation should start with a persuasive style and switch to escalating punishments only when regulatees consistently refuse to co-operate.

successful – detect noncompliance and inculcate future compliance – of tax audit program and to avoid corruption. Future researchers can adopt the organisational behaviour theory to measure tax auditors' level of compliance and to examine factors that influence their compliance behaviour.

Future researchers also can extend Roberts' (1995) study on tax auditors' judgment and decision-making behaviour. Tax researchers can examine tax auditors' fairness in making decisions and other factors (for example, gender of tax auditors, taxpayers' compliance behaviour and managers' control) that influence tax auditors' judgement and decision-making. Researchers can give suggestions to tax authority policies to ensure consistency in decision-making.

Tax auditors' early dispute resolution behaviour is another important area of study that should be a focus for future tax researchers. Smith and Stalans (1994) had identified that tax auditors used different strategies in resolving disputes. However, they failed to explain factors that influence tax auditors' dispute resolution behaviour. Future studies should identify the factors by adopting experimental research approach.

## **ABSTRACT**

Takaful is the Shariah compliant version of conventional insurance and it is not excluded from the convergence wave of International Financial Reporting Standards (IFRS). Malaysia's convergence to IFRS has been effective as from January 1, 2012. In relation to Islamic financial transactions, the key challenge has been to find a relevant accounting framework that will allow for comparability with conventional finance as well as international comparability without affecting the Shariah compliance. It is questioned as to whether IFRS could adequately address the reporting of takaful operators, or whether the transactions are so unique that some other form of accounting framework would be required. The current development of financial reporting requirements for takaful has led local standard setters, regulator and professional body to make improvements to existing financial reporting practices to best meet the IFRS Framework. This paper presents a discussion of issues highlighting local accounting regulatory requirements that guides takaful operators in being both IFRS and Shariah compliant. The objective is to outline the issues, not necessarily to resolve them, and to consider the implications they have for pursuing IFRS convergence in the context of takaful industry.

**Keywords:** *Takaful*, accounting regulation, Shariah principles, financial statements

## 1. INTRODUCTION

*Takaful* or some may call it Islamic insurance, is a relatively young market with a potentially huge customer base (KPMG, 2009). In *The World Takaful Report* by Ernst & Young (2012), it has been reported that Global *takaful* contributions had grew by 19% in 2010 to USD 8.3billion. It is expected that the global *takaful* contributions to reach USD12 billion by 2012. Additionally as reported in the same report, Saudi Arabia remained the largest market for *takaful* in the Gulf Corporation Countries.

According to the Bank Negara Malaysia's *Annual Takaful Statistics 2012*, the number of registered *Takaful* Operators has grown from eight in year 2008 to 12 in year 2012 with a total of fund assets worth RM19.05 billion (BNM, 2012). The *takaful* industry has come a long way since the first Islamic insurance company that was set up in Sudan in 1979 and in Malaysia in the year 1984 (Bhatty, 2010; Lim, J *et al.*, 2010). This starting point was spurred by the issuance of Fatwa in 1972 by the National Council for

Islamic Religious Affairs of Malaysia that life insurance is not lawful as it contains *gharar*, *maysir* and *riba* (Engku Ali & Odierno, 2008).

Apart from the significant growth outside the current major *takaful* markets of the Middle East and Malaysia, a large number of *takaful* business are reporting under International Financial Reporting Standards. Such application gives rise to complex accounting and reporting issues (KPMG, 2009). The reason for this complexity can be tracked back to the fundamental differences between *takaful* and conventional insurance models, which is the existence of donation (*tabarru*') feature in *takaful*.

ACCA and KPMG (2010), PricewaterhouseCoopers (2010) and AOSSG Research Report (2010) highlighted a few key issues with the adoption of IFRS that may compromise Shariah requirements, such as whether the definition of 'insurance contract' include *takaful*; the classification and measurement of *qard* in the financial statement of the *takaful* operator and *takaful* fund; the recognition of participants' contribution as revenue or liability; and whether the presentation of financial statements of *takaful* operator and *takaful* fund be consolidated or separated or combined, etc.

Therefore, this paper seeks to examine the development of accounting standards and guidelines in relation to *takaful* operations in its attempt to reconcile issues and accommodating Shariah principles within the IFRS framework. The main focus of this paper is on the issues related to the presentation of financial statements of *takaful* operators.

## 2. LITERATURE REVIEW

# 2.1 Takaful and Conventional Insurance

Islamic Finance and *Takaful* have its appeal for the strong ethics of the system of fairness, transparency, distribution of wealth leading to social goodness and environmentally focus for generating economic activity (Bhatty, 2010). This is because the Shariah discourages creating money from money and hence prohibits interest. As such, Islamic financial transaction links deposits and investments to real underlying assets. With these principles, the Islamic financial institutions have managed to maintain more consistent returns, even during the economic downturn. However, the industry was not totally immune to economic fallouts, especially from non-performing loans and depressed real estate assets.

Takaful is not dissimilar to conventional insurance (i.e. that is non-mutual insurance), and yet it has distinct differences (Bhatty, 2010). It compensates financially for protection against unforeseen risks just like conventional insurance. However, it functions based on risk sharing rather than risk transfer of that by conventional insurance. Takaful is bound by and based on same scientific rules and actuarial approaches to mortality rates, morbidity rates, loss ratios, claims experience and discounted cash flows for calculating price of risk and evaluation of liabilities. It can be said that takaful is like conventional mutual insurance as its participants conceptually own the co-operative takaful pool but takaful also has shareholders to support the development and expansion plans which is different from mutual companies.

It is important to highlight what makes conventional insurance forbidden from Shariah perspective. Firstly, in conventional insurance, the insurer accepts premiums from the insured at a level which it anticipates will cover claims and result in a profit. This process of anticipation is akin to *maysir* (speculation). Secondly, the insured pays premium to the insurer in exchange for indemnity against risk that may not occur. This process of ambiguity is akin to *gharar* (uncertainty or ambiguity). Lastly, the insurer engages in investments that may derive their income from interest and or prohibited industries. Therefore, this process is akin to *riba* (usury) and or relates to *haram* (prohibited) activities.

Takaful is allowed by Shariah due to its concept of social solidarity, cooperation and mutual indemnification (ta'awun) (Engku Ali & Odierno, 2008; Ernst & Young, 2010). It is a pact amongst a group that agrees to donate contributions to a fund that is used to jointly indemnify covered losses incurred by the members. What makes takaful Shariah compliant is the existence of a contract of donation with a condition of compensation. This is not evident in the conventional insurance as it is mainly based on the contract of sale (indemnity or protection) and purchase of insurance policy (premium paid by participants).

## 2.2 Financial Reporting Standards and Guidance for Takaful

There are various initiatives for ensuring consistency in reporting for *takaful* companies at the international as well as local arena. At the international level, the International Accounting Standards Board (IASB)was established on 1 April 2001, is responsible to develop International Financial Reporting Standards (IFRS), which are accounting standards promulgated after 2001, and to enforce the use of each standard. Many of the standards forming part of IFRS are known by the older name of International Accounting Standards (IAS). The accounting standards put forth for use by *takaful* operators is known as IFRS 4 *Insurance*. It is made effective for use in Malaysia on 1 January 2012.

Another international accounting standard setting body, Accounting and Auditing Organisation for Islamic Financial Institution (AAOIFI) was established in 1990 in order to cater for Islamic financial institutions (IFIs). The accounting standards are specific in nature as it focuses on the financial instruments used by IFIs, such as *Ijarah*, *Mudarabah*, *Murabaha*, *Salam*, *Islamic Insurance* etc.. Countries such as Bahrain, Dubai, Jordan, Lebanon, Qatar, Sudan and Syria have adopted AAOIFI's standards. It is difficult to say that AAOIFI has gain popularity and acceptance at the global arena as most of the countries that adopt are middle-eastern countries where IFIs are mostly located. Further, the proponents of AAOIFI opines that AAOIFI's accounting standards are more relevant for the use by IFIs rather than adopting IFRS that may not portray the true nature of Islamic financial instruments.

The accounting standard setting in Malaysia is spearheaded by Malaysian Accounting Standards Board (MASB). Malaysia has had a comparatively easy journey towards convergence since it has been incorporating the provisions of (International Accounting Standards) IAS into local accounting standards since 1978 (Zainal Abidin, 2008). The current Financial Reporting Standards (FRSs) issued by the Malaysian Accounting Standards Board (MASB) are already compliant with IFRS. On 19 November 2011, the MASB had issued a new accounting framework, the Malaysian Financial Reporting Standards (MFRS) Framework. This issuance was made in conjunction with the MASB's plan to converge with IFRS in the year 2012. The MFRS Framework comprises standards as issued by the IASB which are effective as from 1 January 2012. It also comprises new/revised standards recently issued by the IASB that will be effective after 1 January 2012 such as Standards on financial instruments, consolidation, joint arrangements, and fair value measurement and employee benefits, among others. Therefore, for the case of discussion, IFRS 4 is similar to MFRS 4 *Insurance*.

In year 2011, MASB in its effort to ensure accounting standards for the *takaful* industry is at par with the global trend of IFRS Framework and at the same time adheres to Shariah principles, issued the Discussion Paper *i-1 Takaful*. The Discussion Paper discussed seven areas of contentious issues in applying IFRs to *takaful* operations. Then, in 2012, MASB issued a Feedback Statement which comprised of the feedback received from nine respondents consisting of governmental and professional bodies, takaful and insurance entities, a bank, an actuary and a foreign regulator.

Bank Negara Malaysia (BNM) as the regulator of *takaful* operators is steadfast in regulating the operations as well as the reporting of *takaful* operators. In year 2010, BNM had issued *Guidelines for Financial Reporting for Takaful Operators* (BNM/RH/GL 004-6). This guideline provides guidance on

the disclosure requirement for financial statements of *takaful* operators apart from guidance on the compliance to Financial Reporting Standards, measurement of *qard*, etc. In June 2013, BNM has updated this guideline in line with the issuance of the Islamic Financial Services Act 2013 that is made effective in July 2013. The new guideline titled *Financial Reporting for Takaful Operators* (BNM/RH/GL 004-24) emphasized the need to comply with the MFRS Framework apart from the above mentioned content. There is not much difference on the part of presentation of financial statements of *takaful* operator, except for the measurement of *qard*.

Malaysian Institute of Accountants (MIA) had issued implementation guidance in May 2013 titled Guidance on Special Matter No. 2 Presentation of Financial Statements for Takaful Companies; and Classification and Measurement of Qard. The suggestion put forth is to assist preparers of account for takaful operators in applying MFRS 4 Insurance and regarded this guideline as best practice to complement the reporting requirements in MFRS 4 Insurance.

# 2.3 Shariah issues for Presentation of Financial Statements for Takaful

Modern *takaful* arrangements are designed to offer participants protection that is comparable with conventional insurance whilst adhering to *Shari'ah* principles. *Takaful* is established on the concept of *tabarru'* (donation) and *ta'awun* (mutual cooperation), that is the *takaful* participants pay contributions to a fund to mutually indemnify each other instead of purchasing insurance from an insurer. This is different from conventional insurance which is based on the sale of the protection by the insurer in return for premium as consideration from the policyholder. From Islamic perspective, the above mentioned sale contract is prohibited because it contains elements of *gharar* (uncertainty), *riba*(excess or usury), and *maisir* (gambling).

According to Morshed (2003), the nature of *takaful* operations, in terms of detailed accounting, is largely similar to that of conventional insurance operations except for areas such as method used to remunerate *takaful* operator, the nature of mitigating risks and the nature of investments made by the *takaful* operator. The point of view proposed by Morshed (2003) considering the *takaful* operation within the ambit of Pakistani regulatory environment. From the Malaysian scenario, MASB had conducted discussion with the industry players and issued Discussion Paper *i*-1 on *Takaful* as well as Feedback Statement containing public comments on the accounting issues raised when applying MFRS 4 *Insurance* for *takaful* operations.

The application of MFRS 4 *Insurance Contracts* has aroused various *Shari'ah* issues for *takaful* operators as mentioned below:

- i. The definition of *takaful* may not be covered in MFRS 4. This raises the question of whether there is an element of acceptance of significant risk or not.
- ii. The classification and measurement of *qard* (interest free loan) that is provided by the *takaful* operator to cover for the shortfall in the *takaful* fund.
- iii. The presentation of financial statements of the *takaful* operator. This raises the question as to whether the financial statements should reflect a separation of the assets and liabilities of the *takaful* fund from the *takaful* operator.
- iv. The inclusion of *retakaful* contract in MFRS 4. This raises the question of whether *retakaful* is similar to reinsurance.
- v. The recognition for participation feature in *takaful* contract as liability. This raises the question of timing of recognition.
- vi. The recognition and presentation of revenue of the *takaful* operator. This raises the question of whether only agency fees and return on investment should be recognised in the separate financial statements of the *takaful* operator and whether participations' contribution can be considered as revenue in the consolidated financial statements.

The focus of this paper is to discuss the current developments in the regulatory requirement for item iv that is the presentation of financial statements for *takaful* operators. The disclosure on the financial position and performance of *takaful* operators is important to attract future investments from potential shareholders. More importantly *takaful* operator should be transparent to the participants about the management of the donation (*tabarru*') fund and the return on investment made using the contributions from the participants.

## 3. RESEARCH METHOD

Library search was conducted to analyse the developments in the accounting standards and guidelines as issued by AAOIFI, MASB, BNM and MIA to accounting for *takaful*. These standards were chosen as it provides an indication as to the accounting principles or stand that each standard setter upholds and believes. For instance, standards issued by AAOIFI are based on Shariah principles and advocate contractual obligations or legal form over economic substance. On the other hand, MASB and MIA and BNM tends to be more of supporting the notion of economic substance over form where economic substance of a transaction is deemed as more true and fair in reflecting rights and obligations of the reporting entity rather than the legal form or contractual obligations.

Content analysis was performed by analyzing the suggestions provided in the accounting standards and guidelines issued by the respective standard setters, regulator and professional body. The accounting standards and guidelines analyzed covers MFRS 4 *Insurance*, MASB Discussion Paper *i-1 Takaful*, BNM's *Financial Reporting for Takaful Operators*, *MIA's Guidance on Special Matter No. 2 Presentation of Financial Statements for Takaful Companies; and Classification and Measurement of Qard* and lastly, AAOIFI's FAS 12 *General Presentation and Disclosure in the Financial Statements of Islamic Insurance Companies*. The main discussion revolves around the issue of presentation of financial statements, whether the *takaful* operator should prepare separate financial statements for its operation and the participants' fund or consolidate both accounts.

