### PEMERKASAAN WAKAF DI MALAYSIA: SATU SOROTAN (EMPOWERING WAQF IN MALAYSIA: A REVIEW)

Mohamad Zaim Isamail<sup>1</sup> Khadher Ahmad<sup>2</sup> Mohd Farhan Md. Ariffin<sup>3</sup> Muhammad Ikhlas Rosele<sup>4</sup>

#### **ABSTRAK**

Wakaf merupakan antara salah satu daripada institusi Islam yang wujud sejak dari zaman Rasullullah SAW lagi yang berfungsi sebagai pemangkin ekonomi dan pembangunan umat Islam. Institusi ini juga merupakan tunjang kepada kejayaan jaminan sosial Islam, selain zakat, sedekah dan lain-lain. Oleh itu, adalah menjadi keperluan mendesak kita pada hari ini untuk mengetahui sejauh mana perjalanan institusi wakaf di Malaysia sama ada ia berjalan seiring dengan perkembangan semasa atau tidak. Perananwakaf bukan hanya sekadar untuk tujuan ibadah pada Allah SWT, akan tetapi ia turut meliputi dalam memberi impak kebaikan kepada orang Melayu khususnya dan umat Islam amnya. Namun, sehingga kini, ia tidak berfungsi sebagaimana diharapkan oleh kerana terdapat kekangan dan halangan tertentu selain taraf kesedaran masyarakat yang masih cetek. Wakaf ternyata merupakan salah satu sumber ekonomi dan pembangunan umat Islam. Ia mampu memberi pulangan yang lumayan jika ditadbir dengan cukup efisien. Tugas memperkasakan zakat seperti membangunkan bon-bon dan saham wakaf, penambahbaikan konsep wakaf, penubuhan pentadbiran wakaf pusat, wakaf dalam pendidikan perlu dilaksanakan dan dihayati agar ia menjadi anjakan paradigma berterusan sekaligus membangunkan taraf hidup masyarakat dan merancakkan lagi ekonomi umat Islam seluruhnya.

#### **ABSTRACT**

"Waqf" is one of the important Islamic finance institution that exists since the ages of Prophet Muhammad SAW. "Waqf" institution is functions as the catalyst to the economy and ummah development. This institution also held as backbone that leading to the success of social warranty system in Malaysia besides "zakat", "sadaqah" and others. Therefore, it has been our desperate needs to know on how the "waqf" institution in Malaysia works, whether it works alongside the globalisation of the world or drown under. The role of "waqf" is not only as "ibadah" to Allah SWT, but it also have a wide meaning and overwhelm as an agent to the growth of all Muslims. But nowadays, it seems like the "waqf" institution in Malaysia is not well function, cause by the certain constraints and problems besides the low awareness rate of "waqf" and it's edges. So, the Malaysia government must overcome this constraints, increase the "waqf" awareness among citizens and also make a brand new concepts to see the "waqf" institution in Malaysia thrive through around the globe. This is because "waqf" is really has a great potential to the growth of Islamic economy if it well organise. "Waqf" can be empower and comersialize especially by develops a brand new concepts of 'waqf" in Malaysia like increase the corporate "waqf" bonds and share unit, multiply "waqf" on education and build a special "waqf" bureau to monitor the

running of waaf institution of Malaysia so it can be well functions to the growth and development of all Muslims.

#### 1. **PENDAHULUAN**

Wakaf merupakan apa-apa harta yang ditahan hak pewakaf ke atas harta tersebut daripada sebarang urusan jual beli, pewarisan, hibah dan wasiat di samping mengekalkan sumber fizikalnya<sup>5</sup>. Manfaat harta yang diwakafkan adalah untuk kebajikan umum atau khusus (yang ditetapkan) dengan niat untuk mendekatkan diri pewakaf kepada Allah s.w.t. Pendapatan, perolehan atau manfaat daripada harta wakaf itu perlu dibelanjakan untuk kebajkan dan kebajikan sebagai usaha pendampingan diri pewakaf kepada Allah s.w.t. Dengan sebab itu, harta tersebut tidak lagi menjadi milik pewakaf, tidak boleh diambil kembali dan tidak boleh dimiliki oleh sesiapa. Ianya hak milik mutlak Allah s.w.t. <sup>6</sup>

Wakaf juga merupakan satu amalan sedekah yang merupakan sebahagian daripada amalan soleh yang diamalkan oleh umat Islam seiring dengan perkembangan Islam itu sendiri. Amalan wakaf sememangnya mempunyai ganjaran besar di sisi Allah s.w.t. Ganjaran yang berterusan dan berlipat kali ganda menanti pewakaf di dunia dan di akhirat. Ini jelas sebagaimana sabda Nabi s.a.w,

Dari Abi Hurairah r.a: Sesungguhnya Rasullullah s.a.w bersabda, "Apabila mati seorang anak Adam, terputus segala amalannya kecuali tiga benda, sedekah jariah, ilmu yang memberi manfaat kepada orang lain, dan anak soleh yang sentiasa mendoakan kepadanya."<sup>7</sup>

Wakaf merupakan ejen pembangunan ekonomi umat Islam. Ia merupakan salah satu daripada kontrak tabarru'at dalam sistem muamalat Islam. Tujuannya ialah memberikan ruang kepada umat Islam untuk menginfaqkan harta pada jalan kebajikan menuju redha Allah s.w.t. Bahkan, wakaf juga mampu membantu golongan tertentu bagi meningkatkan taraf hidup mereka di samping menjana aset kekayaan umat Islam.<sup>8</sup> Firman Allah s.w.t,

"Kamu tidak sekali-kali akan dapat mencapai (hakikat) kebajikan dan kebaktian (yang sempurna) sebelum kamu dermakan sebahagian dari apa yang kamu sayangi. dan sesuatu apa jua yang kamu dermakan. Maka sesungguhnya Allah s.w.t lebih mengetahuinya."

Para ulama juga telah menyatakan bahawa para sahabat r.a telah berijma' dari segi kesahihan wakaf dan kepentingannya, ini dinyatakan oleh pengarang kitab Al-Mughni bahawa Jabir r.a telah berkata:

"Sekiranya semua sahabat Nabi s.a.w ada kemampuan, (nescaya) pasti mereka akan mewakafkan (sebahagian daripada) harta mereka (pada jalan fi sabilillah)."

<sup>&</sup>lt;sup>5</sup> al-Svarbini, Muhammad Ibn al-Khatib (1997), Mughni al-Muhtaj Ila Ma'rifat Ma'ani Alfaz al-Minhaj, Beirut: Dar al-Ma'rifah, j. 2, h. 485. <sup>6</sup> Lihat Syahnaz Binti Sulaiman, *Hukum Pembangunan Tanah Wakaf Khas Menurut Perspektif Syarak*, h. 49.

<sup>&</sup>lt;sup>7</sup>Hadith riwayat Abu Dawud dalam [باب ما جاء في الصدقة عن الميت], [كتاب الوصايا] Lihat Abu Dawud al-Sajistani, Sunan Abi Dawud, Riyad: Bait al-Afkar al-Dauliyyah lil Nashar wa al-Tauzi', h. 512, no. 2880.

<sup>&</sup>lt;sup>8</sup>Lihat Manual Pengurusan Istibdal Wakaf (2010), Kuala Lumpur: Jabatan Wakaf, Zakat dan Haji (JAWHAR), h. 6.

<sup>&</sup>lt;sup>9</sup>Lihat Surah Ali Imran (3): 92.

Ini jelas menunjukkan kesedaran dan tahap sensitiviti yang tinggi dalam diri para sahabat r.a terhadap ibadah wakaf ini. Justeru, untuk memperkasakan institusi wakaf ini dalam pembangunan umat Islam, semua pihak perlu memainkan peranan masing-masing dengan lebih efektif. Manfaat wakaf adalah sangat luas dan amat berfaedah kepada masyarakat. Harta wakaf ini perlu digunakan, diuruskan dan dibangunkan dengan cekap supaya matlamat wakaf yang ditetapkan oleh pewakaf tercapai. Bukan itu sahaja, pihak pengurusan wakaf juga perlu bertangungjawab dalam memastikan kemaslahatan harta-harta tersebut. Tidak cukup sekadar itu, harta-harta wakaf juga perlu dikekalkan faedah hartanya agar ia berpotensi untuk "hidup". Islam melarang sebarang pembaziran dan tinggalan harta wakaf yang tidak bermanfaat.

#### 2. WAKAF DI MALAYSIA

Perkembangan wakaf di seluruh dunia turut mempengaruhi perkembangan wakaf di Malaysia. Ini jelas menunjukkan kesedaran dan keprihatinan masyarakat Malaysia terhadap ibadah wakaf ini. boleh dilihat dengan meneliti fakta-fakta berikut:

i. Malaysia sebenarnya memiliki rizab tanah wakaf yang amat besar. Pembangunan tanah-tanah wakaf ini pastinya akan dapat menjana ekonomi umat Islam. Keluasan tanah wakaf di Malaysia ialah sebanyak 11, 091.82 hektar di mana sebanyak 4, 836.50 adalah tanah wakaf am dan tanah wakaf khas adalah sebanyak 6, 225.32. 10 negeri Johor merupakan negeri yang mempunyai paling banyak diikuti oleh negeri Terengganu dan Sabah. Jabatan Wakaf, Zakat dan Haji (JAWHAR) telah mengumpulkan data-data jumlah tanah wakaf di Malaysia seperti berikut:

-

Lihat lebih lanjut Data Tanah Wakaf Terkini di laman sesawang Jabatan Wakaf, Zakat dan Haji (JAWHAR)http://202.75.4.234/spmwj/, akses pada 12 Jun 2013.

Negeri	AM		KHAS			KESELURUHAN			
	BIL	LURS (HEKTAR)	NSLAS(RM)	BIL	LURS (HEXTRR)	nount(RM)	BIL	LURS (HEKTAR)	nolao(RM)
Johor	0	1,422.80	0	0	1,729.50	0	0	3,152.30	7,000,500
Kedah	164	158.62	164.00	1833	1,086.25	1,833.00	1997	1,244.88	1,997.
Kelantan	77	16.01	5,690,274.00	276	157.63	51,013,099.00	353	173.65	56,703,373

Terengganu	311	581.66	13,591,985.51	1260	1,878.58	29,031,210.68	1571	2,460.24	42,623,195
Wilayah Persekutuan	2	0.49	2.00	14	1.59	14.00	15	2.08	16.

ii. Selain itu, terdapat banyak pusat pengajian Islam di Malaysia berteraskan wakaf yang terus memberi pendidikan terbaik kepada golongan muda. Antaranya ialah seperti Madrasah Al-Attas di Pekan, Pahang, Maktab Mahmud di Alor Setar, Kedah, Maahad Al-Yahyawiah di Padang Rengas, Perak, Kolej Islam Sultan Alam Shah di Klang, Selangor dan lain-lain. <sup>11</sup>

Namun, di sebalik data-data di atas, masih banyak masalah yang timbul dalam perkembangan harta wakaf. Jika dilihat kepada sorotan sejarah sistem dan perlaksanaan wakaf di Malaysia, terdapat beberapa isu-isu dan masalah yang sering diperkatakan saban kali apabila menyebut mengenai pembangunan harta wakaf. Antara lainnya ialah:

**Pertama**: Meskipun negara Malaysia kian membangun dan sedang berkembang pesat seiring dengan era globalisasi dunia, tahap kesedaran dan pengetahuan (*marhalah al-Thaqafah*) masyarakat tentang wakaf dan kepentingannya masih lagi kurang. Seruan kepada wakaf ini juga pernah dissentuh oleh cendiakawan agung Melayu, Prof Diraja Ungku Aziz, beliau menyatakan,

"Kalaulah semua umat Islam menyimpan seringgit seorang sebulan (untuk tujuan wakaf), dan bayangkan jika umat Islam berjumlah enam juta orang, maka modal terkumpul sebulan (bagi umat Islam) ialah sebanyak enam juta ringgit."

Akan tetapi, program wakaf ini sepertimana yang pernah cuba dilaksanakan pihak Bank<sup>12</sup> ternyata masih gagal mendapat sambutan masyarakat. Persepsi masyarakat terhadap beberapa aspek dalam ibadah seperti wakaf masih lagi cetek dan ia belum lagi menjadi isu yang sensitif seperti ibadah umrah, korban yang acap kali disentuh dan diperbincangkan kelebihan-kelebihannya saban kali dalam sesi-sesi kuliah dan pengajian.

**Kedua**: Masalah perundangan iaitu ketidakseragaman undang-undang wakaf antara negeri-negeri yang mewujudkan perbezaan dalam pemahaman, tafsiran, tatacara pengeluaran fatwa dan hukum. Ini berpunca daripada kedudukan harta wakaf sepertimana perkara-perkara agama lain terletak di bawah bidangkuasa

<sup>11</sup>Syed Mohd Ghazali Wafa Bin Syed Adwam Wafa, *Pembangunan Wakaf Pendidikan di Malaysia*, h. 139. Kertas kerja ini telah dibentangkan di Seventh International Conference-*The Tawhidi Epistemology: Zakat and Waqf Economy*, Bangi 2010.

<sup>&</sup>lt;sup>12</sup>Lihat Hj. Mohd Nazri Chik, *Wakaf Dan Peranannya Dalam Pembangunan Ummah*, Kuala Lumpur: Institut Kefahaman Islam Malaysia (IKIM), h. 3.

negeri (Perlembagaan Persekutuan, Jadual Kesembilan, Senarai 2 (1)) dan tiada enakmen khusus berkaitan pengurusan dan pentadbiran wakaf di negeri-negeri kecuali Selangor (Enakmen Wakaf (Negeri Selangor) 7/1999). Jadi, enakmen dan akta tentang wakaf kelihatan sempit dan tidak fleksibel (mudah ubah). Isu kritikal berkaitan wakaf sebenarnya bertitik tolak dari polisi kerajaan dan perlembagaan Malaysia itu sendiri yang telah menjurangkan pengurusan wakaf kepada institusi agama negeri-negeri. 13

**Ketiga**: Kebanyakkan harta wakaf terletak di lokasi yang kurang strategik dan tidak mempunyai nilai pembangunan. Manakala, tanah wakaf di kawasan pedalaman pula tidak dapat digunakan oleh kerana tiada keperluan dan tiada nilai komersial selain jauh untuk pembangunan<sup>14</sup>.

Keempat: Tanah-tanah wakaf turut diceroboh dan digunakan oleh pihak yang tidak bertanggungjawab dengan dibina penempatan dan premis-premis perniagaan. Adapun bagi premis perniagaan yang berada di atas tanah wakaf, tarif sewa yang dikenakan pihak Majlis Agama Islam Negeri (MAIN) terhadap peniaga adalah sangat rendah daripada harga semasa. Ini menyebabkan institusi agama negeri-negeri tidak mempunyai kedudukan kewangan yang kukuh untuk digunakan bagi menyalurkan bantuan.

**Kelima**: Masih terdapat waris-waris yang belum mendaftarkan tanah-tanah wakaf di pejabat agama negeri. Ini menyebabkan ketiadaan rekod yang menyebabkan kawasan wakaf tidak boleh dibangunkan.

**Keenam**: Perkembangan dan pembangunan aplikasi wakaf dalam konteks kewangan masih belum lagi dapat dilaksanakan secara komersial sepenuhnya di institusi kewangan seperti di bank-bank memandangkan ia memerlukan sokongan wakaf daripada orang ramai. Konsep dan produk berasaskan wakaf sebenarnya boleh dibangunkan dalam bentuk kewangan serta boleh mendatangkan keuntungan kepada semua pihak. Pada masa kini, institusi kewangan seperti bank-bank sedang berusaha untuk membangunkan wakaf secara lebih meluas seperti saham (unit) dan bon-bon wakaf sesuai dengan status Malaysia sebagai *hub perbankan Islam Antarabangsa*.

**Ketujuh**: Tiada lagi satu bentuk pentadbiran wakaf yang menjadi "*ibu*" bagi semua operasi wakaf negeri. Perbadanan wakaf berpusat dan jawatankuasa khusus wakaf perlu untuk menjamin kelancaran dan kelicinan perlaksanaan operasi wakaf di Malaysia. Perbadanan wakaf berpusat ini juga perlu bertanggungjawab mengawal selia semua operasi wakaf negeri-negeri di seluruh Malaysia.

Namun begitu, meskipun pengurusan dan perlaksanaan wakaf di Malaysia menghadapi banyak masalah yang mampu menganggu gugat, namun Malaysiamasih mampu mencari jalah keluar dari masalah yang menghimpit bagi membangunkan harta wakaf agar tidak terbiar begitu sahaja.

#### 3. PEMERKASAAN WAKAF DI MALAYSIA

Wakaf sememangnya amat penting dalam muamalah seharian umat Islam. Wakaf yang dahulunya dianggap sebagai ibadah sampingan yang terpencil semata-mata, kini telah berkembang pesat di seluruh dunia. Negara-negara luar seperti Amerika dan England sebenarnya telah lama mencedok idea sistem muamalah wakaf ini. If Jadi. Malaysia yang dikenali sebagai hub perbankan Islam tidak sewajarnya tercicir dari negara Barat yang lain. Antara cadangan untuk pemerkasaan industri wakaf di Malaysia ialah,

<sup>1</sup> 

Ahmad Ibrahim (1999), "Wakaf dan Pelaksanaannya di Malaysia", dalam *Undang-undang Keluarga Islam di Malaysia*,
 Malayan Law Journal Sdn. Bhd., h.299. Takrif wakaf sebagai amanah yang diperuntukkan dalam Enakmen Wakaf Selangor (No.7 tahun 1999) telah membezakan tafsiran amanah terdapat di dalam Akta Pemegang Amanah 1949.
 <sup>14</sup>Zulkifli Hasan & Muhammad Najib Abdullah, *The Investment of Waqf Land as a Instrument of Muslims' Economic*

<sup>&</sup>lt;sup>14</sup>Zulkifli Hasan & Muhammad Najib Abdullah, *The Investment of Waqf Land as a Instrument of Muslims' Economic Development in Malaysia*, hh. 18-19. Kertas kerja ini dibentangkan di Dubai International Conference on Endowments' Investment, Dubai, 4-6 Februari 2008.

Dengan saham-saham dan bon wakaf ini, orang ramai akan mampu berwakaf dengan cara yang baru dan sekaligus dapat berkonsi modal dalam membeli bangunan dan tanah untuk kebaikan ummah. Majlis Agama Islam Johor dan Majlis Agama Islam Pulau Pinang telah pun melaksanakan hal ini. Lihat: Nik Mustapha Nik Hassan (1998), "Sumbangan Institusi Wakaf Kepada Pembangunan Ekonomi", dalam Nik Mustapha Nik Hassan et. (ed), Konsep dan Pelaksanaan Wakaf di Malaysia, Kuala Lumpur: Institut Kefahaman Islam Malaysia (IKIM), h. 6 dan 8.

<sup>&</sup>lt;sup>16</sup>Syed Mohd Ghazali Wafa Bin Syed Adwam Wafa, *Pembangunan Wakaf Pendidikan di Malaysia*, h. 140. Kertas kerja ini telah dibentangkan di Seventh International Conference-*The Tawhidi Epistemology: Zakat and Waqf Economy*, Bangi 2010.

**Pertama**: Langkah pertama yang perlu diatur ialah dengan menambahkan lagi kesedaran masyarakat terhadap wakaf. Para ustaz, pensyarah dan guru agama di pusat pengajian agama contohnya, perlu merombak *syllabus* pengajian dan kuliah-kuliah di masjid-masjid dan surau-surau. Mereka perlu sering mengetengahkan dan menerapkan *mawdu'-mawdu'* (tajuk) berkaitan dengan wakaf dalam setiap pengajian mereka (*majal al-ta'lim*) agar dapat memberi maklumat berterusan terhadap kepentingan ibadah wakaf kepada umat Islam. Hal ini kerana, untuk membentuk kesedaran tinggi masyarakat terhadap wakaf, ia memerlukan usaha dan kerjasama yang berterusan dari pelbagai pihak.

Bahkan, kesedaran masyarakat kini tentang kepentingan dan kelebihan ibadah sunat lain seperti umrah dan korban sehingga mereka berlumba-lumba mengerjakannya juga hasil daripada penerapan dan penekanan yang dilakukan para ilmuwan terdahulu. Jadi, kaedah dan metode yang sama juga perlu dilakukan untuk menarik masyarakat agar cenderung kepada ibadah wakaf.

Sebenarnya, sejak 55 tahun yang lalu sebelum merdeka sehingga kini, konsep wakaf telah berkembang dan diterima pakai oleh orang ramai termasuk oleh golongan non muslim untuk pelbagai tujuan, misalnya penerimaan konsep wakaf untuk tujuan pendidikan dan korporat. Tuntutan dan kesedaran masyarakat terhadap wakaf sebenarnya semakin meningkat dari tahun ke tahun, namun akibat dominasi statut parlimen kerajaan Malaysia, ia sedikit sebanyak telah memperlahan dan mengekang kerancakan dan perkembangan wakaf di Malaysia.

**Kedua**: Pentadbiran adalah perkara tunjang dalam memastikan kejayaan sesuatu rancangan. Dari segi pentadbiran, wakaf perlu diperbangun dan diperkembangkan lagi akan segala fungsi, produk dan kepentingannya dalam meningkatkan taraf hidup umat Islam. Pengurusan dan perlaksanaan wakaf di Malaysia juga harus cekap dan telus dalam menjamin kejayaan untuk memartabatkan peranan maksimum wakaf dalam kehidupan negara umat Islam seluruhnya.

Kini, dengan penubuhan Jabatan Wakaf, Zakat dan Haji (JAWHAR) di bawah seliaan Jabatan Perdana Menteri pada 27 Mac 2004 lalu bagi membantu Majlis Agama Islam Negeri melaksanakan pembangunan harta wakaf adalah bagus. Majlis Agama Islam Negeri (MAIN) masih tetap bertindak selaku pemegang amanah tunggal harta wakaf di setiap negeri sambil dibantu oleh Jabatan Wakaf, Zakat dan Haji (JAWHAR).

Semua projek pembangunan tanah wakaf perlu mendapat persetujuan Majlis Agama Islam Negeri (MAIN) dan Jabatan Wakaf, Zakat dan Haji (JAWHAR) terlebih dahulu. Jabatan Wakaf, Zakat dan Haji (JAWHAR) juga bertindak sebagai penyelaras dan mempertemukan antara Majlis Agama Islam Negeri (MAIN) dengan pihak yang berhasrat memajukan tanah wakaf. Keputusannya, hasil kerjasama antara Jabatan Wakaf, Zakat dan Haji (JAWHAR) dan Majlis Agama Islam Negeri (MAIN), sebahagian daripada 11,019.82 hektar tanah wakaf iaitu 4,836.5 hektar tanah wakaf am dan 6,255.55 hektar tanah wakaf khas sudah dibangunkan pada tahun 2012.<sup>17</sup>

Jadi, kerjasama antara Jabatan Wakaf, Zakat dan Haji (JAWHAR) dan Majlis Agama Islam Negeri (MAIN) cuma perlu diperkemaskan dan diperhebatkan lagi. Kedua-dua pihak juga mesti "turun padang" melancarkan kempen-kempen, kursus-kursus kesedaran kepada seluruh anggota masyarakat tentang wakaf, membentuk jawatankuasa khas wakaf, dan mencari dana wakaf melalui syarikat-syarikat besar yang berminat untuk membangunkan harta wakafdi Malaysia. Selain itu usaha untuk menyelaraskan

\_

<sup>&</sup>lt;sup>17</sup>Lihat Berita Harian bertarikh 25 Oktober 2012.

pengurusan wakaf diseluruh negeri di Malaysia juga perlu dilakukan, ia dilihat mampu untuk mempertingkatkankualiti pengurusan harta wakaf di Malaysia <sup>18</sup>.

**Ketiga**: Sebenarnya, sebelum tahun 1952, tiada satu undang-undang bertulis yang diguna pakai Majlis Agama Islam Negeri (MAIN) untuk pelaksanaan pengurusan harta wakaf. Kebanyakan wakaf dulu diserahkan kepada mereka yang berpengaruh di dalam masyarakat seperti imam masjid, nazir masjid dan ketua kampung. Proses penyerahan harta wakaf adalah atas dasar percaya mempercayai dan amanah. Pewakaf akan mengamanahkan harta yang diwakafkan kepada mereka yang berpengaruh dalam masyarakat untuk menguruskan harta wakaf tersebut.

Selepas tahun 1952, barulah pengurusan wakaf menjadi sistematik kerana mempunyai sandaran undangundang yang digariskan di dalam enakmen sebagaimana yang dinyatakan di dalam enakmen pentadbiran Islam negeri masing-masing. <sup>19</sup>Namun begitu, perundangan berkaitan hal ehwal wakaf masih perlu diselaraskan bagi setiap negeri yang kelihatan berbeza-beza fatwa dalam hal ehwal wakaf bagi setiap negeri. Justeru, perlu diwujudkan satu kaedah dan fatwa khas berkaitan wakaf di peringkat nasional agar ia tidak mengelirukan orang ramai yang berminat untuk berwakaf.

Keempat:Kalau dilihat akan tahap perkembangan wakaf di Malaysia, dahulunya ia hanya dianggap sebagai ibadah semata-mata, namun dari sudut perspektif institusi kewangan Islam, apabila jawatankuasa penasihat syariah membuat penilaian terhadap produk-produk aplikasi wakaf, dilihat produk-produk aplikasi wakaf ini mampu menyerap segala elemen muamalah dan fahaman dangkal bahawa aplikasi wakaf akan menyebabkan penyusutan dan kejatuhan ekonomi.

Jadi, dengan memperkenalkan konsep baru dan penambaikan konsep dalam wakaf, ia membuka peluang yang lebih luas kepada institusi kewangan di Malaysia. Bentuk-bentuk pelaburan wakaf yang boleh diusahakan dan dibangunkan institusi kewangan di Malaysia adalah banyak. Hal ini seperti melakukan penambahbaikan terhadap harta wakaf yang terbiar atau kurang berkembang, menggabungkan harta wakaf yang sedia ada untuk menjana hasil yang sama atau lebih, memberi pinjaman untuk keperluan operasi wakaf dan kos untuk meningkatkan fungsi harta wakaf serta memajakkan harta wakaf.

Secara umumnya, banyak bentuk pelaburan wakaf yang boleh dilakukan, dan ia memerlukan penambahbaikan konsep. Dengan cara ini, akhirnya kita boleh melihat peranan wakaf dalam meningkatkan fungsi harta secara maksimum sesuai dengan niat murni orang yang telah mewakafkan harta untuk kemaslahatan ummah sejagat. Hasilnya, pasti akan melahirkan pelbagai produk-produk wakaf lain seperti aset-aset, bon-bon dan saham-saham korporat wakaf yang berpotensi untuk pasaran.

**Kelima**:Akta dan enakmen wakaf yang diwujudkan perlu lebih terbuka dan dapat dirombak pada bila-bila masa sesuai dengan perkembangan semasa dan mengikut keperluan dan kepentingannya. Di samping itu, majlis agama Islam negeri (MAIN) juga perlu memudahkan proses berhubung dengan harta wakaf agar semua orang tertarik untuk melaksanakan ibadah wakaf meskipun ia berkaitan dengan harta benda, yang sedia maklum agak banyak urusan dan proses dokumentasinya.<sup>20</sup>Contohnya seperti di negeri Kelantan sendiri, terdapat banyak harta-harta wakaf yang seakan "beku", dibiarkan dan tidak bernilai ekonomi.

7

<sup>&</sup>lt;sup>18</sup>Zuraidah Mohamed Isa, Norhidayah Ali & Rabitah Harun, *A Comparative Study of Waqf Management in Malaysia*, h. 563. Kertas kerja ini dibentangkan di International Conference on Sociology and Economics Development, Singapura, 2011.

<sup>&</sup>lt;sup>19</sup>Mohd Afandi Bin Mat Rani (2008), *Pengambilan Tanah Wakaf Oleh Pihak Berkuasa Negeri: Analisis Menurut Hukum Syarak dan Aplikasinya di Malaysia*, Tesis Ph.D, Universiti Malaya, h. 129.

<sup>&</sup>lt;sup>20</sup>Akta Kerajaan Tempatan 1960 (Akta 171), Seksyen.134. Lihat juga Akta Kanun Tanah Negara 1965 (Akta 56), Seksyen.196 (1) (a).

Ianya juga tidak dapat digunakan untuk pembangunan oleh kerana ketiadaan akta dan undang-undang yang fleksibel tentang harta wakaf.

Jadi, fatwa berkenaan kaedah istibdal<sup>21</sup> dalam menangani harta wakaf yang tidak berkembang diwujudkan agar harta wakaf dapat dikembangkan untuk kegunaan lain.Undang-undang berkaitan proses mewakafkan tanah oleh kerajaan Persekutuan juga perlu dikaji semula agar segala proses pewakafan hak milik harta wakaf menjadi lebih mudah dan cekap.<sup>22</sup>

**Keenam**: Oleh kerana terdapat banyak situasi di mana harta wakaf tidak dapat dibangunkan kerana permasalahan seperti kedudukan yang kurang strategik, penguatkuasaan undang-undang dan sebagainya, amalan konsep istibdaladalah jalan keluar terbaik untuk membangunkan semula harta wakaf berkenaan.

Konsep dan perlaksanaan istibdal ini sebenarnya telah diputuskan oleh Muzakarah Jawatankuasa Fatwa Kebangsaan pada tahun 1982. Namun begitu, setelah sekian lama, pembangunan harta wakaf dan perkembangannya di Malaysia masih lagi kurang maju jika dibandingkan dengan negara Timur Tengah seperti Mesir, Kuwait, Emiriah Arab Bersatu dan Turki.<sup>23</sup>

Konsep dan perlaksanaan istibdal ini seharusnya perlu lebih efisien. Antara agenda pembangunan yang boleh diketengahkan melalui kaedah ini ialah seperti mendirikan institusi masjid, institusi pendidikan, pusat tanggungjawab sosial (rumah anak yatim), penternakan, pertanian, pusat khidmat komuniti dan pusat perniagaan. Cara ini sekaligus boleh meningkatkan pendapatan dan ekonomi umat Islam dengan pulangan keuntungan dan peluang pekerjaan yang tersedia dengan pembangunan harta wakaf ini.

**Ketujuh**: Penggunaan khidmat Nazir Khas Dilantik (*mutawalli*) oleh Majlis Agama Islam Negeri (MAIN) dalam perihal harta wakaf juga perlu diwujudkan. Nazir yang dilantik khas ini perlu dari kalangan orang dalam kalangan satu-satu kawasan kariah dan daerah agar beliau senang dirujuk jika berlaku masalah dan urusan wakaf. Nazir ini akan berkuasa dan dapat mengatasi (mengubah) niat (*shighah asal*) yang telah ditulis orang yang ingin mewakafkan sesuatu harta. Nazir ini bertanggungjawab dan berhak mengkaji dan memutuskan manfaat yang terbaik bagi pembangunan harta wakaf meskipun ia berlawanan dengan niat asal orang yang ingin mewakafkan harta. Nazir ini juga yang akan berurusan lebih lanjut dengan pihak Majlis Agama Negeri (MAIN). Dengan cara ini, harta wakaf akan kekal membangun dan boleh memberi manfaat untuk kemaslahatan umat Islam seluruhnya. Ini sekaligus dapat memberi limpahan pahala kepada dermawan yang telah mewakafkan harta.

**Kelapan**: Selain itu, pembangunan harta wakaf juga boleh dilaksanakan dengan lebih efisien dengan penggunaan sistem maklumat tanah berasaskan GIS. Pengenalan Sistem Maklumat Wakaf Berasaskan Sistem Maklumat Geografi (GISWAQF) yang mengambil manfaat daripada Geographic Information

Terdapat dua istilah yang perlu difahami dalam proses istibdal mawquf iaitu istilah *ibdal* dan *istibdal*. Istilah *ibdal* bermaksud mengeluar atau menukar sesuatu mawquf (daripada konsep asalnya yang tidak boleh dijual, dihibah atau diwarisi) dengan menjual harta itu. Manakala istilah *istibdal* bermaksud membeli sesuatu harta yang lain dengan hasil jualan untuk dijadikan sebagai mawquf bagi menggantikan harta yang dijual meliputi apa-apa harta yang diperolehi menerusi cara gantian dengan harta yang sama ataupun harta yang lebih baik nilai dan manfaatnya. Harta ini dikenali sebagai *harta badal* atau *amwal al-badal*. Istibdal juga bermaksud menjual apa yang kurang atau telah hilang hasil atau pendapatan dan membeli apa yang lebih baik daripadanya serta menjadikannya sebagai ganti. Istibdal*mawquf* mempunyai matlamat dan objektif tertentu, antaranya ialah: i. mengekalkan *mawquf* umat Islam supaya manfaat dan kegunaannya dapat dinikmati secara berterusan. ii. menjamin pembangunan *mawquf* mengikut arus pembangunan dan perkembangan ekonomi semasa negara. iii. menjaga dan memelihara tujuan/ niat pewakaf bagi mendapat ganjaran secara berkekalan sebagai sedekah jariah. iv. mengelak pembekuan *mawquf* yang tidak ekonomik dan menjadi terbiar. dan v. meningkatkan hasil dan pendapatan dana wakaf negeri-negeri untuk pembangunan ummah. Rujuk *Manual Pengurusan Istibdal Wakaf* (2010), Kuala Lumpur: Jabatan Wakaf, Zakat dan Haji (JAWHAR), h. 11-12.

Hal ini telah diutarakan oleh Y.B S.S Dato' Muhammad Shukri Mohamad, Mufti Kerajaan Kelantan Darul Naim dalam forum mengenai wakaf di Universiti Islam Malaysia (UIM) pada 2012.

<sup>&</sup>lt;sup>23</sup> Syahnaz Binti Sulaiman, Hukum Pembangunan Tanah Wakaf Khas Menurut Perspektif Syarak, h. 46.

System (GIS) sebagaimana dicadangkan oleh sekumpulan penyelidik daripada Pusat Kajian Harta Tanah (CRES), Universiti Teknologi Malaysia adalah baik. Usaha ini adalah untuk membolehkan tanah-tanah wakaf dapat diuruskan dengan lebih efisien dan teratur oleh pihak-pihak berkuasa berkaitan. Hal ini seterusnya akan memperlihatkan penglibatan tanah wakaf dalam pembangunan dan perancangan dan pembangunan negeri, wilayah dan kerajaan tempatan.<sup>24</sup>

**Kesembilan**: Konsep amanah (*trust*) yang diperkenalkan dalam aplikasi wakaf, contohnya seperti amalan wakaf dalam institusi kewangan semasa, perlu turut diserapkan sekali dengan amanah (*trust*) dalam perlaksanaan wakaf. Hal ini bukan disebabkan untuk mengikut rentak suasana rangka kerja ekonomi semasa yang mengikut cara Barat. Akan tetapi, ini dilakukan sebagai rancangan dan persediaan awal agar dapat mencari jalan keluar paling strategik daripada masalah mendatang. Sehubungan dengan itu, institusi *baitulmal* juga boleh memainkan peranan dan bergandingan dalam membentuk konsep *trust* dan wakaf dalam hal ini.

Sekiranya dilihat keboleh terimaan konsep amanah dalam perlaksanaan wakaf, maka benda-benda ini akan dititik beratkan, iaitu hak kepentingan pemegang saham (*stake holders*) akan dipelihara. Pengurusan juga akan dilantik dan diselia oleh pemegang saham sekiranya ada bentuk-bentuk saham yang diwakafkan serta pemantauan yang telus secara "*check and balance*" berdasarkan pemantauan berkala secara audit.<sup>25</sup>

Sehubungan dengan itu, apabila konsep amanah (*trust*) ini diterima pakai dalam operasi dan pentadbiran wakaf<sup>26</sup>, maka di dalam amanah (*trust*), perlu digunakan "*trust deed*", iaitu manfaat kepada penerima hak/benefisian sebagai *instrumen*. Kepentingan "*trust deed*" ini akan memberikan lebih keinginan dan keyakinan kepada selain umat Islam di Malaysia untuk bergiat dengan harta wakaf. Ia juga dapat menarik minat dan memperbanyakkan lagi pelaburan-pelaburan, wang tunai, stok, dan instrumen kewangan bernilai seperti tanah dan lain-lain. Di samping itu, ia juga mengandungi perlindungan daripada pemiutang ke atas harta amanah. Dengan cara ini, pemiutang tidak boleh membuat tuntutan terus terhadap harta zakat dan wakaf, tetapi hanya boleh membuat tuntutan ke atas keuntungan hasil pelaburan yang diperolehi dari harta amanah tersebut.

**Kesepuluh**: Wakaf juga boleh dibangunkan bersama elemen Islam lain seperti zakat untuk tujuan manfaat seperti untuk program pendidikan. Negara-negara Barat seperti Amerika Syarikat dan Great Britain sudah mula menjalankan dan membangunkan serta memaksimumkan aplikasi wakaf dalam urusan muamalah seharian mereka. Ternyata, ia dapat memberi keuntungan dan kemudahan terbaik dalam segenap lapangan untuk kesejahteraan hidup rakyatnya.<sup>27</sup>

Wakaf pendidikan yang dilaksanakan oleh negara lain sudah pun membuahkan hasil dengan lahirdan berkembangnya pusat pengajian ulung seperti universiti Oxford, universiti al-Azhar al-Syarif, al-Jamiah

9

<sup>&</sup>lt;sup>24</sup>Hj. Mohd Nazri Chik, *Wakaf Dan Peranannya Dalam Pembangunan Ummah*, Kuala Lumpur: Institut Kefahaman Islam Malaysia (IKIM), h. 6.

<sup>&</sup>lt;sup>25</sup> Dengan konsep "*Islamic Trust*" ini, semua orang boleh berwakaf dan menyumbang wang mengikut kadar kemampuan masing-masing. Ha ini kerana bukan semua orang mempunyai asset seperti bangunan dan tanah untuk diwakafkan. Mohd Daud Bakar (1999), "Amalan Institusi Wakaf di Beberapa Negara Islam: Satu Perbandingan", dalam Nik Mustapha Nik Hassan et. (ed), *Konsep dan Pelaksanaan Wakaf di Malaysia*, Kuala Lumpur: Institut Kefahaman Islam Malaysia (IKIM), h.182.

<sup>&</sup>lt;sup>26</sup> Konsep amanah (*trust*) bermaksud harta akan dipindahkan kepada para pemegang hak dan dikormesialkan.

<sup>&</sup>lt;sup>27</sup>Rujuk lebih lanjut "*The Sutton Trust Report*". Syed Mohd Ghazali Wafa Bin Syed Adwam Wafa, Pembangunan Wakaf Pendidikan di Malaysia, h. 143. Kertas kerja ini telah dibentangkan di Seventh International Conference-*The Tawhidi Epistemology: Zakat and Waqf Economy*, Bangi 2010.

al-Islamiyyah di Madinah, universiti Cordoba di Andalus dan sebagainya<sup>28</sup>.Universiti-universiti ini kesemuanya terus maju dengan hasil dan sumbangan wakaf. Universiti al-Azhar sebagai contoh telah membangun dan berkembang hasil sumbangan harta wakaf. Sehingga kini, pembiayaan universiti al-Azhar yang dibina sejal 1000 tahun dahulu telah memberi khidmat pengajian percuma kepada pelajar Islam di seluruh dunia.

Mengambil manfaat daripada negara lain, kini, Malaysia telahmenubuhkan Universiti Islam Malaysia (UIM)yang berteraskan wakaf selain sekolah-sekolah agama yang telah sedia ada. Wakaf pendidikan yang besar seperti pusat pengajian tinggi ini perlu diperbanyakkan dan diperhebatkan lagi. Hal ini kerana ia cukup berpotensi untuk memperkasakan lagi sektor ketiga ekonomi Islam, memperkasakan aktiviti ekonomi melalui pelbagai projek pembangunan, pelaburan dan perniagaan, dan seterusnya dapat menjadi pelengkap kepada skim bantuan dan kebajikan pelajaran oleh kerajaan serta akhirnya menyatupadukan rakyat berbilang bangsa atas dasar wakaf pendidikan nasional.<sup>29</sup>

#### 4. KESIMPULAN

Di Malaysia didapati masih banyak harta wakaf yang berpotensi untuk dibangunkan, akan tetapi sehingga kini masih belum dimajukan sewajarnya. Malahan, banyak harta wakaf yang tidak ada rekod dan maklumat sistematik. <sup>30</sup>Hal ini tidak sewajarnya berlaku. Oleh itu, penubuhan pemusatan institusi wakaf dan penambahbaikan konsep wakaf perlu dilaksanakan. Tanpa pendekatan ini, institusi wakaf tidak mungkin berkembang maju dan dapat dikendalikan secara tersusun dan menyeluruh. Pentadbiran dan pelaksanaan institusi dan produk wakaf memerlukan perubahan yang drastik untuk ia berperanan secara lebih efektif dan perkasa.

Institusi wakaf perlulah stabil, lestari dan fleksibel dalam menghadapi apa jua kemungkinan dan halangan yang ada serta tidak terbantut dalam apa-apa noktah. Perlu diingati bahawa wakaf merupakan aset tetap dan penting bagi umat Islam. Ia merupakan satu aset harta yang tidak mudah dimanipulasi dan dibinasakan berbanding sistem-sistem kehartaan lain<sup>31</sup>. Oleh itu,dengan cadangan pemerkasaan ini, adalah lebih menjadi tanggungjawab umat Islam berusaha meletakkan kembali wakaf ke taraf yang sebenar dan menjadikannya satu ibadah yang disegani dalam pembangunan masyarakat dan negara.

#### REVIVAL OF WAQF PROPERTIES IN MALAYSIA

Dahlia Ibrahim<sup>1</sup> Haslindar Ibrahim<sup>2</sup>

#### **ABSTRACT**

Waqf has become a big concept within the Muslim society. Issues pertaining to waqf are famously discussed and debated among fiqh scholars and academician. Most Muslims are familiar with the concept but do not really understand the definition and meaning of waqf along with its process, law, administration and management of it. Waqf is standardly known as benevolence instruments where the profit is used to improve the welfare of the unfortunate society. Beyond the mentioned belief, many Muslims do not take effort in advancing their knowledge on waqf. Undoubtedly, this ignorant attitude among the Muslim- specifically in Malaysia- concerning waqf has largely added to the many visible issues and problems in waqf matters, majorly the administration and management of it. Added to this scenario is the slow progression in developing the many idle and nonproductive waqf properties in all Malaysian states. Hence, there is the need to revive the development of waqf properties in Malaysia. This paper covers brief introduction to waqf, waqf scenario in Malaysia and issues pertaining to its waqf management. Some innovative mechanisms in revitalizing waqf system in Malaysia are also presented with a brief outlook into Jabatan Wakaf, Zakat dan Haji (JAWHAR) dan Yayasan Wakaf Malaysia (YWM).

**Keywords**: waqf institution, management, issues

#### 1. INTRODUCTION

The concept of waqf is in existence long before the emergence of Islam. It was not clearly identified as waqf then but the concept was evidenced through the construction of mosques and surau where donation from the society funded the maintenance cost of the mosques and suraus. Many Muslims believe that waqf is solely for religious matters. Little do majority of the them know that waqf can benefit all level of society. As to rid away this misconstrued understanding of waqf, it is imperative to understand what waqf means in this new era of modern world.

Waqf is standardly known as benevolence instruments where the profit is used to improve the welfare of the unfortunate society. Beyond the mentioned belief, many Muslims do not take effort in advancing their knowledge on waqf. Undoubtedly, this ignorant attitude among the Muslim- specifically in Malaysia-concerning waqf has largely added to the many visible issues and problems in waqf matters, majorly the administration and management of it. On top of this situation, progression on waqf properties is slow in coming although efforts have been taken to step up the development. This paper is intended to give some comprehension of waqf, specifically, covering those areas such as waqf and management of waqf properties.

It will cover brief introduction to waqf, waqf scenario in Malaysia and issues pertaining to its waqf management. Some innovative mechanism's models in revitalizing waqf system in Malaysia are also

presented with a brief outlook into Jabatan Wakaf, Zakat dan Haji (JAWHAR) dan Yayasan Wakaf Malaysia (YWM).

#### 2. WAQF IN ISLAM

There are a few hadiths that support the concept of waqf. One was mentioned by the Prophet (p.b.u.h): whence a child of Adam dies, his/her deed comes to an end except for three things; running and continouos sadaqah, knowledge that benefits (others) and a righteous child who pray for him or her. Second, when Umar bin Al-Khattab went to the Prophet (p.b.u.h) and said "Messenger of Allah! I got a land in Khaibar. I never got a property more precious to me than this. What do you advise me?" The Prophet (p.b.u.h) said, "If you want you can make habs on (bequeath) it, and give it as sadaqah (charity); provided that it should not be sold, bought, given as a gift or inherited". Then, Umar gave it as charity for the poor, relatives, slaves, wayfarers and guests. There is no harm for the person responsible for it to feed himself or a friend from it for free, without profiting. Third is when All the Prophet's (p.b.u.h) companions proclaimed their land as waqf. This evidenced through narrations and report by Thabit Bin Anas Jabir Bin Abdullah and Ibn Hazm (Ibrahim & Ibrahim, 2013; Zahrah, 2007).

Even Karim (n.d), as cited in Ibrahim and Ibrahim (2013) stated that Allah (SWT) says in the Holy Quran: 'those who spend their wealth (in Allah's cause) by night and day, in secret and in public, they shall have their reward with their lord. On them, shall be no fear, nor shall they grieve' (Sura: Al-imran, verse: 274); 'By no means shall you attain Al Birr (piety, righteousness-here it means Allah's reward, i.e. paradise), unless you spend (in Allah's cause) of that which you love; and whatever of good you spend, Allah knows it well.' (Sura: Al-Imran, Verse: 92); and 'Verify those who give sadaqat (i.e. zakat and alms), men and women, and lend a goodly loan, it shall be increased manifold (to their credit), and theirs shall be an honourable good reward (i.e. paradise).' (Sura: Al Hadid, Verse:18).

Evidently from the above, sharing wealth in the form of giving out donations is most encouraged in Islam. And, the one instrument to achieve this is through waqf.

#### 3. WAQF CONCEPT

In laymen perspectives, waqf is a form of donation mostly in term of land and properties. Once a person proclaims his/her property as waqf, it is expected that someone who is entrusted with the waqf will distribute the benefits to the intended beneficiaries as specified by the donor according to the shariah principle. To understand the concept of waqf, first its structure-types, characteristics and participants - needs to be laid down.

#### 3.1 Type of waqf

Standardly there are two types of waqf; specific waqf and general waqf. Specific waqf also known as waqf khas is where the donor declare beforehand what is the purpose of the waqf, for example, build of a mosque or school or for any other purpose he specifies. The purpose will then be specified in a waqf deed and the manager (mutawalli) who is entrusted to administer the waqf as specified by the deed. General waqf or waqf am, on the other hand, is an open ended waqf where the manager of the waqf may use the waqf properties for whatever purpose as long as it benefits the public and the purpose is not against the shariah principles.

#### 3.2 Characteristics of Waqf

Waqf is a mean to protect and preserve a property from belonging to unintended persons. Many jurists believe it is a concept of holding, confining, detaining or restraining the proclaimed property from misuse. For many years, many Muslims believe that only fixed assets can be donated as waqf as interpreted by the Islamic law where the property proclaimed as waqf must be immovable as characterized by the need for waqf to be perpetual. This inherited definition of waqf is due to the nature of the benefit of immovable property where it is utilized without having to use up the property itself (Osman, 2012; Kahf, 2007b). Nowadays, this backward interpretation is no longer valid since the new ruling on waqf includes all movable properties such as cash, shares, books and other things as deemed beneficial (Osman, 2012; Cajee, 2007; Hasan, 2007; Nik Hassan, 1999; Sait and Lim, 2006). In spite of this, the acceptance of other forms of properties as waqf, immovable properties (land and building) still make up the majority of waqf property as evidenced by the value they acquired (Osman, 2012; Sait and Lim, 2006).

But the most acceptable and preferred definition of waqf is by Abu Yusof from Hanafi school where the meaning of waqf is rephrased by jurists such as Imam Muhammad and other Jurists in Shafie, Hanbali and Imami schools. The rephrased waqf definition leans towards the irrevocability, perpetuity and alienability of the donated property- which goes without saying- the proclaimed properties are prohibited from being transferred to other people.

#### 3.3 Waqf Participants

The common parties involved for waqf to be valid are: founder (Waqif), beneficiary (Maukuf Alaihi) and donated property (Maukuf).

First, the founder must be mature and has a sound mind. He must donate on his will and he owns the property he wants to donate. Second, the founder must specify in the waqf deed who shall benefits from his proclaimed waqf. The beneficiary can be specified as individual or general philanthropy to the society. Third, the donated property must be something that can be donated where its ownership rightfully belongs to the founder. Lastly, a lafaz is undertaken to validate the waqf agreement<sup>3</sup>.

#### 4. WAQF IN MALAYSIA

Malaysia has 14 states and ruled by a King. Each state subsequently is under the power of the Sultan who is given full authority by the Federal Government to manage all religious matters which include zakat, baitulmal, waqf and others. The Sultan, then, passed on the power to the State Islamic Religious Council (SIRC) of each state in Malaysia to oversee all religious matters.

#### 4.1 State Religious Council Responsibility

Mohammad and Iman (2006) agreed with fiqh opinions that the management of waqf should not have government interference since waqf properties will be subjected to liabilities and thus can have negative effect on the waqf properties in the future. This argument is further apparent with the appointment of SIRC as the trustee, problems in relation to waqf properties still prevail due to imbalance treatment of waqf property by the individual SIRC especially there is a big argument over the usage of istibdal in the administration waqf properties. In spite of this, however, the management of waqf properties in Malaysia has improved tremendously. This is largely due to the clauses included in the regulation pertinent to the waqf properties.

\_

<sup>&</sup>lt;sup>3</sup> www.jawhar.gov.my

Among the responsibilities of the SIRC as set forth in the clause are<sup>4</sup>:

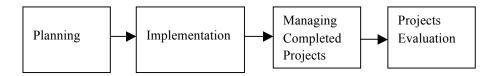

- 1. All wagf properties are solely trusted under the council of Islamic religion
- 2. The council must keep all the documents related to waqf properties
- 3. Ownership of waqf properties must be transferred to the council
- 4. The council must use all monies from specific waqf properties for the intended purpose of the founder
- 5. The council must keep all the monies from general waqf properties in the general fund of the council or the baitul mal

#### 4.2 Department of Waqf, Zakat and Haj (JAWHAR)

According to Mohd Salleh and Muhammad (2008), the Malaysian Federal Government does not have any land to its name because all pieces of land in Malaysia are rightfully owned by the states. Hence, it becomes very taxing for the Malaysian Government to administer and develop waqf properties especially land. Due to this reason, there are many idle and nonproductive waqf lands in Malaysia. The need to develop the idle and unproductive waqf land had prompted the Former Malaysian Prime Minister; Tun Abdullah Haji Badawi announced the establishment of Department of Waqf, Zakat and Haj (JAWHAR) in 2004. JAWHAR is expected to make progression on waqf properties in an organized, systematic and effective way. However, JAWHAR has no jurisdiction in practicing its power and rights on the management of waqf properties because the sole trustee on waqf is still vested under each SIRC.

JAWHAR main function is to establish liaison with the individual SIRC and coordinate all information from the SIRCs to develop waqf properties in each state via the fund from the Federal Government<sup>5</sup>. Holistically, under the 9<sup>th</sup> Malaysian Plan with an allocation of RM250 million, JAWHAR and SIRCs boosted the development of waqf land by applying the waqf land development model as depicted below.

Figure 1: Waqf Land Development model

Source: Mohd Salleh and Muhammad (2008)

At the planning stage, SIRCs need to identify the waqf land to be proposed for development to JAWHAR. The proposed waqf land must be strategic in location and must be unrestricted. SIRCs will still hold the title to the waqf land to maintain the perpetuity aspect of the waqf. During the implementation process, the Federal Government needs to lease waqf land through the Federal Land Commission (FLC) since Federal Fund can only be used on Federal Government lands. As all lands belong to SIRC, this leasing agreement is imperative before proceeding to the implementation process. While the JAWHAR provides the fund, the Work Department is to monitor and manage the proposed projects. Once the project is completed, it will be transferred back to JAWHAR. Next, JAWHAR will pass on the completed social project such as orphanage shelter to SIRCs to manage on their own. For economic project, the SIRCs and Yayasan Wakaf Malaysia (YWM) will jointly be given the authority to manage it where the profits will be deposited into SIRCs and YWM waqf fund for future waqf land development. Lastly, JAWHAR needs to evaluate whether the projects undertaken meets its objective. If it does not, JAWHAR needs to make report on it and find solution to rectify the failure (Mohd Salleh and Muhammad, 2008).

\_

<sup>&</sup>lt;sup>4</sup> Alhabshi (1991)

<sup>&</sup>lt;sup>5</sup> Interview with JAWHAR

#### 4.3 Yayasan Wakaf Malaysia (YWM)

On 25<sup>th</sup> March, 2006, a committee led by the National Baitulmal Coordination Committee or Jawatankuasa Penyelarasan Baitulmal Kebangsaan (JPBK) had agreed to establish a national entity to manage waqf related matters. Although JAWHAR is already in operation to conduct the monitoring and coordination on waqf properties, this national entity- which later launched in 2008 and named as Foundation Waqf Malaysia or Yayasan Wakaf Malaysia (YWM)-is to work along JAWHAR and SIRCs. YWM main idea is to unite and collect all waqf resources as a highly potential economic source in maximizing the benefits to the society. The core purpose of YWM is 1) to collect waqf fund by conducting fundraising programs, 2) to develop and progress waqf properties, 3) to invest YWM fund as allowed by shariah, 4) to organize beneficial activities such giving assistance to the impoverish and to best carry the intention of the founder and 5) to promote conferences/seminars and to publish brochures as a tool to expand YWM's objective (Ahmad, 2008). YWM is also actively promoting its cash waqf programs by distributing flyers and brochures to the public.

#### 5.0 WAQF ISSUES IN MALAYSIA

Previously, before the SIRC is given the authority to manage waqf properties, the manager (mutawalli) to manage the waqf property is chosen by the waqif or donor himself. The mutawalli can be the village leader, trusted individuals or the mosque committees. There is no existence of formal agreement between the waqif and the mutawalli. As a result, mismanagement and corruption surrounds the administration of waqf properties. Most often than not, waqf properties are not managed in accordance to the original intention of the waqf.

One may think that with the appointment of SIRCs as the waqf properties trustee, abovementioned problem can be tackled. But, it is sad to say that such problem still exist when SIRCs are unable to manage waqf properties efficiently. Below are some of the issues.

#### 5.1 Work Force

The persons in charge to manage the waqf properties are not qualified, knowledgeable and professional in the Islamic principles and the laws governing them resulting in difficulty attaining the performance and objectives of the waqf system. To add salt to the wound, SIRCs are also facing shortages of personnel to run waqf properties. Additionally, there are also involvements of the non-muslims in managing the waqf properties. Having no in depth knowledge of the principles and beliefs in Islam, the waqf properties are managed by those who are not supposed to be managing them in the first place. It is not too hush to say that waqf properties should be managed solely by qualified Muslims as to ensure that the objectives of the waqf system is upheld (Chowdury, Ghazali & Ibrahim, 2011).

#### 5.2 Land

The wealthy Malaysian prefers to perform waqf by giving away their lands. However, most often, this donated property is very isolated and have no proper infrastructure which deems valueless. In addition, some of the land has features that are not conducive to develop into productive progression. At other times, there also exists illegal occupation of waqf land by the society. All these along with the improper recordkeeping of ownership registration and minimal waqf data base system have hindered SIRCs intention in developing waqf aggressively (Mohd Salleh and Muhammad, 2008).

#### 5.3 Monetary

The Federal Government through the 9<sup>th</sup> Malaysian Plan had allocated RM250 million for reforming the waqf system in Malaysia (Mohd Salleh and Muhammad, 2008). This amount is actually not sufficient to develop enormous amount of waqf land in Malaysia. As such, many SIRC have formed cooperation with private businesses to develop their waqf land. From the outset, this effort can be fruitful to SIRCs. But it is not apparently so since the private businesses will acquire more benefits compared to the SIRCs. Mohd Salleh and Muhammad (2008) further mentioned that private businesses get 70% while SIRCs only get 30% share from the developed waqf properties. This can be negative to the welfare of the ummah.

#### 5.4 Waqf Enactment

The fact that each SIRC has its own law in managing waqf contributes to the slow progress in reviving waqf properties in Malaysia. The SIRCs have State Islamic Administration Enactment or 'Enakmen Islam Pentadbiran Islam Negeri (EIPIN)' but many do not have specific regulation on waqf, namely Waqf Enacment or Enakmen Wakaf. Only a few SIRCs have Waqf Enacment. These SIRCs include Melaka, Negeri Sembilan and Selangor. The Waqf Enactment defines aspects of waqf which include the type, SIRCs power, administration of waqf, to name a few<sup>6</sup>. Without the presence of this specific Waqf Enactment, it will be very difficult for waqf institutions to uphold and develop waqf properties.

In short, all issues above coupled with the unavailability to form a standard system for waqf management restrict waqf institutions to progressively and actively develop waqf properties.

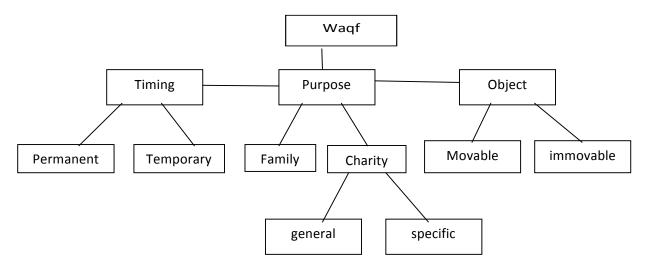

#### **6.0 WAQF NEW MECHANISM**

New measures have become intense issues in waqf development not only in Malaysia but also in most Muslim countries as to revive the waqf system. In all the above discussion, waqf is categorized into various types where the most common categories are those of landed properties. As indicated earlier, there are two types of waqf; general and specific. These two types are further classified into movable or immovable properties. The debate on the movability of the waqf properties still persists especially there are contradictions between the scholars on the Islamic principle supporting it. The movability in the waqf system is highly supported by the Ottoman Sultans who believed that the fund obtained from the movable waqf properties are used for the expansion of Islam in Europe (Chowdury et al, 2011; Cizakca, 2004, 2010). The Malaysian Fatwa Committee Council also confirmed that cash waqf, one form of movable waqf, is allowed to be endowed (Chowdury et al, 2011). The below chart specify the three diverse aspects of waqf system in the Islamic Jurispudence.

-

<sup>&</sup>lt;sup>6</sup> Interview with JAWHAR

Figure 2: Categories of waqf

Source: Chowdury et al (2011)

It is to some researchers' opinion that the movable waqf should be given serious attention. They believe that to develop the full potential of waqf properties to generate income, the orthodox treatment of them shall be replaced by new innovation of waqf. To materialize this new vision, movable waqf shall be allowed to be endowed freely without restricting waqf properties to immovability status only. As such, this section briefly laid down the notion of movability in waqf management. It is a point to mention that there exist interrelations between these mechanisms as discussed next.

#### 6.1 Cash Waqf

Most Muslims believed that waqf endowment shall be in the form of properties since properties meet the conditions of perpetuity, irrevocability and inalienability. Little do the Muslims know that properties can be demolished and destructed due to natural mishap and thus the value of the properties can be diminished. Due to this reason, it is crucial to look into cash waqf as an alternative to waqf properties where the value of waqf can be enhanced through proper management. Cash waqf is more constructive as compared to land, books, buildings and it is reckoned to be lucrative in the modern Islamic financial system practices. As cash waqf does not involve land, many Muslims can participate in the waqf endowment regardless of their financial position as long as no shariah principles are violated (Chowdury et al, 2011).

The society can easily join the cash waqf as they are only required to donate their money by way of cash or make the payment through bank accounts via e-waqf facility. The fund collected from the society will be managed by the nazir who acted as an agent to the waqif based on the wakalah contract where the nazir route the fund for the identified projects and any balance will be reverted back to the fund for future undertakings. Practically, the wakalah contract is applied in the implementation of cash waqf because the waqif permission is not required to run the activities and projects under the waqf agreement (Jalil & Ramli, 2008). The nazir is solely responsible to manage the fund as long as the objectives of the waqf are sustained.

Another example is cash waqf through deposits as practiced by a mosque created under the existing waqf. When the mosque is in need of fund, it can simply apply a beneficiary account with the bank or get a new account of a newly created waqf. Another way is for the mosque to solicit donation for additional fund for maintenance of the mosque through displaying its account number to the public at its premise. Often, there will be a number of people willingly donate to the mosque for this purpose. If in any case, a smaller amount of money is donated or when the waqif does not have any beneficiaries in mind, the waqif may select from a list of existing or future development projects of the bank dealing the waqf certificate where the waqif will

eventually leave the bank to make decision on his behalf (Karim, R, n.d). Here, the bank will position itself as the mutawalli for the waqf. The model for the abovementioned is tabled below.

1-The founder deposits money into cash waqf based account

Capital
Investment

Cash waqf Account

Cash waqf Account

Cash waqf Account

Charity Projects

2-The bank manages the capital on behalf of the waqif

3-The capital is invested

4-The Cash waqf account earns profit thru a mudarabah account

5-The proceeds will be used for charitable purposes or purposes specified by the waqif

Figure 3: Product model-public waqf

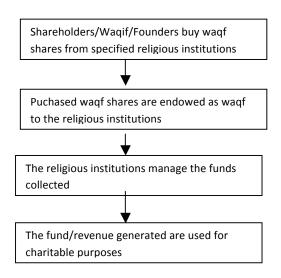

Source: Khademolhoseini (n.d)

#### 6.2 Waqf-Shares

Waqf share works closely with cash waqf concept. This means there is no physical donation of property but cash. The availability of waqf share, like cash waqf, gives opportunity for all Muslims to participate regardless of status. It will eliminate the notion that only the wealthy persons can make the waqf endowments.

An individual will buy shares-amount must be affordable to all- from specified religious institutions. A certificate is issued to the individual, in this case known as waqif or founder- where the name of the waqif will be written on the certificate as proof that he purchases the share with specific amount. The shares will be endowed to the specific religious institution who acts as a mutawalli to manage the collected fund. The funds or revenue collected then will used for charitable purposes. The model of waqf shares is stipulated in the table below. Not only Malaysia used this model but also other countries such as Indonesia, Sudan, Kuwait and UK.

Figure 4: Waqf Share Model-Public waqf

Source: Khademolhoseini (n.d)

# 6.3 Corporate waqf

Ibrahim and Ibrahim (2013) pointed that development of waqf is not confined to immovable property such as land. Steps have been taken to introduce more contemporary waqf development. As mentioned earlier, cash waqf and waqf share are two of the new mechanisms in waqf development. These two mechanisms are more to individual's participation. The most contemporary and most discussed mechanism in waqf development, however, is corporate waqf where cash waqf and waqf share are also utilized in its application. Corporate waqf is an innovative mechanism in generating income for the benefits of most society in the form of cash waqf, waqf share and other assets investment methods. It is an initiative in combining perpetuity characteristic of waqf to achieve the power of entrepreneurial dynamism<sup>7</sup>. Example of corporate waqf is evidenced in some of the Muslims countries such as JCorp in Malaysia and Warees Plc in Singapore.

In line with corporate waqf principles 1) to create an Islamic institution catering to the society's need with element of corporate entity 2) to carry out the responsibility to the 'ummah' for eternity 3) to voluntarily share wealth, time and expertise 4) to generate wealth and protection of the income, and 5) to establish an incorporation instrument that is trustworthy and wholly; the objectives of corporate waqf are (Ministry of Finance, 2011):

- 1. Ability to expand and generate wealth for individuals, private and public sector in global arena
- 2. Professional management
- 3. Preservation of the ummah economic ownership through protection of the assets
- 4. Released of the ummah's undeveloped assets
- 5. Strengthening of the ummah's economic welfare
- 6. assist government in nation's development and reduction of spending, deficit and debts

-

<sup>&</sup>lt;sup>7</sup> Ministry of Finance (2011)

Corporate waqf is popularly discussed as the tools to give new meaning in generating income to improve the economy of the ummah. Most importantly, its application is not against the principles of waqf. It is expected that all issues pertaining to waqf management such as management negligence, flaws and ineffectiveness can be solved through corporate waqf.

In short, the three mechanisms, cash waqf, waqf share and corporate waqf- are new innovation in waqf development in the new era. Nevertheless, the applications of these mechanisms are not without controversies. It is important to mention that cash waqf utilization in the waqf system received a lot of debates among the fiqh scholars and modern scholars alike. Historically, cash waqf exist and accepted in many Muslim countries as way back as the 15<sup>th</sup> century to the 16<sup>th</sup> century. Not only it deviates from the three conditions of waqf-perpetuity, irrevocability, inalienalility- but also, the nature of the management of cash waqf which involve some form of interest bearing become the disputes which persisted from the 16<sup>th</sup> century till the twentieth century (Cizakca, 1998). Despite this disagreement among the fiqh experts, Majid Khademolhoseini (n.d) noted that cash waqf, waqf share and corporated cash waqf are acceptable in many Muslim Countries albeit ongoing debates on them.

## 7. CONCLUSION

Majority of Muslims aware that waqf is to help the poor and needy. This historic belief of waqf is one big factor to the many problems occurring as we reach the era of millennium. Conservatively, most waqf properties are used to develop mosques, surau and religious schools. Many Muslim countries refused to bulge from the tradition system of waqf, fearing any changes made to its system will violate the shariah principles. No doubt, changes made on the waqf development and management erected new meaning and understanding that needs to be understood and accepted by the Muslims as a whole. Malaysia is no exception to this situation. Problems pertaining to waqf that arise in Malaysia almost replicate those of other Muslim countries. Hence, Malaysia is also in active search of ways to improve its waqf development.

It is mentioned by Alhabshi (1991) that estimated 90% of all waqf proclaimed for religious purpose where only 10% can be used for other purposes. Judging from the number, nothing much can be done to improve the development of waqf for the philanthropic and economic improvement of the ummah. But according to Rashid (2011), even 10% of all waqf properties can be developed due to urbanization and a rise in property valuation and rentals. He further mentioned that the average rate of return of investments made in developing waqf can give returns between 20-25%. As such, it is worth the time and effort to seriously look into the new ways in developing the waqf. Notwithstanding, there exists many new mechanisms of waqf which are creative and innovative in generating better income for waqf, still there are slow incoming due to reluctance in changing the old system. Malaysia cannot afford to lose all the time and possibilities in gaining income from the many underdeveloped waqf available in all the states. It is beyond words what can be achieved from developing the underdeveloped waqf properties. In India, for example, 100 waqf properties developed increased nearly 1900% in revenues (Ibrahim & Ibrahim, 2013; Rashid, 2011).

In summary, maybe it is not fair to solely put full responsibility to the religious councils. The government and the Muslim society should also be involved in finding the best way to develop waqf properties in Malaysia. The changes made to waqf system not only involve the changes to its administration and implementation of the waqf properties, but also, all parties need to combine effort in finding the best policy that can be applied to the existing way of their waqf management. There are many papers written on the participation of Islamic financial institutions in providing fund to develop waqf properties. Here, it is evidenced that developing waqf properties are not small matters in hand. All parties should lend their hands to be realize what Rashid (2011) expressed as "only sky is the limit in the waqf development'.

# PERSPECTIVE OF SIYASAH SHAR'IAH IN APPLICATION OF CASH WAQF TRANSFER FOR ISLAMIC FINANCIAL INDUSTRY: INDONESIAN STUDY CASE

Ahmad Mikail<sup>1</sup>

#### **ABSTRACT**

World has become witness for the Indonesian rapid economic growth todays. This rapid economic growth has elevated most of their population standard of living. Nevertheless, this rapid economic growth did not guarantee every citizen in this country live properly. About 35 percent of its population lives with income less that 2 dollar a day. Hence, Poverty is the major problem for Indonesia since this country reached their independence. As most populated Muslim country in the world Indonesia has a lot of opportunity to eradicate poverty by using its Islamic heritage policy. Waqf is the one of the several priceless Islamic heritages that can be utilized for Muslim in Indonesia to tackle their classic problem. Moreover, Muslim in Indonesia has a chance to maximize the momentum of rapid growing of Islamic finance industry by introducing once again waqf as the tool for poverty problem. The unique characteristic of wagf, perpetuity and temporary concept, that inherent with wagf itself can be strengthened by offering applicable method that can be matched with Islamic financial industry todays. Several methods have been offered by many Muslims scholar in the world to re-juvenile the waqf into the Muslim economic activity. One of the most populist is cash waqf transfer. This method is more concern upon return on investment and cash collecting as main source of wagf fund. This concept can be combined by utilizing the Islamic capital market that growing fast recently in Indonesia. The objective of this paper is trying to review the concept of cash waqf transfer and its implementation in Indonesia. Furthermore, this paper also attempt to explain perspective of syiasah shari'ah in application of cash as medium of waqf. Based on library research method, this paper found that cash waqf transfer has been implemented in several private waqf institutions in Indonesia. Lack of government support and participation consider as two main reasons of the low level of cash wagf collection.

Keywords: Indonesia, waqf, cash waqf transfer, Islamic financial industry, Siyasah Shari'ah.

# 1. INTRODUCTION

Indonesian has good experience for developing their country from one of the poorest in Asia to become the member of G-20 in 2011. However, Indonesian rapid economic growth is proven not capable in ensuring the prosperity of the people since its independence. Based on World Bank data, the poverty has been decreased significantly from 85 percent in 1990 to 18 percent in 2010. Nevertheless, the massive numbers of Indonesian people live under the 2 \$ poverty line still continues following the diminishing rate of Indonesian economic growth since 1997. The proportion of Indonesia people live under 2\$ a day still reach 45 percent in 2010. Graph.1 shows us the progression of Indonesian poverty line from 1990 to 2010.

Furthermore, the inequality within the society also becomes major problem in Indonesian economy. Gini coefficient index shows increasing level from 0.34 in to 0.44 in 2010. Form this information we

\_

<sup>&</sup>lt;sup>1</sup> Ahmad Mikail Zaini is currently a Master of Economics student in Faculty of Economics and Management Science, International Islamic University Malaysia. Contact: ahmadmikailzaini@gmail.com.

can infer that the economic growth does not guarantee people in Indonesia prosper together. Inequality situation might bring social and political problem in Indonesia such as crime, chaos, and disintegration. The limitation of government budget, corruption and lack of national insurance also create worse condition for poverty alleviation in Indonesia.

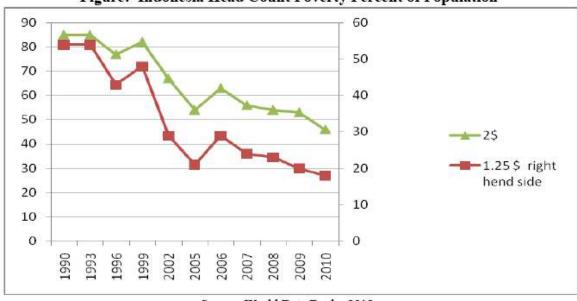

Figure: Indonesia Head Count Poverty Percent of Population

Source: World Data Bank, 2013.

This situation might be handled by Indonesia if the people want to participate together to against the poverty. Indonesia has lot of potential resources that can be used to overcome this situation. Beside its abandon of natural resources, Indonesia has also good potential resources to against the poverty by active participation of Muslim society. Indonesia is the most populated Muslim country in the world. This condition should be maximized by Muslim people to erode this problem by implementing holistic approach of Islamic Economic system.

Islamic economic system has different goal than any other economic system in the world. The holistic approach that defining by Maqasid Shariah or the objective of Islamic law ensures the goal of Islamic economic system not only achieving economic growth but also justice and equality among people. The concept of Maslahah or beneficiary can be attained by protecting five values: life, lineage, wealth, intellect, and religion. One of the main characteristic of Islamic economic system is voluntary sector based<sup>2</sup>. Voluntary sector play important role in achieving maqasid shariah through several instrument such as zakat, waqf, infaq, and sadaqat. It is called third sector because it is different with government and private sector. Private sector works because of the profit motive so the allocation and distribution function in economics was generated by market mechanism. Meanwhile, Government institution plays to correct the market mechanism when allocation and distribution function is not worked efficiently<sup>3</sup>.

We can find voluntary sector in conventional economics like endowment fund. Nevertheless, endowment fund in conventional system works based on altruism motive. In Islamic society voluntary sector works based on seek of Allah blessing. One of the main significant sources of funding for this sector is Waqf. It has played significant role in Islamic society since the era of Prophet Muhammad (Pbuh). The history of Waqf in the economic activity is as long as the history of Islam. Waqaf have been practiced by Prophet Muhammad (pbuh) and his companion since the beginning of Islam<sup>4</sup>.

<sup>&</sup>lt;sup>2</sup> Ziauddin Ahmed, et.al, "Fiscal Policy and Resource Allocation in Islam," (Jeddah: International Centre for Research in Islamic Economics, 1983).:17

<sup>3</sup> Ibid.p.18

<sup>&</sup>lt;sup>4</sup> Monzer Kahf, "Towards the Revival of Awqaf: A Few Fiqhi Issues to Reconsider," (Presented at the Harvard Forum on Islamic Finance and Economics, 1999).:10

Unfortunately, the western colonization had reduced the role of Waqf in Muslim society and the critique from western orientalist about the concept of Waqf as the source of corruption had totally reduced waqf institution in Muslim countries<sup>5</sup> Now days, many people even could not understand what actually the concept of waqf is. With the rapid development of economic activity in many Muslim countries and the awareness of the important of Waqf Muslim country has tried to revive the waqf institution once again. The main problem that face by many Muslim in Indonesia to improve the role of waqf in Muslim society today is the awareness of Muslim people in Indonesia about the benefit of waqf. Besides, people are not well educated about the concept of waqf itself. For majority people waqf is identic with land, building, mosque, and any other fixed asset.

In recent days, Muslim scholars try to revive waqf institution trough several concept one of the most famous method is cash waqf transfer. We can define cash waqf transfer as charitable endowment or mobilizing fund for certain purpose through cash capital<sup>6</sup>. This method is famous because the flexibility of cash capital. Through cash waqf transfer nadzir or the person who manage waqf asset might manage the asset easily. Cash waqf transfer not only limited with transferring cash but also transferring any other asset which allowed by shariah principle such as stock, sukuk, deposit certificate, and hajj saving certificate<sup>7</sup>.

The development of Islamic financial institution in Indonesia now day has support the implementation of cash waqf transfer in several Muslim countries. This momentum should not be ignored by Muslim people in Indonesia. Islamic financial institution like Islamic capital market and Islamic bank should be integral part for developing voluntary sector in Indonesia. These institutions should play as intermediary channel for rich people in Indonesia to waqf their wealth. The graph.2 shows us the growth of Islamic bank asset, financing, and third party fund in Indonesia. The average growth of Islamic bank asset increases around 40 to 60 percent a year. The third party rose rapidly from just Rp. 1 trillion in 2000 to Rp.102 trillion in 2011.

That number show us how huge the potential amount of money that can be collected from the third party to finance the voluntary sector in Indonesia. Moreover, we can use this potential by offering waqf contract for some rich depositor in Islamic bank for poverty reduction purpose. With this kind of effort we can revive and modernize once again waqf institution in Muslim society.