### 4. RESULTS

The MASB (2011) in its Discussion Paper *i*-1 on *Takaful* highlighted that the structure of a modern *takaful* undertaking consists of a normal shareholder-owned company which includes the participants' fund that is considered to be the property of the participants, but which does not have a separate legal personality. Therefore, fund segregation would prevail whereby not all the assets of the participants' fund can be utilized to meet the *takaful* operator's general obligations such as rent, salary and others. As a result of this distinctive nature of the participants' fund and the *takaful* operator, in some jurisdictions, there may be presentation and disclosure requirements that emphasize separate financial statements for the funds that the *takaful* operator manages.

Both of Bank Negara Malaysia's (2013; 2010) Financial Reporting for Takaful Operators (BNM/RH/GL 004-24) and Guidelines for Financial Reporting for Takaful Operators (BNM/RH/GL 004-06) require separate financial statements to be prepared for the participants' fund even though the fund is not a separate legal entity and is not registered under the National Trust Fund Act 1988. This presentation requirement would be in compliance with the Shariah view that the participants' fund is distinct or separate from and 'independent' of the takaful operator.

However, the MASB noted that BNM is cognizant of the fact that certain aspects of the modern *takaful* arrangement create a relationship between the operator and the participants' fund that may not be

adequately conveyed through separate statements alone. As such, the *BNM guideline* also alludes to aggregate financial statements to be prepared as evidenced in its *Appendix* which provides for the elimination of entries in the preparation of aggregated financial statements. In this *guideline*, BNM no longer specifies the format that these aggregated statements must take, and while some stakeholders are amenable to the presentation of consolidated financial statements as required by MFRS 127, others have indicated a preference to retain the combined financial statement presentation required under the previous BNM guideline, that is *Garis Panduan Takaful*, *Takaful* 6 (GPT-6).

The requirement of AAOIFI (2010) in paragraph 39 of FAS 12 General Presentation and Disclosure in the Financial Statements of Islamic Insurance Companies requires that:

"Disclosure should be made on the face of the statement of financial position of the following assets, with separate disclosures in the notes to the financial statements, of assets jointly financed by the owners' equity and policyholders' equity, and those exclusively financed by each of them wherever possible ..." (AAOIFI, 2010, FAS 12, Paragraph 39).

Paragraph 40 of FAS 12 requires similar disclosures for the various items of liabilities, and paragraph 2 of AAOIFI FAS 12 considers separate statements for participants' revenues and expenses to be part of "the complete set of financial statements that should be prepared by the company". Such disclosure and presentation are not required by current IFRS; and indeed are absent in the financial statements of many conventional insurance companies. However, respondents in the AOSSG Research Report (2010) opined that without such separation, the formal structure of a takaful set-up would be obscured. They may argue that since not all the assets of the legal entity are available to meet all the liabilities – for example the participants' fund is not available to pay the salaries of the staff – it would be misleading simply to consolidate the various asset pools.

The AOSSG Research Report (2010) also noted that an unusual presentation results from combining the separate statements of the *takaful* operator and the participants' fund when *qard* is treated as a receivable. In the *takaful* operator's financial statement, the *qard* disbursed by the *takaful* operator to participants will be recorded as receivable in the *takaful* operator's financial statement, whereas in the participants' financial statements, the *qard* received is used to off-set a deficit in the participants' fund. Then, upon combination of the financial statements, the cash entries would contra-off resulting in the combined entity to have a receivable due from itself. Consequently, this would result in an item of 'revenue' being self-generated.

The MASB (2011) in its Discussion Paper *i*-1 on *Takaful* discusses three alternative views on how the financial statements of a *takaful* business should be presented, as follows:

(i) Takaful operator and the takaful fund should present separate financial statements

It is argued that the *takaful* operator is distinct from the participants' fund it manages and the pools of assets are only available to meet the liabilities of that specific pool. This argument goes back to the notion that recognition of the participants' fund as being separate from the *takaful* operator is fundamental to the concept of *takaful* and as such separation has to be preserved in the presentation of financial statements.

(ii) Takaful operator and the takaful fund should present combined financial statements

There is an economic relationship between the *takaful* fund and the *takaful* operator, especially in the activities of managing the fund and providing top-up in case of deficit in the participants' fund. Thus,

there is some merit to an aggregated presentation. These combined statements would aggregate the *takaful* operator's and the participants' fund's income, expenses, assets and liabilities. The MASB also highlighted that there will be intra-group balances that are not eliminated, namely *qard* that would result in a surplus (i.e. revenue as highlighted by the AOSSG Research Report 2010) that is bigger than it really is, or that could even be masking a deficit. The MASB suggested that by eliminating the intra-group *qard* transaction under a consolidation approach, the group statement would show the actual surplus (or deficit), which would provide useful information for financial statement users.

# (iii) Takaful operator and the takaful fund should present consolidated financial statements

The participants' fund should be consolidated with the *takaful* operator because the operator controls these funds through management and decision making responsibilities, such as setting the contributions that should be paid by the participants and deciding how those funds are to be managed. Control exists when the parent (i.e. *takaful* operator) has the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities (MFRS 127, paragraphs 4 and 12). The discussion paper further mentioned that the *takaful* operator would consider its involvement in creating and managing the participants' fund, and setting fees obtained from these funds as evidence of the existence of control.

Based on the above alternative views, the MASB Discussion Paper *i*-1 provided a tentative conclusion that the *takaful* operator is required to present consolidated financial statements for itself and the participants' fund that it controls in accordance with MFRS 127 *Consolidated and Separate Financial Statements*. The Discussion Paper *i*-1 also highlighted that the *takaful* operator can provide additional disclosures about the separate individual funds if it finds it important for financial statement users. The MASB reminded that additional disclosures are not prohibited under IFRS, as long as all the IFRS reporting requirements are met.

In the MASB (2012) Feedback Statement, respondents provided mixed views on whether the *takaful* operator should present a consolidated financial statement for itself and its participants' funds. Some preferred separate or combined statements by arguing on the grounds of participants' funds are not a separate legal entity.

The MIA Draft Guidance (2013) suggested a solution that would adhere to both MFRS 4 Insurance and BNM Guidelines (2013). The *takaful* company's financial statement is to be prepared on a consolidated basis and presented in a tabular format identifying the *takaful* operator, each of the *takaful* funds and *takaful* company (on consolidated basis). As such, the assets and liabilities of the operator and participants are presented separately and in the end it is consolidated at the company's level by eliminating any inter-group's transaction and balances, such as *qard*. This format is applicable for the statement of financial position, statement of comprehensive income and statement of changes in equity.

In addition, the MIA Draft Guidance (2013) reminded preparers of account the following items:

- i. Income and expenses as well as assets and liabilities should comply with the recognition and measurement principles of MFRS;
- ii. Deficit of *takaful* fund should be reported as a loss in the financial statements of *takaful* fund and *takaful* company in accordance to the "Conceptual Framework for Financial Reporting"
- iii. Intragroup transactions and balances should be eliminated upon full consolidation.

The Draft Guidance (2013) also provided some illustrative statements of financial position, statement of comprehensive income and statement of changes in equity. When compared to the financial year 2012 of

one locally based *takaful* company, such presentation is already being practiced, that is the tabular format identifying the *takaful* operator, each *takaful* funds and the *takaful* company.

In general, the MIA Draft Guidance has provided suggestions that try to best satisfy both the requirements of MFRS and BNM Guidelines. With such suggestion, participants would obtain an overview of both the *takaful* operator's operation and performance as well as how the *takaful* operator manages the contribution received from the participant, whether there is surplus or deficit that has aroused.

## 5. CONCLUSION

This paper implied that the current development in the presentation of financial statements of *takaful* operator in Malaysia showed attempts made to align both the IFRS Framework and Shariah requirement. Local standard setters, regulator and professional body have shown commendable efforts to safeguard the interests of both participants and shareholders in complying with Shariah principles and ensuring comparability of financial statements. The MIA's proposed best practice of having tabular column presenting both the *takaful* operator's financial position and performance with the participants' fund would allow greater transparency. Future studies should investigate further the actual practices and problems faced on the ground by the *takaful* operators and perceptions by stakeholders on the usefulness of the financial reporting of *takaful* operators. It is crucial for *takaful* operators, regulator, standard setter, Shariah advisors and academicians to collaborate in identifying the practical solution in applying IFRS without compromising the respective Shariah principles. Inputs and feedback should be provided to IASB so that Shariah point of view would also be taken into consideration when IASB issue new or revised/amendments to the existing standards.

# HUMAN CAPITAL AND ECONOMIC GROWTH IN SUB-SAHARAN AFRICAN (SSA), ORGANIZATION OF ISLAMIC COOPERATION (OIC) MEMBER COUNTRIES

Abdalla Sirag<sup>1</sup>
Adamu Peter<sup>2</sup>
Norashidah Mohamed Nor<sup>3</sup>

#### **ABSTRACT**

The poor state of health care facilities in Sub-Saharan African (SSA) countries has attracted series of debate in recent times. Pooling data on Health and education for sub-Saharan Africa (SSA), Organization of Islamic cooperation (OIC) in relation to economic growth over the period 1990-2010, the Hausman test suggests the use of the fixed effect model. After correcting for time invariance, the result reveals that health represented by life expectancy at birth is positive but insignificantly related to economic growth. Education represented by secondary school enrolment seems to be the only significant variable explaining economic growth. The result shows that economic growth would increase by 2.5% if school enrolment increases by 1%. Albeit labour force and gross capital formation are positive, both are insignificant. Therefore, there is a dire need for an increase in health spending by the governments of these countries to offset the low level of health care which might indirectly influence economic growth. The labour force need to be equipped with requisite skills and modern technology to improve their output levels. Infrastructural development has been lacking over the years in this region and this can explain the reason behind the low level of investment attracted thus far. For meaningful growth to be noticed among these countries, enabling environment must be created for investment to thrive.

**Keywords**: Health, Education, Economic growth

## 1. INTRODUCTION

In the history of development economics, labour has been one of the key factors in explaining economic growth. The level of human capital represented by high education and good health status plays fundamental role in determining country's output level. Economic growth theories recommended that the role of human capital is important for growth process. Grossman, (1972) used the theory of human capital to explain demand for health care. He argued that people invest in themselves by demanding health and education in order to increase their income level. Recently, researchers have shown an increased interest in education as well as health as one of the fundamental aspects of human capital and thus economic growth. In the new global economy, health care has become a central issue for all countries especially poor countries. Basically, country with high health level labour force tends to have higher productivity than other country with lower level labour force. Furthermore, healthy people have more ability to continue their education and get more skills. Illness reduces the number of healthy days and income for individuals and therefore, the total loss due to health problems will be very big in poor countries which have low healthcare.

People living in sub-Saharan Africa have the worse health, on the average, in the world; the region has 11% of the world's population but carries 24% of the global disease burden (IFC, 2012). Diseases ranging from HIV/AIDS, Tuberculosis and Malaria have contributed to increased infant mortality and maternal mortality over the years. Education exists in shamble in most countries due to limited availability of medium and long term investment for capital investment. The question is: can all these problems be attributed to the low level of economic growth in this region in general and the OIC members particularly?

The aim of this paper is to examine the role played by health care in 21 members of Organization Islamic Cooperation (OIC). The main focus of the study is Sub-Saharan African countries members of OIC except Somalia due to insufficient data. Although, few studies have investigated the relationship between health and economic growth in OIC, but low health status in Sub-Sahara African (SSA) OIC countries is very disturbing. For example; (Peykarjou, Gollu, Gashti and Shahrivar, 2011) investigated the impact of health on growth in some OIC countries. They came out with positive link between growth and life expectancy at birth. However, they related low growth rate to high fertility in OIC countries. This study critically examines the effect of life expectancy at birth on GDP per capita. The role of improved life expectancy is discussed widely and found to be positively related to growth (Barro, 1996). Although, (Acemoglu & Johnson, 2007) argued that life expectancy has no relationship with economic growth and that maybe to some extend acceptable in case of poor countries with low life expectancy, but not justifiable for countries with high level of health status as in life expectancy. This paper commences with a brief overview of the healthcare and education of SSA OIC countries as related to economic growth. Secondly, discussion on the theoretical and empirical literatures in relation to health and economic growth were explained. The third part focused on data and methodology, followed by result and discussion and finally, the conclusion.

**Table 1: Decade Life Expectancy of SSA OIC Member Countries** 

Table 1. Decade the Expectancy of SSA OTC Wellber Countries						
Country	1990	2000	2010			
Benin	48.7	52.5	55.6			
Burkina Faso	48.5	50.2	54.9			
Cameroon	53.3	50.8	51.1			
Chad	50.7	48.5	49.2			
Comoros	55.6	57.9	60.6			
Cote d'Ivoire	52.6	50.2	54.7			
Djibouti	51.4	53.9	57.5			
Gabon	61.3	59.6	62.3			
Gambia	53.1	55.2	58.2			
Guinea	43.7	48.1	53.2			
Guinea Bissau	42.8	44.9	47.7			
Mali	44.2	47.2	50.9			
Mauritania	55.9	56.9	58.2			
Mozambique	43.2	47.2	49.7			
Niger	41.4	48.3	54.3			
Nigeria	45.6	46.3	51.4			
Senegal	53.2	55.7	58.9			
Sierra Leone	38.7	39.7	47.4			
Sudan	52.5	56.9	61.1			
Togo	52.9	54.8	56.6			
Uganda	47.4	46.0	53.6			

Source: World development indicator, 2010

Table 1 reveals the life expectancy among the SSA OIC countries. It shows that very few countries have performed well to increase the level of life expectancy over twenty years. This is an indication that most of the people in these countries never live up to their full potentials. Therefore, economic growth is likely not to perform better.

### 2. LITERATURE REVIEW

Technology depends on economic factors and capital labour relationship (Romer, 1986). An increase in labour and capital will increase income and explain the ability to maintain high growth rate in the long run. (Ehrlich & Lui, 1991) argued that an increase in life expectancy stimulate economic growth through encouraging human capital investment in future generations. (Mankiw, Romer and Weil, 1992) mentioned the significance of including health with education to analyze the role of human

capital. (Barro, 1996) emphasized that economic growth enhanced by higher initial health and education level expressed by life expectancy and education as one of most important determinants of growth. He argued initial level of health seems to have greater impact on growth. In other words, high level of health is very crucial in order to stimulate economic growth.

In more recent times, literatures have discussed the relationship between health care and economic growth. (Bhargava et al., 2001) investigated the effects of health indicators such as adult survival rates (ASR) and Total fertility rate on GDP growth rates at 5-year intervals in 92 developing and developed countries. The findings indicated that fertility rate to have a statistically negative effect on economic growth. In addition, adult survival rate is found to significant positive effects in explaining economic growth. (Echevarr, 2003) found that increases in life expectancy leads to higher growth rates only if they are accompanied by simultaneous increments in the working period. Therefore any increase in life expectancy represents an enlarged working period, thus increasing the return on human capital investment. (Echevarría & Iza, 2006) examined the impact of life expectancy and economic growth in existence of social security system with considering the role of education. The main finding of this study is that, increases in life expectancy imply changes in schooling and retirement age which imply changes in the growth rate. (Lucian et al. (2007) studied the relationship and causality between economic growth and diseases in Europe. They argued that the higher the economic growth, the higher the usage of hospital services and then reduces disease rates, while the prevalence of the diseases influence economic growth negatively.

In attempt to analyse the role of health care on economic growth, (Leung & Wang, 2010) found health care has a positive effects on output when life expectancy is high. They argue that when life expectancy is high people tend to save more, thus; increase saving boosts total output and welfare. (Peykarjou et al., 2011) studied the relationship between health and economic growth in Organization Islamic Conference member countries by using health indicators such as life expectancy and fertility rate. Generally, the results state that GDP and life expectancy have a positive and significant impact on economic growth. However, fertility rate has a negative and significant impact on economic growth. Thus, most likely fertility rate and population growth in OIC member countries decreases economic growth.

Analysing the short run and long run causality between economic growth and health in ASIAN countries, (Djafar & Husaini, 2011) found that causality between GDP and health is more likely to occur in the long-run than in the short-run indicated that changes in economic growth may not cause health instantly and vice versa. The countries may also have only short-run causality or only long-run causality. The long run causality from GDP to health is likely to dominate the causality relationship between GDP and health. (Pradhan, 2011) investigated the casual relationship connecting health spending and economic growth in 11 OECD countries. By using panel unit root test, panel cointegration method and error correction model, the results show that health spending has long run relationship with economic growth. That is, health spending causes economic growth in OECD countries.

(Majdi, 2012) also examined the relationship between health and economic growth by testing the impact of life expectancy and health expenditure on growth using panel data for 15 countries of the north and south bank Mediterranean. The result revealed positive effects for health expenditure on growth. The elasticity of the growth of the GDP with regard to healthcare costs equal to 0.86 in the (Countries North Bank Mediterranean) and 1.27 in the (Countries South Bank Mediterranean). In addition, life expectancy shows positive impact on growth in all countries. The author argued that improvement in life expectancy encourage saving for pensions. These savings enhanced liquid assets for the investment. (Granados, 2012) studied the relation between health progress, as measured by annual gains in LEB (Life Expectancy at Birth) (or declines in mortality), and economic growth during the years 1840-2000 in England and Wales. He found a negative relation between GDP growth and health progress. In years in which the economy grew slowly or even contracted, gains in LEB were greater than in periods of faster economic growth. This negative association of economic growth

with health progress occurs at very short lags, it is present for both males and females, and is particularly noticeable in the first half of the 20th century.

## 3. DATA AND METHODOLOGY

Based on economic growth theories the relationship between economic growth and health can be specified in Cobb-Douglas production function as:

$$y = Ak^{\alpha}l^{\beta}.....(1)$$

Where y output per capita of the economy, A is total factor productivity, l is labour per capita stock and k is capital stock per capita.

According to human capital theory (Becker, 1964) and (Grossman, 1972) productivity would increase through the impact of human capital. Let assume total factor productivity is affected by health H and education E, and the other variables are exogenous:

$$A = f(H, E) \dots (2)$$

Substituting equation 2 in to equation 1 produces:

$$y = HEk^{\alpha}l^{\beta}.....(3)$$

#### **Econometrics Model**

Expressing the variables in natural logarithms produces:

$$lnGDP_{it} = \beta_0 + \beta_1 lnLE_{it} + \beta_2 lnSER_{it} + \beta_3 lnCF_{it} + \beta_4 ln LF_{it} + u_{it}$$
(3)

Where: lnGDP is log of real GDP per capita (constant 2000 US\$), lnLE is the natural logarithm of life expectancy at birth as proxy of health care, lnSER is gross secondary school enrolment, lnLF is the log of total labour force, and lnCF is gross capital formation as percentage of GDP. The data is collected from World Bank data base 2012.

**Table 2: Panel Results for SSA OIC Member Countries** 

Variable	Pooled OLS	Random Effect	Fixed Effect
-Constant	-0.4707	4.8002***	4.262***
LLE	1.988***	0.4230	0.2080
SER	0.337***	0.2857***	0.2551***
LCF	0.0337	0.0196	0.0112
LLF	-0.1725***	-0.0978	0.0030
Breusch-Pagan LM test	(0.0000)		
Hausman test		(0.00)	

Values in parenthesis denote p-value, \*\*\* indicate significance at 1% levels. Raw values are coefficients

#### 4. RESULTS AND DISCUSSION

The OLS result is found to be inconsistent and inefficient. The LM test has revealed very strong evidence that random effect is preferred against pooled OLS and therefore, the null hypothesis is simply rejected. In order to get reliable findings, the random effect and fixed effect models were estimated. The Hausman test was used to compare between random effect model and fixed effect model. The result of Hausman has shown the p-value is less than 0.05 implying that fixed effect model is more appropriate to this study and thus fixed effect is used for conclusion. It is obvious from table 2 that only secondary school enrolment (SER) is positively correlated and significant to economic growth. The most striking result to emerge from the data is that life expectancy (LLE) is not significant in explaining GDP per capita in this particular study. In addition, neither gross capital formation (LGCF) nor labour force (LLF) is significant in determining the level of economic growth is Sub-Saharan African countries member of OIC.

Only few studies from previous literatures found no association between life expectancy and economic growth. (Acemoglu & Johnson, 2007) found no relationship between economic growth and improvement in life expectancy at birth. (Sanso & Aísa, 2006) in their study, suggest causality running from economic growth to life expectancy but not the other way round. Our findings shade light on the relationship between economic growth and human development indicators (i.e. Education and Health) among sub-Saharan African OIC member countries. Health status in these countries has been very poor generally compare to high income countries. For example, life expectancy is ranging from 47.4 year to 62.28 in 2010 in Sierra Leone and Gabon respectively. This might explain the reason for the dwindling economic growth among the countries.

It is interesting to note that education represented by secondary school enrolment is the only significant variable in explaining economic growth. The result suggests that more educated people are, the more the country's income. In terms of elasticity, a 1% increase in secondary school enrolment will led to 0.26% increase in GDP per capita. Although the level human capital is quiet low but education is a very influential variable to determine economic growth in these countries. Surprisingly, panel data analysis did not show any significant relationship between GDP per capita with either investment or labour force. The expected sign for both variables were as suggested by the theory of economic growth. Both variables are positive but insignificantly related to economic growth. It seems possible that these results are due to inefficient investment and quality of labour force in among these countries. Investment can be insignificant due to many reasons such as low level of infrastructures, skilled labour and also the level of corruption or political instability. On the other side, labour force is affected by numerous factors such as low quality of education and health care. All these are possible explanations for the insignificant relationship between investment and labour force in Sub-Saharan African OIC countries members.

#### 5. SUMMARY AND CONCLUSION

This paper seeks to investigate the importance of healthcare and education to economic growth for SSA OIC members. It will also contribute to the bulk of literatures that relates health and education to economic growth. More precisely, the aim of this study is to determine the impacts of healthcare and education on economic growth in 21 Sub-Saharan African OIC members; Somalia is excluded due to insufficient data. The study used life expectancy at birth as proxy for health, secondary school enrolment to represent education, gross capital formation and labour force to check their effects on GDP per capita. The study used panel data analysis and fixed effect is chosen according to Hausman test to achieve the desirable results. The study revealed that life expectancy is not associated with economic growth in Sub-Saharan African OIC countries. Secondary school enrolment is found to be positive and significant. However, gross capital formation and labour force are both positive but insignificantly related to economic growth.

In conclusion, the outcomes of this study indicate that the healthcare in Sub-Saharan African OIC countries members is too low to the extent that it cannot contribute meaningfully to economic growth. There is a dire need for an increase in health spending by the governments of these countries to offset the low level of health care which might indirectly influence economic growth. The evidence from this study suggests that education plays a very decisive role in rising income level. However, more spending is needed in the educational sector in terms of research and development to further raise the level of economic growth. This also applies to investment and labour which they are not effective factors to determine economic growth in this study. The labour force need to be equipped with requisite skills and modern technology to improve their output levels. Infrastructural development has been lacking over the years in this region and this can explain the reason behind the low level of investment attracted thus far. For meaningful growth to be noticed among these countries, enabling environment must be created for investment to thrive.

# CURRENCY CONUNDRUM AND INTRA-OIC TRADE: THE CASE OF MUSLIM ECONOMIES IN EAST AFRICA

Mohamed Ibrahim Nor<sup>1</sup> Tajul Ariffin Masron<sup>2</sup>

#### **ABSTRACT**

American dollar has been used for decades as a medium of international trade exchange but the adverse effects of using the dollar is increasing over time as it is valued differently in different countries. The purpose of this study is to examine the effect of using the dollar as a medium of trade exchange among the economies in the Muslim world. While modeling the prices of goods traded among Muslim countries, the study found that adoption of US dollar as a medium of trade exchange among OIC economies poses a considerable currency conundrum, which affects both exporting and importing economies adversely. The results of this study imply that OIC will face difficulties to achieve its target of strengthening intra Islamic economic and trade cooperation as long as the dollar remains the medium of trade exchange among its economies.

Keywords: OIC economies, conundrum, prices of goods, medium of trade exchange

## 1. INTRODUCTION

To enhance trade amongst the Muslim world, many programs have been implemented by Organization of Islamic Cooperation (OIC). These programs range from research, training, raising awareness, and bringing traders and policy makers together to discuss on this matter. Though a significant contribution has been made by OIC to improve the trade among OIC member states, trade statistics illustrate the volume of intra-OIC trade (export and import) remains very small.

Apart from common challenges of production such as access to skilled human capital and suitable infrastructure, trade among OIC member states is suffering from lack of efficient and stable medium of exchange. US dollar is used as a medium of trade exchange among OIC member states but neither exporters nor importers use this currency in their local market. As most of OIC member countries use a floating exchange rate regime, the bilateral exchange rate between their local currencies and the US dollar fluctuates overtime. According to Robert Mundell, the 1999 Nobel Prize winner for Economics, exchange rate is the single factor that could lead to the collapse of a country (Chwialkowska, July 25, 1998). One of the main objectives of a foreign exchange market is to support the real sector by providing stable currency exchange services for traders and business people. In order for currency exchange markets in the Muslim world to be supportive to the intra-OIC trade, it has to be stable in a way that traders can manage their exchange rate risk and hedge the potential losses of their business. Without stable currency, national trade will suffer and export oriented businesses will not be able to effectively operate and efficiently compete in the global market.

In the context of OIC member states in East Africa, traders have been suffering from exchange rate risk due to the multiple currencies used to run their trade and the volatility of the local foreign exchange markets. Traders in these counties are not only worried about volatilities of their currencies but also

<sup>&</sup>lt;sup>1</sup> School of Management, Universiti Sains Malaysia, 11800 USM, Penang, Malaysia. Corresponding author: <u>fachay@gmail.com</u>

<sup>&</sup>lt;sup>2</sup> School of Management, Universiti Sains Malaysia, 11800 USM, Penang, Malaysia

volatilities of the currencies of their trading partners (OIC member states). As the currencies of the states in OIC such as Bangladesh, Pakistan, Turkey, Malaysia, and Indonesia are not actively traded in the markets of the OIC member states in East Africa, traders in low income OIC countries such as Somalia, Sudan, Djibouti, and Uganda use the US dollar to facilitate their trade. Since US dollar is used to facilitate intra-OIC trade, the volatility of US dollar is an essential determinant of the prices of goods imported from OIC member states.

Alternatively, despite the domestically-driven inflation, there is an imported inflation in OIC-East African states, which is more destructive to the economy and to the purchasing power of the people particularly poor and low-income households. This imported inflation is classified into two kinds; dollar-imported inflation and trade-imported inflation. While dollar-imported inflation is inherent in the use of US dollar, trade-based inflation is the inflation incorporated in the imported goods. However, both of them contribute to the deterioration of the local purchasing power.

Trade in OIC member states in East Africa has been suffering from immature and volatile foreign exchange markets. And since neither the exporter nor the importer's currency is accepted by both parties, the use of US dollar as a medium of exchange of the trade among OIC member states has become dominant. As different currencies are involved in each transaction, intra-OIC traders are enforced to consider changes in the markets of their trading partners as well as the changes in the US dollar. As Intra-OIC traders are exposed to these challenges, they are enforced to conceive different rates of inflation at once. This currency conundrum might be one of the reasons behind the poor performance of intra-OIC trade. The purpose of this paper is to examine the impact of using US dollar as a medium of trade exchange among economies in the Muslim world. This study models such events and examines potential adverse effects of such events to OIC member states in East Africa.