Aside from Islamic bank, Islamic capital market is also the potential institution in Islamic financial industry. Islamic capital market has been growing significantly in Indonesia. With average growth 40 percent each year, Islamic capital market has potential place for Muslim to revive waqf institution in Indonesia. Based on graphic.3, the total capitalization of Islamic capital market reached Rp.1671 trillion or US\$ 167,1 billion increasing rapidly from only US\$7.8 billion US\$ in 2000. This rapid growing indicate how big money that can be collected if there is good institution that provided by the Indonesian government or private institution for altruism purpose.

Source: Bank of Indonesia, 2013.

Figure 3. Capitalization of Islamic Capital Market in Indonesia from 2000 to 2012 (Billion Rupiah)

Source: Indonesian Financial Authority, 2013.

Regarding above explanation, we know the valuable potency of Islamic financial industry in generating cash waqf transfer in Indonesia. This potency should not be ignored by Indonesian government and Muslim society to accelerate poverty alleviation. Nevertheless, the implementation of cash waqf transfer is not immune with several obstacles. The lack of government support in constructing silent nadzir institution in Indonesia and fiqh issue related cash waqf concepts are several issuesvthat faced by the society today. In this case the framework of siasah syar'iyyah plays important role to analyze these problem. By definition of Ibn Qayyim, "siasah syar'iyyah is any measure which actually brings the people closest to the beneficence (salah) and furthest away from corruption (fasad)

partake in just siyasah even if it has not been approved by Prophet (PBUH) nor regulated by Divine revelation. Anyone who says that there is no siasah syar'iyyah where the shariah itself is silent is wrong and has misunderstood the companions"<sup>8</sup>

That definition explains that the ruler, in this case Indonesian government, can take any measure to reach *maslahah* for its people and reduce *mafsadah* or any obstacle that arise in implementation of cash waqf transfer in Indonesia of course with several steps that allowed or not contradict of shariah. It is interesting to inform what kind of obstacle that faced in implementing cash waqf transfer in Indonesia and what is jurist opinion about this method. According to these reasons, this paper tries to explain and review clearly the concept of cash waqf transfer and its implementation in Indonesia. Moreover, this paper also tries to analyze the concept of cash waqf transfer from syiasah shariah perspective.

## 2. LITERATURE REVIEW

In this part, the author try to explain the definition of waqf, its general principle, institution, and concept of cash waqf transfer. The sources of this part come from several journal and books.

# 2.1. General Concept of Waqf

Firstly we have to identify what is the meaning of waqf. "Literally waqf means to stop, to hold, to restrain, to detain, or to prevent, such as saying," preventing from disposition." In Islamic law, waqf refers to irrevocable dedication of a portion of ones wealth for the purpose of expending its usufructs to legitimate causes or charitable and righteous ends with the overriding objective of getting closer to Allah<sup>9</sup>. By this definition we can infer that waqf has different characteristic with any other charitable gift. It has stock concept then flow concept. The principle of waqf asset must be hold and the usufruct or the return of that asset can be used for charitable purpose.

In Islamic history Waqf has play a crucial role. It is help not only to build mosque but also to create job. "Waqaf institutions also contributed significantly in taking care of orphans, widows, handicapped and the old; by providing them with food, shelter and all the basics they needed. There were also some waqf for animals and dead people; for instance, and during the Mamluki era in Egypt, a whole Waqf institution cared for funeral ceremonies for the aliens, and another one cared for cats and dogs. Awqaf helped also in providing job opportunities for the jobless; for example, in Turkey 1931, the Turkish Awqaf hired over 13% of the working power in the country" <sup>10</sup>. From Islamic jurisprudence, waqf can be classified into three aspects: time, purpose, and object matter of waqf<sup>11</sup>.

• Time: we can divide waqf based on how long the waqf asset invested in waqf purpose. When one person decided to waqf his asset forever for certain purpose, we can classify this as permanent waqf. Based on *Malikiyyah* if some on decide to waqf his asset for certain period of time and take back the usufruct or the ownership of his asset before for his pleasure, it can classify it as

temporary waqf<sup>12</sup>. For instance, when some on decide to waqf her building for mosque purpose for one year then take back his asset after that is what we mention as temporary waqf.

- Purpose: the intention of using the usufruct of waqf asset can be classify as two main categories family waqf and full charity purposes. In family waqf the usufruct and the ownership of the asset is still hold by family member of waqif or the person who waqf his asset. The usufruct of that asset is used to family member pleasure. In full charity waqf the ownership of the asset and the usufruct of the asset are transferred to nadzir or the institution which manage asset of waqf. The purpose of this waqf can be specific or it can be general for social welfare.
- Object: the object of waqf or the asset of waqf can be classified as two main categories. The first one is moveable asset such as cash, book, valuable certificate, etc. the second is immoveable asset such as building, land, mosque, and house<sup>13</sup>. The graphic bellow shows us the summary of categories of waqf.

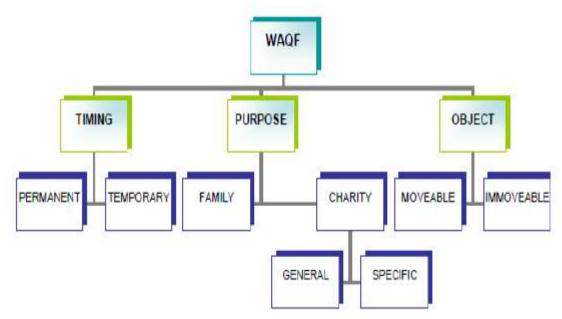

Figure 4. The Categories of Waqf in Islamic Jurisprudence

Source: Abdullah Jalil (2010) 14

## 2.2. The Characteristic of Waqf

Based on classical jurist Waqf has three main characteristic <sup>15</sup>. Irrevocability means lack of power of waqif to revoke his donation at any time. In other word when someone has decided to waqf his asset, he could not revoke the ownership of his asset for his pleasure. The second characteristic of waqf is perpetuity which has three definitions "once the declaration of waqf is made by the donor, a legally binding waqf os automatically effected. Second, that waqf cannot be constrained by time and temporariness. Third, the subject metter of the waqf should remain so forever" <sup>16</sup>.

\_

<sup>&</sup>lt;sup>12</sup> Ibid, p. 2.

<sup>&</sup>lt;sup>13</sup> Ariff hidayat Ali,"Waqf ontinued Relevance as The Third Sector in Term of Mobilizing Resources for Productive Use in Islamic Economic Sytem,"(Malaysia: The Global University in Islamic Finance,INCEIF).10
<sup>14</sup> Abdullah Jalil, ibid., p. 2.

Mohammad Tahir et.al, "Obstacle of the Current Concept of Waqf to Development of Waqf Properties and The Recommended Alternative", http://eprints.utm.my/501/1/27-38.pdf (Accessed June 1st 2013).

16 Ibid., p. 29.

This definition shows us the rigidity of waqf asset. By this definition the ownership and the usufruct of waqf asset could not be changed. The interpretation of perpetuity concept creates some different idea. Jurist has some different position regarding perpetuity of the asset. Kahf argued that the perpetuity of subject matter of waqf can be changed as long as the usufruct of the asset or *mal* still at the same purpose <sup>17</sup>. He insists that as long as the principle of the asset preserved there is a room for changing the object of the asset. The third characteristic of waqf is inalienability. It mean "after a valid declaration is made, the subject matter of waqf passes out of the ownership of the waqif and it cannot be alienated or transferred either by waqif or the mutawalli or nadzir" <sup>18</sup>. Even for family purposes the waqf asset could not be hold by the name of waqif. There should be legal transfer of asset from waqif to society.

# 2.3. Institution of Waqf

There are several individual or parties who get involved in waqf process. The first one is the founder or the person who waqf their asset called al-waqif. This person must have several criteria such as an adult, be sound of mind, capable of handling financial affairs; not under interdiction for bankruptcy<sup>19</sup>.

The second is the property or object matter called *al-mawqūf* or *al-muḥabbas*. There are several requirements for object matter: al-waqif must have control over the object matter, the objects should be allowed in Islam, the object should be clearly defined, and the purpose or intention to waqf this object must be clearly stated. The third one is an administrator called *nāzir* or *mutawallī* or *kayyim*. This administrator or manager of waqf asset could be a person or institution. Waqif is given the right to choose the administrator of his waqf assets.

# 2.4. Cash Waqf Transfer Concept

The cash waqf transfer is one method of waqf which popular today although the history of cash waqf transfer can be trace back to ottoman era<sup>20</sup>. This method became popular among philanthropy in Ottoman era even there are some critique about the implantation of cash waqf transfer. They argued that if someone already gave their asset for waqf purpose then the asset belongs to Allah and could not be transferable to third parties<sup>21</sup>. According to Cizakca during the ottoman time philanthropies give cash waqf to some borrowers and let the borrower used the usufruct of that money. The borrower then used their house as the collateral to the waqf institution. As long as the borrower keeps the money they obligated to pay rent for their house that they allowed to use. When they pay the loan back they can take the ownership of their house again<sup>22</sup>.

<sup>18</sup> Ibid., p. 30.

<sup>&</sup>lt;sup>17</sup> Ibid., p. 29

<sup>&</sup>lt;sup>19</sup> Arif hidayat ali,Ibid., p.11

<sup>&</sup>lt;sup>20</sup> Murat Cizaka, ibid.,p. 2.

<sup>&</sup>lt;sup>21</sup> Ibid., p. 2

<sup>&</sup>lt;sup>22</sup> Ibid., p. 3

This rental amount that they have to pay is similar with usury. This condition arise some critique about its implementation that close with riba. Based on this experience Imam Zufar approved the implementation of cash waqf as long as it was invested under mudarabah contract<sup>23</sup>. According to Cizakca musyaraka and mudarabah contract are the two contracts that can be used to avoid back door riba and reduce agency problem. The profit from mudarabah or musyarakah contract can be used for waqf purpose and these contracts also avoid cash waqf asset from riba practice.

The main ide of cash waqf transfer is maximizing the flexibility of cash as a liquid asset. With transfer of cash nazir will manage the waqf asset easily for attaining the waqf objective. The cash waqf also create opportunity for nazir to invest in several sectors that could bring more benefit. One of the pioneers in cash waqf transfer is social investment bank in Bangladesh. Dr. Mannan as founder and chairman of this bank is one of the Muslim scholars who implement the concept of cash waqf transfer in real life<sup>24</sup>.

According to him the cash waqf transfer concept can be strengthened by issuing cash waqf certificate. This leads to securitization of Islamic voluntary sector. With the cash waqf certificate it will increase the interest of the people to waqf their small amount of money. This also can pool that money in several purpose and increase good governance in maintaining waqf asset. Mannan gives several guidelines governing the issuing of cash waqf certificate<sup>25</sup>:

- 1. Cash-awqāf shall be accepted as endowment in conformity with the sharī a. The bank will manage the waqf on behalf of the wāqif;
- 2. Awaāf are done in perpetuity and the Account shall be opened in the title given by the wāqif;
- 3. Wāqif will have the liberty to choose the purpose (s) to be served, either from the list of 32 purposes identified by SIBL as noted later or any other purpose(s) permitted by the sharīca;
- 4. Cash-waqf amount will earn profit at the highest rate offered by the bank from time to time;
- 5. The waqf amount will remain intact and only the profit amount will be spent for the purpose(s) specified by the wāqif. The unspent profit amount will automatically be added to waqf amount and earn profit to grow over time;
- 6. Wāqif may also instruct the Bank to spend the entire profit amount for the purpose specified by him/her.
- 7. Wāqif will have the opportunity to create Cash-waqf at a (later?) time. Otherwise, he/she will declare the amount he/she intends to build up and will start with a minimum deposit of Tk. 1000/= one thousand only (or equivalent foreign currency). The subsequent deposits shall also be made in thousand or in multiples of thousand;
- 8. Wāqif shall also have the right to give standing instruction to the bank for regular realization of Cash-waqf at a rate specified by him/her from any other a/c maintained with SIBL;
- 9. Cash-waqf shall be accepted in specified endowment receipt voucher and a certificate for the entire amount shall be issued as and when the declared amount is built;

<sup>&</sup>lt;sup>23</sup> Ibid., p. 3

<sup>&</sup>lt;sup>24</sup> M.A.Mannan,"Cash Waqf Certificate Global Opportunities for Developing The Social Capital Market in 21first century Voluntary-Sector Banking (Proceeding of the Third Harvard University Forum on Islamic Finance: Local Challengs, Global opportunities Cambridge, Massachusetts, Center for Middle Eastern Studies, Harvard University. 1999pp. 23-256):243
<sup>25</sup> Ibid., p.251

10. The principles and shara-based rules of Cash-waqf Account are subject to amendment and review from time to time

From above explanation we can contract the concept of ideal cash waqf transfer method. The following picture shows us the flow of money in cash waqf transfer model. We can infer form this picture that the waqf money can be invested in social project and profitable investment. The profitable investment such as investment on industry, agriculture, and service sector can help financing the social project. The consideration of high cost of managing social project can be overcome by the profit which generate by private investment. Furthermore the implementation of financing under musyarakah and mudarabah contract is considered as the way to avoid practice of riba by social investment bank.

# 3. RESEARCH METHOD

This study uses library research method in collecting the data which relevant with application of cash waqf transfer. The data is collected from relevant literature such as journal, books, and other related materials. Several paper show how the concept of cash waqf transfer has been implemented in such countries like Indonesia, Malaysia, and Singapore. Moreover, jurist's point of view related with cash waqf transfer is also gathered to inform us the *fiqh* issue in cash waqf transfer.

# a. Implementation of Cash Waqf Transfer in Several Countries

# Malaysia

Malaysia is one of the leaders of Islamic financial industry in the world. With several Islamic institutions Malaysia continues to develop Cash waqf method for several purposes. Government actively encourages the development of waqf institution like establishment of department of waqf, Hajj, and Umrah in 2004 under the ministry of finance. Furthermore, Johor Corporation as quasi-governmental body in 2006 establish corporate waqf share by its subsidiary in Kuala Lumpur, Waqf An-Nur<sup>26</sup>. The establishment of several clinic of An-nur shows the commitment of this corporation to develop the role of waqf.

Beside for allocation purpose, cash waqf transfer can be used for economic growth objective. Malaysia tries implementing this relatively a new way to help micro and medium enterprises (MME'S). The purpose of cash waqf transfer is to provide financial assistance and develop financial service for MME's in Malaysia. Several methods are offered by the scholar to collect and generate fund from society and MME's and MME's stakeholders to improve the adequacy of fund. For building the cash

-

<sup>&</sup>lt;sup>26</sup> Ariff Hidyat Ali, ibid., p.16

waqf in Malaysia Lahsana suggested the cooperation between several institutions is needed. SMIDEC Stand for Small and Medium Industries Development Corporation (Malaysia) is the main important institution to insist this model work<sup>27</sup>.

Several steps are needed to construct the cash waqf transfer for MME's<sup>28</sup>. Firsly, the SMIDEC has the obligation establishing the cash waqf and create deposit account for every SMIDEC member. Secondly, SMIDEC make Appointment of trustee with the founder of the cash waqf (fund management to invest the capital). Thirdly, the SMIDEC mobilize the fund by attracting several institution like SME members in SMIDEC, NGO, financial institution, Government, etc. Fourthly, this fund can be used to investment in debt financing like murabaha, BBA, Ijarah financing. Otherwise, this fund can be invest in equity financing like musyarrakah and mudarabah financing.

Lastly, the distribution of the profit according to SMIDEC member's terms and according to the accounts of cash waqf management. This concepet that create by lahsana can solve the problem of high risk financing contract like musyarakah and mudarabah financing. The MME's in Malaysia always faces the difficulties when they ask for this contract financing because agency problem that inherent with profit and loss sharing contract. With chash waqf some of this problem can be solved.

## Singapore

Singapore institutionalize it waqf under the Majlis Ugama Islam Singapura (MUIS). Tis institution is a statutory body under the Ministry of Community Development youth and sport (MCYS)<sup>29</sup>. The administration of Muslim act (AMLA) in 1968 is a basis for Muslim in Singapore to establish waqf institution. The sources of financing for several waqf project in Singapore are financed by Sukuk musyarakah bond and cash waqf method. By this method Muslim in Singapore can directly participated in monitoring and maintaining waqf project.

According to Hanefah In 2007, the pre –tax income received by the Waqaf Funds is \$98.9 million increased from \$6.3 million from 2006 because of an increase on the fair value of investment properties. The total capital owned is \$65.4 million and the asset revaluation reserve is \$8.4 million. The accumulated funds received are \$341 million increased from \$130.7 million in 2006.

# Indonesia

maonesi

Indonesia is one of several countries which already implemented cash waqf transfer method to finance several social projects especially for poverty reduction and reducing inequality. Indonesian government already established the regulation for cash waqf activities since 2004. Waqaf act no 41 2004 has become basis for several institution to collect and spend cash waqf in Indonesia. This act clearly stated that sources of waqf can be tangible asset such as money, stock and securities. One of the leaders for waqf institution is Tabung Waqf Indonesia (TWI). TWI is independent private institution which establish as initiation of Dompet Dhuafa. Beside TWI there are several private waqf institutions such as center for justice and Caring of Ummah, and Caring of Ummah Darrut Tauhid<sup>30</sup>.

Although Indonesia is most populated Muslim country the awareness about cash waqf transfer is leave behind. This condition happened because the people are not really familiar with the concept of cash

.

<sup>&</sup>lt;sup>27</sup> Lahsana, Ahcene."The Role Of Cash Waqf In Financing Micro and Medium sized enterprices (MMES)".(Paper was Presented in Seventh International Conference-the Tawhidi Epistemology Zakat and Waqf Economy.Bangi. 2010): 105.

Hajah Mustafa Mohammad Hanefah et al,"financing the development of Waqf Property: The Experience of Malaysia and Singapore",(Malaysia: Faculty Ekonomi dan Muamalat Universitas Sains Islam Malaysia).3

<sup>&</sup>lt;sup>30</sup> Ahmad Affandi and Diah NurhayatiNufus."Analysis on Cash Waqf Return Fund Allocation in Indonesia: A case study in Indonesian Waqf Deposit,"(Paper was presented in Seventh International Conference-The Tauwhidi Epistemology: Zakat and Waqf Economy, Bangi, Bangladesh, 2010):121

waqf<sup>31</sup> because waqf in Indonesia identic with fixed asset such as land, building and mosque. For that reasons it is not easy way to inform Muslim in Indonesia about cash waqf transfer.

TWI as the leader in this sector spent the cash wag for productive and social sector. The allocation for social sector is the major expenditure of TWI. Beside the collecting and spending activities, cash waqf transfer can also be generated by Mutual Fund. In the case of Indonesia, Batasa Capital as nadzir for individual investor transfers some fraction of money to Dompet Dhuafa.

Table 1. The Proportion of Cash and Mutual Fund

No	Cash Waqf	Mutual Fund
1.	10%	90%
2.	30%	70%
3.	50%	50%
4.	70%	30%
5.	90%	10%

Source: Siswantoro, 2006

This Mutual fund base on fixed income basis where 80 to 100 percent of the fund from the investor is allocated to Islamic bond including Repurchase Agreement (REPO) and the rest is to Islamic Money market (Islamic Deposit). The rate of return is around 11 to 13 percent and the scheme offered to investor in some combination of mutual fund investment and cash waqf transfer.

Fraction of money that distributed to cash wagf and mutual fund investment is predetermined before the Mutual fund invested. That table shows allocation and investment scheme that offered by Batasa Syariah.

From the explanation of Siswantoro above, we can infer that cash waqf can be generated by Mutual fund concept and cash waqf collection as commonly used. Mutual fund concept is relatively new method in Islamic world where nadzir maximize the rapid growing of Islamic capital market such as Sukuk and Islamic share to generate cash waqf. The idea quite interesting because this scheme not only can generate income for the investor of Islamic capital market but it also can increase the share of voluntary sector based in Indonesia. Nevertheless there is some limitation of the development of this scheme.

Based on Siswantoro, the transparency is really needed for the investor's trust. Lack of transparency or information regarding the management of cash waqf transferred will reduce new investor to come. Moreover, government support regarding this concept is urgently needed. The placement of government account in such Mutual Fund and will help the Batasa Syariah capital to generate more money for cash waqf purposes. Besides, government can also help by securitizing idle asset owned by government and use that cash collection for this mutual fund purpose.

<sup>&</sup>lt;sup>31</sup> Dodik Siswantoro, ibid., p. 4.

## 3.2. Opinion of Muslim Scholar about Cash Waqf Transfer

Cash waqf method can be implemented under the condition where the waqf asset in this case money can be exchange with different asset that will generate income. This condition arise some fiqh issue related the ahkam of exchanging waqf asset with other asset. Based on Fatwa Kedua Puluh Dua Saham Wakaf dan Wakaf gentian: Muzarakah Jawatankuasa Fatwa Kebangsaan Bagi Hal Ehwal Ugama Islam Malaysia, Malaysian government has allowed waqf ibdal to be implemented.

Jurist has different opinion about the akham on *istibal*. This word means change or exchange waqf asset with different asset by selling or buying with other asset with the intention to keep and maintain asset of waqf<sup>32</sup>. Imam Abu Hanifah one of the classical jurists allowed istibal on waqf asset. He argued that *istibal* is allowed as long as it will bring more benefit. He also allowed to sale the waqf asset when it is urgently needed<sup>33</sup>. Maliki schools also allowed this transaction under *darurah* condition. Several jurists disagree with it. Imam syafii argue that waqf asset cannot be transferable because when it already announce as waqf the ownership belongs to Allah and there is no room to revoke that asset<sup>34</sup>. Imam syafii is also one of jurist who disallow cash as waqf asset<sup>35</sup>. Besides Syafii, Ibnu Qudamah is also one of the jurst who disagree with cash waqf<sup>36</sup>.

Regarding the need of cash waqf as the instrument of waqf Indonesian government has passed the Waqf act No.41 in 2004. In this act Indonesian government allow cash, valuable certificate, gold and silver, land certificate, etc. this act is similar with other act in several countries which already allowed cash as one of waqf asset.

## 4. RESULT

## 4.1 Issues Related Cash Waqf transfer in financial Industry

Several issues may arise regarding implementation of cash waqf transfer concept especially in Indonesia. We can analyze this issue by each institution that must exist in waqf: waqif, Asset of waqf, *Nadzir*, and portfolio investment.

- Waqif: with the growing consideration of implementing shariah in recent economic activities, there will be big chance for big corporation or international corporation deal with private waqf institution in Indonesia such as TWI. The issue is how we decide that institution or corporation waqf their money for good purpose. Based on several endowment fund experience around the world, money laundry activities did happen in the name of endowment fund. We don't want the good intention of establishing waqf institution in Indonesia mislead by avoiding tax practice or money laundry activities. According to this, selective criteria must be regulated by the government for international and private institution that eager to waqf their asset in cash waqf method especially in Mutual fund arrangement. According to this check and balance and transparency must be implemented to avoid that case.
- Asset of waqf: based on Waqf act no.41/2004, government allows several asset like cash, equity, sukuk, deposit certificate, land certificate, etc as to be waqf. This certificate is representing the ownership of some asset like equity and sukuk of several corporations. The screening criteria of this portfolio must be done by nadzir such as Batasa Capital in receiving this portfolio. AAOFI has already clearly stated what type of equity which categorize as shari'ah compliance. From that criteria nadzir should receive the asset or certificate that categorized as shari'ah compliance asset.

36

<sup>&</sup>lt;sup>32</sup> Fatwa kedua puluh dua,"Saham dan Wakaf,"(Muzarakah Jawatankuasa Fatwa Kebangsaan Bagi Hal Ehwal Ugama Islam Malaysia ke-4 pada 13 hingga 14 pril 1982):84

<sup>33</sup> Fatwa kedua puluh dua.p.84

<sup>&</sup>lt;sup>34</sup> Mohammad Tahir et.al, ibid., p. 3.

<sup>&</sup>lt;sup>35</sup> Ibid, p. 3.

<sup>&</sup>lt;sup>36</sup> Ibid, p. 4.

In Indonesian context, stocks of corporations that list in Jakarta Islamic Index are preferable due to its liquidity and its lower ratio of debt to equity.

- Nadzir: in the context managing asset of waqf, nadzir must keep the amanah of waqif. The relationship of waqif and nadzir in cash waqf transfer is based on trust and transparency. Once nadzir violate the trust that already been transferred to him it will reduce the eager and participation of people to implement waqf. Cash is a liquid asset which very difficult to trace. According to this, TWI or Batasa Capital should create transparence and acceptable accounting method in managing cash waqf asset from waqif. Moreover, the excessive overhead cost in managing waqf asset should be avoided.
- **Portfolio investment**: manager of waqf asset should be selective in using and trading the portfolio of their investment. Cash waqf transfer through Mutual Fund should be considered what type of sukuk which tradable and non-tradable. Sukuk al-Ijarah, al-musyarakah, and al-mudarabah should become prioritize because its limitation of fiqh issue regarding these type. Moreover, mudarabah and musyarakah contract is preferable in mobilizing cash waqf for financing social project or profitable project. TWI or any other private waqf institution should become pioneer in introducing masyarakah and mudarabah type of financing amid Muslim people in Indonesia.

# 4.2. Government Role and implementation of Cash Waqf Transfer in Indonesia

Siyasah shar'iah or Islamic oriented public policy play an important role in analyzing cash waqf transfer as one method that used amid revitalization of waqf institution in Islamic world today. Kallaf clearly denotes syiasah shar'iah as "administration of public affairs in Islamic polity with the aim of realizing the interest of, and preventing the harm to, the community in harmony with general principle of Shari'ah even if it disagrees with particular ruling of mutjtahidun". Kallaf said siyasah shar'iah is tantamount to acting on maslahah, or public interest<sup>37</sup>.

We consider that the implementation of cash waqf transfer not immune with critique from several jurist even from several classical jurist<sup>38</sup>. Nevertheless, the flexibility of cash that can be used and generated to make profit for waqf purpose is considered bringing more *maslahah* for the *ummah* today. By this method, we can also securitize idle asset into small numerator and sale it to potential waqif. The intention of this method is trying to capture common people to participate in waqf activities and generate more income for poverty alleviation and social purposes. By its nature waqf is one instrument of Islamic teaching which protect five values of Maqasid Shar'iah: life, lineage, wealth, religion, and intellect.

We have become witness how many *maslahah* which already been achieved by cash waqf transfer in Indonesia like financing school, poor district, rehabilitation of natural disaster victim, health center etc. All of these actions are trying to protecting the life of the *ummah*, their knowledge trough education, their wealth trough creating job, and their religion through mosque. In the framework of *syiasah shar'iah*, it is the obligation of government to increase the participation of Muslim people in Indonesia in waqf. It is not impossible to achive *hajihiyah* (complement level), *tahsiniyyah* (desirable level) of *Maqasid shari'ah* trough active participation of Indonesian government and its dweller.

Based on Siswantoro, Indonesian government is not really active in helping the revival of waqf institution. This is un-fortune condition while 30 percent of its citizen live less than 2 dollar a day. The government of Indonesia should do more in supporting this method. Several ways can be done like increase the advertising of cash waqf transfer by government body, encourage participation of people who deposit their money in government bank, and encourage participation of investor in Islamic capital market through issuing government waqf certificate.

\_

<sup>&</sup>lt;sup>37</sup> Mohammad Hashin Kamali, ibid., p. 61

<sup>&</sup>lt;sup>38</sup> Dodik siswantoro, ibid., p. 4.

Aside from encouraging any measures that could close people to public interest, the ruler should also take any measure that could further away people to *mafsadah* or corrroption. The key success factor of implementing cash waqf transfer method lays on trust, transparency, and quality of nadzir in managing cash waqf transfer. Trust between waqif and nadzir is playing crucial role in order to increase participation of people. Moreover, transparency is needed to encourage the trust of the waqif to nadzir. This is the role of the government to create transparence system in informing the citizen. Good governance in nadzir institution is urgently needed. This is also the rule of government to reduce fasad or corruption in society. Quality of manager must be another consideration of waqf institution Indonesia. To implement just *syiasah* or *siyasah adilah* loyal and strength officer are needed<sup>39</sup>. The loyal mean fear to misuse the *amanah* that already trust to them and strength is the capability of nadzir in investing cash waqf transfer. These two requirements must be attained to keep the existence of waqf institution.

## 5. CONCLUSION AND RECOMMENDATION

The objective of this paper is trying to inform several objectives: review the concept of cash waqf transfer, its implementation in Indonesia, jurist opinion about cash waqf transfer, and perspective of syiasah shariah in implementing cash waqf transfer in Indoneia. From several explanations above we can conclude some information regarding this topic.

The main objective of cash waqf transfer is increasing participation of Muslim in waqf their money through buying cash waqf certificate from bank or waqf institution. The cash will be mobilized to financing social project and profitable project to support financing of social project. Several jurist suggest the project must be implemented under musyarakah and mudarabah contract to avoid back door riba practice.

Several jurists have different argument in analyzing the *ahkam* of cash as instrument of waqf. Syafii schools tend to avoid the using of money as asset of waqf and prohibit changing waqf asset. Nevertheless Imam Hanafi allows changing waqf asset to different asset as long as it bring more benefit. Several countries has already allows the practice of cash waqf transfer such as Malysia, Indonesia, and Singapore.

Several condition must be consider to success in implementing cash waqf transfer such as criteria of waqif, quality and transparency of nadzir, and investment process that should be in line with shar'iah. From the perspective of syiasah shar'iah the government should actively encourage the participation people in waqf to achieve better maslahah. The silent regulation and transparency must be constructed in order to increase participation of people.

Several recommendations can be addressed to government in order to achieve Maqasid Shar'iah. Firstly, the government can help revive waqf institution by create strong regulation according transparency and accountability of waqf institution. The government could help through providing good manager in maintaining waqf asset. Secondly the government could participate by injection some capital into the system to increase capitalization of waqf institution. Thirdly, government might facilitate auditing program for waqf institution in Indonesia to improve transparency. Finally, the government might help by improve socialization of cash waqf transfer in mass media or social media.

To conclude, how to improve participation of people can be main concern of Indonesian government.

# THE FOUR-RS OF A WAQF IN ILORIN EMIRATE ECONOMY

Mufutau Ayinla Abdul-Yakeen' Dr. Nasir Mukhtar Gatawa' Prof. Chika Umaru Aliyu (Ph.D)'

#### **ABSTRACT**

Absence of a Waqf for the entire people of Ilorin Emirate Economy (IEE) spurred this study. The Four-Rs of establishing a Waqf in Ilorin Emirate Economy (IEE) are the Rationale for, Riddles within, Remedies for, and Reward accruable to the people of IEE if a Waqf is organized. Books relating the existing financial institutions and Waqf are reviewed with reference to IEE. Participant, discussion and observation methods are used to obtain cross-sectional data and analyzed via the major sources of Islamic Economics. It is discovered that IEE possesses the wherewithal (Human, Islamic, Landed and Material Resources) to establish a Waqf but there are some surmountable factors hindering its establishment while the likely proceeds of Waqf on IEE are inexhaustible. The inexhaustible contributions of Waqf to the IEE are also sustainable; will never lead to disinvestment; precedes and supersedes MDGs (Millennium Development Goals); and gives hope to the hopeless; generates full employment of resources; harmonizes the haves and the have-nots; increases output and productivity; stabilizes prizes of commodities, enhances consumption, spending trading, income, savings, investments and even distribution of income among other micro and macroeconomic objectives of every economists. Above all, Waqf would enable the people of IEE to secure the Eternal Mercy of Allah (S.W.T). The study recommends prompt establishment of a Waqf combining all residents of IEE, in order not to miss the sustainable and everlasting benefits of a Waqf on the IEE in particular and the entire world in general.

**Keywords**: IEE, Sustainable Development, Waqf

## 1. INTRODUCTION

The call for the establishment of a Fund for the development of the Ilorin Emirate Economy (IEE) by the National or Chief Missioner of Ansarudeen Society of Nigeria, Sheikh Abdul-Rahman O. Ahmad in 2011 (Ahmad, 2011), reiterated by the current Grand *Khadi*, Kwara State *Shariah* Court, Justice Imam Fulani, at this year's Annual End of Ramadan Program, organized by Joint Committee of IEDPU Ilorin Branch and National Council of Muslim Youth at the front of Emir's Palace, Ilorin; formation of an Economic Committee within the National Executives of Ilorin Emirate Descendants Progressive Union (IEDPU), organization of a Workshop for Revamping Ilorin Emirate Economy and the speech of National President of IEDPU, retired Justice Saka Yusuf (Yusuf, 2012) showed that there was no *Waqf* in the IEE. These showed that there was no *Waqf* collectively owned by the stakeholders of IEE. Ahmad (2011) called for the establishment of a Trust Fund or Common Purse for the development of the people of Ilorin Emirate.

- 1. Mufutau Ayinla Abdul-Yakeen teaches Economics at Economics Unit, CHMSS, Kwara State University, Malete. Ilorin, Nigeria.
- 2. Dr. Nasir Mukhtar Gatawa is a Teacher of Economics at Economics Department, Usmanu Danfodiyo University, Sokoto, Nigeria.
- 3. Prof. Chika Umaru Aliyu (Ph.D) teaches Economics at Economics Department, Usmanu Danfodiyo University, Sokoto, Nigeria.

Thus, the will of people to voluntarily contribute a part of their hard-earned income to the Fund, for community development, could lead to the establishment of a *Waqf*. *Waqf* is an Arabic word that stands for "A religious foundation set up for the benefit of the poor", and *Awqaf* is the "Property voluntarily transferred to the charity or trust so that the usufruct may accrue to other people" Usmani (2002: 237). The institution of *Waqf* began in the early days of Islam, well-developed in the Ottoman Empire, contributed to socio-economic development of Islam and signified a foundation set up for keeping properties in perpetual existence and making its income available for specific beneficiaries (Navaid, 2010: 57). It was an endowment for common well-being (Navaid, 2010: 118).

There is persistent influx of people to the state capital, Ilorin Metropolis from all parts of Nigeria due to insecurity in the northern part of Nigeria and relatively conducive commercial environment of the state, Kwara compared to the southern part of Nigeria, Moronfoye, (2013). Above all, all efforts made by various governments to stop street begging in IEE have proved abortive and many other reasons necessitate the establishment of Waqf in IEE.

Acronyms used in the paper are IEDPU, IEE, MDGs, S.A.W, Q and S.W.T which means "Ilorin Emirate Descendants' Progressive Union", 'Ilorin Emirate Economy', 'Millennium Development Goals', 'Qur'an', 'Solallahu Alaehi Was-Salaam' (Peace and Blessing of Allah be on him.) and 'Subuhanahu Wa Tahala' (Glory and Esteem be to Him) respectively.

# 2. LITERATURE REVIEW

Waqf is religious endowment, Khan (1996: 889). Thus, if a foundation were to be Islamic, it does not have to come in the name of somebody's mother, father, wife, etc. According to www.irWaqf.com/index.php?!/Waqf\_publications .... 2013/06/18 12:02pm, Waqf is different from other acts of charity for it is Sadaqah Jariyah, an on-going, endless and sustainable religious endowment. It is an asset given as religious gift by a Mujtahid (Islamic Donor), has current and renewable challenges, can be used to buy assets to mosques, construct Islamic schools, construct public utility services, ceases to become the asset of the donor after delivery, to the Mutawali (Suretee) and yield sustainable economic development for the beneficiary who is safe and secured with it, leading to huge reward for the donor. The donor of which must be matured, sane, not under pressure, objective, and has right over the property endowed.

Abdul-Yakeen (2006) ascertained that there was Islamic Banking Windows in Ilorin Metropolis but the patronage was below expectation. However, the existence of Islamic Banking Windows in Keystone and many other banks is a good step towards having a *Waqf*. Meanwhile, Abdul-Yakeen (2012) discovered that the contribution of Rotating Savings and Credit Associations (ROSCAS) to the economic development of Ilorin Metropolis was very great and thus recommended improved patronage of ROSCAS to attain the greater and sustainable economic growth and development. The implication of this is that the establishment of a *Waqf* would assist ROSCAS and Islamic Banking Windows of many Conventional Banks to develop the community in a more Islamically minded way. On The Untapped Role of Civil-Servants, Ibrahim and Abdul-Yakeen (2013) suggested the application of One-By-One (1X1) Financial Strategy in order to attain Affluence through the 'Emulable 'Circular Flow of Wealth'.

Development of human resources includes extensive and intensive training of man in all spheres of life to uplift his understanding and commitment to Islam (taqwa), efficiency, sense of responsibility, social spirit of individuals; and to establish Justice, adl in the society according to Ahmad (1980) cited by Molla, et al (1988: 200). Sustainable development, therefore, is defined as voluntary increase in employment of resources (for the sake of Allah 'S.W.T') that leads to increase in output and improvement in the standard of living of people in this world and in the hereafter. This kind of development is sustainable because the

contributors are not expecting material gains (interest, commission or compensation) from the beneficiaries (Q92: 17 - 21) but countenance from His Lord, Allah (S.W.T) who would reward them with Paradise and eternal bliss.

Ibrahim (2006) tried to discover how individual collection and distribution of *Zakah* significantly contributed to ineffectiveness of *Zakah* in Ilorin Metropolis and suggested solutions which do not involve establishment of a *Waqf*. This shows the fact that the only compulsory financial institution in Islam is not yet well-coordinated by the community. Thus, the researchers had the necessary and sufficient excuses to commence a study on the formation of a Voluntary Financial Institution in Islam, *Waqf*.

Aliyu, Gatawa and Abdul-Yakeen (2013) discovered that the level of application of some Islamic Principles to the operation of ROSCAS in Ilorin Metropolis is sixty-eight percent. It recommended improved employment of Islamic Principles to ROSCAS' operation at micro and macroeconomic levels; formalization; and transformation of ROSCAS to Islamic Banks to attain *Falah* (Success in this World and in the Here-After). With this level of compliance (68%) from the associations where people would get direct benefit, who knows what would be the percentage of compliance to Islamic Principles when it comes to the establishment of a *Waqf*. The challenge the Muslim countries face was to actualize the Islamic Vision of *Falah* and *Hayat Tayyibah* for every individual in their societies in spite of the resource constraints they face, Chapra (1992/1412H: 339). *Hayat Tayyibah* means Clean life and *Falah* implies successful living in this Life and Here-After. The best way to achieve these is to add the establishment of *Waqf* to the current Islamic religious duties they uphold.

The best course for people who have surplus wealth is to hand it to others so that they may satisfy their needs, Afzal-ur-Rahman (2000: 40). This assertion is derived from Qur'an (Q2: 267). Ministry of *Waqf*, Islamic Affairs, and Holy Places was issuing specialized amount of *Muqarada* Bonds the proceeds of which was used to build shops, offices, and factories on the *Waqf* Land, renting out the properties under *Al-Hijarah* contract and the rentals ('*ijr*) constituted its profit (Rosly, 2008: 477). This shows that Ministries of *Waqf* can be established by all Islamic Governments and pieces of land could be set aside as a *Waqf* and lent out for business purposes. According to Gusau (1993: 77 - 112), social security, Islamic Jurists described Social security in terms of guaranteeing of minimum livelihood of feeding, clothing, shelter, marriage and education. He continued that Social Security was enjoined on Prophets like Ibrahim (Q2: 73), Ismael (Q1: 58), Musa (Q7: 156) and Jesus (Q19: 31). The implication of this statement, though not mentioned by Gusau (1993: 77 - 112), is that *Waqf* is a way of providing Social Security for the society.

Source of funds to *Waqf* could be through *Sadaqat* (Voluntary Donations). Sadaqat is rated in *Hadith* 1324 in Al-Asqalani, (1996: 535) which says "*Sadaqa* does not reduce property, Allah (S.W.T) increases the honor of him who forgives and no one will humble himself for Allah's (S.W.T) sake without Allah (S.W.T) raising him up". Thus, *Waqf* would lead to an improved welfare for the people of IEE. In addition, there is Time-Multiple-Counter-Loan (TMCL) invented by Sheikh Mahmud Ahmad (www.renaisance.com.pk,lawrel961.\$html ... 2013/6/30 ...3am.). This is an Islamically accepted means of financing because it involves no payment of interest on loans and is accepted by a lot of Islamic jurists. Thus, Establishment of *Waqf* could aid the execution of TMCL as an alternative to interest based financial system.

## 3. METHODOLOGY

The study area is Ilorin Emirate. Ilorin town is on coordinate  $8^0$  30'N  $4^0$ 33'E /  $8.500^0$  4.550°E, founded in 1450 and having a population of 847,582 as at 2007 (en.m.wikipedia/wiki/Ilorin, Nigeria... 2013/06/19 2am.). Ilorin Emirate was established in the third decade of nineteen century, Ilorin town became popular Centre of Islamic Learning south west of Niger and beacon of light to Islam and Muslims in Nigeria till present time, Danmole (2012: 3 - 4)

Shari'ah (technically, is seen as the Islamic legal system that encompasses all aspects of life), Aliyu (2010: 1). Waqf as an aspect of Islamic economics is derived from Shari'ah. Guiding rules of Islamic Financial System (IFS) are derived from Qur'an and Sunnah [i.e. Sayings and Deeds of Prophet Muhammad (S.A.W)], Rosly (2008: 20). Allah (S.W.T) says believers shall follow Him and His Prophets respectively (Q64: 12). Qur'anic teachings are in three dimensions, namely: Aqidah (Faith and Belief), Akhlak (Ethics and Morality), and Muamalat (Transactions), Rosly (2008: 20). Impliedly, Islamic Financial System is derived from the basic sources of Islamic religion, Shari'ah. In order to elaborate it, Aliyu (2010) says that Shari'ah is derived from three basic sources, namely: Qur'an, Hadith (Prophetic Traditions) and Ijma' (Consensus of Muslim jurists).

he researchers used explanatory method to analyze data obtained through Participatory, Discussion and Observation methods of analyzing primary and qualitative data. The secondary data were obtained from the Holy Qur'an, the primary source of *Shari'ah* (Islamic Law) and was used to back most of the arguments put forward for the establishment of *Waqf* in the study area. Following the above was the sayings of Holy Prophet, Muhammad (S.A.W), views and discoveries of Islamic scholars were used for data analysis and discussion of findings. None of the data obtained was subjected to any scaling method or quantitative analysis but they were discussed briefly due to the fact that they were too numerous.

The findings of the study are stated as the synthesis of the rationales for the establishment of *Waqf*; riddles of organizing a *Waqf*; remedies to the problems of potential *Waqf* institution; and the likely gains that could arise from the *Waqf* if established in IEE.

## 4. DATA PRESENTATION AND ANALYSIS

The data obtained and explained in the study are based on the rationale, riddles, remedies and rewards of *Waqf* in IEE which led to the remark made by the researchers. It goes thus:

## 4.1 Rationale

Rationales are the *raison-deter* or arguments in support of the establishment of a *Waqf* in IEE. Thus, the reasons why a *Waqf* should be established in IEE are listed and explained below.

Iman (Belief). Islamic Religion must be available in a place where a Waqf would be instituted. Muslims are the people who belief in Oneness of God, Allah (S.W.T), Messengership of Muhammad (S.A.W), Ghaib (invisible things), last day of judgment, observe Salat (Islamic Prayer) (Q2: 3; 3: 114, etc). Muslims or Believers are called to be helpers of the course of Allah (S.W.T), (Q61: 14). A Muslim is defined as a person in whose hand and tongue the lives and properties of other Muslims are safe (Hadith 10 in Khan, 1994: 60). He who feeds and greets others Muslims is a Muslim (Hadith 12 in Khan, 1994: 60 - 61). Most of the indigenes of IEE are Muslims Ahmad (2011), Yusuf (2012), Danmole (2012), etc. Thus, IEE people are obeying the Aqidah (Faith and Belief) teaching of the Qur'an as stated by Rosly (2008).

'Ardh (Land). Land, according to jurists is not eligible for entitlement to share of profit as compared to other factors of production, Usmani (2002: 237). Therefore, a portion of the free gift of nature, land in IEE could be allocated for a *Waqf*. IEE has a very large land mass that is over forty percent of the entire land mass of Kwara State of Nigeria, Lambo (2012). in agreement with *Hadith* 1081 in Khan (1994: 508), *Waqf* Land shall not be distributed, in order to preserve it for future generation.

'Amalan Soliah (doing good work) or Gainful Employment and doing well with their wealth as stated in Qur'an (18: 110). Believers are to struggle in Allah's (S.W.T) way (Q5: 35), must not sit at home expecting Mercies of Allah (S.W.T) to fall on him without making some refinements on them. Though Allah (S.W.T) promises to provide means of sustenance to every body (Q51: 58; 15: 20; etc) He also enjoined believers to work (2: 277); for Him, His messengers and the generality of Muslims to see (Q9: 105). Seek for Allah's (S.W.T) Mercy after *Jumu'ah* prayers (O62: 10), invite people to good deeds (O3: 104), etc. Doing good leads people to Paradise (Q14: 124; 51: 22, 7: 3; etc), good life and better rewards (Q16: 97); compensation with garden in Paradise beneath which rivers flow, perpetually sustainable living, and reciprocal mercy between Allah (S.W.T) and believers who fear Him; and workers would not be cheated (Q3: 195). Allah (S.W.T) says the work may be a good one or bad one and everybody would see his work on the Day of Judgment (Q99: 1 - 9). Thus, laziness and beggary are not condoned in Islam. Majority of the people of Kwara State in which Ilorin Metropolis is the capital are civil-servants, Ahmed (2013). The Holy Prophet (S.A.W) says it is better that one goes to fetch log of wood for sale and earn income than to beg [Hadith 748 in Khan (1994: 371 - 372)]. Allah (S.W.T) also says after darkness, difficulty, failure, sufferness, pain, payment, and input, etc comes illumination, ease, success, joy, receipt, and output respectively (Q94: 5 - 6). Therefore, the Muhamalat (Transactions) teaching of Qur'an identified by Rosly (2008) is followed by the aborigines of IEE.

Kulu wa Sirabu (Consume: Eat and Drink). Muslims are allowed to eat and drink the lawful, products of their labor (Q7: 157; 3: 168). There shall be no illegal consumption (Q4: 29), no prodigal spending (Q7: 31), no stealing (Q5: 41), no illegal capital accumulation (Q2: 188). Here, the role of custom (Urf) and usage ('Ada) must be adhered to. Thus, one must not embezzle wealth of others. One must also provide shelter for his family, or let your wife and children live where you live (Q65: 6, etc).

Infaq (Spending). It is agreed in Islam that Men are created in ranks (Q43: 32; 16: 71; 6: 165, etc). As such rich believers are expected to spend out of their income in Allah's (S.W.T) way (O2: 274; 36: 47; 57: 7, 65: 6-7; etc). Spending could be from their wealth via kindness to the poor ((Q92: 5-7; 107: 1 -3); 51: 19; 28: 77; etc) in order to protect the less privilege ones. You are created in ranks, if you must ask, ask Allah (S.W.T) (Q43: 32) and men to give to women (4: 34). Nafagat (Maintainance of Wife, children, close relatives, etc.) is the fact that husband must be ready to provide food, clothing, housing, education, health and other sustainable living facilities for his wives, children, close relatives, Gusau (1993: 113 - 124). Thus, Muslim is permitted to spend each unit of his on himself, children, wives, slaves and where he knows best respectively as could be inferred from an *Hadith* cited by Gusau (1993: 114). There shall be no niggardliness (Q3: 180), no extravagance (Q25: 67). In Islam, Hagus-Saahili means that beggars and destitute have right in the properties of the rich, (Q70: 24 - 25) including the poor who does not beg for living (Q51: 19). Orphans and Beggars are not to be driven away (Q93: 9 - 11). Rich Muslims must be kind to the poor ones (Q107: 4 - 7), feed the poor (Q89: 17 - 18). Allah (S.W.T) promises anybody with problems that after problem is relief (Q94: 5 - 6). Expenditure in Islam includes Low Income Earners, who are expected to spend out of their income (Q65: 7). People IEE do give alms to beggars especially on Thursdays and Fridays. They are free to spend their wealth or money in order to get increase in self purification (Q93: 18). Hadith 1103 in Khan (1994: 520) encourages quick spending in Allah's (S.W.T) way within three days. Also, Hadith No. 522 of Sahih Al-Bukhari, Vol. 2 cited in the footnote of Khan (1996: 114) says everyday an angel pray to Allah (S.W.T) to compensate those who spend on His cause and anther angel does pray that Allah (S.W.T) to destroy the misers. This implies that the *Akhlq* (Ethics and Morality) teachings from the Qur'an outlined by Rosly (2008) are not strange to the people of IEE.

Bai' (Trade) is permitted but Riba (Interest) is forbidden. Interest is forbidden but Trading is permitted in Islam (Q2: 275). Bai' (Sale), Ishtirā' (buying) and Aqd (contract) are permitted by Islam. Allah (S.W.T) wants to alleviate poverty (Q4: 28). Thus, He says "Trade and do not cheat" (Q4: 29 - 30). There shall be no hoarding (Q9: 34), excessive accumulation of wealth (Q104: 1 - 4). Never-the-less, rich ones must leave properties for their descendants to inherit (Q4: 7). There are a lot of markets where people buy and sell commodities in IEE. Among them are: the Traditional, Goods Markets (Oja-Oba,Oja-Omoda, Oja-Gbooro, Oja-Ipata, Oja-Ago, Oja-Tuntun, Mandate Market and Oja-Kankatu to mention but a few), Modern Markets: Capital Market (Stock Exchange Market at Station Area in Ilorin, Banks, Insurance Companies, etc); and Labor Market (e.g. Civil-Service Commission, Local Government Service Commission, Teaching Service Commission and Universal Basic Education etc).

*Qardul Hassanah* (Good Loans). Excess output of a producer could be loaned out with proper documentation and witnesses (Q2: 282), debt postponement and forgiveness if the debtor is straightened and the creditor is able (Q2: 280), etc but interest charges must be avoided (Q2: 275 - 279). Loans must not be interest payment reliant (Q2: 275) but should be good loans (*Qardul-Hassanah*), (Q:Q5: 12). Most of the people in IEE do not engage in interest but that does not mean the absence of Money Lenders.

*Ummah* (Global Unity or Collectiveness of Muslims). Believers are enjoined to hold fast to the Rope of Allah (S.W.T) and do not be divided (Q3: 103). The Qur'anic verse that says fight in the way of Allah (S.W.T) (Q61: 4), should not be limited to physical fight against unbelievers but extended fight against poverty of wealth, knowledge, insecurity and other uncomfortable living conditions among believers and their neighbors. Danmole (2012: 21 - 21) reported that the first Emir of Ilorin did not mount the saddle of leadership on the platter of gold. He established prestined Islam in Ilorin, sougth for legitimacy frm the then Emir of Gwandu, Emir Muhammad B. Abdullah in 1829 and the request was granted as indicated in *Risala Ila Amir Yarba*. This shows that IEE is part of *Ummah*.

Ihwah (Brotherhood), Sharikah (Partnership) and Wakaala (Manager or Agency). Brotherhood and giving out ones assets to others for management are permitted in Islam but there shall be no cheating, Hadith 742 and 743 in Al-Asqalani (1996: 309 - 310). In addition, all loans must be repaid, Hadith 751 and 752 in Al-Asqalani (1996: 312). However. Managers of Waqf have rights to test and consume from and manage the wealth of orphans if they (Waqf Managers) are poor (Q4: 6). Allah (S.W.T) also says 'let there be among you, people who exhorting people to doing good and forbidding bad deeds' (Q3: 104).

Early Childhood Islamic Training which always lead to the construction of Dummy-Mosques by the very young ones before any Ramadan fast. The very young ones who are indigenes of IEE used to herald the coming of *Ramadan* Fasting (Annual Compulsory Fasting being observed by all Muslims) by constructing Dummy-Mosques which they (Very Young Ones) call Mosques. Probably, it is this infant spirit of mosque construction that grows with them that makes all the indigenes of IEE mosque-crazy (Very Determined to Construct Mosques). This kind of spirit can be extended to *Waqf*, especially now that we have necessary, sufficient and highly sophisticated mosques.

#### 4.2 Riddles

The Riddles are the puzzling questions that a reasonable person may ask concerning the existing factors that could hamper the establishment of a new thing (say, Waqf in IEE). They are not called Problems but Riddles because they are funning, purposely existing not to debar Waqf's existence but some people would expect them to hinder the establishment of Waqf. Thus, some scholars may call them 'factors inhibiting the existence of a Waqf'.' These go thus:

Desire for Direct Benefits. Most of the people of the IEE would want to get some benefits from the persons they lifted out of problems. Thus, there are Islamic Cooperative Societies in almost all the government establishments and private institutions in the IEE. Among them are: Muslim Staff Treasury of Government Day Secondary School, Amule, Ilorin; *Al-Halal* Cooperative Society of Kwara State University, Malete; Islamic Cooperative Society Saint Anthony Secondary School, Ilorin; Islamic Cooperative Society at Deputy Governor's Office, Ilorin; and many others.

There are some modern Islamic Organizations that suppose to work towards the establishment of a *Waqf* in IEE. Among the Modern Islamic Organizations are: Council of Muslim Organizations (CMO); National Council of Muslim Youths (NACOMYO); and *Jamaatu Nasirul-Islam*, *Sherriff* guard, The NASFAT, QUAREEB and many other *Al-Asalatu-*Groups.

Existence of Foundations that are not committed to establishment of a *Waqf*. Among them are: Islamic Welfare Foundation which organizes monthly Lectures and Established an Islamic Cooperatives; Retired Justice Mustafa's 'Akanbi Oniyo Foundation', which also organizes Public Lectures in addition to philanthropic activities; LEAH Charity Foundation established, for political propagation, by the wife of the current Kwara State Governor, Deaconess Omolewa Ahmed; Alh. Tunde Yusuf's 'TTY Foundation' that is giving scholarship to students; Adisa Bakare Foundation also give scholarship to students; Raliat Islamic Foundation established in memory of the mother of Late Admiral Muhammad Lawal; Alhaja Faoziyyat Ola-Olu Ali Foundation is another private *Waqf* instituted in memory of the wife of Barrister Yusuf Ola-Olu Ali (SAN); Muhammad Kamaldeen Education Foundation (MUKEF) aimed at raising funds for establishing a University in memory of Sheikh Muhammad Kamaldeen Al-Adabiy. These foundations are individually owned and are not Waqf despite the fact that they are established by Muslims. The philanthropic moves by the politicians are not *Waqf* for they do not follow the principles of "We feed them to secure Allah's Mercy, we do not expect reward or thanks from them" as stated in Qur'an (Q76: 9S) and *Qardul-Hassana* (Good Loans) extolled by Allah (S.W.T) in Qur'an (Q73: 20, etc).

Inadequate communal support from the well-to-do and the so-called Islamic Preachers to the deprived, orphans, needy, poor and their helpers. Believers are extorted to make adequate provisions for the orphans, *Hadith* 743 in Khan (1994: 369). Muslim Orphanage Home under the guidance of Architect Saifullah Ahmad Alege, stands alone for not bearing any name of any individual and not having any political and commercial motive. It is a real *Waqf* but undocumented but glaring report shows that little encouragement is given to its coordinator and staff.

Differences in political delinations. Majority of the indigenes of IEE are card carrying members of PDP (People's Democratic Party) but are not professing the party but following the Eldest Son of the Deceased Political Icon of the town, Late Dr. Abubakar Sola Saraki. So establishment of a *Waqf* could be hampered by the party not having large number of their people as organizers of a *Waqf*.

Paradox of Behaviour and Ostentatious Living of the New-Breed Islamic Scholars. Some of the New-Breed Islamic Scholars used to go to the houses of rich men, pray for them, accept payments and start ostentatious life by riding on the newly modeled vehicles, marry many wives and expensive houses. Their priorities are to become rich quickly in order to buy costly vehicles and live in mansions. They, Islamic Teachers do preach the virtues of spending for the course of Allah (S.W.T) but do not practicalize the habit of spending in the name of Allah (S.W.T). Most of them generate incomes through religious donations but spent their incomes on the purchase of new and flashy cars, building mansions, big mosques that are costly to be maintained, polygamous marriages and *Maoludin-Nabiyy* ceremonies among other expenses which are tantamount to white elephant projects. In addition, they want people to abide by the time but they are also not time conscious.

Excessive Concentration of Wealth which ultimately leads to the Bequittance of Legacies to the First Child. In IEE, every rich, educated, royal, influential, religious, spiritual and outspoken man in IEE is

pursuing the programme with which the first some of his family would inherit his legacy. Due to this fact, some specific families have specific profession and specific method of bequetting their legacies to their blood relations.

Marriage to Non-Muslims and Non-Indigenes. This is another riddle in the sense that whenever a rich man and an indigene of IEE dies and left a lot of properties, the Non-Muslims and non-indigene descendants always prevail on the legacies. Thereby, they debar the poor and needy orphans access to their Islamic rights. This, in an occasion went to the closure of a Jumu'at Mosque, and non-release of a portion of land to the development union to which it was willed among other instances.

Proliferation of Beggars. Beggars are growing in number and found along so many major streets almost every nooks and corners of the IEE. Among the places and major streets where you can find the beggars are *Oja-Oba* (Kings' Market), *Gambari*, *Omoda*, Emirs Road, Lagos Road, and *Ipata*, to mention but a few. Based or personal assessment, it was discovered that most of the beggars did not possess physical disability, incapacity or poverty. Added to the real beggars were the Political Beggars going to Political Office Holders to either beg for money or frame some undesirable excuses to request for financial assistants. Begging is not done for public interest (*Maslahah*) but personal gains. There and then some academics may ask questions like "Do these people believe in the regular statement of Muslims, in every prayer 'It is You (Allah) we worship and from You (Allah) we seek for sustenance" that is embedded in Qur'an (Q1: 5) or do they not make prayers the people of Cave, "Our Lord, provide for us from your Mercy and facilitate for us our affairs in the right way" in the Qur'an (Q18: 10).

Persistent Invitation of Muslims to Public *Kiyamu Lael* (Night Prayer) the cost (money, time, energy, etc) could be enough to establish and sustain a Waqf. Currently, there is hardly a week that passes and one would not hear invitation to Islamic Night Vigil by at least a Muslim Society on the Radio stations sited in IEE. None of these associations do call for a *Waqf* for the Emirate.

Excessive belief and compliance to the principle of 'Feed the Poor during Ramadan (Religious and Compulsory thirty days fasting that is observed annually during the lunar month of *Ramadan*) and get Multiple Rewards', in addition to other religious duties. Probably, because of this, some well-to-do citizens of IEE did not establish Foundations. We would have suggested an all year feeding of the downtrodden masses but for the fear of it being a disinvestment for the mentally sound, willing and able bodied men and women. This is evident in Senator Abubakar Saraki who dolled out One Hundred Million naira to prepare *Iftar* (Food for people when breaking their Islamic Fasting) for the people of Ilorin Metropolis this year.

Other riddles or problems are Islamic preaching are politicized and personalized; traditional religious pilgrimage to Kuo; lavishing of time, money and other scarce resources during marriages, naming and Maoludin'Nabiyy ceremonies; Pomposity via the expressions of words like "We-are-all-born-here, Nobody-can-drive-me-out-of-This-Town" and "Nobody-Can-Kill-Me Syndrome"; absence of necessary and sufficient enlightenment on the virtues of doing goods for the sake of Allah (S.W.T); marriage of prominent muslims to christians; geographical distribution of Ilorin Metropolis into two major divides (i.e. Oke-Imale and Aafin dichotomy); absense of a Full-Fledged Islamic Banks; highest financial donations to religious foundations are from the Politicians while the least used to come fron the Islamic Preachers; perpetual subjugation of Islamic Students to the control of their Islamic Teachers; biased and inadequate enlightenment (most of the sponsored religious programs on the Radio are for selfish ends. They are either for political campaigns, self aggrandizement or business promotion); desire for prompt or instant benefit; inactivity of the Zakah Collection Committee; existence of corruption in Nigeria; inadequate compliance to the Islamic Principles of Financing by the operators of existing financial system; absence of very strong opposition from the very minute fear that giving out of wealth reduces wealth of the giver; indigenes of IEE who are indigenes of IEE who converted to Christian faith; land tussle between the government and the indigenous land owners in IEE; existence of sects among the

practitioners of Sufism (*Tijaniyyat* sect, *Qodiriyya* sect, *Ikhlasiyyat* sect); and others too numerous to be mentioned.

#### 4.3 Remedies

The researchers observed that there are remedies (Ways in which the Riddles of *Waqf* in IEE could be streamlined to form a *Waqf*). These remedies serve as recommended solutions to the riddles or hindrances to the Establishment of a *Waqf* in IEE. They are as follow:

Involvement of Institutional will. This is the process of making Waqf to be an Institution of its own and everybody to contribute to Waqf as an institution that would stand the test of time. Labor, education, administrative acumen, land, machines, materials, useful advice, materials, and the so-called scrap goods, etc can be contributed to Waqf as an institution. Thus, there shall be quick formation of a committee that would institutionalize the Waqf. Just like the Joint Committee of the Traditional Ramadan Festival, and the Central Mosque Committee, among others; the need for the formation of a Waqf Committee cannot be over-emphasized. The Emirate Council under the Leadership of the current Emir of Ilorin, Alh. Ibrahim Sulu Gambari, can constitute the Waqf institution. The term of reference that would be given to the Waqf Committee shall be Institutionalization of Waqf in IEE within a lunar year. The committee members shall be trustworthy and retired academicians and civil-servants who may have no cause to swindle the assets.

There shall be Regular Call for Donations to *Waqf*. The regularity could be twice in a decade or every decade. Thus, it should not be only when we need to repair the Central Mosque that we would call for donations. All the existing modern Islamic associations and the foundations could assist this project. The duty of Regular Call for Donations could be assigned to Dr. Abubakar Ali-Agan, Alh. AbdulRahman Olanrewaju Ahmad (National Missioner of Ansarudeen Society of Nigeria) and the likes.

Inevitability of *Bai'a* (Pledge). Promise of good and Islamically acceptable behavior must be made by the people that would manage *Waqf* assets. With reference to Hadith 18 in Khan, 1994: 62, the *Mutawali* (Trustee) of a *Waqf* must promise not to: associate anything with Allah (S.W.T), engage in sexual promiscuity, slander, biasness, kill anybody and misbehave. Justice Alfa Belgore (Retired Chief Judge of the Federation, Nigeria); and Justice, Dr. S.O. Muhammad among others could facilitate this duty.

Desirability of Amanah (Trustworthiness). All indigenes of the IEE shall try to be trustworthy so that they would be qualified as, at least, beneficiaries of Waqf assistance, if they cannot be managers of Waqf assets. Pending the establishment of a full-fledged Islamic Bank, the Waqf account can be opened as an interest-free account in a Conventional Bank. No matter how little everybody, residents of IEE, is enjoined to strive to contribute to Waqf whenever they get surplus income.

Need for Collective Responsibility. Every indigenes of IEE shall be ready to avoid begging as stipulated in *Hadith* 747 in Khan 1994: 371) and work for/or contribute to the success of *Waqf* as 'abdullah [Servant of Allah (S.W.T)]. The work for the *Waqf* shall be either manual labor, or mental labor, or both. Other contributions could be in terms of provision of legal backing, administrative acumen, security, technical advise, education, financial assistance, etc.

Impetus of Regulation and Control of Ostentatious Living Style. Here, incessant ceremonies, and usage of assets whose monetary values are too prohibitive should be minimized. This would check jealousy, armed robbery, incessant attacks, wide gap between the rich and the poor, etc. At the for front, here, we can have Retired General Abdullahi Muhammed as the Champion.

Creation of Political will. The Politicians shall have it as part of their Manifestoes that they are going to create and sustain a *Waqf* for the IEE in particular and the state in general. Distinguished Senator, Dr. Abubakar Bukola Saraki can spearhead the Political Will of having a *Waqf* in IEE as an innovative venture over his predecessors.

Avoidance of Pomposity and Bragging. Everybody shall know that if another person cannot kill or banish him to other towns, Allah (S.W.T) is measuring his deeds and would reward him according to his action as could be read in Qur'an (Q99: 1 - 9). Allah (S.W.T) would give greater reward to people who have heavy good deeds in His Scale and lesser reward for those with light good deeds. (101: 6 - 11).

Decentralization of Wealth. The rich, educated, royal, religious, and influential people of the Emirate shall be ready to disperse their wealth to other families. This would lead to fair and even distribution of wealth; peaceful co-existence, economic growth and development.

Subjugation of Colonial Legacies of injustice, inequity, nuclear family, selfishness, and many others to the Islamic Legacies of Peaceful Co-Existence, Justice, Equity, Brotherhood, Goodness to everybody, and many others. This mission can be led by the Chief Imam of Ilorin, Alh. Muhammad Basheer Salih.

Opening of *Waqf* Accounts with banks [e.g. Keystone Bank (NIB Accounts), Stanbic IBTC Bank (*Imaan* Account), Access Bank, etc] that have Interest-Free Accounts.

Avoidance of Marriage with Non-Muslims. All bonafide indigenes of IEE shall avoid tieing nuptial knot with Non-Muslims. This would pave way for the Islamic legacies of IEE to be retained among the believers. Better still, they should convert them (Non-Muslims) to Islam before death overtakes them (Muslims).

Formalization of Islamically Permissible Businesses. For the *Waqf* to be sustainable and honorable, beneficiaries of *Waqf* funds and *Waqf* managers shall embark on all *Halal* [Islamically permissible businesses like *Mudaraba*, *Murabaha*, *Musharaka*, *Bais-Salaam*, *Bai' Muajjal*, One-By-One Financial Strategy, Time-Multiple-Counter-Loans (TMCL), Al-*Jumuah* Cooperatives or Rotating Savings and Credit Associations (ROSCAS), etc]. By implication, they should avoid all *Haram* [Deals that are forbidden by Islam, for example *Maysir* (Gambling), *Riba* (Interest or Usury dealings), sales and or eating of dog and swines, dead animals, alcoholic drinks, etc].

Optimal Utilization of 'ardh (land) resources within the IEE. Some portion of the land could be set aside as Waqf Land. The unused properties could also be loaned out on Qardul-Hassanah basis to Waqf for Allah (S.W.T) says if you lend good loan (Qardul-Hassanah) to Allah (S.W.T) you would get multiple rewards (Q64: 18). This principle of Time-Multiple-Counter-Loan (TMCL) could be applied when giving out monetary loans under Waqf.

Efficacy of Ad-Dua' (Prayer). The prayer of the managers and beneficiaries of Waqf fund must include the one that complies with Hadith 1331 in Al-Asqalani, (1996: 537) where the Holy Prophet (S.A.W) says "O Allah as You have made my form beautiful so make my character beautiful".

Purchase of Tangible Commodities. Waqf beneficiaries must ensure that they spent assistants, grants and/or loans obtained on tangible, productive, sustainable and lasting goods and services. In other words, people especially poor people should stop lavishing monies on frivolities.

Modernization of *Waqf*. This is a situation where *Waqf* complies with all and current Mercies of Allah (S.W.T) released for the betterment of human race. The Mercy in Vogue is the Electronic-Dealings. Thus, the IEE *Waqf* shall have a website where stakeholders can inform and be informed of *Waqf* activities. This would minimize the cost of information disemination and make *Waqf* to be Millennium Compliant.

#### 4.4 Rewards

Among the prospects of *Waqf* in IEE are:

It would generate employment via the promotion of effective utilization of resources. Prompt and effective demand is encouraged in Islam through the verse that says "Spend before death comes", (Q63: 10). Here, Islam encourages Effective Aggregate Demand. The Holy Prophet (S.A.W) also encourages quick dispensation of personally owned resources, in Allah's (S.W.T) way within three days; *Hadith* 1103 in Khan (1994: 520).

It would minimize Street-Begging along the main mosque, other mosques and major streets of Ilorin Metropolis. IEE would be a best nation as promised in the Qur'an (Q3: 110). In addition, it would aid the attainment of the Millennium Development Goals (MDGs) before the targeted year. Fund for maintaining the Ultra-Modern Central Mosque and many other mosques in IEE could come from *Waqf*.

To be precise, the establishment of Waqf in IEE would lead to peaceful co-existence. This is because both the rich and the poor, old and young, producers and consumers, males and females, leaders and the led, strangers and dwellers, etc would live peacefully with each other.

Waqf establishment would lead to Social and infrastructural development. Spending leads to the removal of people from darkness to illumination (Q65: 11). In addition, it leads to soul's benefit (Q64: 16), self-control and direct benefit to the consumers before their death overcomes them (Q63: 10). That is to say the *Waqf* could enhance regular supply of electricity in IEE.

In addition, the establishment of *Waqf* in IEE would lead to increase in output, consumption of *Halal* (Permissible) goods, creation of gainful business avenues, price stability, bumper harvest, savings, investments and many other symptoms of economic growth and development.

## 4.5 Synthesis of the Four-Rs of Establishing *Waqf* in IEE

Rationales or reasons why a *Waqf* must be established in IEE are: Existence of Believers, Land, Gainful Employment, Consumption, Spending, Trade, Good Loans, Brotherhood, Unity, Partnership, Agency, and Early Childhood Islamic Training among others.

Riddles of *Waqf* in IEE are: desire to get benefits from the person helped out of a problem, existing modern Islamic Organizations and Foundations that are not working towards the establishment of *Waqf*, Inadequate communal support for the Muslim Orphanage Home, differences in political delinations, Paradox of Behaviour of New-Breed Islamic Scholars, Excessive Concentration of Wealth, Marriage to Non-Muslims and Non-Indigenes, Proliferation of Beggars, Persistent Invitation of Muslims to *Kiyamu Lael*, belief in 'Feeding the Poor during Ramadan', and others too numerous to be mentioned.

Remedies to the above riddles are Institutional will, Regular Call for Donations to *Waqf*, Pledge to be made by the Trustworthy Committee Members based on terms of reference, avoidance of begging profession, regulation and control of ostentatious living style, Political will, Avoidance of Pomposity and Bragging, Subjugation of Colonial Legacies to Islamic Legacies, Opening of *Waqf* Accounts with banks that have Interest-Free Accounts, Avoidance of Marriage to Non-Muslims, beneficiaries of *Waqf* funds and *Waqf* managers shall embark on all *Halal* (Islamically Permitted) businesses, set aside portion of Emirate Land as *Waqf* Land, regular Prayer must be made for the success of *Waqf*; and purchase of tangible, productive, and sustainable commodities with *Waqf* Fund.

The prospects of Waqf in IEE are employment generation, minimization of Street-Begging, enhancement of peaceful co-existence, increase in output, consumption of Halal (Permissible) goods, creation of gainful business avenues, price stability, bumper harvest, savings, investments, self-control, social

development, infrastructural development (Illumination); people derive direct benefits from their income before their death (Q16: 10), and many other symptoms of economic growth and development.

## 5. CONCLUDING REMARKS

Waqf can be established in IEE without much hassle. Many studies and implementation of the recommendations of this kind shall be conducted in other Islamic villages, towns, metropolis, megalopolis of all nations and the entire world so that we can resuscitate the Global Muslim Waqf (Waqf ul-Ummatul Muslimeen) which precedes and supersedes the MDGs. MDGs as approved by all member countries of United Nations' Organization, include elimination of extreme poverty, improvement of health, education, equality of sexes, global financial cooperation, etc which have been embedded in Waqf since its inception.

The study does not exhaust all the points available under the Four-Rs of *Waqf* in IEE, for to Allah (S.W.T) belongs all and complete knowledge. Allah (S.W.T) is powerful over all things and surrounds them with His knowledge (Q65: 12).

# MEMPERKASA ZAKAT PERTANIAN DI MALAYSIA: SATU SOROTAN (EMPOWERING THE ZAKAH ON AGRICULTURE IN MALAYSIA: A REVIEW)

Muhammad Ikhlas Rosele<sup>1</sup> Luqman Haji Abdullah<sup>2</sup> Mohd Farhan Md Ariffin<sup>3</sup>

#### **ABSTRAK**

Zakat merupakan salah satu bidang terpenting di dalam Islam. Di samping ianya merupakan satu bentuk ibadah ketuhanan ia juga menjaga kemaslahatan manusia. Oleh kerana itu apabila bidang zakat ini diperkasakan, secara langsung ia menjamin kemaslahatan bagi umat Islam terutamanya dari sudut ekonomi. Kertas kerja ini bertujuan untuk melakukan sorotan dan analisis terhadap bagaimana untuk memperkasakan zakat di Malaysia dengan memfokuskan kepada bidang zakat pertanian. Ia berasaskan satu kajian kualitatif yang dilakukan terhadap perbincangan-perbincangan zakat pertanian di kalangan ulama' fiqh. Hasil kajian mengemukakan beberapa kaedah pemerkasaan zakat pertanian di Malaysia iaitu memperbanyakkan sumber-sumber pertanian yang perlu dizakatkan, menyelaraskan kadar nisab bagi setiap negeri, melakukan pentaksiran ke atas tanaman dan zakat atas penyewa (petani) dan tuan tanah.

Kata kunci: zakat, zakat pertanian, ekonomi, fiqh

#### **ABSTRACT**

Zakah is a well known and also one of the most important "ibadah" (worship) in Islam. Besides it's role as ibadah, it also vital for the benefit of ummah. Therefore, the empowerment of zakah in Malaysia is most welcome, because it exactly will ensure the stability of economy for ummah. This paperwork has been made to review and also to analyse through the process on how to empowering the zakah institution in Malaysia by focusing to the zakah on agriculture. This review was based on qualitative studies on zakah on agriculture that have been done lately by the fiqh scholar around the globe. As a result, the finding of this studies also have propose effective methods or framework to empower and strengthen the zakah on agriculture institution in Malaysia such as by enhancing or increase the source of agricultural crops that includes in zakah on agriculture, coordinate all states nisab amount, formative assessment to every plants or crops and lastly the reinforcement of zakah to the farmers and landlord.

**Keywords:** zakah, zakah on agriculture, economy, figh.

# 1. PENDAHULUAN

Zakat adalah ibadah harta yang mengandungi hikmah dan manfaat yang sangat besar dan mulia, sama ada terhadap pemberi zakat, penerimanya, harta yang dizakatkan, mahupun terhadap masyarakat keseluruhannya<sup>4</sup>. Falsafah zakat juga adalah memberi, di mana golongan yang kaya memberi kepada orang yang memerlukan terutamanya orang miskin. Ia juga membawa motif perkongsian antara orang

<sup>&</sup>lt;sup>1</sup> Pelajar pascasiswazah (PhD), Jabatan Fiqh dan Usul, Akademi Pengajian Islam, Universiti Malaya.

<sup>&</sup>lt;sup>2</sup> Pensyarah Kanan (PhD), Jabatan Fiqh dan Usul, Akademi Pengajian Islam, Universiti Malaya

<sup>&</sup>lt;sup>3</sup> Pelajar pascasiswazah (Sarjana), Jabatan al-Qur'an dan Hadis, Akademi Pengajian Islam, Universiti Malaya

Didin Hafidhudin, Zakat dalam perekonomian modern (Jakarta: Gema Insani, 2002), 9-10.

kaya dan golongan yang tidak bernasib baik serta merapatkan jurang sosial antara orang kaya dan orang miskin<sup>5</sup>, ini jelas kita lihat dalam sebuah hadis ketika mana Rasulullah menghantar Mu'az bin Jabal ke Yaman dan berpesan, maksudnya:

"sesungguhnya Allah memfardukan keatas mereka agar menzakatkan harta mereka yang diambil daripada orang-orang yang kaya dikalangan mereka dan diberikan kembali kepada orang yang miskin dikalangan mereka"

(Hadis riwayat Bukhari dan Muslim)

Zakat juga mempunyai hikmah dan objektif yang besar dalam kehidupan manusia, antaranya adalah:

- Sebagai bukti keimanan kepada Allah dan mensyukuri nikmat-Nya, Melahirkan akhlak yang mulia dengan rasa kemanusiaan yang tinggi, menghilangkan sifat kedekut, rakus, kebendaan, juga dapat memberikan ketenangan.
- Membersihkan dan mengembangkan harta yang dimiliki, kerana apabila lahirnya rasa syukur maka Allah akan menambahkan nikmat-Nya keatas hambanya. Firman Allah s.w.t yang bermaksud:

"Dan (ingatlah juga) tatkala Tuhanmu memaklumkan: sesungguhnya jika kamu bersyukur, pasti Kami akan menambah (nikmat) kepadamu, dan jika kamu mengingkari nikmat-Ku, maka sesungguhnya azabku sangat pedih"

(Surah Ibrahim: 7)

- Zakat merupakan hak orang yang layak menerima zakat, maka hakikatnya zakat berfungsi menolong membantu dan membina mereka, terutamanya fakir miskin kearah kehidupan yang lebih baik dan lebih sejahtera. Sehingga mereka dapat memenuhi keperluan hidup, dan beribadah kepada Allah, juga dapat mengurangkan beban yang mereka tanggung.
- Orang yang tidak mahu berzakat adalah orang yang kedekut, dan kesan daripada itu akan menimbulkan sifat hasad dengki dari orang-orang miskin dan penderitaan, juga akan mengundang azab Allah s.w.t yang bermaksud:

"(Iaitu) orang-orang yang kedekut, dan menyuruh orang lain menjadi kedekut, dan menyembunyikan apa yang dikurniakan oleh Allah yang diberikan kepada mereka. Dan kami telah menyediakan untuk orang-orang kafir seksaan yang hina"

(Surah an-Nisaa': 37)<sup>6</sup>

- Dari sudut pembangunan kesejahteraan umat, zakat merupakan salah satu instrumen persamarataan pendapatan. Dengan zakat yang dikelola dengan baik, ia dapat memungkinkan pertumbuhan ekonomi sekaligus persamarataan pendapatan, ataupun economic with equity<sup>7</sup>.
- Zakat dapat memajukan ekonomi umat Islam dengan menerusi perancangan penggunaan dana zakat yang berkesan. Ia juga dapat menjadi sumber pendapatan kepada negara<sup>8</sup>.
- Dapat memperkasakan negara dan umat Islam melalui penyelidikan-penyelidikan dalam pelbagai bidang seperti ekonomi, pendidikan, kesihatan dan sebagainya dengan menggunakan dana zakat<sup>9</sup>.

Shofian Ahmad dan Amir Husin Mohd. Nor, Zakat Membangun Ummah (Kuala Lumpur: Utusan Publications & Distributors Sdn Bhd, 2002), 21.

Shofian Ahmad dan Amir Husin Mohd, Nor, Zakat Membangun Ummah, 10-14.

Hamizul Abdul Hamid, Eksklusif Zakat, 10; Sayed Sikandar Shah Haneef & Mek Wok Mahmud, Issues in Contemporary Zakah A Juristic Analytical Evaluation, (Selangor: IIUM Press, 2011), 5.

• Zakat juga berbeza dengan riba, kerana zakat pada hakikatnya dapat menyuburkan harta, sedangkan riba hanyalah kerugian pada akhirat kelak, firman Allah s.w.t yang bermaksud:

"Allah memusnahkan riba dan menyuburkan sedekah" (Surah al-Baqarah : 276)

Secara kasarnya didapati bahawa zakat memainkan peranan yang penting dalam mengimbangi ekonomi umat Islam<sup>10</sup>. Oleh kerana itu, kertas kerja ini akan melakukan sorotan terhadap kaedah untuk memperkasakan zakat pertanian di Malaysia. Secara tidak lansung pemerkasaan zakat pertanian ini dapat mempertingkatkan hasil zakat di Malaysia dan mengimbangi kadar sosio ekonomi umat Islam di Malaysia.

## 2. ZAKAT PERTANIAN

Pertanian adalah salah satu sumber pendapatan dan ekonomi bagi manusia, dengan mempunyai tanah dan tanaman yang subur boleh menjadikan seseorang itu kaya. Oleh kerana itu jugalah hasil yang dikeluarkan dari bumi tersebut diwajibkan zakat, iaitu zakat pertanian.

Zakat pertanian umumnya adalah hak yang wajib ditunaikan sebanyak 10% atau 5% (mengikut kaedah pengairan) daripada hasil pertanian (yang tertentu), pada waktu hasil tersebut dituai (atau setelah dilakukan pentaksiran) yang mencukupi atau melebihi 5 *ausuq*<sup>11</sup>. Selaras dengan pengertian zakat secara umum, iaitu "hak yang wajib ditunaikan dengan kadar tertentu dari pada harta tertentu, untuk golongan tertentu pada waktu yang tertentu". Menurut Mujaini Tarimin, pentakrifan zakat pertanian adalah:

"Mengeluarkan sebahagian daripada pendapatan bersih hasil pertanian yang dimajukan oleh manusia dari jenis biji-bijian atau buah-buahan atau mana-mana hasil pertanian yang memberi manfaat serta menepati semua syarat, rukun dan sebab (*'illah*) diwajibkan zakat"<sup>13</sup>

Zakat pertanian juga dikenali sebagai *al-'usyr*, zakat *al-zuru' wa al-thimar*, atau zakat *al-mu'asyirat*<sup>14</sup>, walaupun begitu ia tetap mempunyai satu maksud. Hasil pertanian wajib untuk dikeluarkan zakat daripadanya. Dalil-dalil yang mewajibkan zakat pertanian antaranya adalah seperti berikut:

# Al-Quran

Firman Allah s.w.t di dalam surah al-Baqarah :

"Wahai orang-orang yang beriman! belanjakanlah (pada jalan Allah) sebahagian dari hasil usaha kamu yang baik-baik, dan sebahagian dari apa yang Kami keluarkan dari bumi untuk kamu"

(Surah Al-Baqarah 2 : 267)

dan firman Allah dalam surah al-An'am:

Yusuf al-Qaradawi, Fiqh al-Zakah Dirasah Muqaranah li Ahkamiha wa Falsafatiha fi Dhau' al-Qur'an wa al-Sunnah (Kaherah: Maktabah Wahbah, 1994), 1: 329.

"Makanlah dari buahnya ketika ia berbuah dan keluarkanlah haknya (zakatnya) pada hari memetik atau menuainya; dan janganlah kamu melampau-lampau (pada apa jua yang kamu makan atau belanjakan); sesungguhnya Allah tidak suka kepada orang-orang yang melampau-lampau"

(Surah Al-An'am 6 : 141)

#### Al-Sunnah

Sabda Rasulullah s.a.w:

فيمَاسَقَتْ السَّمَاءُوَ الْعُيُونُ أَوْ كَانَعَثَر يَّاالْعُشْرُ وَمَاسُقِيَبِالنَّصْحِنِصْفُالْعُشْر

"Pada apa-apa yang diairi (disirami) dengan air hujan, mata air atau air tanah (takungan) dikenakan (zakat) sebanyak 10%, sedangkan pada apa-apa yang diairi dengan tenaga dikenakan (zakat) sebanyak 5%"

(Hadis riwayat al-Bukhari)

Sabda Rasulullah s.a.w:

فِيمَاسَقَتْ الْأَنْهَارُ وَ الْغَيْمُالْعُشُورُ وَفِيمَاسُقِيَبِالسَّانِيَةِنِصْفُالْعُشْرِ

Yang bermaksud : "Pada apa-apa yang diairi dengan sungai dan hujan dikenakan (zakat) sebanyak 10%, sedangkan pada apa-apa yang diairi dengan pengairan dikenakan (zakat) sebanyak 5%"

(Hadis riwayat Ahmad dan Muslim)

Serta beberapa hadis lain yang menyatakan hasil pertanian dikeluarkan zakat.

#### Iima'

Para ulama' telah ijma' dalam mewajibkan zakat dari hasil yang dikeluarkan dari bumi, tetapi mereka berbeza pendapat dari sudut perinciannya sahaja<sup>15</sup>.

## 2.1 Perlaksanaan Kutipan Zakat Pertanian di Malaysia

Zakat pertanian merupakan antara sumber zakat yang penting di Malaysia, ini kerana sektor pertanian antara sektor utama yang menjadi tulang belakang kepada ekonomi di Malaysia di samping sektor perkhidmatan dan perkilangan<sup>16</sup>.Sosio ekonomi masyarakat Malaysia juga antaranya berasaskan pertanian. Pertubuhan-pertubuhan kutipan zakat di Malaysia telah pun menjalankan kutipan zakat hasil tanaman atau pertanian demi merealisasikan tuntutan syariat. Di dalam bahagian ini akan membincangkan secara ringkas dan umum berkenaan perlaksanaan kutipan zakat di Malaysia.

Hasil pertanian yang wajib dikeluarkan di Malaysia adalah hasil pertanian yang berbentuk makanan asasi (*qut al-balad*) dan mengenyangkan bagi sesebuah negeri. Pentakrifan inilah yang diperjelaskan oleh kebanyakan pusat pungutan zakat negeri di Malaysia seperti Selangor<sup>17</sup>, Melaka<sup>18</sup>, Pahang<sup>19</sup>dan selainnya.

Abu Bakr bin Mas'ud al-Kasani, *Badai' al-Shanai' fi Tartib Syarai'*(Beirut : Dar al-Kutub al-'Ilmiyah, 2003), 2: 495.

Mohd Faisol Ibrahim & Suhana Musani, *Zakat dan Perlaksanaannya di Malaysia* (Sabah: UMS, 2010), 17; Aziz Abdul Majid, Ab. Latif Ibrahim, Norizan Md. Nor & Hassan Naziri Khalid, "Pertanian Mapan: Cabaran dan Strategi Pembangunan Dalam Sektor Pertanian Di Negeri Perlis," (makalah Society Space and Environment In A Globalised World Prospects & Challenges, City Bayview Hotel, Penang, 29-30 April 2003), 277.

Lembaga Zakat Selangor, "Zakat Pertanian," e-zakat.com, diakses pada 8 Jun 2013, http://www.e-zakat.com.my/zakat-harta/zakat-pertanian/

Dalam konteks Malaysia dimaklumi bahawa makanan asasi masyarakatnya adalah beras ataupun padi, oleh kerana itu zakat tanaman adalah diwajibkan ke atas padi apabila telah sempurna syarat-syaratnya<sup>20</sup>.

Syarat-syarat wajib zakat pertanian, tanaman atau lebih khususnya padi adalah seperti berikut<sup>21</sup>:

- i. Islam
- ii. Sempurna Milik
- iii. Merdeka
- iv. Cukup Nisab
- v. Biji-bijian dan buah-buahan ditanam oleh manusia

Nisab bagi zakat pertanian pula dilihat berbeza di antara setiap negeri di Malaysia. Lihat Jadual 1 berikut:

Jadual 1: Kadar Nisab Zakat Pertanian di Negeri-Negeri di Malaysia

Negeri	Kadar Nisab (kg)
Johor <sup>22</sup>	816.75
Kedah <sup>23</sup>	1300.49
Kelantan <sup>24</sup>	875
Melaka <sup>25</sup>	1300
Negeri Sembilan <sup>26</sup>	1306
Pahang <sup>27</sup>	1000
Perak <sup>28</sup>	363 gantang
Perlis <sup>29</sup>	986.7
Pulau Pinang <sup>30</sup>	1300
Sabah	-
Sarawak <sup>31</sup>	1080
Selangor <sup>32</sup>	1306

Nuruul Hidayah Mansor, "Analisis Perbandingan Amalan Kaedah Pembayaran Zakat Tanaman: Kajian di Negeri Selangor dan Perlis," 84

Terengganu <sup>33</sup>	937.5
Wilayah Persekutuan <sup>34</sup>	363 gantang

Kadar zakat yang perlu dikeluarkan apabila hasil pertanian sudah mencukupi atau melebihi nisab adalah sebanyak 5% jika diari oleh alat bantuan seperti jentera dan sebagainya. Jika tanaman diairi oleh air hujan atau secara alami maka kadar zakat yang wajib dikeluarkan adalah sebanyak 10%<sup>35</sup>. Walaubagaimanapun ada antara negeri di Malaysia meletakkan kadar zakat sebanyak 7.5% sekiranya kedua-dua kaedah pengairan tersebut digunapakai<sup>36</sup>, contohnya adalah negeri Melaka<sup>37</sup>, Sarawak<sup>38</sup>, Wilayah Persekutuan<sup>39</sup> dan selainnya.

#### 2.2 Pemerkasaan Zakat Pertanian

Pemerkasaan zakat begitu penting bagi mengimbangi dan mempertingkatkatkan ekonomi umat Islam, Memperkasakan zakat juga dilihat sebagai suatu bentuk pemerkasaan manusia, ini adalah kerana zakat merupakan suatu mekanisme ekonomi yang berbentuk global dan bersifat manusiawi<sup>40</sup>. Oleh kerana itu apabila sistem zakat dapat diperkukuhkan taraf hidup umat Islam juga meningkat dan seimbang. Walaubagaimanapun kertas kerja ini hanya melakukan sorotan terhadap sub-bidang zakat sahaja iaitu zakat pertanian dan pemerkasaannya di Malaysia.

Zakat pertanian dilihat boleh diperkasakan di Malaysia, ini kerana Malaysia giat dalam mengusahakan sektor pertanian di samping sektor-sektor lain. Sektor pertanian juga merupakan sektor ekonomi primer yang merupakan sumber pendapatan negara<sup>41</sup>. Berikut adalah beberapa cadangan dalam memperkasakan zakat pertanian di Malaysia:

#### 2.2.1 Memperbanyakkan sumber-sumber pertanian yang perlu dizakatkan

Ulama-ulama fiqh berbeza pendapat dalam menentukan jenis sumber-sumber pertanian yang wajib dikeluarkan zakat. Secara asasnya terdapat 4 perbezaan pendapat mengenai isu ini;

- i) Kewajipan zakat pertanian hanya terbatas kepada empat hasil pertanian sahaja (gandum, barli, kurma dan kismis). Ia merupakan pendapat Ibnu 'Umar dan sebahagian ulama' salaf <sup>42</sup>.
- ii) Semua yang dikeluarkan daripada bumi yang bertujuan untuk menyuburkan tanah (memperoleh hasil) wajib untuk dikenakan zakat padanya<sup>43</sup>. Pendapat ini dikemukakan oleh Imam AbuHanifah<sup>44</sup> yang juga merupakan pendapat 'Umar 'Abdul 'Aziz, Mujahid, al-Nakha' i<sup>45</sup> dan Hammad.

<sup>41</sup> Mohd Faisol Ibrahim & Suhana Musani, Zakat dan Perlaksanaannya di Malaysia, 17.

<sup>&</sup>lt;sup>42</sup> Ibn Qudamahal-Maqdisi, *Al-Mughni* (Kaherah: Hajar, 1992), 4: 156-157/160.

<sup>&</sup>lt;sup>43</sup> al-Qaradawi, Figh al-Zakah, 1: 383-384.

- iii) Mensyaratkan bahawa hasil pertanian yang dikenakan zakat mestilah berbentuk makanan asasi yang boleh disimpan lama. Pendapat ini dikemukakan oleh Imam Malik dan Imam al Syafi'i<sup>46</sup>.
- iv) Hanya hasil pertanian yang boleh disukat, tahan lama dan boleh dikeringkan sahaja akan dikenakan zakat. Pendapat ini didokong oleh Imam Ahmad<sup>47</sup>.

Pandangan Imam Abu Hanifah dilihat relevan pada masa kini. Ini kerana sumber kekayaan hasil bumi bukanlah terhad hanya kepada jenis-jenis tanaman tertentu sahaja. Di Malaysia perusahan tanaman dan hasil pertanian juga berkembang pesat dan sewajarnya hasil tersebut juga perlu dikenakan zakat seperti tebu, nanas, limau dan sebagainya. Perkara ini juga secara lansung dapat meningkatkan hasil kutipan zakat pertanian di Malaysia dan dapat meningkatkan taraf ekonomi orang yang memerlukan serta melepaskan umat Islam dari kesusahan.

Al-Qaradawi di dalam kitabnya Fiqh al-Zakah bersetuju dengan pendapat Imam Abu Hanifah ini. Beliau menyebut:

"Pendapat inilah bertepatan dengan al-Quran dan al-Sunnah, dan ianya juga seiring dengan hikmah pensyariatan zakat, tidaklah dikatakan suatu hikmah sekiranya Allah mewajibkan zakat kepada petani yang menanam barli dan gandum, dan mengecualikan (membayar zakat) pemilik kebun-kebun limau, mangga ataupun epal" 48

Nas-nas yang terdapat di dalam al-Quran yang menyatakan kewajipan zakat pertanian adalah bersifat umum dan tidak menentukan dan mengkhususkan jenis sumber pertanian yang wajib dizakatkan sebagaimana firman Allah s.w.t di dalam surah al-Baqarah 2:267, dan surah al-An'am 6:141. Begitu juga di dalam hadis Rasulullah s.a.w<sup>49</sup>., sabda Baginda s.a.w:

"Pada apa-apa yang diairi (disirami) dengan air hujan, mata air atau air tanah (takungan) dikenakan (zakat) sebanyak 10%, sedangkan pada apa-apa yang diairi dengan tenaga dikenakan (zakat) sebanyak 5%" (Hadis riwayat al-Bukhari)

Berasaskan pendapat inilah semua tanaman yang ditanam untuk memperolehi hasil perlulah dizakatkan termasuklah tumbuhan hijau seperti sayur-sayuran dan buah-buahan yang tidak tahan lama dan cepat busuk. Ini adalah kerana zakat pertanian akan dikenakan pada setiap tumbuhan yang sudah menjadi, contohnya tumbuhan yang kering dizakatkan apabila ia sudah kering, dan tumbuhan yang basah dizakatkan apabila ia sudah masak<sup>50</sup>. Zakat daripada tumbuhan hijau diambil mengikut nilainya bukan fizikalnya oleh kerana tumbuhan hijau cepat rosak dan busuk.Antara ulama' tersebut adalah al-Zuhri, Maimun bin Mihran, al-Auza'i<sup>51</sup>, Ata' al-Khurasani, al-Sya'bi<sup>52</sup> dan selain mereka.Di samping itu hasil tanaman selain padi (di Malaysia terutamanya) dilihat lebih membuahkan hasil dan mendatangkan

kekayaan kepada pengusahanya<sup>53</sup>. Oleh kerana itulah adalah wajar sekiranya hasil pertanian selain padi di Malaysia seperti keledek, pisang, sawit dan selainnya juga dikenakan zakat.

Walaupun begitu, terdapat perkara yang perlu diberi perhatian iaitu membezakan antara bentuk-bentuk tanaman yang dikenakan zakat perniagaan (iaitu tanaman yang ditanam bertujuan untuk diniagakan) dan tanaman yang dikenakan zakat pertanian. Oleh kerana itu dicadangkan agar kajian yang lebih terperinci dilakukan untuk mengklasifikasikan jenis tanaman-tanaman tersebut dalam usaha untuk mewajibkan zakat pertanian ke atas tanaman selain padi di Malaysia. Tambahan pula wujudnya kesediaan masyarakat untuk membayar zakat dari hasil pertanian yang diikhtilafkan<sup>54</sup>. Ini dapat memungkinkan penambahan sumber-sumber hasil pertanian yang diwajibkan zakat dapat direalisasikan.

#### 2.2.2 Menyelaraskan kadar nisab bagi setiap negeri

Perbezaan kadar nisab bagi zakat tanaman di antara negeri-negeri di Malaysia perlulah diselaraskan. Ianya bertujuan untuk menjamin keseimbangan dan kestabilan sosio ekonomi umat Islam di Malaysia dan menepati prinsip-prinsip keadilan dalam kutipan hasil zakat. Nisab bagi zakat pertanian adalah sebanyak 5 *awsuq* dan hasil pertanian yang kurang daripada kadar nisab tersebut tidak diwajibkan zakat, sebagai mana sabda Rasulullah s.a.w yang bermaksud:

"Apa-apa yang kurang daripada 5 awsuq tidak diwajibkan zakat" (Hadis muttafaq 'alaih)

Untuk menyelaraskan kadar nisab bagi setiap negeri di Malaysia perlu berapakah jumlah atau perkiraan 5 *awsuq* tersebut. Menurut al-Qaradawi perkiraan 5 *awsuq* adalah sebanyak 300 *sa'* (gantang). Penentuan tersebut berdasarkan sebuah hadis *da'if*<sup>55</sup> serta berpegang dengan ijma' yang dinukilkan oleh Ibnu Munzir dan selainnya<sup>56</sup>.

Timbul pula persoalan dalam menentukan saiz besarnya satu sa'. Ulama' bersepakat dalam sukatan sa'yang dipakai adalah sukatan sa' Madinah, tetapi mereka berbeza dalam mengenalpasti besarnya satu sa' tersebut. Terdapat dua pendapat yang masyhur berkenaan satu sa'. Pendapat pertama adalah satu sa' bersamaan dengan 5 1/3 kati Baghdad yang merupakan pendapat ulama' fiqh Hijaz<sup>57</sup>. Pendapat kedua pula adalah satu sa' bersamaan dengan 8 kati Baghdad yang merupakan pendapat ulama' fiqh Iraq<sup>58</sup>.

Pendapat yang terpilih adalah satu *sa'* bersamaan dengan 5 1/3 kati Baghdad. Al-Qaradawi juga berpendapat bahawa satu *sa'* adalah bersamaan dengan 5 1/3 kati Baghdad<sup>59</sup>. Pendapat ini berasaskan beberapa bukti, antaranya Imam Malik sendiri telah menakar sendiri besar *sa'* penduduk Madinah yang masih kekal sehingga zaman beliau<sup>60</sup>. Abu Yusuf juga telah menakar sendiri besar *sa'* penduduk madinah

ketika beliau selesai menunaikan haji, sehingga beliau menukar pendapatnya dengan menerima pendapat penduduk Madinah<sup>61</sup>.

Namun timbul permasalahan yang timbul adalah kiraan semasa (kg) bagi 1 kati Baghdad, perlunya ada usaha untuk mendapatkan kiraan tepat bagi 1 kati Baghdad tersebut mengikut sukatan Malaysia. Walaubagaimanapun terdapat 2 alternatif untuk menyelaraskan timbangan nisab zakat pertanian;

- 1) Pertama: Al-Qaradawi telah melakukan kiraan nisab 5 *awsuq* mengikut kiraan semasa. Beliau mendapati bahawa 5 *awsuq* adalah bersamaan dengan 653 kg gandum. Kadar berat ini boleh digunapakai (di*qiyas*kan)dalam timbangan nisab bagi beras<sup>62</sup>.
- 2) Kedua: Memilih satu kadar yang telah ditentukan oleh setiap negeri untuk menjadikan kadar nisab yang sesuai diaplikasikan di Malaysia. Kadar nisab yang dilihat sesuai adalah 363 gantang beras yang bersamaan 1300 kg beras. Timbangan inilah yang perlu kita selaraskan bagi setiap negeri di Malaysia.

Perbincangan nisab 5 awsuq adalah sesuai digunakan bagi hasil pertanian yang boleh diliter. Bagi hasil pertanian yang tidak boleh disukat dengan menggunakan sa' hendaklah dikeluarkan zakat dengan menggunakan mata wang mengikut nilai 5 awsuq bijian yang sederhana nilai harganya. Nilai harga barang memang berbeza di antara setiap negara, jadi penentuan itu hendaklah diserah kepada setiap ilmuan di negara tersebut<sup>63</sup>. Sebagai contoh, nisab bagi tebu adalah mengikut nilai 5 awsuq padi atau dalam kilogram adalah lebih kurang 653 kg padi yang mempunyai harga yang sederhana<sup>64</sup>. Harga sederhana digunakan sebagai ukuran adalah untuk menjaga dua kepentingan iaitu, kepentingan fakir miskin dan kepentingan pemilik kekayaan<sup>65</sup>.

#### 2.2.3 Melakukan pentaksiran ke atas tanaman

Pentaksiran dilakukan ke atas tanaman adalah untuk mengetahui jumlah yang perlu dizakatkan oleh petani dengan lebih awal<sup>66</sup>. Pentaksiran atas tanaman dilihat perlu bahkan ianya sunat dilakukan menurut para fuqaha', oleh kerana itu pemerintah perlu mewujudkan para pegawai atau pekerja untuk melakukan kerja-kerja pentaksiran<sup>67</sup>. Objektif paling jelas dalam melakukan pentaksiran ialah untuk memberi kebebasan kepada pemilik untuk melakukan apa-apa urusan terhadap hasil pertaniannya<sup>68</sup>.

Walaubagaimanapun dalam isu ini terdapat dua golongan yang berbeza pendapat, golongan yang mengatakan sah menggunakan kaedah pentaksiran dan yang mengatakan tidak sah. Golongan tersebut adalah:

1- Jumhur ulama'. Mengikut jumhur ulama' menggunakan kaedah pentaksiran adalah sah, dan mereka berhujah dengan dalil daripada hadis Nabi s.a.w<sup>69</sup>.

al-Baihagi, al-Sunan al-Kubra, 4: 286.

<sup>66</sup> Mahmood Zuhdi Abd. Majid, *Pengurusan Zakat* (Kuala Lumpur: Dewan Bahasa dan Pustaka, 2003), 264.

Ibn Qudamah al-Maqdisi, *al-Mughni* (Riyadh: Dar 'Alim al-Kutub, 1997) 4: 173-174, al-Nawawi, *al-Majmu'* Syarh al-Muhadhdhab, 5: 459.

Mahmood Zuhdi, *Pengurusan Zakat*, 264.

<sup>69</sup> Ibn Qudamah, al-Mughni, 4: 173.

2- Imam Abu Hanifah pula berbeza dengan jumhur. Beliau berpendapat kaedah pentaksiran adalah tidak sah. Beliau berhujah bahawa kaedah pentaksiran merupakan satu bentuk anggaran dan agakkan. Anggaran dan agakkan tidak boleh dijadikan sumber hukum<sup>70</sup>.

Pendapat yang diterima adalah pendapat yang dikemukakan jumhur ulama' kerana adanya nas yang jelas<sup>71</sup>. Namun perlu ditekankan bahawa pentaksiran ini bukanlah sesuatu yang mengikat. Pemilik hasil tanaman boleh menolaknya (jumlah taksiran) sekiranya ia tidak tepat berbanding jumlah sebenar setelah disukat. Al-Syirazi menyatakan sekiranya kesilapan (pentaksiran) yang didakwa itu terlalu besar sehingga mencecah 1/3 atau 1/4 maka dakwaan pemilik hasil itu perlu ditolak. Sekiranya dakwaan kesilapan itu dalam kadar yang munasabah, dakwaan pemilik hasil itu perlu diterima dengan disertai sumpah<sup>72</sup>.

Asasnya pentaksiran ini dilakukan kepada kurma dan anggur sahaja. Berkenaan hasil pertanian selain daripada kurma dan anggur, jumhur berpendapat bahawa selain kurma dan anggur tidak boleh ditaksir, manakala al-Zuhri, al-Laith dan al-Auza'i berpendapat bahawa selain kurma dan anggur boleh digunakan kaedah pentaksiran<sup>73</sup>. Imam Yahya juga mengharuskan dilakukan pentaksiran ke atas tanaman (selain buah-buahan) kerana maslahah<sup>74</sup>.

Dicadangkan di Malaysia agar melakukan pentaksiran ke atas semua jenis sumber-sumber pertanian yang layak dikenakan zakat. Ianya dapat melancarkan perakaunan zakat pertanian, mampu menjamin keakuran petani untuk membayar zakat serta memudahkan para petani melakukan urusan terhadap hasil pertaniannya dan memudahkan pengutip zakat dalam melakukan urusan berkaitan perlaksanaan zakat pertanian.

### 2.3 Zakat atas penyewa dan tuan tanah

Di Malaysia amalan menyewa dan memberi sewa tanah telah lama dipraktikkan, termasuklah amalan menyewa tanah pertanian. Jadi persoalan yang timbul siapakah yang perlu membayar zakat, adakah pemilik tanah kerana pemilikannya terhadap tanah tersebut dan mendapat keuntungan atas sewaannya ataupun orang yang menyewa kerana secara zahir dialah yang mengusahakan tanah dan tanaman dan yang mengeluarkan hasil dari tanah tersebut.

Ulama-ulama fiqh juga berbeza pendapat dalam isu ini. Secara asasnya di dalam persoalan ini terdapat dua pandangan yang utama;

i) Pendapat Imam Abu Hanifah: Imam Abu Hanifah berpendapat bahawa zakat hanya dikenakan ke atas pemilik tanah<sup>75</sup>. Ini adalah kerana zakat pertanian (*'usyr*) diwajibkan ke atas tanah yang mengeluarkan hasil bukan ke atas bijian ataupun hasil pertanian<sup>76</sup>, alasan lain adalah kerana *'usyr* dikenakan ke atas manfaat dari tanah, dan manfaat dari tanah itu sebenarnya di serahkan kepada penyewa dalam bentuk bayaran sewa, dan sewa adalah ganti kepada manfaat yang diperoleh dari tanah. Oleh kerana itu zakat dikenakan ke atas pemilik tanah, berasaskan kaedah hukum perkara yang menggantikan mengambil hukum perkara yang digantikan<sup>77</sup>

al-Qaradawi, Fiqh al-Zakah, 1:410. Muhammad bin 'Ali al-Syaukani, Nail al-Awtar (Mesir: Dar al-Hadis, 2005). 2: 507.

<sup>&</sup>lt;sup>72</sup> Ibrahim bin 'Ali al-Syirazi, *al-Muhazzab fi Fiqh al-Imam al-Syafi'i* (Beirut: Dar al-Kutub al-'Ilmiyyah, 1995), 1: 287

<sup>&</sup>lt;sup>73</sup> Ibn Oudamah. *al-Mughni*. 4: 178-179.

<sup>&</sup>lt;sup>74</sup> al-Syaukani, *Nail al-Awtar*, 2: 507.

al-Kasani, Badai' al-Shanai' fi Tartib Syarai', 2: 499; Ibn al-Humam, Fath al-Qadir, 2: 256.

al-Sarakhsi, *al-Mabsut*, 3: 5. Lihat juga: Ibnu Qudamah, *al-Mughni*, 4: 201; al-Mawardi, *al-Hawi al-Kabir* (Beirut: Dar al-Kutub al-'Ilmiyah, 1999), 3: 254.

<sup>&</sup>lt;sup>77</sup> al-Sarakhsi, *al-Mabsut*, 3: 5.

ii) Pendapat jumhur: Jumhur ulama pula berpendapat bahawa zakat hanya dikenakan keatas penyewa, oleh kerana zakat diwajibkan ke atas hasil tanaman bukan tanah yang mengeluarkan hasil tanaman itu<sup>78</sup>.

Ibnu Rusyd telah melakukan penjelasan berkenaan asas perbezaan Imam Abu Hanifah dan Jumhur. Ibn Rusyd menjelaskan sebab perbezaan pendapat dua golongan tersebut adalah penentuan sama ada zakat itu merupakan hak tanah ataupun hak hasil tanaman ataupun hak keduanya. Tetapi tidak ada yang berpendapat bahawa ia merupakan hak keduanya. Sedangkan ia adalah hak keduanya (iaitu hak tanah dan hak hasil tanaman). Mereka berpendapat bahawa zakat mestilah merupakan hak salah satu antara keduanya, perbezaan yang timbul adalah yang mana satukah di antara dua perkara itu lebih utama untuk dikenakan zakat. Maka jumhur berpendapat bahawa zakat dikenakan atas hasil tanaman, dan AbuHanifah berpendapat bahawa zakat dikenakan atas asal kepada benih iaitu tanah <sup>79</sup>.

Apabila diteliti penjelasan yang dikemukan oleh Ibn Rusyd mempunyai asasnya. Oleh kerana itu adalah wajar sekiranya zakat dikenakan ke atas penyewa dan tuan tanah. Perkara ini dapat meningkatkan hasil kutipan zakat di Malaysia dalam rangka mempertingkatkan ekonomi umat Islam. Al-Qaradawi juga bersetuju dengan pendapat Ibn Rusyd ini, di mana zakat pertanian diwajibkan ke atas tanah dan ke atas hasil pertanian, bukan ke atas salah satu daripada dua perkara tersebut.Ini bermakna pemilik tanah dan penyewa hendaklah mengeluarkan zakat pertanian<sup>80</sup>.

Tetapi masih terdapat persoalan yang timbul apabila pemilik tanah dan penyewa perlu mengeluarkan zakat, iaitu bagaimanakah cara kedua-dua mereka untuk mengeluarkan zakat secara bersama? Berikut adalah cara dan kaedah kiraan yang dikemukakan oleh al-Qaradawi;

Permulaannya, sewa yang dikenakan ke atas penyewa hendaklah ditolak sebagai hutang yang ditanggung oleh pembayar zakat.Ini bermakna hasil pertanian hendaklah ditolak dengan segala hutang yang ditanggung dan pembiayaan, dan kemudian barulah dikeluarkan zakat dari bakinya apabila telah cukup nisab samada sebanyak 10% ataupun 5%.

Contoh kiraannya adalah, seorang lelaki telah menyewa sawah untuk menanam padi dengan harga sewaan sebanyak 20 *junaih*. Hasil yang diperolehi daripada sawah itu adalah 100 *irdab* yang mana setiap 1 *irdab* berharga 4 *junaih*. Maka penyewa hendaklah menolak hasil pertanian yang diperolehi itu sebanyak 50 *irdab* untuk bayaran sewa sawah (50 *irdab* x 4 *junaih*= 200 *junaih* ) sepanjang sepuluh bulan (10 bulan x 20 *junaih* = 200 *junaih*). Contohnya penyewa telah menggunakan sebanyak 40 *junaih* (bersamaan dengan 10 *irdab*) untuk tujuan pembiayaan juga hendaklah ditolak. Maka setelah ditolak yang tinggal hanyalah sebanyak 40 *irdab* sahaja pada penyewa (cukup nisab), dan hendaklah dia mengeluarkan sebanyak 5% (atau 10% mengikut kaedah pengairan) daripada 40 *irdab* untuk dizakatkan iaitu sebanyak 2 *irdab*. Manakala pemilik tanah hendaklah mengeluarkan zakat daripada hasil bayaran sewa yang diperolehi, iaitu sebanyak 200 *junaih*.contohnya pemilik tanah perlu membayar cukai ataupun *kharaj* sebanyak 40 *junaih*, maka 40 *junaih* hendaklah ditolak dari 200 *junaih*. Maka yang tinggal pada pemilik tanah adalah sebanyak 160 *junaih* (cukup nisab), maka wajib untuknya mengeluarkan zakat sebanyak 5% daripada 160

<sup>&</sup>lt;sup>78</sup> Ibn Rusyd, *Bidayah al-Mujtahid wa al-Nihayah al-Muqtasid* (Beirut: Dar al-Kutub al-ʻIlmiyyah, 2009), 1: 368; al-Nawawi, *al-Majmu' Syarh al-Muhadhdhab*, 5: 481; al-Mawardi, *al-Hawi al-Kabir*, 3: 254; Ibnu Qudamah, *al-Mughni*, 4: 201. Lihat juga: al-Qaradawi, *Fiqh al-Zakah*, 1: 428.

<sup>&</sup>lt;sup>79</sup> Ibn Rusyd, *Bidayah al-Mujtahid wa al-Nihayah al-Mugtasid*, 1: 368.

al-Oaradawi, Figh al-Zakah, 1: 429.

*junaih*, iaitu 8 *junaih*. <sup>81</sup>Sekiranya setelah ditolak sewa dan pembiayaan dan baki yang tinggal tidak mencukupi nisab maka zakat tidak lagi diwajibkan keatas penyewa.

Mengenai pemilik tanah pula ia tidaklah wajib mengeluarkan zakat daripada hasil pertanian itu tetapi dia wajib mengeluarkan zakat daripada sewa yang diperolehi daripada penyewa yang mengusahakan tanah dan tanaman. Apabila duit sewa yang diperoleh itu mencukupi nisab (iaitu sebanyak RM 1470.15) maka dia wajib mengeluarkan zakat sebanyak 10% ataupun 5% daripada duit sewa yang diperoleh tersebut. Sekiranya terdapat hutang yang ditanggung, membayar *kharaj*, ataupun sara hidup, pemilik hendaklah menolak kesemuanya itu terlebih dahulu sebelum mengeluarkan zakat<sup>82</sup>.

Contoh yang lain adalah<sup>83</sup> seorang penyewa telah menyewa tanah dengan harga sewaan sebanyak RM 200, dia telah mengusahakan padi di tanah tersebut. Hasil yang diperolehi daripada tuaian padi adalah sebanyak 600 gantang beras. Dia juga telah menggunakan sebanyak RM 300 untuk membiaya tanamannya itu.

Nisab zakat pertanian adalah 5 *awsuq* mengikut ukuran gantang di Malaysia adalah sebanyak 363 gantang<sup>84</sup> iaitu bersamaan 1300 kg<sup>85</sup>, jadi 600 gantang x 3.58 kg = 2148 kg. 1 kg beras = RM 1.80, jadi 2148 kg x RM 1.80 = RM 3866.40. maka nilai sebanyak RM 3866.40 perlu ditolak dahulu harga sewa tanah dan pembiayaan yang ditanggung oleh penyewa (petani) sebanyak RM 500. Jadi nilai bersih yang berada ditangan penyewa adalah sebanyak RM 3366.40. Nisab zakat pertanian mengikut harga adalah (363 gantang = 1300 kg x RM 1.80 = RM 2340) sebanyak RM 2340, jadi RM 3366.40 yang diperolehi oleh petani adalah melebihi nisab dan hendaklah dia mengeluarkan zakat sebanyak 10% ataupun 5% daripada RM 3366.40. Supaya pengiraan ini lebih mudah untuk difahami rujuk jadual 2;

Jadual 2: Pengiraan zakat yang dikenakan ke atas penyewa<sup>86</sup>

	5 differential its datas periferra
Pengiraan :	
RM 3866.40	(Hasil pertanian yang diperolehi oleh penyewa)
- RM 300.00	(Sewa tanah)
- RM 200.00	(Pembiayaan)
RM 3366.40	(Hasil bersih dan telah melebihi
	nisab [RM 2340])
Maka 5% ataupun 10% daripada RM 3366.40 hendaklah dizakatkan.	

Sekiranya setelah ditolak sewa dan pembiayaan dan baki yang tinggal tidak mencukupi nisab maka zakat tidak lagi diwajibkan keatas penyewa. Mengenai pemilik tanah pula ia tidaklah wajib mengeluarkan zakat

Contoh kiraan telah diubah oleh pengkaji menggunakan bentuk timbangan dan nilai harga di Malaysia supaya lebih mudah difahami, ini disebabkan pengiraan yang dilakukan oleh al-Qaradawi di dalam kitabnya mengikut kaedah kiraan di Mesir. Tetapi kaedah dan prinsip asas masih dikekalkan dan mengikut buku *Fiqh al-Zakat*.

al-Qaradawi, Figh al-Zakah, 1: 431.

<sup>&</sup>lt;sup>82</sup> al-Qaradawi, Fiqh al-Zakah, 1: 430.

PPZMAIWP, "Zakat Pertanian," *zakat.com*, diakses pada 16 April 2012,http://www.zakat.com.my/index.php?option=com\_content&view=article&id=102%3Azakat-pertanian&catid=10&Itemid=95&lang=ms

<sup>&</sup>lt;sup>86</sup> Hasil analisis yang dilakukan oleh pengkaji.

daripada hasil pertanian itu tetapi dia wajib mengeluarkan zakat daripada sewa yang diperolehi daripada penyewa yang mengusahakan tanah dan tanaman. Apabila duit sewa yang diperoleh itu mencukupi nisab (iaitu sebanyak RM 2340.00) maka dia wajib mengeluarkan zakat sebanyak 10% ataupun 5% daripada duit sewa yang diperoleh tersebut. Sekiranya terdapat hutang yang ditanggung, membayar *kharaj*, ataupun sara hidup, pemilik hendaklah menolak kesemuanya itu terlebih dahulu sebelum mengeluarkan zakat<sup>87</sup>.

Pendapat ini dilihat lebih sesuai dengan prinsip keadilan dan toleransi.Penyewa membayar zakat hasil dari tanaman dan buah-buahan yang dikurniakan Allah kepadanya setelah ditolak sewa, hutang dan pembiayaan-pembiayaan lain, manakala pemilik pula membayar zakat hasil keuntungan yang diperolehinya daripada tanah yang disewakannya itu apabila telah ditolak hutang, *kharaj* dan selainnya. Dengan pertimbangan kewajipan yang adil itulah diambil apa yang terbaik dari pendapat AbuHanifah dan apa yang terbaik dari pendapat jumhur. Zakat dikenakan berasaskan pemilikan masing-masing maka tidak timbul persoalan membayar dua zakat pada sumber yang sama<sup>88</sup>. Kesimpulannya kaedah ini perlulah diaplikasikan di Malaysia untuk meningkatkan hasil kutipan zakat serta memperkasakan zakat daripada hasil pertanian.

#### 3. KESIMPULAN

Zakat suatu bidang yang penting dalam Islam. Ia bukan sahaja ibadat sebagai bukti ketaatan kepada Allah, bahkan ia mendatangkan kemaslahatan dalam kehidupan umat Islam. Memperkasakan zakat sama seperti memperkasakan umat Islam. Pemerkasaan zakat dapat memberikan beberapa faedah antaranya, mempertingkatkan taraf sosio ekonomi umat Islam, menjamin pusingan kekayaan (*rounding wealth*) di kalangan masyarakat, membantu golongan yang memerlukan terutamanya fakir miskin dan sebagainya.

Disebabkan itulah setiap bidang-bidang pengurusan zakat perlu diperkasakan dari sudut sumber-sumber zakat, kaedah kutipan dan agihan zakat serta mempertingkatkan produktiviti harta zakat. Kertas kerja ini menyediakan beberapa cadangan yang perlu diberi perhatian dalam usaha memperkasakan zakat pertanian di Malaysia. Oleh kerana itu perlu adanya kajian lanjutan dijalankan dalam merealisasikan cadangan-cadangan serta idea-idea yang telah dikemukakan.

## ZAKAT PERTANIAN: KAJIAN METODOLOGI AL-QARADAWI (ZAKAH ON AGRICULTURE: A STUDY ON Al-QARADAWI)

Mohd Farhan Md. Ariffin<sup>1</sup> Muhammad Ikhlas Rosele<sup>2</sup>

#### **ABSTRAK**

Artikel ini bertujuan untuk memperlihatkan ketokohan al-Qaradawi dalam bidang fiqh. Kajian ini khusus mengenai sumber dan metodologi hukum al-Qaradawi dan ianya menfokuskan terhadap metodologi beliau dalam membantu menetapkan hukum zakat pertanian. Untuk mencapai objektif tersebut, analisis dilakukan terhadap data-data kepustakaan terutamanya kitab Fiqh al-Zakat karangan beliau sendiri. Hasil kajian mendapati al-Qaradawi mempunyai kaedah dan metodologi penetapan hukum yang tersendiri di mana terdapat lima metodologi yang dapat dikenalpasti digunakan oleh beliau dalam penetapan hukum zakat pertanian. Metodologi penetapan hukum yang digunakan al-Qaradawi dilihat cenderung ke arah memelihara maslahah serta meraikan realiti semasa dan setempat ('urf).

Kata kunci: metodologi istinbat, al-Qaradawi, zakat pertanian, maslahah dan 'urf

#### **ABSTRACT**

This article has been made to notify al-Qaradawi charismaristic and caliberism in the field of fiqh related to zakah. This study was specifically based on his source and methodology in "hukm" (istinbat al-hukm) and focus on his in methodology to prescribe and define hukm on zakah on agriculture. Therefore, to achieve that specified objective, the analysis on literature review such as on his own writing book, Fiqh al-Zakah has been done. The finding of this study exactly has found al-Qaradawi special and distinctive methods in define hukm on zakah on agriculture, where there is five methodologies that has been used by him. Al-Qaradawi methodologies in define hukm on zakah on agriculture seems to be great, tend to preserve "maslahah ummah" and also cherish the current "'urf".

**Keywords**: define on hukm (istinbat al-hukm), al-Qaradawi, zakah on agriculture, "maslahah" and 'urf.

#### 1. PENGENALAN

Prof. Dr. Yusuf al-Qaradawi (al-Qaradawi) merupakan salah seorang intelektual Islam yang begitu masyhur, beliau merupakan pemikir Islam dan pendakwah yang tidak asing lagi di dalam dunia Islam masa kini. Beliau sering muncul di kaca televisyen, di dalam laman sesawang, banyak menghasilkan karya-karya dalam pelbagai lapangan bidang, menyampaikan ceramah juga melakukan pembentangan di seminar-seminar dan konvensyen yang menyebabkan beliau menjadi masyhur di kalangan umat Islam hari ini.

<sup>&</sup>lt;sup>1</sup> Pelajar Pascasiswazah (Sarjana), Jabatan Al-Quran Dan al-Hadith, Akademi Pengajian Islam, Universiti Malaya

<sup>&</sup>lt;sup>2</sup> Pelajar Pascasiswazah (PhD), Jabatan Fiqh Usul, Akademi Pengajian Islam, Universiti Malaya

Al-Oaradawi terkenal dengan ketokohannya dalam bidang figh, beliau juga antara ulama' pada zaman ini yang begitu menekankan persoalan ijtihad dalam syariat Islam<sup>3</sup>. Oleh kerana ketokohannya itu, al-Qaradawi banyak mengeluarkan fatwa, mengarang kitab di dalam bidang fiqh dan usul fiqh. Justeru itu, artikel ini bertujuan untuk menganalisis metodologi beliau dalam penetapan hukum di lapangan fiqh. Penulis telah menjadikan bidang zakat pertanian sebagai subjekuntuk menganalisis metodologi penetapan hukum (istinbat hukum) al-Qaradawi. Dalam artikel ini penulis turut menyatakan metodologi penetapan hukum al-Oaradawi secara umum kemudian dikhususkan kepada metodologi beliau di dalam zakat pertanian, setelah itu penulis membawa contoh jitihad al-Oaradawi dalam zakat pertanian.

#### **BIOGRAFI AL-QARADAWI**

Nama penuh al-Qaradawi ialah Yusuf bin 'Abdullah bin 'Ali bin Yusuf al-Qardah. Beliau dilahirkan di sebuah desa kecil yang terletak di negara Mesir bernama Saf al-Turab di al-Mahalla al-Kubra pada 9 September 1926 bersamaan 1344 hijrah<sup>4</sup>. Pendidikan awal al-Qaradawi adalah di salah satu *kuttab*<sup>5</sup> ketika usianya lima tahun<sup>6</sup>. Tatkala beliau berusia tujuh tahun, beliau masuk ke *madrasah ilzamiyyah*.Beliau telah berjaya menghabiskan hafalan al-Ouran sebelum usianya genap sepuluh tahun. Setelah tamat dari madrasah ilzamiyyah beliau melanjutkan pelajaran ke sekolah rendah (madrasah ibtida 'iyyah) di Thanta. Setelah tamat di sekolah rendah beliau masuk ke sekolah menengah (madrasah thanawiyyah) yang juga di Thanta selama lima tahun<sup>7</sup>.

Setelah tamat pengajiannya di peringkat sekolah menengah, beliau telah ditawarkan untuk melanjutkan pengajiannya di Universiti al-Azhar. Di Universiti al-Azhar beliau belajar di Fakulti Usuluddin, dan beliau memperolehi ijazah pertama (BA) dengan kepujian tertinggi di Fakulti tersebut pada tahun 1953, dan pada tahun 1960 beliau telah berjaya memperoleh ijazah kedua (MA). Kemudian beliau menyambung pengajiannya di peringkat tertinggi jaitu PhD dengan tesis berkajtan zakat yang selesai pada tahun 1973<sup>8</sup>.

Al-Qaradawi telah banyak menerima anugerah atas jasa, sumbangan dan ketokohan beliau. Antara anugerah yang telah diterima oleh beliau adalah, Anugerah Pembangunan Ekonomi Islam dari Bank Islam pada tahun 1411 hijrah, Anugerah daripada Universiti Islam Antarabangsa Malaysia pada 1996, Anugerah daripada Sultan Hasanul Bolkiah, Brunei dalam bidang figh Islam pada tahun 1997<sup>9</sup> dan selainnya.

Beliau juga memliki karya yang banyak jumlahnya yang merangkumi pelbagai bidang. Kira-kira 115 judul buku karangan al-Qaradawi yang dikumpul dan disenaraikan oleh Ishom Talimah<sup>10</sup>. Antara kitab al-Qaradawi yang masyhur adalah Al-Halal wa al-Haram fi al-Islam, Fatawa al-Mu'asirah (Jilid 1-3), Figh al-Aulawiyyat, Figh al-Zakat dan banyak lagi.

#### 3. METODOLOGI AL-QARADAWI DALAM PENETAPAN HUKUM

#### 3.1 Sumber-sumber Hukum al-Qaradawi

Secara ringkas dan umumnya sumber hukum yang digunakan al-Qaradawi dalam mengeluarkan fatwa adalah al-Quran, as-Sunnah, Ijma' yang diyakini keabsahannya, beramal dengan qiyas yang betul, menggunakan maslahah, istihsan, meraikan magasid syariah<sup>11</sup>, 'urfdan termasuk di dalamnya adalah

mengambil kira realiti masyarakat dan kehidupan sekitar (iaitu sezaman dan setempat)<sup>12</sup>, *sadd al-dharai* '<sup>13</sup>, mengambil sunnah-sunnah para Khulafa' al-Rasyidin dan para sahabat RA, dan pendapat-pendapat para fuqaha' dari sudut pandangan mereka samada tafsiran terhadap nas-nas, atau hasil *istinbat* mereka, atau penentuan '*illah* yang mereka lakukan<sup>14</sup>.

Al-Qaradawi juga menolak ilham sebagai sumber hukum mahupun sebagai hujah<sup>15</sup>.Beliau juga menolak mimpi sebagai sumber hukum, sehinggakan mimpi berjumpa dengan Nabi s.a.w juga tidak boleh dijadikan sebagai sumber hukum menurut beliau<sup>16</sup>.

#### 3.2 Metodologi al-Qaradawi dalam Mengeluarkan Hukum

Al-Qaradawi telah menggariskan metodologi-metodologi yang beliau gunakan dalam mengeluarkan hukum atau fatwa dalam permasalahan fiqh umumnya, dan metodologi yang digunakan beliau adalah seperti berikut<sup>17</sup>:

- 1- Berpegang dengan keumuman nas-nas daripada al-Quran dan Sunnah selagi mana tidak ada dalil yang mengkhususkannya. Berkenaan dengan metodologi ini, al-Qaradawi sendiri menyebut:
  - "Aku (al-Qaradawi) berpendapat bahawa wajib untuk mengambil setiap ayat-ayat yang umum yang datang daripada al-Quran dan hadis-hadis Rasulullah s.a.w, dan beramal dengan keumumannya, selagi mana tidak ada nas yang sahih dan thabit, serta jelas pendalilannya (sarih al-dalalah) mengkhususkannya, sekiranya ada maka ketika itu hendaklah didahulukan khas daripada 'am"<sup>18</sup>
- 2- Berpegang dengan ijma' yang diyakini keabsahannya. Al-Qaradawimenerima ijma' yang diyakini, manakala ijma' yang hanya berbentuk dakwaan sahaja tidaklah diterima (atas nama ijma') tetapi ianya hanya sekadar satu ijtihad<sup>19</sup>. Salah satu contoh pengaplikasian beliau adalah di dalam masalah keharusan untuk berbuka puasa bagi wanita yang sedang hamil atau yang menyusukan anak. Menurut al-Qaradawi, ianya adalah ijma' di kalangan fuqaha', dan perbezaan hanyalah berlaku di dalam permasalahan adakah wajib bagi wanita tersebut membayar kafarah dengan memberi makan ataupun menggantikan puasanya ataupun kedua-duanya sekali<sup>20</sup>.
- 3- Beramal dengan *qiyas* yang benar. Al-Qaradawimenggunakan *qiyas* yang cukup syarat-syaratnya. Beliau menolak *qiyas* yang tidak berasas, ataupun *qiyas* yang tidak mempunyai '*illah* yang bersamaan (antara *al-asl* dan *al-far'*), ataupun adanya pemisah yang jelas antara *al-asl* dengan *al-far'*<sup>2</sup>. Oleh kerana itulah al-Qaradawi berpendapat jihad bukan hanya terhad pada peperangan, bahkan jihad boleh berlaku dalam bentuk penulisan, percakapan dan selainnya.
- 4- Mengiktiraf *Maslahah* dan *Maqasid al-Syari'ah*. Al-Qaradawi menyatakan bahawa hukum syara' disyari'atkan demi menjaga kepentingan manusia dan kelangsungan hidup manusia, begitu juga *maqasid* ianya adalah bertujuan menjaga *maslahah* manusia dan menolak mudarat dan kebinasaan bagi manusia<sup>22</sup>. Oleh kerana itu al-Qaradawi menitik beratkan maslahah dan maqasid dalam penetapan hukum, antara contohnya adalah bila mana beliau menfatwakan bahawa harus bagi

<sup>&</sup>lt;sup>12</sup>al-Qaradawi(1996a). op. cit. hh. 47-49

<sup>&</sup>lt;sup>18</sup>al-Qaradawi(1994). op. cit. j. 1, h. 39.

<sup>&</sup>lt;sup>19</sup>Mas'ud Sabri(2007, julai).op. cit. h. 92.

<sup>&</sup>lt;sup>20</sup>al-Qaradawi (2009). op.cit. juz. 1, hh. 301-302.

<sup>&</sup>lt;sup>21</sup>Mas'ud Sabri(2007, julai).op. cit. h. 97.

<sup>&</sup>lt;sup>22</sup>al-Qaradawi (1994). op. cit. j. 1, hh. 46-47.

- kerajaan untuk menetapkan had harga sewa bagi rumah-rumah sewa, kerana ianya termasuk dalam bab *masalih al-mursalah* kerana tidak ada nas yang mengakuinya ataupun menolaknya<sup>23</sup>.
- 5- Tidak bersikap taksub kepada sesuatu mazhab dan bersikap taklid buta. Menurut al-Qaradawi tidak taqlid kepada para imam dan fuqaha' bukanlah bermaksud merendahkan martabat mereka, tetapi sebaliknya masih berpegang dan mengikuti metodologi dan cara mereka, melaksanakan pesan mereka agar tidak taklid kepada mereka atau kepada orang lain, serta mengambil dalil-dalil yang mereka gunakan. Berkenaan perkara ini al-Qaradawi berkata:

"Saya tidak rela untuk mengekang akal saya dari bertaklid kepada mazhab-mazhab tertentu dalam segala masalah dan persoalan yang kita hadapi, baik mazhab itu benar atau salah. Sebab seorang muqallid (orang yang bertaklid) sebagaimana yang dikatakan oleh Ibnul Jauzi; "dalam taqlid terdapat perlumpuhan fungsi akal, kerana akal diciptakan untuk merenung dan berfikir dengan mendalam, dan alangkah kejinya seseorang yang diberi pelita untuk dia jadikan sebagai alat penyuluh namun dia padamkan pelita itu lalu dia berjalan di tengah gelap gelita". Sekali lagi saya tegaskan saya berusaha untuk tidak menyekat diri saya dengan mazhab yang ada di dunia Islam.Ini adalah kerana kebenaran itu tidak ada hanya pada satu mazhab."<sup>24</sup>

Terdapat beberapa perkara yang harus diperhatikan dan ditekankan oleh para ulama masa kini:

- a. Tidak mengambil sesuatu pendapat bagi satu-satu persoalan tanpa didasari oleh dalil dan hujah yang kuat.
- b. Hendaklah mempunyai kemampuan untuk melakukan pentarjihan di antara pendapat yang saling bercanggah dengan menggunakan kaedah pertimbangan antara kekuatan dalil-dalil selain merujuk kepada dalil-dalil naqli dan aqli untuk memilih satu pendapat yang sesuai dengan nas syara' dan objektifnya.
- c. Mempunyai kepakaran dalam *ijtihad juz'i* iaitu ijtihad pada satu-satu masalah sekalipun belum ada ketetapan hukum daripada ulama sebelumnya.
- 6- Bersikap mempermudahkan dan meringankan, bukannya menyulitkan manusia. Ini adalah kerana syariat Islam terbina berasaskan kemudahan dan menghilangkan kesusahan ke atas hambahambanya<sup>25</sup> oleh kerana reality, umat Islam sekarang lebih kepada bersikap negatif dalam urusan agama dan perkara kebajikan daripada bersikap positif. Al-Qaradawi menegaskan kemudahan yang dimaksudkan ialah kemudahan yang tidak bertembung dengan nas-nas yang *thabit* dan *muhkam*, juga tidak bertembung dengan kaedah syariat yang bersifat *qat'i*, bahkan hendaklah selari dan sesuai dengan syariat Islam itu sendiri. Contohnya al-Qaradawi menfatwakan berkenaan orang yang berpuasa lalu dia muntah tanpa disengajakan sebagai tidak batal puasa orang tersebut. Beliau mendasarkan pendapat beliau tersebut kepada sunnah Rasulullah dan perbuatan sahabat<sup>26</sup>.
- 7- Berkomunikasi dan berbicara dengan manusia menggunakan bahasa yang mudah difahami, lancar dan jelas. Perkara yang perlu ditekankan dalam memenuhi kaedah ini ialah:
  - a. Menyampaikan sesuatu pemikiran dengan menggunakan akal fikiran dan logik bukannya mengikut perasaan.
  - b. Mengelakkan daripada menggunakan istilah atau frasa yang asing atau sukar difahami. Menurut al-Qaradawi, bahasa yang digunakan mestilah bersifat sederhana tidak terlalu tinggi dan tidak terlalu rendah supaya ia sesuai dengan golongan berpendidikan dan juga golongan bawahan.

-

<sup>&</sup>lt;sup>23</sup> al-Qaradawi (2009). op.cit. juz. 1, h. 590.

<sup>&</sup>lt;sup>24</sup>al-Qaradawi (1980). *Al-Halal wa al-Haram fi al-Islam*. Kaherah : Maktabah Wahbah. h. 9.

<sup>&</sup>lt;sup>25</sup>Lihat dalil daripada kenyataan tersebut dari surah al-Ma'idah, 5 : 6, al-Baqarah, 2 : 185, an-Nisa', 4 : 28 dan al-Hajj, 22 : 78

<sup>&</sup>lt;sup>26</sup>al-Qaradawi (1993). Taysir al-Figh fiDau' al-Qur'an wa al-Sunnah: Figh al-Siyam. Beirut: Muasasah al-Risalah. hh. 90-92.

- c. Perlu dijelaskan hikmah dan *'illah* di sebalik ketentuan sesuatu hukum dan disertai dengan falsafah Islam secara umum.
- 8- Menjauhi dari perkara-perkara yang tidak bermanfaat bagi manusia. Al-Qaradawi mengelak dari menjawab persoalan yang mengundang perdebatan sesama sendiri, sengaja memandai-mandai dan menunjuk-nunjuk, semata-mata menguji keilmuan mufti atau perkara-perkara ganjil. Kerana ia langsung tidak berfaedah bahkan mendatangkan kemudaratan dan memecahbelahkan umat.
- 9- Bersikap pertengahan di antara terlalu memperlonggarkan dan terlalu memperketatkan. Contohnya ialah tidak melonggarkan ikatan-ikatan hukum yang sudah tetap (*qat'i*) dengan alasan mengikut perkembangan zaman dan tidak kaku dalam berfatwa dengan mengatakan semua perkara atau isu yang timbul dalam kehidupan sekarang ini adalah haram.

Sebagai contoh fatwa yang dikeluarkan al-Qaradawi yang dilihat bersifat pertengahan adalah dalam persoalan perempuan yang hadir dalam pertemuan dengan lelaki asing (ajnabi).Dalam persoalan ini nyata terdapat golongan yang bersikap terlalu melonggarkan hingga membolehkan pertemuan itu secara mutlak, dan terdapat juga golongan yang terlalu memperketatkan sehingga menghukum haram perbuatan tersebut. Dalam persoalan ini al-Qaradawi berpendapat pertemuan itu dibolehkan dengan memenuhi syarat-syarat berikut:

- i. Menjaga pendangan
- ii. Menjaga pemakaian dengan memakai pakaian yang memenuhi tuntutan syariat
- iii. Sentiasa menjaga adab-adab sebagai seorang muslimah dalam setiap keadaan.
- iv. Menjauhi dari melakukan perkara yang boleh menarik perhatian orang seperti memakai wangian dan pakaian yang warnanya menjolok mata
- v. Mengelakkan daripada berduaan denga lelaki *ajnabi* tanpa mahram
- vi. Pertemuan yang mempunyai kepentingan dan bertepatan dengan dirinya sebagai perempuan<sup>27</sup>
- 10- Mengemukakan fatwa beserta dengan penjelasan dan perinciannya. Antara perkara penting dalam metodologi ini ialah, hendaklah menyertakan dalil dan hujah, menerangkan *'illah* dan hikmah hukum tersebut, melakukan perbandingan pandangan, mengemukakan alternatif yang halal bagi sesuatu perkara yang difatwakan sebagai haram, dimasukkan penjelasan perkara lain atau hukum dalam perkara lain yang mempunyai perkaitan dan sebagainya<sup>28</sup>.

#### 4. AL-QARADAWI DALAM PENETAPAN HUKUM ZAKAT PERTANIAN

Terdapat beberapa metodologi yang digunakan al-Qaradawi dalam penetapan hukum, apa yang dimaksudkan disini adalah kaedah dan metodologi al-Qaradawi dalam pembinaan kerangka hukum (*alistinbat*), pemilihan (*al-ikhtiyar*) dan melakukan pentarjihan (*al-tarjih*) di dalam zakat pertanian. Metodologi tersebut adalah seperti berikut:

a. Berpegang dengan nas-nas yang umum selagi mana tidak ada nas lain yang mengkhususkannya.

Contoh pengaplikasian metodologi ini oleh al-Qaradawi adalah di dalam penetapan sumber pertanian yang wajib dikenakan zakat. Al-Qaradawi berpendapat bahawa semua yang dikeluarkan daripada bumi wajib untuk dikenakan zakat<sup>29</sup>. Pendapat beliau ini berasaskan keumuman nas-nas daripada al-Quran dan

<sup>&</sup>lt;sup>27</sup>al-Oaradawi(1996b). Fatawa al-Mar'ah al-Muslimah. Kaherah: Maktabah Wahbah. hh. 49-68.

<sup>&</sup>lt;sup>28</sup>Penulis telah meringkaskan metodologi al-Qaradawi dalam mengeluarkan hukum atau fatwa dengan merujuk kepada dua karya berikut; Abd. Rahman Ghazaly. (2004). *Pandangan Yusuf al-Qaradawi Tentang Ijtihad Kontemporer dan Prospeknya dalam Menunjang Pengembangan Hukum Islam*. Tesis PhD dalam Bidang Ilmu Agama Islam yang tidak diterbitkan, Universitas Islam Negeri (UIN) Syarif Hidayatullah, Jakarta.hh. 119-125, dan Nasrul Hisyam Nor Muhammad. (2004). Pandangan Yusuf al-Qaradawi Terhadap Fiqh Semasa. *ISLAMIYYAT*, 26 (2).hh. 77-78.
<sup>29</sup>al-Qaradawi (1994). op. cit. j. 1, hh. 383-384.

al-Sunnah. Walaupun terdapat golongan<sup>30</sup> yang mengkhususkan dengan hadis yang yang membataskan zakat pertanian kepada empat hasil pertanian, tetapi al-Qaradawi tidak menerima pengkhususan (*takhsis*) tersebut, ini adalah kerana menurut beliau hadis tersebut dan seumpamanya tidak lepas dari cacat<sup>31</sup> dan hadis tersebut juga boleh difahami sebagai menyatakan contoh-contoh sumber pertanian yang dikenakan zakat<sup>32</sup>.

#### b. Berpegang dengan ijma' yang diyakini keabsahannya

al-Qaradawi juga berpegang dengan ijma' yang diyakini keabsahannya. Sekiranya ijma' itu tidak diyakini dan hanyalah merupakan dakwaan maka al-Qaradawi akan membuat penimbangan dan tidak terus berpegang dengan ijma' tersebut. Antara pengaplikasian al-Qaradawi terhadap metodologi ini adalah ketika beliau menerima penentuan jumlah satu *wasaq* adalah bersamaan dengan 60 *sa'*, di mana terdapat ijma' berkenaan dengan perkara ini sebagaimana yang dinukilkan oleh Imam al-Nawawi<sup>33</sup>, juga menerima ijma' para ulama' dalam mewajibkan zakat dari hasil yang dikeluarkan dari bumi<sup>34</sup>.

### c. Melihat kepada magasid dan maslahah dalam proses untuk menentukan hukum

Sebagai contoh al-Qaradawi telah menetapkan bahawa penentuan nisab bagi hasil pertanian yang tidak boleh disukat hendaklah ditentukan dengan nilai harga sederhana 5 *awsuq* hasil pertanian lain yang boleh disukat. Beliau menolak pendapat Abu Yusuf yang berpendapat menggunakan nilai harga terendah<sup>35</sup>. Al-Qaradawi menggunakan nilai harga sederhana tidak mahal dan tidak murah adalah kerana menjaga maslahah pembayar zakat dan penerima zakat<sup>36</sup>.

#### d. Meraikan realiti semasa ('Urf) dalam penetapan hukum

Metodologi ini dapat dilihat secara umum di mana beliau menetapkan bahawa semua sumber pertanian wajib dikenakan zakat, kerana secara realitinya pada hari ini (*'urf zamani*) telah wujud begitu banyak sumber pertanian yang memberikan keuntungan dan kekayaan pada pemiliknya. Beliau juga telah menerapkan kaedah pengiraan dan sukatan yang bersesuaian dengan zaman sekarang dalam pengiraan dan sukatan yang berlaku dalam zakat pertanian. Begitu juga dalam penentuan nilai harga sederhana bagi sumber pertanian yang wajib dizakatkan untuk dijadikan asas penentuan harga bagi sumber pertanian lain yang tidak boleh di sukat, oleh kerana harga yang berbeza-beza antara negara Islam, jadi penentuan itu hendaklah diserah kepada setiap ilmuwan di negara tersebut<sup>37</sup>.

#### e. Tidak taksub dengan satu-satu mazhab

Al-Qaradawi tidak taksub dengan mana-mana mazhab, Oleh kerana itulah dalam satu-satu isu beliau menguatkan pendapat satu mazhab dan dalam isu yang lain beliau menerima pendapat mazhab yang lain. Sebagai contoh dalam penentuan hasil pertanian yang wajib dikenakan zakat beliau menerima pendapat

75

<sup>&</sup>lt;sup>30</sup> Iaitu pendapat Ibnu 'Umar dan sebahagian ulama' salaf seperti Musa ibn Talhah, al-Hassan, Ibn Sirin, al-Sya'bi, al-Hasan ibn Salih, Ibn Abi Laila, Ibn al-Mubarak, Abu 'Ubaid dan salah satu riwayat dari Imam Ahmad, lihat ; al-Maqdisi, Ibn Qudamah (1992). *Al-Mughni*. Kaherah : Hajar. j. 4, hh. 156-157 / 160.

<sup>&</sup>lt;sup>31</sup> Samada hadis tersebut *inqita*' ataupun sebahagian daripada perawinya dinilai *da'if* sehingga tidak dapat mengkhususkan nas yang lebih kuat dari sudut *thubut* dan *dalalah*.

<sup>&</sup>lt;sup>32</sup> al-Qaradawi (1994). op. cit. j. 1. h. 384.

<sup>&</sup>lt;sup>33</sup>al-Nawawi, Yahya bin Syaraf (t.t.). *Al-Majmu' Syarh al-Muhadhdhah.* Jeddah : Maktabah al-Irsyad. j. 5, h. 439.

Imam AbuHanifah<sup>38</sup> dan dalam isu lain seperti penentuan nisab dalam zakat pertanian beliau telah menerima pendapat jumhur dan menolak pendapat Imam AbuHanifah<sup>39</sup>.

#### 5. IJTIHAD AL-QARADAWI DALAM ZAKAT PERTANIAN

#### 5.1 Sumber Pertanian Yang Wajib Dikenakan Zakat

Dalam isu ini al-Qaradawi berpendapat bahawa semua yang dikeluarkan daripada bumi wajib untuk dikenakan zakat.Pendapat beliau ini berasaskan keumuman nas-nas daripada al-Quran dan al-Sunnah, dan ianya juga bertepatan dengan hikmah pensyariatan zakat. Beliau menyebut:

"Pendapat inilah bertepatan dengan al-Quran dan al-Sunnah, dan ianya juga seiring dengan hikmah pensyariatan zakat, tidaklah dikatakan suatu hikmah sekiranya Allah mewajibkan zakat kepada petani yang menanam barli dan gandum, dan mengecualikan (membayar zakat) pemilik kebun-kebun limau, mangga ataupun epal"<sup>40</sup>

Nas-nas yang terdapat di dalam al-Quran yang menyatakan kewajipan zakat pertanian adalah bersifat umum dan tidak menentukan dan mengkhususkan jenis sumber pertanian yang wajib dizakatkan sebagaimana firman Allah s.w.t di dalam surah al-Baqarah 2: 267, dan surah al-An'am 6: 141. Begitu juga di dalam hadis Rasulullah s.a.w., sabda Baginda s.a.w:

Yang bermaksud: "Pada apa-apa yang diairi (disirami) dengan air hujan, mata air atau air tanah (takungan) dikenakan (zakat) sebanyak 10%, sedangkan pada apa-apa yang diairi dengan tenaga dikenakan (zakat) sebanyak 5%" (Hadis riwayat al-Bukhari)

Pendapat al-Qaradawi ini adalah hasil penelitian beliau kepada perbincangan-perbincangan yang wujud diantara ulama'-ulama' ketika membahaskan isu ini.Beliau telah mentarjihkan pendapat yang dikemukakan oleh Imam AbuHanifah<sup>41</sup> yang juga merupakan pendapat 'Umar 'Abdul 'Aziz, Mujahid, al-Nakha'i<sup>42</sup> dan Hammad di mana mereka berpendapat bahawa semua yang dikeluarkan daripada bumi yang bertujuan untuk menyuburkan tanah (memperoleh hasil) wajib untuk dikenakan zakat padanya<sup>43</sup>.

Al-Qaradawi juga menolak dan mengkritik pendapat-pendapat yang bercanggahan yang dikemukakan oleh golongan lain mengenai isu ini. Beliau telah mengkritik golongan yang membataskan kewajipan zakat pertanian kepada empat hasil pertanian sahaja iaitu Ibnu 'Umar dan sebahagian ulama' salaf <sup>44</sup>, kritikan beliau menjurus kepada hadis-hadis yang membataskan zakat pertanian kepada empat hasil pertanian<sup>45</sup>, ini adalah kerana hadis-hadis tersebut tidak ada yang selamat dan bebas dari cacat. Samada hadis tersebut *inqita*' ataupun sebahagian daripada perawinya dinilai *da'if*, dan sekiranya hadis tersebut boleh diterima adalah mustahil untuk membataskan kepada empat hasil pertanian tersebut untuk dikenakan zakat, dan berkemungkinan bahawa penentuan tersebut hanyalah sebagai contoh (sumber

<sup>41</sup>al-Mirghinani, 'Ali bin Abu Bakr (t.t). op. cit. h. 41. lihat juga: Ibn al-Humam (2003). op. cit. j. 2, h. 248.

<sup>&</sup>lt;sup>38</sup>al-Mirghinani, 'Ali bin Abu Bakr (t.t). *Bidayat al-Mubtadi*. Kaherah : Matba'ah al-Futuh. h. 41, lihat juga : Ibn al-Humam (2003). *Fath al-Qadir*. Beirut : Dar al-Kutub al-'Ilmiyah. j. 2, h. 248.

<sup>&</sup>lt;sup>39</sup>al-Qaradawi. (1994). op. cit. j. 1. h. 389.

<sup>40</sup> Ibid. h. 384.

<sup>&</sup>lt;sup>42</sup>Ibn al-Humam (2003).op.cit. j. 2, h. 249.

<sup>43</sup>al-Qaradawi (1994). op. cit. j. 1, hh. 383-384.

<sup>44</sup> al-Maqdisi, Ibn Qudamah (1992). op. cit. j. 4, hh. 156-157 / 160.

<sup>&</sup>lt;sup>45</sup>Contohnya adalah hadis riwayat Ibn Majah dan al-Daraqutni yang bermaksud : "Sesungguhnya Rasulullah s.a.w mengenakan zakat pada gandum, barli, kurma dan kismis"

pertanian) bukan membawa pengertian yang benar, oleh kerana itu hadis ini tidak dijadikan hujah dalam menetukan sumber atau hasil pertanian yang dikenakan zakat oleh ulama' empat mazhab<sup>46</sup>.

Seterusnya beliau mengkritik pendapat golongan yang mengisyaratkan hanya hasil pertanian yang boleh disukat sahaja yang dikenakan zakat, pendapat ini didokong oleh Imam Ahmad<sup>47</sup>.Al-Qaradawi mengatakan bahawa hujah mereka ini lemah, kerana hadis<sup>48</sup> yang menjadi hujah mereka zahirnya menunjukkan nisab bagi buah-buahan dan bijian, bukan untuk menggugurkan kewajipan zakat ke atas hasil pertanian yang tidak boleh disukat<sup>49</sup>.

Seterusnya al-Qaradawi mempertikaikan golongan yang mensyaratkan bahawa hasil pertanian yang dikenakan zakat mestilah berbentuk makanan asasi<sup>50</sup>, kerana ia tidak mempunyai asas dan sandaran, dan ia juga boleh dikira sebagai satu *qiyas* yang rosak<sup>51</sup>.

Al-Qaradawi seterusnya menolak pendapat yang mengecualikan tumbuhan hijau<sup>52</sup>. Beliau berpendapat bahawa zakat pertanian dikenakan pada setiap tumbuhan yang sudah menjadi, contohnya tumbuhan yang kering dizakatkan apabila ia sudah kering, dan tumbuhan yang basah dizakatkan apabila ia sudah masak<sup>53</sup>.

Al-Qaradawi juga bersetuju dengan sebahagian ulama' yang mengambil zakat daripada tumbuhan hijau mengikut nilainya bukan fizikalnya oleh kerana tumbuhan hijau cepat rosak dan busuk.Antara ulama' tersebut adalah al-Zuhri, Maimun bin Mihran, al-Auza'i<sup>54</sup>, Ata' al-Khurasani, al-Sya'bi<sup>55</sup> dan selain mereka.

Tetapi terdapat sebahagian mereka menentukan kadar yang perlu dizakatkan adalah sebanyak 2.5% mengikut kadar zakat mata wang, dan perkara ini tidak dipersetujui oleh al-Qaradawi. Al-Qaradawi berpendapat nilai kadar zakat yang perlu dikeluarkan adalah 5% ataupun 10% sesuai dengan kadar zakat pertanian, asasnya adalah zakat menggunakan nilai bagi tumbuhan hijau itu merupakan ganti atau alternatif bagi zakat pertanian, dan ia mengambil hukumnya, berasaskan kaedah pengganti tetap sama hukumnya dengan yang digantikan<sup>56</sup>.