#### 2. REVIEW OF THE LITERATURE

Inflation has been a common issue in Africa for the past 20 years due to the excessive devaluation of local currencies. Inflation is generally defined as "devaluation of local currency" but some people do mix between inflation and the effect of inflation. Inflation is an outcome of an uncalculated human action which leads to a general price increase and at the same time to the weakening of the purchasing power of the people. According to Friedman (1977), "Inflation is always and everywhere a monetary phenomenon". This means inflation occurs due to problems in monetary policies and there would be no inflation if there were no money (King, 2001). Though inflation is driven by monetary side miscalculations, its effect on financial sector is less than its effect on the real sector. When inflation hits the real sector, the purchasing power of the people erodes until people cannot make the ends meet. Whilst Milton Friedman's famous proposition about inflation has been challenged by some studies (Willard, Guinnane and Rosen, 1996; Smith and Smith, 1997; McCandless, 1996), Burdekin and Weidenmier (2000) has offered new proof that Friedman proposition is entirely correct. Friedman's proposition reveals that drastic change in the quantity of money leads to a similar drastic change in the price level.

The current global monetary crisis has negatively affected global foreign exchange markets through different channels. Nonetheless, the adverse effects of these crises on least developed countries (LDCs) is severe. Since foreign currency markets are essential for these countries, crisis in foreign exchange market is almost equal, to them, losing both domestic and international trade leading into critical economic situation. This critical economic condition might reach in some countries a level of human crisis where people cannot afford basic livelihoods. In addition to droughts and armed conflicts, increasing food prices is contributing to the massive humanitarian crisis in East African countries such as Somali, Djibouti, Ethiopia and Kenya (IRIN, July 2011)<sup>3</sup>. Since the fall down of the Bretten Woods systems in 1973, foreign exchange markets in general have been highly volatile (Arize, Osang, & Slottje, 2000).

\_

<sup>&</sup>lt;sup>3</sup> Retrieved June 19<sup>th</sup> 2013: http://www.irinnews.org/report/93142/kenya-somalia-drought-decimates-livestock-hits-incomes

Subsequent to the collapse of fixed exchange rates, a central question was how such dramatic paradigm shift affects the growth of international trade.

Inflation remained an active phenomenon in Africa for decades because of poor monetary policies that pushed the creation of an active parallel market in the continent. Even when African governments such as Ghana wanted to improve the quality of their national currencies, they could not do it because of the existence of an active parallel market as prices quickly adjust in the parallel exchange rate (Chhibber & Shafik, 1990). Apart from local inflation, Africa is suffering from intra-and inter-continental transmission of inflation. Whilst measuring the intra-and inter-continental transmission of inflation in Africa, Jeong, Philip Fanara, and Charlier E. Mahone (2002), reported that USA is the leading producer of inter-continental inflation in Africa.

To reduce the level of inflation, some researchers have proposed the use of common currency that can at least contribute to the stability of prices of the goods traded among the countries in the same monetary area. Though it has been emphasized on establishing a currency union among trading partners to reduce adverse effects of using foreign currencies such as US dollar in their bilateral trade, researchers are in different opinion. While using data from over 200 countries, Glick and Rose (2002) found that countries left currency unions experience significant declines in bilateral trade economically and statistically. Moreover, Glick and Rose (2002) found that there is an economically and statistically significant effect of currency union on trade and their estimates indicate that bilateral trade increases when a pair of countries form a currency union. According to (Masron & Yusop, 2009), while the economic integration of ASEAN countries is anticipated to come up with a positive results, the integration can be strengthened through monetary integration. For them, having a common medium of exchange is important to facilitate bilateral trade in ASEAN countries.

Organization of Islamic Conference (OIC) was established in 1969 with the aim of ensuring and protecting the interest of the Muslim world in the spirit of promoting international peace and harmony. In 2011, the organization changed its name from Organization of Islamic Conference (OIC) to Organization of Islamic Cooperation (OIC). OIC is a strong organization as it's the collective voice of the Muslim world and has a permanent delegation to the United Nations (UN). Regarding to the economic interest of the Muslim world, OIC established several frameworks to strengthen intra Islamic economic and trade cooperation (Kusuma, 2010). This economic and trade cooperation is expected to facilitate the establishment of an Islamic common market. The Protocol on the Preferential Tariff Scheme (PRETAS) is among these frameworks and this is instituted to reduce trade restrictions among member states to ultimately promote trade and growth (Kusuma, 2010).

Though OIC has been trying to improve the intra-OIC trade, trade among Muslim world is not as anticipated. Even OIC countries in Gulf Cooperation Council (GCC) did not achieved their unified economic policy as the intra-regional trade among these countries (United Arab Emirates, Bahrain, Saudi Arabia, Oman, Qatar and Kuwait) is still at a modest level (Sahib & Kari, 2012). On the other hand, Ahamat (2009) found that intra-OIC trade still remains low in terms of its volume and its proportion (compared to other trade systems). Moreover, Ahamat (2009) identified that intra-OIC trade is concentrated in few OIC countries and in certain types of products. As shown in table 1, the average intra-OIC trade needs to be revolutionalized to increase trade among OIC member states. Apart from Djibouti and Somalia, the intra-OIC trade of the sample countries is less than 30%. Indonesia, Malaysia, Bangladesh, UAE and Uganda have the lowest trade (export and import) with OIC member states. More interestingly, Somalia and Djibouti have the highest percentage in Intra-OIC exports (80% and 73% respectively) but have less than 30% of intra-OIC imports.

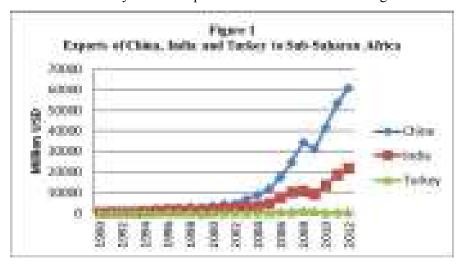

**Table 1: Intra-OIC Trade (1970-2011)** 

No.	Country	Geographical Zone	Export (% Mean)	Imports (% Mean)	Trade (% Mean)
1	Bangladesh	South Asia	14	14	14.0
2	Djibouti	East Africa	73	21	47.0
3	Indonesia	South East Asia	6	9	7.5
4	Malaysia	South East Asia	6	7	6.5
5	Oman	Middle East and North Africa	20	30	25.0
6	Pakistan	South Asia	26	30	28.0
7	Somalia	East Africa	80	28	54.0
8	Sudan	East Africa	21	26	23.5
9	Turkey	Europe	22	18	20.0
10	Uganda	East Africa	7	8	7.5
11	UAE	Middle East and North Africa	15	13	14.0

The trade and investment competition in low-income countries such as East African countries has increased due to the interest of the emerging economies such as China and India to these countries. The link between China and Sub-Saharan Africa has been growing rapidly in trade, investment and aid and Chinese involvement in Africa is driven primarily by the quest for material inputs necessary for Chinese infrastructure investments and flourishing manufacturing sector (Kaplinsky, McCormick, & Morris, 2007). Likewise, India has remained interested in Africa and its involvement in West Africa has increased drastically due to India's fierce competition from the West and other countries to secure West Africa resources (Singh, 2007). Apart from securing resources in Africa, India wants to make West Africa one of its long-term energy sources. Though India's quest for energy in West Africa is not currently a principal component, India invests in these countries as one of its bid to diversify energy sources (Singh, 2007).

Apart from China and India, Turkey is strongly striving to position itself in Africa. Turkey is taking part in the competition in Africa. Turkish relation with Africa has been evolving since 1998 and it has come as a passive attempt after Turkey decided to strengthen its links with Africa following Turkey-Africa Cooperation Summit (Ozkan, 2008). Though Turkey is trying to penetrate African markets, its exports to Sub-Saharan Africa are very small compared to China and India. See figure 1.

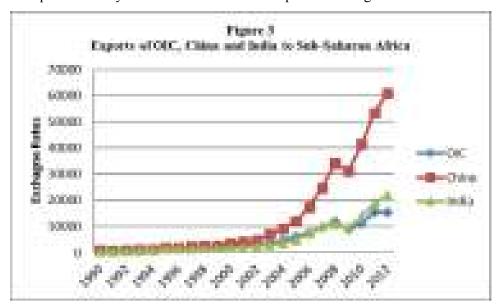

Source: IMF - Direction of Trade Statistics

Since the interest of OIC countries such as Turkey is increasing drastically for the purpose of having Africa as a source of input and a profitable market, OIC member states should have their currencies traded in African foreign exchange markets. Because this could reduce the current currency conundrum among trade partners within OIC economies. Figure 2 depicts exports of OIC member states in Sub-Saharan Africa are increasing overtime.

Source: IMF - Direction of Trade Statistics

Despite the fact that exports of OIC member states to Sub-Saharan Africa are increasing but the volume of the exports is small compared to China and India. The volume of exports made by seven OIC exporting countries (Indonesia, Malaysia, Pakistan, Oman, UAE, Turkey, and Bangladesh) is less than the volume of exports made by China or India in the same period. See figure 3.

Source: IMF - Direction of Trade Statistics

Due to the currency conundrum in OIC countries, the objectives of Islamic economic system that have been propagated by Islamic economists are coming under threat. Apart from other goals such as economic well-being and socio-economic justice, stability in the value of money is an indispensible goal in the Islamic economic system because of the unequivocal stress of Islam on honesty and fairness in all human dealings (Chapra, 1985). The increasing inflation in low-income OIC countries such as Somalia, Sudan, Uganda and Djibouti is not only contributing to the money erosion but also weakening the ability of OIC traders to compete in the global market. This will finally lead poor OIC member states not to achieve the other goals of Islamic economic system such as economic well-being and socio-economic justice.

Since money is a measure of value, any constant and significant erosion in its real value may be regarded as corrupting the world because of the adverse effect that this erosion will have on social justice and welfare (Chapra, 1985). One way to stabilize money is to ensure the stability of exchange rate markets because money is traded in this market. Having a sound monetary policy is fundamental for an exchange rate to be stable. According to Kaleem (2000), the ultimate goal of good monetary policy to achieve sustaining real economic growth, increase employment and minimize inflation. These targets can be accomplished under Islamic monetary system if suitable monetary instruments, which are in line with the teachings of Islam, are deployed (Kaleem, 2000).

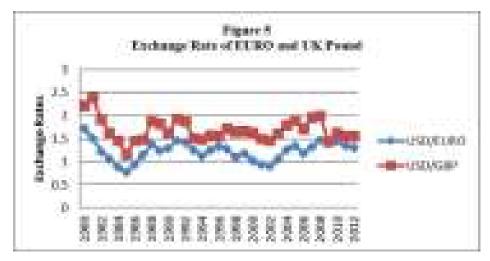

As shown in figures 4, exchange rates of most of the OIC member states have fluctuates over time. Out of the seven Asian OIC countries, only two (UAE and Oman) have had a stable currency. However, the currency behavior of these two countries might not reflect the true value of the currency. On other hand, out of the four East African OIC member states, only Djibouti has had a stable currency. Nevertheless, this trend might not reflect the real value of Djibouti frank. The historical currency data indicate that currencies in OIC member states have been volatile over time. The volatility of exchange rates affects both the traders and consumers; thus, reducing the ability of traders to engage in business activities and limiting the capacity of consumers to purchase their needs.

Whilst an extensive body of theoretical and empirical literature has investigated the link between exchange rate uncertainty and international trade flows, neither the theoretical nor empirical studies provide an absolute answer (Baum & Caglayan, 2012). However, the general provision is that an increase in exchange rate volatility will have an adverse effect on trade flows and as a result the overall vitality of the global economy.

Source: SESRIC

Due to immature currency markets in East African OIC countries, US dollar has been the most active foreign currency in these countries; thus, it has been used as a medium of trade exchange. Nonetheless, the US dollar itself is not free from fluctuation and it is also hit by the global economic events. As depicted in figure 5, the US dollar has been fluctuating against British Pound and EURO. Whilst US dollar is facing such fluctuations against other currencies, its adoption as a medium of trade exchange is yet to be challenged in East Africa OIC countries because the currencies of other OIC exporting countries such as Turkey, Pakistan, Malaysia, Indonesia, UAE, Oman and Bangladesh are not actively traded in East African markets.

Source: WM/Reuters

Though American currency (the dollar) has been using in East African OIC countries as a medium of trade exchange for decades, the use of US dollar to facilitate intra-OIC trade is threatening traders in East African OIC due to the volatility of the national and international currencies. Alternatively, traders in these countries (Djibouti, Somalia, Sudan, and Uganda) need to convert their national currencies into US dollar and then the US dollar into the national currency of their trading partner (Turkey, Bangladesh, Malaysia, Indonesia, Pakistan, Oman, and UAE). Consequently, East African traders are enforced to conceive several exchange rate fluctuations (inflations), which is not only disappointing these traders but also making OIC imported goods cannot compete in these markets. This paper examines the effect of such currency conundrum on the trade among Muslim world.

## 3. METHOD AND MATERIAL

The purpose of this study is to examine the effect of currency conundrum on intra-OIC trade. The study uses four East African OIC countries, namely, Djibouti, Somalia, Sudan and Uganda and seven of their OIC trading partners, namely, Bangladesh, Indonesia, Malaysia, Oman, Pakistan, Turkey and United Arab Emirates. The following are the basic assumptions of the study:

- 1. These seven countries are the trading partners of the four countries
- 2. Currencies of these seven countries are not actively traded in East Africa
- 3. Currencies of East African economies are not also traded in these seven countries
- 4. US dollar is used as a medium of trade exchange between these seven economies and East African OIC states
- 5. The availability of hedging service/facility is limited in East African OIC states

- 6. Cost of trade is constant (c)
- 7. Profit Rate is constant (p)
- 8. Risk reduction rate is also constant (e)

To comprehensively understand the effect of the currency conundrum an intra-OIC trade, the study simulates seven possible scenarios that can take place while importing goods from on OIC economy to East African OIC countries. East African traders, who are importing from an OIC member states must consider the following three factors:

- 1. Price of goods in the domestic markets of the OIC trading partner (OICTP)
- 2. The value of US dollar in the markets of the OIC trading partner
- 3. The value of US dollar in East African OIC markets.

If these three factors are taken into consideration, the basic pricing model for imported goods from OIC trading partners looks like the following:

$$\mathbf{Y}_{EAp} = \left[ \frac{\mathbf{Y}_{OICp}}{S_{OICc}^{\$}} \times S_{EAc}^{\$} \right] + C + P + \varepsilon$$

where  $Y_{EAp}$  is the price of a good in the markets of East African OIC countries,  $Y_{OICp}$  is the price of a good in the markets of OIC trading partners,  $S_{OICc}^{\$}$  is the exchange rate of a US dollar in the markets of OIC trading partners,  $S_{EAc}^{\$}$  is the exchange rate of a US dollar in the markets of East African OIC member states, C is the cost of trade, P is the profit of trade and E is the risk reduction amount.