#### 6. KESIMPULAN

Tidak dapat dinafikan ketokohan al-Qaradawi dalam bidang fiqh, beliau mempunyai kaedah dan metodologi penetapan hukum yang tersendiri. Al-Qaradawijuga telah berusaha dengan menggunakan cara dan metodologi beliau sendiri dalam penghujahan, memilih pendapat yang lebih kuat, dan menentukan hukum dalam menyelesaikan isu-isu zakat pertanian.

Terdapat lima kaedah ataupun metodologi yang dapat dikenalpasti di dalam penetapan hukum zakat pertanian yang digunakan al-Qaradawi, iaitu berpegang dengan nas-nas yang umum selagi mana tidak ada

77

<sup>46</sup>al-Qaradawi (1994). op. cit. j. 1, h. 384.

<sup>&</sup>lt;sup>47</sup>Pendapat yang mensyaratkan bahawa hanya hasil pertanian yang boleh disukat sahaja yang dikenakan zakat, lihat ; al-Maqdisi, Ibn Qudamah (1992). *op. cit.* j. 4, hh. 155-156.

<sup>&</sup>lt;sup>48</sup>Hadis muttafaq 'alaih, yang bermaksud : "*Apa-apa yang kurang daripada 5 ansuq tidak dikenakan zakal*".

<sup>&</sup>lt;sup>49</sup>al-Qaradawi (1994). op. cit. j. 1, h. 385.

<sup>&</sup>lt;sup>50</sup>Pendapat ini dikemukakan oleh Imam Malik dan Imam al-Syafi'i. <sup>&</sup>lt;sup>56</sup>al-Qaradawi (1994). op. cit. j. 1, h. 388.

nas lain yang mengkhususkannya, berpegang dengan ijma' yang diyakini keabsahannya, melihat kepada maqasid dan maslahah dalam proses untuk menentukan hukum, Meraikan realiti semasa ('Urf) dalam penetapan hukum dan beliau tidak taksub dengan satu-satu mazhab dalam penetapan hukum. Dapat disimpulkan juga bahawa kaedah metodologi penetapan hukum yang digunakan al-Qaradawibertujuan memelihara maslahah dan meraikan realiti semasa ('urf).

Penetapan hukum al-Qaradawi dalam zakat pertanian juga dilihat lebih sesuai untuk diaplikasikan pada masa kini. Ini adalah kerana al-Qaradawi merupakan salah seorang intelektual muslim kontemporari yang arif dengan keadaan semasa zaman dan masyarakat. Kaedah, metodologi dan pendapatnya di dalam zakat pertanian juga mempunyai nilai ilmiah yang tersendiri dan boleh dimanfaatkan oleh pelbagai pihak, termasuk para ilmuan Islam, penyelidik, pelajar dan umat Islam secara amnya.

# ANALISA KETIDAKSELARASAN TAKSIRAN ZAKAT PERTANIAN DI MALAYSIA (THE ANALYSIS OF NON-UNIFORMITY ESTIMATION OF AGRICULTURE ALMS IN MALAYSIA)

Muhamad Firdaus Ab Rahman<sup>1</sup> Hussein 'Azeemi Abdullah Thaidi<sup>2</sup> Azman Ab Rahman<sup>3</sup>

#### **ABSTRAK**

Kajian ini bertujuan untuk menganalisis isu ketidakselarasan taksiran zakat pertanian di Malaysia Pengurusan zakat pertanian di Malaysia adalah di bawah bidang kuasa Majlis Agama Islam Negeri-Negeri berdasarkan peruntukan di dalam Perlembagaan Persekutuan. terdapat kepelbagaian dasar dan hukum yang ditetapkan oleh Jabatan Mufti Negeri melalui Jawatankuasa Fatwa dan Majlis Agama Islam Negeri (MAIN) berpandukan kepada Enakmen atau Ordinan Pentadbiran Agama Islam Negeri masing-masing. Misalnya ketidakselarasan penetapan nisab bagi timbangan metrik gantang iaitu 363 gantang, 375 gantang dan 400 gantang. Begitu juga kepelbagaian kadar yang diaplikasikan di negeri-negeri yang sebahagiannya hanya mengenakan kadar tunggal sama ada 5% atau 10% sahaja dan sebahagian negeri yang lain mengehadkan kepada kadar alternatif 7.5%. Objektif kajian ini adalah untuk menganalisis punca kepelbagaian taksiran nisab dan meneliti faktor penetapan kadar zakat tanaman di Malaysia serta mengkaji pelepasan kos operasi tanaman dan kos sara diri petani sebelum diwajibkan zakat pertanian. Metodologi kajian menggunakan data primer dengan menggunakan 5 buah sampel kajian iaitu negeri Selangor, Pulau Pinang, Perlis, Terengganu dan Sarawak. Data diperoleh dengan menemu bual responden yang terdiri daripada pegawai zakat dan pegawai jabatan mufti di lima buah negeri. Penganalisisan data menggunakan kaedah deskriptif dan komparatif. Implikasi kajian ini mendapati setiap fatwa yang telah dikeluarkan perlu dinilai semula dari semasa ke semasa agar hukum zakat pertanian senantiasa bersifat semasa, dinamis dan praktikal.

Kata Kunci: Zakat Pertanian, Ketidakselarasan, Nisab, Kadar, Pelepasan Kos-Kos

#### **ABSTRACT**

This research analyzed the issue of non-uniformity estimation of agriculture alms in Malaysia. The administration and management of almsis under the jurisdiction of State Islamic Council (MAIN) as stated in Federal Contitutions. Thus, there are diversity policies and laws set by the State Mufti Department through the Fatwa Committee and the State Islamic Religious Council (MAIN) based on the Administration of Islamic Law Enactment or Ordinance respectively, for example inconsistency nisab setting for metric weights of 363 bushels, 375 bushels and 400 bushels. Similarly, the applied rate variability in some states only charge a single rate either 5% or 10% and most other states limit the alternative rate of 7.5%. The objectives of this study are to research the causes of diversity assessment and examine factors of agriculture alms in Malaysia such as nisab, rate and to study the deduction of costs in Malaysia. Therefore, this study analyses the non-uniformity estimation of agriculture alms involving policy makers, namely the State Mufti Department and officers in charge of the alms management namely the State Baitulmal. The methodology of this study is done using the primary data which is the interview with the State Mufti

Department and the State Baitulmal in states of Selangor, Penang, Perlis, Terengganu and Sarawak. The data analysis uses the descriptive and the comparative methods. This study carries an important implication, where every fatwa that has been issued needs to be reassessed from time to time, so that the law of alms-granting will continuously be current, dynamic and more importantly, practical to be used by from one generation to another.

Keywords: Agriculture Alms, Non-uniformity, Nisab, Rate, Deduction of Costs

#### 1. PENDAHULUAN

Realiti pengurusan zakat di Malaysia terletak di bawah bidang kuasakerajaan negeri, berdasarkan peruntukan Perlembangaan Persekutuan dalam Jadual Kesembilan Senarai II Senarai Negeri (Perlembangaan Persekutuan, 2006). Pentadbiran zakat terletak di bawah Majlis Agama Islam Negeri-negeri MAIN dan terdapat juga di sesetengah negeri diletakkan di bawah institusi khas yang terasing dari MAIN. Pelaksanaan segala dasar dan kegiatan Majlis Agama Islam di sesebuah negeri berpandukan kepada Enakmen atau Ordinan Pentadbiran Agama Islam Negeri dan Jawatankuasa Fatwa Negeri. MAIN adalah sebuah badan yang terletak di bawah DYMM Sultan atau Yang Dipertuan Agong yang mana ia bertanggungjawab ke atas segala urusan berkaitan dengan kegiatan Islam di negeri berkenaan termasuklah Jabatan Mufti dan Pusat Pengurusan Zakat.

Pentadbiran pengurusan agihan zakat di Malaysia terbahagi kepada dua kategori. Pertama, agihan zakat di bawah Baitulmal Majlis Agama Islam Negeri masing-masing seperti yang dipraktikkan di negeri Perlis, Kedah, Perak, Johor, Sabah, Kelantan, Pahang, Melaka, Negeri Sembilan, Sarawak, Wilayah Persekutuan dan Terengganu. Walaupun MAIN telah menubuhkan anak syarikat korporat (corporate governance) yang menguruskan zakat di negeri masing-masing seperti Pusat Pungutan Zakat Wilayah Persekutuan, Puzat Zakat Melaka, Pusat Kutipan Zakat Pahang dan Pusat Zakat Negeri Sembilan, namun begitu kuasa agihan zakat masih dikekalkan di bawah Baitulmal MAIN. Kategori kedua ialah agihan yang dilakukan oleh syarikat korporat atau anak syarikat yang ditubuhkan khusus oleh MAIN untuk mengurus kutipan dan agihan zakat bagi pihak MAIN secara serentak dan bersepadu seperti di Lembaga Zakat Selangor dan Pusat Urus Zakat Pulau Pinang sahaja.

Pengkaji akan menganalisa zakat pertanian dan pengurusannya di lima buah negeri yang menjadi sampel kajian iaitu di Selangor, Sarawak, Pulau Pinang, Terengganu dan Perlis. Jadual (1) menunjukkan pengurusan dan pentadbiran zakat pertanian di negeri-negeri yang menjadi sampel kajian:

Jadual 1: Pentadbiran Zakat Pertanian Di Malaysia

Bil	Negeri	Pengurusan Zakat Pertanian
1	Selangor	Lembaga Zakat Selangor (LZS)
2	Pulau Pinang	Pusat Urus Zakat Majlis Agama Islam Pulau Pinang
		(PUZ MAINPP)
3	Sarawak	Tabung Baitulmal Sarawak (TBS)
4	Terengganu	Majlis Agama Islam Dan Adat Melayu Terengganu (MAIDAM)
5	Perlis	Baitulmal, Majlis Agama Islam Dan Adat Istiadat Melayu Negeri Perlis
		(MAIPs)

Sumber: Laman Sesawang Majlis Agama Islam Negeri.

#### 2. DEFINISI ZAKAT PERTANIAN DI MALAYSIA

Di Malaysia, kesemua negeri hanya mengenakan zakat ke atas tanaman padi sahaja berdasarkan pandangan Imam al-Syafi'e yang mengenakan terhadap makanan asasi sesuatu tempat, tahan disimpan lama dan boleh dikeringkan. Namun, tidak ditetapkan pendefinisan yang khusus di negerinegeri, ini kerana tafsiran zakat tanaman sedia ada terlalu umum(Temubual bersama Ustaz Mohd Farid Bin Mohd Zainal, Eksekutif Sektor Penerangan Korporat, Lembaga Zakat Selangor bertarikh 12 September 2012) berdasarkan dalil daripada surah al-Baqarah 2:267 dan pendapat mazhab Syafi'e sahaja. Misalnya di LZS mendefinisikan zakat pertanian sebagai:

"Satu zakat yang dikenakan ke atas makanan asasi yang mengenyangkan ke atas sebuah negeri yang telah cukup nisab. Hasil tanaman yang wajib dizakatkan adalah bijirin—bijirin daripada jenis makan asasi yang mengenyangkan dan tahan lama jika disimpan seperti padi, kurma, jagung, gandum dan sebagainya. Makanan asasi bagi penduduk di Malaysia adalah nasi dan nasi dihasilkan daripada padi" (Lembaga Zakat Selangor, 2012).

Di PUZ MAINPP dan Baitulmal MAIPs menambah syarat hasil tanaman "yang diusahakan oleh manusia" (Pusat Urus Zakat Pulau Pinang, 2012) dan "di atas tanah milik sendiri, sewa atau sebagainya" (Baitulmal MAIPs, t.t) dalam pendefinisian zakat tanaman mereka. Manakala di TBS mendefinisikan sebagai sebahagian daripada "pendapatan bersih" dan "hasil pertanian yang bermanfaat" (Tabung Baitulmal Sarawak, 2012). Pengkaji beranggapan sesuatu pentafsiran itu berhubung rapat dengan perlaksanaannya contohnya di Sarawak mengenakan istilah "pendapatan bersih" disebabkan TBS membenarkan penolakan kos operasi sebelum dikenakan zakat berbanding Selangor yang hanya mengenakan ke atas hasil kasar. Namun istilah "hasil pertanian yang bermanfaat" telah membuka dimensi *maslahah* dalam memperluaskan hasil tanaman selain padi kepada hasil tanaman yang mendatangkan keuntungan yang lumayan dan manfaatnya kepada para asnaf.

Namun terdapat isu di Baitulmal MAIPs berkenaan definisi zakat pertanian, ini kerana berdasarkan fatwa mengkategorikan zakat pertanian termasuk di bawah zakat gaji atas dasar memperolehi hasilnya pada musim dan waktu tertentu (Fatwa Negeri Perlis, t.t), ini bertentangan dengan definisi yang dikeluarkan oleh pihak Baitulmal Perlis (Baitulmal Perlis, t.t). Berdasarkan kepada kepelbagaian pentakrifan ini, sewajarnya pihak-pihak yang berwajib negeri membangunkan sistem garis panduan tafsiran setiap istilah jenis-jenis harta dan asnaf zakat agar perlaksanaannya selari dengan terminologi yang ditetapkan.

#### 3. NISAB ZAKAT PERTANIAN DI MALAYSIA

Jumhur fuqaha bersepakat nisab tanaman adalah 5 *awsuq* bersandarkan kepada hadith *sahih* dari Abu Sa'id al-Khudri r.a. Walau bagaimanapun pendapat ini tidak dipersetujui oleh Imam AbuHanifah yang tidak menghadkan nisab tanaman, dan diwajibkan zakat atas hasil produktiviti tanpa melihat kepada kuantiti.

Di Malaysia kesemua negeri berpegang kepada pendapat jumhur ulama (Ibn Qudamah,1994)dengan mengenakan nisab dengan kadar 5 awsuq sebagai kayu ukur kemampuan dan kelayakan muzakkiuntuk mengeluarkan zakat tanaman padi. Penetapan kadar nisab adalah bagi hasil tanaman padi yang telah dibersihkan iaitu dibuang kulit dan jeraminya. Oleh itu, timbangan nisab 5 awsuq yang dipraktikkan adalah berasaskan timbangan beras, adapun padi yang belum dibersihkan yakni belum dibuang kulit maka ketetapan nisabnya adalah diganda dua iaitu 10 awsuq.

Walaupun begitu, negeri-negeri di Malaysia tidak bersepakat dalam penetapan kadar timbangan metrik gantang dan kilogram, seperti jadual(2) di bawah:

Jadual 2: Ketidakselarasan Nisab Zakat Padi Di Malaysia

Bil	Negeri	Gantang	Kilogram (kg)
1	Lembaga Zakat Selangor	363 gantang	1306kg / 1.306tan
2	Pusat Urus Zakat Penang	363 gantang	1300kg / 1.3tan
3	Baitulmal Majlis Agama Islam Perlis	363 gantang / 2 kunca 7 naleh	1300kg / 1.3tan
4	MAIDAM Terengganu	375 gantang / 600 gantang Madinah	937kg / 0.937tan
5	Tabung Baitulmal Sarawak	400 gantang / 50 pasuk	1080kg / 1.08tan

Sumber: Hasil temubual bersama Pengurusan Zakat Negeri

Berdasarkan jadual (2)di atas terdapat tiga kepelbagaian kadar gantang Malaysia iaitu 363 gantang, 375 gantang dan 400 gantang. Begitu juga dengan kepelbagaian takaran kilogram iaitu 987kg, 1080kg, 1300kg dan 1306kg.

Pengkaji berpendapat kepelbagaian ini berlaku disebabkan oleh beberapa faktor. Faktor pertama ialah tidak terdapat keselarasan timbangan gantang di setiap negeri dan *converter* peralihan timbangan daripada 5 *awsuq* kepada timbangan gantang dan kilogram. Asasnya kerana gantang adalah alat untuk menyukat dan bukan untuk ditimbang berdasarkan hadith diriwayatkan oleh Ibn 'Umar (Al-Nasa'i, t.t). Sukatan satu *sa*' berbeza berdasarkan keadaan dan semasa misalnya berbeza sukatan gantang Madinah dan Mesir, ini kerana setiap negeri berijtihad menetapkan takaran *sa*' ini berdasarkan bentuk dan saiz model gantang yang diwarisi.

Di Sarawak menurut Ustaz Zulhazmi Bin Bohari (Temubual bersama Ustaz Zulhazmi Bin Bohari, Pengawai Eksekutif Tabung Baitulmal Sarawak Cawangan Bandar Sri Aman bertarikh 24 September 2012) masih menggunakan timbangan traditional 40 sehingga 55pasukyang telah diamalkan oleh pengusaha padi terdahulu sebelum wujudnya Tabung Baitulmal Sarawak dan kadar ini masih dipraktikkan sehingga sekarang, walaupun pada tahun 2007 pihak Baitulmal telah menetapkan kadar timbangan moden 400 gantang bersamaan 1080 kg (1gantang= 2.7kg). Penetapan gantang ini disokong oleh Mujaini Tarimin (Mujaini Tarimin, 1987) dan Mahmood Zuhdi (Mahmood Zuhdi, 1996) 400 gantang Malaysia menyamai 1600 kati dengan kiraan satu gantang menyamai 4 kati, akan tetapi mereka berbeza dari segi penetapan kilogram iaitu masingmasing 960kg (1 gantang = 2.4kg) dan 1000kg (1 gantang = 2.5kg).

Di Terengganu kadar takaran nisab berjumlah 375 gantangatau 600 gantang Madinah bersamaan dengan 937 kg (1 gantang = 2.5kg). Manakala di Perlis, Selangor dan Pulau Pinang mengenakan sebesar 363 gantang atau 2 kunca 7 nalehbersamaan 1300kg dan 1306kg (1 gantang = 3.58kg).

Kepelbagaian ini jelas disebabkan oleh timbangan traditional lokaliti yang masih digunakan seperti pasuk, kunca dan naleh. Pentaksiran takaran kadar satu gantang yang berbeza sama ada 2.5kg atau 2.7kg atau 3.58kg menyumbang kepada perbezaan ini. Asas perbezaan ini berlaku disebabkan oleh jenis padi yang ditanam di sesuatu kawasan, kerana setiap jenis padi mempunyai timbangan berat yang berbeza bergantung kepada kualiti *grade* padi serta ketumpatannya.

Perselisihan pendapat ini bukan sahaja berlaku di Malaysia, bahkan di seluruh dunia, begitu juga para ulama berbeza pendapat berapa kilogramkah satu gantang Baghdad? misalnya perbezaan kadar timbangan Imam AbuHanifah dan Imam Syafi'e masing-masing dengan lapan (8) kati dan lima satu pertiga (5 1/3) kati (Abu 'Ubaid, 1988). Pengkaji berpendapat perbezaan ini berlaku disebabkan oleh faktor setempat dan semasa contohnya Imam AbuHanifah menetap di Iraq manakala Imam Syafi'e di Hijaz.

Faktor kedua membabitkan bidangkuasa pembuat dasar iaitu Jabatan Mufti dan Baitulmal negeri perlu menilai semula isu ini sepertimana penilaian yang dilakukan Muzakarah Fatwa Majlis

Kebangsaan Bagi Hal Ehwal Ugama Islam Malaysia kali ke-57membincangkan cara penetapan harga zakat firtah seluruh Malaysia (Institut Pengurusan dan Penyelidikan Fatwa Sedunia INFAD, 2012). Hasil daripada perbincangan Muzakarah telah memutuskan harga zakat fitrah bagi negerinegeri di Semenanjung Malaysia adalah berdasarkan harga setempat yang ditetapkan oleh Padi Beras Nasional Berhad BERNASbagi beras Super Tempatan Gred A mengikut timbangan satu gantang Baghdad bersamaan 2.6kg. Manakala zakat fitrah bagi negeri-negeri Sabah dan Sarawak adalah berdasarkan harga beras Vietnam White Rice bagi negeri Sabah dan Thai White Ride bagi negeri Sarawak mengikut timbangan 1 baqhdad bersamaan 2.7kg. Gantang yang disukat kepada timbangan metrik digital menggunakan replika kayu gantang baqhdad dari Negeri Sembilan dan replika tembaga gantang baqhdad dari Majlis Agama Islam Kelantan.

Jika dibandingkan dengan keputusan Muzakarah mengenai ketetapan kadar zakat fitrah dengan amalan yang diaplikasi di negeri-negeri menunjukkan negeri Sarawak sahaja menyamaratakan timbangan kadar zakar fitrah dengan zakat hasil pertanian iaitu satu gantang bersamaan 2.7kg, yang membezakan hanya kuantiti yang perlu dikeluarkan iaitu zakat fitrah hanya 1 gantang manakala hasil tanaman 400 gantang. Negeri–negeri di Semenanjung Malaysia sepertimana keputusan muzakarah mensyorkan takaran satu gantang baqhdad zakat fitrah bersamaan 2.6kg, akan tetapi dari sudut amalannya sukatan 1gantang bagi hasil tanaman berbeza di setiap negeri misalnya di Terengganu satu gantang bersamaan 2.5kg, manakala di Perlis, Pulau Pinang dan Selangor menetapkan 3.58kg segantang.

Timbul persoalan menyamaratakan takaran satu gantang zakat fitrah dengan satu gantang zakat hasil tanaman? Ini kerana timbangan satu gantang yang dimaksudkan dalam zakat fitrah adalah gantang baqhdad. Manakala gantang yang digunakan dalam zakat tanaman di Malaysia sudah diubah kepada timbangan gantang Malaysia. Misalnya di Sarawak 400 gantang (Tabung Baitulmal Sarawak, 2012) hasil tanaman yang dimaksudkan adalah gantang Malaysia.

Pengkaji berpendapat perlunya ditetapkan satu standard keselarasan timbangan metrik moden iaitu gantang dan kilogram. Fatwa penetapan nilai nisab ini perlu dinilai semula dari semasa ke semasa bagi mendapatkan nilai yang tepat, ini disebabkan perbahasan mengenai nisab zakat kurang ditekankan di peringkat Baitulmal Negeri dan Jawatankuasa Fatwa. Berdasarkan temubual yang telah dijalankan, fatwa atau keputusan nisab zakat pertanian selepas pertama kali difatwakan tidak dinilai semula dalam tempoh yang lama, misalnya di Selangor, Pulau Pinang dan Terengganu hanya membahaskan isu penetapan kadar, penolakan kos-kos dan subsidi sahaja. Penilaian semula hukum nisab berlaku di Sarawak daripada 363 gantang ditukar kepada 400 gantang pada tahun 2007, akan tetapi tidak menitikberatkan secara terperinci perakaunan atau taksiran nilai semasa satu gantang. Begitu juga di Perlis, fatwa menetapkan nisab padi 2 kunca 7 naleh bersamaan 937 kilogram, namun pihak Baitulmal telah meminda timbangan kilogram kepada 1300kg berdasarkan situasi semasa tanpa melibatkan Jawatankuasa Fatwa Negeri Perlis (Temubual bersama Ustaz Roslan bin Isa, Timbalan Mufti Negeri Perlis bertarikh 5 September 2012).

Hasil temubual pengkaji bersama Jabatan Mufti Negeri berkenaan fatwa-fatwa zakat pertanian yang pernah diputuskan amat mendukacitakan sekali kerana fatwa-fatwa tersebut tidak disimpan dan didokumenkan secara sistematik dan menyukarkan pengkaji dan penyelidik meneliti tarikh yang tepat keputusan pernah dikeluarkan, salinan minit mesyuarat muzakarah, hasil perbicangan secara terperinci dan sebagainya. Fakta ini diperakui oleh Ahmad Hidayat buang dalam analisa beliau terhadap fatwa-fatwa semasa syariah di Malaysia (Ahmad Hidayat Buang, 1988).

Penilaian pengkaji berkenaan dengan isu perubahan fatwa timbangan gantang di Sarawak dan Perlis, bukanlah disebabkan oleh perubahan ekonomi dan teknologi semasa, ini kerana dalil nisab 5 awsuq sangat sarih dan thabit. Kemungkinan perubahan fatwa nisab adalah sebagai penambahbaikan terhadap hukum yang kurang tepat yang telah diputuskan oleh Jawatankuasa Fatwa terdahulu.

Dalam arus globalisasi serba canggih ini, masalah ini boleh diatasi dengan kaedah timbangan metrik yang moden seperti penimbang jenis 'digital' yang disediakan oleh Unit Metrik Kementerian Perdagangan Dalam Negeri dan Hal Ehwal Pengguna KPDNHEP dipraktikkan bagi memastikan ketepatan timbangan menyamai 5 *awsuq* atau 300 gantang baqhdad kepada takaran gantang Malaysia.

Dalam timbangan sistem metrik *mud* (cupak)ditimbang dengan istilah gram (g), manakala *sa'* (gantang) dan *wasaq* ditimbang dengan kilogram (kg). Walaupun begitu terdapat kesukaran dalam mendapatkan timbangan yang tepat, walaupun menggunakan sukatan satu gantang yang sama timbangannya, akan tetapi hasil timbangan akan berbeza disebabkan jenis dan ketumpatan misalnya timbangan kacang lebih berat daripada jagung, dan jagung lebih berat daripada padi dan tepung. Selain itu, ulama juga berbeza pendapat dalam menetapkan timbangan satu gantang.

Takaran gantang adalah untuk sukatan, oleh itu timbangan yang lebih tepat adalah dalam liter dan bukan kilogram, akan tetapi dengan peredaran zaman timbangan kilogram adalah lebih *efficient* serta memudahkan urusan muamalat manusia. Justeru *maqasid* syariah mengiktiraf unsur setempat iaitu Negara seperti perbezaan yang berlaku di Madinah dan Baqhdad, maka pengkaji berpendapat di Malaysia secara lokalitinya perlu dibahagikan kepada dua bahagian iaitu Semenanjung Malaysia dan Sabah Sarawak. Penilaian semula perlu bagi menetapkan satu anggaran tepat timbangan diantara jenis-jenis padi yang ditanam di sesuatu kawasan, kerana ia bersifat ijtihad semasa. Pembahagian dua jenis kawasan ini disebabkan faktor geografi yang berbeza, teknologi yang digunapakai serta taraf ekonomi petani, ini kerana pertanian yang diamalkan di Sarawak dan Sabah berbeza daripada yang diamalkan di Semenanjung Malaysia.

Penetapan kadar gantang bolehlah merujuk kepada kaedah keselarasan kadar zakat fitrah oleh Muzakarah Fatwa Kebangsaan iaitu satu gantang baqhdad bersamaan 2.6kg bagi negeri di Semenanjung dan 2.7kg bagi negeri di Sabah dan Sarawak. Namun perbezaan berapa gantang yang seharusnya ditakar sama ada 363 gantang, 375 gantang atau 400 gantang Malaysia haruslah dipanjangkan kepada peringkat Suruhanjaya Pentadbiran Zakat Negeri-Negeri SPZN untuk menilai *conversion* yang tepat takaran satu gantang baqhdad jika diterjemahkan dalam timbangan kilogram Malaysia. Manakala penetapan harga semasa bergantung kepada jenis padi yang ditanam berdasarkan kualiti dan ketumpatannya misalnya padi sawah dan padi huma dan boleh dirujuk kepada pihak BERNAS.

#### 4. KETETAPAN HAUL (CUKUP SETAHUN) BAGI ZAKAT PERTANIAN

Berbanding jenis-jenis harta lain yang dikenakan zakat, zakat pertanian dikecualikan daripada ketetapan haul kerana hasil pertanian dikutip apabila tiba waktu menuainya sahaja, berdasarkan firman Allah s.w.t dalam surah al-An'am ayat 141 "Dan keluarkanlah haknya (zakatnya) pada hari memetik atau menuainya". Namun amalan di Selangor, Sarawak dan Pulau Pinang jika nilai jualan padi pada musim pertama kurang dari nisab, maka hendaklah dicampurkan ke musim kedua di dalam tahun yang sama. Ini kerana berdasarkan temubual bersama pihak LZS, TBS dan PUZ MAINPP, kebanyakan petani akan membayar zakat tanaman diakhir tahun bagi memudahkan urusan mereka. Pengkaji berpendapat kaedah yang ditetapkan ini seolah-olah mengaplikasikan tempoh haul yang bertentangan dengan nas. Maqsad dalam penentuan nisab adalah sebagai kayu ukur kemampuan seseorang dalam mengeluarkan zakat, namun kaedah ini dilihat sebagai menekan para petani dengan mewajibkan zakat tanaman walaupun hasil tanaman tidak melepasi kadar nisab sesuatu musim.

#### 5. KADAR ZAKAT PERTANIAN DI MALAYSIA

Di Malaysia kesemua negeri di Semenanjung bersepakat menggunakan asas penetapan kadar 10% dan 5% bersumberkan hadith sarih Ibn 'Umar dan hadith Mu'az (al-Asqalani, t.t). Penentuan kadar zakat tanaman dibahagikan kepada dua kategori berasaskan metode pengairan dan tenaga yang digunakan iaitu sama ada pengairan secara semula jadi atau menggunakan jentera serta tenaga manusia. Namun, sebahagian negeri menghadkan kadar dengan mengenakan kadar tunggal sama ada 10% atau 5% sahaja. Manakala di Sarawak kadar alternatif ketiga dikenakan iaitu 7.5% berdasarkan pendapat Ibn Qudamah, seperti jadual (3)di bawah:

Jadual 3: Ketidakselarasan Kadar Zakat Pertanian Di Malaysia

Bil	Negeri	Kadar Zakat
1	Lembaga Zakat Selangor	5% sahaja
2	Pusat Urus Zakat Penang	10% sahaja
3	MAIDAM Terengganu	5% dan 10%
4	Baitulmal MAIPs	5% dan 10%
5	Tabung Baitulmal Sarawak	5%, 10%dan 7.5%
	-	

Berdasarkan jadual(3) di atas dapat disimpulkan terdapat tiga kategori penetapan kadar zakat tanaman. Pertama, penetapan kadar tunggal sama ada 5% atau 10% sahaja yang diamalkan di negeri Selangor dan Pulau Pinang. Di Selangor pada tahun 1989 kadar zakat tanaman yang dibenarkan pada awalnya adalah pilihan sama ada 5% atau 10% mengikut kerelaan petani. Oleh kerana tidak terdapat satu panduan yang khusus, pihak Jawatankuasa Perunding Hukum Syara' telah memutuskan kadar zakat tanaman padi ialah 10% sahaja berdalilkan kitab *Majmu' Syarh al-Muhazzab* menyatakan parit dan tali air yang dikorek berhubung dengan sungai yang besar dan memakan belanja yang tinggi zakatnya masih dikenakan sebesar 10% (Jawatankuasa Perunding Hukum Syara' Selangor, 1989). Kini dengan penggunaan teknologi pertanian moden Ustaz Mohd Farid Bin Mohd Zainal (Temubual bersama Ustaz Mohd Farid Bin Mohd Zainal, Eksekutif Sektor Penerangan Korporat, Lembaga Zakat Selangor bertarikh 12 September 2012) menegaskan Lembaga Zakat Selangor telah menilai semula dan menetapkan kadar 5% bagi zakat tanaman dengan alasan realiti di Selangor kesemua 100% petani yang mengusahakan tanaman padi sawah menggunakan saliran yang disediakan oleh pihak Jabatan Pengairan dan Saliran JPS Selangor melibatkan saliran yang sistematik dan terancang serta tidak lagi menggunakan saliran semulajadi.

Fuqaha juga berbeza pendapat dalam isu pembelian air ini sepertimana al-Rafi'e berbeza pendapat dengan al-Dusuqi dengan mengenakan kadar 5% jika melibatkan pembelian air (cukai tali air), beliau berpendapat pembelian air tergolong dalam tanggungan kos (al-Nawawi, t.t) walaupun terdapat syarat-syarat yang perlu dipatuhi sebelum dikurangkan kadar zakat iaitu kos tersebut mestilah kos yang besar dengan melihat kepada 'urf pertanian semasa dan kos tersebut secara langsung mempengaruhi produktiviti hasil pertanian. Ini kerana para fuqaha tidak memasukkan kos mewujudkan saliran atau takungan sebahagian daripada kos tanaman berdasarkan pendapat Imam Nawawi disokong oleh Imam Haramain.

Di Pulau Pinang berlaku juga penilaian semula hukum penetapan kadar semasa. Kadar 5% adalah kadar yang sediakala dipakai sebelum ini oleh Majlis Agama Islam Negeri Pulau Pinang (Majlis Agama Islam Negeri Pulau Pinang, 2005), namun pada tahun 2005 Muzakarah Fatwa Negeri telah memutuskan kadar zakat tanaman padi sebesar 10% dengan memberi pelepasan kos operasi. Pengkaji berpendapat Mufti Pulau Pinang dalam memutuskan keputusan ini berpegang kepada *qaul* al-Dusuqi (al-Dusuqi, 1996), ini berdasarkan hasil temubual bersama Y.Bhg. *Sahibul Samahah* Dato' Seri Haji Hassan Bin Haji Ahmad (Temubual bersama *Sahibul Samahah* Dato' Seri Haji Hassan Bin Haji Ahmad, Mufti Negeri Pulau Pinang bertarikh 20 September 2012), seperti berikut: "Timbul juga isu berkenaan dengan cukai tali air JPN (Jabatan Pengairan dan Saliran Negeri), cukai air tidak banyak dan tidak padan dan tidak boleh dimasukkan dalam usaha pengairan yang

menjadikan kadarnya 5%. Contohnya satu relong berapa RM sahaja. Oleh itu ia dikira sebagai cukai biasa sahaja. Kadar 10% lebih menguntungkan kepada asnaf dan lebih sesuai".

Ulasan pengkaji berkenaan kenyataandi atas seolah-olah Y.Bhg *Sahibul Samahah* hanya mengutamakan *maslahah* para asnaf berbanding melihat dengan lebih menyeluruh kedua-dua entiti zakat termasuklah *muzakki* (petani) itu sendiri. Namun, berdasarkan keputusan Jawatankuasa Fatwa Pulau Pinang dalam menetapkan kadar 10% dengan mengambil kira penolakan kos-kos operasi, adalah hampir menyamai kadar 5% sepertimana yang diaplikasikan di Selangor ke atas kos kasar iaitu tanpa penolakan sebarang kos-kos.

Kategori kedua penetapan kadar zakat tanaman adalah berlandaskan zahir hadith iaitu dengan kadar 10% bagi saliran semula jadi dan 5% bagi yang melibatkan tenaga kerja sepertimana yang dipraktikkan di Perlis dan Terengganu. Di Perlis kadar zakat yang telah ditetapkan pada tahun 1980an adalah sebanyak 5% sahaja iaitu kadar tunggal (Fatwa Negeri Perlis, t.t). Namun Baitulmal MAIPs telah mengemaskini kaedah dengan mengenakan kadar 5% sekiranya tidak menolak sebarang kos dan 10% sekiranya ditolak kos-kos bagi menepati dengan kehendak syarak (Baitulmal MAIPs, t.t). Kaedah terkini yang digunapakai oleh Baitulmal MAIPs lebih menitikberatkan nilai keadilan kepada para petani dan asnaf zakat dengan mengimbangi diantara kadar penetapan zakat tanaman dengan penolakan kos-kos tertentu.

Di Terengganu kadar tunggal 10% telah dikenakan pada tahun 1990 (Mesyuarat Jawatankuasa Fatwa Negeri Terengganu, 1990)kerana saliran air ketika itu didapati dari parit dan saliran air yang percuma dan cukai air yang dikenakan ketika itu tidak membebankan maka tidak mengubah kadar zakat. Keadaan berubah pada tahun 1994 (Mesyuarat Jawatankuasa Fatwa Negeri Terengganu, 1994) apabila wujudnya usaha menggunakan jentera moden dalam sektor pengairan maka ia dikenakan 5%, dan kadar 10% masih dikenakan bagi petani yang menggunakan saliran air traditional menggunakan parit, takungan air dan tadahan hujan.

Kategori ketigayang menetapkan kadar alternatif ketiga iaitu 7.5% selepas 5% dan 10%. Meskipun kadar yang telah ditetapkan *nas* 5% dan 10% sahaja, namun menurut Ustaz Zulhazmi Bin Bohari secara praktikalnya pihak Tabung Baitulmal Sarawak mengenakan secara puratanya dengan kadar 7.5% sahaja berdasarkan pandangan Ibnu Qudamah (Temu bual bersama Ustaz Zulhazmi Bin Bohari, Pengawai Eksekutif Tabung Baitulmal Sarawak Cawangan Bandar Sri Aman bertarikh 24 September 2012). Ini kerana faktor geografi di Sarawak berbeza disamping jenis tanaman seperti padi huma dan padi sawah, begitu juga kawasan tanaman yang berbukit bukau yang menghadkan penggunaan teknologi moden dalam sistem pengairan dan pertanian.

Pengkaji berpendapat perbahasan penetapan kadar 7.5% hanya jika melibatkan dua jenis tanaman atau lebih, dijirus secara bercampur-campur dan sekiranya nisbah kedua-dua pengairan sama banyak (Ibn Qudamah, 1994). Ini kerana berkenaan kerja-kerja menggali parit atau tali air Ibnu Qudamah tidak memasukkannya dalam takrif penjirusan dan tidak mengurangkan kadar zakat, oleh kerana istilah "kerja berat" terlalu subjektif dan sukar ditentukan (Al-Nawawi, t.t).

Berpandukan analisa ketiga-tiga kategori di atas, disimpulkan kadar zakat pertanian di Malaysia berbeza mengikut persekitaran negeri masing-masing. Ini kerana perbezaan disebabkan oleh pengaruh faktor-faktor kapasiti pengairan saliran air, cuasa, sumber tenaga (teknologi) dan perubahan geografi sesetengah tempat. Tidak dinafikan asas penetapan kadar zakat tanaman bertunjangkan nassarihhadith Ibn 'Umar dan hadith Mu'az yang berasaskan pengairan sama ada 10% ataupun 5%, namun objektif syariah meraikan keadaan setempat (lokaliti).

Kesemua fuqaha mazhab telah memperincikan kaedah penetapan kadar ini seperti al-Kasani (al-Kasani, 2002) mengiyaskan bebanan sebagai 'illah penentuan begitu juga al-'Imrani ('Imrani, 2000) dan Ibn Qudamah (Ibn Qudamah, 1994) dengan mendatangkan contoh haiwan sa'imah diwajibkan

zakat, ini kerana zakat diwajibkan ke atas hasil usaha manusia dan bebanan akan mengurangkan produktivitinya. Walaupun begitu, al-Dusuqi(al-Dusuqi, 1996) menegaskan penetapan kadar 10% jika membeli air atau mengupah pengairan disebabkan bebanan yang sangat sedikit.

Dalam arus globalisasi kini yang menuntut setiap tindakan diurus tadbir, maka kadar zakat pertanian tidak lagi diputuskan oleh petani sendiri sepertimana yang diamalkan secara traditional dahulu. Kini, urusan pengairan pertanian diurus oleh Jabatan Pengairan dan Saliran Negeri, oleh itu sudah menjadi tanggungjawab Baitulmal Negeri dari semasa ke semasa berhubung dengan pihak yang secara lansung mengurus sektor pertanian ini, bagi mengemaskini hukum dan menetapkan kaedah berasaskan pengairan yang bersesuain dengan keadaan semasa.

#### 6. PENOLAKAN PERBELANJAAN KOS-KOS ZAKAT PERTANIAN DI MALAYSIA

Di Malaysia, taksiran zakat tanaman padi termasuklah wang subsidi (kupon) yang diperolehi dikira sebagai *al-Mal al-Mustafad* dan wajib dikeluarkan 2.5% jika mencukupi nisab sepertimana amalannya di Selangor, Sarawak, Perlis dan Pulau Pinang. Oleh itu, pelepasan kos-kos tertentu sebelum dikenakan zakat pertanian sudah diaplikasikan di sebahagian negeri di Malaysia sebagai keringanan kepada petani dengan membenarkan penolakan kos operasi tanaman dan hanya di negeri Perlis secara rasminya membenarkan pelepasan kos operasi tanaman dan kos sara hidup seperti jadual (4)di bawah:

Jadual 4: Ketidakselarasan Tolakan Kos-Kos Sebelum Diwajibkan Zakat Padi

Bil	Negeri	Tolakan Kos-Kos
1	Lembaga Zakat Selangor	-
2	Pusat Urus Zakat Penang	Tolak kos operasi dan sara hidup (jika tiada punca pendapatan lain)
3	MAIDAM Terengganu	Tolak kos operasi
4	Baitulmal MAIPs	Tolak kos operasi dan kos sara diri
5	Tabung Baitulmal Sarawak	Tolak kos operasi sahaja

Berdasar hasil temubual didapati hanya di negeri Selangor sahaja tidak membenarkan sebarang penolakan kos dan dikenakan zakat tanaman ke atas kos kasar sahaja. Sebahagian negeri pula hanya memberikan pelepasan kos-kos operasi sahaja seperti yang dipraktikkan di negeri Terengganu dan Sarawak. Manakala pelepasan kesemua kos termasuk kos operasi dan kos sara diri dibenarkan sebelum pengeluaran zakat tanaman di negeri Pulau Pinang dan Perlis.

Di Selangor zakat tanaman dikenakan ke atas pendapatan kasar sahaja. Ini berdasarkan keputusan yang telah diputuskan oleh Jawatankuasa Perunding Hukum Syara' pada tahun 1989 berpandukan kitab *al-'Ubab* menyatakan:

"Apabila sesudah menuai hasil tanaman, para petani tidak dibenarkan memakan hasil tersebut, membayar upah mengetam atau mengeluarkan sedekah sebelum dikeluarkan zakat tanaman. Hukuman takzir akan dikenakan sekiranya petani ingkar. Manakala segala perbelanjaan kos-kos tanaman ditanggung sendiri oleh para petani." (Jawatankuasa Perunding Hukum Syara' Negeri Selangor, 1989)

Keputusan ini masih diaplikasikan sehingga kini, walaupun kebanyakan negeri seperti Perlis, Pulau Pinang, Terengganu dan Sarawak sudah memberi pelepasan sama ada penolakan kos operasi sahaja atau dengan kos sara diri. Berdasarkan temubual pengkaji bersama Ustaz Mohd Farid Bin Mohd Zainal (Temubual bersama Ustaz Mohd Farid Bin Mohd Zainal, Eksekutif Sektor Penerangan Korporat, Lembaga Zakat Selangor bertarikh 12 September 2012) mendapati isu ini masih belum dilakukan kajian semula oleh pihak Penyelidikan Syariah LZS, walaupun terdapat permintaan penilaian semula berkenaan dengan penolakan kos *had kifayah* para petani yang membayar zakat tanaman.

Kategori kedua adalah negeri-negeri yang membenarkan pelepasan kos-kos tertentu sebelum dikenakan zakat tanaman iaitu seperti yang dipraktikkan di Terengganu, Sarawak, Pulau Pinang dan Perlis.

Negeri Perlis, Pulau Pinang, Terengganu dan Sarawak bersepakat memberikan pelepasan kos-kos kepada pengusaha padi seperti kos baja, racun, sewa tanah, upah tenaga dan mesin tuaian dan upah membajak tanah. Manakala penolakan kos pengangkutan dibenarkan di semua negeri di atas kecuali negeri Terengganu. Walaupun hukum penolakan kos sudah diputuskan, hakikatnya di Terengganu hukum ini tidak dipraktikkan oleh golongan petani, sehinggakan ia tidak dicatatkan di dalam pamplet panduan zakat pertanian MAIDAM 2012. Menurut Tuan Zuhaimi Bin Tuan Sembok (Temubual bersama Tuan Zuhaimi Bin Tuan Sembok, Pengawai Eksekutif Taksiran Zakat, Majlis Agama Islam Dan Adat Melayu Terengganu MAIDAM bertarikh 3 Oktober 2012)kebanyakan petani membayar zakat berniatkan *'ibadah mahdah* yang bersifat *ta'abbud* yang terdiri daripada golongan petani yang berumur. Oleh itu, mereka berpegang kepada *qaul* jumhur fuqaha yang mentakrifkan kekayaan seseorang dengan hanya cukup kadar nisab. Golongan ini tidak menerima pakai pendapat berasaskan *qaul* Ibnu 'Abbas dan Ibnu 'Umar tentang keharusan penolakan kos-kos *daruriyyat* dan keperluan asasi walaupun telah dimaklumkan oleh pihak MAIDAM.

Di Pulau Pinang terdapat satu lagi pelepasan yang dibenarkan pada tahun 2005 iaitu potongan luar jangka sebanyak ¼ seperti serangan burung, bencana alam dan lain-lain. Walaupun begitu, berdasarkan pendapat Ustaz Azhari Bin Ahmad (Temubual bersama Ustaz Azhari Bin Ahmad, Pengawai Eksekutif Dakwah Dan Rundingan Syara', Jabatan Kutipan Dan Pemasaran, Pusat Urus Zakat MAINPP bertarikh 18 September 2012) dan juga pamphlet zakat tanaman padi 2012 tidak dinyatakan pelepasan ini, ini jelas menunjukkan ia sudah tidak diamalkan oleh Pusat Urus Zakat, Majlis Agama Islam Pulau Pinang.

Berkenaan dengan penolakan kos sara hidup, hasil temubual yang telah dijalankan mendapati hanya negeri Perlis dan Pulau Pinang sahaja yang membenarkan penolakan kesemua kos iaitu kos pengeluaran dan keperluan sara diri. Di Perlis penolakan kedua-dua kos ini telah diputuskan semenjak tahun 1980an oleh Jawatankuasa Fatwa Perlis ketika itu. Mereka mengistinbat keharusan ini berdasarkan *qaul* Ibnu 'Abbas, Ibn 'Umar, Ahmad Ibnu Hanbal dan lain-lain dengan alasan hutang *daruriyyat* bagi persoalan penolakan kos operasi adalah masalah *ijtihadiyyah* berpandukan hadith, maksudnya:

"Diriwayatkan oleh Abu 'Ubaid dalam bab al-Amwal dengan sanadnya daripada Jabir bin Zaid dengan katanya kepada lelaki yang berhutang untuk digunakan bagi keperluan keluarganya dan ladangnya, katanya: Ibnu 'Abbas berkata dipotong hutang yang bersangkutan dengan ladangnya, Ibnu 'Umar berkata: dipotong hutang pengeluaran dan juga untuk keluarganya (sara diri)."

Yahya bin Adam telah juga meriwayatkan seperti di atas, katanya: Ibnu 'Umar berkata: hendaklah hasil daripada tanaman digunakan untuk membayar hutang terlebih dahulu dan dikeluarkan zakat yang baki daripadanya. Ibnu Abbas berkata: Ditunaikan terlebih dahulu apa yang dihutangkan sebagai kos pengeluaran dan bakinya dikeluarkan zakat.

Manakala penolakan keperluan asasi dan perbelanjaan daruriyyat berasaskan pendapat Ibnu 'Umar yang menyatakan bahawa zakat dikenakan ke atas orang-orang kaya sahaja berdasarkan hadith Rasulullah s.a.w yang bermaksud "Tidaklah bersedekah (berzakat) melainkan ke atas orang kaya" (al-Bukhari,1993), ini selari dengan hadith "Diambil zakat dari orang kaya mereka dan dipulangkan ke atas orang fakir mereka" (al-Bukhari,1993). Ini kerana salah satu asnaf yang menjadi objektif kutipan zakat adalah membantu golongan fakir miskin sepertimana firman Allah s.w.t dalam surah at-Taubah ayat 60.

Secara amalannya di Perlis, penolakan kos pengeluaran secara amnya dibenarkan kepada seluruh warga petani, namun penolakan kesemua kos iaitu kos operasi dan sara diri hanya dibenarkan jika petani tersebut tidak mempunyai pendapatan yang lain selain daripada bertani. Baitulmal MAIPs mengimbangi diantara penetapan kadar dan penolakan kos-kos, misalnya sekiranya berlaku penolakan kos sebelum dizakatkan maka kadar yang dikenakan adalah sebanyak 10% (kadar asal). Keadaan kedua, sekiranya petani tidak menolak sebarang kos, maka kadar yang ditetapkan adalah sebesar 5% (kadar *ruksah*).

Baitulmal MAIPs telah menetapkan formula yang khusus bagi penolakan kos keperluan sara diri meliputi keperluan diri petani dengan kadar sehari RM14.12, kadar keperluan sehari isteri RM8.47 dan kadar sehari bagi anak-anak adalah RM3.28. Manakala jumlah penolakan maksima setahun yang dibenarkan bagi keperluan diri petani, isteri dan anak-anak masing-masing RM5,000, RM3,000 dan RM1,200. Selain itu penolakan hutang *daruriyyat* seperti kenderaan dan kediaman juga dibenarkan, begitu juga kos perubatan dan pemberian ehsan kepada ibu bapa. Di Pulau Pinang, Mesyuarat Jawatankuasa Syariah, Majlis Agama Islam Negeri Pulau Pinang Bil.1/2005, Perkara 3.0 (e) telah mengsyorkan penolakan kos sara diri jika tidak mempunyai pendapatan yang lain sepertimana amalan di Perlis. Berdasarkan temubual bersama Ustaz Azhari Bin Ahmad (Temubual bersama Ustaz Azhari Bin Ahmad, Pengawai Eksekutif Dakwah Dan Rundingan Syara', Jabatan Kutipan Dan Pemasaran, Pusat Urus Zakat MAINPP bertarikh 18 September 2012), realitinya hukum ini tidak diaplikasikan oleh Pusat Urus Zakat Majlis Agama Islam Pulau Pinang walaupun sudah terdapat ketetapan Jawatankuasa Syariah dan ia tidak dimuatkan dalam pamplet zakat tanaman padi 2012 PUZPP.

#### 7. RUMUSAN DAN CADANGAN

Cadangan serta intipati yang dapat diambil daripada perbincangan kajianini ialah penilain sesuatu fatwa zakat pertanian yang telah diputuskan perlu dinilai semula dari semasa ke semasa sepertimana peruntukan di dalam seksyen 50 Enakmen Pentadbiran Agama Islam Negeri EPAI dengan memberi bidangkuasa kepada Jawatankuasa Fatwa dalam meminda, mengubahsuaikan atau membatalkan sesuatu fatwa dari semasa ke semasa. Namun, amalannya di Malaysia sesuatu fatwa yang pernah diputuskan tidak dinilai semula, kecuali jika ia menjadi isu kontrovesi sepertimana termaktub di bawah seksyen 47 EPAI. Hal ini perlu diatasi segera kerana mengeluarkan sesuatu fatwa yang bersifat *ad-hoc* akan mengakibatkan sesuatu fatwa itu tidak menepati *maqasid* semasa dan setempat yang kemungkinan hanya relevan pada masa dan ketika isu kontroversi itu timbul dan demi kepentingan sesetengah pihak sahaja.

# PERANAN INSTITUSI ZAKAT DALAM PEMBANGUNAN PENDIDIKAN ASNAF FAKIR DAN MISKIN DI MALAYSIA

Azman Ab Rahman<sup>1</sup> Siti Martiah Anwar<sup>2</sup>

#### **ABSTRAK**

Zakat merupakan satu ibadah yang wajib dilaksanakan oleh umat Islam yang telah mencukupi syarat. Segala urusan berkaitan kutipan zakat dikendalikan oleh institusi zakat setiap negeri di Malaysia. Seterusnya institusi zakat bertanggungjawab dalam mengagihkan zakat kepada lapan golongan asnaf sepertimana yang telah ditetapkan di dalam al-Quran iaitu kepada fakir, miskin, muallaf, fi sabilillah, ibnu sabil, gharimin, riqab dan amil. Pengagihan zakat kepada lapan golongan asnaf ini terdapat dalam pelbagai skim dan bentuk termasuklah bantuan pendidikan. Bantuan pendidikan merupakan salah satu bentuk bantuan terpenting kepada golongan asnaf fakir dan miskin kerana pendidikan salah satu kaedah yang dapat mengubah kehidupan dan mengeluarkan golongan ini dari kepompong kemiskinan. Disebabkan oleh kepentingan pendidikan ini kepada golongan asnaf fakir dan miskin, maka institusi zakat memainkan peranan yang penting dalam memastikan golongan asnaf fakir miskin ini mendapat peluang pendidikan dan berjaya seperti orang lain. Terdapat beberapa kes dilaporkan pada awal tahun 2013 di mana anak-anak fakir miskin ini tidak dapat meneruskan persekolahan kerana gagal melunaskan yuran persekolahan mereka. Dengan wujudnya kes-kes keciciran dalam pelajaran seperti ini, institusi zakat memainkan peranan yang sangat penting dalam menyalurkan bantuan zakat dari segi pendidikan kepada gologan ini. Justeru itu, kajian ini dijalankan bagi mengenalpasti skim dan bentuk bantuan pendidikan yang telah diberikan oleh institusi zakat di Malaysia kepada golongan asnaf di samping peranan yang dilakukan oleh institusi zakat dalam memastikan pelajar fakir dan miskin tidak ketinggalan dalam pelajaran khususnya di Lembaga Zakat Selangor. Diharapkan kajian ini dapat memberi gambaran kepada masyarakat terhadap usaha yang telah dilakukan oleh institusi zakat dalam membantu fakir dan miskin dalam pembangunan pendidikan di Malaysia.

Kata Kunci: Zakat Pendidikan, Fakir dan Miskin, Skim dan Bantuan

### Abstract

Zakat is an obligation that must be done by all the Muslims who fulfilled the conditions of zakat. All the matters related to the zakat collection are administered by the zakat institution in Malaysia. Therefore, this zakat institution is responsible in distributing the zakat to eight asnaf as has been decreed in the Quran which are to the poor, needy, muallaf, fi sabilillah, ibnu sabil, gharimin, riqab and amil. The distribution of zakat is in various forms and schemes which includes the educational aid. The educational aid is one of the most important aids given to the poor and needy because with education only they can change their life and bring them out of poverty. Due to the importance of education in the life of the poor and needy, the zakat institutions play a vital role in ensuring that the poor and needy being given an opportunity in education and opportunity to be a successful person in the future. There were a few cases reported in the early year of 2013 whereby the kids from the poor and needy family cannot continue their study due to their failure to pay the school fee. By looking at this situation, the zakat institutions play an important role in giving the educational aids to them. Therefore, this research is to examine the scheme and educational aids given to the poor and needy in Malaysia besides the role play by the zakat institutions in ensuring the poor and needy not to be left behind in term of education especially by the Lembaga Zakat Selangor (LZS). It is hope that this

research will gives a better overview to the society at large on the efforts done by the zakat institution in helping the poor and needy in term of the educational enhancement in Malaysia.

### 1. PENDAHULUAN

Zakat memainkan peranan penting dalam pembangunan pendidikan pelajar fakir dan miskin di Malaysia. Terdapat beberapa kes melibatkan golongan fakir dan miskin yang berhenti sekolah dan tidak dapat meneruskan persekolahan disebabkan oleh masalah kewangan. Kes seperti ini telah direkodkan dan mendapat liputan yang meluas oleh pihak media massa dan elektronik. Sebagai contoh, seorang anak sulung daripada lima beradik di Kuantan iaitu Mohd Abu Khir Abu Bakar yang merupakan pelajar di Sekolah Menengah Kebangsaan (SMK) Sultan Abu Bakar tidak dapat meneruskan pelajaran kerana gagal menjelaskan yuran Peperiksaan Sijil Tinggi Pelajaran Malaysia (STPM) manakala dua adiknya yang lain sering kali tidak menghadirkan diri ke sekolah kerana malu dengan rakan-rakan mereka yang mereka adalah orang miskin (Sinar Harian, 28 Februari 2013).

Berdasarkan tinjauan awal yang dibuat oleh penyelidik terhadap institusi zakat negeri-negeri dan unit baitulmal di bawah Majlis Agama Islam Negeri di Malaysia. Mereka mempunyai skim dan bentuk bantuan atau sumbangan pendidikan kepada golongan asnaf khususnya fakir dan miskin seperti bantuan persekolahan, bantuan melanjutkan pelajaran ke Institut Pengajian Tinggi Tempatan (IPT), biasiswa kecil pelajaran, bantuan kepada sekolah pondok dan juga bantuan pengajian tinggi ke luar negara (Dasar Agihan Zakat Majlis Agama Islam dan Adat Istiadat Melayu Kelantan, 1994; Hak Asnaf: Asnaf Fakir dan Miskin, Pusat Urus Zakat Pulau Pinang; Bantuan: Pendidikan, Lembaga Zakat Selangor; Skim Bantuan, Jabatan Zakat Negeri Kedah Darul Aman; Buku Panduan Skim Agihan Bantuan Zakat, Majlis Agama Islam dan Adat Melayu Terengganu)

Isu ini disokong oleh kajian yang dilakukan oleh Abd Halim dan Mohd Saladin (2011) yang bertajuk 'Pengurusan Agihan Zakat', ia menerangkan kaedah yang dilaksanakan dalam mengelola dana zakat yang telah dikumpul supaya dapat diagihkan kepada asnaf yang berhak. Memandangkan peningkatan prestasi kutipan zakat semakin meningkat maka pengagihan seharusnya meningkat sama supaya dapat mengurangkan bilangan yang tidak berkemampuan. Kajian ini mendapati bentuk bantuan kepada asnaf perlu dimantapkan lagi terutamanya dari segi pengagihan pendidikan. Ini kerana bantuan berterusan dari segi pendidikan kepada golongan asnaf sehingga mereka berjaya adalah sangat penting, ia dapat mengubah kehidupan dan meningkatkan lagi ekonomi negara.

Berdasarkan Manual Pengurusan Agihan Zakat yang diterbitkan oleh Jabatan Wakaf, Zakat dan Haji (JAWHAR) (2008), ia menerangkan tentang bentuk bantuan dan skim pendidikan yang diberikan kepada golongan asnaf seperti skim bantuan pelajaran, skim bantuan Am pelajaran/ dermasiswa, skim bantuan yuran persekolahan dan peperiksaan sekolah rendah/menengah, skim bantuan aktiviti dan lawatan belajar. Tujuan skim seperti ini diwujudkan adalah untuk memberi bantuan pelajaran kepada anak golongan asnaf supaya tidak tercicir dalam pelajaran serta dapat memperbaiki taraf hidup keluarga.

Menurut kajian Ab. Halim Tamuri, Zuria Mahmud dan Safani Bari (2005) yang bertajuk 'Permasalahan Pelajar-pelajar Fakir Miskin di Daerah Sabak Bernam' dalam Jurnal Pendidikan. Kajian ini adalah satu tinjauan yang bertujuan untuk mengkaji permasalahan yang dihadapi oleh pelajar-pelajar dari golongan fakir miskin di negeri Selangor, khususnya di daerah Sabak Bernam. Pelajar yang terlibat adalah terdiri daripada 19 pelajar yang tinggal di tiga buah Desa Kasih Pusat Zakat Selangor dan 23 orang pelajar yang tinggal di luar Desa Kasih. Dapatan kajian menunjukkan pelajar-pelajar fakir miskin dalam kajian ini mempamerkan aspirasi yang sihat, serta nilai yang positif walaupun mereka menghadapi masalah kewangan. Aspek yang ketara menjadi penghalang kepada

aspirasi pelajar-pelajar miskin ini adalah cara gaya hidup mereka seperti menonton televisyen secara berlebihan, berbual kosong, peruntukan masa yang sangat sedikit bagi mengulangkaji, menyiapkan kerja rumah, ataupun membaca bacaan berunsur akademik, kerohanian, dan pengetahuan am.

Tidak dapat dinafikan bahawa institusi zakat di Malaysia telah memberikan beberapa bentuk skim dan bantuan pelajaran kepada fakir dan miskin di Malaysia. Tetapi permasalahan lain yang timbul adalah seperti golongan fakir dan miskin ini tidak diberikan pendedahan dan pengetahuan tentang cara-cara untuk memohon bantuan tersebut yang menyebabkan hanya segelintir sahaja golongan fakir dan miskin yang mendapat manfaat daripada skim dan bantuan tersebut. Isu ini turut dibincangkan juga dalam kajian yang dijalankan oleh Azman Ab Rahman dan Ahmad Wifaq Makhtar (2011) yang bertajuk 'Kelayakan dan Kedudukan Pelajar sebagai Penerima Zakat Menurut Perspektif Islam' dalam Jurnal Pengurusan Jawhar, Jabatan Wakaf, Zakat & Haji, Jabatan Perdana Menteri. Kajian ini menjelaskan bahawa salah satu faktor kegagalan dan kesukaran permohonan bantuan pendidikan adalah disebabkan oleh pemohon tidak memenuhi syarat kelayakan yang perlu dipenuhi sebelum membuat permohonan.

# 2. SKIM DAN BANTUAN PENDIDIKAN YANG DIBERIKAN OLEH INSTITUSI ZAKAT DI MALAYSIA

Terdapat pelbagai skim dan bentuk bantuan pendidikan yang telah ditawarkan kepada golongan asnaf fakir dan miskin oleh institusi zakat di seluruh negeri di Malaysia. Skim dan bentuk bantuan pendidikan ini dapat diringkaskan seperti dalam jadual (1) di bawah:

Jadual 1: Jenis Skim dan Bentuk Bantuan Pendidikan oleh Institusi Zakat di Malaysia

No	NEGERI	SKIM DAN BENTUK BANTUAN PENDIDIKAN	ASNAF
1	Selangor	Keperluan Pendidikan, Bantuan Yuran Sekolah Rendah dan Menengah, Biasiswa Pelajaran, Elaun Kehadiran Kelas Agama Asas, Dermasiswa, Bantuan Umum Pelajaran, Elaun Guru KAFA, Bantuan Umum Pelajaran Dalam dan Luar Negara, Dermasiswa Pelajar Belajar di Timur Tengah, Dermasiswa Hufaz Quran.	Fakir dan Miskin, <i>Mualaf,</i> Fisabilillah
2	Negeri Sembilan	Pinjaman dan bantuan zakat pelajar Timur Tengah tajaan MAINS kali ke-2 dan bantuan perkapita Sekolah SMAN, SABK, SAR, KAFA, Tahfiz dan Tadika Islam Tahun 2013 di Royale Bintang, Seremban.	Fakir dan Miskin, Fisabilillah
3	Johor	Skim Bantuan Pelajaran, Skim Bantuan Pendidikan Pendaftaran IPTA, Skim Bantuan Awal Tahun Persekolahan (Pakaian Seragam), Skim Bantuan Basikal Pelajar, Skim Bantuan Cermin Mata, Skim Bantuan Pendidikan di Universiti, Skim Bantuan Pembiayaan Tambang Ke Pusat Pengajian, Skim Pinjaman Pengajian.	Fakir dan Miskin
4	Kelantan	Bantuan Persekolahan, Bantuan Melanjutkan Pelajaran ke Institut Pengajian Tinggi Tempatan (IPT), Biasiswa Kecil Pelajar Yayasan Islam Kelantan (YIK), Bantuan Kepada Sekolah Pondok, Biasiswa Tengku Anis.	Fakir dan Miskin
5	Terengganu	Bantuan Persekolahan, Skim Bantuan Dermasiswa (IPTA/IPTS), Skim Bantuan Pondok/Madrasah.	Fakir dan Miskin

6	Kuala Lumpur	Bantuan Tambang Dalam/ Luar Negeri, Bantuan Am Pelajaran IPT, Bantuan Pelajar Institut Profesional Baitulmal (IPB), Biasiswa Baitulmal/Insentif Khas Pelajar Cemerlang, Bantuan Peralatan dan Kecemasan Persekolahan, Bantuan Tuisyen, Bantuan Galakan Hafaz Al-Quran, Bantuan Pelajaran Kolej Kejururawatan PUSRAWI, Bantuan Persediaan IPT.	Fakir dan Miskin
7	Perlis	Bantuan Pakaian Sekolah, Bantuan Persekolahan Menengah dan Rendah, Bantuan Sekolah, bantuan Pelajaran, Bantuan Pelajaran Timur Tengah, Bantuan Sekolah dan Institusi Agama.	Fakir dan Miskin
8	Pulau Pinang	Bantuan Pendidikan, Persekolahan, Pakaian Seragam, Permulaan ke IPT Dalam dan Luar Negara, Biasiswa Kecil Sekolah Agama Rakyat, Pendidikan Khusus Kecemerlangan Minda, Kelas Persediaan Belajar, Bantuan Yuran Sekolah Rendah/Menengah, Bantuan Keperluan Pendidikan.	Fakir dan Miskin
9	Sarawak	Bantuan Kemasukan ke Institusi Pengajian Tinggi, Bantuan Pengajian Sekolah Rendah/Menengah, Yuran/Kelengkapan Persekolahan, Bantuan Pengajian ke Timur Tengah, Bantuan Pengajian IPT Bidang Agama, Bantuan Pengajian Sekolah Agama/Arab, Bantuan Pengajian Maahad Tahfiz Al- Quran, Bantuan Kertas Kerja Projek (Tesis).	Fakir dan Miskin, Fisabilillah
10	Kedah	Bantuan Yuran Peperiksaan Penuntut Miskin Sekolah Agama Nidzomi, Bantuan Penuntut Miskin Sekolah Agama Nidzomi, Bantuan Persekolahan Bulanan, Bantuan Persekolahan Sekaligus Penuntut Miskin, Bantuan Pakaian Seragam Sekolah Penuntut Miskin, Bantuan Penuntut Miskin Maktab Mahmud, Bantuan Yuran Penuh Ke IPT Tempatan Penuntut Miskin.	Fakir dan Miskin
11	Melaka	Bantuan Kelas Tuisyen dan Motivasi Pelajar, Pembiayaan Pinjaman Biasiswa Pengajian Tinggi Islam, Bantuan Yuran Persekolahan.	Fakir dan Miskin
12	Sabah	Yuran Pendaftaran Pengajian IPT/S, Dermasiswa Pengajian IPT/S, Tiket Penerbanagan ke IPT/S di Semenanjung Malaysia.	Fakir dan Miskin, Fisabilillah
13	Perak	- Masih dalam proses pengumpulan maklumat	-

Berdasarkan kepada jadual (1) di atas ia menunjukkan bahawa hampir kesemua insitusi zakat negerinegeri di Malaysia seperti di Selangor, Johor, Kelantan, Kuala Lumpur, Perlis, Pulau Pinang dan Sarawak yang memberikan bantuan persekolahan rendah dan menengah, bantuan yuran pengajian di institusi pengajian tinggi (IPT) dalam dan luar negara (Pengajian ke timur tengah). Begitu juga bantuan sampingan yang lain seperti bantuan persediaan persekolahan, bantuan pakaian seragam sekolah, bantuan galakan hafaz Quran.

Institusi zakat di negeri Johor memberikan bantuan pendidikan yang berbeza daripada institusi zakat lain di Malaysia iaitu dari segi Skim bantuan basikal pelajar dan Skim bantuan cermin mata. Manakala di negeri Sarawak, bantuan pendidikan yang berbeza yang diberikan oleh institusi zakat Sarawak ialah

bantuan kertas kerja projek (thesis). Terdapat juga keistimewaan dan bantuan zakat pendidikan khusus bagi pelajar yang mengambil bidang kejururawatan di Kuala Lumpur yang dinamakan Bantuan Pelajaran Kolej Kejururawatan PUSRAWI. Secara keseluruhannya, institusi zakat di Kuala Lumpur memberikan pelbagai jenis bantuan dari pelbagai aspek yang dilihat telah banyak membantu dan memenuhi keperluan golongan asnaf fakir dan miskin di Kuala Lumpur.

Walaubagaiamanapun, terdapat sedikit perbezaan berkaitan syarat permohonan bagi bantuan pendidikan tersebut mengikut negeri-negeri di Malaysia. Sebagai contoh, bantuan pendidikan di Sabah dan Sarawak dari segi bantuan yuran pengajian adalah dibezakan mengikut bidang pengajian yang diambil. Kedua-dua institusi zakat ini mensyaratkan bidang agama sebagai syarat utama untuk memohon dermasiswa dan bantuan ini akan diberikan pada setiap semester di sepanjang pengajian. Berbeza dengan bidang pengajian yang lain di mana bantuan yuran pengajian hanya akan diberikan sekali sahaja iaitu ketika pendaftaran pengajian. Institusi zakat lain selain Sabah dan Sarawak tidak memberikan syarat yang khusus seperti yang digunapakai di Sabah dan Sarawak kerana objektif bantuan pendidikan tersebut adalah lebih bersifat menyeluruh dan saksama kepada semua golongan asnaf fakir dan miskin.

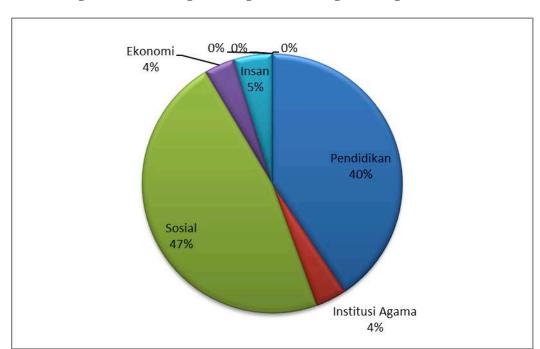

# 3. PERANAN LZS DALAM PEMBANGUNAN PENDIDIKAN FAKIR DAN MISKIN DI NEGERI SELANGOR DARUL EHSAN

Mengikut laporan kutipan dan agihan zakat di Selangor bagi tahun 2012, jumlah kutipan zakat di negeri Selangor adalah sebanyak RM394.1 juta manakala jumlah agihan zakat adalah sebanyak RM 401.7 juta. Perkara ini boleh dirujuk dalam jadual (2) di bawah:

Jadual 2: Jumlah Kutipan dan Agihan Zakat di Selangor Bagi Tahun 2012

		2012	2011	Peratus Peningkatan
Kutipan	Kutipan Zakat (RM)	RM451.3 Juta	RM394.1 Juta	15
	Bil. Pembayar (Orang)	210,307	180,617	16
Agihan	Agihan Zakat (RM)	RM401.7 Juta	RM 373.5 Juta	8

Berdasarkan jadual 2 di atas, kutipan zakat pada tahun 2012 telah meningkat sebanyak 15 peratus berbanding tahun 2011 dengan jumlah pengagihan sebanyak 89 peratus daripada jumlah keseluruhan kutipan zakat. Manakala laporan kutipan dan agihan zakat di Selangor bagi tahun 2012 di bawah program pembangunan pendidikan turut menjelaskan jumlah agihan zakat mengikut program pembangunan bagi tahun 2013 seperti jadual 3 dan 4 di bawah.

Jadual 3: Agihan Zakat Mengikut Program Pembangunan Bagi Tahun 2012

Jadual (3) di atas menunjukkan bahawa pendidikan merupakan agihan zakat kedua terbesar selepas program pembangunan sosial iaitu mewakili 40% daripada keseluruhan agihan program zakat. Manakala pembangunan ekonomi dan Institusi agama adalah sebanyak 4% daripada jumlah keseluruhan agihan. Sebanyak 5% daripada kutipan zakat diperuntukkan bagi pembangunan insan.

Kajian juga mendapati terdapat beberapa jenis bantuan yang diberikan di bawah program pembangunan pendidikan bagi tahun 2012 di Selangor sebagaimana yang terdapat dalam jadual (4) di bawah.

Jadual 4: Jenis Bantuan Terbesar di Bawah Program Pembangunan Pendidikan Bagi Tahun 2012 di Selangor

NO	ASNAF	JENIS BANTUAN	JUMLAH AGIHAN (RM JUTA)	BILANGAN PENERIMA
		Keperluan Pendidikan	33.4	13,629
1	Fakir dan Miskin	Bantuan Yuran Sekolah Rendah / Menengah	5.1	13,195
		Biasiswa Pelajaran	5.3	1,487
		Elaun Kehadiran Kelas Agama Asas	2.9	2,755
2	Mualaf	Dermasiswa	1.6	492
		Bantuan Umum Pelajaran	0.6	140
3	Fisabilillah	Elaun Guru KAFA	27.7	3,710

	Bantuan Umum Pelajar Dalam dan Luar Negara	21.1	17,352
	Dermasiswa Pelajar Belajar di Timur Tengah	12.5	850
	Dermasiswa Hufaz Quran	1.6	1,115

Jadual (4) di atas menjelaskan bahawa seramai 54,725 orang menerima bantuan pendidikan di bawah program pembangunan pendidikan di Selangor dan ia melibatkan duit zakat sebanyak RM 140,103,080 iaitu sebanyak 40% daripada jumlah keseluruhan agihan zakat mengikut program pembangunan pada tahun 2012. Jumlah ini dikatakan telah meningkat berbanding tahun yang sebelumnya iaitu seramai 27,583 orang sahaja penerima bantuan pendidikan pada tahun 2008. Jumlah penerima agihan tertinggi adalah dari kalangan asnaf *fisabililah* yang mendapat bantuan umum pelajaran di dalam dan luar Negara.

Di samping bantuan pendidikan yang diberikan, Lembaga Zakat Selangor juga telah mensasarkan dan merancang beberapa aktiviti dan program khusus kepada golongan asnaf fakir dan miskin di Selangor dari segi bantuan pendidikan. Antaranya ialah seperti yang dilakukan oleh Lembaga Zakat Selangor pada tahun 2013 iatu sebanyak RM 17.9 juta zakat pendidikan telah diagihkan kepada golongan asnaf yang melibatkan seramai 32,919 orang asnaf. Menurut ketua sektor pengurusan daerah LZS iaitu Mohd Basir Hasan Basri, agihan bantuan zakat pendidikan ini bertujuan untuk memperkasa pendidikan dan juga memenuhi keperluan persekolahan supaya anak-anak dapat menumpukan pembelajaran sehingga ke peringkat universiti (Laporan Kutipan dan Agihan Zakat, Info Zakat, Lembaga Zakat Selangor, 2013).

LZS turut memperuntukkan zakat berjumlah RM2.5 juta melalui Program Sekolah Angkat (Prosa2012) untuk dimanfaatkan kepada 15,220 anak asnaf yang menuntut di sekolah rendah dan menengah di Selangor. Program ini dijalankan dengan usahasama LZS bersama Jabatan Pelajaran Selangor (JPS) dengan memfokuskan anak asnaf yang bakal menduduki peperiksaan utama iaitu Ujian Penilaian Sekolah Rendah (UPSR), Ujian Penilaian Menengah Rendah (PMR), Sijil Pelajaran Malaysia (SPM), Sijil Tinggi Pelajaran Malaysia (STPM) dan Sijil Tinggi Agama Malaysia (STAM) (Laporan Kutipan dan Agihan Zakat di Selangor Bagi Tahun 2012).

Menurut laporan kutipan dan agihan zakat di Selangor bagi tahun 2012, sebanyak 26,069 keluarga asnaf fakir dan miskin telah dicatatkan. Oleh yang demikian, beberapa program giat dijalankan bagi mengurangkan bilangan keluarga asnaf fakir dan miskin dari tahun ke tahun iaitu melalui program pembangunan sosial, program pembangunan ekonomi, program pembangunan pendidikan, program pembangunan insan dan juga program pembangunan institusi agama. Tujuan diadakan program pembangunan pendidikan oleh LZS adalah untuk melahirkan generasi asnaf yang cemerlang dan bebas daripada kemiskinan di Selangor (Laporan Pengurusan Zakat Selangor, 2008).

Manakala sumbangan yang berterusan yang diberikan oleh LZS semenjak tahun 2008 sehingga kini ialah sumbangan pakaian sekolah di awal tahun persekolahan. LZS telah memberikan sumbangan pakaian kepada 48 pelajar Sekolah Menengah Kebangsaan (SMK) Sijangkang Jaya secara tahunan. Penyerahan sumbangan pakaian atau uniform sekolah ini diharapkan dapat menyuntik semangat para pelajar dari golongan asnaf fakir dan miskin supaya lebih bersungguh-sungguh dalam pelajaran dan

belajar lebih tekun dalam meningkatkan prestasi pelajaran mereka (Laporan Pengurusan Zakat Selangor, 2008).

Usaha LZS ini dilihat telah menampakkan hasil apabila bilangan anak-anak fakir dan miskin yang mendapat keputusan cemerlang dalam peperiksaan meningkat dari tahun ke tahun. Ia memberikan gambaran bahawa kemiskinan bukan lagi menjadi penghalang untuk golongan asnaf fakir dan miskin ini untuk melanjutkan pelajaran ke peringkat yang lebih tinggi. Kejayaan anak-anak asnaf fakir dan miskin ini menjadi kebanggaan kepada LZS serta pembayar zakat seterusnya mereka menjadi contoh kepada anak asnaf yang lain dalam membuktikan bahawa dana zakat dapat melahirkan lebih ramai lagi anak-anak asnaf yang berjaya dan cemerlang dalam pendidikan. (Laporan Kutipan dan Agihan Zakat, Info Zakat, Lembaga Zakat Selangor, 2013).

### 4. PENUTUP

Berdasarkan kajian yang telah dijalankan oleh penyelidik, penyelidik mendapati bahawa institusi zakat di Malaysia memainkan peranan yang sangat penting dalam pembangunan pendidikan anak-anak golongan fakir dan miskin iaitu melalui skim dan bantuan pendidikan yang telah diberikan. Institusi zakat di Malaysia juga telah berusaha keras dalam melaksanakan aktiviti dan program pembangunan pendidikan kepada golongan asnaf fakir dan miskin dan usaha yang berterusan ini seharusnya mendapat pujian daripada semua pihak. Seharusnya anak-anak golongan fakir dan miskin juga dapat memanfaatkan skim dan bentuk bantuan yang telah ditawarkan supaya dapat membantu meringankan beban mereka dalam membayar yuran persekolahan dan pengajian di institusi pengajian tinggi. Diharapkan bahawa dengan adanya skim dan bantuan pendidikan yang telah diberikan oleh institusi zakat di Malaysia dapat menggalakkan golongan asnaf supaya mementingkan pendidikan dan ilmu pengetahuan sebagaimana yang digalakkan dalam Islam iaitu menuntut ilmu adalah satu kewajipan kepada semua umat Islam. Dengan usaha seperti ini, ia seharusnya dapat menaikkan lagi martabat golongan asnaf, memperbaiki taraf hidup golongan fakir dan miskin, melahirkan lebih banyak lagi pelajar asnaf fakir dan miskin yang berjaya di dalam dan luar negara dan seterusnya menjadikan Malaysia sebagai sebuah negara yang kurang masalah dalam keciciran pelajaran.

## IN SEARCH OF DEBT FREE ECONOMIC DEVELOPMENT: THE ROLE OF ZAKAH AND AWOAF FUNDS

Nor Asmat Ismail<sup>1</sup>

### **ABSTRACT**

Most Islamic countries today have large amounts of external debts or public borrowing. The concrete reason for public borrowing is that most Islamic countries still need enormous expenses for building economic infrastructure in order to alleviate poverty. However, in spite of huge amount of public sector expenditure financed through borrowing, most of these countries have not been able to alleviate poverty. Majority of the population in these countries are facing extremely low literacy rate and they are living in underdeveloped rural areas with extremely limited transport facilities, severely deficient health care facilities, very serious housing problems and no civic facilities, such as no safe drinking water, electricity, sewerage etc. This seems to indicate that external debt does not play a role in enhancing economic development. As a result, large external debts have become a severe chronic problem in these countries. To overcome large external debts problem, this paper suggest that these countries use internal funds, such as zakah and awqaf funds to accelerate economic growth.

**Keywords**: public expenditure, zakah, awqaf, poverty reduction, economic development.

### 1. INTRODUCTION

Traditional Keynesian theory implies that an increase in government spending can create an increase in consumption and aggregate demand. This theory makes expansionary fiscal policy (increase in government spending) attractive to those who believe in government intervention to improve the economy. However, some countries are facing short of government revenue to finance government spending. Therefore, the government borrowed from abroad in order to spend. This also happened in most Islamic countries and the concrete reason for public borrowing is that most Islamic countries still have enormous needs for expansion of their economic infrastructure and to alleviate poverty. However, after decades of large amount of government spending, most of these countries still have not been able to build viable physical and human infrastructures. Most of these countries have not been able to develop good railroad facilities, good roads, good schools and adequate health care facilities. The rate of literacy of population in these countries are extremely low and majority of the population are living in underdeveloped rural areas with very serious housing problems, severely deficient health care facilities, extremely limited transport facilities and inadequate civic facilities (no safe drinking water, electricity, sewerage etc). Even these countries also have not been able to provide sufficient energy for industrial and domestic requirements.

One of the reason why this happen is that the debt repayment amount is far exceeds the amount received. To give an example, according to the Jubilee Debt Campaign, in 2005 developing countries paid a combined 513.8 billion USD in debt repayments, while in the same year they received a total of 106.8 billion USD in official aid. The very poorest of them paid a joint 43.2 billion USD in debt repayments, while they received a combined 40.4 billion USD in development aid. This means that, despite significant

102

<sup>&</sup>lt;sup>1</sup> School of Social Sciences, Universiti Sains Malaysia. Email: <u>norasmat@usm.my</u>. h/p: 6019-2995039

amounts in aid, the net result is that the countries end up poorer every year. This is because poor countries are paying significant percentages of their GDP in servicing their debts. This means this money cannot then be invested in other sectors such as education, health and research and development which the key means to support countries' escape from poverty. Consequently, poor countries are often forced into taking out new loans just to service the old ones. So, they are trapped in a vicious circle of debt. In year 2009, the ratio of external debt to GDP is more than 100 percent in some countries, for example Guinea-Bissau, Kazakhstan and Somalia. Table 1 shows the percentage of external debt to GDP in Islamic countries for the period of 2001 to 2009. This study raise two questions. First, is government intervention through debt financing can accelerate economic growth?

To answer the first question, this study reviews some related studies. According to some studies done by several researchers, external debt is not favuorable. Deficit financing is a dangerous policy except in a very limited way, for example, to mobilize untapped resources by increasing aggregate demand through government expenditure, and only if the expected rate of social return from the project being financed through borrowing is higher than the cost of obtaining the resource (Munawar Iqbal 1992). Furthermore, according to Munawar Iqbal (1992), the big government philosophy has seriously flaws. The experience of many developed countries shows that economies have not become more stable because of governmental intervention; income distribution has not improved and the rate of growth has not eccelerated because of the larger government involvement.

Furthermore, according to Munawar Iqbal (1992), the big government philosophy has seriously flaws. The experience of many developed countries shows that economies have not become more stable because of governmental intervention; income distribution has not improved and the rate of growth has not eccelerated because of the larger government involvement. Economic historian also state that the period between 1870 and 1913 was one of the most dynamic periods for the economies of the modern world. The rate of growth was very high, and modern infrastructure such as railoads, roads and schools was built. Yet the level of public spending was remarkably low (10 percent of national income). This percentage raise doubts about the necessity for high levels of public expenditure in promoting economic growth. Furthermore, from Islamic viewpoint, the permissibility of public borrowing depends on certain conditions and circumstances only, for example, military service to defend the ummah. Improvement of material conditions of living and other public interest of beneficial nature should not be financed by borrowing. And the message of the Quran is very clear that the size of the government should be limited to what it collects through the zakah (the only taxation in Islam).

Since the government intervention through debt financing can not accelerate economic growth, and the the zakah is the only source of government revenue, the government have only one choice, that is to fully utilise internal funds such as zakah, awqaf and sadaqah. But the question now is how this internal sources of funds can be used to accelerate economic growth? This is the second question raised by this study. Before answering the second question, this study will discusses briefly about the definition of poverty, zakah and waqf. The rest of this paper is organized as follows. Section two discusses the definition of poverty, zakah and waqf. Section three discusses the concept of economic development in Islam, section four discusses the role of zakah and awqaf in economic development and section five concludes.

### 2. DEFINITION OF POVERTY, ZAKAH AND WAQF

The most common method of measuring poverty in conventional economic is income or consumption. A person in a particular country is considered poor if his/her income or consumption level is below the poverty line which is fixed by the government in that particular country. Poverty line is defined as the income or expenditure level required to purchase a predefined basket goods and services needed for basic needs. This poverty line is an income level that can sustain a minimum standard of living and separates the poor from the non-poor (world bank 1993). In Islam, the concept of poverty does not only represent deprivation of goods and services, but also poverty in spirit. Keeping this broader concept of poverty in Islam in mind, this concept of poverty and its alleviation indirectly adresses the spiritual aspects with the consideration of individuals can improve their material life by improving their spiritual lives.

Islam discourages extreme poverty and income inequality. Each individual is expected to exert his/her effort to the fullest extents of his potential to fulfill his/her needs. However, there may be situations and circumstances in which individuals will not be able to earn enough money to meet their needs. Islam has instituted social support mechanisms to support the deprived; zakah. The Quran says "And those in whose wealth there is recognized right. For the beggar who asks, and for the unlucky who has lost his wealth" (Quran 70:24-25). All Islamic jurists agree that the government is responsible for the implementation of zakah in a muslim society and responsible to check if individual payers are actually paying zakah on apparent and non-apparent properties.

Zakah means to grow, to purify and to increase. When it is said about a person, its means to improve, to become better. Consequently, zakah means blessing, growth, cleanliness, purification or betterment (Kahf 1999, Dogarawa 2009). Zakah is often seen as a means of purifying the wealth acquired by the giver as well as purifying the giver themselves by making them more sensitive to the needs of others (Zaman 1980). In the Islamic law, the word zakah refers to the determined share of wealth prescribed by Allah to be distributed among the categories of those entitle to receive it. It is a compulsory payment by the

wealthy to the economically underprivileged. In this way, the primary purpose of zakah is to purify the giver, a consequence of which is aiding those who are less fortunate. Because zakah is an obligation, some scholars argue that it should not be interpreted as a form of charity, but rather a right of the poor. While protecting the rights of poor and the main objective of zakah is to alleviate poverty, zakah also is a unique spiritually charged filtering device primarily designed to cleanse one's possession or wealth necessary to protect the owners of wealth against spiritual poverty.

Zakah is defined in Fiqh as "a due right on specific items of assets/properties, in specific percentages with consideration of the passage of a year and satisfaction of the condition of nisab." Various schools of Islamic jurisprudence maintain that zakah is compulsory on properties that fulfill certain conditions. Furthermore, the concept of tamlik (ownership) is an important aspect of owner of what is disbursed so that the recipient enjoys the full authority to use it at her/his free will.

Most of the items that are subject to zakah are mentioned in the texts of the Quran and hadith. These include gold and silver (two monies of the time), herds of camels, sheep and cows, goods readied for sale, and agricultural products. Islamic jurists (Fuqaha) classify zakatable items in to apparent and non-apparent assets. The apparent assets (amwal zahirah) are ones that can be easily observed. These would include agricultural products and livestock. The non-apparent assets/goods (amwal batinah) are not readily observable by outsiders. Goods for trade and cash fall under this category.

The quran (9:60) determines eight categories of heads to whom zakah can be paid, saying: Sadaqat (here means zakah) are only for the fuqara (poor), and miskin (the needy), and those employed to collect (the funds), and to attract the hearts of those who have been inclined (towards Islam), and to free the captives, and for those in debt, and for All-knower, All-wise." Other verses and sayings of the Prophet (pbuh) added destitute, orphans, and prisoners of war to the heads of zakah (Quran 76: 8, 51:19 and 70: 24-25). While no strict definition of poverty appears in shariah to categorize persons eligible to receive zakah, it is agreed upon that it is not meant for the rich. This is evident from the following hadith which says "the sadaqah (zakah) is not lawful to a rich or strong, non-defected (non-handicapped) person."

Waqf on the other hand, is a voluntary act of charity that comes under the general terms of sadaqah and infaq. Linguistically, waqf means stand still, hold still, not to let go. On the other hand, waqf is a form of endowment of a resource in perpetuity. It can be performed on behalf of someone who passed away, usually for public good. The purpose of a waqf is set by the endower and should only be changed in accordance with his or her will (John Gerhart Center, 2006 in Kefa 2008). The word waqf is used in the Islamic law in the meaning of holding certain property and preserving it for the confined benefit of certain philanthropy and prohibiting any use or disposition of it outside its specific objective (Monzer Kahf, 2003).

From shariah point of view, waqf is defined as holding a maal (an asset) and preventing its consumption for the purpose of repeatedly extracting its usufruct for the benefit of an objective representing righteousness/philanthropy. Hence, waqf is a continuously usufruct-giving asset as long as its principal is preserved. Preservation of principal may result from its own nature as in land or from arrangements and conditions prescribed by the waqf founder (Monzer Kahf, 1998).

From economic point of view, waqf is diverting funds (and other resources) from consumption and investing them in productive assets that provide either usufruct or revenues for future consumption by individuals or groups of individuals. This definition of waqf allows inclusions of all kinds of maal (asset) under waqf, so that land and construction can be made waqf for religious purposes, such as a mosque for prayers, for philanthropic purposes such as hospital, an orphanage or a school. Land and construction may also be made waqf for agricultural utilization or for any other productive utilization in industry and urban areas provided that the net revenues are exclusively devoted for nourishing philanthropy/righteousness

causes, such as spending on light and heat of a mosque, on feeding the poor and needy or on the current expenses of a hospital, a school or an orphanage.

An important characteristic of waqf relates to its objective, which means doing charity out of good intention. This implies that a waqf for bad or immoral objectives is not recognized. The objective of waqf may be for the society at large, including the provision of religious services, socio-economic relief to the poor, and other purposes. This kind of waqf is traditionally characterized as philanthropic or public. It aims at supporting the poor segment of the society and all activities that are of interest to people at large such as public utilities, libraries, scientific research, education, health services, care of animals and environment, lending to small businessmen, parks, roads, bridges, dams etc. In case of a family (ahli) or private (khass) waqf, the objective is related to the family and descendants of the founder or another specific person. A combined/mixed waqf (waqf mushtarak) has dual objectives of serving partly the family/descendants and partly the public.

Many scholars term the ownership of waqf assets/properties "as if it were owned by God". The founder (waqif) determines the objectives for which the waqf property can be used and the way its fruits, services and revenues can be distributed. The founder also determines the waqf management and the procedure governing the succession of managers. The organizational structure of awqf is flexible because it is essentially in the hands of the founder, who can mold it the way it pleases her/him. Waqf manager is usually called Mutawali, Nazir or Qayyim and his/her responsibility is to administer the waqf property to the best interest of the beneficiaries. The first duty of Mutawali is to preserve the property; this is followed by maximization of the revenues of the beneficiaries.

### 3. THE CONCEPT OF DEVELOPMENT IN ISLAM

Development or economic development should be consistent with the central objective of shariah: the welfare of the people and their relief from hardships. Economic development in Islam may be defined as a balanced and sustained improvement in the material and non-material well-being of man, and development as a multi-dimentional process which involves improvement of human welfare through advancement, reorganization and reorientation of entire economic and social systems in accordance with the norms and values of Islam. In this context, I would like to emphasize the concept of a two stage permanent life of human being. The life of mankind consists of two sequential stages: the worldly life (from birth until death) which is temporary, and the life of the hereafter (that begins after death) which is eternal and permanent. Thus, human life per se is one complete whole which is eternal, eventhough divided into two stages. Islam desires welfare of mankind for this complete whole. In funtional form,

$$W = f_1 (W_t, W_p)$$
 (1)

Human welafare,  $W_p$  is thus a function of welfare in both the temporary stage,  $W_t$  and that in the permanent stage,  $W_p$  of life. Here,  $W_t$  and  $W_p$  are again functions of separate sets of variables which determine welfare in the temporary and permanent stages of life respectively. The functions are as follows:

$$W_t = f_2(X_t, SED, ED, HD, Y_t)$$
(2)

Where  $X_t$  stands for variable related to economic development (e.g. political freedom, income equality, education, training, health, environmental peace and harmony and the like), SED stands for sources of economic development (e.g. zakat, sadaqah, awqaf), ED stands for economic development (wealth, income and the like), HD stands for human development (skill, healthy, educated, spirituality and the like),  $Y_t$  stands for variable unrelated to economic development but responsible for the welfare in

temporary stage of life (e.g. satisfaction derived from human accomplishment in this world like philanthropic contribution, sadaqah, waqf etc, compassion in human relationship and the like).

$$W_p = f_3 (Y_p, ED, SD)$$
 (3)

Where  $Y_p$  stands for variable unrelated to economic development but responsible for the welfare in the permanent stage of life (e.g, ibadah), ED stands for economic development (economic development still contribute to the welfare in permanent stage of life because more income ao more wealth can contribute to more zakah, sadaqah and waqf). and SD stands for spiritual development. These formulations show that economic development is a common argument in both the individual welfare functions,  $W_t$  and  $W_p$  which implies that economic development is an explanatory variable in the overall welfare function,  $W_t$ . In other words, economic development has an important role to play in the achievement of welfare in both stages of human life. Economic development is a function of sources of economic development (SED), human development (HD) and variable related to economic development (e.g. political freedom, income equality, education, training, health, environmental peace and harmony and the like), ( $X_t$ ). In functional form,

$$ED = f_4 (SED, HD, X_t)$$
 (4)

The uniqueness of the Islamic concept of economic development is that the terminology incorporates within it the welfare elements in both stages of human life. The welfare of these two stages is so related that  $W_p$  cannot alone maximize  $W_t$ , if  $W_t$  is zero or negative. And since the permanent stage (life of the hereafter) is definitely longer than the temporary one,  $W_t$  can never be maximized by sacrifying a major and significant portion of  $W_p$ . There may, however, arise a trade-off problem: an increase in  $W_t$  may involve a decrease in  $W_p$  and vice versa. In such a situation the individual concerned may choose an appropriate combination of  $W_t$  and  $W_p$  on the basis of the weight of arguments in the objective function. An individual with preference for  $W_p$  is expected to maximize  $W_t$  subject to the constraint of some minimum value of  $W_t$ . An individual at the other extreme may prefer to maximize  $W_t$  subject to the constraint of a minimum scale of  $W_p$ . A conscientious person with knowledge and practice of Islam may make his whole life as Ibadah by adhering strictly to the norms of Islam in all activities of life. So,  $W_t$  and  $W_p$  reinforce each other instead of creating a trade-off problem. The strength of such reinforcement depends, however, on the degree of such consientiousness exhibited by different persons.

Economic development is related to Islamic would be that which contributes to welfare in the both stages of human life. Economic development is related to Islamic values in two ways. First, economic development has been defined as a balanced and sustained improvement in material and non-material well-being of man which is not complete without a high moral standard resulting from Islamic values. Second, the establishment of Islamic values requires spending on Islamic education, propagation of Islam and so on. This spending is expected to be positively related to income level and the strength of one's Iman (belief).

### 4. THE ROLE OF ZAKAH AND AWQAF IN ECONOMIC DEVELOPMENT

The message of the Quran is very clear, specifically in mentioning that the size of the government sector should be limited to what it collects through zakah, the only tax in Islam. All Islamic jurists agree that the government is responsible for the implementation of zakah in a Muslim society. In Malaysia, there is a specific body (Religious Council in every state) that responsible to collect and distribute zakah and to manage awqaf funds. If zakah and awqaf funds are properly managed, these funds could replace external borrowing and therefore significantly reduce the debt burden. So, Religious Council in every state should

be creative, innovative and expert in business in order to fully utilize the zakah and awqaf funds to accelerate economic development and at the same time to improve welfare of the individual.

Zakah is one of the important instruments to increase welfare of individual both in temporary and permanent stage of their life. Economically, zakah is one of the important instruments to increase the wealth of the poor. Zakah aims at eliminating poverty and the desire for personal accumulation at any cost, and encouraging socially orientated behavior. It aims for the reduction of socio-economic differences by providing financial help to the have-not to bring them closer to the haves. It can be done in two ways. First, the person capable to work will be given what he/she needs to become a productive earner so that he/she can earn an income that satisfies the basic needs. This may includes education, training and capital to start a business. The distribution of zakah in the form of education, training and capital goods, (like a taxi, sewing machine etc) not only enriching the poor and making them productive elements in the society, but also encourages entrepreneurship and increases the supply of entrepreneurs. This effect is further enhanced by the overall zakah system which provides social security type of arrangement that stimulates new business venture. This will increase employment and productivity.

Second, the unproductive members of the society such as the elderly, sick, widows, handicapped etc, will be provided periodic income to support them to afford consumption of the basic needs. Therefore, zakah increases the demand for goods which fulfills the basic needs of the poor. Hence, zakah also influence investment because the multiplier effect which results from a rise in aggregate consumption increases investment.

Investment could be more attractive if there are sufficient economic infrastructures or facilities are provided by the government. The provision of economic infrastructure can be done using awqaf funds. As I mentioned earlier, the person who manage awqaf (mutawali) should be very creative in generation of income or profit from awqaf properties. The generated profit can be used to provide infrastructures or facilities to attract more investors. Furthermore, it also can help the poor by providing them capital to start business, education and training to become more productive. By assuming that the efficiency problems are solved, the waqf system can significantly contribute towards that ultimate goal of every modern economist; massive reduction in government expenditure which leads to a reduction in the budget deficit, which lowers the need for government borrowing.

From the point of view of Islamic economies, the most important item in the above mentioned agenda is, obviously, the reduction in the government debt. The waqf can, indeed, lower the debt and debt repayment by providing the most essential social services without any cost to the government. This important contribution of the waqf system towards the gradual elimination of debt is not yet recognized by the Islamic economists. It will be proposed here that it should be. Put differently, a re-establishment and revitalization of the waqf system should be considered as a vital step in the struggle to eliminate debt.

The waqf could fulfill those functions by voluntarily donations made by the rich. Thus, privately accumulated capital may be voluntarily endowed to finance all sorts of social services to the society. At this point another extremely important function of the awqaf becomes apparent: not only does it help reduce government expenditure and consequently the debt, it also achieves another modern economic goal; a better distribution of income in the economy and increase welfare of individual in temporary and permanent stage of their life.

In the concept of development in Islam as discussed above, zakah and awqaf improve the welfare of the people in temporary and permanent stage of life, (Wp and Wt) for either the rich or the poor. For the rich, zakah not only purify the wealth but also purify the themselves by making them more sensitive to the needs of others, but also improve the strength of their Iman (believe) to become more pious or better person. It is expected that there are positive relationship between zakah and the strength of one's Iman. It

is also expected that waqaf is positively related to the strength of one's Iman. As people become more sensitive to the needs of others, they will be more willing to pay zakah and sadaqah (waqaf) and their welfare will be improved both in the temporary life and permanent life. As more people pay zakah, the amount of zakah collection become bigger. So the waqaf, as more people contribute to waqaf or more properties allocated for waqaf, the funds become bigger and bigger. The bigger funds will be spending to provide income and services for the poor and the welfare of the poor in temporary and permanent life will be improved. Based on the positive relationship between zakah and awqaf and the strength of one's Iman, it is expected that the strength of their Iman will be improved too. In this case, zakah and waqaf funds do not only alleviate material poverty but also spiritual poverty. Zakah and waqaf also generate a situation of good relationship between the rich and the poor. They will live in a society with full of peace and harmony and again will improve their welfare.

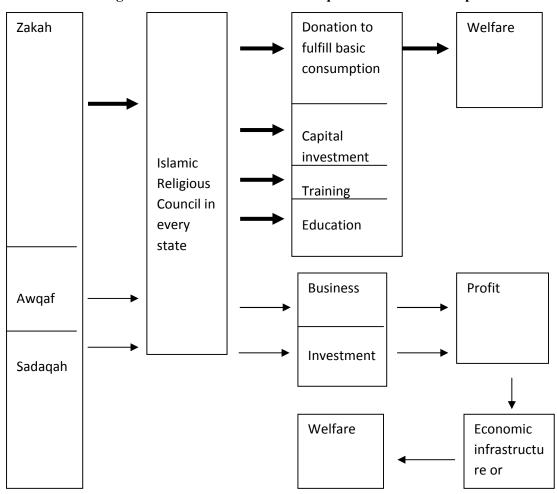

Figure 1: The role of zakah and awqaf in economic development

### 5. CONCLUSION

Muslim countries have relied extensively on external borrowing to fill the gap in public budget. As a result, external debt has grown and debt repayment became a big problem to them as they have to pay interest. Beside other problems, interest payments are eating a sizeable part of total government expenditure. In Islamic countries, this is most unfortunate. In addition to the economic problems that this public debt is creating for these countries, they are in violation of Islamic shariah. As a matter of fact, a number of their economic problems are a result of ignoring the government expenditure should be limited to what it collects through zakah, awqaf and sadaqah. Zakah and awqaf do not only contribute to economic development or poverty alleviation but also contribute to human development through eradication of spiritual poverty and achievement of welfare in both stages of human life.

### ZAKAT AS AN INSTRUMENT FOR POVERTY ALLEVATION: A CASE STUDY OF NIGER STATE ZAKAT BOARD, NIGER STATE NIGERIA.

Adam Idris<sup>1</sup> S. O. Muhammad<sup>2</sup>

### **ABSTRACT**

The importance of zakat in poverty alleviation among Muslims cannot be overemphasized. This paper presents the meaning and essence of zakat, highlighting its spiritual and economic benefits. Attention was drawn to underscore how obligatory it is in Islam. This was followed by discussions on assets subject to zakat. A brief explanation on poverty and its features was presented, succeeded by expositions on zakat's potential for its alleviation. This provoked discussions on the importance of planning the collection and distribution of zakat to achieve maximum social benefit. We emphasize the relevance of institutionalizing the collection and distribution of zakat as a panacea for realizing this goal. Explanations were presented with reference to its institutionalization in Niger state; one of the Northern states with dominant Muslim population in Nigeria. The paper concludes with a recommendation for planning zakat in Muslim communities.

Keywords: Zakat Assets, Zakat Institution, Poverty Alleviation

### 1. INTRODUCTION

The literal and simple meaning of zakat is purity. The technical meaning of the word designates the annual amount in kind or coin which a Muslim with means must distribute among the rightful beneficiaries.

In sharia, the word zakat refers to the determined share of wealth prescribed by Allah [SWT] to be distributed among the categories of those entitled to receive it. According to an-Nawawi's report from al-Wahid the share of wealth is called zakat because it increases the funds from which it is taken and protect them from being lost or destroyed. Growth and cleanliness are not restricted to the assets from which zakat has been taken, but affects the person who pays zakat. This is in line with the verse which stipulates:

### "Take zakat from their wealth to purify and cleanse them" 9;103

In elaborating the purpose of Zakat and its genesis, Umer Chapra (2000) observed that Zakat is not really a task in the normal sense of the term, It is the religious obligation of a Muslim, in the same way as prayer, fasting and pilgrimage as they are, a Muslim is expected to pay a specified proportion of his or her net worth or output. Its proceed cannot be spent by the state for any purpose that it deems desirable. It is essential as a social self help measure adopted with full religious backing to support those among the poor and destitute who are unable to help themselves so as to eliminate misery and poverty from Muslim society.

Islam as a religion is unprecedented in the extent of its care for the poor and in its determination to solve the problem of poverty whether through directives and

\_

<sup>&</sup>lt;sup>1,2</sup> Kwara State Shariah Court of Appeal, Ilorin, Nigeria.

recommendations that enjoins Muslims to show mercy to the poor, through legislation and laws or through implementation and application.

Every religion including those created by man has considered mercy to the poor to be a humanitarian social issue, without which oneness and a high standard of living cannot be realized. Because of the importance of this institution, all the prophets sent by God one way or the other enjoined their followers to give out zakat for the benefit of the mankind. This will be elaborated as we go further in this paper.

The voice of Divinely revealed religions calling for the care of the poor and weak has been even louder than other religions systems, having a deeper effect than any human philosophy or man-made law: I cannot believe any messenger of Allah has passed through the world without calling for the care of the poor, called zakat in the Our'an.

In the Holy Our'an, which is the most authentic Divine text existing on earth today, which mentioned the Messages of Ibrahim and Ya'qub. Allah says: (21:73)وَجَعَلْنَهُمْ أَئِمَةً يَهْدُونَ بِأَمْرِنَا وَأَوْحَيْنَا ٓ إِلَيْهِمْ فَعُلَ الْخَيْرَتِ We made them leaders, guiding by Our وَإِقَامَ الصَّلَوة وَإِيَاءَ الزَّكَوَة وَكَانُو الْنَا عَابِدَينَ. command and revealed to them the doing of good actions and the establishment of the prayer and the payment of zakat, and they worshipped Us".

Isma'il's Message is described in the following:words "Mention Isma'il in the Book. He was true to his promise and was a Messenger and a Prophet. He used to command his people to pray and give zakat and he was pleasing to his Lord". (19:54-55).

وَاذْكُرْفِي الْكَتَابِ إِسْمَاعِيلَ إِنَّهُ, كَانَ صَادِقَ الْوَغْدِ وَكَانَ رَسُولًا نَبِيًّا وَكَانَ يَأْمُنُ أَهْلَهُ, بِالصَّلُواةِ وَالزَّكَاةِ وَكَانَ عندَ رَبِّهِ. مَرْضيًا.

We also see the pledge of the tribe of Israel: "Remember when we make a covenant with the tribe of Isreal (2:83).

"Remember when We made a covenant with the tribe of Israel: 'Worship no one but Allah and be good to your parents and relatives and to orphans and the very poor. And speak good words to people. And establish the prayer and pay zakat. But then you turned away except a few of you. You turned aside"

وَإِذْ أَخَذْ نَا مِيثَاقَ بَنِي إسْراعِيلَ لاَتَعْبُدُ ونَ إلاَّ اللَّهَ وَبِالْوا لدَيْنَ إِحْسَانًا وَذِي الْقُرْبَى وَالْيَتَامَى وَالْمَسَاكِين وَقُولُوا لِلِنَّاسِ حُسْنًا ﴿ وَأَقِيمُوا الصَّلَوةَ وَعَاتُواالزَّكَاةَ ثُمَّ تَوَلَّيْتُمْ إِلاَّ قَلْيلاً مَنكُمْ وَأَنتُمْ

Also Prophet Isah is described by his own words as a baby in the cradle. (19:31).

He has enjoined upon me prayer and charity as long as I live.

وَجَعَلَني مُبَارِكًا أَيْنَ مَا كُنتُ وَأَوْصَالَى بالصَّلاة وَالزَّكَاة مَادمُ ثُ And made me blessed wherever I may be: and

Zakat is comprehensive holistic and systematic as deduced and derived from the Quran and Sunnah.

The above verses shows that

all religions share the concern for and care of the poor and weak members of the society. Islam expressed concern in these matters as early as the Makkan period. Thus the system of zakat preceded all similar legislation in the world.

In the recent time the World Assembly has rightly pointed out in their statement "that poverty, condition where people lack the basic necessities to sustain life, is a pervasive reality in our world". Islam being a comprehensive religion, has sincerely dealt with different aspects of this question and has shown us some ideology which may be helpful to protect the rights of the poor. One of these avenues is the issue of zakat, wealth remain in constant circulation among all sections of the societies and must not become the monopoly of the well to do. To achieve this sublime objective, Islam established beside zakat the institutions of inheritance and regular charity.

Islamic law guarantees every person in the Islamic state, Muslim or not a suitable standard of living. This is with the objective that food, clothing and shelter are available in addition to health care and education. It is a system which aims at satisfying the poor and the needy, and their families for life. But natural disasters may unexpectedly befall any person, wealthy or not, whether farmer, merchant, industrialist or landlord. Natural disaster may be common to a whole area, like drought, flood, insecticide, contamination, explosions, or there may be individual, such as car accidents, fires, or loss of assets or source of income through the war.

It will be recalled that during the life time of the Prophet (SAW), the collection and distribution of Zakat was handled by the State. The practice continued during the life time of the rightly guided caliphs and thereafter. Its importance can be seen from the fact that the commandment to perform prayers is immediately followed by the orders for Zakat in twenty various places in the Quran. The consensus opinion among Muslim Scholars is that it certainly occupies a place second in importance to prayer. And to underline the importance of Zakat as the corner stone of the financial structure of an Islamic state, when some Arab tribes refused to pay out Zakat to the public treasury immediately after the death of the prophet (SAW), the Caliph Abubakar had to enforce it even at the point of sword. Thus, he protected not only the financial structure of the state but the entire edifice of Islam as well.

Caliph Abubakar maintained that there is no difference between prayer and Zakat and as such it is lawful to wage a holy war against those members of the Muslim community who withhold Zakat, which is the right of the whole community on the wealth of the individuals as the prayer is the right of Allah on every believer. However, this practice was later ignored as a result of many factors.

These may include deviation of the Muslim Ummah worldwide from the path of Allah, wars of conquests, colonial subjugation and un-purposeful indigenous administration among others. Consequently, the collection and distribution of Zakat was left in the hands of individuals and groups who may not necessarily be conscious of the rules and regulations of this important pillar of Islam. First and foremost, there is need to remind ourselves of what the institution of Zakat is in Islam.

### 2. THE CONCEPT OF ZAKAT IN ISLAM

Zakat is one of the pillars of Islam. It is second in importance to Salat. This is because hardly is a Muslim enjoined in the Qur'an to establish regular prayers without being asked to give out Zakat to its due beneficiaries if he has the means.

In the Qur'an, Allah directs: "of their wealth, take alms so that you may purify and sanctify them". He also adds: "And be steadfast in prayer and regular in charity, and whatever good you send forth for your souls before you, you shall find it with God: for God sees well all that you do".

Allah rebuked Zakat defaulters and assures them of stern punishment where He says,

"And there are those who bury gold and silver and spent them not in the way of Allah, announce to them a most grievous penalty on the day when heat will be produced out of that (wealth) in the Hell fire and with it will be branded their fore heads, flanks and backs. This is the treasure which you buried for yourselves and you shall taste it. "

The Sunnah of the Prophet (SAW) has also made the compulsory nature of zakat clear. The Prophet (SAW) was reported to have said:-

"Islam is built on five pillars. The testimony that there is no deity worthy of worship except Allah. The establishment of daily prayers regularly and promptly, the giving out of alms to the poor, the observance of the month of Ramadan for fasting for the sake of Allah, the performance of pilgrimage to Ka'aba if one can afford it at least once in a lifetime."

Therefore, the people with means among us should be conscious of Allah and treat the less fortunate members of the society with kindness by prompt paying of their Zakat among others.

Zakat has also the effect of leveling up the general level of prosperity in a community. The taxing of idle money inevitably leads to its compulsory employment in productive channel which in turn increases the national wealth of a country. The zakat is the main tax in the Islamic state which answers all the requisites.

The low taxable limit and the principle of proportionate sacrifice tend to reduce the gulf between the high and low incomes and level up the differences by preventing the accumulation of wealth into the hands of a few individuals. This results in a general prosperity, i.e. the prosperity of the largest number, and as the prosperity increases, the number of those contributing the tax increases with a proportionate decrease in the number of those indigent and unemployed whose maintenance is the first charge on zakat. This shows that not only the growth of zakat is automatic as the wealth and population increases, but it is a potent instrument of increasing the wealth of a country.

It is worth noticing that whatever the needs of a given state, however great the contingency, it is of the greatest paramount that the system of zakat as laid down by Allah (SWT) should remain inviolable. Rather it is open to the state to devise and impose new taxes, should situation call for it, such as war or when wealth perpetually remains concentrated in few hands to the detriment of the rest of the populace. This will be emergency imposition and should be withdrawn as soon as the condition improves, but it will have no bearing with zakat which must remain inviolable.

### 3. ASSETS SUBJECT TO ZAKAT

The Qur'an does not give the definition of the kinds of wealth on which zakat should be paid nor does it provide the required percentages of zakat. It is left to the Sunna to give, by example or by directives, details of the general Qur'anic command and to convert the theoretical axioms of the Qur'an into a living reality in human life. The Prophet (S.A.W) was assigned this responsibility and the Book. Allah says: (16:44) It must be realized, however, that the Qur'an does mention a few kinds of zakatable assets, such as:

"And We have sent down the Reminder بِالْنِينُ الذَّيْرِ وَأَنزَلْنَا إِلَيْكَ الذَّعْرِ لِتَّبَيِّنَ لِلنَّاسِ مَانْزَلَ إِلْيُهِمْ

to you so that you can make clear to

mankind what has been sent down to them so that perhaps they may reflect".

- Gold and silver in the verse: "As for those who hoard up gold and silver and do not spend it in the way of Allah, give them the news of a painful punishment". (9:34).
- Crops and fruits that are referred to in: "Eat of their fruits when they bear fruit and pay their due on the day of their harvest". (6:141).
- Earnings from trade and other business ventures, referred to in the verse: "O you who believe! Give away some of the good things you have earned". (2:267).
- What is brought out from beneath the earth: "and some of what the earth produces for you"

Except for these items, the Qur'an mentions zakat in general and the word annual (assets or wealth) in its plural form, such as in verse. (9:103)

"Take sadaga from their wealth to purify and cleanse them".

خُذْ مِنْ أَمْوَ الهُمْ صَدَفَةَ تُطَهِّرُ هُمْ وَ اللَّهُ سَمِيعُ عَليمُ.

and. (51:19)

"And the beggars and destitutes received a due share of their wealth"

وَفِي أَمْوَالهمْ حَقِّ للسَّا ئِلِ وَالْمَحْرُومِ.

See Appendix A for the more elaboration on the Nisab of Zakat on various animals.

### 4. ZAKAT ON BUSINESS GOODS

Since practicing trade is lawful, several sayings order the guardians of orphans to invest orphan's wealth in trade so that it is not exhausted by the repetitive payment of zakat. It is normal that part of the wealth of any nation is used in trade and business exchange, and it is no wonder that Islam prescribes zakat on assets invested in business and commerce as well as on the income derived there from. Like zakat on money, zakat on business is an expression of thankfulness to Allah for His bounties by caring about those of His servants who are in need.

Islamic jurisprudence addresses itself to the details of this kind of zakat. Business goods are called by jurists 'urud at-tijara', which means anything obtained for the purpose of trade for profit, except liquid monetary assets. This definition includes machinery, furniture, clothing, foodstuffs, ornaments, jewellery, livestock, agricultural produce, land, buildings, etc. Some jurists define 'urud at-tijara' as anything that one buys in order to sell for profit. A Muslim who owns business goods equal to the nisab of money or more at the end of a zakat year must pay its due zakat at the rate of two and a half percent. This zakat is levied on the principal and increments accruing above the principal.

### 5. ZAKAT DISTRIBUTION AS DEFINED BY THE QUR'AN

According to Yusuf al-Qardawi, the collection of zakat is discussed in the Qur'an as a general concept, where it can be spent is specifically mentioned in the Qur'an; it was not left to rulers or those with personal opinions to decide according to their whims. At the time of the Messenger, some greedy individuals tried to take some proceeds of zakat, but when the Prophet did not yield to their attempts, they criticized and censured the prophet to such an extent that Allah sent verses deploring their greed and uncovering their hypocrisy. See Qura'an (9: 58-60).

يَسْخَطُونَ. وَلَوْ أَنَّهُمْ رَصُوا مَآءَاتَاهُمُ اللهُ وَرَسُولُهُ, thee (O Prophet) concerning (the distribution of) the offerings given for the sake of God. If الله سَيُؤْتِينًا الله مِن فَصْلِهِ, وَرَسُولُهُ, إِنَّالِلَي اللهِ

م مَّن يَلْمِزُ ك في الصَّدَقَات فَإِنْ أَعْطُوامِنْهَا رَضُوا وَإِن لَمْ يُعْطُوا And among them are such as find fault with they are not given anything thereof, lo! They إِنُّمَا الصَّدَقَاتُ للْفُقْرَآء وَالْمَسَاكِينَ وَالْغاملينَ عَلَيْهَا

are consumed with anger. And yet, (it would be but for their own good) if they were to content themselves with that God has given them and (caused) His Apostle (to give them) and would say, "God is enough to us! God will give us (whatever He wills) out of His bounty, and (will cause)

His Apostle (go give us, too): verily, unto God alone do we turn with hope!" the offerings given for the sake of God are (meant) only for the poor and the needy, and those who are in charge thereof and those whose hearts are to be won over, and for the freeing of human beings from bondage, and (for) those who are overburdened with debts, and (for the wayfarer: (this is) an ordinance from God – and God is all-knowing, wise.

وَالْمُوَلَقَةَ قُلُوبُهُمْ وَفِي الرَّقَابِ وَالْغَارِمِينَ فِي سَبِيلِ اللهِ وَابْنِ السَّبِيلِ فَرِيضَةً مَنَ اللهِ واللهُ عَلِيمُ حَكِيمٌ.

Also Abu Dawud narrated that he went to Prophet Muhammad (SAW) and give him his pledge, during the pledge a man came to the Prophet (SAW) and requested the Prophet (SAW) to give him the proceeds of zakat, the Prophet (SAW) responded immediately that he would only be entitled to what he demanded for if he belonged to the categories mentioned by the Qur'an.

### 6. POVERTY AND ITS MAIN FEATURES

Poverty has been defined in absolute and relative terms. Absolute poverty refers to a condition where a person can not meet up with the most basic requirement necessary for human survival. These include food, clothing, shelter, health and education.

Poverty has various manifestations which include among others, lack of income and productive resources sufficient to ensure sustainable livelihood and mal-nutrition, ill health, lack of access to education, homelessness and inadequate, unsafe and degraded environment.

The introduction of any poverty eradication programme should also not be done without the involvement of the people from the design through the implementation monitoring and evaluation of programme. The involvement of people who have fear of God this, will allow for adequate flow of information most especially at the community level.

To enable Zakat to play its role meaningfully however, a number of scholars have suggested that it should become permanent supplement for only those who are not capable of earning enough through there own efforts, to implement this therefore there is a need to develop an institutional mechanism whereby the collection and disbursement of Zakat proceeds can carefully be planned and implemented for maximum social advantage.

This brings me to the appraisal of the collection and distribution efforts of Zakat Board of Niger State, which will assist us to introduce a similar board or organization in any muslim country for the purpose of alleviating poverty within the Muslim community. We have earlier mentioned the obligatory nature of zakat and it is in fulfillment of this religious obligation that the Niger State Zakat and Endowment Board was established in 1999 by the Niger State Government. The board is charged with the responsibility of collecting and distributing zakat in Niger State.

### 7. THE ORGANIZATIONAL STRUCTURE OF THE BOARD

The Board meets at regular intervals to take decisions in order to achieve the objectives for which it was established. In pursuance of this, it has established four standing committees. They include collection, distribution, staff disciplinary, and finance and general purpose committees respectively.

Each committee has three members of the Board and Directors.

### 7.1 The Functions of the Collection Committee

- (i) serving as secretaries. The collection committee shall among others:
- (ii) ensure effective collection of zakat, alms, etc.
- (iii) listen to complaints from collection officers and zakat payers,
- (iv) ensure the adequacy of collection procedure
- (v) recommend disciplinary measures against erring Board collection officers

### 7.2 The Functions of the Distribution Committee

The Distribution Committee shall perform the following functions:

- i) ensure effective and efficient distribution of zakat as laid down in the Qur'an
- ii) attend to complaints from recipients/beneficiaries about distribution officers.
- iii) ensure the adequacy of, and compliance with the distribution guidelines.

### 7.3 The Functions of the Staff Disciplinary Committee

The staff disciplinary committee shall:

- i) ensure that prompt action is taken against erring staff of the board.
- ii) handle disciplinary cases of all erring staff below the rank of Directors.
- iii) recommend disciplinary action against erring officers from the rank of Directors and above to the Board.

### 7.4 The Functions of Finance and General Purpose committee

The Finance and General Purpose Committee shall:

- i) consider and approve financial expenditures of the Board other than zakat and charity funds distribution and utilization up to a maximum limit to be sent by the Board.
- ii) make recommendations to the Board in respect of sums above its power.

The Board consist of three directorates. These are collection and endowment, distribution, and finance and administration respectively. Each directorate is headed by a Director and is assigned specific functions to enable the Board collect and distribute zakat effectively.

### 7.5 The Functions of Collection and Endowment Directorate

The Collection and Endowment Directorate shall:

- i) collect due zakat from zakatable Muslims as stipulated in the relevant provisions of the law establishing the Board.
- ii) seek and collect endowment, donations and zakat from individual, organizations and government within and outside the state.
- iii) keep record of zakat, endowment, alms, donations and other charities.

### 7.6 The Functions of the Distribution Directorate

The Distribution Directorate shall:

- i) distribute the collected proceeds of zakat in accordance with the Qur'anic injunctions to the stipulated beneficiaries with guiding instructions of the Board.
- ii) keep record of all beneficiaries of zakat distributed.

### 7.7 The Functions of the Finance and Administration Directorate

The Finance and Administration Directorate shall:

i) provide an efficient administrative structure for the smooth

functioning of the Board and ensure that the personnel employed by the Board work for the attainment of the objectives for which the Board is established.

ii)ensure proper keeping of records of all financial transactions of the Board for accountability and transparency.

In addition to this, the Board has set up zonal zakat committees at emirate level in all the eight emirates of the state. Each committee consists of six members nominated by the Emir and approved by the Board. District Zakat councils were also set up at district level in all the districts in each emirate. Each council consists of six members nominated by the Emir and approved by the Board. The member of the councils were given induction courses at their emirates. The induction courses given to the members of these committees and councils aimed at intimating them with their functions. Topics to be discussed at the induction sessions include functions of the Board, functions of zonal zakat committees, functions of district zakat councils, zakat collection procedures, method/criteria of distribution of zakat and beneficiaries of zakat.

The committees and councils were charged individually and collectively to work in harmony with each other in the collection and distribution of zakat. They were also implored to enlighten the Muslims in their areas on the importance of zakat collection and warn them of the dangers of refusing to comply with the divine injunctions in this respect. They are also to collect zakat from the zakatable Muslims in their areas as volunteer staff of the Board. In addition, they are implored to persuade the wealthy Muslims in their areas while collecting the zakat by appealing to their personal honesty and encourage them to assess themselves sincerely.

The Board Headquarters, Zonal Zakat Committee (ZZC), and District Zakat Councils (DZC) operate official bank accounts respectively where collectable zakat are kept before distribution takes place. No money is withdrawn from these accounts except as authorized by the Board. They also issue official receipt for all zakat collected before lodging them in their accounts. With these structures on ground and close monitoring, the Board is optimistic that huge success will be recorded in the nearest future.

It is also important to note that the Board receives financial assistance form the State Government in running its affairs. It has also collected some zakat of money, animals and grains from the zakatable Muslims in the state.

### 8. COLLECTION OF ZAKAT

Though at the inception of the Board, the collection of zakat was centralized and the wealthy Muslims were advised to pay their zakat at its Secretariat in Minna, however, with the introduction of the Zonal Zakat Committees in all the emirates and district Zakat Councils,

the zakatable Muslims were encouraged to give them their zakat as volunteer staff of the Board.

The staff at the Board headquaters, zonal and district levels were collectively and severally charged with the responsibility of collection of zakat, alms and donations. They were required to carry out this assignment with diligence. They were also used in the enlightenment of the Muslim ummah on the importance of zakat. The Board gave them identity cards, assessment forms, posters, receipts and other materials to make their work effective.

In addition to the zakat accounts at the Board headquarters, the zonal zakat committees and District zakat councils were given money to operate separate accounts in their respective areas where the collected zakat is kept for safe keeping before same is distributed.

The Board has set up a machinery to ensure adequate compliance is achieved and continue to monitor their activities for optimal performance. It also made use of the print and electronic media to enlighten the Muslim Ummah of its activities and solicited for its co-operation to achieve success. It also used the traditional rulers at all levels in the same direction.

It is noteworthy to inform the Muslim ummah and the general public that since inception, the Board Headquarters has collected a total sum of fifteen million four hundred and eighty thousand, nine hundred and forty-four Naira (N15,480,944) only as zakat from fifty-one zakatable Muslims in the state. While the eight zones have jointly collected a sum of Four million, one hundred and sixty nine thousand, one hundred and seventy-nine Naira (N4,169,179.00) only from some wealthy Muslims as zakat.

This shows that the board has collected a total sum of nineteen million, six hundred and fifty thousand, one hundred and twenty-three Naira (N19,650,123.00) only as zakat.

### 9. DISTRIBUTION OF ZAKAT

The distribution of zakat takes place periodically at the Board Headquarters to the Districts beneficiaries as approved by the Board. See Appendix B and C for the forms designed and guide lines for the distribution.

As a matter of fact, the Board ensures the adequacy of, and compliance with its distribution guidelines. It is also important to note that it distributes the collected proceeds of zakat in accordance with the Qur'anic rules to the stipulated beneficiaries without fear or favour, ill-will or affection. It also keeps records of the distribution at all levels in order to forestall duplication of efforts and provide information for ease of reference.

The Board is also responsible to guide and counsel the zakat beneficiaries on the need to be prudent in using the money given to them with the hope that they will be able to assist themselves and others. Through its agents who monitor the activities of the beneficiaries, it receives positive report about their empowerment thereby reducing the poverty rate in their society. This explains the rationale behind fixing a minimum of twenty five thousand Naira (N25,000.00) only to each beneficiary as provided by the Board's guidelines on distribution of zakat as shown on the table marked Appendix "B" overleaf.

The Board has distributed large portion of the collectable zakat to the districts' beneficiaries in all the one hundred and seventeen (117) districts in the state on the basic of equity and level of performance. It is also important to note that each district is given four beneficiaries on the basis of equity and additional ones based on their level of performance in collecting zakat. Each beneficiary receive a sum of twenty five thousand Naira (N25,000.00) only.

From the records before you on distribution of zakat as shown by Appendix "C" attached overleaf during the period under review, five hundred and fifty (550) beneficiaries received a total sum of Thirteen million, Seven hundred and fifty thousand Naira (N13,750,000.00) only on the basis of equity, while sixty three beneficiaries received a sum of one million, five hundred and seventy five thousand Naira (N1,575,000.00) only on the basis of level of performance in the collection of zakat in their areas respectively.

The rationale behind the distribution of zakat on the level of performance in the collection of zakat from the zones and districts is to encourage healthy competition among the zones. It is also important to note that the distribution of zakat collected at all levels was adequately supervised by the officials from the Headquarters of the Board to ensure compliance with its guidelines. These activities were embarked upon by the Board to ensure effective collection and distribution of zakat to ameliorate the suffering of the poor. At this juncture, we wish to inform you that despite the good will of the government to the Board, there are some obstacles militating against effective performance. The obstructions were caused by the following:

- i) Antagonistic preaching against the Board by the traditional zakat beneficiaries.
- ii) Ignorance and negligence on the importance attached to zakat.
- iii) Misinformation about the functions of the Board
- iv) Inadequate vehicles to be used in plying all nooks and crannies for effective collection and distribution of zakat.
- v) Insufficient qualified and committed manpower to handle zakat offices at zonal, district village and ward levels.

### 10. CONCLUSION

In conclusion, we have tried to trace the genesis of zakat to the Prophet (SAW) of the old starting from Prophet Ibrahim Yaqub through Ismail, Isah to Prophet Muhammad (SAW). We have also shown the resistance of some Arab tribes to zakat after the demise of the Prophet Muhammad (SAW) and how the sanctity of the institution was restored by Caliph Abubakar (R.A.), we have also discussed the concept of zakat as well as assets that are subject to zakat. Similarly, we have had a quick look at zakat on business goods and the distribution of zakat as defined in the Qur'an. Finally, a quick glance is cast at poverty and its main features with a view to finding solutions to them through the institution of zakat.

In an attempts to find solutions to poverty through zakat, we have examined carefully and in detail the initiative of the Niger State in Nigeria. Disturbed and disappointed with the haphazard attitude to zakat, the state established a formal organization to champion the cause of zakat in the state. We have examined the Board that was officially established for the purpose, its structure, function, achievements and weakness so that other Muslim communities can borrow a leaf from this and adapt it to suit its own environment. May Allah guide us all right and grant us the spiritual courage to follow His guidance.

# APPENDIX (A) GUIDELINES FOR THE DISTRIBUTION OF ZAKAT COLLECTED BY THE ZAKAT AND ENDOWMENT BOARD

- 1. No. zakat collected by the Board at the Headquarters, Zonal and district levels shall be distributed to beneficiaries unless with the explicit approval of the Board and written authority of the Board's Executive Secretary.
- 2. Zakat distribution at all levels shall be in accordance with the Board's procedure duly communicated to the distributions through the Board Secretariat.
- 3. Distribution to the various administrative or community units must be based on equity and level of performance
- 4. Zakat must be distributed only to those categories of people mentioned in the Qur'an, chapter 9 verse 60 namely. The poor, needy; zakat collectors, in Allah's cause, inclined hearts to Islam freeing captives, insolvent debtors and wayfares.
- 5. Ten percent of zakat monies received at the Board Headquarters shall be retained by the Board for distribution periodically to beneficiaries who occasionally can at the secretariat and to enhance its general collection efforts.
- 6. Each of the beneficiary group mentioned in (4) above shall have the share of the zakat to be distributed in the following proportion the poor 30%, needy 30%, zakat collectors 10%, cause of Allah 10% inclined hearts 5%, freeing captives 5%, insolvent debtors 5%, and wayfarers 5% respectively.
- 7. The individual zakat beneficiary shall receive not less than twenty five thousand Naira (N25,000.00) or not more than fifty thousand Naira (50,000.00) in cash or their equivalent in collected zakat property.
- 8. Zakat beneficiaries need to be counseled on the need for the prudent use of the zakat money received by them so as to make them non-beneficiaries of zakat subsequently.
- 9. Proper documented account must be rendered to the Board by both the zonal zakat committees and district zakat councils on who received the distributed zakat and how much not later than one month after distribution of same.

#### SELECTION FACTOR OF E-FARAID IN SEGAMAT: WHAT DOES MUSLIM SAY?

Nor' Azurah Md. Kamdari<sup>1</sup> Remali Yusoff<sup>2</sup> Ahmad Abd. Majid<sup>3</sup>

#### **ABSTRACT**

This paper is focus on the purpose of web based expert system called as e-Faraid. The implication from implementation of this system, it is very useful by applying Islamic principle in income distribution. This study will discuss factor on affected Muslim in using e-Faraid in Islamic inheritance law. This study deals with several factors on affected Muslim to using electronic system such as perceived awareness, understanding and perception. This is important to look how the e-Faraid can be fully accepted by Muslim people. This research has be done by using primary data collection. The total of respondent is 180 and the sample respondent in Segamat. Overall, in the finding revealed that respondent have generally moderate view of selection factor on using e-Faraid). The sensitivity of respondent on level of awareness of concept Faraid is still at a moderate level, mainly because less of awareness among people to Faraid law and the existence of e-Faraid In addition the level of people understanding of the concept faraid is still low. This may be due to lack of knowledge and exposure to understand the Faraid concept. Finally, in recommendation of this research would to suggest to Department of Islamic Development Malaysia (JAKIM) to give more emphasizes to advertising and promotional campaign on e-Faraid.

**Keyword(s):** *e-Faraid*, *selection factor*.

# 1. INTRODUCTION

Income distribution from the Islamic perspective is Islam recognizes economic inequalities among its people but does not let them grow wider. In Islam, wealth or income is important and necessary but much more important is the way in which wealth or income is distributed. The guiding principle is that there should be more production and fairer distribution of wealth or income so that the increased wealth or income might lead to equitable division among the people. Wealth or income should not be concentrated in the hands of only a few members of society.

The Muslim law of inheritance is an effective measure in checking accumulation of wealth in fewer hands and in spreading it out among the larger section of the community. To achieve fairer distribution of income, one of method that Islam applying is by *Faraid*. According to the Muslim law of inheritance, if man or women dies, the property of the deceased after settling his debts will

<sup>&</sup>lt;sup>2</sup> A professor in the Faculty of Business and Management, Universiti Teknologi MARA Johor.

<sup>&</sup>lt;sup>3</sup>An associate professor in the School of Mathematical Sciences, Universiti Sains Malaysia.

be divided among his near relatives in proportion to *Faraid*. However, if the deceased is without any relative, the state will take over the property so that other citizen will benefit.

#### 2. BACKGROUND OF STUDY

The successful to develop *e-Faraid* which can solve in income distribution problem. *e-Faraid* was implementation a few years ago by researcher from USM. Almost all The Department Islamic Affairs and university was used *e-Faraid*. However, no study has been carried out to investigate the selection factor of *e-Faraid* in Segamat. This paper essentially analyzed the factor considered by Muslim in choosing *e-Faraid*. In this time, the researcher focuses on *e-Faraid* and the sample on respondent in Segamat, which had very new on awareness used *e-Faraid*.

#### 3. PROBLEM STATEMENT

Al- For Muslim people, the Quran and Al hadith provide absolute guidance on how to distribute wealth among family members and relatives of a person who pass away. Distributing the property correctly requires thorough studies or expert guidance, because the rules stated are in details and distinctive to each person. Besides that, it is difficult for normal people who do not have the comprehension on Islamic inheritance to implement the distribution of inherited assets that was mentioned in the Quran. Thus, it needs someone who has the necessary knowledge and knowledge with thorough understanding. Normally, when someone passes away, his or her relatives will refer to someone who has as much as necessary knowledge to determine the distribution, which is costly and time consuming.

Based on that *e*-Faraid was developed and it can solve in income distribution problem Therefore, this study attempted to investigate the factor that contributes to the fast growing of selection factor of *e*-Faraid in Segamat. There were increased people who had aware to using *e*-Faraid, but we do not know what factor influencing them to choose *e*-Faraid. From this research, we want to determined factor of awareness, perception and understanding influence towards choosing of *e*-Faraid.

#### 4. OBJECTIVES

These objectives are:-

- I. To determine the relationship between Muslim acceptances of *e-Faraid* with awareness.
- II. To determine the relationship between Muslim acceptances of e-Faraid with perception.
- III. To determine the relationship between Muslim acceptances of *e-Faraid* with understanding.

#### 5. SIGNIFICANCE OF STUDY

Faraid was developed and it can solve in income distribution problem Therefore, this study attempted to investigate the factor that contributes to the fast growing of selection factor of *e-Faraid* in Segamat. Beside of *e-Faraid* is still new implementation, therefore, researcher hope from this finding of this research it can identify of what the strength and weakness from *e-Faraid*.

#### 6. HYPOTHESIS

A hypothesis can be defined as a tentative, yet testable, statement, which predicts what you expect to find in your empirical data. Along this line, hypothesis can be defined as a logically conjectured relationship between two or more variables expressed in the form of testable statement (Sekaran & Bougie, 2003). A null hypothesis (H<sub>0</sub>) is a hypothesis set up to be rejected

in order to support an alternate hypothesis. Alternate hypothesis (H<sub>a</sub>) is the opposite of null hypothesis (Sekaran & Bougie, 2010). In this research, it is important to test whether *e-Faraid* have significant relationship with awareness, understanding and perception. Therefore, this study attempts to test the following hypotheses:

- I. H<sub>0</sub>: There is no significant relationship between *e-Faraid* with awareness of *Faraid* among the Muslim society.
  - H<sub>a</sub>: There is significant relationship between *e-Faraid* with the awareness of *Faraid* among the Muslim society.
- II. H<sub>0</sub>: There is no significant relationship between *e-Faraid* with understanding of Faraid among the Muslim society.
  - H<sub>a</sub>: There is significant relationship between *e-Faraid* with understanding of Faraid among the Muslim society.
- III. H<sub>0</sub>: There is no significant relationship between *e-Faraid* with perception of Faraid among the Muslim society.
  - H<sub>a</sub>: There is no significant relationship between *e-Faraid* with perception of Faraid among the Muslim society.

#### 7. LITERATURE REVIEW

#### 7.1 Overview of Faraid

Faraid is a part of Islamic laws of inheritance with the aim of increasing the awareness of the Muslim community living in the west regarding this important aspect of Islamic law. The scope of this article is confined to traditional Sunni Islamic law.

When a Muslim dies there are four duties which need to be performed. These are payment of funeral expenses, payment of his/ her debts, execution his/ her will and distribution of remaining estate amongst the heirs according to Sharia

It is assumed that the preliminary issues have been resolved and we shall confine ourselves principally to discussing the fourth and last duty. The task is to firstly, determine which of the relatives of the deceased are entitled to inherit and secondly, to determine the quantum share entitlement of each of the heirs concerned.

#### 7.2 Awareness of Faraid

Rosman and Abd Razak (2008) found out that awareness and understanding amongst Muslim community worldwide pertaining to *will* is very low despite advancement in technology. This is an economic lost to the Muslim community and the nation, as assets are frozen whilst disputes are ironed out. Majority do not understand the implication of division of wealth in accordance to *Fara'id* and many more are not aware that *will* is not against Islamic teaching and that *will* writing is encouraged in Islam.

Omar (2008) carried out Most Muslims in Malaysia do not view estate planning seriously and some of them are skeptical about making a *wasiyyah*, which is evidenced by having large number of Malaysian Muslims not having *wasiyyah*. Information from available resources indicates that in general, awareness of *wasiyyah* practice among Malaysian Muslims is not very encouraging. Today, in a modern and complex world, leaving a written will is crucial, and, thus, it implies that Islamic estate planning for Muslims demands a proper planning beyond the provision of *faraid* and bequest

Amanah Raya Berhad (2005) argues that "generally the level of Malaysian awareness with respect to the importance of *will* is relatively very low and the evidence comes from the fact that 90 percent of Malaysians currently do not have a *will*. In supporting this, Jin (2005) also admits that many Malaysians do not have a *will*. However, neither ARB nor Jin differentiates between the likelihood of leaving *wasiyyah/wills* between Malaysian Muslims and non-Muslims. Hence, the number of *wasiyyah* made by Muslims, which have been kept under ARB, might usefully indicate the consciousness of Malaysian Muslim people towards the importance of leaving *wasiyyah*.

Aslam (2012) identified the majority of the Muslims are completely oblivious to the importance of making a written will (wasiyah). Those who are knowledgeable of its importance and try to bring up this topic with grief stricken family members are ostracized. It's even worse if a family member dares touch upon this sensitive subject; they are considered greedy and insensitive for talking about such a thing at a time like that. Muslims don't know and don't care about one of the few things that are mandatory and extremely important after the death of a Muslim. The result from his study are common misconception about the preparation of a will prevails among the Muslims who are aware of the importance of wasiyah. They believe that since Qur'an gives clear instructions about the distribution of the wealth of a deceased Muslim, why prepare a written will. There reason for this as described by Muslim scholars is that since there is no truly Islamic state in the world, which follows the Shariah, there is a strong possibility of non-compliance on this extremely important matter. This is particularly important for Muslims living in non-Muslim countries or for people who have accepted Islam later in life. Therefore, we should prepare a written wasiyah to ensure that we follow the command of Allah (SWT).

#### 7.3 Level of Understanding

Md Yazid Ahmad (2010) identified most of the Muslim community have less understands about Islamic inheritance laws, not the least their career and have a good background academically either from the public or private sector employees. There are also those Muslims who have a stake and a calculation in accordance with their own interests that are not in line with Islamic. The result from his study is he proposes that the authorities should expand the information to knowledge to Muslims in Malaysia in relation to this matter through road shows, creating advisory clinics that are not commercial, information through the mass media and the internet.

According to Hizmet in the epitome of Tazkirat-al Qurtubi (1998), declares, "Try to learn and understand the knowledge of faraid! Teach this knowledge to the youth! The understanding of faraid is half of (all) religious knowledge. It will be this knowledge that my Umma will forget first."

Mohamad Azhar Hashim (2010) carried out that Muslims need to take immediate steps to ensure that the wisdom of the understanding of al-Faraid continues to be significant in building the prosperity of the descendants of an Islamic family institution. He also found all parties, regardless of whether they belong to the public, scholars, professionals, legislators, administrators and others should be unified and aligned in their thinking to ensure that the knowledge of al-Faraid can survive and remain in the life of each and every Muslim individual.

Wan Abdul Halim Harun (2006), identified about Muslims understanding towards faraid is with the law of faraid will removes us from seizing or owning land or property belonging to others, especially his own brother. Nevertheless, law of faraid also can avoid misunderstandings and disputes among heirs can bring to break bonds and the family become chaos. The result from his study are respondents views on the importance faraid and the knowledge at a high level.

#### 7.4 Perception

Nik Noriani (2012) elaborated that under the *faraid* distribution system, women's contribution towards the family needs are disregarded when it comes to inheritance, as the emphasis is still on men to provide maintenance for the family, resulting in men receiving a greater share of the inheritance. It was stressed that there is a need for equal distribution with regards to the present socio-economic circumstances and that the historical rationale behind the *faraid* system must be re-examined.

Abdullah Siddik (1975). Identified that Muslim perceptions towards law of faraid is based on to *Adat* law, hereditary property (*tanah pesaka*) are collectively owned by clan/lineage members registered under the female members of the matriclan/matrilineage, and this property is to be passed from mother to daughter. This type of ownership is not in line with Islam, so too is property inheritance when according to *Adat* law, male children have no ownership right to such property, whereas under Islamic law of inheritance (*faraid*), they are entitled to two-thirds of the property belonging to both parents. Female children are only given one-third. Adat Perpatih laws also give provision of property inheritance to adopted children, and again, this practice is not recognized by Islam. In Islam, only natural children are the rightful heirs to their parents' property.

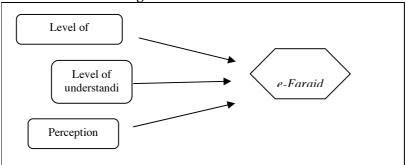

#### 7.5 e- Faraid

There is a website from University of Science Malaysia (USM) developed on Islamic inheritance law. The system was built by Prof Madya Ahmad Abdul Majid plus it using in Malay language. e-Faraid is a complete computerized solution to the faraid management system which is a method of division of inheritance of the deceased's properties among his/her immediate family and relatives according to the Islamic law developed by the department of Mathematics Universti Sains Malaysia. This software is menu driven and has a user friendly interface system which is specially developed for almost anyone having no previous or limited knowledge or an expert on faraid who is interested to study or resolving a particular problem which is relates to faraid. e-Faraid uses a database approach to solve either a single or multilevel (munakahat) faraid problem. It consists of an information module which consists of a Malay translation of the Quranic verses on *faraid*, a summary of the deceased's family tree and those who have the right to stake their claims. A user needs only to key in the relevant information regarding the deceased and his/her family (from key board or a mouse click). Almost immediately, the result will be displayed in fractional form. The results can either be viewed on a computer screen or printed on a paper or special form which is customized to special requirements off any authority or organization. In addition, to the common output, e-Faraid will also display the true result in accordance with a given input value of the deceased's actual properties in any preferred currency or in term of it acreage (for land).

# 7.6 Theoretical Framework

Figure 1 below is a theoretical framework based on two types of variables which are Independent Variables and Dependent Variable. The Independent Variables consist of level of awareness, understanding and perception. The Dependent Variable consists influences of Muslim in *e-Faraid*.

**Figure 1: Theoretical Framework** 

#### 8. DATA COLLECTION METHOD

The main focus of this study is to examine the level perceived awareness, understanding and perceptions Muslims toward *e-Faraid*. A short questionnaire was formed containing specifies questions relating the willingness to *e-Faraid*. Also, questions were picked up to distinguish between respondents who believe they were well informed about advantages pertaining to using *e-Faraid*. The data used in this research are primary data. Primary data is information that is received directly from the subject of the research that they reserved. The primary data will be collected from the respondents (Muslim).

The technique and instruments of the data collected are carried out through Questionnaire. These questions were conditional in nature and were used to determine the selection of sample population. All the answer will be used as the main data and analyzed by the researcher. Three specific questions relating to independent variables (awareness, understanding and perception) as well as the dependent variable (Muslims acceptance) in *e-Faraid*.

Specifically these questionnaires are using the Likert scale in order to measure the behavior of the respondent towards an answer. To measure the behavior of the respondent toward an answer, likert scale is used. Each question in this research is provided with five alternatives to answer. This response was considered large enough and sufficient for statistical reliability and generalization. Table 2 depicts the response respondents of background.

**Table: 1.2 Respondent distributions** 

	Frequency	Percentage %
Gender		
Male	95	52.8
Female	85	47.2
Occupation		
Government	94	52.2
Private sector	48	26.7
Own	38	21.1
Age		
Below 30 Years	56	31.1
31 – 40 Years	52	28.9
41 – 50 Years	43	23.9
Above 50 Years	29	16.1
Marital status		
Single	81	45.0
Married	97	53.9

Divorce	2	1.1
Income		
Below 2000	37	20.6
2000 - 3000	52	28.9
3001 – 5000	56	31.1
Above 5000	35	19.4
Qualification		
SPM	70	38.9
Diploma	54	30.0
Degree	40	22.2
Master	9	5.0
PHD	7	3.9

Table 2 summarizes some basic statistics on gender, occupation, age, marital status, income and qualification of the respondents. The respondents selected by randomly were predominantly male which comprise 52.8 percent of the respondents. There is quiet a good mix of age grouping ranging from below 30 years of age to over 50, although a bulk of the respondents belong to below 30 years. Consequently, the opinions expressed in the survey could very well reflect the attitude and selection of the younger respondents. In term of occupation, most of all are government servant (52.2%), private sector (26.7) and own (21.1%). Almost all of the respondents are married (53.9%), 45.0 percent of them are single and only 1.1 percent are already divorced. The result reported in table 4.2.1.1 also indicate that majority (31.1%) of the respondents were in the RM3001 - RM5000 monthly income group. Meanwhile it can be found in the figure that the more than a half of the respondent earns more than RM3000 a month. This result indicates that most of the respondents can be classified as above poverty line income and middle income earners since majority of them have monthly incomes range of RM3001 -RM5000. Percentage of the respondents by academic qualification also can be found in figure 4.1. It can be found that most of the entire respondent obtained the secondary education. 38.9% of them obtained the SPM, 30.0% obtained the Diploma, 22.2% obtained Bachelor Degree, 5.0% obtained Master Degree. Only 3.9% have the highest education level (PHD).

# 9.1 Method Analysis

All the data will be analyzed by using Statistical Package for the Social Sciences (SPSS) version 18.0.Descriptive analysis was carried out in order to understand the level of perception towards awareness, understanding and perception, Muslims acceptance. Mean value of all variables is use to measure the average perception of the respondents. Using the reliability analysis, researcher studies the relationship between factors that affect Muslims to using e-Faraid. Other than that, the Factor Analysis will be tested. Factor analysis is a statistical method used to describe variability among observed variables in terms of fewer unobserved variables called factors. (Nor'Azurah, Nurul Haida & Wan Asma, 2006). This statistical tool stated the method, which can assist the researcher to reduce large number of items to some smaller number by showing which variables belong mutually and which seem to show the same thing. The analysis is also important in confirming the construct validity of the scales using the principal component analysis (Emory & Cooper, 1991). Kaiser-Meyer-Olkin (KMO) in factor analysis will explained adequacy test whether the partial correlations among variables are small. Bartlett's test of sphericity tests whether the correlation matrix is an identity matrix, which would indicate that the factor model is inappropriate. Factor Analysis conducted to find the most variables or most factor that influenced customers to choose e-Faraid. Next after that the analysis will used Kruskall Wallis Test. It is a non-parametric method for one-way analysis of variance used to determine if three more samples originate from the same distribution. The Kruskal-Wallis test essentially a standard one-way analysis of variance, with ranks assigned to the data points replacing the data points themselves. It conducted in the hypothesis test to assess any significant relationship between independent and dependent variables by the different groups involved in this survey. These non-parametric tests are appropriate when measurements of the variables under investigation are in ordinal scale. Using this method, we can determine the relationship strength between the independent and dependent variables. Significance values that lower than 0.05 (p < 0.05) means, that null hypothesis is rejected and alternative hypothesis accepted.

#### 9. FINDING AND ANALYSIS

#### 9.1 Reliability

The reliability of a measure is established by testing for both consistency and stability. Cronbach's alpha is a reliability coefficient that indicates how well the items in a set are positively correlated to one another. Cronbach's alpha is computed in terms of the average intercorrelations among the items measuring the concept. One of the most commonly used indicators of internal consistency is Cronbach's Alpha coefficient. Ideally Cronbach Alpha coefficient of a scale should be above .7. Cronbach Alpha values are, however, quite sensitive to the number of items in the scale. With short scales it is common to find quiet low Cronbach values. In this case, it may be more appropriate to report the mean inter- item correlation for the items.

For internal consistency, respondents were asked to evaluate their perception towards five points likert scale statements. The internal consistency was tested to test the realibity of the data. The negative items were revised to get the reliable value of Cronbach's Alpha. It is observed in Table 3 that the internal consistency for Awareness is 0.713; Understanding is 0.748; Perception is 0.777, and Muslims Acceptance is 0.802 that are accepted and reliable value (Cronbach's, 1951). These results show that the data are reliable and can be used for futher analysis. The purpose of reliability is to examine the level of non error in measurement, which mean to examine the consistency of measurement. This study adopts Cronbach's a value, higher internal consistency. If a value bigger than 0.60, then its shows reliability of measurement. For reliability test, if we get Cronbach's Alpha more than 0.6 is significant. For this case, all the independent variables are significant and factor that affecting Muslims to using *e-faraid*.

**Table 3: Reliability Analysis** 

Variables	Cronbach's Alpha
Awareness	0.713
Understanding	0.748
Perception	0.777
Muslims Acceptance	0.802

## 9.2 Factor Analysis

The results in Table 4 reveal the presence of three factors with all 9 items of the using system *e-Faraid* criteria. The eigenvalues for the three factors are above 1 (2.588, 1.832, 1.716,). These three factors explain a total of 64.701 per cent of the variance. Specially, factor 1 has five significant loadings while factor 2 has four significant loadings and factor 3 has three significant loadings. One can see that the first factor (Perception) delineates a cluster of relationship amongst the following attributes are *Shariah Principles* (P2), *Government support* (P3), *Level of encouragement* (P5), *Concept as solution of distribution* (P6), *High quality systems* (P9). The nature of the highly loaded variable on this factor suggests that it can be named (perception). This perception factor contributes around 64 per cent of the reason for using *e-Faraid*. Since factor 1

has the highest eigenvalues and variances, (eigenvalues = 2.588, variances = 64.701) it necessary the most important factor that has influenced Muslims to using *e-Faraid* system.

The second factor (Awareness) delineates a cluster of relationship attributes are *Customer preferences* (A4), *Shariah compliance* (A5), *Rigid and clear cuts rules of inheritance* (A7), and *Advertising and promotional campaign* (A9). The nature of second higher loaded variable on this factor suggests that it can be named Awareness factor contributes around 35 per cent of the reason for *e-Faraid*. Since factor 2 has the second eigenvalues and variances, (eigenvalues = 1.832, variances = 35.299).

The third factor (Understanding) delineates a cluster of relationship attributes are *Less understanding and knowledge* (U4), *Benefit* (U6) and *Solution the Faraid management* (U10). The nature of third higher loaded variable on this factor suggests that it can be named understanding factor contributes around 17 per cent of the reason for *e-Faraid*. Since factor 3 has the third higher eigenvalues and variances, (eigenvalues = 1.716, variances = 17.64).