Other things being equal, a change of a price of a good in East Africa  $(Y_{EAp})$  is dependent on changes in the factors of the basic pricing model in equation 1. Changes in  $Y_{EAp}$  can be expressed algebraically as follows:

$$\Delta Y_{EAD} = \Delta Y_{OICD} \div \Delta S_{OICC}^{\$} \times \Delta S_{EAC}^{\$} + C + P + \varepsilon$$

whereas  $\Delta$  is the change that can happen in each factor. From our simulations, we have found the following seven changes that can occur while trading a good among OIC member states:

1. Change of the Prices of the goods in the markets of the trading partners

$$D_{lm}^{OICc} = \left[ \frac{EP_{OICc} \div S_{OICc}^{\$}}{OP_{\$}} \right]$$

whereas  $D_{lm}^{OICc}$  is the changes of prices of the goods in the exporting economy,  $EP_{OICc}$  is the extra price that has to be paid by the local people,  $S_{OICc}^{\$}$  is the Spot Rate of a US dollar in the market of OIC trading partner and  $OP_{\$}$  is the Original price of the good in US dollar. While taking this change into consideration, there will be the following new pricing model:

$$\mathbf{Y}_{EAp} = \left[1 + \frac{EP_{OICc} \div S_{OICc}^{\$}}{OP_{\$}}\right] \times \left[\frac{\mathbf{Y}_{OICp}S_{EAc}^{\$}}{S_{OICc}^{\$}}\right] + C + P + \varepsilon$$

2. Change of the value of US dollar in the OIC trading partners' market (USD vs OIC currency)

$$D_{OICc}^{\$} = \left[ \frac{S_{-1}^{\$} - S_{0}^{\$}}{S_{0}^{\$}} \right]$$

Whereas  $D_{OICc}^{\$}$  is the devaluation of a US dollar in an OIC Currency,  $S_{-1}^{\$}$  is the previous spot exchange rate of a US dollar in an OIC Currency and  $S_0^{\$}$  is the current spot exchange rate of a US dollar in an OIC Currency. If this is considered, the new price will look like the following:

$$\mathbf{Y}_{\mathit{EAp}} = \left[1 + \frac{S_{-1}^\$ - S_0^\$}{S_0^\$}\right] \times \left[\frac{\mathbf{Y}_{\mathit{OICp}} S_{\mathit{EAc}}^\$}{S_{\mathit{OICc}}^\$}\right] + C + P + \varepsilon$$

3. Change of the value of the US dollar in East African OIC states (USD vs East African Currency)

$$D_{EAc}^{\$} = \left[ \frac{S_0^{\$} - S_{-1}^{\$}}{S_{-1}^{\$}} \right]$$

Whereas  $D_{EAc}^{\$}$  is the devaluation of an East African currency against US dollar. After considering this, the new pricing model can be expressed as follows:

$$\mathbf{Y}_{EAp} = \left[1 + \frac{S_0^{\$} - S_{-1}^{\$}}{S_{-1}^{\$}}\right] \times \left[\frac{\mathbf{Y}_{OICp} S_{EAc}^{\$}}{S_{OICc}^{\$}}\right] + C + P + \varepsilon$$

4. Change of Prices of the goods and value of US dollar in the exporter's market simultaneously

$$D_{lm}^{OICc} + D_{OICc}^{\$} = \left[ \frac{EP_{OICc} \div S_{OICc}^{\$}}{OP_{\$}} \right] + \left[ \frac{S_{-1}^{\$} - S_{0}^{\$}}{S_{0}^{\$}} \right]$$

If this event happens, the new pricing model can be expressed as follows:

$$\mathbf{Y}_{\mathit{EAp}} = \left[ \left( \frac{\mathit{EP}_{\mathit{OICc}} \div S_{\mathit{OICc}}^\$}{\mathit{OP}_\$} \right) \times \Delta S_{\mathit{OICc}}^\$ + \left( \frac{S_{-1}^\$ - S_0^\$}{S_0^\$} \right) \right] \times \left[ \frac{\mathbf{Y}_{\mathit{OICp}} S_{\mathit{EAc}}^\$}{S_{\mathit{OICc}}^\$} \right] + C + P + \varepsilon$$

Whereas 
$$\Delta S_{OICc}^{\$} = \frac{S_{-1}}{S_0}$$
.

5. Change of Prices in exporter's market and value of US dollar in East African markets concurrently

$$D_{lm}^{OICc} + D_{EAc}^{\$} = \left[ \frac{EP_{OICc} \div S_{OICc}^{\$}}{OP_{\$}} \right] \times \left[ \Delta S_{EAc}^{\$} \right] + \left[ \frac{S_{0}^{\$} - S_{-1}^{\$}}{S_{-1}^{\$}} \right]$$

Whereas 
$$\Delta S_{EAc}^{\$} = \frac{S_0}{S_{-1}}$$
.

If these changes are incorporated into the price, the pricing model will be as follows:

$$\mathbf{Y}_{EAc} = \left[ \left( \frac{EP_{OICc} \div S_{OICc}^\$}{OP_\$} \right) \times \left( \Delta S_{EAc}^\$ \right) + \left( \frac{S_0^\$ - S_{-1}^\$}{S_{-1}^\$} \right) + 1 \right] \times \left[ \frac{\mathbf{Y}_{OICp} S_{EAc}^\$}{S_{OICc}^\$} \right] + C + P + \varepsilon$$

6. Change of the value of US dollar in exporter's market and East African markets simultaneously

$$D_{OICc}^{\$} + D_{EAc}^{\$} = \left[ \frac{S_{-1}^{\$} - S_{0}^{\$}}{S_{0}^{\$}} \right] \times \left[ \Delta S_{EAc}^{\$} \right] + \left[ \frac{S_{0}^{\$} - S_{-1}^{\$}}{S_{-1}^{\$}} \right]$$

While considering these changes, the new price can be expressed as follows:

$$\mathbf{Y}_{EAp} = \left[ \left( \frac{S_{-1}^{\$} - S_{0}^{\$}}{S_{0}^{\$}} \right) \times \left( \Delta S_{EAc}^{\$} \right) + \left( \frac{S_{0}^{\$} - S_{-1}^{S}}{S_{-1}^{\$}} \right) + 1 \right] \times \left[ \frac{\mathbf{Y}_{OICp} S_{EAc}^{\$}}{S_{OICc}^{\$}} \right] + C + P + \varepsilon$$

7. Change of all factors concurrently (prices, value of US dollar in both market)

$$D_{OICc}^{\$} + D_{lm}^{OICc} + D_{EAc}^{\$} = \left[ \left( \frac{S_{-1}^{\$} - S_{0}^{\$}}{S_{0}^{\$}} \right) \times \left( \Delta S_{EAc}^{\$} \right) \right] + \left[ \left( \frac{EP_{OICc} \div S_{OICc}^{\$}}{OP_{\$}} \right) \times \left( \Delta S_{EAc}^{\$} + \Delta S_{OICc}^{\$} \right) \right] + \left[ \frac{S_{0}^{\$} - S_{-1}^{\$}}{S_{-1}^{\$}} \right]$$

After considering changes in the three factors, the new price can be modeled as follows:

$$\mathbf{Y}_{EAp} = \left\{ \left[ \left( \frac{S_{-1}^{S} - S_{0}^{0}}{S_{0}^{S}} \right) \times \left( \Delta S_{EAc}^{S} \right) \right] + \left[ \left( \frac{EP_{OICc} \div S_{OICc}^{S}}{OP_{S}} \right) \times \left( \Delta S_{EAc}^{S} + \Delta S_{OICc}^{S} \right) \right] + \left[ \frac{S_{0}^{S} - S_{-1}^{S}}{S_{-1}^{S}} \right] + 1 \right\} \times \left[ \frac{\mathbf{Y}_{OICp}S_{EAc}^{S}}{S_{OICc}^{S}} \right] + C + P + \varepsilon$$

## 4. RESULTS AND DISCUSSION

# 4.1 Results

Whiling using the pricing models developed in the methodology section, the results of all possible scenarios are reported here. In the hypothesized findings, a good is assumed to be imported from OIC exporting economies to East African OIC countries. If the seven potential scenarios are employed to incorporate the potential changes of the three factors, the following price change will take place. This is based on the assumption that goods are imported from an OIC exporting economies whose national currency is different from US dollar. While assuming hypothetical good, this paper assumes that one unit of good is traded between OICc1800 and OICc2000 depending on the exporter's domestic market. On the other hand, \$1 is traded between OICc38 to OICc28 depending on the historical rates of exporter's foreign exchange market, while \$1 is traded between AEc12,000 to EAc34,000 on the basis of East Africa's historical exchange rates. This scenario analysis is based on an assumption that traders from East Africa continue importing goods from their OIC trading partners regardless of changes in commodity and currency markets. For this analysis, the cost, profit and risk reduction rates are ignored.

# 4.1.1 Normal Situation: Original Price

Other things being equal, the price of the hypothesized good will be in OIC East African countries about **568,421** in East African currency. In terms of US dollar, this price is equivalent to **\$47.37**.

$$Y_{EAp} = \left[ \frac{1800}{38} \times 1200 \right] = EAc568,421$$

# 4.1.2 Scenario I: Change of the Price of the OICTP Goods (from 1800 to 2000)

While assuming the basic prices have changed in exporter's local market, East African traders will be affected by this change and it will be incorporated in East African local markets. This change is captured in the following pricing model:

$$Y_{EAp} = \left[1 + \frac{200 \div 38}{47.37}\right] \times \left[\frac{1800}{38} \times 12000\right] = EAc631,579$$

As shown in the above model, the price will be **631,579** of OIC currency, which is equal to **\$52.63**. Analytically, OICTP local consumers will pay OICc2000 (11%) whereas the price of the same product in East Africa will also go up by the same percentage (11%) due to the price changes in the original/source market. Assuming a constant exchange rate, it can be inferred from the analysis that the 11% price increase affects all economies that import from these countries, thus, everyone will pay the additional price rise. This concludes that the price rise in an exporting country will be imported to all of its trading partners.

# 4.1.3 Scenario II: Change of the value of US dollar in the Exporter's market

In the second scenario, the value of US dollar changes in the market of the OIC exporters. This change will affect the pricing model in East Africa as the change is incorporated. As shown in the model below, the new price will be 771,429 and \$64.29 East African and US currencies respectively.

$$Y_{EAp} = \left[1 + \frac{38 - 28}{28}\right] \times \left[\frac{1800}{38} \times 12000\right] = EAc771,429$$

Mathematically, East Africans will pay 36% additional to the price paid by the people in OIC exporters. This happens when the value of dollar devaluates against OIC exporters' currency. Furthermore, while the value of a US dollar in East Africa remains the same, East African consumers pay more due to the usage of US dollar as a medium of trade exchange. This implies the inflation of the US dollar is imported into East African OIC states even if the price of goods and currencies in OIC states are stable.

# 4.1.4 Scenario III: Change of East African Currency

This scenario assumes the value of US dollar is changed in East African OIC states from 12000 to 34000. If such scenario takes place, the new price will be **EAc1,610,526** with an equivalent to \$47.37.

$$\mathbf{Y}_{EAp} = \left[ 1 + \frac{34000 - 12000}{12000} \right] \times \left[ \frac{1800}{38} \times 12000 \right] = EAc1,610,526$$

As shown in model 4, the price of the imported goods will change due to devaluation of East African currency against US dollar. The price of the imported goods will go up in East Africa by 183%, while its price remains the same in the exporter's Market. East African consumers are facing this challenge due to the devaluation of their domestic currency.

# 4.1.5 Scenario IV: Change of Prices and value of USD in Exporter's market simultaneously

In this scenario, two factors are assumed to be changing simultaneously. The price of the hypothesized good changed from 1800 to 2000 and the value of US dollar changed from 38 to 28. If prices of the goods

and value of US dollar happen to change concurrently in the exporter's market, the price of the imported goods in East Africa is anticipated to be about 857,143 East African currency, which is similar to \$71.43.

$$\mathbf{Y}_{EAp} = \left[ \left( \frac{200 \div 38}{47.37} \right) \times \frac{38}{28} + \left( \frac{38 - 28}{28} \right) + 1 \right] \times \left[ \frac{1800}{38} \times 12000 \right] = EAc857,143$$

Both the value of US dollar and price of goods have changed in exporter's market but the value of US dollar in East Africa remains the same. In this case, East Africans have to pay 51% extra price due to two effects: domestic price and exchange rate changes. Despite the fact that the price increase in exporter's domestic market is only limited to 11%, the price increased in East Africa by 51% due to the usage of US dollar as a medium of trade exchange.

4.1.6 Scenario V: Change of Prices in the Exporter's Market and value of USD in East African
If the price of the hypothesized good changes in the exporter's market from 1800 to 2000 and the value of
US dollar changes in the East African markets, the new price will be EAc1,789,474 with an equivalent
USD of \$52.63.

$$\mathbf{Y}_{EAc} = \left[ \left( \frac{200 \div 38}{47.37} \right) \times \left( \frac{34000}{12000} \right) + \left( \frac{34000 - 12000}{12000} \right) + 1 \right] \times \left[ \frac{1800}{38} \times 12000 \right] = EAc1,789,474$$

After having assumed that East African traders will observe these changes, the price of the imported goods will go up in Africa by 215% while there is only 17% price increase in the exporter's market. This drastic change is driven by the drastic change in the value of USD in East Africa.

4.1.7 Scenario VI: Change of the value of USD in Exporter's Market and East Africa
Assuming the value of the US dollar changes in exporter's market from 38 to 28 and in East African market from 12000 to 34000, the new price is expected to be **EAc2,185,714**, which is similar to \$64.29.

$$\mathbf{Y}_{EAp} = \left[ \left( \frac{38 - 28}{28} \right) \times \left( \frac{34000}{12000} \right) + \left( \frac{34000 - 12000}{12000} \right) + 1 \right] \times \left[ \frac{1800}{38} \times 12000 \right] = EAc2, 185, 714$$

If the value of the dollar changes in the two markets, the pricing model will change and the new price for the same product will change. Due to this change, consumers in East African will pay 285% additional money. More interestingly, African people pay 285% additional money on the same product, while its price remains unchanged in exporter's markets. Thus, the use of US dollar as a medium of exchange is causing such drastic changes to the intra-OIC trade.