Table 4: Selection factor e-Faraid among Muslim

	Factor								
Variable	Perception	Awareness	Understanding	Communality					
P2	0.798			0.766					
P3	0.769			0.726					
P6	0.731			0.720

Significant	.000								

## Variables

- **P2** Shariah Principle
- **P3** Government support
- **P6** Solution of distribution among the heirs
- **P5** Highest level of perception
- P7 Substitute of conventional insurance
- A3 Faraid concept
- A7 Basic rules of Faraid
- A4 Customer preferences
- **A9** Advertising and promotional campaign
- U3 Lack of knowledge and understanding

**U4** Main challenge face by the Muslims

U6 Knowledge

In testing whether factor analysis was appropriate for the factor selection factor *e-Faraid* among Muslim, KMO and Bartlett's Test of Sphericity were conducted. The KMO measures the sampling adequacy which should be greater than 0.5 for a satisfactory factor analysis to proceed. Looking at the Table 4, the KMO measure is 0.756 which is above the acceptable level 0.5. From the same table, we can see that the Bartlett's test of sphericity is significant. That is, its associated probability is less than 0.05. The Bartlett Test of sphericity at 0.000, it means it is below the alpha value of 0.05, thus significant. Therefore, the validity of this study is considered to be acceptable. Based on this favourable results, factor analysis was conducted using Principal Component Analysis (PCA) and Varimax Rotation with Kaiser Normalization. The result of varimax rotated factors given in **Table 1.4** along with communality values of each variables, eigenvalues, percentage of explained variance.

# 9.3 Hypothesis Tests

# **Hypotheses 1:**

H<sub>0</sub>: There is no significant relationship between *e-Faraid* with awareness of *Faraid* among the Muslim society.

H<sub>a</sub>: There is significant relationship between *e-Faraid* with the awareness of *Faraid* among the Muslim society.

Table 5 is show result of relationship between *e-Faraid* with awareness of *Faraid* among the Muslim society The first hypothesis showed there is no significant relationship between Muslims acceptance towards the *Faraid* depending awareness. Based on this information, Muslims are aware that the Quran was introduced Shariah (Islamic Law) by providing rigid and clear-cut-rules of inheritance and this *faraid* concepts was found them in which there is a negative awareness about this *Faraid*. This hypothesis using the Kruskal Wallis test where the chi-square value is 18.911, while the gain is significant at 451. Kruskal Wallis Test method is used because it is similar between the groups and allows us to assess the potential differences between two or more groups. The results was received this hypothesis, Muslim acceptance towards the *e-Faraid* system is no significantly depending on awareness. Hence, the null hypothesis is accepted, thus alternative hypothesis is rejected.

Table 5: K-W Test Result of Relationship between *e-Faraid* with awareness of *Faraid* among the Muslim society

Degree of Influence	Value	Total (%)	N	Chi- SquareX	Asymp. Sig. (p)	
Strongly Agree	5	14.29	20			
Agree	4	7.14	10			
Disagree	2	36.42	51	<b>V</b> 2 _	151	
Strongly Disagree	1	39.28	55	$X^2 = 18.911$	451	
Neutral	3	2.85	4	10.911		
Total		100	140			
df	5					

# **Hypotheses 2:**

H<sub>o</sub>: There is no significant relationship between *e-Faraid* with understanding of *Faraid* among the Muslim society.

 $H_a$ : There is significant relationship between *e-Faraid* with understanding of *Faraid* among the Muslim society.

Table 6: K-W Test Result of Relationship between *e-Faraid* with understanding of Faraid amongst the Muslim society

i www uniongst the musilin society									
Degree of Influence	Value	Total (%)	N	Mean Rank	Chi- Square X <sup>2</sup>	Asymp. Sig. (p)			
Strongly Agree	5	13.85	18	55.33					
Agree	4	16.15	21	44.67		.652			
Disagree	2	30.00	39	72.78	W2				
Strongly Disagree	1	13.08	17	95.44	$X^2 = 5.898$				
Neutral	3	26.92	35	60.57	3.090				
Total		100	130						
df	4								

Table 6 shows result of relationship between *e-Faraid* with understanding among the Muslim society. The second hypothesis showed no significant relationship that occurs between Muslim acceptance towards the *e-Faraid* system based on their understanding. This hypothesis using the Kruskal Wallis test where the chi-square value is 5.898, while the gain is significant at .652. Therefore, this study rejects the alternative hypothesis that there is significant relationship between *e-Faraid* with understanding of *Faraid* among the Muslim society. Based on this information, although they are aware of the negative impact on the acceptance of Muslims to using the *e-Faraid*, but the lack of guidance, understanding and knowledge of this system has resulted in them not aware of the concept *Faraid*. So this are the main challenges face by Muslims.

#### **Hypotheses 3:**

H<sub>0</sub>: There is no significant relationship between *e-Faraid* with perception of Faraid among the Muslim society.

H<sub>a</sub>: There is significant relationship between *e-Faraid* with perception of Faraid among the Muslim society.

Table 7: K-W Test Result Comparing the Mean Ranks of Relationship between *e-Faraid* with perception of *Faraid* among the Muslim society.

Degree of Influence	Value	Total (%)	N	Mean Rank	Chi- Square X <sup>2</sup>	Asymp. Sig. (p)
---------------------	-------	-----------	---	-----------	----------------------------------	--------------------

Strongly Agree	5	10.71	15	86.59		
Agree	4	54.28	76	85.89		
Disagree	2	7.14	10	64.89	<b>V</b> 2 _	
Strongly Disagree	1	3.57	5	61.12	$X^2 = 20.541$	.002
Neutral	3	24.28	34	54.12	20.541	
Total		100	140			
df	5					

Table 7 is showed result comparing the mean ranks of relationship between *e-Faraid* with perception of *Faraid* among the Muslim society. The third hypothesis showed a significant relationship between Muslims acceptance towards the *Faraid* is significantly depending on perception. Based on this information, Muslims have made positive opinion that the *e-Faraid* system was developed in accordance with Shariah principles and the system is a replacement to conventional insurance. This hypothesis using the Kruskal Wallis test where the chi-square value is 20.541, while the gain is significant at .002. The results was received this hypothesis, Muslim acceptance towards the *e-Faraid* system is significantly depending on perception. Hence, the alternate hypothesis is accepted, thus null hypothesis is rejected.

#### 10. CONCLUSION

Selection factor of *e-Faraid* amongst Muslim awareness, understanding is still low. Meanwhile, perception of *e-faraid* is high due to this system gives more benefits and facilities for them to make the calculation and distribution of the estate to their heirs. Furthermore the level of awareness of the concept faraid still at a moderate level, mainly because of their less sensitive to faraid law and also the existence of *e-Faraid*. In addition, the level of their understanding of the concept *faraid* is still low. This may be due to lack of knowledge and exposure caused them to understand the concept faraid. Therefore they do not understand to use this system because this system faraid still newly introduced to the Muslims.

Based on Kruskal Wallis Test, factor that consist of variable of awareness and perception, partially or individually is not influenced towards Muslims to using e-Faraid. It is show that with probability of hypothesis from its variable is <.05, even though to variable of understanding didn't has influenced of significant towards Muslim acceptance which has the probability >.05.

Based from factor analysis, each of variables have significant influenced towards Muslims acceptance to using *e-Faraid*. Refers to the finding of this study, it is revealed that Muslim opinions towards understanding factors are in the moderate level, compared to higher awareness and perception factors between the Muslims. This research would suggest to the Department of Islamic Development Malaysia (*JAKIM*) to give more emphasizes to explain the understanding factor to Muslims by doing advertising and promotional campaign in *e-Faraid* as a success factor.

#### 11. RECOMMENDATIONS

The *e-Faraid* that has been developed as a result of our research work can be used online. Any Muslim, worldwide can easily compute his or her portion of the wealth left behind by the decease according to the rules of *Faraid* in Islam. The website can provide the user to allocate the wealth to all the users and to those, who have rights or entitled to receive their portion from the wealth. When any user answers the question on his relation to the system. The *e-Faraid* for Islamic Inheritance Laws is considered useful for any Muslim in this world and success in design. Such a system leads to call for wider use of expert systems in the field of Islamic Jurisprudence.

For future of study, subsequent web based designer could add more relevant questions to the knowledge base to make it more robust and extensiveness. The system can be adapted to other branches of Islam such as Zakat, and recurring phenomenon to use an expert systems in field of Islam, more work is needed in this direction It also have multiple experts as domain expert to get more knowledge of experts regarding all the rules for *faraid* in four schools of thought (*Almathaheb*).

# ISLAMIC BANKS' CORPORATE SOCIAL RESPONSIBILITY AND ITS IMPACT ON SOCIETAL DEVELOPMENT IN MALAYSIA: AN ANALYSIS FROM ISLAMIC AND CONVENTIONAL ECONOMICS PERSPECTIVES.

Prof. Dr. Wan Sulaiman bin Wan Yusoff, Assoc. Prof. Dr. Ahmad Fauzi bin Idris, Asst. Prof. Dr. Adewale Abideen Adeyemi Jaiyeoba Haruna Babatunde

#### **ABSTRACT**

This study was carried out to investigate the impact of Islamic banks' corporate social responsibility on the societal development in Malaysia. It is highly recommended for all the Islamic financial institution and other institutions that claimed to be Islamic to set up a standard of behaviuor as part of their operations which will impact the society in a positive and in a productive manner at the same time as abiding by values which exclude profit seeking at all cost. However, the study used five elements namely zakat, charitable activities, *qard hasan*, micro & small size business and social savings and investment, and social impact based investment quotas policies in its investigations. The target population of this study was the stakeholders of Bank Islam Malaysia Berhad (BIMB), Bank Muamalat Malaysia Berhad (BMMB), CIMB Islamic Islamic Berhad and Maybank Islamic Berhad in Alor Star, Kedah State of Malaysia and 196 respondents were involved. In order to realize the objective of the study, the researcher used multivariate techniques in examining the relationship between the dependent and independent variables. It was found that there was a statistical significant relationship between the Islamic banks' corporate social responsibility and societal development in Malaysia.

**Keywords:** Zakat, Charitable activities, Qurd hasan, Micro & Small size business and social savings and investment, and Social Impact Based Investment Quotas Policies.

#### 1. INTRODUCTION

Corporate Social Responsibility (CSR) has been identified by Islamic Scholars as an integral part of Islamic Banks responsibilities due to its impacts on societal development and its emphasis on people's welfare. This was ascertained through the higher objectives of the Sharia'ah (Maqasid al-Shari'ah)<sup>1</sup> which are meant to protect the interests of the creations in this world and the hereafter. Apparently, organizations' throughout the world now realize that CSR is an important part of a company's operations, because of its positive impact on society, staff members and the general public at large.<sup>2</sup> Stakeholders such as the consumers, employees, investors, and local communities expect organizations to contribute to the societies where they operate (Hassan 2010).

.

<sup>&</sup>lt;sup>1</sup> The five higher objectives of the maqasid shariah are: protection of religion, protection of life, protection of intellect, protection of progeny, and protection of wealth.

<sup>&</sup>lt;sup>2</sup> Institutes of Islamic Banking and Finance, Corporate Social Responsibility. Available: http://www.islamic-banking.com/csr.aspx, accessed on 14 November 2012.

Specifically, financial institutions can positively influence the environment by implementing CSR that match with the expectation of the society (Taimoor et al, 2012). According to Dusuki & Dar (2005) Corporate Social Responsibility outline the standard of behaviour that the businesses must subscribe to impact society in a positive and productive manner which abides by values and exclude profit seeking at any cost. Therefore, more specifically, the responsibility of Islamic Banks from Shari'ah perspective transcends the paying of zakat to the poor and the needy but extend to the societal welfare, wellbeing and any other activities that will bring about positive development to the society.

The extant literature on CSR is awash with varying views albeit with convergent conclusion on what Islamic CSR should be especially for Islamic financial institutions. The study of Farook (2007) provides the basis for Islamic corporate social responsibility for Islamic financial institutions and the justification for developing a flexible Islamic corporate social responsibility standard that encompasses both mandatory and recommended forms. The study of Dusuki (2011) on the other hand has offered instructive discussions on what constitutes the ethical and social responsibility dimension of Islamic finance. Also, Muhammed and Zakaria (2011) examined the criteria and Islamic instrument of corporate social responsibility towards the creation of a sustainable economic development. Other studies such as Zulkifli (2012) have declared corporate governance on corporate social responsibility in Islamic financial institutions as part of their ethical responsibilities. In addition, many Islamic writers have claimed that Islamic corporate social responsibility, if well practice will lead to societal development.

A matter arising from the foregoing and which deserves research attention is the fact that CSR from Islamic perspective is not only a corporate voluntary obligation but also a manifestation of corporate spiritual commitment. When organizations obtained economic benefit from the society, expectations are that they also give back to the society. While this is the norm in most corporate firms, the dimension from an Islamic perspective offers more benefit beyond just giving back to the society. This is because the motivation for such action will take into cognizance both the mechanics and spirit of operational efficiency in its entire ramification including economic, social, and spiritual development. It is from this concern and in particular context of Malaysia that this study evolved. In this regard, the objective of this paper is to empirically investigate the impact of Islamic banks' policy on zakat, *qard Hassan*, charitable activities, and social investment activities on societal development.

#### 2. LITERATURE REVIEW

Financial institutions, regardless of whether they are Islamic or conventional must be active and profound in discharging their responsibilities to the society of their operations. According to Soludo (2004), banking industry occupies a unique position in every economy and that is why it often attracts more than a casual regulatory attention. He also mentioned in his paper that industry in the 21st century must have a moral face and live up to some modicum of social responsibility. Another study by Sabarudin & Norhanim (2010) contended that the awareness and placing CSR as part of the corporate agenda is a significantly sign shows that bank is not just aggressively poise for bigger profit but also focus their investment strategies on benefits of socially and environmentally responsible investing<sup>3</sup>.

For example; Bank Islam Malaysia Berhad (BIMB) has been building and rehabilitating homes to old and handicapped as part of its social responsibility programs. Bank Muamalat Malayasia Berhad as another example also involved in different social activities. The press releases by the Media Relation & Event Management (MREM) on January 20, 2013 revealed that Bank Muamalat invited under-privileged

 $<sup>^{\</sup>rm 3}$  This is also known as the "triple bottom line"

children for football talent clinic with Tottenham Hotspur's legend so as for some of them to choose football as their future career and for social reasons.

Also, CIMB Islamic Bank as another example has been partaken in philanthropic and social responsibility for different reasons as can be seen from its *Islamic Finance &* CSR report presented by the CEO of this bank in World Islamic Finance Conference in London, UK on the 27, March 2012:

Philanthropy and social responsibility is a part of CIMB Islamic culture and recently through the CIMB Foundation successfully raised USD 1 million for Padang's earthquake disaster relief.<sup>4</sup>

Similarly, Maybank Islamic Berhad is not lacking behind in the area of CSR. Maybank has been participating in CSR programmes for the betterment of the community and for environmental sanitation as can be seen from its website.

Sequel to the forgoing CSR activities by Malaysian Islamic banks, it appears that in today's business, ignoring the importance of CSR in business endeavors will give a bad impression to the business not only by the public but also by the shareholders and investors. This new global tactic may affect a bank's relationship with its clients and shareholders. There are market benefits and competitive advantages for those companies whose business policies integrate CSR (Ogrizek, 2004). It need to be reiterated here that being socially responsible is not limited to the Islamic banks in Malaysia alone but encompasses all Islamic banks in the world. Therefore, it is very essential for Islamic banks to be socially responsible to the society under their operation in a positive ways. This involvement will not only bring about the development to their operations but also to the society at large.

# 2.1 ISLAMIC BANKS CORPORATE SOCIAL RESPONSIBILITY AND SOCIETAL DEVELOPMENT

According to Farook (2007), Islamic banks corporate social responsibility was categorized into two major which are mandatory forms and recommended forms. The mandatory forms are; screening of investment, earning prohibited by Shari'ah, responsible dealing with clients, employee and zakat. Recommended forms on the other hand are; *qard hasan*, charitable activities, employee welfare, micro & small size business and social savings and investment. Other recommended forms are par excellence customer service, environmental impact based investment quotas, social impact based investment quotas, industry wise investment quotas, screening clients and contractors reduction of impact on the environment and waqf management.

However, this study focuses on one of the mandatory forms (i.e. zakat) and four of the recommended forms (i.e. *qard hasan*, charitable activities, social impact based investment quotas and micro & small size business and social savings and investment) in order to determine the impact of Islamic banks CSR on societal development in Malaysia. Thus, this section will stress on these five only.

#### **2.1.1 ZAKAT**

The principle of Zakat and the importance attached to it in Islamic law and teaching is such that it will be a welfare tax system for ensuring that the basic need of the less fortunate Muslims are met by the society (Mohamed 2009). Zakat is a fixed religious obligation calculated by reference to net assets (including cash) that have appreciated or have the capacity to appreciate in value over a specific period of time. This excludes assets that have been acquired for consumption or use in the production of revenues. Zakat is a religious obligation on wealth for every Muslim, including a child or an insane person, provided that the

<sup>&</sup>lt;sup>4</sup> Badlisyah Abdul Ghani (2012), Islamic Finance & CSR, World Islamic Finance Conference in London, UK.

net assets are liable for zakat (AAOIFI, 2008). Zakat serve as means or mechanism to transfer the wealth from the haves to have-nots in the society because Islam does not allow the concentration of wealth in the hand of few people while other people suffer. Moreover, the needy and the poor people can improve their living standard by receiving zakat money. Hence, with a better condition of life, they will have a higher chance to get a better education and knowledge as well as contributing to the way of Allah.

However, the importance of zakat cannot be ignored by the institutions, most especially IFIs because of the gravity of its capacity to improve the standard of living of the poor and needy. As a result of this, Allah has approved zakat and made it obligatory on those who are qualified to pay it including the institutions of this nature. Allah says:

قال تعالى:

"The believing men and believing women are allies of one another. They enjoin what is right and forbid what is wrong and establish prayer and give zakah and obey Allah and His Messenger. Those - Allah will have mercy upon them. Indeed, Allah is Exalted in Might and Wise" (al-Tawbah 71).<sup>5</sup>

It was also narrated by Ibn Abbas (RTA):

عَنْ زَكَرِيَّاءَ بْنِ إِسْحَاقَ، عَنْ يَحْيَى بْنِ عَبْدِ اللَّهِ بْنِ صَيْفِيِّ، عَنْ أَبِي مَعْبَدِ، عَن ابْنِ عَبَّاسٍ ـ رضى الله عنهما ـ أَنَّ النَّبِيَّ صلى الله عليه وسلم " ادْعُهُمْ إِلَى شَهَادَةِ أَنْ لاَ إِلَهَ إِلاَّ اللهُ، وَأَنِّي رَسُولُ اللهِ، فَإِنْ هُمْ أَطَاعُوا لِذَلِكَ فَأَعْلِمُهُمْ أَنَّ اللهَ اقْرَضَ عَلَيْهِمْ صَدَقَةً فِي أَمْوَالِهِمْ، تُوْخَذُ مِنْ أَغْنِيَائِهِمْ اقْتَرَضَ عَلَيْهِمْ خَمْسَ صَلَوَاتٍ فِي كُلِّ يَوْمٍ وَلَيْلَةٍ، فَإِنْ هُمْ أَطَاعُوا لِذَلِكَ فَأَعْلِمُهُمْ أَنَّ اللهَ افْتَرَضَ عَلَيْهِمْ صَدَقَةً فِي أَمْوَالِهِمْ، تُوْخَذُ مِنْ أَغْنِيَائِهِمْ وَتُرَدَّ عَلَى فَقَرَائِهِمْ ".

The Prophet (SAW) sent Mu`adh to Yemen and said, "Invite the people to testify that none has the right to be worshipped but Allah and I am Allah's Messenger (SAW), and if they obey you to do so, then teach them that Allah has enjoined on them five prayers in every day and night (in twenty-four hours), and if they obey you to do so, then teach them that Allah has made it obligatory for them to pay the Zakat from their property and it is to be taken from the wealthy among them and given to the poor" (Sahih al-Bukhari).

As it is wildly known, Islamic banks in Malaysia including other part of the world have been paying zakat to improve the welfare of their various societies. This was ascertained after reading through some of their financial report.

According to Hizamuddin, the managing director of bank Islam Malaysia berhad stated in banks Islam CSR 2012 report,

In 2009 a total of RM 8.9 million in zakat was contributed to a variety of causes, projects and events. And in 2010 a total of RM11.8 million was given out where the beneficiaries included State zakat authorities, mosque, Islamic institution and religious schools, nongovernmental organization, the less fortunate and needy homes through various charitable activities<sup>7</sup>

<sup>&</sup>lt;sup>5</sup> Translation of Sahih international

<sup>&</sup>lt;sup>6</sup> Sahih al-Bukhari 1396, Vol. 2, Book 24, Hadith 479, Available: http://sunnah.com/bukhari/24, Accessed on 19 January, 2013.

<sup>&</sup>lt;sup>7</sup> BIMB, (2012). "Corporate social responsibility report." available: www.bankislam.com.my/, accessed on 25 December 2012

The above statement has shown the contribution of bank Islam Malaysia Berhad to the society for 2009 and 2010 respectively.

Kahf (2007) argued that many Islamic banks also establish social funds, especially designed for relieving the economic hardship of the poor and needy. These funds are usually financed by the yearly zakat dues on shareholders' equity as well as many investment depositors who give their consent to the bank's management for the deduction and distribution of zakat annually.

Another study by Ahmed (2008) also asserts that the areas in which zakat can contribute in the macro-context would be improving the human capital through specific programs for the poor and vulnerable. Zakat also has a more significant role to play with regard to poverty alleviation strategies in the micro level such as providing education and skill development, health facilities, social services that improve the welfare of the poor, provision of physical capital (like a taxi, sewing machine, etc.), and making available financial capital to start a business so that the poor can be productively employed to earn a living.

#### 2.1.2 CHARITABLE ACTIVITIES

Charity in Islam means spending out of what Allah has given to individuals. It involves using the energy, talent, resources, money, possessions etc. to help and provide for those in need in order to improve their living standard and for equal participation in the society. As mentioned, Islam does not approve the concentration of wealth in the hand of few people while others are not able to fulfill their daily needs. Because of this, charitable activities policy of Islamic banks can serve as a means to provide for these needy in the society. In addition, charity has occupied an important position in Islam because Allah the Most High Has mentioned it in the *qur'an* as part of the responsibility of a good Muslim and this responsibility has been extended to the responsibility of IFIs. Allah says:

"So be pious to Allah as best as you can, (Literally: as much as you are able to) and give ear, and obey, and expend; (that is) most charitable (i.e., best) for yourselves. And whoever is protected against the avarice of his self, then those are they who are the prosperers" (al-Taghabun: 16).

It was also narrated by Abu Darda:

حَدَّثَنَا مُسْلِمُ بْنُ إِبْرَاهِيمَ، حَدَّثَنَا شُعْبَةُ، حَدَّثَنَا سَعِيدُ بْنُ أَبِي بُرُدَةَ، عَنْ أَبِيهِ، عَنْ جَدِّه، عَنِ النَّبِيِّ صلى الله عليه وسلم قالَ " عَلَى كُلِّ مُسْلِمٍ صَدَقَةٌ ". فَقَالُوا يَا نَبِيَّ اللَّهِ فَمَنْ لَمْ يَجِدْ قَالَ " يَعْمَلُ بِيدِه فَيَنْفَعُ نَفْسَهُ وَيَتَصَدَّقُ ". قَالُوا فَإِنْ لَمْ يَجِدْ قَالَ " يُعِينُ ذَا الْحَاجَةِ الْمَلْهُوفَ ". قَالُوا فَإِنْ لَمْ يَجِدْ. قَالَ " فَلْيَعْمَلُ بِالْمَعْرُوفِ، وَلْيُمْسِكُ عَنِ الشَّرِّ فَإِنَّهَا لَهُ صَدَقَةٌ

From his father from his grandfather that the Prophet (SAW) said, "Every Muslim has to give in charity." The people asked, "O Allah's Prophet! If someone has nothing to give, what will he do?" He said, "He should work with his hands and benefit himself and also give in charity (from what he earns)." The people further asked, "If he cannot find even that?" He replied, "He should help the needy who appeal for help." Then the people asked, "If he cannot do that?" He replied, "Then he should perform good deeds and keep away from evil deeds and this will be regarded as charitable deeds" (Sahih al-Bukhari).

.

<sup>&</sup>lt;sup>8</sup> The translation of Dr. Ghali

<sup>&</sup>lt;sup>9</sup> Sahih al-Bukhari 1445 Vol. 2, Book 24, Hadith 524, Available: http://sunnah.com/bukhari/24, Accessed on 19 January, 2013.

However, as a representative institution that serves collective Islamic religious obligation, Islamic financial institutions have implemented CSR policy as part of their charitable activities in order to provide for the needy and to improve the society at large. According to AAOIFI standard (2008) on CSR of Islamic financial institutions, the provisions of charitable activities policy of IFIs may include matters pertaining to:

- Establishing a charity fund
- Establishing avenues for voluntary donations by donors (e.g. from depositors, shareholders, clients, contractors and employees) for the charity
- Establishing fund raising drives (emergency or otherwise) from employees) for the charity
- Establishing target groups, communities and institutions that require assistance, including those described in policy for social impact based investment quota and policy for environmental impact based investment quotas, means by which charity may be distributed to prospective donees,
- Contracting an agent or establishing a trust foundation to distribute funds to allocated charities.

More so, Kahf (2007) also claimed that the charitable activities of Islamic banks are also financed by interest that may accrue to the bank from its deposits in conventional banks and from certain transactions that the Shari'ah boards may find doubtful/suspicious from a Shari'ah point of view. This is on the ground that such earned interest cannot be taken by the bank and must be distributed as charity. His motion was supported by the standard of AAOFI discussed above that charitable funds of Islamic banks are usually also open to receiving donations from the public.

Another study of Farook (2007) also contended that IFIs are in a special position to source charitable funds, both from within and without the IFI, for deserving causes. With minimal financial outlay, IFIs are able to create charity accounts and fund raising drives for charity from customers and clients to complement their banking operations. This will allow IFIs to utilize their existing capacity for the benefit of society's most deserving individuals. In addition, Samina (2012) argued that Islamic banks should give charity to the fullest extent of their capacity.

From the Western perspectives, CSR also addresses at least the following areas: the environmental dimension, the human resource dimension, the philanthropic dimension, and the human rights dimension. The philanthropic dimension on the other hand include helping solve social problems, supporting charities and community projects, participating in management of public affairs and playing a role in society that goes beyond profit maximization (Dusuki 2011).

#### 2.1.3 QARD HASAN

Another distinctive characteristic of Islamic banking's social responsibility can be traced to its commendable commitment in providing *qard hasan* or benevolence loans to the needy (Dusiki 2011). AAOFI (2008) defined *qard hasan* as a non-interest bearing loan intended to allow the borrower to use the loaned funds for a period of time with the understanding that the same amount of the loaned funds would be repaid at the end of the period. Even though this is not well practiced by Islamic financial institutions due to high default rate from the beneficiaries, it's still considered as one of the commendable characteristic of IFIs which distinguish it from the conventional financial institutions.

Qard hasan financing is performed in order to improve the economic life of the financing participants. It is important to mention that the participants of qard hasan financing are the participants who have not the feasibility to obtain the other types of financing (such as mudharabah, musyarakah, murabahah financing) so they need to be helped by using qard hasan financing (Irawan & Arimbi 2012). In many places in the Holy Qur'an, Allah Has encouraged the Muslims to give qard hasan by assuring reward in this world and in the hereafter. Allah the Most High says:

قال تعالى: {مَّن ذَا الَّذِي يُقَرِضُ اللَّهَ قَرْضًا حَسَنًا فَيُضَلِعِفَهُ لَهُ أَضْعَافًا كَثِيرَةٌ وَاللَّهُ يَقْبِضُ وَيَبْصُّطُ وَالِيَّهِ تُرْجَعُون} البَقَرة 245 "Who is he that will loan to Allah a beautiful loan, which Allah will double unto his credit and multiply many times? It is Allah that giveth (you) want or plenty and to Him shall be your return" (Al-Baqar). 245). 10

It was also narrated by Abu Hurairah:

Abu Hurairah narrated that the Messenger of Allah said: "Whoever relieves a Muslim of a burden from the burdens of the world, Allah will relieve him of a burden from the burdens on the Day of Judgement. And whoever helps ease a difficulty in the world, Allah will grant him ease from a difficulty in the world and in the Hereafter. And whoever covers (the faults of) a Muslim, Allah will cover (his faults) for him in the world and the Hereafter. And Allah is engaged in helping the worshipper as long as the worshipper is engaged in helping his brother." <sup>11</sup>

However, as a financial intermediary, IFIs are in a special position in society to encourage *qard hasan* activities both within it and with its clients and customers. This is because IFIs are able to direct funds from depositors and customers and also allocate them to the neediest purposes (Farook, 2007). According to AAOIFI standard (2008) on CSR of Islamic financial institutions, IFIs may implement a CSR policy for *qard hasan* for social reasons. Therefore, as a representative institution that serves collective Islamic religious obligation, Islamic financial institutions need to improve on CSR policy relating to *qard hasan* and consider it as part of their charitable activities in order to provide for the needy and to improve the society at large.

## 2.1.4 SOCIAL IMPACT BASED INVESTMENT QUOTAS

Global Impact Investing Network (GIIN) defines social impact investments as investments made into companies, organizations, and funds with the intention to generate measurable social and environmental impact alongside a financial return. GIIN emphasizes that such investments could be made across sectors and industries both in the developed and developing world with varied returns on investments. An impact investor seeks to create social good or improve the health of the environment in addition to achieving financial returns. Exchange Asia (IIX), impact investment is still nascent in Asia but the industry is expected to grow significantly, reportedly to a US\$1 trillion asset class by 2020. In the control of the environment in the control of the environment in the control of the environment in addition to achieving financial returns. In the control of the environment in addition to achieving financial returns. In the control of the environment in addition to achieving financial returns. In the control of the environment in addition to achieving financial returns. In the control of the environment in addition to achieving financial returns. In the control of the environment in addition to achieving financial returns. In the control of the environment in addition to achieving financial returns.

AAOIFI standard (2008) on CSR of Islamic financial institutions stipulated that, Islamic banks should invest in industries that produce social, cultural or religious development. These policies may include quotas/targets for social-impact investments, based on the role that the investments play in:

- Assisting poor and needy individuals and families, by financing business opportunity and/or education
- Assisting orphans
- Assisting heavily indebted individuals or families with unfortunate circumstances
- Assisting in the provisioning of health and medical services to impoverished communities or areas
- Assisting in the development of research and education facilities, particularly those that utilize and empower disadvantaged individuals or communities
- Assisting the development of small and medium sized entrepreneur and family businesses
- Encouraging the development of Islamic and native societal culture, discouraging contemporary social ills and vices.

More so, IFIs can set aside a portion of their investment quota as a target for increasing investments in social impact based projects. Again, individual research undertaken by the banks could lead to an appreciation of the particular projects that have the greatest social impact (Farook, 2007).

# 2.1.5 MICRO AND SMALL SIZED BUSINESS, SOCIAL SAVINGS AND INVESTMENTS

Many believe that financing for micro-enterprises and SMEs is a natural niche for Islamic banking as it deals directly with the real economy, creates employment, involves the productive use of resources, especially capital and finance, and contributes to the alleviation of poverty (ITC 2009).

Access to financing is one of the major problems for SMEs especially for expansion and business development. In this regard, in order to facilitate the easy access to the fund and financing Government, Islamic commercial institutions provide loans for working capital, purchase of fixed assets and project financing (Ahcene, 2010).

Islamic banking is community oriented and entrepreneur-friendly, emphasizing productivity and the physical expansion of economic production and services. Hence, it shifts from the predominant practice of focusing on financial collateral or the financial worth of borrower to the entrepreneur's trustworthiness and the project's viability and usefulness. This feature has important implications for the distribution of credit as well as the stability of the system (Dusuki 2011). This policy has occupied an important position in Islam because Allah the Most High Has mentioned it in the *qur'an*:

قال تعالى:

لِلْفُقَرَآءِ الَّذِينَ أُحْصِرُواْ فِي سَبِيلِ اَشَّهِ لا يَسْتَطِيعُونَ ضَرْبًا فِي الْأَرْضِ يَحْسَبُهُمُ الْجَاهِلُ أَغْنِيَآءَ مِنَ التَّعَفُّفِ تَعْرِفُهُم بِسِيمَاهُمْ لَا يَسْتَلُونَ النَّاسَ إِلْمَافَةُ وَمَا تُنفِقُواْ مِنْ خَيْرِ فَإِنَّ اللَّهَ بِهِ عَلِيمٌ

"(Alms are) for the poor who are straitened for the cause of Allah, who cannot travel in the land (for trade). An ignorant [person] would think them self-sufficient because of their restraint, but you will know them by their [characteristic] sign. They do not beg of men with importunity. And whatsoever good thing ye spend, lo! Allah knoweth it" (Al-Baqara: 273).<sup>15</sup>

.

<sup>&</sup>lt;sup>15</sup> Translated by Sahih International & Dr. Ghali.

However, Islamic financial Institutions are expected to provide assistance for poor and week units in the economy (Samina, 2012). This can be achieved most significantly through the financial empowerment of family units in the lowest echelons of society. Micro and medium sized business can usually be run by such families if given the appropriate seed capital to initiate business. IFIs can also make profitable divisions serving this class of clients, particularly because existing examples of conventional micro-credit banks are very successful (Farook, 2007). AAOIFI standard (2008) on CSR of Islamic financial institutions stipulated that, IFIs may implement a CSR policy to assist micro and small business and social savings and investments. The provisions of this policy may include matters pertaining to:

- Encouragement of micro and small business savings through special features and terms for these types of investment depositors.
- Encouragement of social savings for marriages, children's education, community based programs and other social welfare programs through special features and ters for these types of investment depositors.
- Encouragement of both micro and small business savings and types of investment depositors (e.g. saving deposit with higher rates of return and investment loans discounts etc.).
- Encouragement of both family savings and investment through combination features and terms for these types of investment depostors (e.g. savings deposit with higher rates of return and investment loan discounts etc.).

Therefore, Islamic banking and finance itself is perceived by a number of Muslims as a social enterprise whereby Islamic banks are expected to play a socially responsible role in the development process. Islamic banking is believed to have the great potential to be involved in microfinance programmes to cater for the needs of the poor who usually fall outside the formal banking sector (Dusuki, 2008).

#### 3. METHODOLOGY

The researchers used both primary and secondary data in order to achieve a credible study. Secondary data was used to obtain relevant information from the published annual reports of the Islamic banks understudy. Other secondary data includes academic books, journals, website information, articles and previous theses in CSR arena. Primary data on the other hand was used to elicit the respondents' opinions toward the impact of CSR of Islamic banks in Malaysia on societal development. Data obtained were subjected to both descriptive and inferential statistics using SPSS version 18.0.

# 4. ANALYSIS AND FINDINGS

#### 4.1 PROFILE OF THE RESPONDENTS

The respondents of this study were Islamic banks' managers, customers, employees and local community (that is, citizen). However, the total number of male as identified from the results were 92 and total number of female were 102 with 48% and 52% respectively. The proportion of the respondents who were Malay is 180 with 91.8%, Chinese is 6 with 3.1%, and Indian 3 with 1.5% and the proportion of others were 7 with 3.6%.

In addition to the above, the qualification of the respondents are as follows; primary school certification was 19 with 9.7%, higher school was 43 with 21.9%, diploma was 54 with 27.6%, Bachelor Degree was

62 with 31.6%, master degree was 18 with 9.2% and none of the respondents identified themselves as Ph.D. holder. More so, out of the respondents surveyed, 81 of them belong to Bank Islam Malaysia Berhad with 41.3%, 41 belong to CIMB Islamic Berhad with 20.9%, 23 belong to Bank Muamalat Malaysia Berhad with 11.7% and 51 belong to Maybank Islamic Berhad with 26%.

Furthermore, only two (2) out of four (4) managers filled and returned their questionnaires and the percentage of this two was 1.0% out of the whole respondents, customers were 137 with 69%, employees was 50 with 25.5% and member of local community was 7 with 3.7%. Even though the number of the participants who identified themselves as member of local community was the lowest among the targeted group, but the majority of the respondents were Malay and most of them preferred to identify themselves as the customer rather than member of local community. All demographic distribution are shown in table 4.2 below.

# 4.2 MULTIPLE REGRESSION ANALYSIS

The multiple regression analysis was also used to investigate the impact of Islamic banks' zakat, charitable activities, *qard hasan*, social impact based investment quotas and micro & small sized business, social savings and investments policies on the Malaysian societal development. The following

# 4.3 RESULTS SUMMARY

The aim of this section is to provide the summary of major findings in this paper. Such findings are discussed based on the statistical results shown below and in the context of the literature review.

TABLE 4.3 SUMMARY OF THE HYPOTHESIS TESTING

Hypothesis Statement	Adj R <sup>2</sup>	Sig. Level	Description
Islamic banks' zakat policy	.391%	0.000	Accepted
Societal Development= $\alpha + \beta ZP + \varepsilon$			
Islamic banks Qard hasan policy	.458%	0.000	Accepted
Societal Development= $\alpha + \beta QAP + \varepsilon$			
Islamic Banks' Charitable Activities Policy	.553%	0.000	Accepted
Societal Development= $\alpha + \beta CAP + \varepsilon$			
Islamic banks' Social Impact Based	.576%	0.000	Accepted
Investment Quotas Policy			
Societal Development= $\alpha + \beta SIBIQP + \varepsilon$			
Islamic Banks' Micro & Small Sized	.508%	0.000	Accepted
Business, Social Savings and Investments			
Policy			
Societal Development= $\alpha + \beta MBSSIP + \varepsilon$			

By achieving the objective of the study, the above findings support the study of Dusuki and Dar (2005) which proved that corporate social responsibility is not an alien to Islamic banking. It also proved that Islamic banks in Malaysia are versatile in discharging their responsibility to their stakeholders as recommended by Farook (2007).

#### 5. CONCLUSION

This research was conducted in order to study the impact of the Islamic banks' corporate social responsibility on the societal development in Malaysia. In order to achieve this aim, researchers structured this paper into five main sections in which section one contained the introductory aspect of the study, section two was basically on reviewing the literature of the past study within the scope of the study, section three was on the methodology used to achieve the aims of this study, while findings of the various analysis was presented under section four and section five contained the conclusion and recommendation for this study.

However, multivariate techniques of the statistics were employed to test whether there is a significant relationship between the Islamic banks' corporate social responsibility and societal development. The variables used to investigate this objectives were Islamic banks' zakat policy, *qard hasan* policy, charitable activities policy, social impact based investment quotas policy and micro and small sized business, social savings and investments policy. All these variables were linked with the societal development and it was found that there was a significant relationship between the dependent and independent variables. Therefore, the objective of this study was achieved because there was a significant relationship between the Islamic banks corporate social responsibility and societal development.

#### 5.1 RECOMMENDATION

As mentioned, the result of this study was all significant. As a result, the researchers argued that the importance of Islamic banks' CSR cannot be overemphasized. But this does not mean that Islamic banks have extremely contributed to the society of Malaysia and they are therefore recommended to improve more extensively in supporting the needy, businesses and the entire society as a whole.

More so, the Islamic banks from other part of the world are as well recommended to emulate the Islamic banks in Malaysia in supporting the needy and the societies of their respective countries so as to achieve the aim and objective of Shari'ah.

# EFFICIENCY OF BAITUL MAAL WA TAMWIL (BMT): AN EFFORT TOWARDS ISLAMIC WEALTH MANAGEMENT IN MICROFINANCE INSTITUTION

Atiqi Chollisni Nasution<sup>1</sup>

#### **ABSTRACT**

The primary objective of most microfinance program is alleviating the poverty by assisting the poor to be economically independent. Measuring efficiency of microfinance program is important for enabling the microfinance institutions (MFIs) to strengthen management, generate the profits and maintain an efficient operation to ensure its sustainability. In the last twenty years, the growth of BMTs increases significantly and has contributed positively to the development of socio economic of the country. Recently, there are around 4,000 BMTs operate and have enhanced thousand poor people life. BMTs responsible in collecting, managing and distributing the funds either for charity or providing financial services for the poor. The main aim of the paper is to examine the efficiency of Baitul Maal wa Tamwil (BMT) as Islamic microfinance institution in Indonesia and explain BMT's effort towards Islamic wealth management by applicating Islamic principles on its programs. Data Envelopment Analysis (DEA) is used to examine the relative efficiency of the selected BMTs. DEA is a non-parametric method which utilizes the linear programming method to measure technical (technological) efficiency and requires inputs and outputs data. Twelve BMTs are chosen as the sample of the study as it represents the biggest BMT's operated in the poorest provinces. The study indicated that financing and human resources were some sources of inefficiency in BMT. It also indicated that the efficient BMTs applicated the Islamic wealth management where focus on wealth of members and customers based on Islamic principles are the priority. Inefficient BMTs are expected to optimize its operations by emulating the input minimization and output maximization practices adopted by efficient BMTs.

**Keywords:** microfinance, efficiency, DEA, Islamic wealth management, BMT

#### 1. INTRODUCTION

The Islamic approach to eradication of poverty and achievement of an equitable distribution of income and wealth is part of an overall scheme for the establishment of a socio economic order (Ahmad,1991). Islam has stated that the balance of human life is main priority. It should be stand to the accomplishment of basic human needs and justice in human life. It means that Islam does not only manage the ritual activities between human and God but it also manages the daily activities of human where the Islamic ethics is involved on it.

Islamic finance offers various ethical schemes and instruments that can be advanced and adopted for the purpose of microfinance (Abdul Rahman, 2007). Islamic MFIs do not aim to reduce the poverty in material aspect only but they also attempt to motivate the microentrepreneurs (poor people) to be thriving by assisting them to adhere with Islamic norms and values.

The term of alleviating the poverty in Islamic perspectives entails spiritual aspect is more important than material aspects. A hadiths<sup>2</sup> narrated by Abu Hurairah (as quoted on Mannan,

 $<sup>^1\,</sup>PhD\ student\ of\ Institute\ Islamic\ Banking\ and\ Finance, International\ Islamic\ University\ Malaysia$ 

1988) said that; "Indeed, the real richness is that of the heart (spiritual) itself". On the other word, the real wealth in Islamic perspectives is not only in material aspects but also the spiritual concern. Wealth management can be defined as how the person manage it's wealth to give as much return. In conventional perspectives, anything that give a return is considered as income without considers the sources are halal or haram. Meanwhile, Islamic wealth management helps to ensure that a person's wealth is managed in such a way that consistent with the Islamic norms and value.

The concept of Islamic wealth management is consistent with the role of Baitul Maal wa Tamwil (BMT) in Indonesia cause it based on cooperative model. The model focuses on customer's welfare as the priority. Using Islamic principles in all activities, BMT attempts to reduce the poverty by increasing the material and spiritual aspect of the poor people. They do not only disburse the loan for the poor but also assist the poor to manage its wealth (source of funds from the micro financing) based on Islamic principles. The fully assistance of BMT to its member by educating them in managing the funds, indicates the effort of BMT to increase the welfare of its member. It is also meant that BMT has moved forward to improve the economic condition of a person especially assist the poor to improve its norms and faith as a worship to Allah SWT.

Historically, BMT's movement was started around 1990's and the number grows rapidly with totally around 4,000 BMTs operate in the country. However, most of BMTs are not working well and some of them are collapsed. It indicates that the growth of BMTs is not consistent with the quality development of its performance. Therefore, BMT's performance needs to be evaluated in order to find out the problems and inefficiency matters. Especially the evaluation of BMT's efficiency and effectiveness in order to indicate the health of this institution that can be effect to its Islamic wealth management.

The structure of the paper is divided into four sections. The next section provides an overview of BMTs in Indonesia and literature on efficiency and Islamic wealth management. Section three discusses the methodology while section four explains the findings. The last section is the conclusion.

# 2. LITERATURE REVIEW

Asian Development Bank (ADB) (2000) defines poverty as characterized by a lack of access to essential goods, service, assets and opportunities to which being is entitled. On the other word, someone is considered poverty when they are absence of the items in the list of necessities (basic needs). Microfinance provides financial services to the poor through delivering financial services in micro and small sized enterprise.

Baitul Maal wa Tamwil (BMT) is established to help muslim micro-entrepreneurs as a strategy for eradicating rural poverty (Kholis, 2009). As Islamic MFI, BMT divides its role into two functions; social and economic mission. The social missions is operated by Baitul Maal where collecting and distributing the charity fund (zakah, infaq, shodaqoh) to the poor is the main tasks. Whilst, Baitut Tamwil operates based on commercial activities, where the funds are managed to be productive and profitable.

The basic operation of BMT follows cooperative model, where all of persons that involve in BMTs are members (e.g staffs and customers). As member of BMT, they have responsible to

-

<sup>&</sup>lt;sup>2</sup> Hadiths is the words or the acts of Prophet Muhammad (pbuh) that should be followed by muslim and as guidance to their daily activities. The revelation given to Prophet Muhammad (pbuh) is based on circumstances that are suitable with the process of Islamic propagation (Solihin, 2008)

pay the membership fee. The fees will support the BMT's mission to highlight the members welfare by optimalizing their contribution fee on BMT's commercial activities.

Some studies indicated that BMT's performance was relatively low. It was confirmed by the lack of management (Widiyanto and Ismail, 2010), lack of supervision and development assistance (Kholis, 2009; Amalia, 2009). To evaluate the performance of a financial institution, Berger and Humphrey (1997) suggested to separate those production units that are performing well from those that are performing poorly. For an MFI, efficiency analysis is useful to know if MFIs are well performing and if they can in the long run survive autonomously (Sedzro and Keita, 2009).

In term of efficiency, economic efficiency is defined in economic theory as a term describing how well a system in performing, in generating the maximum desired outputs for given inputs with available technology (Wahab and Abdul Rahman, 2012). The question is coming out when the assessment of an Islamic MFI is needed. How we assess that Islamic MFIs are efficient in contributing its role in economic and social, is one of the question that should be investigated more. In fact, most of previous studies were more concerned on evaluating the efficiency of conventional MFIs whereas evaluating the efficiency of Islamic MFIs are still limited.

The prior studies used Data Envelopment Analysis (DEA) method to measure the efficiency of MFIs and covered a sample period of two to five years. DEA is a non-parametric method which utilize the linear programming method to measure technical (technological) efficiency and requires inputs and outputs data. Study by Qoyyum and Ahmad (2006), Hassan and Sanchez (2009) and Haq and Skully (2009) analyzed the efficiency of MFIs in some countries and indicated that DEA method can identify the problems and improve the MFI's functions.

Moreover, there were two studies that only concerned on one country, such Nghiem et.al (2006) analyzed the efficiency of MFIs in Bangladesh and Widiyanto (2007) that explored efficiency of BMTs in Indonesia. Both of them summarized that measuring the efficiency of MFIs has helped them to analyze the best practices of each MFI. Therefore, measuring efficiency of Islamic MFIs is an important effort to enhance the functions of this institution for the ummah and for the future studies in the area of Islamic MFIs.

Additionally, the concept of Islamic wealth management (IWM) could strengthen the role of Islamic MFIs. As it has mentioned before that IWM helps to ensure that a person's wealth is managed in such a way that consistent with the Islamic norms and value. Islamic MFI distributes the loan to the poor from and halal sources and make sure the loan is used in the ethical scheme (Islamic principles). Meanwhile, IWM helps Islamic MFI in managing the loan (as the wealth) of the poor to be develop and securing the benefit of the loan. It can be clearly stated by the scheme as follows:

Source: Money Compas (2010)

Shariah rules will protect the public interest by securing of benefits and removing the harm. Securing of benefits means that the benefits of the loan that used by the poor people should be

useful for his self and also beneficial for public.<sup>3</sup> Moreover, removing the harm earns that every transaction or investment of MFI's loan must avoid any transactions that involves gambling, harm or unclear investment. However, being compliant to shariah law does not limit a person's opportunity to invest as it actually helps a person to make ethical investment whereby the chosen business will be involved in ethical practice (Money Compas, 2010).

#### 3. RESEARCH METHODOLOGY

Based on some literatures, there are two approaches in measuring the efficiency, they are non-parametric approach and parametric approach:

- 1. The non-parametric approach. This approach is utilizing the linear programming method to measure technical (technological) efficiency which require inputs and outputs data only. This approach uses two types of analysis; Data Envelopment Analysis (DEA) and Free Disposal Hull Analysis (FDH)
- 2. The parametric approach. This approach is using econometric techniques to measure economic efficiency. Since economic efficiency requires information on technical and allocative efficiency, this method is considered broader than non-parametric approach. Based on market price, this approach involves in choosing the optimal level and structure of inputs and outputs. This approach uses three of analysis; Stochastic Frontier Analysis (SFA), Thick Frontier Analysis (TFA) and Distribution Free Approach Analysis (DFA).

The most popular approach that is widely used is Data Envelopment analysis (DEA). It is a linear programming technique where a set of the best practices or frontier observations are those for which no other decision making units or linear combination of units has a much or more every output (given inputs) or a little or less of every input (given output) (Berger and Humphrey,1997). DEA also can be defined as a linear programming model, assuming no random mistakes, used to measure technical efficiency (Vincova, 2005).

DEA is used to examine the relative efficiency of the selected BMTs. DEA is a non-parametric method which utilize the linear programming method to measure technical (technological) efficiency and requires inputs and outputs data. It is calculated by using Constant Return Scale (CRS) and Variable Return Scale (VRS) model. Charnes, Cooper and Rhodes (1978) or CCR defined Data Envelopment Analysis (DEA) as a mathematical programming model applied to observational data that provides a new way of obtaining empirical estimates of relations such as the production functions and/or efficient production possibilities surfaces that are conner stones of modern economics. While, in Banker, Charnes, and Cooper (1984) or is called as BCC model, the calculation of efficiency is called Pure Technical Efficiency (PTE).

CCR assumes ratio of additional input and output is equal or constant return to scale (CRS) or DMUs is at optimal scale, while BCC argues ratio of additional input and output is non-equal or variable return to scale (VRS). In addition, CCR model represents multiplication of Pure Technical Efficiency (PTE) and Scale Efficiency (SE) while BCC model examines Technical Efficiency (TE) only.

Technical efficiency (TE) describes the ability of a business unit to maximize output given certain amount of input or minimize its inputs given outputs. Hasan and Sanchez (2009)

\_

<sup>&</sup>lt;sup>3</sup> For example; if the loan that used by the poor people grow and develop, the benefit of the loan could create a wealth for the person. In Islamic principles, the wealth should be shared to other people who need it by distributing the charity (shadaqah) or could be used for opening the work field for the unemployment. Secure the benefit of loan will avoid economic discrepancy and protect the public interest.

defined pure technical efficiency (PTE) to firm's ability to avoid waste by producing as much output as input usage allows, or by using as little input as output production allows. While Scale efficiency (SE) is defined as proportional reduction if the firm or bank achieved constant return to scale (CRS) or refers to the firm's ability to work at its optimal scale.

# a. The Constant Return To Scale (CRS)

The CRS assumes when all DMUs are operating at optimal scale. To define some notation, Coelli (1996) started by assuming data on K inputs and M outputs on each of N firms or DMUs. For the i-th DMU, it stated by the vectors xi and yi. Moreover, the data of all N DMUs represented by the KxN input matrix, X and the MxN output matrix, Y. Coelli (1996) also mentioned that the best way to introduce DEA is via the ratio form. For each DMU, a measure of the ratio of all inputs, such as u'yi/v'xi, where u is a Mx1 vector of output weights and v is a Kx1 vector of input weights. The input oriented measure of a particular DMU, under CRS, is calculated by:

```
\begin{array}{ll} \text{Min } \theta, \lambda \ , \theta \\ \text{St} & -yi + Y \ \lambda \! \geq \! 0, \\ \theta xi - X\lambda \! \geq \! 0, \\ \lambda \! > \! 0 \end{array}
```

where  $\theta$  is a scalar and  $\lambda$  is a Nx1 vector of constant (Coelli, 1996). If  $\theta$  =1, the DMU is considered is efficient which lies on the frontier (technical efficient). Meanwhile, if  $\theta$  < 1, DMU is inefficient, thus, it need a 1 –  $\theta$  reduction in the inputs levels to reach the frontier. It should be noted that the linear programming problem must be solved N times, once for each DMU in the sample.

#### **b.** The Variable Return to Scale (VRS)

The use of CRS which considered all DMUs are at optimal scale, might encourage the result of TE confounded by SE. It can happen when DMU is in imperfect competition, constraints on finance, etc. Therefore, the use of VRS which was promoted by Banker, Charnes, and Cooper (1984) attempt to calculate TE that devoid the SE effects. Based on CRS linear programming problem, the VRS can be calculated by adding the convexity constraint :  $N1'\lambda = 1$  to provide:

```
\begin{array}{ll} Min\;\theta,\lambda,\theta\\ St & -yi+Y\lambda \geq 0\\ \Theta xi-X\lambda \geq 0,\\ N1'\lambda = 1\\ \lambda \geq 0, \end{array}
```

where N1 is an Nx1 vector of ones. This model provides TE scores which are greater than or equal to CRS model, it caused by a convex hull intersecting planes which envelope the data points more tightly than the CRS conical hull.

DEA method is choosen for this study due to its useful features when it applied such each decision making unit  $(DMU)^4$  is assigned a single efficiency score and highlights the areas of improvement for each single DMU. The formula of DEA method is as follows;

#### **Efficiency of DMU** =

```
p

Σ μk yk0 DMU = decision making unit k=1 m = different inputs
```

.

<sup>&</sup>lt;sup>4</sup> DMU on this study is BMTs

m p = different outputs  $\Sigma$  vi xi0 n = number of DMU evaluated i=1 xij = number of input I consumed by DMUj yij = number of output k produced by DMUj

The concept of DEA considers that the most efficient firm is indicated by the score of 1 and generating best practice outputs among the rest of firms in the given sample. To measure the efficiency of an MFI, DEA method requires the approach in production or intermediation. Production approach considers financial institutions as a production unit, whilst intermediation approach deliberates financial institutions as intermediating between savers and borrowers. Moreover, DEA method also requires the inputs and outputs to measure the efficiency. This study argues that intermediating approach is suitable to measure the efficiency of BMTs due to its role as an intermediary between the borrowers and MFI. Two inputs and two outputs will be analyzed to measure BMT's efficiency by using DEA method. the inputs and outputs that proposed by this study are as follows:

Table 1: The Inputs and Outputs of the Study

INPUTS	OUTPUTS
<b>Fixed assets</b> ; represents the support of fixed	Disbursement of loans; represents the
assets to BMT's operations	BMT's activities in distributing the loan
Total Capital; represents total funds that have	Total profit sharing; represents the
been collected	achievement of BMTs to acquire profit
to support BMT's activities	and financial sustainability

#### 4. DATA ANALYSIS

The data needed for the empirical analysis comes from 14 BMT's financial statement. These fortheen BMTs are chosen as the sample of the study as it represents the biggest BMT's operated in the poorest provinces. Most of these BMTs have established well where they have operated more than five years, have asset more than Rp 1 billion and have served more than 500 borrowers (poor people).

In order to calculate the level of efficiency of BMTs, this study applies DEAP version 2.1 proposed by Coelli (1996). Data is taken from BMT's annual report 2009-2011. Table 2 provides the technical efficiency of BMTs .

Table 2: Technical Efficiency in BMTs 2009 – 2011 (Constant and Variable Return to Scale)

		(00115111111111111111111111111111111111					
Year	Sample	TE	PTE	SE			
	Size	Mean of sample	Mean of sample	Mean of sample			
		CRS	VRS				
2000	1.4	0.502	0.665	0.000			
2009	14	0.593	0.667	0.898			
2010	14	0.628	0.743	0.842			
2011	14	0.729	0.825	0.890			
Mean		0.650	0.745	0.877			

Table 3 provides the means of TE under the assumption of CRS, while PTE and SE under the assumption of VRS. Between 2009 to 2011, the mean TE under the assumption of CRS ranged from 59.3 % and 72.9%. Taking the TE in 2009 as example, the conclusion can be

explained that the BMTs on average have produce the same level of output by actually using only 65 % of the input mix. In other conclusion, it can be explained that in 2004, on average the BMTs were still 27.1% technically inefficient.

Moreover, under the assumption of VRS, between 2009 and 2011 the PTE ranged between 66.7% and 82.5%. VRS rating is obtained when we control for the scale size of the DMU. Furthermore, the TE in BMTs seems increases every year from 2010 to 2010. As it is noted that TE 62.8% in 2010 as compared to the mean TE in 2009 that only 59.3%. The same trend is showed by the mean of PTE that the number is growing every year. On the other hand, the mean of SE is decreasing in 2010 compared to 2009, then, it further increase again in 2011. In order to find the efficient BMTs in three provinces, the next table will explain the efficiency measures of each BMTs.

Table 3: DEA Technical Efficiency, Pure Technical Efficiency and Scale Efficiency for BMTs from 2009-2011

East Java	UGT Sidogiri	1.000	1.000	1.000 -	1.000	1.000	1.000 -	1.000	1.000	1.000 -
	Mean	0.593	0.667	0.898	0.628 0.743 0.842 0.729 0.825 0.89		0.890			

It can be summarized that the most efficient BMT is UGT Sidogiri at East Java and BMT Al Hikmah Bangsri at Central Java with the score 1 that achieved every year and every efficiency measurement. It means that they have optimalized the inputs to get the maximum output by requiring the capital and fixed asset to create the optimum income and disburse as much of loan. On the other hand, the BMTs that have less result of efficiency is due to inefficiency to optimalize their inputs. BMT Al-Anhar, for instance, the number of TE and PTE are very low. It might be due to the lack of quality of human resources and also the absence of supporting funds (third parties funds).

To understand the operational of efficient BMT, this study only focuses on BMT UGT Sidogiri in order to see its application on Islamic wealth management. BMT UGT Sidogiri was developed by Pesantren Sidogiri at East Java. In 2011, it has 183.061 customers with asset Rp 322 billion, and has served 71.048 micro-entrepeneurs. One of strategy that used by BMT Sidogiri to serve the customers is spiritual approach. This approach includes fully assistance to customers to manage their wealth in Islamic way. For example, when the

 $<sup>^{\</sup>rm 5}$  Based on interview with Manager Marketing of BMT Sidogiri on April 2011.

customers received the microfinancing, BMT Sidogiri assists them to manage the loan (as the wealth) of the customers properly from how to manage the money, write every transactions until how to manage the profit or loss of the business.

Using the spiritual approach that focus on the responsibility of a human to Allah SWT, most of customers aware of their responsible to pay the loan on time. If a customer can not pay due the date, one of BMT Sidogiri's staff will visit and remind some verses in the qur'an about the compulsory of pay the loan for every muslim. This approach is effective to reduce the number of non-performing loan of the BMT. In short, learn from BMT UGT Sidogiri, other BMTs that have low result of efficiency can optimalize its function by educating the customers to manage their wealth efficiently.

#### 5. CONCLUSION

Islamic wealth management helps to ensure that a person's wealth is managed in such a way that consistent with the Islamic norms and value. BMTs in Indonesia have applicated the Islamic wealth management by focusing on customer's welfare as the priority and educate the customers to manage the wealth properly. The result of DEA method that proposed by Coelli (2006) to measure the efficiency found that BMT Sidogiri and BMT Al Hikmah Bangsri have the highest score of efficiency.

BMT Sidogiri assisted the customers to be efficient in managing their wealth based on Islamic approach. This strategy is effective to reduce inefficiency of operational in BMT. Inefficient BMT might be due to the lack of quality staffs and financial support. It was indicated by the low of TE and PTE in general. In conclusion, the study suggests to learn from the efficient BMT in order to enhance the quality of Islamic wealth management.

#### **ABSTRAK**

Artikel ini akan menganalisis isu ketidakselarasan kaedah-kaedah bayaran zakat yang ditawarkan oleh institusi-institusi zakat di Malaysia. Kajian mendapati bahawa terdapat perbezaan kaedah-kaedah bayaran zakat yang ditawarkan oleh institusi zakat termasuk institusi zakat yang dikorporatkan dan institusi zakat yang tidak dikorporatkan. Sehubungan dengan itu, kajian ini akan mengkaji punca ketidakselarasan kaedah-kaedah bayaran zakat oleh semua institusi negeri dan menganalisis hubungan yang wujud antara kaedah-kaedah bayaran zakat yang ditawarkan oleh institusi-institusi zakat negeri dengan jumlah kutipan zakat yang diperolehi oleh sesebuah institusi zakat negeri. Kepelbagaian kaedah-kaedah yang disediakan bagi pembayar zakat oleh institusi zakat negeri telah memberi kesan positif kepada peningkatan jumlah kutipan zakat negeri di Malaysia.

Kata Kunci: Zakat, Metodologi Bayaran Zakat; Kutipan zakat; Bayaran zakat; Institusi zakat

#### **ABSTRACT**

This article will analyze the non-uniformity zakat payment methods offered via zakat institutions in Malaysia. The study implies that there are differences in zakat payment methods offered by zakat institutions including institution of zakat institutions incorporated and not incorporated. Accordingly, this study will examine the causes of inconsistency zakat payment methods by all zakat state institutions and analyze the relationships between zakat payment methods offered by the state of zakat institutions with the total zakat amount collected by the state of zakat institutions. The diversity of methods provided for zakat payers via zakat state institutions have a positive impact on the increasing of zakat amount collected in Malaysia.

**Keywords:** Zakat, Methodology of zakat payment; Zakat payment; Zakat collection; Zakat institutions;

#### 1. PENGENALAN

Menurut Yusuf al-Qaradawi (1981), Wahbah Al-Zuhaili (1994) dan Jabatan Kemajuan Islam Malaysia (2001) zakat dari segi syarak ialah sesuatu hak yang wajib pada sesuatu harta untuk dikeluarkan kepada orang yang berhak mendapatkannya Ini bermaksud sebahagian harta tertentu yang telah diwajibkan oleh Allah SWT untuk diberikan kepada orang-orang yang berhak menerimanya iaitu golongan tertentu (asnaf) sebagaimana yang telah dinyatakan di dalam Al-Quran dan lafaz zakat juga digunakan terhadap bahagian tertentu yang dikeluarkan dari harta orang yang wajib mengeluarkan zakat. Zakat juga berhubungkait dengan tauhid, solat dan hal harta dalam Siyasah Syari'ah. Di dalam Al-Quran, zakat juga disebut sebagai perkataan sadaqah. Menurut Afzal Ur-Rahman (1994), sadaqah merupakan istilah yang amat luas

<sup>&</sup>lt;sup>1</sup> Pensyarah Kanan, Fakulti Ekonomi dan Muamalat, Universiti Sains Islam Malaysia. Email:faisol@usim.edu.my

maknanya yang digunakan di dalam Al-Quran. *Sadaqah* bermaksud memberi derma (sukarela) kerana mematuhi hukum dan zakat juga dikatakan sebagai *sadaqah* kerana ia sejenis derma yang diwajibkan.

Sistem pengurusan zakat di Malaysia telah mula bertapak sejak era pre-klonial lagi di mana masyarakat Islam pada ketika itu telah membayar zakat fitrah hanya kepada amil yang terdiri daripada guru-guru agama (Abdul-Wahab, Mohamed et. al., 1995). Undang-undang yang wujud semasa kerajaan Islam Melaka ditubuhkan adalah bersifat tunggal di mana zakat merupakan satu bidang dalam pentadbiran negara (Mahmood Zuhdi Ab Majid, 2007). Menurut Mahmood Zuhdi (2007), penjajahan British ke atas tanah Melayu telah memberi kesan negatif kepada sistem pengurusan zakat di mana undang-undang dan pentadbiran zakat bersama semua undang-undang pentadbiran hal ehwal agama Islam telah ditolak ke sudut yang lebih sempit dan terhad. Sebelum penjajahan British ke tanah Melayu, sultan atau raja mempunyai kuasa yang tertinggi di dalam pentadbiran negeri yang merangkumi penguatkuasaan undang-undang Islam (termasuk zakat). Namun dengan dasar pecah dan perintah oleh British ke atas tanah Melayu telah menyebabkan kuasa sultan atau raja mula dikurangkan dan mereka hanya berkuasa kepada undang-undang Islam sahaja dan bukan lagi pentadbir negeri. Ini secara tidak langsung menyebabkan sistem pengurusan zakat di Malaysia mula mengalami kemelesetan disebabkan bidang undang-undang berkaitan Islam mula dihadkan.

Sungguhpun demikian, usaha yang dijalankan oleh pihak kerajaan di Malaysia bagi memartabatkan kembali sistem zakat telah membuahkan hasil walaupun mengambil masa berdekad lamanya. Ini terbukti apabila kerajaan Malaysia melalui penubuhan JAKIM, YAPEIM, JAWHAR dan beberapa lagi agensi lain telah membantu pengurusan zakat negeri (Mahmood Zuhdi Ab Majid, 2007) agar dapat meningkatkan lagi kutipan dan agihan zakat di Malaysia. Di Malaysia, semua negeri mempunyai institusi zakat masingmasing yang bertanggungjawab menguruskan kutipan dan dan agihan zakat. Berikut merupakan institusi zakat negeri-negeri di Malaysia yang bertanggungjawab menguruskan kutipan zakat bersama alamat laman web masing-masing iaitu Pusat Pungutan Zakat Persekutuan (PPZ); http://www.zakat.com.my, Lembaga Zakat Selangor (LZS); http://www.e-zakat.com.my, Pusat Urus Zakat P.Pinang (PUZPP); http://www.zakatpenang.com, Pusat Kutipan Zakat Pahang (PKZP); http://www.zakatpahang.com, Pusat Zakat Negeri Sembilan (PZNS); http://www.zakatns.com.my, Pusat Zakat Melaka (PZM); http://www.izakat.com, Tabung Baitulmal Majlis Agama Sarawak (BMS); http://www.tabung-baitulmalsarawak.org.my, Pusat Zakat Sabah (PZS); http://www.zakat.sabah.gov.my, Jabatan Zakat Negeri Kedah (JZNK); http://www.zakatkedah.com, Baitulmal Negeri Perlis (BMP); http://www.perlis.gov.my, Majlis Agama Islam Dan Adat Melayu Perak (MAIDAMP); http://www.maiamp.gov.my, Majlis Agama Islam Dan Adat Istiadat Melayu Kelantan (MAIDAIMK); http://www.e-maik.my, Pusat Urusan Zakat Majlis Agama Islam Dan Adat Melayu Terengganu (PUZMAIDAMT); http://www.maidam.gov.my dan Majlis Agama Islam Negeri Johor (MAIJ); http://www.maij.gov.my.

Terdapat perbezaan nama institusi-institusi yang bertanggungjawab menguruskan zakat di Malaysia. Bagi Wilayah Persekutuan, Negeri Sembilan, Pahang, Sabah, Melaka, Pulau Pinang serta Terengganu menggunakan nama Pusat sebagai satu entiti yang bertangungjawab kepada zakat dan lebih berfokus. Manakala Perak, Kelantan dan Johor pula masih menggunakan nama Majlis Agama Islam kerana ia masih dibawah kelolaan Majlis Agama Islam dan Adat Melayu. Bagi Kedah dan Selangor masing-masing menggunakan nama jabatan dan juga lembaga. Selain itu, Walaupun begitu Perlis dan Sarawak masing-masing menggunakan nama baitulmal. Adalah perlu dinyatakan disini bahawa semua institusi zakat negeri masih lagi tertakluk kepada Enakmen Pentadbiran Agama Islam Negeri masing-masing (JAKIM, 2013).

Kepelbagaian nama institusi zakat di setiap negeri juga sebenarnya amat berkait rapat dengan transformasi institusi pengurusan zakat itu sendiri. Kedapatan sembilan institusi zakat negeri telah mengalami transformasi pengurusan zakat di mana institusi zakat ini telah dikorporatkan bagi meningkatkan lagi kualiti pengurusan zakat negeri masing-masing khususnya berkaitan kutipan zakat.

Pusat zakat yang pertama dikorporatkan ialah Pusat Zakat W.Persekutuan iaitu pada tahun 1991. Empat tahun kemudian terdapat tiga lagi institusi zakat yang dikorporatkan iaitu Lembaga Zakat Selangor, Pusat Zakat Pahang dan Pusat Urus Zakat Pulau Pinang. Pada tahun 2000 pula menyaksikan dua lagi institusi zakat negeri berjaya dikorporatkan iaitu Pusat Pungutan Zakat Negeri Sembilan and Pusat Zakat Melaka (Sanep Ahmad et.al., 2006). Pengkorporatan besar-besaran oleh institusi zakat negeri telah mempengaruhi negeri Sarawak dan Sabah agar institusi zakat mereka juga dikorporatkan. Hasilnya pada tahun 2001 dan 2007 Tabung Baitulmal Sarawak dan Pusat Zakat Sabah dikorporatkan (Norazlina dan Abdul Rahim, 2012).

Jesteru itu, pelbagai usaha telah dilakukan oleh semua institusi zakat negeri bagi meningkatkan jumlah kutipan zakat seperti mempelbagaikan perkhidmatan kaedah bayaran zakat kepada para pembayar zakat. Terdapat institusi zakat negeri yang hanya menawarkan sedikit perkhidmatan kaedah bayaran zakat dan ada pula yang menawarkan pelbagai perkhidmatan kaedah bayaran zakat. Ketidakselarasan ini menunjukan bahawa wujud ketidakmuafakatan dan perbezaan ideologi pengurusan di institusi-institusi zakat di Malaysia. Ketidakselarasan ini amat merugikan masyarakat Islam khususnya bakal penerima-penerima zakat kerana kepelbagaian kaedah bayaran zakat akan memberi kesan kepada peningkatan kutipan zakat. Oleh itu ketidakselarasan perkhidmatan kaedah bayaran zakat ini perlu diselaraskan di setiap institusi zakat negeri agar para pembayar zakat mempunyai pilihan yang pelbagai bagi menunaikan kewajipan berzakat. Ini kerana para pembayar zakat mempunyai pelbagai kekangan seperti kekangan masa, kekangan tempat lokasi, kekangan kaunter zakat, kekangan jarak dan pelbagai lagi.

Pada hari ini Malaysia mempunyai 17 buah bank Islam yang menjalankan pengurusan perbankan berdasarkan Syariah (BNM, 2012) dan 14 buah institusi zakat negeri yang menjalankan pengurusan zakat (JAWHAR, 2013). Daripada 17 buah bank Islam yang wujud di Malaysia hanya 15 buah bank (tidak termasuk BSN, AgroBank dan Bank Rakyat) berjaya menjalinkan kerjasama dengan institusi zakat negeri bagi urusan kutipan dan bayaran zakat.

Sumber: laman web institusi-institusi zakat negeri 2012

Walaupun kedapatan 18 buah bank telah menjalinkan kerjasama dengan institusi zakat negeri, tetapi wujud ketidakselarasan kaedah bayaran zakat oleh pembayar-pembayar zakat kepada institusi zakat masing-masing. Ketidakselarasan ini berlaku kerana transformasi sistem pengurusan zakat negeri-negeri di Malaysia. Di Malaysia, kedapatan 11 kaedah bayaran zakat telah disediakan oleh institusi zakat negeri kepada masyarakat Islam bagi kemudahan membayar zakat mereka di mana kaedah-kaedah ini dapat dibahagikan kepada tiga bahagian iaitu:

- i. Institusi zakat sendiri
- ii. Institusi perbankan Islam
- iii. Lain-lain institusi

Bagi bayaran zakat melalui institusi zakat negeri, terdapat satu kaedah ditawarkan iaitu bayaran di kaunter zakat. Manakala bayaran zakat melalui institusi perbankan Islam, terdapat tujuh kaedah ditawarkan iaitu bayaran melalui perkhidmatan online, bayaran di kaunter bank, bayaran melalui kad kredit, bayaran melalui cek, draf bank dan kiriman wang, bayaran melalui perbankan telefon, bayaran melalui sms dan juga bayaran melalui ATM. Bagi bayaran zakat melalui lain-lain institusi terdapat tiga kaedah ditawarkan iaitu bayaran melalui skim potongan gaji oleh majikan, bayaran melalui kaunter zakat di IPT dan bayaran zakat melalui pejabat pos.

Walaupun begitu tidak semua institusi zakat negeri menawarkan tiga bahagian kaedah bayaran dan kutipan zakat itu. Ada sebilangan yang fokus kepada kerjasama dengan institusi perbankan Islam seperti PPZ dan LZS, ada yang yakin dengan kemampuan institusi zakat itu sendiri mengutip zakat seperti Pusat Zakat Melaka dan ada yang melihat bahawa bantuan institusi seperti IPTA juga penting bagi meningkatkan bayaran dan kutipan zakat seperti LZS dan MAIDAP. Maka kepelbagaian yang wujud ini telah menimbulkan satu fenomena ketidakselarasan kaedah bayaran dan kutipan zakat di Malaysia yang sedikit sebanyak turut mempengaruhi jumlah kutipan zakat di Malaysia. Walhal jika dilihat kepada semua kaedah bayaran dan kutipan zakat ini, semua negeri mempunyai keupayaan melakukanya kerana suasana persekitaran adalah hampir sama walaupu latarbelakang ekonomi sesebuah negeri adalah berbeza.

#### 2. METODOLOGI KAJIAN

Kajian ini menggunakan primer yang diperolehi hasil kajian lapangan iaitu temuduga dengan beberapa pegawai zakat seperti Lembaga Zakat Selangor dan Pusat Zakat Kedah. Selain itu kajian ini juga menggunakan data sekunder yang diperolehi daripada majalah asnaf, majalah dewan ekonomi, laporan tahunan institusi zakat negeri serta laman web setiap institusi zakat negeri dan juga Jabatan Wakaf, Haji dan Zakat JAKIM dari tahun 2001 hingga 2010. Kajian ini cuba melihat jenis-jenis kaedah pembayaran zakat di Malaysia yang ditawarkan oleh institusi-institusi zakat negeri di dalam sistem pembayaran zakat di Malaysia. Ini sekaligus memberi gambaran yang jelas tentang ketidakselarasan kaedah bayaran zakat yang disediakan oleh institusi zakat negeri-negeri di Malaysia khusus untuk pembayar-pembayar zakat dan kesannya ke atas jumlah kutipan zakat. Ketidakselarasan ini telah mempengaruhi jumlah kutipan zakat di Malaysia.

## 3. SOROTAN LITERATUR

Banyak kajian awal telah dilakukan terhadap zakat serta institusi pelaksanaannya. Menurut Zulkarnain (1994), Abdul hamid Hassan (1998), Mohd Zulkhairi Mustapha et.al (2005), dan Mohd Faisol Ibrahim et.al (2011) juga telah melakukan kajian terhadap zakat pendapatan dan perbezaannya dengan cukai. Ternyata hasil kajian tersebut semuanya membuktikan bahawa zakat amat berbeza dengan cukai dalam pelbagai aspek.

Kajian yang dilakukan oleh Suhaili Abd Hadi (2003), Fuadah Johari (2004) dan Patmawati Ibrahim (2006) pula adalah berkaitan dengan agihan zakat dimana kajian tersebut mendapati agihan zakat telah berjaya mengurangkan kadar kemiskinan. Walaupun begitu menurut Hairunnizam et al (2009) kebanyakan pembayar zakat tidak berpuas hati dengan institusi zakat negeri kerana maklumat berkaitan agihan zakat yang tidak tepat dan menyeluruh. Selain itu kajian oleh Sanep et.al (2006) mendapati bahawa pembayar zakat lebih berminat membayar zakat secara terus kepada asnaf yang layak berbanding berbanding di institusi zakat itu sendiri.

Kajian yang dilakukan oleh Rosbi et.al (2011) pula menyatakan bahawa wang zakat ini sebenarnya mampu melahirkan usahawan melalui pemberian modal perniagaan oleh institusi zakat dilihat mampu mengubah penerima zakat menjadi usahawan berjaya sehingga mampu menjadi pembayar zakat. Pandangan ini disokong oleh Hisham et. al (2006) dan Mohd Abd Wahab Fatoni Mohd Balwi et. al (2008) yang menyatakan bahawa zakat merupakan salah satu instrumen yang menyumbang kepada pembentukan usahawan Islam seandainya ia diuruskan dengan betul dan tepat.

Rentetan itu penulis mendapati tidak terdapat lagi kajian yang membincangkan secara khusus metodologi bayaran zakat di Malaysia. Oleh itu penulis beranggapan bahawa kajian ini penting bagi melihat isu ketidakselarasan kaedah-kaedah yang mampu ditawarkan oleh institusi zakat negeri-negeri di Malaysia bagi meningkatkan lagi kutipan zakat dan bayaran zakat. Ini penting kerana zakat merupakan pemangkin kepada pembangunan ekonomi negera kearah berpendapatan tinggi (Zarina Kadri et.al., 2012).

Berdasarkan kaedah-kaedah bayaran zakat di atas, ternyata peranan yang dimainkan oleh sektor perbankan Islam dalam sistem pengurusan zakat di Malaysia adalah begitu besar di mana sektor ini menawarkan tujuh kaedah bayaran zakat kepada masyarakat Islam berbanding institusi zakat itu sendiri yang hanya menawarkan satu kaedah sahaja.

Hasil analisis mendapati wujudnya 11 kaedah bagi pembayar zakat menjelaskan bayaran zakat mereka dengan institusi zakat negeri. Kaedah bayaran zakat yang paling banyak ditawarkan oleh institusi-institusi zakat negeri di Malaysia ialah kaedah bayaran zakat menggunakan kaedah bayaran zakat di kaunter-kaunter institusi zakat negeri. Ini terbukti apabila semua institusi-institusi zakat negeri di Malaysia menawarkan kaedah ini. Ini diikuti pula oleh kaedah bayaran zakat menggunakan perkhidmatan skim potongan gaji dan perbankan internet di mana semua institusi zakat negeri menawarkanya kecuali negeri Perlis. Selain itu perkhidmatan bayaran zakat menggunakan kaunter pos dan kaunter bank di juga banyak ditawarkan oleh institusi zakat negeri kecuali Pusat Pungutan Zakat Persekutuan sahaja yang tidak menawarkan perkhidmatan ini.

Bagi perkhidmatan bayaran zakat yang paling sedikit ditawarkan oleh institusi zakat negeri-negeri di Malaysia kepada masyarakat Islam ialah perkhidmatan bayaran zakat menggunakan kaunter IPT, perbankan telefon, SMS dan ATM. Ini terbukti di mana hanya dua buah negeri sahaja di Malaysia yang menjalinkan kerjasama dengan IPT bagi menyediakan khidmat kaunter zakat, satu negeri sahaja yang menawarkan bayaran zakat menggunakan perbankan telefon, dua negeri bagi perkhidmatan SMS dan empat negeri bagi perkhidmatan ATM.

Statistik di atas juga menunjukkan bahawa negeri Selangor merupakan institusi zakat negeri yang mempunyai bilangan kaedah bayaran terbanyak dan juga nilai kutipan zakat tertinggi berbanding institusi zakat negeri lain iaitu 11 kaedah bayaran zakat dan kutipan zakat RM1.6 bilion. Ini diikuti negeri Sembilan, Kedah, Pahang, dan Perak di mana masing-masing ialah 9 kaedah bayaran dan kutipan zakat hanya RM258 juta, 7 kaedah bayaran dan kutipan zakat RM466.8 juta, 7 kaedah bayaran dan kutipan RM384.3 juta dan 7 kaedah bayaran dan kutipan RM365.9 juta.

Analisis data di atas juga menjelaskan bahawa institusi zakat di negeri Perlis dan Melaka merupakan institusi zakat negeri yang mempunyai bilangan kaedah bayaran yang paling sedikit dan juga nilai kutipan zakat terendah berbanding institusi zakat negeri lain iaitu masing-masing ialah 1 kaedah serta kutipan zakat hanya RM149.3 juta serta 3 kaedah dan kutipan zakat ialah RM119.9 juta. Ini diikuti institusi zakat di negeri Sabah, Wilayah Persekutuan dan Pulau Pinang di mana masing-masing menawarkan iaitu 4 kaedah bayaran dan kutipan zakat RM144 juta, 4 kaedah bayaran dan kutipan zakat RM1.5 bilion dan 5 kaedah bayaran dan kutipan zakat RM344.1 juta.

Disamping itu, analisis di atas juga menunjukan bahawa institusi zakat di Wilayah Persekutuan walaupun mempunyai bilangan kaedah bayaran zakat yang terendah tetapi kutipan zakatnya adalah kedua tertinggi berbanding Selangor. Ini adalah kerana kedudukan institusi zakat di Wilayah Persekutuan yang berada di kawasan kota metropolitan yang penuh dengan bangunan pentadbiran sama ada kerajaan ataupun swasta serta kepadatan pekerja telah menjadi faktor utama kepada kutipan zakat yang tinggi.

Selain itu juga, statistik di atas juga memperjelaskan bahawa beberapa institusi zakat yang mengalami pengkorporatan pengurusan masih tidak mampu menyumbang kepada jumlah kutipan yang tinggi seperti negeri Sabah, Sarawak dan juga Pulau Pinang. Sebaliknya terdapat beberapa institusi zakat negeri yang belum dikorporatkan masih mampu mengutip kutipan zakat yang tinggi seperti negeri Johor, Terengganu dan Kedah. Perbezaan jumlah kutipan zakat membuktikan bahawa pengkorporatan sesebuah institusi zakat bukan penyumbang utama kepada peningkatan jumlah kutipan zakat di Malaysia.

Selain itu statistik di atas juga menunjukkan bahawa masih terdapat kekurangan kaedah bayaran zakat yang ditawarkan oleh beberapa institusi zakat negeri dengan institusi zakat negeri yang lain di Malaysia. Kekurangan kaedah bayaran zakat yang ditawarkan oleh institusi zakat negeri telah mempengaruhi jumlah kutipan zakat di negeri masing-masing. Hal ini juga membuktikan bahawa perbezaan kaedah bayaran zakat yang ditawarkan oleh setiap institusi zakat negeri akan mewujudkan perbezaan dalam jumlah kutipan zakat di masa hadapan oleh negeri masing-masing.

Jelas membuktikan bahawa wujud ketidakselarasan kaedah bayaran dan kutipan zakat di setiap negerinegeri di Malaysia. Ketidakselarasan ini bukan sahaja berlaku di kalangan institusi zakat yang dikorporatkan tetapi juga kepada institusi zakat yang tidak dikorporatkan.

#### 5. PUNCA KETIDAKSELARASAN KAEDAH BAYARAN DAN KUTIPAN ZAKAT

a. Kurang Kerjasama Antara Institusi Zakat Negeri Dengan Semua Bank-Bank Islam di Malaysia

Perkembangan yang pesat di dalam sektor perbankan Islam seharusnya dimanafaatkan oleh institusi zakat negeri agar lebih berdaya saing diperingkat antarabangsa. Berdasarkan analisis, tidak terdapat satu pun institusi zakat negeri yang menjalinkan hubungan dengan semua institusi perbankan Islam di Malaysia sedangkan institusi perbankan Islam ini beroperasi di setiap negeri di Malaysia. Kerjasama ini sebenarnya penting bagi institusi zakat negeri meningkatkan jumlah kutipan melalui kaedah-kaedah bayaran zakat yang boleh diwujudkan dengan kerjasama pihak bank-bank Islam. Ini adalah kerana institusi perbankan Islam sentiasa mencari peluang dan ruang bagi meningkatkan kualiti perkhidmatan menerusi teknologi bagi memasarkan produk dan perkhidmatan mereka untuk pelanggannya. Kesempatan ini sepatutnya diambil oleh institusi zakat bagi memudahkan pelanggan bank yang beragama Islam agar dapat menunaikan kewajipan membayar zakat melalui perkhidmatan perbankan.

b. Ketiadaan Akta Dan Ordinan Ataupun Enakmen Khusus Yang Mewajibkan Semua Institusi Perbankan Islam di Malaysia Perlu Menawarkankan Kaunter Zakat Oleh BNM

Seperti yang diketahui zakat bukan hanya terdiri daripada zakat fitrah tetapi juga meliputi zakat lain antaranya zakat pendapatan, zakat saham dan zakat perniagaan. Ketiadaan Akta dan Ordinan ataupun Enakmen khusus yang mewajibkan semua institusi perbankan Islam di Malaysia menawarkankan kaunter zakat akan terus mewujudkan ketidakselarasan bayaran dan kutipan zakat di Malaysia. Jesteru bagi memastikan ketidakselarasan bayaran dan kutipan zakat di Malaysia, maka satu akta khusus ini perlu diwujudkan dan disokong oleh pihak lain seperti pihak BNM. BNM sepatutnya memainkan peranan utama bagi penubuhan Akta Bayaran dan Kutipan Zakat 2013 sepertimana Akta Bank Islam 1983 dan Akta Takaful 1984 bagi memastikan sistem perbankan dan kewangan Islam terus berkembang. Melalui

Akta Bayaran dan Kutipan Zakat 2013 ini mungkin beberapa seksyen berkaitan kaedah bayaran zakat dan kerjasama institusi zakat dan bank boleh diperuntukkan bagi memastikan kaedah bayaran zakat sentiasa berkembang dan diseleraskan diseluruh negeri. Selain itu Akta Bayaran dan Kutipan Zakat 2013 juga tidak harus lagi diletakan dibawah Majlis Agama Islam Negeri sebaliknya perlu digubal dan diletakkan dibawah BNM agar institusi zakat negeri dapat memainkan peranan bersama-sama institusi perbankan Islam di Malaysia dikembang ke peringkat yang lebih tinggi.

# c. Kurangnya Kerjasama Antara Institusi Zakat Negeri Dengan Institut Pengajian Tinggi (IPT) Dan Lembaga Hasil Dalam Negeri (LHDN)

Walaupun diseluruh negeri-negeri di Malaysia mempunyai IPT dan juga pejabat LHDN tetapi tidak dimanfaatkan sepenuhnya oleh institusi zakat negeri bagi mewujudkan kaunter bayaran zakat. Hanya sebilangan kecil sahaja institusi zakat negeri yang mengambil inisiatif mewujudkan kerjsama dengan IPT dan LHDN bagi mewujudkan kaunter khas untuk zakat. Sebenarnya kewujudan kaunter zakat di institusi pengajian tinggi awam ataupun swasta dan LHDN itu sendiri akan membolehkan masyarakat Islam menggunakan kemudahan yang terdapat di sesebuah IPT dan LHDN bagi menunaikan tanggungjawabnya dan tidak perlu lagi membazir masa untuk ke institusi zakat tertentu bagi pembayaran zakat. Ini penting kerana boleh dikatakan setiap negeri-negeri di Malaysia mempunyai IPT dan LHDN. Jesteru itu, dengan membenarkan IPT dan LHDN membuka kaunter zakat akan meningkatkan lagi kutipan zakat. Kurangnya kerjasama antara institusi zakat negeri dengan institut pengajian tinggi (IPT) dan Lembaga Hasil Dalam Negeri (LHDN) akan terus mewujudkan ketidakselarasan bayaran dan kutipan zakat di Malaysia.

## d. Kurang Kolaborasi Antara Institusi Zakat Di Malaysia

Kedapatan kekurangan maklumat di surat khabar ataupun media elektronik tentang kolaborasi antara institusi zakat negeri-negeri di Malaysia. Antaranya seperti mewujudkan MOA dan MOU antara institusi zakat yang dikorporatkan dengan institusi zakat yang tidak dikorporatkan lagi. Walaupun institusi zakat sebuah negeri belum lagi mempunyai kerjasama dengan keseluruhan bank-bank Islam, namun disebabkan institusi zakat negeri lain telahpun menjalankan kerjasama, maka perkara ini perlu dimanafaatkan oleh institusi zakat negeri terbabit seperti mewujudkan MOA dan MOU agar proses keseragaman metodologi bayaran zakat dapat direalisasikan seterusnya meningkatkan kutipan zakat. Selain itu, institusi zakat negeri yang hanya tertumpu kepada zakat tertentu sahaja juga akan mendapat manafaat melalui kolebarasi ini kerana pelbagai idea dan pengalaman dapat dijalinkan dan diterjemahkan dalam bentuk operasi pengurusan institusi zakat negeri tersebut. Kurangnya kolaborasi antara institusi zakat di Malaysia akan terus mewujudkan ketidakselarasan bayaran dan kutipan zakat di Malaysia.

## e. Faktor Demografi Sesebuah Institusi Zakat Negeri Di Malaysia

Faktor demografi sesebuah institusi zakat negeri di Malaysia juga menjadi punca wujudnya ketidakselarasan bayaran dan kutipan zakat di Malaysia. Ada institusi zakat negeri yang terletak di sebuah negeri maju seperti LZS dan PPZ, ada institusi zakat negeri yang terletak di sebuah negeri hanya berlatarbelakangkan ekonomi pertanian seperti PZNK, ada institusi zakat negeri yang terletak di sebuah negeri yang bilangan penduduk Islamnya adalah minoriti seperti PUZPP dan pelbagai lagi faktor demografi seperti ekonomi, sosial serta infrastruktur sesebuah negeri tersebut. Kepelbagaian demografi ini telah mempengaruhi keputusan pengurusan institusi zakat tentang dasar kaedah bayaran dan kutipan zakat mereka. Maka dengan itu satu kolabarasi di seluruh institusi yang melaksanakan kutipan dan agihan zakat amat perlu bagi memastikan jumlah kutipan zakat di Malaysia dapat selaraskan supaya ini akan meningkatkan jumlah bilangan pembayar zakat dan penerima agihan zakat. Keadaan ini mungkin akan berlaku jika pengurusan institusi zakat memberi ruang dan peluang kepada proses penjenamaan semula pengurusan zakat selaras dengan perubahan masa serta perkembangan teknologi yang semakin canggih. Sejarah telah membuktikan kebanyakkan institusi zakat di Malaysia yang dikorporatkan telah

mengalami perubahan dalam kutipan zakat. Sebagai contoh LZS yang kini menjadi rujukan institusi zakat luar negara kerana transformasi pengurusan zakat telah menyebabkan sistem kutipan zakat meningkat secara mendadak.

# 6. KESIMPULAN

Berdasarkan kajian yang dilakukan, ternyata wujud ketidakseragaman metodologi bayaran zakat yang disediakan oleh institusi zakat negeri kepada para pembayar zakat. Ketidakseragaman metodologi bayaran zakat disebabkan oleh faktor dalaman dan luaran institusi zakat itu sendiri. Di samping itu juga ketidkaseragaman ini perlu dipandang serius oleh semua institusi kerana ia telah mewujudkan perbezaan dalam kutipan zakat yang amat ketara. Namun peranan institusi bank-bank Islam bagi membantu institusi zakat negeri di Malaysia meningkatkan kutipan zakat amat baik di mana hampir separuh daripada metodologi bayaran zakat di Malaysia adalah berasaskan daripada perkhidmatan perbankan Islam .

Jika dilihat daripada kajian juga, terdapat segelintir institusi zakat negeri yang menjalinkan hubungan dengan IPT bagi mempelbagaikan kaedah bayaran zakat manakala sebilangan besar pula tidak menjalinkan hubungan dengan IPT. Seharusnya perkara ini tidak berlaku kerana setiap negeri mempunyai IPT. Selain itu, walaupun terdapat beberapa kaedah pembayaran secara internet dilakukan oleh pihak bank Islam namun masih lagi wujud institusi zakat yang tidak mengambil peluang ini. Usaha-usaha yang lebih proaktif antara institusi zakat dan institusi bank Islam perlu diperluaskan dan diperjelaskan secara berkesan. Bank-bank Islam juga perlu memainkan peranannya sebagai medium perantaraan wang yang bukan sahaja mahu mencipta keuntungan tetapi membantu institusi-institusi zakat negeri bagi meningkatkan kutipan zakat.

Selain itu institusi zakat juga perlu mempunyai daya pengurusan yang lebih dinamik selaras dengan dasar negara yang ingin menjadikan Malaysia sebagai negara maju pada tahun 2020. Oleh itu satu rancangan strategik jangka masa panjang perlu digubal dan diselaraskan di seluruh institusi zakat negeri-negeri di Malaysia agar sistem pengurusan zakat di Malaysia tidak lagi dipinggirkan oleh undang-undang barat sebaliknya ia perlu dimartabatkan setaraf atau lebih tinggi daripada undang-undang barat.

# THE EFFECTS OF REAL INTEREST RATES ON SOCIAL DIMENSION: A CASE STUDY OF UNEMPLOYMENT IN THE UNITED STATE

Diyah Putriani<sup>1</sup>

#### **ABSTRACT**

This paper aims to analyze the long-run impact of real interest rate on the unemployment rate in the United State (US). The *Residual Based Test* (Philips-Peron) test and *Error Correction Models* (ECM) regression are applied. The cointegration tests show that there are long-term relationships among real interest rate, oil price and industrial production index. Both of real interest rate and oil price have positive significant long-term impacts on the unemployment rate. The affect of oil price is almost three times greater than real interest rate in terms of contribution to the unemployment rate in the U.S. Meanwhile, the industrial production index has a significantly negative impact.

**Keywords**: The U.S., Unemployment Rate, Real Interest Rate, Oil Price, Industrial Production Index, Cointegration

## 1. INTRODUCTION

Unemployment is an important macroeconomic and political problem all economies confronts (Dogrul and Soytas, 2010). Therefore, it is well recognized as a negative matter since affects the economy in indirectly way. The number of poor and criminality, for instance, will increase along with the increasing number of jobless people. The limitation of income source will encourage a one do instant way to earn money. Furthermore, the dynamics impacts of unemployment may differ amongst countries at the divergence stage of economic expansion. Since it creates social and economic impacts, hence it is important to identify the main factor affecting the rate of unemployment at most. Developed countries, however, still face of the problem of unemployment as what happened in the United State (U.S.). Indeed, the source problem of unemployment from supply-demand side in one country to other country is different. Productivity of labour, wages, oil price and interest rate are some of examples factor affecting unemployment rate from supply side perspective. Meanwhile, the unemployment rate will nearly run with the dynamic of business cycle, technology development, and the number of population.

In general, an increase in unemployment due to more employed persons losing their jobs or more entrants from outside of the labor force being unsuccessful in their effort to be employed like what happened in the U.S. in the late of 2007. Bureau of Labor Statistics (BLS) of the U.S reports that the labor market weakened from May 2007 to May 2008. The number of unemployed persons rose from 6.9 million to 8.5 million, and the jobless rate increased from 4.5 to 5.5 percent. A rise in unemployment might be expected to coincide with a decline in employment. Throughout most of 2007, the official measures of unemployment rose due to declines in the outflows from unemployment, that is fewer unemployed persons were able to find employment and fewer left the labor force. As its result, the share of those who remained jobless from month to month increased

<sup>&</sup>lt;sup>1</sup> Post Graduate Student, International Islamic University Malaysia (diyah.putriani@gmail.com)

from 47 to 51 percent, and the number of unemployed persons rose. In contrast, inflows into unemployment had little effect on the rise in unemployment during this period. The share of the employed that became unemployed remained relatively stable throughout both 2006 and most of 2007, at about 1.2 percent of total employment. Similarly, the flow of individuals from outside the labor force to unemployment also changed little in 2007, hovering around 2.3 percent of all persons not in the labor force.

The reason behind this increasing number is caused by the attack of financial crisis and economic meltdown entering a nightmare recession in the late 2007. It has caused several serious economic problems such as the significantly increasing number of jobless people which created skyrocketing unemployment. The wage was paid at the lower level causing many families fell down into poverty. As it was widespreadly known, this crisis come up due to the ascending price of housing in the early 2006 combined with credit tightened since 2007 and high oil prices in 2008. Swagel (2009) explain further that the financial crisis in September 2008 clearly exacerbated the pre-existing economic slowdown, turning a mild downturn into a deep recession. Families stopped spending, while firms stopped hiring and paused investment projects. As a result, the economy plunged, with GDP falling by 5.4 percent and 6.4 percent (at annual rates) in the last quarter of 2008 and the first quarter of 2009—the worst six months for economic growth since 1958. In effect, the events of September and October 2008 were a severe negative shock to the people confidence in the economy, and in the ability of the U.S. government and political system to deal with the crisis.

Many previous research literally proven that crisis come up in to the picture due to the existence of interest rate. As of Meera and Larbani (2004) explains that interest is the main source of economic downturn. Empircally, Basu et.al. (2001) proof that in the U.S. there is a positively relationship between unemployment rate and interest rate risk. In the case of Turkey, Dogrul and Soytas (2010) forecast that in the long run the rise of interest rate will cause the number of unemployment. Contrastingly, Philips (1958) reports that in the case of United Kingdom (UK) the relationship between interest rate and unemployment is negative. Referring to this opposite findings, this research investigates factors affecting unemployment in the U.S by applying Error Correction Model (ECM) procedures. There are 3 involved variables in the econometric model, such as Real Interest Rate (RIR), Oil price (Oil) and Index Production (IP).

The rest of this paper is organized into five parts. Part 2 exhibits literature review comprising of the hypotheses development. Part 3 elucidates research method along with the econometric model and data. Part 4 shows the empirical results and analysis. Some conclusions are presented in Part 5.

# 1.2. Research Scope and Contributions

This research will be only focused on the impact of real interest rate, oil price and industrial production index on the unemployment rate in the U.S, i.e., from supply sides. In addition, many previous research focus of research in Islamic economics is concentrated on the function of *zakah*, *infaq*, *sadaqah*, and case study of *sharia* banking. In the other words, only few of conducted researches in Islamic economics are explored in labour matters. Therefore, this study will especially contribute to fulfill the gap of literatures in Islamic labour economics.

# 1.3. Data Sources

This research takes sample period from the first quarter of 1980 to the first quarter of 2012. All of calculated data were taken from International Monetary Fund (IMF), International Financial Statistics (IFS) of the IMF and Bureau of Labour Statistics (BLS) of the U.S.

## 2. LITERATURE REVIEW

## 2.1. The Factors Affecting Unemployment

## 2.1.1. Interest Rate

Riba or the concept of interest rate in the existing monetary economic system becomes a fundamental variable. Many groups of economist believe that the interest rate will never be eliminated from the world economic system. Kayadibi (2011) delineated that the pro- *riba* groups believed that riba is the fundamental of global economic system due to it compensates a person's consumption today for some potential benefit in the future. Rationally, interest indeed has to be existed in the economy. Therefore, those who against this thinking will be judged as an irrational and undeveloped class. Many recent conducted researches, on the opposite, proved that what is happening crisis today is triggred by the existence of interest rate in the economic system. Furthermore, Rehman and Ghaffari (2012) conclude that the interest rate is a useless policy tool which has no power to reduce inflation; on contrary, it can cause increment in inflation via the cost channel. Therefore the study concludes that central banks should never use high interest rate to fight with inflation and the justification of existence of interest i.e. as a monetary policy tool is wrong and must be ruled out.

Related to the objective of this research, there are several channels how interest rate influence the rate of unemployment. First, the increasing of interest rate will push the cost of production into higher level causing number of investments go down. In some cases this declining encourages some closure of the business unit affecting the number of retrenchment of employed workers rise. Second, to cover the increasing in production cost, the producer will increase the price of produced goods and services causing the rate of inflation go up (Aliero, 1992). Empircally, Basu et.al. (2001) show that in the U.S. there is a positively relationship between unemployment rate and interest rate risk by using GARCH model. Similarly, Dogrul and Soytas (2010) forecast by applying Toda-Yamamoto procedures, they find that in the long run the rise of interest rate will cause the number of unemployment rise in Turkey.

Even so, in some countries there is a possibility of negative relationship between interest rate and unemployment. When the interest rate falls down, hence the number of unemployed people will rise up, vice versa. The rationale reason behind this phenomenon can be explained by *Philips curve* theory proposed by A.W. Phillips in 1958. He reported evidence of an inverse relationship between the rate of increase in wages and the rate of unemployment. By comparing rates of rise in wages with the rate of unemployment rates in Britain spans from 1861 to 1957, he found that as the labor market tightened, and the unemployment rate fell, money wages tended to rise more rapidly. Because wage increases are closely correlated with price increases, thus this relationship was widely interpreted as a trade-off between inflation and unemployment (Cashel, 2004).

#### 2.1.2. Oil Price

As one of the important determinant world economic performance, oil price has big effect on the dynamic of macroeconomic environment. Reffering to International Energy Agency (IEA), the impact of oil price depends on the share of the cost of oil in national income, the degree of dependence on imported oil and the ability of end-users to reduce their consumption and switch away from oil. It also depends on the extent to which gas prices rise in response to an oil-price increase, the gas-intensity of the economy and the impact of higher prices on other forms of energy that compete with or, in the case of electricity, are generated from oil and gas. Therefore, the bigger the oil-price rise and the longer higher prices are sustained, the bigger the macroeconomic impact. In this case, for net oil-exporting countries, the rise of oil price will

directly push up real national income through higher export earnings, vice versa. In the same time its gain, however, would be later offset by losses from lower demand for exports generally due to the economic recession suffered by trading partners.

These domino impacts will affect also on the rate of unemployment. The transmissions of these impacts through channel of production cost in industries that depend on the world price oil. As Loungani (1986) elucidates that when the price of oil reach a peak for some period of time, it will change the production structure. In detail, the rising oil price will stimulate the firm to increase the marginal cost of production from oil intensive to less-oil intensive. Therefore, in the long run this change in turn generates capital and labor reallocation across sectors that can affect unemployment in the long run.

Empirically, Kooros et.al (2006) investigates the impact of oil price on the unemployment rate in Louisiana. They found that an increase in the price of crude oil for million BTUs by one dollar will result in a decrease in unemployment in Louisiana by 1.08 per cent, but oil prices alone do not sufficiently explain unemployment in Louisiana. Yau (2010) finds also that oil price shock will increase price level and decrease money supply leading to worse-off unemployment in the U.S. Meanwhile, Löschel and Oberndorfer (2009) observe that in the case of Germany the rise of oil price will induce unemployment rate in the labour market go up using data spans from 1973 to 2008.

#### 2.1.3. Industrial Production

This research use industrial production index (IPI) instead of gross domestic product (GDP) due to IPI more represents economic activities in particular industry. Formally, IPI conveys amount of output from the manufacturing, mining, electric and gas industries. The reference year for the index is 2002 and a level of 100. Each individual index is calculated using the Fischer index formula. This index is released by the Federal Reserve Board, meanwhile the production data is received directly from the Bureau of Labor Statistics (BLS) and trade associations, both on physical output and inputs used in the production process. Investors usually benefit this index of various industries to examine the growth in the respective industry. If the index is growing month-over-month for a certain industry, it implies that the firm in the industry is performing well.

In addition, IPI can be used for measuring income in such country (Baak, 2006). Thus, IPI might be used also for measuring the economic activities; however, it is not as comprehensive as GDP. In this case, if the index of industrial production increases, thus it will yield a decreasing in unemployment rate, vice versa. In other words, the relationship between them is negative.

#### 3. RESEARCH METHOD AND HYPOTHESES DEVELOPMENT

# 3.1. Cointegration Test

Gujarati (2003: 822) noted that the existence of cointegrating relationships is indicated when two or more non stationary series could have at least a linear combination which is stationary, I(0). In short, the stationary linear combination cancels out the stochastic trends in the two series, proven by checking the residuals from the regressions are stationer, I(0). Thomas (1997: 438-443) noticed that the presence of cointegration for multivariate equation case (as this research case) is detected by applying Johansen cointegration test. Afterwards, the empirical result of Johansen test will be confirmed by Error Correction Model (ECM), as follows:

$$\Delta UN_{t} = \alpha + ECT_{it-1} + \sum_{h=0}^{nx} \beta_{h} \Delta RIR_{it-h-1} + \sum_{h=0}^{np} \gamma_{h} \Delta OIL_{it-h} + \sum_{h=0}^{np} \delta_{h} \Delta IP_{t-h} + \sum_{h=0}^{np} \eta_{h} \Delta IM_{it-h} + \sum_{h=0}^{np} \varphi_{h} \Delta M1_{t-h} + u_{it}$$

$$(4)$$

Here, the length of involved for each variable is denoted as nx, np, ns, and nc. As of Baak (2007, 2006, and 2005) explains that negative and significant of the estimated error correction term (ECT) coefficient ( $ECT_{ijt-1}$ ) represents the presence of long-run relationships amongst variables included in the model. Since, there is at least one cointegration amongst included variables, the causal relationship among these variables will be detected by the ECM procedures.

## 3.2. Hypotheses Development

The source of dynamic of employment and unemployment, as stated at the outset, might come from several factors. Different country has different main affecting factors of unemployment. As of Basu, *et.al.* (2001), Dogrul and Soytas (2010), Loungani (1986), Cashel (2004), Kooros et.al (2006), Yau (2010) and Löschel and Oberndorfer (2009) the econometric model of how real interest rate affects unemployment in the U.S can be framed as follows. All of variables are measured in natural logarithm, except RIR.

$$UN_t = \beta_0 + \beta_1 RIR_t + \beta_2 OIL_t + \beta_3 IP_t + \varepsilon_t \quad (2)$$

Subscript t represents time of quarterly data spans from 1980 Q1 to 2012 Q1.  $UN_t$  denotes the rate of unemployment in the US provided widely by the IFS IMF.

Real interest rate,  $RIR_t$ , measures the expected interest rate which will be received by investor after allowing inflation rate. The formula of real interest rate is generally known, i.e, it equals to the nominal interest rate minus inflation rate. It is expected that between  $UN_t$  and  $RIR_t$  might has positive and negative relationship. If the estimated coefficient sign is positive, it means that the rising of interest rate will push the cost of production increase, then level of investment fall. It will cause firms dismiss their worker, hence the rate of unemployment rise. Meanwhile, if ithe estimated coefficient sign is negative, it suggests that the *Philips curve* phenomenon<sup>2</sup> occurs in the U.S.

OIL<sub>t</sub> measures the strength relationship between oil price and unemployment. It will affect production cost of the firms which has dependence of world price oil. It is suggested that the relationship between them is negative. As the price of oil rise, it will increase cost of production, hence the firms will both reduce their product quantity and dimish their worker in order to reduce the cost. Here, the portion of wage, as widely known, is the biggest percentage in producing such products.

 $IPI_t$  denotes industrial production index. As stated at the literatures review part, it can be utilized for measuring amount of output from the manufacturing, mining, electric and gas industries. By using  $IPI_t$ , it is expected that this proxy could represent economic activities in particular industry. In this case, if the index of industrial production increases, thus it will yield a decreasing in unemployment rate, vice versa. In other words, the relationship between them is negative.

\_

<sup>&</sup>lt;sup>2</sup> For further explanation (see chapter 2 Literature Review).

## 4. EMPIRICAL RESULT AND ANALYSIS

## 4.1. Unit Roots Test

In order to detect the equilibrium relationship, this research will firstly test the order of integration involved in the model, i.e. unemployment rate, real interest rate, oil price, and Industrial production. To do so, *Philip-Perron* (PP) procedures is applied to test for both the level and the first difference. The optimal length of lag applied in the test is determined by using *Aikake* Information Criterion (AIC). As described in Table (1), all variables of PP statistics are lower than MacKinnon critical value. It means all variables are not stationary at the level, however, all the variables are integrated of order one I (1) or stationary at the first difference.

Table 1: PP Unit Roots Test for the Level and the First Differences

Indonesia to the US		Level		FiFi	First Difference			
	Lag	PP Test	AIC	Lag	PP Test	AIC		
Unemployment	-	-				-		
Intercept	1	-2.149	-1.973	1	-15.335	-2.085

## **4.2.** The Cointegration Test

The urgency of the cointegration test is to examine "spurious regression" problem. Gujarati (2003: 822) noted that the existence of cointegrating relationships is indicated when two or more non stationary series could have at least a linear combination which is stationary, I (0). In short, the

The figures in the brackets are the order of integration

<sup>\*)</sup> Denotes rejection of a unit root hypothesis based on Mackinnon's critical values at the level of significance  $\alpha=1\%$ , 5%, 10%.

stationary linear combination cancels out the stochastic trends in the two series, which can be proven by checking the residuals from the regressions are stationer, I(0).

Table 2. Residual Based Test: PP Test

PP Statistics
-6.193* (I)

Source: IFS and BLS. Author's calculation.

\*) Denotes rejection of a unit root hypothesis based on Mackinnon's critical value at at the  $\alpha=1\%$ , 5%, 10%.

Residual-based test of PP procedures are be applied in order to test the stationary of residual regression model (Equation 1). Table (2) describes its results. It is clearly showed that the residuals from all regressions are stationer, I (0) which means there are long-run relationships among variables examined in econometric model. Henceforth, this finding is supported by the error correction model (ECM) estimation. Table (3) shows the estimated coefficient of error correction term (ECT) in all of regression results are negative and significant at the level of significances,  $\alpha$ = 5% and 10%. In other words, this result shows long-run relationships among variables involved.

**Table 3. ECM Estimation** 

С	RIR	OIL	IP	ECT	$\mathbb{R}^2$	DW
-0.0005	0.016	-0.041	-1.285*	-0.322*	0.237	2 692

Source: IFS and BLS. Authors' calculation.

Notes: Standard error in parantheses

The asterisk (\*)indicate the rejection of the null hypothesis of a zero coefficient at the 5% significance level.

## 4.3. The Estimated Coefficient Interpretation

To this end, this study only focuses on the impact of factors affecting unemployment rate in the U.S, thus the short run impacts will be ignored. Equation (2) explores that unemployment rate in the U.S. are both positively influenced by real interest rate and oil price. Here, if there is an increasing of 1 percent real interest, it is expected that the unemployment rate will also rise around 0.026 percent. This result is supported by the findings of Meera and Larbani (2004), Hardi et.al (2012) and Putriani, et.al. (2012) that conclude interest rate has a negative impact on the economics performance. Meanwhile, the oil price affects greater, i.e. an increasing of 1 percent in oil price will contribute 0.071 percent rise in jobless people. In other words, the effect of oil price is almost 3 times greater than real interest rate. As expected before, industrial production has a negative significant impact on the level of unemployment. It implicitly means that if there is a decreasing of 1 percent in industrial production then it will turns out an increasing 2.388 percent of jobless people in the U.S.

Table 4: OLS Estimation<sup>3</sup>

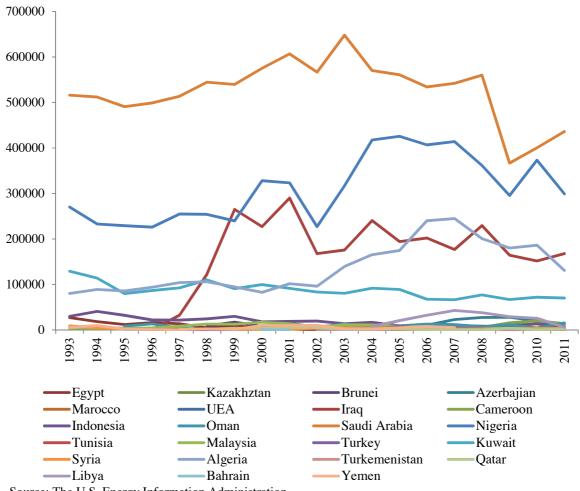

Tuble 4: OEB Estimation							
C	RIR	OIL	IP	$\mathbb{R}^2$	DW		
6.286*	0.026*	0.071*	-2.388*	0.501	2.682		
0.322	0.0028	0.037	0.240				

Source: IFS and BLS. Authors' calculation.

Notes: Standard error in parantheses

The asterisk (\*)indicate the rejection of the null hypothesis of a zero coefficient at the 1%, 5% and 10% significance level.

**Graph 1: The U.S. Oil Imports** 

Source: The U.S. Energy Information Administration

Author's calculation

In addition, the estimated coefficient in table (4) can be inferred that oil might be benefited as a potential bargaining power to oil importer countries in terms of political power. It is widely known

<sup>&</sup>lt;sup>3</sup> Table 4 shows the result after Cohcrane Orcutt procedures applied. To see the difference before and after iteration (see: Appendix).

that the U.S imports almost their oil from muslim countries. Up till now, the development of muslim countries are very left behind from developed countries, particularly to the U.S. In many cases of negotiation, muslim countries may not be able to bargain the offered options, however, it will harm them. The attack of Israel to Palestine, for instance, may not be shortly stopped. If all of oil importer muslim countries do agree to stop their oil import transaction to the U.S and allied states, hence it is expected that the war between Israel and Palestine can be stopped and the power of world economy will be governed by the muslim countries. Graph (1) shows oil volume imported by the U.S.

#### 5. CONCLUSIONS AND POLICY RECOMMENDATIONS

According to the outset empirical findings, there are some analysis and international trade policy recommendations for muslim countries in particular. First, since interest rate has been proven as one of the main root causes of unemployment (read: economic fluctuation), thus it needs to eliminate it from the economic system, especially in muslim countries. In this case, debt -along with interest imposed on it- is the real terrorist creating poverty in many countries, particularly in muslim countries. It might be referred that what is happening in muslim countries today caused by they do not consider the warning of Islam related to the peril of the existence interest (riba/usury) in the economy activities. In order to eliminate interest rate in the economic system, a muslim country could implement "little policy" as a starting point. For instance, by empowering the use of zakah, improving the role of islamic microfinance to eradicate unemployement and poverty, and encouraging society to develop cooperative system. By these three policies, it is expected that the role of interest rate in the economic system can be reduced in short run and totally eliminated in the long run.

Second, it is clearly showed that the estimated coefficient of oil price is 3 times greater compared to real interest rate. Therefore, it is expected to use oil as a political weapon in order to equalize the bargaining power amongst muslim countries to the US in particular. As of graph (1) shows that there is a dependency of the U.S to the almost muslim countries around the world.

Third, it urges to improve the quality of next muslim generation both soft and hard skill. Since the level of education of muslim countries are lower than developed countries, then their (muslim individual) position in terms of jobs will also be lower than others. Therefore, a muslim government must do concern about this matters.

IP	-2.341639	0.129518	-18.07958	0.0000
R-squared Adjusted R-squared S.E. of regression Sum squared resid Log likelihood F-statistic Prob(F-statistic)	0.796614 0.791771 0.111906 1.577879 102.2824 164.5036 0.000000	Mean depende S.D. depende Akaike info o Schwarz crite Hannan-Quin <b>Durbin-Wat</b>	ent var criterion erion nn criter.	9.016366 0.245234 -1.512037 -1.423805 -1.476186 <b>0.703739</b>

#### Note:

Autocorellation can be informally seen from low value of Durbin-Watson (DW) test i.e. less than 1.2. Based on the regression result above, the value of DW test is 0.703. In order to prove formally, then some tests of classical assumptions are applied as follows.

# **Classical Assumptions Test**

# Autocorelation

Breusch-Godfrey Serial Correlation LM Test:

F-statistic	76.85663	Prob. F(2,124)	0.0000
Obs*R-squared	71.95452	Prob. Chi-Square(2)	0.0000

Since the value of tested probability of X > statistic probability ( $\alpha = 5\%$ ), hence residual of regression estimator has suffered by autocorellation.

## Heteroscedasticity

Heteroskedasticity Test: Breusch-Pagan-Godfrey

F-statistic	6.821465	Prob. F(3,126)	0.0003
Obs*R-squared	18.16395	Prob. Chi-Square(3)	0.0004
Scaled explained SS	12.78388	Prob. Chi-Square(3)	0.0051

Since the value of tested probability of X > statistic probability ( $\alpha = 5\%$ ), hence the regression equation has suffered by heteroscedasticity.

# Multicoleniarity

	UR	RIR	OIL	IP
UR	1	0.2496846	0.5157024	-0.0241626
RIR	0.249684	1	0.5718307	0.9467975
OIL	0.515702	0.5718307	1	0.4823032
IP	-0.024162	0.9467975	0.4823032	1

Generally, the value of estimated coefficient correlation all of observations shows is bigger than 0.80, except RIR variable with IP, viceversa. In other words, there is no multicoleniarity indication on the regression model. Nevertheless, according to Gujarati (2003), the multicoleniarity indication can be ignored since the model may yield BLUE estimation.

#### **OLS After Iteration Cochrane Orcutt**

## Note:

Based on the regression result above, the value of DW test has changed, i.e. 2.68. In other words, the result has no longer suffered by autocorellation.

# PERTUMBUHAN FIRMA, PEMBIAYAAN KEWANGAN DAN KEBEBASAN EKONOMI: SUATU DATA PANEL FIRMA PATUH SHARIAH DI BURSA MALAYSIA

Musa Muhamad Ali<sup>1</sup>

#### **ABSTRAK**

Kertas ini bertujuan mengkaji secara empirikal bagaimana bentuk pembiayaan kewangan firma berstatus patuh syariah (sama ada pembiayaan dalaman atau luaran) dan kebebasan ekonomi mempengaruhi pertumbuhan firma patuh syariah yang tersenarai di Bursa Malaysia dari tahun 2000-2010. Walaubagaimanapun penggunaan data konvensional turut dilibatkan bagi melihat asas perbandingan. Kaedah data panel statik dengan menggunakan model kesan tetap (fixed effect) telah digunakan untuk menganggar penentu pertumbuhan firma. Hasil kajian mendapati sumber kewangan dalaman dan kewangan luaran berhubungan positif dan signifikan mempengaruhi pertumbuhan firma. Di samping itu, pertumbuhan firma patuh syariah lebih sensitif dipengaruhi oleh kewangan dalaman berbanding dengan kewangan luaran manakala pertumbuhan firma patuh syariah berhubungan negatif dengan kebebasan ekonomi.

Kata kunci: kekangan kewangan; kebebasan ekonomi; pertumbuhan firma; data panel statik.

#### **ABSTRACT**

This paper aims to examine empirically how the types of finance (sources of financing) and economic freedom influencing the growth of syariah compliance firms' in which listed in Bursa Malaysia for the period of 2000-2010. However, convensional data for regression is used for make a comparison. A static panel data technique namely a fixed effect model is used to estimate the determinants of firms' growth. The findings revealed that the internal and external financing has a positive effects and statistically significance in influencing the firms' growth. The growth of syariah compliance firms' are more sensitive to internal finance than external finance. On the other hand, the growth of syariah compliance firms' are negatively affected by economic freedom.

**Keywords**: financial constraint, economic freedom, firms' growth, static panel data

## 1. PENGENALAN

Pertumbuhan firma adalah penting bagi memastikan sesebuah firma terus menikmati keuntungan sekaligus menggalakkan perkembangan ekonomi sesebuah negara (lihat Carrisoza, (2007). Di samping itu, pertumbuhan firma juga merupakan pra syarat kepada kemajuan inovasi dan motif utama perubahan teknologi (Pagano dan Schivardi, 2003). Persoalannya, apakah faktor-faktor yang mempengaruhi pertumbuhan firma? Kajian oleh Guariglia et al. (2011) dan Rahaman (2011) telah merumuskan sumber kewangan iaitu pembiayaan dalaman dan luaran adalah pembolehubah yang penting dalam mempengaruhi pertumbuhan firma. Sesetengah firma terutamanya firma kecil yang menghadapi kekangan kewangan sangat bergantung kepada sumber pembiayaan dalaman untuk menjana pertumbuhan, manakala firma besar yang memiliki profil kredit yang lebih kukuh tidak perlu terlalu bergantung kepada sumber kewangan dalaman kerana mempunyai alternatif sumber pembiayaan luaran.

\_

<sup>&</sup>lt;sup>1</sup> Jabatan Pengurusan Perniagaan, Kolej Profesional MARA Bandar Penawar

Selain daripada sumber pembiayaan, kebebasan ekonomi di sesebuah negara juga merupakan sebagai salah satu faktor yang boleh mempengaruhi pertumbuhan firma. Kebebasan ekonomi yang diberi kepada firma boleh meningkatkan produktiviti dan akhirnya meningkatkan pertumbuhan firma daripada aspek pertumbuhan aset, jualan, dan pelaburan. Bukti makro yang mengaitkan kebebasan ekonomi dengan pertumbuhan juga merumuskan bahawa negara yang memiliki darjah kebebasan ekonomi yang tinggi cenderung menikmati pertumbuhan ekonomi yang lebih cepat berbanding dengan negara lain (lihat Heckelman dan Knack, 2009; Powell, 2003; DeHaan dan Sierman, 1998). Kajian Azman-Saini et al. (2010) juga mendapati kebebasan ekonomi memainkan peranan yang penting sebagai pemacu pertumbuhan ekonomi dalam jangka panjang, dan negara yang memiliki darjah kebebasan ekonomi yang tinggi memperoleh faedah yang signifikan daripada kehadiran firma multinasional. Selain itu, kajian Sufian dan Habibullah (2010) telah mendapati kebebasan ekonomi signifikan mempengaruhi pertumbuhan firma dalam industri perbankan di Malaysia.

Oleh sebab itu kertas ini dibuat bertujuan untuk memberikan bukti empirikal baharu mengenai pengaruh sumber pembiayaan (pembiayaan dalaman dan luaran) dan kebebasan ekonomi ke atas pertumbuhan firma patuh syariah (*syariah compliance*) yang tersenarai di Bursa Malaysia. Ada dua sebab mengapa kajian ini sangat menarik untuk diterokai, dalam konteks negara Malaysia. Pertama, mutakhir ini, bilangan firma yang tersenarai di Bursa Malaysia telah berkembang dengan pesat sejak tahun 2000. Misalnya, dalam tempoh 11 tahun (2000-2010), penyenaraian firma baru di Bursa Malaysia telah meningkat hampir 30 peratus. Kedua, berdasarkan laporan daripada Suruhanjaya Sekuriti Malaysia mendapati penyenaraian firma patuh syariah telah mengalami peningkatan mendadak dan telah mendominasi bilangan firma konvensional di Bursa Malaysia (sila rujuk Jadual 3, di bahagian Lampiran). Justeru, adalah menarik untuk mengkaji secara empirikal bagaimana pertumbuhan firma patuh syariah dipengaruhi oleh sumber kewangan yang diperolehi.

Kajian ini memberikan sumbangan yang signifikan terhadap literatur dalam bidang 'finance-growth' nexus daripada tiga aspek. Pertama, sebahagian besar kajian terdahulu mengkaji isu 'finance-growth' dengan menggunakan data makro, dan secara umum mendapati pembangunan kewangan mempengaruhi pertumbuhan ekonomi (lihat Demirguc-Kunt et al. (1998), Levine et al. (2000), Ang (2007), Ang (2008) dan Karim et al. (2008)). Sebaliknya, kajian ini menyambung karya lepas dengan menggunakan data di peringkat mikro iaitu dengan melihat peranan kewangan (kewangan dalaman dan kewangan luaran) terhadap pertumbuhan firma patuh syariah di Malaysia. Penggunaan data mikro membolehkan firma secara individu membuat pilihan sumber pembiayaan yang bersesuaian untuk mencapai pertumbuhan yang diingini, di samping memberi panduan kepada firma untuk meningkatkan keuntungan pada masa hadapan. Kedua, walaupun kajian oleh Guariglia et al. (2011) mendapati kekangan kewangan memberi kesan positif kepada pertumbuhan firma, namun mereka hanya memberi fokus kepada pembiayaan kewangan dalaman sahaja. Oleh itu, kajian ini dilanjutkan dengan melihat pengaruh kewangan luaran terhadap pertumbuhan firma patuh syariah di Malaysia. Ketiga, selain pemboleh ubah kewangan, kajian ini juga mengambil kira pengaruh kebebasan ekonomi terhadap pertumbuhan firma. Kajian Sufian dan Habibullah (2010) hanya melihat hubungan kebebasan ekonomi dengan prestasi bank-bank di Malaysia, tetapi tiada kajian di Malaysia yang mengaitkan pertumbuhan firma dengan kebebasan ekonomi.

Dapatan kajian bolehlah diringkaskan seperti berikut. Pertama, kajian ini menyokong hipotesis 'finance-led growth' di peringkat firma, yang mana terdapat hubungan yang positif dan signifikan antara kewangan dalaman dan luaran dengan pertumbuhan firma. Kedua, pertumbuhan firma patuh syariah lebih sensitif dipengaruhi oleh kewangan dalaman berbanding dengan kewangan luaran. Ketiga, pertumbuhan firma patuh syariah berhubungan negatif dengan kebebasan ekonomi.

Untuk memudahkan analisis, kertas ini dibahagikan kepada lima bahagian. Bahagian kedua membuat sorotan kajian lepas. Bahagian ketiga pula membincangkan metodologi kajian. Hasil kajian dibincangkan dalam bahagian keempat, manakala bahagian kelima merumus dan membincangkan beberapa saranan untuk implikasi dasar.

## 2. KAJIAN LEPAS

Kebanyakan kajian lepas yang mengkaji hubungan antara pertumbuhan dengan kewangan (*finance-growth nexus*) menggunakan data di peringkat agregat (makro). Kajian empirikal yang paling awal telah dijalankan oleh Goldsmith (1969), McKinnon (1973) dan Shaw (1973) mendapati wujud hubungan yang signifikan antara pembangunan sektor kewangan dengan pertumbuhan ekonomi di beberapa buah negara. Seterusnya, King dan Levine (2000) telah menggunakan data panel di 71 buah negara dan mendapati pembangunan dalam sektor kewangan merupakan prasyarat kepada pertumbuhan ekonomi.

Walau bagaimanapun, sehingga kini terdapat batasan kajian terhadap hubungan antara 'finance-growth' yang melibatkan data pada peringkat mikro. Kajian di peringkat mikro yang menggunakan data peringkat industri telah dilakukan oleh Rajan dan Zingales (1998), manakala Demirguc-Kunt dan Maksimovic (1998) melakukan kajian pada peringkat firma. Sebagai contoh, kajian Demirguc-Kunt dan Maksimovic (1998) mendapati pembangunan sistem perbankan (pembiayaan luar) dan kecairan pasaran saham memberikan kesan yang positif terhadap pertumbuhan firma. Keputusan kajian ini menjelaskan kepentingan sumber kewangan luaran dan pasaran modal sebagai penjana pertumbuhan firma, dan seterusnya petumbuhan ekonomi negara.

Kajian 'finance-growth nexus' pada peringkat firma kemudiannya dilanjutkan oleh Love (2003) dan Beck et al. (2004), dan mendapati pengaruh kekangan kewangan (dalaman atau luaran) terhadap pertumbuhan firma amat bergantung kepada tahap pencapaian sistem kewangan sesebuah negara. Sebagai contoh, sistem kewangan yang lemah menyebabkan firma lebih bergantung kepada kewangan dalaman, sebaliknya sistem pembangunan kewangan yang baik menyebabkan firma lebih menumpukan pembiayaan luaran. Kajian Rahaman (2011) juga mendapati pembiayaan kewangan signifikan mempengaruhi pertumbuhan firma yang bergantung kepada kemudahan atau prasarana sistem kewangan. Misalnya, kesan kewangan dalaman terhadap pertumbuhan firma berkurangan apabila kemudahan terhadap akses kewangan luaran seperti kemudahan pinjaman bank meningkat. Maka, firma perlu beralih kepada pembiayaan kewangan luaran sebagai sumber utama kewangan bagi meningkatkan pertumbuhan.

Di Malaysia, kajian mengenai hubungan antara sektor kewangan dengan pertumbuhan ekonomi lebih memberikan tumpuan kepada isu makro. Sebagai contoh, kajian oleh Ansari (2002), Ang (2007) dan Karim et al. (2008) telah menyokong hipotesis pembangunan kewangan mendorong pertumbuhan ekonomi (*finance-led growth*). Walau bagaimanapun, sehingga kini tiada kajian empirikal di Malaysia yang mengkaji hubungan antara kewangan dengan pertumbuhan di peringkat firma. Justeru, kajian ini memberikan sumbangan yang bermakna kepada literatur '*finance-led growth*' dengan memberi tumpuan kepada pengaruh pembiayaan kewangan dalaman dan pembiayaan kewangan luaran terhadap pertumbuhan firma patuh syariah yang tersenarai di Bursa Malaysia.

Kajian kebebasan ekonomi dan kesannya ke atas pertumbuhan firma amat terbatas maklumatnya. Sebahagian besar kajian peringkat makro melihat kesan kebebasan ekonomi terhadap pertumbuhan ekonomi sesebuah negara. Sebagai contoh, kajian Heckelman (2000) mendapati wujud hubungan yang positif antara kebebasan ekonomi dengan pertumbuhan ekonomi. Kebanyakan kajian peringkat mikro melihat pengaruh kebebasan ekonomi terhadap pencapaian di industri perbankan sesebuah negara (Chantapong, 2005; Heffernan dan Fu, 2008). Misalnya, kajian oleh Beach dan Kane, 2008 menyimpulkan campurtangan kerajaan yang besar terhadap sistem perbankan menyebabkan berlaku ketidakefisenan dan menggalakkan korupsi. Di Malaysia, kajian yang dilakukan oleh Sufian dan Habibullah (2010) mendapati semakin tinggi darjah kebebasan ekonomi secara keseluruhan (*overall economic freedom*) akan meningkatkan keuntungan bank di Malaysia.

## 3. METODOLOGI KAJIAN

#### Data

Kajian ini menggunakan maklumat kewangan syarikat yang tersenarai di Bursa Malaysia yang merangkumi tempoh masa 11 tahun iaitu daripada tahun 2000 sehingga 2010. Data maklumat kewangan syarikat tersebut diperolehi daripada '*Thomson Financial Data Stream*'. Sehingga tahun 2010, terdapat secara puratanya sebanyak 1428 buah firma yang tersenarai di Bursa Malaysia yang terdiri daripada dua kategori iaitu firma patuh syariah dan konvensional,yang mana teras aktiviti utama berbeza mengikut sektor ekonomi.. Oleh kerana status firma patuh syariah tidak bersifat mutlak dan akan ditarik balik jika tidak memenuhi syarat yang ditetapkan (rujuk suruhanjaya sekuriti bahagian Majlis Patuh Syariah), maka data yang dipecahkan kepada dua bahagian adalah tidak konsisten. Ini kerana dalam tempoh 11 tahun, firma bila-bila masa boleh bertukar status. Justeru, data yang digunakan untuk tujuan penganggaran merupakan data panel yang tidak seimbang (unbalanced panel). Walaupun fokus kajian adalah terhadap firma patuh syariah, namun data firma konvensional di Bursa Malaysia turut diambil kira bagi melihat perbandingan pembiayaan kewangan dengan firma patuh syariah dan kesannya terhadap pertumbuhan firma.

## Definisi dan Keterangan Pembolehubah

Pembolehubah Bersandar

Pembolehubah bersandar dalam kajian ini adalahpertumbuhan firma yang merujuk kepada pertumbuhan aset.. Pertumbuhan firma dikira seperti berikut:

Pertumbuhan firma = 
$$\frac{\text{Aset baru - aset asal}}{\text{aset asal}} \times 100$$

atau

$$AG_{i,t} = \frac{A_{i,t} - A_{i,t-1}}{A_{i,t-1}} \times 100$$

yang mana, AG ialah pertumbuhan firma (aset), dan Aialah jumlah aset.

## Pembolehubah Bebas

Terdapat 3 pembolehubah bebas yang bertindak sebagai pembolehubah penerang bagi mengkaji hubungannya dengan pembolehubah bersandar (pertumbuhan aset). Antaranya;

i. Sumber pembiayaan kewangan dalaman (internal financing) atau INF

Ia merujuk kepada aliran tunai firma yang terlibat sebagai dana dalaman bagi menggerakkan operasi firma. Sumber kewangan dalaman dinyatakan sebagai peratusan daripada jumlah aset seperti berikut:

$$INF = \frac{Aliran tunai}{Aset}$$

Yang mana aliran tunai diperolehi daripada pendapatan sebelum cukai ditambah dengan susut nilai.

ii. Sumber pembiayaan kewangan luaran (External Financing) atau EXF

Ia merujuk kepada pinjaman jangka masa panjang yang dibuat oleh firma bagi mengerakkan operasi firma. Formula bagi sumber pembiayaan kewangan luar adalah seperti berikut:

$$EXF = \frac{\text{Pinjaman jangka panjang}}{\text{Aset}}$$

#### iii. Kebebasan Ekonomi atau EFR

Ia merupakan indeks yang menggambarkan darjah kebebasan ekonomi sesebuah negara. Indeks ini diberi dalam bentuk peratusan. Semakin tinggi peratus yang diberi, semakin bebas sesuatu dasar kerajaan terhadap aktiviti ekonomi sesebuah negara. Data indeks kebebasan ekonomi tersebut diperolehi daripada 'Heritage Foundation'. [lihat Jadual 4 di Bahagian Appendix]

#### MODEL ASAS

Untuk melihat hubungan antara pertumbuhan firma dengan sumber kewangan (kewangan dalaman dan kewangan luaran) dan kebebasan ekonomi, model asas telah dibina seperti berikut:

$$AG_{it} = \alpha_0 + \beta_1 INF_{it} + \beta_2 EXF_{it} + \beta_3 EFR_t + \varepsilon_{it}$$
 [1]

yang mana,

AG ialah pertumbuhan firma, İ ialah firma, dan t ialah tahun.

 $\alpha_0$  ialah nilai pintasan

 $\beta_1$  ialah nilai koefisien kewangan dalaman

*INF* ialah kewangan dalaman

 $\beta_2$  ialah nilai koefisen kewangan luaran

EXF ialah kewangan luaran

B<sub>3</sub> ialah nilai koefisen indeks kebebasan ekonomi

EFR ialah indeks kebebasan ekonomi

 $\varepsilon_{it}$  ialah terma ralat, yang diandaikan  $\varepsilon_{it}$  =  $IID(0, \sigma_{\varepsilon}^2)$ 

Persamaan [1] merupakan model data panel statik dengan menggunakan kesan tetap (fixed effect).

Nilai koefisien untuk setiap pembolehubah bebas dijangka adalah positif. Ini berdasarkan teori pertumbuhan firma yang berhubung secara positif dengan pembangunan kewangan dan kebebasan ekonomi. Ini bermakna, peningkatan dalam pembolehubah penerang akan menyebabkan peningkatan dalam pertumbuhan firma.

## PENGESANAN DATA PEMENCILAN (OUTLIERS)

Untuk mengesan data 'outliers', pengukuran statistik DFITS telah digunakan. Kaedah ini telah diperkenalkan oleh Belsey et al. (1980) dan kemudian dikemaskini oleh Belsey (1991). Statistik DFITS adalah melihat perbezaan di antara 'di dalam sampel' dan 'di luar sampel' yang mana nilai yang dijangka untuk pemerhatian kali ke-j. (Baum, 2006). DFITS juga menilai hasil daripada penyesuaian model regresi 'termasuk' dan 'tidak termasuk' pemerhatian. Statistik DFITS dihitung seperti berikut:

**DFITS** 
$$_{j} = r_{j} \sqrt{\frac{k_{j}}{1 - k_{j}}}$$
 di mana  $r_{j}$  adalah ralat standard, di mana  $r_{j} = \frac{e_{j}}{s_{j} \sqrt{1 - k_{j}}}$  dengan

 $\mathbf{s}_j$  merujuk kepada 'root mean squared error of the regression equation' dengan pemerhatian  $\mathbf{j}_{ih}$  dikeluarkan,  $\mathbf{e}_j$  adalah ralat dan  $\mathbf{h}_j$  adalah nilai leveraj.

Melalui penggunaan statistik ini, Kesannya data di dapati mengalami pengurangan cerapan sekali lagi. Selain itu, DFITS juga menilai kesesuaian model regresi. Terdapat 3 langkah dalam ujian statistik DFITS, pertamanya ialah mengira DFITS dalam model penganggaran terhadap pertumbuhan firma. Keduanya ialah menyusun statistik DFITS yang dikira secara menurun dan yang ketiga ialah dengan mengira nilai 'cut-off' yang dicadangkan sebagai penanda pemboleh ubah dengan mengandaikan nilai DFITS untuk setiap 'cut-off' = 1. Seterusnya senarai firma yang dikesan sebagai 'outliers' akan diperolehi.

Pada asal kajian, terdapat sebanyak 10,703 cerapan dengan 973 buah firma secara keseluruhan yang tersenarai di Bursa Malaysia yang terdiri daripada dua kategori iaitu firma patuh syariah dan konvensional. Namun begitu, setelah mengambil kira faktor seperti data dan maklumat kewangan yang tidak lengkap yang dikategorikan sebagai 'missing values generated', menjadikan jumlah firma yang dicerap adalah 10,673 cerapan dengan patuh syariah melibatkan 6684 cerapan (785 buah firma patuh syariah), manakala bagi firma konvensional melibatkan 3989 cerapan (443 buah firma konvensional). Atas sebab itulah wujud jumlah yang tidak seragam antara cerapan keseluruhan dengan sub cerapan yang terdiri daripada bahagian syariah dan tidak konvensional.

Memandangkan status firma patuh syariah tidak bersifat mutlak dan akan ditarikbalik jika tidak memenuhi syarat yang ditetapkan (rujuk suruhanjaya sekuriti bahagian majlis patuh syariah), maka data yang dipecahkan kepada dua bahagian adalah tidak konsisten. Ini kerana dalam tempoh 11 tahun, firma bila-bila masa boleh bertukar status. Kesannya didapati wujud ketidakseragaman di antara jumlah keseluruhan firma (firma patuh syariah dan konvensional) dan pecahan sub sektor di antara patuh syariah dan konvensional. Justeru, permasalahan data yang seperti yang dinyatakan sebelum ini untuk tujuan penganggaran merupakan data panel yang tidak seimbang (unbalanced panel) seperti mana pada jadual 1.

Jadual 1: Data sebelum dan selepas pemencilan (outlier)

Guana 10 Butta ses et ann sere pus permenentan (sucher)					
Kategori Firma	Sebelum	Selepas			
	pemencilan	pemencilan			
Keseluruhan	1428	1228			
(Firma patuh syariah & Konvensional)					
Firma Patuh Syariah	823	785			
Firma Konvensional	605	443			

#### 4. KEPUTUSAN KAJIAN

Jadual 2 meringkaskan keputusan penganggaran penentu pertumbuhan firma. Fokus utama adalah mengkaji pengaruh sumber kewangan (kewangan dalaman dan luaran) dan kebebasan ekonomi terhadap pertumbuhan firma patuh syariah. Walaubagaimanapun analisa terhadap firma konvensional turut dirumuskan sebagai asas perbandingan. Dapatan kajian bagi keseluruhan sampel menunjukkan sumber kewangan dalaman berhubung secara positif dan signifikan pada aras keertian 1 peratus dengan pertumbuhan firma. Misalnya, kenaikan 1% sumber kewangan dalaman menyebabkan peningkatan 0.21% pertumbuhan firma, sebaliknya peningkatan 1% sumber kewangan luaran telah meningkatkan pertumbuhan firma sebanyak 0.15%. Penemuan kajian ini selaras dengan kajian Demirguc-Kunt dan Maksimovic (1998) yang mendapati pengaruh kewangan dalaman lebih dominan berbanding dengan kewangan luaran terhadap pertumbuhan firma.

Daripada aspek kebebasan ekonomi, didapati wujud hubungan yang negatif iaitu peningkatan 1% dalam kebebasan ekonomi telah menyebabkan pertumbuhan firma merosot sebanyak 0.014%. Ini selaras dengan kajian yang dibuat oleh Sufian dan habibullah (2010) yang mendapati wujud hubungan negatif antara kebebasan monetari (sub daripada kebebasan ekonomi keseluruhan) dengan pencapaian bank – bank di Malaysia. Memandangkan pencapaian bank yang baik juga mewakili pertumbuhan

firma sesebuah bank, maka penemuan empirikal mendapati semakin tinggi campurtangan kerajaan dalam pasaran sebenarnya berupaya meningkatkan keuntungan bank ( pertumbuhan firma) di Malaysia. Ini berasaskan rasional iaitu dasar monetari yang stabil dan boleh dipercayai (reliable) akibat kurangnya kebebasan ekonomi menggalakkan dan merangsang pelaburan, simpanan dan pelan jangka masa panjang.

## Regresi Sub Sampel

Jadual 2 [kolum kedua dan ketiga] meringkaskan keputusan penganggaran model pertumbuhan firma patuh syariah dan konvensional. Dapatan kajian menunjukkan pertumbuhan firma patuh syariah berhubungan positif dan signifikan dipengaruhi oleh sumber kewangan dalaman dan luaran. Pertumbuhan firma patuh syariah lebih sensitif dipengaruhi oleh sumber kewangan dalaman berbanding dengan sumber kewangan luaran. Buktinya, peningkatan 1% kewangan dalaman telah meningkatkan pertumbuhan firma sebanyak 0.4%. Sebaliknya, peningkatan sumber kewangan luaran sebanyak 1% hanya meningkatkan pertumbuhan firma sebanyak 0.14%. Sebaliknya, kebebasan ekonomi berhubungan negatif dan signifikan mempengaruhi pertumbuhan firma patuh syariah. Contohnya, peningkatan 1% indeks kebebasan ekonomi telah mengurangkan pertumbuhan firma patuh syariah sebanyak 0.013%.

Bagi firma konvensional, sumber kewangan (dalaman dan luaran) juga menunjukkan hubungan yang positif dan signifikan mempengaruhi pertumbuhan firma pada aras keertian 1%. Walau bagaimanapun, pertumbuhan firma konvensional lebih sensitif dipengaruhi oleh kewangan luaran berbanding dengan kewangan dalaman. Sebagai contohnya, peningkatan 1% kewangan luaran telah meningkatkan pertumbuhan firma sebanyak 0.28% berbanding kewangan dalaman yang hanya meningkatkan pertumbuhan firma sebanyak 0.18%. Dapatan kajian ini selaras dengan kajian Demirguc-Kunt dan Maksimovic (1998) yang mendapati pembiayaan daripada sumber kewangan luaran cenderung menyebabkan pertumbuhan firma yang lebih besar berbanding dengan pembiayaan sumber dalamam. Pertumbuhan firma konvensional berhubungan positif dengan kebebasan ekonomi, tetapi secara statistiknya tidak signifikan. Ini menjelaskan pertumbuhan firma konvensional tidak dipengaruhi oleh tahap kebebasan ekonomi negara.

**Nota:** Pembolehubah bersandar ialah pertumbuhan firma. Pembolehubah bebas ialah pembiayaan kewangan dalaman, pembiayaan kewangan luaran dan kebebasan ekonomi. Tanda aras keertian \*\*\* adalah signifikan pada aras keertian 1%, \*\*signifikan pada aras keertian 5%, dan \* signifikan pada aras keertian 10%.

Angka dalam kurungan ialah ralat piawai.

## 5. RUMUSAN DAN IMPLIKASI

Kajian empirikal mengenai hipotesis kewangan menerajui pertumbuhan (*finance-led growth hypothesis*) pada peringkat makro telah pun dikaji dengan mendalam oleh penyelidik sama ada di negara maju mahupun di negara sedang membangun. Walau bagaimanapun, kajian pada peringkat data mikro (data firma) belum lagi dikaji dengan mendalam, terutama bagi kes negara Malaysia. Maka, ketandusan literatur ini telah memberikan motivasi kajian untuk menerokai pengaruh faktor kewangan firma (kewangan dalaman dan luaran) terhadap pertumbuhan firma patuh syariah dan konvensional yang tersenarai di Bursa Malaysia. Kaedah data panel statik dengan menggunakan model kesan tetap telah digunakan untuk menganggar fungsi pertumbuhan firma.

Dapatan kajian dapatlah diringkaskan seperti berikut. Pertama, pertumbuhan firma patuh syariah dan konvensional signifikan dan berhubungan positif dengan kewangan dalaman dan kewangan luaran. Ini menunjukkan sumber pembiayaan sama ada dana dalaman atau dana luaran adalah pra syarat kepada perkembangan firma. Kedua, pertumbuhan firma patuh syariah lebih sensitif dipengaruhi oleh sumber kewangan dalaman berbanding dengan sumber kewangan luaran. Sebaliknya, pertumbuhan firma konvensional lebih sensitif kepada sumber kewangan luaran berbanding dengan kewangan dalaman. Penemuan kajian ini menunjukkan firma patuh syariah perlu meningkatkan pembiayaan daripada sumber dalaman untuk mencapai kelangsungan pertumbuhan pada masa hadapan. Ketiga, pertumbuhan firma patuh syariah signifikan dan berhubungan negatif dengan kebebasan ekonomi, sebaliknya, pertumbuhan firma konvensional tidak signifikan dipengaruhi oleh kebebasan ekonomi. Keputusan ini menunjukkan semakin tinggi tahap kebebasan ekonomi, maka semakin terjejas pertumbuhan firma patuh syariah, sebaliknya, kebebasan ekonomi yang tinggi tidak menggugat prestasi pertumbuhan firma konvensional.

Penemuan kajian ini memberikan beberapa implikasi penting kepada pelaksanaan dasar. Pertama, firma patuh syariah sewajarnya meningkatkan pembiayaan melalui sumber kewangan dalaman untuk meningkatkan pertumbuhannya. Ini memberi isyarat bahawa, firma patuh syariah mengalami kekangan kewangan kerana terpaksa bergantung kepada kewangan dalaman untuk mendapatkan dana. Sebaliknya, firma konvensional tidak perlu terlalu bergantung kepada kewangan dalaman, kerana mereka mempunyai profil kredit yang kukuh untuk mendapatkan pembiayaan daripada sumber luaran. Kedua, Majlis Penasihat Syariah di Suruhanjaya Sekuriti dan di Bank Negara Malaysia (BNM), perlulah memantau dana yang diperolehi daripada sumber luaran kerana berkemungkinan terdedah daripada unsur riba. Justeru, langkah atau peraturan dengan meletakkan nisbah yang tinggi terhadap pembiayaan kewangan dalaman adalah satu langkah yang pragmatik untuk mengelakkan unsur riba daripada aktiviti pinjaman daripada sumber luaran.

# THE REAL DETERMINANTS OF FINANCIAL CRISIS AND HOW TO RESOLVE IT IN ISLAMIC ECONOMICS PERSPECTIVE

Ascarya<sup>1</sup>

#### **ABSTRACT**

The ongoing global financial crisis, which was triggered by US subprime mortgage crisis since 2007 and has spread to some EU countries, is just a repeat of previous financial crises. The new financial crisis usually has wider, deeper and more devastating impacts on the economy and the people. In the history of capitalism, there have actually been crises almost continuously for the past 200 years except for during one short period, 1945-1971, under Bretton Woods Agreement. Failing to learn the lessons from history will assure that the crises will continue to hobble the financial system. This study applies Vector Error Correction Model (VECM) to determine and compare conventional and Islamic quantitative variables of the financial crisis, as well as to analyze the impact of the real determinants of financial crisis to output and inflation.

The results show that the real determinants of financial crisis are structural in unstable monetary system (interest system and fiat money system), poor governance (administered price), and unsustainable fiscal system (volatile food), as well as misbehavior of economic actors (expectation). Interest system (Monetary) is the number one determinant of financial crisis with 43.66% share in inducing inflation and 24.85% share in curbing economic growth, followed by administered price (Governance) with 14.41% share in inducing inflation and 5.33% share in curbing economic growth, fiat money (Monetary) with 5.54% share in inducing inflation and 13.49% share in curbing economic growth, and volatile food (Fiscal) with 5.79% share in inducing inflation and 9.11% share in curbing economic growth. Meanwhile, the best cure of financial crisis is single global currency (External) and just money (Monetary) using gold standard with 8.03% share in curbing inflation and 3.50% share in inducing economic growth, followed by profit-and-loss sharing (Monetary) with 0.02% share in curbing inflation and 0.09% share in inducing economic growth.

Keywords: Financial crisis, Islamic economic perspective, VECM

#### 1. INTRODUCTION

The ongoing global financial crisis, which was triggered by US subprime mortgage crisis since 2007 and has spread to some EU countries, is just a repeat of previous financial crises. The new financial crisis usually has wider, deeper and more devastating impacts on the economy and the people than those of previous ones. In the history of capitalism, there have actually been crises almost continuously for the past 200 years except for during one short period, 1945-1971, under Bretton Woods Agreement. Failing to learn the lessons from history will assure that the crises will continue to hobble the financial system. One aphorism says that those who cannot remember the past are condemned to repeat it (Financial Crisis Inquiry Commission-FCIC, 2011; pp.444). Under Islamic tradition, Muslims should not make the same mistake twice, as mentioned in Al Qur'an at the end of surah Al Bagarah [2]:275.

The first financial crisis has been recorded in England 1825 and 1837. In the past century, financial crises started to erupt in 1915 and the world entered into great depression in 1929 as well as two world wars. After World War II, the world entered into new international monetary arrangement

\_

<sup>&</sup>lt;sup>1</sup> Ascarya is a Senior Researcher at Center for Central Banking Research and Education, Bank Indonesia.

under Bretton Woods Agreement (BWA) in 1945. Unfortunately, BWA collapsed in 1971 and financial crises have spread wider all over the world. There is no one country that could escaped from financial crisis, even for some countries that have generally followed some sound fiscal and monetary policies (Chapra 2008). Moreover, financial crises have happened not because of cyclical or managerial failures, but because of structural failures in various countries under very different regulatory systems as well as at different stages of economic development (Lietaer, *et al.*, 2009).

A new database of financial crises in the period of 1970-2011 can be read in Laeven and Valencia (2012) which covers 147 banking crises, 218 currency crises (10 episodes in 2008-2011), and 66 sovereign debt crisis, including 68 twin crises and 8 triplet crises.

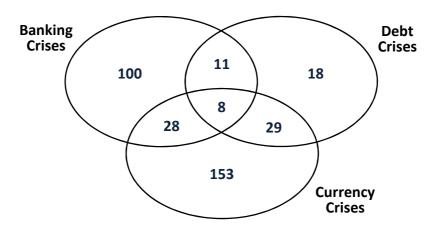

Figure 1.1: Simultaneous Crises in the Period of 1970 – 2011

Source: Laeven and Valencia (2012), with correction.

Indonesia is no exception. Multi-dimensional crisis has hit Indonesia in 1997-1998, inflation has jumped up to 64% and Rupiah value has plummeted from Rp2600/US\$ to Rp11000/US\$, while economic growth has contracted to 13.1% (Ascarya, 2011). All sectors in the economy have contracted significantly. Moreover, rapid currency depreciation had made public debt to reach US\$60 billion in November 1997, which imposed severe strains on the government's budget. Indonesia has suffered the most with fiscal cost reached 56.8% of GDP, while output loss reached 67.9% of GDP (Laeven and Valencia, 2008).

It seems that they have not learned the lessons yet on how to eradicate and/or control the financial crisis. Even though financial crisis has been repeated again and again, none of those affected countries has become economically stronger and more stable. Lipson (2010) argues that the current financial crisis is just a rerun of previous crises from which we have failed to learn our lessons.