4.1.8 Scenario VII: Change of all factors (price, value of USD in OICTP and East Africa)
This scenario simulates a case in which the three factors change. Price of the goods change from 1800 to 2000, value of US dollar changes in the exporter's market from 38 to 28, and the value of US dollar change in East Africa from 12000 to 34000. If such changes takes place, the new price will be EAc2.428.571, which is equal to \$71.43.

$$\mathbf{Y}_{\mathit{EAp}} = \left\{ \left[ \left( \frac{38 - 28}{28} \right) \times \left( \frac{34000}{12000} \right) \right] + \left[ \left( \frac{200 \div 38}{47.37} \right) \times \left( \frac{34000}{12000} + \frac{28}{38} \right) \right] + \left[ \frac{34000 - 12000}{12000} \right] + 1 \right\} \times \left[ \frac{1800}{38} \times 12000 \right] \pm 3\% = \mathit{EAc2}, 428, 571$$

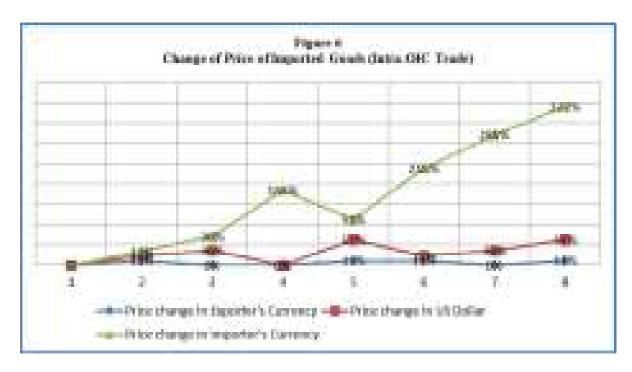

If the changes of all factors are considered, the price of the product will change in East African markets. Due to changes in both East African markets as well as the exporter's market, the price increases from

**568,421** to **2,428,571**(327%). Apart from 11% that is caused by the exporter's domestic inflation, the remaining 316% is caused by the fluctuation of the US dollar. It can be argued that East African consumers are victimized because they are using US dollar as a medium of trade exchange.

## 4.2 Discussion

As shown in the hypothesized results of the pricing model developed in this study, it is obvious that prices of goods imported from OIC trading partners to East Africa might go up without any price increase that takes place in the source market. After having analyzed the seven scenarios, the study found the following imperative results: firstly, due to exchange rate fluctuation, prices of goods imported from OIC trading partners rise in East African markets while the prices of the same goods are stable in the exporter's market. Secondly, prices of goods imported from OIC trading partners will go up in East Africa if the prices of the same goods increase in the exporter's domestic market. The price rise observed in exporter's market and imported to East Africa can come from a local economic shock or an external shock that is transmitted to the exporter's market by international markets. Thirdly, the study identified that prices of goods traded within OIC member states may change due to a change in the value of US dollar in the exporter's market. Again, this change can take place due to an economic strength recorded in the exporter's domestic economy or a general depreciation facing the US dollar worldwide. Fourthly, this study argues that prices of goods traded within Muslim world may increase due to changes that are taking place in importer's market. For example, the value of US dollar may change in Somalia or Uganda due to either domestic factors or externally transmitted factors.

Figure 6 shows that prices of goods imported from OIC trading partners can extremely go up in East African OIC states indicating that prices in these markets do not follow all times the prices of its trading partners. This is due to the use of US dollar as a medium of trade exchange. In the seventh scenario, the price of good increases in East Africa by 285%, while it is price is unchanged in the exporter's market. If the three factors happen to change, the price will go up in the importer's market by 327% and in the exporter's market by only 11% because US dollar do not determine the domestic prices of the exporter's market. Due to exchange rate mismatches, prices do not go down in East Africa when it's going down in the exporter's market.

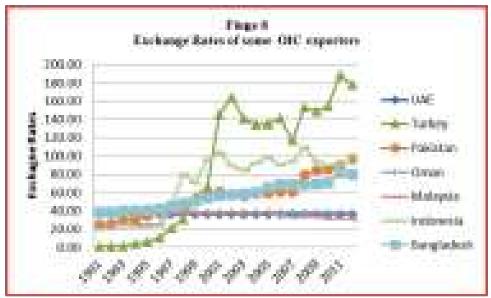

As figure 7 shows there is an exchange rate mismatch among OIC member states, which indicates there is no comovement between exchange rates of OIC states and its trading partners. This is another important phenomenon as this exacerbates the case of using US dollar as a medium of trade exchange. It is observed that sometimes East African currencies (such as Somali shilling) are losing against USD while the currencies of its trading partners are gaining against USD leading into more price increase in the local market. Alternatively, such events are making OIC goods less competitive in East African markets.

Source: SESRIC

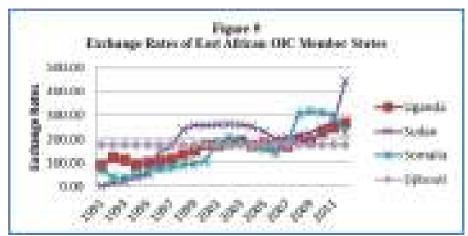

On the other hand, figure 8 indicates that currencies in OIC exporting economies are not commoving and each currency behaves on its own pattern. This also shows that goods imported from these countries will have different prices in East Africa if such trend persists. The trend of the currencies of these countries

points out that trade within these economies will also suffer from the same currency conundrum as long as US dollar is used as a medium of trade exchange. Nevertheless, the trend of currencies in OIC exporting economies illustrate that using US dollar as a medium of exchange in intra-OIC is not contributing to the strategies of OIC and to the objectives of an Islamic economic system.

Source: SESRIC

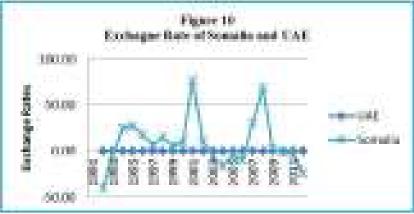

Equally, currencies in East Africa OIC states are valued in US dollar differently. As shown in figure 9, except for Djibouti, East African OIC currencies do not commove; thus, goods imported from an OIC trading partner is priced different in every country depending on the volatility of domestic currency against US dollar. This implies that trade within East African OIC economies is also suffering from currency conundrum because the value of US different differs among these countries.

Source: SESRIC

Someone may argue that the assumptions of this paper are not realistic as it is assuming something that is oddly happen. Nevertheless, the available historical data shows that the assumptions of this paper are not unrealistic. The real data shows that value of US dollar is changing in the exporting economy, whereas the same change is not followed by importing economy and the opposite is true. Figure 10 shows that the value of US dollar in Somali behaves different from the value of US dollar in United Arab Emirates (one

of Somalia's trading partners). As shown in figure 11, similarly, the value of US dollar behaves differently in Bangladesh and Somalia. This shows the existence of a significant currency mismatch between Somalia and its trading partners.

Source: SESRIC

Source: SESRIC

Similar to the currency mismatches between Somalia and its trading partners, there is also a significant currency mismatches between Uganda and its OIC trading partners (Turkey and Oman) as shown in figure 12 and 13. This provides an evidence of how OIC economies in East Africa are suffering due to the use of US dollar as a medium of trade exchange.

Source: SESRIC

Source: SESRIC

The same currency conundrum is suffered by the trade between Pakistan and Djibouti in one side and Sudan and Bangladesh on the other side. As illustrated in figure 14 and 15, the value of US dollar in the exporting country does not match the one in the importing country, which contributes the existence of big price gaps between the exporting and importing markets.

Source: SESRIC

Source: SESRIC

The data shown in these figures illustrates that volatility of exchange rates differ between East African OIC economies and its OIC trading partners. While the value of US dollar appreciates in East African, it value is going down in OIC exporting economies or there is no changes in the value of US dollar while it is changing in East Africa. This partially explains the reason behind the huge price gabs between East African markets and their trading partners. All these mismatches are directly affecting the prices of imported goods as the dollar is used as a medium of trade exchange. This makes US dollar a vital determinant of prices of goods traded among OIC member states

# 4.3 Policy Implications

This study has imperative policy implications to OIC economies because the existence of huge price gaps among OIC member states exacerbates the trade relations among these countries. This is also a big challenge to the accomplishment of OIC targets. OIC has established several frameworks to strengthen intra Islamic economic and trade cooperation, which is expected to facilitate the establishment of as Islamic common market (Kusuma, 2010). Nevertheless, if such currency conundrum persists among OIC member states, the achievement of trade and economic cooperation will be impossible. On the other hand, it has been observed that the victims of such drastic price changes are the consumers rather than traders because in most case traders adjust the prices and they let the public feel the pain. Since exporting and importing economies of OIC do not know the monetary policies guided by the US dollar, they cannot have any contribution to its stability.

To achieve its goal of strengthening economic and trade cooperation in the Muslim world, OIC should come out with strategies to overcome such currency conundrum among OIC member states and develop a medium of exchange that is suitable to intra-OIC trade. Likewise, countries in the Muslim world should find a solution for this matter to achieve the central goals of an Islamic economic system. Finding a suitable solution for this matter is beneficial to both exporting and importing OIC economies. Importing OIC economies can achieve stable prices, while goods of the exporting OIC economies will become more competitive in the importing economies such as East Africa.

# 5. CONCLUDING REMARKS

The purpose of this paper was to examine the impact of using US dollar as a medium of trade exchange among economies in the Muslim world (OIC member states). The findings suggest adoption of US dollar as a medium of trade exchange among OIC member states has an adverse effect on the prices of goods exported to East African OIC economies. The use of US dollar as a medium of trade exchange among OIC countries does not promote the intra-OIC trade and consequently OIC member states cannot achieve a greater economic and trade cooperation. OIC member state should find a suitable solution for this matter. Achieving such kind of solution is important for both exporting and importing economies. Importing economies will achieve relative price stability, while exporting countries will gain competitive advantage in the importer's market.

# 6. LIMITATIONS AND FUTURE STUDIES

There are some limitations that should be addressed by future studies. Firstly, as this study employed only 11 OIC member states (seven exporting and four importing), future studies should increase the sample of both exporting and importing countries. Secondly, this study has only modeled for the exports to East African OIC states but future studies should also model exports from East African OIC states to other OIC countries. Thirdly, future studies should also examine goods imported from an OIC country and then exported to a third country, which might increase the number of currencies involved. Lastly, future

studies should examine the real prices of the goods traded within OIC member states and how they are fitted in these models.

# IMPACT OF TURKEY'S ZERO PROBLEM POLICY UPON TRADE WITH THE NEIGHBORING ISLAMIC COUNTRIES AND COMPARISON WITH THE PREFERRED TRADE BLOCS: AN EMPIRICAL ANALYSIS 1992-2011

Ahmet İncekara<sup>1</sup> Murat Ustaoğlu<sup>2</sup>

#### ABSTRACT

Turkey holds a special place in one of the most strategic regions in the world and connects the European and Asian continents. It also has important advantages in terms of commercial activities thanks to naval transportation facilities to the North African countries. Despite the geographical advantages, its trade with the neighboring countries has remained limited up to early 2000s. One of the primary reasons for this lack of improved trade is the failure in the Turkish foreign policy to focus on the Middle Eastern countries due to its traditional policy of Westernization. Since the remarkable changes in the identity of Turkish foreign policy and adoption of the zero-problem policy with the neighboring countries, trading activities have intensified and Turkey has improved its economic relations with the Islamic countries in the last decade. The global economic crisis that erupted in 2007 in the US has influenced almost the entire European continent whereas its impacts have remained limited upon Turkey thanks to its improved ties with the Middle Eastern countries. However, the developments associated with the Arab Spring process have led to serious criticisms towards the zero-problem policy. Turkey has been negatively influenced by the process as evidenced in the decline in the volume of trade with these countries. The trajectory of the developments in the years to come remains unclear. However, the general conviction tells that the people will become more assertive and decisive in the political stage in Arab countries and this will boost economic demand in the region, serving the economic interests of Turkey. This study examines the impacts of the zero-problem policy upon Turkey's economic relations with the Islamic countries and further analyzes the economic consequences of the future political developments.

**Keywords**: Zero problem policy, foreign trade with border neighbor islamic countries, Turkey

# 1. INTRODUCTION

Since late period of the Ottoman Empire, Turkey has been impressed by the economic development in the Western countries; in consideration of this, Turkey has adopted a policy of Westernization in an attempt to attain similar economic success and performance. The young republic which turned to the Western world in an effort to benefit from its technological and economic advantages maintained loose relations with the Islamic countries despite historical and cultural ties. The weakened political relations also led to decline in the economic relations as well. However, advanced Western states have huge amount of trade with their neighboring countries. They even create regional and international trading blocs and zones to improve the economic and trade ties.

Up to early 2000s, the trade with the neighboring countries, particularly the Arab and Islamic countries has remained limited. Even the border trade with the Islamic countries, rich of

<sup>&</sup>lt;sup>1</sup> A lecturer, Istanbul University, Beyazıd Fatih, Istanbul, Turkey.

<sup>&</sup>lt;sup>2</sup> A lecturer, Istanbul University, Beyazıd Fatih, Istanbul, Turkey.

global energy and raw material resources, was limited. Turkey which has been trying to improve its relations with the neighboring countries in recent years has taken significant steps to enhance the commercial relations. Visa requirements were lifted with many Arab countries; measures were taken to enhance the tires with the peoples in the region. This change in the foreign policy style influenced the trade volume with these countries. The EU countries hold an important place in Turkey's exports. Half of the exports is made to these countries. The economic uncertainty in the EU zone becomes a graver issue, raising serious doubts on the viability of the EU as one of the most important successes in the history of global integration. The EU countries are currently experiencing serious political and economic problems (Ustaoğlu, 2013). It does not seem possible that they would preserve their common currency and adopt a common fiscal policy in the near future. The ongoing recession in the EU negatively affects Turkish economy. On the other hand, the Arab Spring that started with the popular uprising in Tunisia and Egypt remains the biggest obstacle before achievement of stability in the Middle East. The uprisings which led to regime changes in many Islamic countries revealed the fault lines between the communities in these countries. The recent developments that concern Turkish foreign policy including the growing tension with Israel, the situation in Syria and the worsened relations with Azerbaijan raise discussions and questions on the effectiveness of the zero-problem policy approach. It is apparent that the ongoing political instability will inevitably influence the economic relations as well.

#### 2. LITERATURE REVIEW

# 2.1 Turkey's political relations with the neighboring Islamic countries

Turkey's political relations with the neighboring Islamic states have historically been timid. It could be argued that Turkey's Western orientation in the Cold war era was the main reason for Turkey's indifference to the Islamic world and the MENA region (Çakmak & Güneysu, 2013). This state of indifference could be linked to the security concerns that Turkey held back then. These concerns could only be addressed by involvement in Western institution and alliance. As a result of this choice, Turkey generally remained reluctant to interact with the neighboring states.

However, this started to change in the 2000s for several reasons. The primary reason is the radical change in the priorities and content of Turkish foreign policy. This change does not refer to an axis of change; but it is of course visible that Turkey has adopted a new style of policy which now recognizes the importance of its near abroad and of the Islamic world as well. Another reason for this change is Turkey's ambition to broaden its set of relations. In the new approach, Turkey understands that it is important to act as a strong state that is able to mediate in the regional problems and also have good relations with the West at the same time. As a result of this new approach, the neighboring states gained importance in Turkish foreign policy. This led to strong ties of friendship and cooperation in many fields.

# 2.2 Zero problem policy

The zero problem policy seeks to change the mutual perceptions between Turkey and its neighbors in respect to security threats and concerns. A similar pattern is being followed in the policies devised in line with this overall goal and purpose. For this reason, joint cabinet meetings were held with the participation of Turkish delegation and the respective neighboring state representatives. The joint cabinet meetings as well as the high level cooperation councils created in the relations with the neighboring states could be seen as ambitious steps to change the mutual perceptions held by the two parties in respect to the

threats posed by each other and replace them with a new perception of cooperation and friendship in the field of diplomacy, politics and economy (Abramowitz & Barkey, 2009). In case this is achieved, the complex bilateral issues will also be resolved eventually. This is the overall idea of the zero problem policy (Kirişçi, 2011).

At this point, the psychological impact of such attempts upon the administrators of the neighboring states is pretty important. To this end, no particular attention is paid to specific bilateral issues in the type of relationship that emerged around this pattern because it is obvious that problem-oriented approach has not obviously worked properly. Unlike this traditional and conventional approach, a new style seeking to build confidence and focusing on common economic interests is being devised within the framework of zero problem policy. This has been the main difference and new item in the Turkish foreign policy in the new era (Abramowitz & Barkey, 2009).

The zero problem policy should be evaluated from this perspective. Of course, this approach does not seek to resolve the problems by focusing on the problems themselves. On the contrary, this seeks to achieve a serious and dramatic transformation in the bilateral relationships with respect to the content of the external relations through confidence-building measures and moves that would address the current threat perceptions.

# 2.3 Turkey's economic relations with the neighboring Islamic countries

The introduction of zero problem policy has been extremely influential in the foreign policy making in Turkey. By virtue of the change associated with this new style of policy making, Turkey's relations have gone through radical transformation. This has been particularly visible in the economic relations with the neighboring countries. The announcement of zero problem policy has been promising for many states in the area; the policy has built confidence between Turkey and the neighboring countries. This was reflected in the change of the composition of the economic relations and in the increased amount of foreign trade volume between Turkey and its neighbors. The impact of the zero problem policy upon Turkey's economic relations with the neighboring states has been radical (Abramowitz & Barkey, 2009). While the EU has been the main foreign trade partner of Turkey up until 2000s, this started to change in the aftermath of the introduction of the zero problem policy and Turkey's opening to the Middle East. The overall share of the Middle East states in Turkey's foreign trade has dramatically increased in the period where the zero problem policy has been implemented whereas the share of the EU has visibly declined. Even though this could be partly attributed to the economic crisis in the EU region, the influence of the zero problem policy should also be acknowledged.

The business associations and private sector players have been the major drivers in the change where Turkey's trade with the MENA countries has increased. However, the role of the state in this change should also be considered for analytical purposes. The state created high level cooperation councils that would facilitate interaction between players from different backgrounds in both Turkey and the neighboring states.

# 3. METHODOLOGY AND DATA COLLECTION

# 1.1. Research Goal

The purpose of this study is to examine Turkey's foreign policy vis-à-vis the neighboring Islamic countries in recent years and analyze the reflections of this foreign policy style upon economic relations. The period between 1992 and 2011 will be empirically tested. Due to lack

of data on the foreign trade volume of neighboring Islamic countries of Turkey, only quarterly terms were included in the tests.

#### 3.2. Data Collection

The statistical data used was collected mainly through internet sources: the Turkish governments' official statistical webpage TurkStat (Turkey's import and export to the Azerbaijan. Iran and Syria quarterly period of 1992-2011), The World Bank (Real GDP growth of Turkey, Iran, Azerbaijan and Syria quarterly period of 1992-2011) and Central Bank of Turkey (Turkey's foreign trade volume and real GDP growth quarterly period of 1992-2011) web data catalogs.

# 3.3.1 ADF Unit Root Test

The ADF unit root test results reveal that not all variables are static at level; however, they are static at 5 pct of significance level at first different. It is observed that all series are I(1) and that they are static at the same level.

Test results also tell that unit root should be considered because the Toda-Yamamoto test tests the causality in the series that static at the first degree; and there is no need for co-integration between the series. For this reason, whether or not the series are co-integrated is not investigated in the paper.

# 3.3.2 Toda-Yamamoto Causality Analysis

Toda-Yamamoto (1995) show that the result of this test used for the Granger causality test may not be applicable since the traditional F-statistics cannot have standard distribution in case where the series are not static in the system (Yavuz, 2006; Toda & Yamamoto, 1995). The causality relationship between the series was first tested by the Granger (1969) causality test. Because the causality test developed by Granger was implemented by Sims (1972), it was called Granger-Sims causality test. It was observed that the Toda-Yamamoto (1995)

enhanced the causality tests; it has been popularly used in many articles and studies since then.

In periods where Granger (1969) causality test was used, the level values of the series were included in the models because no attention was paid to the notion of static. However, many studies proved that most macroeconomic series were not static at the level. On the other hand, Granger and Newbold (1974) show that in case the series are processed in their non-static standing, fake regression problem may be encountered and therefore the regression results may not show the reality.

The regression analyses run with the non-static time series may only reflect a genuine relationship if there is a co-integration relationship between these series. F test may be used in the testing of the causality in the error fixing model which is a restricted VAR model. In this causality test developed by Engle and Granger (1987), the condition that the series where causality relationship will be investigated should be co-integrated makes this test dependent upon the co-integration tests.

TURM→ SURM	10.571	0.1831	Ho accepted					
$TURM \rightarrow SURX$	5.569	0.5908	Ho accepted					

The test results depicted at the table show that there is no causality between Turkey's exports and Syria's imports and exports. In addition, there is no causality relationship observed between Turkey's imports and Syria's imports and exports. The political stability in 2000s had positive impacts upon Turkish economy. Turkey's competitiveness increased in the aftermath of the customs union agreement in 1996 in international arena. The amount of exports to Iran and Azerbaijan has increased as a result of the improved political relations. Iran and Azerbaijan have become visible beneficiaries of the trade relations with Turkey because of oil and energy exports. Turkey's energy need grows because of the growing industrial production; Turkey acquires a substantial part of its energy materials from Iran and Azerbaijan. The zero problem policy contributed to the transportation of the oil and natural gas via the pipelines to the EU countries over Turkey. In the exports and imports with Syria, a growth in parallel to the real GDP growth is observed. Syria has no oil or natural gas resources. For this reason, the volatility in the global oil prices in 2000s positively affected Iran and Azerbaijan whereas this did not lead to any contribution to Syria's economic performance. Despite overall increase in its foreign trade volume, Turkey's bilateral trade with Syria did not show a similar trend. The primary reason for this is lack of import items in

Syria that Turkey needs whereas Turkey does not have a lot to export to Syria. The zero problem policy of Turkey has positively affected the volume of trade with the neighboring countries up until the Arab Spring. However, the recent political crisis with Syria will inevitably deteriorate the trade relations between Turkey and Syria.

In 1995, Toda and Yamamoto developed a causality test by using the VAR model whose delay was enhanced. There was no co-integration relationship between the series in this test; however, it was sufficient to know the degree of the maximum integration level of the variables in the model and to identify the model properly. In this study, the bilateral trade between Turkey and its neighboring countries including Azerbaijan, Iran and Syria were investigated. The trade relations between Turkey and Iraq were suspended due to the embargo imposed after the Gulf War; for this reason, the bilateral trade volume with this country was considered zero and was not included in the scope of the study. In this study, Granger (1969) and Toda-Yamamoto (1995) causality tests were used to analyse the relationship between the imports and exports, and the size of foreign trade. Granger causality is sensitive at the static level of the series. Unless series are I(0), it does not yield to effective results. The Toda-Yamamoto test, on the other hand, is applicable regardless of the static levels of the series. For this reason, it is pretty useful and suitable.

The following equations may be taken as bases in the Toda-Yamamoto (1995) causality test:

$$Y_{t} = \alpha_{0} + \beta_{1i} \sum_{i=1}^{k} Y_{t-i} + \beta_{2j} \sum_{j=k+1}^{d_{\text{max}}} Y_{t-j} + \gamma_{1i} \sum_{i=1}^{k} X_{t-i} + \gamma_{2j} \sum_{j=k+1}^{d_{\text{max}}} X_{t-j} + \varepsilon_{1t}$$
(1)

$$X_{t} = \alpha_{1} + \lambda_{1i} \sum_{i=1}^{k} X_{t-i} + \lambda_{2j} \sum_{j=k+1}^{d_{\max}} X_{t-j} + \delta_{1i} \sum_{i=1}^{k} Y_{t-i} + \delta_{2j} \sum_{j=k+1}^{d_{\max}} Y_{t-j} + \varepsilon_{2t}$$
(2)

As evidenced by the equations above, expanded VAR equations were obtained by addition of expanded lags to the standard VAR equations. In this way, for the causality test, a VAR model at the degree of  $k + (d_{max})$  can be estimated. Here, k refers to the optimal lag length of the estimated VAR model whereas  $d_{max}$  to the maximum integration level of the variables in the model, in other words, to the maximum static level.

One important feature of this method offered by Toda and Yamamoto is that pre-estimation tests like unit root and co-integration were not necessary. In this case, the risk in connection with the error in identifying the integration level on the estimation of the model is minimized.

The following causality hypotheses are obtained by using the equations (1) and (2):

For equation (1);

 $H_0$  hypothesis:  $\gamma_{1i} = 0$  (X is not cause of Y)  $H_a$  hypothesis:  $\gamma_{1i} \neq 0$  (X is cause of Y) For equation (2);

 $H_0$  hypothesis:  $\delta_{1i} = 0$  (Y is not cause of X)  $H_a$  hypothesis:  $\delta_{1i} \neq 0$  (Y is cause of X)

Here, a standard Wald test is applied by neglecting the coefficients corresponding to the lags added to the optimal lag length. The Wald test is calculated as follows:

$$W = \frac{SSR_R - SSR_{UR}}{SSR_{UR} / n}$$

If the calculated  $X^2$  statistics is greater than table value or the prob value is smaller than the significance level, the zero hypothesis is rejected. In this case, there is causality relationship between two variables. Its graphic depiction is  $X \to Y$  and X variable is the cause of Y.

The stages of the test take place as follows:

- First, the series are subjected to the static (unit root) test. From this, the highest level of integration level of the series  $(d_{max})$  is obtained.
- At the second stage, standard VAR analysis is run. The lag which displays normal distribution without auto-correlation and changed variance is identified as optimal lag. This lag is referred to as "k" in the literature.
- At the third stage, "k+ d<sub>max</sub>" delayed expanded VAR model is predicted.

Finally, causality tests are run via the expanded lag VAR model. The coefficients in the causality analysis are subjected to the Wald test. However, not all coefficients but the coefficients of the standard VAR model are subjected to the WALD test.  $X^2$  statistics and the prob value are calculated.

# 4. CONCLUSION

The 1990s are referred to as wasted years in Turkey due to many chronic political and economic problems and their repercussions. The public investments stopped; huge problems were experienced with the neighbors; and economic crises erupted because of the populist policies in connection with political problems and political instability. No political stability was achieved in the 1990s; and Turkey was governed by coalition governments. Because these governments acted like short term election administrations, no strong

measures that would be proper for long term were taken to address prominent political and economic problems. This led to grave economic crises in following years. The financial crisis in 2001 has been particularly disruptive and harmful to Turkish economy; in the first election held after the crisis, the political parties represented in the government were unable to gain representation in the parliament. The most important development that affected Turkey's economic performance in the 1990s was the customs union agreement signed in 1996. By this agreement, the national economy started to renew its industry and production items and went through a process of structural change. Even though many firms have experienced serious problems at the beginning in respect to the strong competitiveness, they have gone through a process of transformation from labor-intensive production to capital-intensive production thanks to technology transfer. Many exporting sectors of Turkey have achieved structural transformation and accomplished high level of efficiency and productivity. The increased productivity and efficiency enhanced competitiveness and increased the amount of exports. The textile sector, one of the most important export sectors in the 1990s, was replaced by the automotive sector in 2000s.

For Turkey, the general elections in 2002 represented a turning point. The single party administration that won a landslide election in the election maintained political stability; this facilitated the decision making that was extremely important and relevant to the identification of economic problems vital for the national economy. Thanks to the strong measures, the amount of exports increased to \$135 billion in 2007. The crisis in 2007 negatively affected the United States and the European Union; Turkey barely experienced the impacts of the crisis thanks to the opening to the new markets in foreign trade.

Turkey which had minimal interaction with the neighboring countries in 2000s; as a result, the level of foreign trade with these states remained at low levels. However, in the aftermath of the zero problem policy with the neighboring countries, the size of foreign trade with these countries rose as a result of bilateral trade agreements. Iran and Azerbaijan, net exporters of oil and natural gas, were positively influenced by the fluctuations in the energy prices and price increases in these commodities. For this reason, the contribution by the partnership agreements with these two countries has been great to the bilateral trade with Turkey. It is observed that the demand for the Turkish goods in these countries has been on rise in the last decade. Turkey's neighboring countries face serious political and economic problems. Turkey is the most stable and economically strongest state in the region. For this reason, Turkey's foreign trade volume with the neighboring countries has been on the rise

# INCIDENCE OF HEALTH SERVICES ON DIFFERENT INCOME GROUPS IN PAKISTAN

Badshah Nawab<sup>1</sup>

#### **ABSTRACT**

This study investigates the incidence of health services on different income groups in Pakistan using HIES data set 2001-02. This study uses Kienzle (1981) index to measure the incidence of such services for overall Pakistan its rural-urban segments and four provinces of Pakistan. The findings of the study are that health services are pro-poor employing that the lower income classes enjoy the benefits which can hopefully improve the relative income positions of the beneficiaries. This study further confirms the previous results by estimating Gini index of gross income and after adding the health services expenditures. The results are bootstrapped in order to build confidence intervals for the estimated indices as the interval estimates are reliable for policy prescriptions.

**Keywords**: Incidence, public goods, government expenditure on health.

#### 1. INTRODUCTION

Income inequalities do prevail almost in every society with in a variety of degrees. It stems social disharmony among people. In this regard it is the responsibility of every welfare state / government to generate sufficient revenues and also to cater for the needs of lower income groups in order to bring harmony among people. Negative income taxation and /or transfer payments such as infaq money are the ways to address this problem. To supplement the efforts mentioned above the basic social services provided to people such as health due to which the relative income position can be improved.

The main issue is to trace / pinpoint the beneficiaries of this social service which needs distributional analysis in the economy of Pakistan. If these social benefits accrued to the lower income strata are progressive, then their relative income position can definitely be improved. Several indices have been implied in the literature like Kienzle (1984) following the widely used tax distributional index of Suits (1977) which are based on Lorenz Curve and Gini Coefficient. The empirical work on this theme in developed and developing countries are Kakwani (1976), Reynolds et.al (1977), Paul (1991), Seldon et.al (1992), Devarajan et. al (1995), Vanquez- Martinz (2001), Pinar (2004), Johannes (2005) and Berg (2005) who have different methodologies to analyze fiscal incidence and / or education and health benefits incidences on different income classes. The estimates of these indices shall exhibit progressivity or regressivity for overall Pakistan, its rural-urban segments and of four provinces. The estimated values of the index are point estimates which are hardly beneficial for policy purposes. This problem can be handled by constructing the standard errors of the estimated index values for all the region of analysis in order to build confidence interval at a reasonable level of significance.

<sup>&</sup>lt;sup>1</sup> Badshah Nawab is currently working as Head of Economics Department / Professor of Economics at Government College Peshawar KPK Pakistan.

The organization of the study is as follows:

Following introduction, Section II outlines methodology of the study. Section III describes data sources while Section IV elaborates the results and discussions. Lastly two appendices and references are placed.

#### 2. METHODOLOGY OF THE STUDY

The methodology adopted for the allocation of health expenditures to individuals who are actually receiving these benefits is taken from the HIES data 2001-02. The data on health per unit cost for all the regions of analysis are taken from Sustainable Policy Development Centre (SPDC) Karachi 2001.

The net income distribution is constructed by applying the following methodology.

Net or Adjusted Income of the Household = Household's Market Income + (All Government Spending on health – All Tax Burdens)

The beneficiaries are traced and the allocations are made according to the level and regional classification.

Similarly the health expenditures are allocated by using the following expression:

$$XH_{i} = \sum_{j=1}^{6} HH_{i} \left( \frac{EH_{j}}{TP_{i}} \right) * W_{j}$$

Where  $XH_i$  equals the amount of expenditures / benefits on health received by i<sup>th</sup> household; where the household consists of age-wise distribution of individuals at different levels.  $EH_j$  stands for total public expenditures on health on j<sup>th</sup> age group and  $TP_j$  is total number of patients in j<sup>th</sup> age group in a particular region;  $HH_i$  is the i<sup>th</sup> household member of being patients who attend public hospitals for treatment.  $W_j$  stands for weight for j<sup>th</sup> age group. In addition, residents less than ten years and above sixty years old and females with in the age limit of fifteen to fifty years have been allocated double weight. The weight for male/female patients below the age of ten and above sixty years and females within the age group of fifteen years to fifty is double as they are more vulnerable to diseases. (According to recent World Health Organization (WHO) report the reproductive age of females are between 15 to 49 years. So it justifies our weight structure that they face more health problems during this age group). While male within the age group between ten and sixty and females within the age group between ten to fifteen year and above fifty

to sixty year are given single weight. Note that  $\frac{EH_j}{TP}$  is the unit cost per patient at different regional levels e.g. at overall and provinces levels.

# 2.1 DATA SOURCES

The data used in this study is known as Household Income and Expenditure Survey 2001-2002, which is conducted by the Federal Bureau of Statistics having sample size of 14767. The benefit of this type i.e., micro data is an ideal option that enables a researcher to manipulate the data according to the need of the research problem. In addition, micro data files contain weighting factors that are designed to obtain the nationally representative estimates of population. Tax rates on customs duty, central excise, and sales tax rates are taken from CBR sources. The income tax rates are implied from the notifications for various income brackets of Ministry of Finance Government of Pakistan for the two years 1992-93 and 2001-02

with the information that Rs.50, 000 in 1992-93 and Rs.80, 000 was exempted from the tax.. The information whether a good or service is taxed or otherwise is taken from CBR Year Book of the year 2001-02. The data on public expenditure provided by the government such as education are taken from the Demand for Grants at National and Provincial levels for the year 2001-02 and rates on health that is per unit cost of the provision of region wise health from the SPDC Karachi for the year 2001.

# 3. RESULTS AND DICUSSIONS

The results are reported in the following Table 1. The value of the Kienzle index is negative for all the region of analysis for both the government provided services. It shows that health is progressive which favor the low income classes in the year 2001-02. But the degree of progressivity differs across regions. For example health expenditures are also progressive throughout. These expenditures are strongly progressive in the Province of Sindh as the index value is -0.654 followed by Pakistan—urban. Overall Pakistan is number third followed by NWFP and Punjab. The second and third last regions according to progressivity are Pakistan-rural and the Province of Baluchistan.

# 3.1 CONFIDENCE INTERVAL FOR THE KIENZLE INDEXES 2001-02

TABLE.1: KIENZLE INDICES SHOWING PROGRESSIVITY OF HEALTH FOR THE YEAR 2001-2002

	Pakistan – overall	Pakistan - Rural	Pakistan - Urban	PUNJAB	SINDH	KPK	BALOCHISTAN		
Expenditure s	KIENZLEINDICES								
Health	-0.330	-0.280	-0.353	-0.299	-0.654	-0.307	-0.224		

Sources: Author's estimation by using HIES data 2001-02 and applying Kienzle index.

In Table 1 each value represent a single value or a point estimate which can hardly to be used for policy purposes, hence confidence intervals are built to make it more reliable estimates. The standard procedure which has been followed is known as bootstrapping contributed by Efron (1979). Table.2 reports the bootstrap results of the above mentioned estimates for the 2001-02.

TABLE.2: BOOTSTRAP RESULTS OF KIENZLE INDICES OF HEALTH FOR THE YEAR 2001-2002

Regions of Analysis		Pakista n – overall	Pakistan -rural	Pakistan – urban	PUNJAB	SINDH	KPK	BALOCHISTA N	
	Unit of analysis		KIENZLEINDICES						
	Bootstrap Estimated Kienzle Inde	0.090	-0.020	0.050	-0.030	-0.210	0.010	-0.020	
Н	Standard Errors	0.030	0.040	0.040	0.030	0.040	0.030	0.040	
Health	Lower (9 Bound	0.030	-0.090	-0.100	-0.100	-0.280	-0.060	-0.090	
	5 % Upper CI Bound	0.160	0.050	0.030	0.030	-0.140	0.070	0.060	

Source: Author's estimation by applying 250 replications using HIES data 2001-02.

Table. 2 reports the mean bootstrap estimates of Kienzle index of health expenditures for all the regions of analysis. Among the seven four possesses negative signs while three bear positive signs having negligible magnitudes Next row shows the standard errors of the estimates followed by lower and upper bounds at 95% confidence level for the health expenditures.

# 3.2 DIAGRAMMATICAL REPRESENTATION OF THE INCIDENCE OF HEALTH EXPENDITURES ON INCOME GROUPS IN THE YEAR 2001-02.

Figure 1 through 7 placed in the Appendix 2 show the distributional impact/ incidence of health for overall Pakistan. Similarly, health facilities are also enjoyed by the lower income groups as well. The figures of the remaining regions of analysis have been placed in the Appendix of the study. This Appendices shall also comprise up the expression of Kienzle index and other theoretical issues.

To confirm the results already obtained Table 3 shows that the inequality of gross income is slightly more than the after inclusion of education and health expenditures of the government of each region. It implies that education and health expenditures are pro poor in Pakistan in the year 2001-02. The diagrammatical representation has been placed in the Appendix 3.

TABLE. 3: SHOWING THE GINI INDEX OF INCOME BEFORE AND AFTER HEALTH FOR THE YEAR 2001-02

Region	Pakistan- Overall	Pakistan- Rural	Pakistan- Urban	PUNJAB	SINDH	NWFP	BALOCHISTAN
Gini index ( before)	0.565	0.592	0.532	0.581	0.562	0.593	0.546
Gini index (After)	0.562	0.588	0.528	0.579	0.560	0.587	0.545
Difference	-0.003	-0.004	-0.004	-0.003	-0.002	-0.006	-0.001

# 4. SUMMARY AND CONCLUSIONS

The aim of this study is to analyze the distributional impacts of public health being a social service provided by government on various income groups using HIES micro data set of 2001-02. This category is related to the allocable government expenditures. The beneficiaries of the said expenditures on health is traced by using the above mentioned data. Per unit cost of service approach for the allocation of these benefits have been used. On the average out of total number of surveyed 16179 households, 15524 households benefit from public health facilities provided by the government. And the percentage participation rate of health is approximately 96 percent.

The results show that health is progressive in nature in all regions of analysis. The results also suggest that apart from other measures of government, the provision of health can probably lesson income disparities in Pakistan. The results are further confirmed by estimating the Gini index of gross income before and after the inclusion of this service. This study investigates the overall situation about the distributional nature of the said social service hence effective rates estimation for each income group might be worked out in future.

#### APPENDIX: A

# A. 1: Expenditures Progressivity/ Regressivity:

An expenditures / benefits structure is progressive or pro-poor if the lower income deciles receive most of the expenditures / benefits or receive larger share in the public expenditure than their income share of the total population. And this will be called income equalizing or pro-poor expenditures / benefits structure. The expenditures / benefits structure is regressive if the upper income deciles receive most of the expenditures / benefits or receive larger share in the public expenditure than their income share of the total population, implying regressivity of the expenditures structure or income non-equalizing or pro-rich expenditures / benefits structure. It will be proportional if all the income deciles receive the same percentage share in the public expenditure in accordance with the share of their incomes, then it is termed as distributionally neutral expenditure of benefit system.

# A.2: PUBLIC EXPENDITURE / BENEFIT DISTRIBUTIONAL INDEX

This index of expenditure / benefit progressivity / regressivity (E) suggested by Kienzle, (1981) is nothing but a replication of the well-known Suits index by replacing tax with public expenditures or benefits.

$$E = (X - Y)/X = 1 - (Y/X)$$
(A.1)

or the mathematical formulation of the above expression is as follows:

$$E = 1 - \left(1/5000\right) \int_{0}^{100} E(Y)dy \tag{A.2}$$

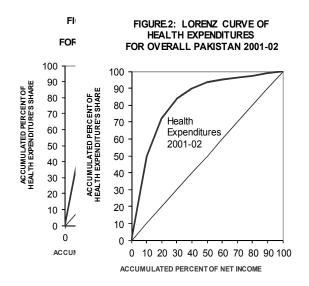

Where Y and E(Y) are the cumulative percentage of total income and the corresponding cumulative percentage of expenditure / benefit. The (1/5000) term in the above expression comes from the area of the triangle below the perfectly equality line whose both sides are equal to 100 each. While, in reality the cumulative distribution of E(Y) is often available for only a few discrete values of Y. To use this index (E) practically, the studies divide the distributions of income and expenditures e.t.c., into classes or groups. In this study the entire data set of the two reference years has been grouped into deciles. So this discrete approximation of the Suits index is given by the following expression:

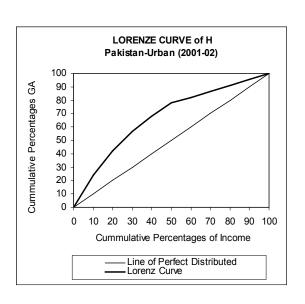

$$E = 1 - \left(\frac{1}{5000}\right) \int_{0}^{100} E(Y)dy \approx 1 - \left(\frac{1}{5000}\right) \sum_{i=0}^{n=10} \left(\frac{1}{2}\right) \left[E(Y_i) + E(Y_{i-1})\right] Y_i - Y_{i-1}$$
(A.3)

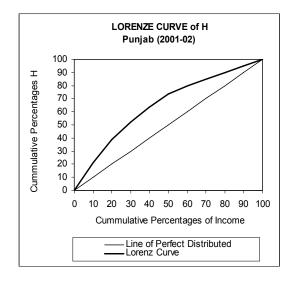

Where n shows the total number of income or taxpayer's classes or deciles. The two extreme values of index E are to equal -1 and +1. If E equals -1, it shows (extreme progressivity), and that the lowest income group / class receive the entire public expenditure / benefit. When E equals 1, it shows (extreme regressivity), that the uppermost group / class receive the total public expenditure / benefit. A 0 value of the index (E), shows that the expenditure / benefit structure is proportional. It is also important to be careful in its application because the proposed measure may encounter the problem of "crossover". It is possible that some expenditure structure may be progressive over one range and regressive over another range and the net result may show a value of index equals 0 implying proportionality.