Clearly, the current financial system has fundamental flaws which make it unstable and susceptible to financial crisis. This study aims to determine root causes of financial crisis from Conventional and Islamic perspectives using Vector Error Correction Model (VECM) using Indonesian data and propose real remedies to cure the financial crisis permanently and to avoid the similar mistakes in the future, so that financial crisis will not repeated again and again.

# 2. LITERATURE REVIEW

# 2.1 Theory of Financial Crisis

The development of financial crisis theory under conventional economic perspective was inspired by currency crises which initially occurred in England in 1825 and 1837. The theory mostly views the crisis from macro perspective, which has been developed from first-generation model, second-

generation model, and third-generation model. Other alternative theories include Austrian business cycle theory, Minsky's theory, world system theory, coordination game, herding model and learning model. On the other hand, viewed from Islamic economic perspective, financial crisis is a result of the transgressions of God's laws by economic actors which cause disruption in the balance of economic system, especially in the form of  $rib\bar{a}$  (usury or interest), maysir (gambling and game of chance or speculation) and gharar (excessive uncertainty) in their many forms.

# 2.1.1 First-Generation Model

First-generation model views financial crisis is originated from currency crisis or balance of payments crisis, which is caused by macroeconomic imbalances due to weak economic fundamentals. Under this model, the collapse of fixed exchange regime is due to unsustainable fiscal policy. The classic first-generation model was first proposed by Krugman (1979) and later by Flood and Garber (1984). These classic models have been extended, among others, by Obstfeld (1986), Calvo (1987), Drazen and Helpman (1987) and van Wijnbergen (1991), which incorporate consumer optimization and government's intertemporal budget constraint. Under fixed exchange rate regime the government should set the amount of money supply fixed in accordance with fixed exchange rate. This requirement would severely limit the ability of the government to raise *seigniorage* revenue from printing fiat money. Therefore, when the government runs persistent primary deficits (this is the hallmark of first-generation model), it has to use foreign reserves or borrow continuously. In the long run, this is not feasible, so that the government would have to print more money, which would lead to the collapse of fixed exchange regime (Flood and Marion, 1999).

Viewed from Islamic economic perspective, the root causes of first-generation financial crisis are international monetary system based on multiple fiat currency system, interest system, excessive fiat money supply, excessive fiscal deficits, excessive debt, expectation and speculation. The emphasize of first-generation model is currency crisis due to the debasement of currency, where fiat currency does not have any back up assets, to create the *seigniorage* necessary for a rational system of government money. The issuance of fiat money creates a new purchasing power out of nothing. Therefore, fiat money gives unfair benefit, usually known as *seigniorage*, to the money issuer authority. The creation of benefits without any counter value ('*iwad*) in terms of ownership risk (*ghurmi*), value added (*ikhtiyar*), or liability (*daman*) are categorized as *ribā* by Ibnu Arabi.

#### 2.1.2 Second-Generation Model

The second generation model is developed based on the drawbacks of the first generation model and suggests the central role of expectations and coordination failure among creditors, so the crisis could occur independent of soundness of economic fundamentals. This model was first proposed by Obstfeld and Rogoff (1986). When investors have doubts about whether the government is willing to maintain its exchange rate peg, this model generally will exhibit multiple equilibriums, so speculative attacks due to self-fulfilling prophecies may be possible. This means the reason investors attack the currency is that they expect other investors to attack the currency. One example is the model proposed by Obstfeld (1994 and 1996), where the central bank minimizes a quadratic loss function that depends on inflation and on the deviation of output from its natural rate (the detailed discussion of this type of loss function can be seen in Barro and Gordon, 1983). Ali (2006&2007) mentioned that in the context of a banking crisis it means that irrespective of solvent position of a bank (or of the banking sector as a whole) if a random event can adversely change the collective expectations of the depositors (i.e., its creditors) then it can precipitate a run on the bank and on the banking system. Thus there can be a range of economic fundamentals over which this type of a pure liquidity crisis can occur. Blanchard (2009) adds that there also exists modern version of bank runs. In traditional bank runs, it was the depositors that took their money out of the banks. In modern bank runs, troubled financial institutions can no longer finance themselves on money market (short-term wholesale funding). The result is however the same as in the old bank runs: Faced with a decrease in their ability to borrow, institutions have to sell their assets at 'fire sale prices'.

Viewed from Islamic economic perspective, the root causes of second-generation financial crisis are expectation, speculation, fractional reserve banking system, leverage system, non-performing loan, troubled financial institutions, and interest system. The emphasize of second-generation model is banking crisis due to fractional reserve banking system (in commercial banking) and leverage system (in investment banking and shadow banking), which create bank money similar to fiat money creation. For illustration, the leverage ratios of Lehman Brothers and Goldman Sachs before they went bankrupt were 30 and 26, respectively. Some European banks had even a higher leverage: BNP Paribas at 32; Dexia and Barclays' leverage ratios are both estimated at about 40; UBS' at 47; and Deutsche Bank's a whopping 83 (Lietaer, *et al.*, 2009). Similar to fiat money creation, bank money creation through fractional reserve or leveraging is considered *ribā*.

# 2.1.3 Third-Generation Model

The third-generation model is built on the shortcomings of the second-generation model by redefining the fundamentals more broadly to include micro incentives and policies. This model emphasizes the role of the financial sector in causing currency crises and propagating their effects, since many currency crises coincide with crises in the financial sector (see Diaz-Alejandro, 1985; Kaminsky and Reinhart, 1999). Some other models allow interaction between fundamentals and beliefs so that a crisis is triggered by both factors working together not by any one in isolation (Ali, 2006&2007). Keywords of third-generation model of financial crisis are mismatches in currency and in the characteristics of financial institutions, such as liquidity and maturity mismatches, so that Eichengreen and Hausmann (1999) argue that currency mismatches are an inherent feature of emerging markets. However, when there exist government guarantees, it is optimal for banks and firms to expose themselves to currency risk (McKinnon and Pill, 1996; and Burnside, et al., 2001). Therefore, different third-generation models explore various mechanisms through which balance-sheet exposures may lead to a currency and banking crisis. Burnside, et al. (2004) argue that government guarantees lead to the possibility of self-fulfilling speculative attacks, while Chang and Velasco (2001) state that liquidity exposure leads to the possibility of a Diamond and Dybvig (1983) style bank run. Moreover, Caballero and Krishnamurthy (2001) find that firms face a liquidity problem because they finance risky long-term projects with foreign loans but have access to limited amounts of internationally accepted collateral.

Viewed from Islamic economic perspective, the root causes of third-generation financial crisis are international monetary system based on multiple fiat currency system, fractional reserve banking system, leverage system, currency, liquidity and maturity mismatches, interest system, expectation and speculation. The emphasize of third-generation model is currency mismatch due to multiple fiat currency system, as well as liquidity and maturity mismatches due to fractional reserve banking system (in commercial banking) and leverage system (in investment banking and shadow banking), where both of them have been categorized previously as  $rib\bar{a}$ .

# 2.1.4 Austrian Business Cycle Theory

Austrian business cycle theory (ABCT) emerges from Austrian school of thought, which assumes that money is not neutral and financial flows are a mere mirror of what is happening in the real economy (Zelmanovitz, 2011). The main proponents of the Austrian business cycle theory historically were Ludwig von Mises and Friedrich Hayek followed by Murray Rothbard, James Keeler and Roger Garrison to name a few. Hayek won a Nobel Prize in economics in 1974 (shared with Gunnar Myrdal) in part for his work on this theory. Austrian business cycle theory, or preferably called credit cycle by Austrian economists, can be divided into four stages, namely, expansion, crisis, recession and recovery. *Expansion* stage starts when low interest rates or expansionary monetary policy tend to stimulate borrowing or credit expansion from the banking system to businesses and individual borrowers, which causes an expansion of the money supply through the money creation process in a fractional reserve banking system. In this stage production and prices increase. Subsequently, this leads to unsustainable credit-sourced boom during which the artificially stimulated borrowing seeks

out diminishing investment opportunities, which results in widespread mal-investments causing capital resources to be misallocated into areas that would not attract investment if the money supply remained stable. *Crisis* stage starts with a correction (or credit crunch or recession or bust) that occurs when exponential credit creation cannot be sustained. The money supply suddenly and sharply contracts. In this stage stock exchanges crash and multiple bankruptcies occur. *Recession* stage follows after the crisis when output and prices drop and interest rates increase. Recovery stage start when markets finally "clear" and causing resources to be reallocated back towards more efficient uses. In this stage stocks recover due to the fall in prices and incomes. Recovery and prosperity are associated with increases in productivity, consumer confidence, aggregate demand and prices.

Viewed from Islamic economic perspective, the root causes of ABCT financial crisis are fiat money system, fractional reserve banking system, leverage system, interest system, excessive credit creation, adverse selection, moral hazard, mal-investments, expectation and speculation. The emphasize of ABCT is excessive credit creation due to fractional reserve banking system, which is considered as  $rib\bar{a}$ , as well as expectation and adverse selection leading to mal-investments and finally causes stock market crash, due to expectation and speculation, which are considered as maysir and are prohibited in Islamic perspective.

# 2.1.5 Minsky's Theory

Hyman Minsky hypothesizes that the capitalistic economy has an inherent tendency to develop instability/fragility (also known as Financial Instability Hypothesis). High fragility leads to a higher risk of a financial crisis, which culminates in severe economic crises. The key mechanism that pushes the economy towards a crisis is the accumulation of debt. To facilitate his theory, Minsky makes a distinction between three types of firms as borrowers. The first type he labels *hedge borrowers* who can meet all debt payments from their cash flows. The second type is *speculative borrowers* who can meet interest payments but must constantly roll over their debt to be able to repay the original loan. The third group of borrowers Minsky labeled *Ponzi borrowers*; they can repay neither the interest nor the original loan. These borrowers rely on the appreciation of the value of their assets to refinance their debt. Ponzi borrowers lead to the most fragility.

The level of financial fragility moves together with the business cycle. In time of recession, firms only borrow as much as they can payback from their cash flows (in other words, they can only act as hedge borrower). As economic condition getting better and businesses grow, expected profits increase and firms tend to raise their level of debt beyond their ability to repay. However, they believe that profits will rise and the debt will eventually be repaid without much trouble. The rising profit attracts other firms or entrepreneurs to join in and encourages them to raise their level of debt. More debt leads to more investment, borrowers' financial health show visible improvement, the economy grows further, and this makes lenders more eager to lend to firms even without full guarantees of success.

As time goes by, the pace of debt accumulation starts to rise much faster than borrowers' ability to repay and serve the debt. This is Ponzi financing. In this way, the economy has taken on much risky credit. At this stage, the foundation for an economic bust is set in motion, started with the default of some big firms, which make lenders realize the actual risks in the economy and stop giving credit. Refinancing becomes impossible for many, and more firms default. If no new money comes into the economy to allow the refinancing process, a real economic crisis begins. During the recession, firms start to hedge again, and the cycle is closed. Many economists, such as Wray (2009a and 2009b) and Prychitko (2010), argue that current global financial crisis could be called the 'Minsky Moment' or 'Minsky Crisis'.

Viewed from Islamic economic perspective, the root causes of Minsky crisis are fiat money system, fractional reserve banking system, leverage system, interest system, excessive debt, expectation, speculation, moral hazard, adverse selection, and fraud. The emphasize of Minsky's theory is expectation and speculation in relation to *speculative borrowers*, as well as fraud in relation to *Ponzi borrowers*. All of these could lead to banking crisis due to credit defaults and stock market crash due

to firms' bankruptcies. Therefore, Minsky's crisis is caused by the intertwined among  $rib\bar{a}$ , maysir and fraud, which are all prohibited in Islamic perspective.

# 2.2 Previous Studies

Studies on current global financial crisis from conventional economic perspective are plenty, covering several school of thoughts, such as, mainstream (neo classic and new Keynesian), Austrian, binary economics and other minor views. There is an official report from Financial Crisis Inquiry Commission - FCIC (2011) which comprises of 22 chapters divided into five parts, as well as two dissenting views. There is an edited book by Kolb (2011) which comprises of 78 papers grouped in 11 parts. There is one special volume of Cambridge Journal of Economy, volume 33 (2009) which comprises of 15 papers. There is a CEPR (Centre for Economic Policy Research) publication edited by Felton and Reinhart (2008) which includes 38 papers divided into three parts. Since 2008, there have been more than 100 working papers of IMF and more than 25 working papers of NBER which study global financial crisis and its impacts from many different perspectives.

Meanwhile, studies on current global financial crisis from Islamic economic perspective are also plenty but not as many as those of conventional economic perspective. The Task Force on Islamic Finance and Global Financial Stability, organized by Islamic Development Bank – IDB, published a report on Islamic finance and global financial stability (2010), which discusses the resilience of Islamic finance against global financial crisis. There is one special volume of International Journal of Islamic and Middle Eastern Finance and Management, volume 3 number 4 (2010) which comprises of 8 papers. There is a compilation book by Islamic Economic Research Center, King Abdulaziz University - IERC-KAU (2009), which includes 18 papers of prominent Islamic economic and finance scholars. There are also many studies from various journals which discuss financial crisis. The summary of conventional and Islamic literatures which relate financial crisis with several root causes mentioned in the theory of financial crisis can be read in table 2.1.

Table 2.1: Root Causes of Financial Crisis in Conventional and Islamic Literatures

VARIABLE	CONVENTIONAL	ISLAMIC

#### 3. RESEARCH METHOD

# 3.1 Data

This study will apply quantitative method, namely, Vector Error Correction Model (VECM), which needs time series quantitative data. This quantitative data needed by VECM method will be monthly time series secondary data of March 2004 to June 2012 obtained from several resources, such as Biro Pusat Statistik (BPS), Indonesian Economic and Finance Statistics of Bank Indonesia (SEKI-BI), Syariah Banking Statistics of Bank Indonesia (SPS-BI), Banking Statistics of Bank Indonesia (SPI-BI), Jakarta Stock Exchange (JSX) and Ministry of Energy and Mineral Resources (KESDM).

# 3.2 Vector Error Correction Model (VECM)

#### 3.2.1 VECM Overview

The methodology to be used is Vector Auto Regression (VAR), followed by Vector Error Correction Model (VECM), if cointegration occurred. VAR is an *n*-equation with *n*-endogenous variable, where each variable is explained by its own lag, as well as current and past values of other endogenous variables in the model. Therefore, in the context of modern econometrics, VAR is considered as multivariate time series that treats all variables endogenous, since there is no confidence that a variable is actually exogenous, and VAR allows the data to tell what actually happen. Sims (1980) argue that if there is true simultaneity among a set of variables, they should all be treated on an equal footing and there should not be any a priori distinction between endogenous and exogenous variables. Enders (2004) formulates a simple first-order bivariate primitive system that can be written as follows.

$$y_{t} = b_{10} - b_{12} z_{t} + \gamma_{11} y_{t-1} + \gamma_{12} z_{t-1} + \varepsilon_{yt}$$
(3.1)

$$z_{t} = b_{20} - b_{21} y_{t} + \gamma_{21} y_{t-1} + \gamma_{22} z_{t-1} + \varepsilon_{zt}$$
(3.2)

With assumptions that both  $y_t$  and  $z_t$  are stationary,  $\varepsilon_{yt}$  and  $\varepsilon_{zt}$  are white noise disturbances with standard deviations of  $\sigma_y$  and  $\sigma_z$ , respectively, and  $\varepsilon_{yt}$  and  $\varepsilon_{zt}$  are uncorrelated white-noise disturbances. Meanwhile, the standard form of the above primitive form can be written as follows.

$$y_t = a_{10} + a_{11}y_{t-1} + a_{12}z_{t-1} + e_{yt} (3.3)$$

$$z_{t} = a_{20} + a_{21}y_{t-1} + a_{22}z_{t-1} + e_{zt}$$
(3.4)

Where,  $e_{yt}$  and  $e_{zt}$  are composites of  $\varepsilon_{yt}$  and  $\varepsilon_{zt}$ . The primitive form is called structural VAR, while the standard form is called VAR. The detailed transformation from primitive form to standard form can be read in Enders (2004). In short, according to Achsani *et al.*, 2005, the general VAR model mathematically can be represented as follows.

$$X_{t} = \mu_{t} + \sum_{i=1}^{K} A_{i} + X_{t-1} + \varepsilon_{t}$$
(3.5)

Where  $x_t$  is a vector of endogenous variables with  $(n \times 1)$  dimension,  $\mu_t$  is a vector of exogenous variables, including constant (intercept) and trend,  $A_t$  is coefficient matrix with  $(n \times n)$  dimension, and  $\varepsilon_t$  is a vector of residuals. In a simple bivariate system  $y_t$  and  $z_t$ ,  $y_t$  is affected by current and past value of  $z_t$ , while  $z_t$  is affected by current and past value of  $y_t$ .

VAR provides systematic ways to capture dynamic changes in multiple time series, and possess credible and easy to understand approach for describing data, forecasting, structural inference, and policy analysis (Stock and Watson, 2001). VAR provides four tools of analysis, namely, forecasting, impulse response function (IRF), forecast error variance decomposition (FEVD) and Granger causality test. Forecasting can be used to extrapolate current and future values of all variables by

utilizing all past information of the variables. IRF can be used to trace current and future responses of each variable to the shock of certain variable. FEVD can be used to predict the contribution of each variable to the shock or changes of certain variable. Meanwhile, Granger causality can be used to determine the causal relationship among variables.

Like any other econometric models, VAR also comprises a series of process of model specification and identification. Model specification includes the selection of variables and their lag length to be used in the model. While, model identification is to identify the equation before it can be used for estimation. There are several possible conditions encountered in the identification process. *Overidentified* condition will be obtained if the number of information exceeds the number of parameter to be estimated. *Exactly identified* or *just identified* condition will be obtained if the number of information and the number of parameter to be estimated is equal. Meanwhile, *underidentified* condition will be obtained if the number of information is less than the number of parameter to be estimated. Estimation process can only be carried out under *overidentified* and *exactly identified* or *just identified* conditions.

The advantages of VAR method compared to other econometric methods, among others, are (Gujarati, 2004 and Enders, 2004): 1) VAR method is freed from various economic theory restrictions that often exists, such as spurious variable endogeneity and exogeneity; 2) VAR develops model simultaneously within complex multivariate system, so that it can capture all relationships among variables in the equation; 3) Multivariate VAR test can avoid biased parameters due to exclusion of relevant variables; 4) VAR test can detect the relationships among variables within equation system by treating all variables endogenous; 5) VAR method is simple where one does not have to worry about determining which variables are endogenous and which ones exogenous, since VAR treats all variables endogenous; 6) VAR estimation is simple where the usual OLS method can be applied to each equation separately; and 7) The estimate forecasts obtained are in many cases better than those obtained from other more complex simultaneous-equation models.

Meanwhile, the disadvantages and problems of VAR model, according to Gujarati (2004), are: 1) VAR model is a-theoretic, since it uses less prior information, unlike simultaneous-equation model where exclusion and inclusion of certain variables plays a crucial role in the identification of the model; 2) VAR model is less suited for policy analysis, due to its emphasis on forecasting; 3) Choosing the appropriate lag length is the biggest practical challenge in VAR modelling, especially when there are too many variables with long lag-length, so that there will be too many parameters that will consume a lot of degree of freedom and require a large sample size; 4) All variables should be (jointly) stationary. If not, all data should be transformed appropriately, e.g. by first-differencing. Long-term relationships will be lost in the transformation of data level needed in the analysis; and 5) Impulse Response function (IRF) is the centrepiece of VAR analysis, which has been questioned by researchers.

To overcome the drawback of first difference VAR and to regain the long-term relationships among variables, vector error correction model (VECM) can be applied, provided that there are cointegrations among variables. The trick is to reincorporate original equation in level into the new equation as follows.

$$\Delta y_{t} = b_{10} + b_{11} \Delta y_{t-1} + b_{12} \Delta z_{t-1} - \lambda (y_{t-1} - a_{10} - a_{11} y_{t-2} - a_{12} z_{t-1}) + \varepsilon_{vt}$$
 (3.6)

$$\Delta z_{t} = b_{20} + b_{21} \Delta y_{t-1} + b_{22} \Delta z_{t-1} - \lambda \left( z_{t-1} - a_{20} - a_{21} y_{t-1} - a_{22} z_{t-2} \right) + \varepsilon_{zt}$$
 (3.7)

Where a is long-term regression coefficient, b is short-term regression coefficient,  $\lambda$  is an error correction parameter, and the phrase in the bracket shows the cointegration between variables y and z. The general VECM model mathematically can be represented as follows (Achsani  $et\ al\ 2005$ ).

$$\Delta x_{t} = \mu_{t} + \prod_{t=1}^{k-1} x_{t-1} + \sum_{i=1}^{k-1} \Gamma_{i} \Delta x_{t-i} + \varepsilon_{t}$$
(3.8)

Where,  $\Pi$  and  $\Gamma$  are functions of  $A_i$ . The matrix  $\Pi$  can be decomposed into two matrices  $\lambda$  and  $\beta$  with  $(n \times r)$  dimension.  $\Pi = \lambda \beta^T$ , where  $\lambda$  is called an adjustment matrix and  $\beta$  is a cointegration vector. Moreover, r is a cointegration rank.

#### 3.2.2 VECM Procedure

VAR/VECM analysis process can be read on figure 3.1. After basic data is ready, data is transformed into natural logarithm form (*ln*), except for interest rates and the PLS return, to obtain consistent and valid results. The first test conducted was the unit root test, to find out whether data is stationary or still contain trends. If the data are stationary at levels, then VAR can be conducted at level. VAR level can estimate the long-term relationship between variables. If data are not stationary at level, then the data should be reduced at the first level (first difference), which reflects the difference or changes in data. If the data are stationary at first difference, then the data will be tested whether there is cointegration between variables. If there is no cointegration between variables, then VAR can only be done at the first difference, and it can only estimate the short-term relationship between variables. If there is cointegration between variables, then VECM can be done using data level to obtain long-term relationship between variables. VECM can estimate the short-term and long term relationship between variables. Innovation accounting for the level VAR and VECM will be meaningful for the long-term relationships.

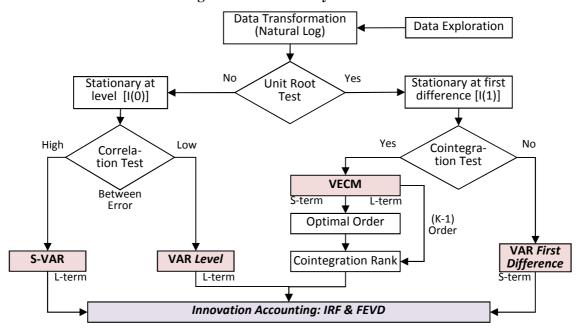

Figure 3.1: VAR Analysis Process

# 3.2.3 VECM Model

The general model of VECM can be expressed as equation (3.8).

$$\Delta x_t = \mu_t + \prod x_{t-1} + \sum_{i=1}^{k-1} \Gamma_i \Delta x_{t-i} + \varepsilon_t$$

Where:

 $x_k$  is k selected endogenous variables, specific for each model;

 $\varepsilon_k$  is disturbance or error term with zero means and constant variance-covariance.

#### Inflation model:

 $x_k = [Crisis (Inflation), Behavior, External, Governance, Monetary, Fiscal]$ 

# Growth model:

 $x_k = [Crisis (Growth), Behavior, External, Governance, Monetary, Fiscal]$ 

Proxies for selected endogenous variables (conventional and Islamic) can be seen in table 3.1 as follows:

**Variable Crisis Behavior External** Governance Monetary **Fiscal** Expectatio -Intl. Mult. -Price Interest Rate (INT) Poor Strategic n (XINFL) Fiat Currency Control; Comm. Mgt.; -Fiat Money (FM) Convention System Administere - Fractional Reserve Volatile Food al (EXCH) d Price (VF) Banking (FRB) -Inflation (ADM) (INFL); -No -Single Global - No Price - Profit-and-loss -Good Growth Expectatio Currency Control Sharing (PLS) Strategic (GRO); System/ Gold Comm. Mgt. n -Just Money Islamic Standard (GOLD) (GOLD) -Narrow Banking (NB)

**Table 3.1: Proxies of Endogenous Variables** 

The focus of differentiation between conventional and Islamic crisis variables will be in the area of  $rib\bar{a}$  monetary/financial system and international multiple fiat currency system, so that the crisis models (inflation and growth) under dual financial system are as follows:

- INFL = f (INT, PLS, FM, FRB, NB, EXCH, GOLD, VF, ADM, XINFL) (3.9)
- GRO = f(INT, PLS, FM, FRB, NB, EXCH, GOLD, VF, ADM, XINFL) (3.10)

# Where:

- INFL: the index of monthly CPI (consumer price index) inflation obtained from table "Indeks Harga Konsumen dan Inflasi Bulanan Indonesia", BPS.
- GRO: the index of monthly IPI (industrial production index) obtained from table "Indeks Produksi Bulanan Industri Besar dan Sedang, 2003-2011", BPS.
- INT: the rate of one-month conventional time deposits, obtained from table I.28 "Suku bunga simpanan berjangka rupiah menurut kelompok bank": Bank Umum 1/3/6/12/24 bulan, SEKI-BI.
- PLS: the rate of one-month Islamic time deposits (deposito iB), obtained from table 36 "Ekuivalen Tingkat Imbalan bagi hasil/fee/bonus Bank Umum Syariah dan Unit Usaha Syariah": Time Deposits 1 month, SPS-BI.
- FM: money creation originally issued by the central bank or money in circulation (M0), obtained from table I.2 "Neraca analitis otoritas moneter": Uang Kartal yang diedarkan, SEKI-BI.
- FRB: credit creation or fractional reserve banking, is the difference between broad money M2 and M0 monthly. Broad money M2, obtained from table I.1 "Uang Beredar dan Faktor-Faktor yang Mempengaruhinya": M2, SEKI-BI.
- NB: Narrow banking with no credit creation, is similar to just money supply or money needed in the economy in Islamic perspective, which is an equilibrium intrinsic M0 proximate by the monthly M1 and GDP data obtained from SEKI-BI and BPS.

- EXCH: International multiple fiat currency system or exchange rate, is the nominal Rupiah exchange rate to the US Dollar obtained from SEKI-BI.
- GOLD: Single global currency system and just money using gold standard or gold price, is international gold price index obtained from "Indeks Harga Energi", SEKI-BI.
- VF: Volatile food inflation, is monthly food price index for rice obtained from SEKI-BI.
- ADM: Administered price, is monthly gasoline (premium) price obtained from Ministry of Energy and Mineral Resources (KESDM).
- XINFL: Expected inflation, is the rate of monthly inflation, CPI index, of previous period obtained from table "Indeks Harga Konsumen dan Inflasi Bulanan Indonesia", BPS.

# 4. RESULTS

Several procedures of data testing should be followed as a standard procedures for using VAR/VECM method, such as unit root test, stability test, optimum lag test, and cointegration test (see figure 3.1). After all requirements have been met, results can be generated. The complete results of all VECM procedures can be obtained from the authors.

#### 4.1 Test Results

# a. Unit Root Test

Unit root test results show that most variables are not stationary in level, but all variables are stationary in first difference (see table 4.1).

**ADF Value McKinnon Critical Value** Variable 1st Difference Level Level 1<sup>st</sup> Difference **GRO** -5.586035 -15.88780 -3.455376 -3.455842 **PLS** -3.947138 -10.59308 -3.455376 -3.456319 **NB** -6.498920 -9.960527 -3.455842 -3.461094 -3.455842 **GOLD** -2.404773 -9.657199 -3.455376 JII -2.178969 -7.624593 -3.455842 -3.455842 VF -3.456319 -1.858362 -7.660940 -3.456319 **ADM** -1.625228 -3.455842 -10.13098 -3.455376 **XINFL** -0.736651 -6.786609 -3.457301 -3.457301 **INFL** -1.187897 -3.455376 -3.455842 -10.16923 -3.455842 INT -3.380070 -3.587209 -3.455842  $\mathbf{FM}$ -5.676494 -14.85347 -3.455376 -3.455842 -4.845790 -3.455376 -3.459397 **FRB** -5.242070 **EXCH** -3.123738 -4.577799 -3.456805 -3.4568605 **IHSG** -2.293074-7.682988 -3.455842 -3.455842

**Table 4.1: ADF Test Summary** 

# b. Stability Test

Stability test results show that both inflation model and growth model are stable up to 7 (seven) maximum lag (see table 4.2).

**Table 4.2: Stability Test Summary** 

No	Model	Modulus	Max Lag
1	INFL	0.339403 - 0.985622	7
2	GRO	0.501793 - 0.993559	7

# c. Optimum Lag Test

Optimum lag test results for inflation model show that lag optimum varies for every criteria from 0 to 6, namely, 0 (zero) for Schwarz information criterion SC, 1 (one) for Hannan-Quinn information criterion HQ, 2 (two) for Final prediction error FPE, 5 (five) for sequential modified LR test statistic LR, and 6 (six) for Akaike information criterion AIC (see table 4.3).

**Table 4.4: Optimum Lag Test Summary of Growth Model** 

# d. Cointegration Test

Johansen cointegration test results for inflation model (INFL) show that there exist 2 (two) cointegrating equations at the 0.05 level and 3 (three) cointegrating equations at the 0.10 level. Moreover, cointegration summary results show that the optimal inflation model under AIC is linear with intercept and trend (assumption 4) model with 3 (three) cointegrating equations (see Appendix).

Meanwhile, Johansen cointegration test results for growth model (GRO) show that there exist 2 (two) cointegrating equations at the 0.05 level and 3 (three) cointegrating equations at the 0.10 level. Moreover, cointegration summary results show that the optimal inflation model under AIC is linear with intercept and no trend (assumption 3) model with 3 (three) cointegrating equations (see Appendix).

# 4.2 Inflation Model

Impulse Response Function (IRF) results of Inflation model can be seen in figure 4.1. The results show that all conventional variables (see figure 4.1, left) induce inflation or financial crisis, especially, interest rate 'INT' and administered price 'ADM'. Meanwhile, two Islamic variables curb inflation or financial crisis, namely, single global currency or just money 'GOLD' (gold or gold-backed money) and profit-and-loss sharing 'PLS' (prohibition of *ribā* or interest), while one Islamic variable still induces inflation or financial crisis, namely, narrow banking 'NB' (see figure 4.1, right).

-XINFL -FRB -VF -FM -ADM -INT -EXCH | -NB -GOLD -PLS | 0.01 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 | 0.005 |

Figure 4.1: IRF Results of INFLATION Model

Forecast Error Variance Decomposition (FEVD) results of Inflation model can be seen in figure 4.2. The results show that interest rate 'INT' gives the highest share (43.66%) to induce inflation or financial crisis, followed by administered price 'ADM' with 14.41% share, while single global currency or just money 'GOLD' gives the highest share (8.03%) to reduce inflation or curb the financial crisis.

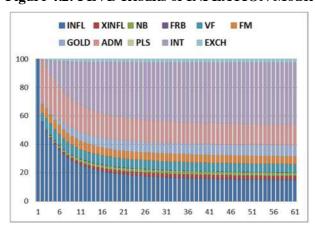

Figure 4.2: FEVD Results of INFLATION Model

VECM summary results of Inflation model can be seen in table 4.1. All conventional variables (see table 4.1, center), including expected inflation 'XINFL' (Behavior), multiple currency 'EXCH' (External), administered price 'ADM' (Governance), interest rate 'INT', fiat money 'FM' and fractional reserve banking 'FRB' (Monetary), as well as volatile food 'VF' (Fiscal), induce inflation or financial crisis. Meanwhile, some Islamic variables, including 'GOLD' as single global currency (External) and just money (Monetary), as well as profit-and-loss sharing 'PLS' (Monetary), reduce inflation or curb the financial crisis, while one Islamic variable, narrow banking 'NB' (Monetary), still induces inflation or financial crisis (see table 4.5, right), since narrow banking is being proxied by using M1, where M1 comprises of M0 (fiat currency) and Demand Deposits (part of fractional reserve banking) which are considered *ribā* in Islamic perspective.

**Table 4.5: VECM Summary Results of Inflation Model**

	- FRB: (+), 0.08%	- GOLD: (-), 8.03%
FISCAL	- VF: (+), 5.79%	- n/a

# 4.3 Growth Model

Impulse Response Function (IRF) results of Growth model can be seen in figure 4.3. The results show that almost all conventional variables reduce economic growth or induce financial crisis, especially, interest rate 'INT', fiat money 'FM' and volatile food 'VF'. Fractional reserve banking 'FRB' and international multiple fiat currency system 'EXCH' still promote economic growth or curb financial crisis. Meanwhile, all Islamic variables promote economic growth or curb financial crisis, especially narrow banking 'NB' and single global currency/gold standard or just money 'GOLD'.

Figure 4.3: IRF Results of GROWTH Model

Forecast Error Variance Decomposition (FEVD) results of Growth model can be seen in figure 4.4. The results show that interest rate 'INT' gives the highest share (24.85%) to reduce growth or induce financial crisis, followed by fiat money 'FM' with 13.49% share, while fractional reserve banking 'FRB' (8.02%), narrow banking 'NB' (5,98%) and single global currency/gold standard or just money 'GOLD' give the highest share to improve growth or curb financial crisis. The results consistent with the tight money condition in Indonesia (with M2/GDP less than 0.4), where loosening monetary policy will improve growth.

TOO BOOLD FM FRB NB VF

# 4.4 Analysis

Overall VECM summary results of Inflation and Growth models can be re written as seen in table 4.7. Five conventional variables, including expected inflation 'XINFL' (Behavior), administered price 'ADM' (Governance), interest rate 'INT' and fiat money 'FM' (Monetary), as well as volatile food 'VF' (Fiscal), induce financial crisis through increased inflation and reduced growth (see table 4.7, left). Meanwhile, two Islamic variables, including 'GOLD' as single global currency (External) and just money (Monetary), as well as profit-and-loss sharing 'PLS' (Monetary), curb financial crisis through reduced inflation and improved growth. Moreover, two conventional variables, multiple currency 'EXCH' (External) and fractional reserve banking 'FRB' (Monetary), as well as one Islamic variable, narrow banking 'NB' (Monetary), on one hand induce financial crisis through increased inflation, on the other hand curb financial crisis through improved growth.

**Table 4.7: Overall VECM Summary Results** 

<b>↑INFLATION</b> and <b>↓GROWTH</b>	个INFLATION and 个GROWTH	<b>↓INFLATION</b> and 个GROWTH
	Conventional	
XINFL; ADM; INT&FM VF	EXCH; FRB	
	Islamic	
	NB	GOLD; PLS

In summary, interest rate 'INT' (Monetary) is the number one root cause of financial crisis with 43.66% share in inducing inflation and 24.85% share in curbing economic growth, followed by administered price 'ADM' (Governance) with 14.41% share in inducing inflation and 5.33% share in curbing economic growth, fiat money 'FM' (Monetary) with 5.54% share in inducing inflation and 13.49% share in curbing economic growth, and volatile food 'VF' (Fiscal) with 5.79% share in inducing inflation and 9.11% share in curbing economic growth. Meanwhile, 'GOLD' as single global gold currency (External) and just money (Monetary) is the number one cure of financial crisis with 8.03% share in curbing inflation and 3.50% share in inducing economic growth, followed by profit-and-loss sharing 'PLS' (Monetary) with 0.02% share in curbing inflation and 0.09% share in inducing economic growth. Narrow banking 'NB' will be more effective if it is combined by gold or gold backed currency.

Gold or gold-backed currency is proven to be the most effective means of stabilizing currency as mentioned by US Congressman Ron Paul in his April 2002 letters to US Treasury Department and the Federal Reserve Bank asking why IMF prohibits gold-backed currencies for its member states (Hosein, 2007). The letter is as follows.

# Dear Sirs:

I am writing regarding Article 4, Section 2b of the International Monetary Fund (IMF)'s Articles of Agreement. As you may be aware, this language prohibits countries who are members of the IMF from linking their currency to gold. Thus, the IMF is forbidding countries suffering from an erratic monetary policy from adopting **the most effective means of stabilizing their currency**. This policy could delay a country's recovery from an economic crisis and retard economic growth, thus furthering economic and political instability.

I would greatly appreciate an explanation from both the Treasury and the Federal Reserve of the reasons the United States has continued to acquiesce in this misguided policy. Please contact Mr. Norman Singleton, my legislative director, if you require any further information regarding this request.

Thank you for your cooperation in this matter.

Ron Paul

U.S. House of Representatives

Note: Neither the Federal Reserve Bank nor the US Treasury Department has so far responded to this request for an explanation.

Source: Hosein (2007).

In other words, to prevent financial crisis, in monetary side, interest system should be replaced by profit-and-loss sharing system, while international multiple fiat currency system should be replaced by single global currency based on gold or gold standard. Meanwhile, in government/fiscal side, there should be no price control on goods and services, but there should be good regulation, supervision and management of goods and services, especially for strategic commodities to stabilize their demands and supplies. Moreover, misbehavior of economic actors, especially speculation should be prohibited.

In Indonesia case, there is an anomaly of broad money supply (M2) which always significantly lowers than GDP (see figure 4.5), where M2/GDP in 2012 only reached 0.40. India has the closest M2/GDP figure, which reached 0.80 in 2012, or twice as much as that of Indonesia, while Thailand and Malaysia have very high M2/GDP of 1.32 (in 2012) and 1.42 (in 2011), respectively. That is why the increase of FRB (which uses M2 as its proxy) will give only 0.08% share in increased inflation, but it will give 8.02% share in increased economic growth. Note that M2/GDP of countries affected by 1998 Asian crisis (such as Thailand, Malaysia and South Korea) has reached their pre-crisis level or higher. This means that there is still plenty of room for Indonesia to stimulate economic growth without inducing inflation (or triggering financial crisis) by gradually increases M2/GDP to its optimal level. FRB will become a problem by inducing inflation and triggering financial crisis when M2 becomes excessive (money supply greater than the money needed by the economy), which is usually when M2/GDP becomes greater than its optimal level.

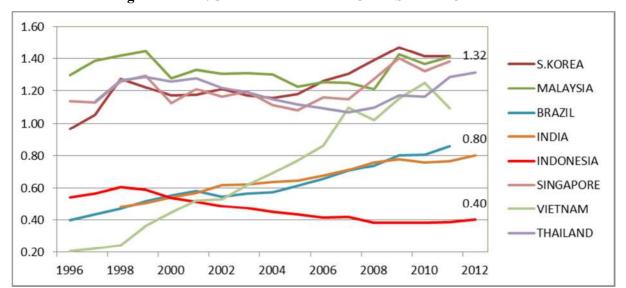

Figure 4.5: M2/GDP of Indonesia and Other Selected Countries

# 5. CONCLUSION AND RECOMMENDATION

# 5.1 Conclusion

- Under Inflation model, all variables induce inflation or cause financial crisis except two Islamic variables, 'PLS' as profit-and-loss sharing (Monetary) and 'GOLD' as single global currency (External) and just money (Monetary), which curb inflation or prevent financial crisis. It means that all conventional variables, namely, interest system 'INT', fiat money system 'FM' and fractional reserve banking system 'FRB' (Monetary), administered price 'ADM' (Governance) that should not be controlled, volatile food 'VF' (Fiscal) due to minimum control, expected inflation 'XINF' (Behavior), and international monetary system with multiple fiat currency 'EXCH' (External), contribute to financial crisis.
- The highest contributor to cause financial crisis through inducing inflation is interest system 'INT' (43.66%), followed by administered price 'ADM' (14.41%), volatile food 'VF' (5.79%) and fiat money system 'FM' (5.54%). The highest contributor to prevent financial crisis through curbing inflation is single global currency and just money 'GOLD' (-8.03%), followed by profit-and-loss sharing 'PLS' (-0.02%).
- Under Growth model, most conventional variables hinder growth or cause financial crisis, including (from the highest to the lowest contributor) interest system 'INT' -28.85% and fiat money system 'FM'-13.49% (Monetary), volatile food 'VF' -9.11% (Fiscal), administered price

- 'ADM' -5.33% (Governance), and expected inflation 'XINF' -0.24% (Behavior). Meanwhile, all Islamic variables prevent financial crisis through stimulating economic growth, namely, narrow banking 'NB' +5.98% and profit-and-loss sharing 'PLS' +0.09% (Monetary), as well as single global currency and just money 'GOLD' +3.50% (External and Monetary).
- Therefore, the real determinants or root causes of financial crisis are structural in unstable monetary system, poor governance, unsustainable fiscal system, misbehavior of economic actors, as well as in external factor. Interest system and fiat money system (Monetary), administered price (Governance), volatile food (Fiscal), as well as expectation (Behavior) are the most dominant variables to cause financial crisis through Inflation and Growth.
- Under Inflation and Growth models, interest system is the prime real determinant or root cause of financial crisis through inducing inflation and curbing economic growth, so that lowering the interest rate will decrease inflation and will induce economic growth, thus it will prevent financial crisis most effectively.
- Under Inflation model, narrow banking system 'NB' still induce inflation (thus, financial crisis), since the proxy used for NB is money use for transaction-M1, which is still represents fiat money and money creation of conventional system. When narrow banking system is combined with gold or gold backed currency, it will be most effective.
- Under Growth model, fractional reserve banking system 'FRB' still stimulates growth (or hinders financial crisis), since money supply needed in the economy-M2 is in shortage with the ratio of M2/GDP is less than 40% and in decreasing trend. Therefore the expansion of money supply will stimulate growth.
- Under Growth model, multiple international currency system 'EXCH' still also stimulates growth (or hinders financial crisis), since under multiple currency system, the depreciation of one country's currency will improve the competitiveness of that country in international trade and finance.

# 5.2 Recommendation

- Structural reforms are needed in monetary system, fiscal system and governance, as well as in international system, which are more fair, just, stable and sustainable. Moreover, behavior of economic actors should be controlled by market conduct regulation and improved by education.
- The share of Islamic finance should be increased, while the share of PLS system in Islamic finance should be increased to improve the stability of financial system in a country adopting dual financial system.
- International monetary system should move towards a just single currency system, which is not a currency of certain country. Gold standard is the most just and stable monetary system.
- In Indonesia case, to lower inflation, and at the same time prevent the CRISIS, interest rate should be lowered up to its optimal level.
- In Indonesia case, to stimulate growth, and at the same time prevent the CRISIS, M2/GDP should be gradually increased up to its optimal level.

# ENHANCING FINANCIAL SYSTEM STABILITY IN INDONESIAN DUAL FINANCIAL SYSTEM

Adinda Ratu Nur Illiyyin<sup>1</sup>

#### ABSTRACT

In a country adopting dual financial system (conventional and Islamic), monetary authority has the responsibility to maintain financial stability and synergy of both systems by stabilizing price level and promoting economic growth. Three main pillars, which differentiate between the Islamic and conventional financial system, are international monetary system, banking system and financial operation system. Conventional financial system adopts fiat money/ multiple fiat currency, fractional reserve banking and interest systems. Meanwhile, Islamic financial system adopts gold money, Islamic narrow banking and profit-and-loss sharing systems. The main objective of this study is to compare the three main pillars of conventional and Islamic financial system in curbing inflation and promoting economic growth. This study applies Vector Error Correction Model (VECM) using Indonesian data. The results show that interest (INT), fiat money (M0) and multiple fiat currency (EXCH) systems in conventional financial system are the main determinants that induce inflation as well as hinder economic growth. INT induces inflation with 38.44% share and hinders economic growth with 71.72% share. The results also show that profit-and-loss sharing (PLS) and Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) systems in Islamic financial system are the main determinants that curb inflation, as well as promote economic growth for GOLD. GOLD curbs inflation with 0.66% share and promote economic growth with 4.07%. Therefore, the share of Islamic financial system with PLS and GOLD should be increased to its optimum level.

**Keywords**: Islamic Financial System, Conventional Financial System, Inflation, Economic Growth, VECM

# 1. INTRODUCTION

# 1.1 Background

Economic growth and price stability are two of the objectives of economic development for every country, so that sustainable economic development and financial stability could be achieved. However, in the past two centuries these conditions have rarely occurred. Instead, financial crises have occurred one after another since the first financial crisis in England 1825. In the past century, financial crisis have occurred after the gold standard regime in 1915 collapsed. The crisis started with depression in Japan (1920) and followed by other countries such as Germany (1922), Austria (1931), France (1944), Hungary (1944) and Nigeria (1945). The return to gold standard under Bretton Woods Agreements (BWA) has made the world economy developed and international economic stability maintained (Davies, 1996).

After the breakdown of BWA in 1971, international economic stability has gone, while financial crises have reemerged. Leaven and Valencia (2012) recorded that there were 431 episodes of financial crises (147 banking crisis, currency crisis and sovereign debt crisis) in the period of 1970-2011. According to Lietaer, *et al.* (2009), these financial crises happened not because of cyclical or managerial failures, but

<sup>1</sup> Adinda Ratu is a Research Assistant at Center for Central Banking Research and Education, Bank Indonesia. adindaratu@hotmail.com

because of structural failures in various countries under very different regulatory systems as well as at different stages of economic development.

Indonesia has also hit by multi-dimensional crisis in 1997-1998. In this multi-dimensional crisis, inflation has increased up to 64% and Rupiah value has jumped to Rp11000/US\$ from Rp2600/US\$, while economic growth has contracted to 13.1% (Ascarya, 2011). All sectors in the economy have contracted significantly. Moreover, currency depreciation had made public debt to reach US\$60 billion in November 1997, which imposed severe strains on the government's budget. Indonesia has suffered the most with fiscal cost reached 56.8% of GDP, while output loss reached 67.9% of GDP (Laeven and Valencia, 2008). In the middle of multi-dimensional chaos, Bank Muamalat Indonesia, the only Islamic bank existed at that time has survived from this crisis. Islamic finance has proven to be more resilient to financial crisis than that of conventional finance. From this experience, Indonesia reformed its financial system and adopted dual financial system, where conventional financial system exists side by side with Islamic financial system, in 1999.

In a country adopting dual financial system, the authority has the responsibility to maintain financial stability and synergy of both systems by stabilizing price level and promote economic growth. Therefore, there should be a study to investigate the impact of conventional and Islamic financial systems in an economy under dual financial system, such as Indonesia, to economic growth and financial stability.

# 1.2 Objective

There are three main distinct characteristic pillars of Islamic and conventional financial systems. These three main pillars are money system, banking system, and financial operation system. The objective of this study is to compare the three main pillars in curbing inflation and promoting economic growth.

# 1.3 Data and Methodology

The data used in this study is secondary data of monthly time series obtained from Indonesian Economic and Finance Statistics of Bank Indonesia (SEKI-BI), Shariah Banking Statistics of Bank Indonesia (SPS-BI), as well as PLS returns from major full-fledged Islamic for the period of January 2004 to June 2012. While, the method applied is Vector Auto Regression (VAR) followed by Vector Error Correction Model (VECM).

# 2. LITERATURE REVIEW

There are various schools of thought in economic system. The two contrasting economic systems are conventional economic system and Islamic economic system. These two systems have different paradigms. The three main differences between these two systems lay in the three main pillars, namely, money system/ multiple fiat currency, banking system and financial operation system. The comparison between conventional financial system and Islamic financial system can be read in Table 1.1.

**Table 1.1: Comparisons of Conventional and Islamic Financial Systems** 

	Islamic	Conventional		
Money System/ International Monetary System	Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD)	Fiat Money/ Multiple Fiat Currency		
Banking System	Narrow Banking System	Fractional Reserve Banking System		
Financial Operation System	Profit-and-Loss Sharing System (PLS)	Interest System

# 2.1 Fiat Money/Multiple Fiat Currency and Gold (or Gold-backed) Money and/or Single Gold Standard

Fiat money is something (usually in the form of paper or coin) that is acknowledged as a legal medium of exchange in a certain jurisdiction or state, even though it does not carry a value or back up equivalent to its nominal value. The issuance of fiat money creates a new purchasing power out of nothing. Therefore, fiat money gives unfair benefit, usually known as *seigniorage*, to the money issuer authority. Within economic system where fiat money is used, the institution given the authority to issue money (usually central bank, monetary authority, treasury department, or other appointed institution) gains this *seigniorage* benefit. Consequently, aggregate purchasing power of money will decrease (in the form of inflation) equivalent to the percentage of new money added (issued) in the economy. Money in Islam is either full bodied money or fully backed money. In this new money issuance, there is no new purchasing power created (no *seigniorage*). Furthermore, in the printing process of new money, the cost of printing is the government responsibility, so that there is no party suffers financial loss (Ascarya, 2007). The value of a currency is relatively stable when it is backed by gold. But, when a currency has no more back up from gold, its value depreciates quickly.

Current international monetary system is based on multiple fiat money of every country in the world without any back-up of real assets. Therefore, each country gains *seigniorage* profits of printing the national currency on the burden of all people as money holders in the form of depleting purchasing power. Super power country gains a huge *seigniorage*, since its currency is used as international currency. This condition makes persistent inflation and unfairness, especially for small countries with un-convertible currency. The more a currency is used as international payment, the more a country gains *seigniorage* and country with un-convertible currency can only enjoy *seigniorage* in national level.

Meera and Larbani (2006) state that fiat money system, together with fractional reserve banking system, was argued to redistribute ownership of assets in the economy unjustly and indiscriminatingly. The wealth-distributing mechanism was argued to be similar to theft while taxing the whole economy in the form of inflation. Indeed, fiat money system was argued to be unjust, unstable and unsustainable in the long-run.

Meanwhile, money in Islamic financial system is either full bodied money (money, in the form of gold or silver, which has intrinsic value equivalent to its nominal value) or fully backed money (money, usually in the form of paper or coin), which its nominal value is backed by 100 percent gold equivalent stored by the issuing authority. In this new money issuance, there is no new purchasing power created (no *seigniorage*), so that there is no *riba* involved. Furthermore, in the printing process of new money, the cost of printing is the government responsibility, so that there is no party suffers financial loss.

In the Islamic financial system where Islamic money is used, the institution given the authority to issue money does not gain *seigniorage* benefit; even it has to take the responsibility of printing costs. The amount of money added (issued) to the economy is aligned with the growth of value added of the economy, so that Islamic economic in general does not have inflationary nature and tends to be stable. Therefore, the value of dinar (in gold) and dirham (in silver) have always been relatively stable.

# 2.2 Fractional Reserve Banking System and Narrow Banking System

Fractional reserve banking system means that a bank is required to hold reserve in only a certain percentage of deposits mobilized. With this system, bank has the ability to create another kind of fiat money, i.e. bank money (demand deposits, electronic money), through multiple deposit creation. In this case, money is created when a bank extends loan. For example, if the required minimum reserve is 10%, Rp1 million deposit, first, will be recorded as 'Deposit' in liability side and cash 'Reserve' in asset side. Second, since reserve requirement is only 10%, the bank can extend loan as much as Rp 9 million, so that the total deposit becomes Rp10 million. This transaction illustrated below (Ascarya, 2009).

# BALANCE SHEET 1 Reserve 1 mn Deposit 1 mn BALANCE SHEET 2 1 mn Deposit 1 mn Loan 9 mn Deposit (Loan) 9 mn

The formula of multiple deposit creation can be written as follows (Meera, 2004):

# $D = 1/r \times R$

Where, D = change in total deposit; r = minimum reserve ratio (e.g., 10%); and R = change in reserve (e.g., new deposit Rp1 million). In this example, deposit of Rp1 million can create new money (deposit) nine times of its original value, Rp9 million, so that the total deposit becomes Rp10 million. Therefore, fractional reserve banking system also gives unfair *seigniorage* profit to the bank which authorized to create new bank money. Consequently, the creation of bank money will also make the aggregate purchasing power of money to decrease (in the form of inflation) equivalent to the percentage of new bank money created by bank. The party who suffer a loss with the creation of new bank money is, again, the whole population who holds this money.

Narrow banking system does not give the opportunity for bank to create new bank money, since narrow banking system has to be deposited back to central bank. A bank can only extend loan as much as the original deposit. Therefore, there will be no *seigniorage*, there is no inflationary effect, and there is no party suffered any loss. For example, Rp1 million deposits, first, will be recorded as 'Deposit' in liability side and cash 'Reserve' in asset side. Second, since reserve requirement is 100%, the bank can only extend loan as much as Rp1 million, so that in the asset side, the 'Reserve" becomes 'Loan' of Rp1 million. This transaction can be illustrated below (Ascarya, 2009).

	BALAN	CE SHEET 1	
Reserve	1 mn	Deposit	1 mn
	BALAN	ICE SHEET 2	_
Loan	1 mn	Deposit	1 mn

Money creation through fractional reserve banking system has made the 20th century one of the highest inflationary centuries on the historical record; inflation is obviously not a problem specific to the process of money issuance by governments (Lietaer et al., 2008).

# 2.3 Interest and Profit and Loss Sharing

Interest system is a risk shifting so that there is always unfairness. When all market players don't want to share the risk, someone will become a victim of the system. It also means interest rate is basically provides guaranteed profit for one party against unpredictable future events. Interest rate will force the market to give positive return while real productivity could be higher or lower than the interest rate, so that the business may gain profits or suffer losses.

The emergence and expansion of interest system with money as a commodity and rate of interest as its price, new financial markets emerged in parallel with the main market of goods and services in the real

sector, such as capital market, money market, bond market and derivatives market. Since financial markets offer fixed and predetermined rate of return, capital that originally is invested in the real sector, flows swiftly to financial sector (which cannot produce real value added), so that the amount of capital concentrated in financial sector has exceed tens of times to that in the real sector (which can produce real value added). Financial sector, which is originally serves as supporting entity to the real sector, has developed as a separate sector that has its own products and prices (Ascarya 2009).

Sakti (2007) argues that the economy is inevitably dichotomized into two main activities, namely real activity and monetary activity. Interest rate should reflect productivity level of the capital but that never happens and the consequent of this misallocation of resources has made lack of capital to grow in the real sector. Because of that there is always a gap between interest rate and real productivity that leads to market distortion. When this gap exited, the market will react negatively. Then, there is always a bubble in economic growth. This bubble economy is like a time bomb that will explode at some point in the future in the form of crisis.

In conventional economy, money as commodity, and the permissibility of speculation cause the creation of money (paper money and bank money) and concentration of money in monetary sector to seek higher return with less or no risk. Consequently, money or investment that should be channeled to the real sector for productive purposes mostly flows to the monetary sector and impedes growth, and even reduces the size of real sector. The creation of money without value addition will cause inflation. In the end, the goal of economic growth will be impeded.

Interest System

Money Creation & Concentration

Real Sector Contraction

Figure 2.1 The Implication of Interest to Economy

Source: Sakti (2007)

The alternative of interest system in Islamic financial system is profit-and-lost sharing (PLS) system. The *zakah* system, PLS system and the prohibition of speculation will accelerate investment activities to the real sector for productive purposes. This will ensure the distribution of wealth and income as well as the growth in the real sector. The improvement in productivity and opportunity to work and to do business finally will accelerate economic growth, and therefore, social wellbeing will be achieved (read figure 2.2).

# 2.4 Previous Studies

The studies on determinants of inflation and growth are plenty under conventional perspective, but not so many under Islamic perspective. Nonetheless, there are still some Islamic perspective studies on determinants of inflation and growth. The studies under conventional perspective include, Yanuarti and Hutabarat (2006), Husman (2007), Suselo *et al* (2008), Tabi (2011), Barro (1997) and Motley (1994). The studies under Islamic perspective include Ascarya (2009), Rab (2010), Meera and Larbani (2006), Ibrahim (2006). Moreover, Darrat (2000), Ascarya (2011) and Ryandono (2006) cover these subjects under conventional as well as Islamic perspectives.

In empirical studies, Ryandono (2006) compares conventional interest system and Islamic PLS system. He concludes that interest system has negative relationship with the economy and causes money turns over becomes ineffective and inefficient at macro and micro levels, which subsequently cause instability in the economy. This finding is in line with Ascarya (2011) who analyses how to eradicate inflation under dual monetary system, which's concludes that the highest contributor to induce inflation is Interest system. Moreover Darrat (2000), which takes Iran and Pakistan for his case study in determining the stability of demand for money under interest system as well as interest-free system, finds that interest-free system a) improves overall macroeconomic performance; b) leads to a smoother behavior of money velocity; c) provides policymakers with a more controllable monetary environment; and d) strengthens the linkage between policy instruments and the main policy goal of price stability. Moreover, in his descriptive study, Rab (2010) believes that system of interest cannot be sustained without monetary manipulation and it is in gross conflict with nature as its efficient working require rate of return of economic activities to be nearly equal while natural laws ensure that it is distributed over a wide range, which leads to unemployment as well as inefficient allocation of resources. Furthermore, it causes gross economic imbalance.

Meera and Larbani (2006) state that fiat money system, together with fractional reserve banking system, was argued to redistribute ownership of assets in the economy unjustly and indiscriminatingly. The wealth-distributing mechanism was argued to be similar to theft while taxing the whole economy in the form of inflation. Indeed, fiat money system was argued to be unjust, unstable and unsustainable in the long-run. Rab (2010) states that currency is the measure of wealth that market uses as the scale in the process of determination of prices, which constitutes measurement of wealth. It is implied that error in measurement has to be corrected and it means that we must correct our accounting. This manipulation of currency is extremely harmful for the economy in the long run and it is the root cause of most of the major economic, social and political problems.

In the empirical study, Ascarya (2011) finds that the root causes of inflation are fiat money, price control and fractional reserve banking system. Meanwhile, Ibrahim (2006) finds three evidences, namely: 1) the results portray clearly an important causal role of money supply for other macroeconomic variables; 2) expansion in money supply is inflationary; and 3) money supply – interest rate and money supply – stock price interactions are destabilizing. Moreover, Yanuarti and Hutabarat (2006), Husman (2007) and Ascarya (2009; 2011; 2012) find exchange rate (i.e., multiple fiat money system) has proven to be one of the main contributors to induce inflation in several countries, including Indonesia, while exchange rate is not only contribute to induce inflation but also hinder economy growth. Suselo, *et al.* (2008) also finds the depreciation of rupiah and volatility of exchange rate will hinder economy growth in Indonesia.

Meera and Larbani (2003) argue that using gold instead of national currencies in multiple payment arrangement (MPA) eliminates exchange rate risk while allowing countries without any international reserves to trade freely. Using gold will greatly reduce, if not eliminating, speculative and arbitrage activities among the currencies of the participating countries. The MPA is more efficient and requires a much lower amount of gold for settling the trade balances. The overall benefits are thus monetary stability, justice, increased trade and economic prosperity with minimum international reserves, i.e. things that are very much at stake in the current highly 'blown-up' vulnerable global fiat monetary system. There are also some proves from Ascarya (2009; 2011; 2012), where he finds that the highest contributor to prevent Inflation is gold standard and Profit-and-loss sharing (PLS). To prevent crisis effectively Ascarya suggests that lower interest rate will decrease inflation, while international

monetary system should move towards a just single (Gold) currency system where Gold standard is the most just and stable monetary system. M. Yusuf, *et al.* (2002) argue that if Malaysia implement the Gold Dinar side by side with Ringgit Malaysia, it is possible the that speculators will change from speculating on currencies toward on gold prices to obtain profit. However, the impact of manipulation currencies toward one economy could be reduced because of the gold does not inflate in value as it is a commodity and has an intrinsic value.

Ryandono (2006) finds that interest system can impede investment and economic growth, so that it is difficult to synchronize monetary sector and real sector, since the two sides have different interests and objectives in the economy which is difficult to settle. In contrast, PLS system has positive relationship with the economy and causes money turnover becomes effective and efficient at macro and micro levels, and subsequently will cause stability in the economy. PLS system can stimulate investment and economic growth, so that it will synchronize monetary sector and real sector, since the two sides have similar interests and objectives in the economy.

There are a number of reasons why persistent inflation might tend to reduce economic growth. Motley (1994) finds that inflation may affect saving and investment decisions, reducing the proportion of GDP devoted to investment and so causing the economy to accumulate less human or physical capital. For example, when inflation is high, it is usually more volatile, so that it is harder to forecast. This condition may make it more difficult to deduce the real returns on investments from available market information and may cause savers and investors to be less willing to make long-term nominal contracts or to invest in long-term projects. The resulting reduced stocks of productive capital may, in turn, imply lower levels of future GDP. In addition, Barro (1997) also finds that growth rate is enhanced by lowering inflation and government consumption. Meanwhile, Tabi (2011) analyzes Cameroon data from 1960-2007 on inflation and growth. The results show that money in circulation causes growth and growth causes inflation.

# 3. METHODOLOGY

# 3.1 Type and Source of Data

The data used in this study is secondary data of monthly time series obtained from Indonesian Economic and Finance Statistics of Bank Indonesia (SEKI-BI), KITCO, BPS, Sharia Banking Statistics of Bank Indonesia (SPS-BI), as well as PLS returns from major full-fledged Islamic for the period of January 2004 to June 2012.

# 3.2 Variable and Operational Definition

The variables used in this study and their operational definitions are as follows.

- 1. Inflation (INF) is the index of monthly CPI inflation obtained from SEKI-BI.
- 2. Growth (GRWTH) is the index of monthly Industrial Production Index, data obtained from BPS.
- 3. Interest System (INT) is the monthly 1-month working capital loan rate of conventional banks obtained from SEKI-BI.
- 4. Profit-and-Loss Sharing System (PLS) is the returns of investment from Islamic bank represented by equivalent rate from the actual returns of *Mudharabah* time deposit or investment obtained from full-fledged Islamic banks and sharia Banking Statistics of Bank Indonesia (SPS-BI).
- 5. Multiple Fiat Currency (EXCH) is the nominal Rupiah exchange rate to the US Dollar obtained from SEKI-BI.
- 6. Fiat money (M0) is equilibrium intrinsic proximate by the monthly M0, data obtained from SEKI-BI.

- 7. Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) is gold price index obtained data obtained from KITCO.
- 8. Fractional Reserve Banking System (M2) is the monthly M2, data obtained from SEKI-BI.

#### 3.3 Method of Estimation

This study will apply Vector Auto Regression (VAR)/Vector Error Correction Model (VECM) to determine the dynamics of Islamic bank financing channel. VAR is an *n*-equation with *n*-endogenous variable, where each variable is explained by its own lag, as well as current and past values of other endogenous variables in the model. Therefore, in the context of modern econometrics, VAR is considered as multivariate time series that treats all variables endogenous, since there is no confidence that a variable is actually exogenous, and VAR allows the data to tell what actually happen (Ascarya, 2010). Sims (1980) argue that if there is true simultaneity among a set of variables, they should all be treated on an equal footing and there should not be any a priori distinction between endogenous and exogenous variables. The general VAR model mathematically can be represented as follows.

$$x_{t} = \mu_{t} + \sum_{i=1}^{k} A_{i} + X_{t-1} + \varepsilon_{t}$$
(3.1)

Where xt is a vector of endogenous variables with  $(n \times 1)$  dimension,  $\mu t$  is a vector of exogenous variables, including constant (intercept) and trend, Ai is coefficient matrix with  $(n \times n)$  dimension, and  $\varepsilon t$  is a vector of residuals. In a simple bivariate system yt and zt, yt is affected by current and past value of zt, while zt is affected by current and past value of yt. When data level is not stationary and there is a cointegration between variables, the dynamic relationships of cointegrated system can be determined by VECM. VECM will also overcome the drawback of first difference VAR and regain the long-term relationships among variables. The trick is to reincorporate original equation in level into the new equation as follows.

$$\Delta x_{t-1} = \mu_t + \prod x_{t-1} + \sum_{i=1}^{k-1} \Gamma_i \Delta x_{t-i} + \varepsilon_t$$
(3.2)

Where,  $\Pi$  and  $\Gamma$  are functions of Ai. The matrix  $\Pi$  can be decomposed into two matrices  $\lambda$  and  $\beta$  with  $(n \times r)$  dimension.  $\Pi = \lambda \beta T$ , where  $\lambda$  is called an adjustment matrix and  $\beta$  is a cointegration vector. Moreover, r is a cointegration rank.

VAR/VECM analysis process can be read on figure 3.1. After basic data is ready, data is transformed into natural logarithm form (*ln*), except for interest rates and the PLS return, to obtain consistent and valid results. The first test conducted was the unit root test, to find out whether data is stationary or still contain trends. If the data are stationary at levels, then VAR can be conducted at level. VAR level can estimate the long-term relationship between variables. If data are not stationary at level, then the data should be reduced at the first level (first difference), which reflects the difference or changes in data. If the data are stationary at first difference, then the data will be tested whether there is cointegration between variables. If there is no cointegration between variables, then VAR can only be done at the first difference, and it can only estimate the short-term relationship between variables. Innovation accounting would not be meaningful for the long-term relationship between variables. VECM can estimate the short-term and long term relationship between variables. Innovation accounting for the level VAR and VECM will be meaningful for the long-term relationships.

Figure 3.1: VAR Analysis Process

Source: Ascarya, 2010

Impulse response function analysis is performed to see the response of an endogenous variable to the shocks of other variables in the model. Decomposition variance analysis is also carried out to see the relative contribution of a variable in explaining the variability of the endogenous variable. The software used in this research is *Eviews*.

The advantages of VAR method compared to other econometric methods, among others, are (Gujarati, 2004 and Enders, 2004): 1) VAR method is freed from various economic theory restrictions that often exists, such as spurious variable endogeneity and exogeneity; 2) VAR develops model simultaneously within complex multivariate system, so that it can capture all relationships among variables in the equation; 3) Multivariate VAR test can avoid biased parameters due to exclusion of relevant variables; 4) VAR test can detect the relationships among variables within equation system by treating all variables endogenous; 5) VAR method is simple where one does not have to worry about determining which variables are endogenous and which ones exogenous, since VAR treats all variables endogenous; 6) VAR estimation is simple where the usual OLS method can be applied to each equation separately; and 7) The estimate forecasts obtained are in many cases better than those obtained from other more complex simultaneous-equation models.

Meanwhile, the disadvantages and problems of VAR model, according to Gujarati (2004), are: 1) VAR model is a-theoretic, since it uses less prior information, unlike simultaneous-equation model where exclusion and inclusion of certain variables plays a crucial role in the identification of the model; 2) VAR model is less suited for policy analysis, due to its emphasis on forecasting; 3) Choosing the appropriate lag length is the biggest practical challenge in VAR modeling, especially when there are too many variables with long lag-length, so that there will be too many parameters that will consume a lot of degree of freedom and require a large sample size; 4) All variables should be (jointly) stationary. If not, all data should be transformed appropriately, e.g. by first-differencing. Long-term relationships will be lost in the transformation of data level needed in the analysis; and 5) Impulse Response function (IRF) is the centerpiece of VAR analysis, which has been questioned by researchers.

# 3.4 VECM Model

The VECM model of this study follows the general model of VECM as expressed in equation 3.2, which will be divided into two models. The first model uses inflation (which will be represented by consumer price index, CPI) as final objective, while the second model uses growth (which will be

represented by industrial production index, IPI) as final objective. These simplified models can be represented, as follows.

#### Inflation Model:

 $x_k = \{\text{Inflation (INF), Financial Opt. System, Money System/International Monetary System, Banking System}\}$ 

#### Growth Model:

 $x_k = \{Growth (GRWTH), Financial Opt. System, Money System/International Monetary System, Banking System\}$ 

The proxies of endogenous variables mentioned above, conventional as well as Islamic, can be read in the following table (Table 3.1).

Variable Financial Opt. Money System/ **Banking System** System International **Monetary System** Interest System Fiat money (MO)/ Fractional Conventional (INT) Multiple Fiat Reserve Banking Currency System System (M2) -Inflation (INF) (EXCH) -Growth Profit-and-Loss Gold (or Gold-**Islamic** Narrow Banking (GRWTH) Sharing (PLS) backed) Money System (-) and/or Single Gold Standard (GOLD)

**Table 3.1: Proxies of Endogenous Variables** 

Narrow banking system variable will not be included in the model, because once fractional reserve banking system is replaced by narrow banking system, there is no more money creation from banking system.

Therefore, the complete inflation and growth models can be expressed as follows.

$$INF = f(INT, M2, EXCH, PLS, M0, GOLD)$$
(3.3)

and

$$GRWTH = f (INT, M2, EXCH, PLS, M0, GOLD)$$
(3.4)

#### 4. RESULTS AND ANALYSIS

Required preliminary tests which should be carried out in VAR/VECM method include unit root test, stability test, optimum lag test, and cointegration test.

# **4.1 Stationary Test**

Stationary test or unit root test is intended to identify the state of the data, whether it is stationary or non-stationary (or, whether it is stationary in level or stationary in first difference). In other words, stationary test is used to identify the variable's order of integration. When unit root exists, it means that the data is not stationary and has trend component in it, which should be removed to produce un-spurious results. Augmented Dickey-Fuller or ADF test and Phillips-Perron or PP test are used

simultaneously to test the existence of unit root or the stationary of the data. Using 5% McKinnon critical value, all variables are stationary at first difference.

## 4.2 Selection of Optimal Lag

Optimum lag length should be used in the VAR system to overcome the problem of autocorrelation. Optimum lag test will determine lag length based on *Akaike Information Criterion* (AIC), *Schwarz Information Criterion* (SC) or *Hannan-Quinn Information Criterion* (HQ). Every models have two possible optimum lags, namely 2 (two), if it based on AIC, Moreover, Every models with lag 2 (two) also produce more realistic results.

## **4.3** Cointegration Test

Stationary tests have concluded that all variables are stationary in first difference or I (1). The use of level data to obtain long-run relationships (using VECM method) is only possible when there is at least one cointegration between variables. Cointegration test will determine the number of equation systems that can explain long-run relationship based on trace statistics. Trace test of all models indicates cointegrating equations. Therefore, VECM method can be carried out.

# **4.4 Stability Test**

Stability test is aimed to identify the stability of VAR system, so that the results of Impulse Response Function (IRF) and Forecast Error Variance Decomposition (FEVD) are valid. The stability test based on modulus or unit-circle will be applied to determine maximum lag length of the VAR system which is still stable within its unit-circle or with modulus less than one. The result of stability test for inflation model shows that the VAR system is stable up to lag 10 with modulus 0.196742-0.989835. Similarly, the result of stability test for growth model shows that the VAR system is also stable up to lag 10 with modulus 0.259181-0.999761.

#### 4.5 Results

The results of VECM including *Impulse Response Function* (IRF) and *Forecast Error Variance Decomposition* (FEVD) will be discussed in this section.

# a. Impulse Response Function

Impulse Response Function (IRF) results for Inflation model (see figure 4.1) show that conventional variables, namely interest system (INT), fractional reserve banking system (M2), fiat money (M0) and multiple fiat currency (EXCH) give positive and permanent impact to inflation in the long run. In other words, all conventional variables induce inflation. Meanwhile, two Islamic variables, namely profit-and-loss sharing system (PLS) and Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) give negative and permanent impact or curb inflation in the long run.

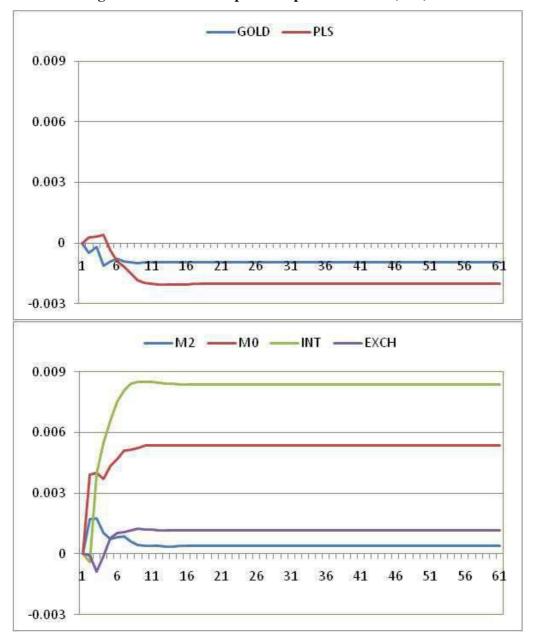

Figure 4.1: Result of Impulse Response Function (IRF) for Inflation Model

Results of *Impulse Response Function* (IRF) for Growth model (see figure 4.2) show that two conventional variables, namely interest system (INT), multiple fiat currency (EXCH) and fiat money (M0) give negative and permanent impact or hinder economic growth, while fractional reserve banking system (M2) gives positive and permanent impact or promote economic growth in the long run. Meanwhile, one Islamic variable, namely Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) gives the biggest positive and permanent impact or promote economic growth, while two Islamic variables, namely, profit-and-loss sharing system (PLS) give diminutive negative and permanent impact to economic growth, in the long run.

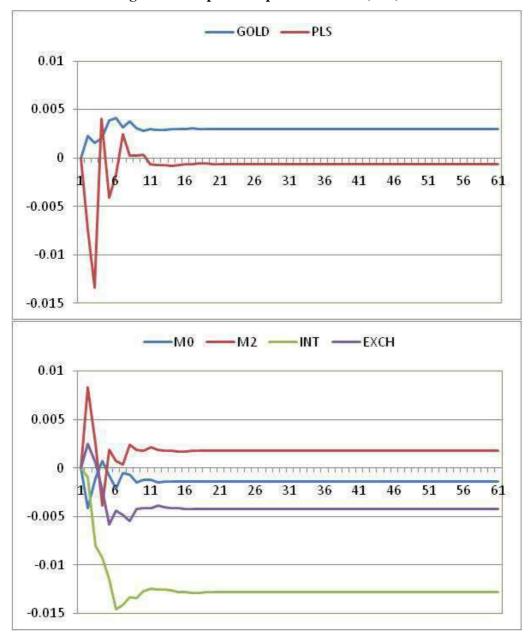

Figure 4.2: Impulse Response Function (IRF) for Growth Model

# **Forecast Error Variance Decomposition**

Results of *Forecast Error Variance Decomposition* (FEVD) for inflation model (see figure 4.3) show that the shares of the conventional variables to the variation of inflation are 0.16% for fractional reserve banking system (M2), 38.44% for interest system (INT), 15.69% for fiat money (M0), and 0.72% for multiple fiat currency (EXCH). Note that all of these conventional variables induce inflation. Meanwhile, the shares Islamic variables to the variation of inflation are 2.11% for profit-and-loss sharing (PLS) and 0.66% for Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD). Note that all of these Islamic variables curb inflation.

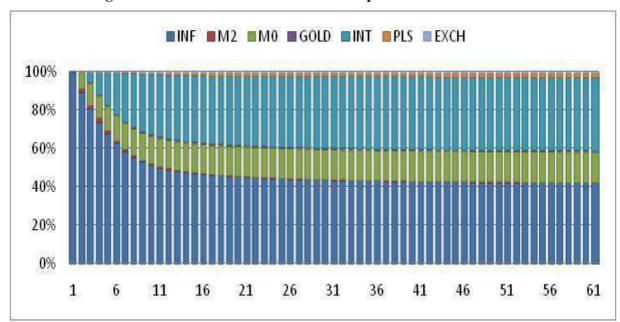

Figure 4.3: Forecast Error Variance Decomposition for Inflation model

Result of *Forecast Error Variance Decomposition Inflation* (FEVD) for Growth model (see figure 4.4) show that the shares of conventional variables to the variation of growth are 2.01% for fractional reserve banking system (M2), 71.72% for interest system (INT), for 0.96% for fiat money (M0), and 7.86% for multiple fiat currency (EXCH). Note that all of these conventional variables hinder growth, except fractional reserve banking system (M2). Meanwhile, the shares of Islamic variables to the variation of growth are 2.22% for profit-and-loss sharing (PLS) and 4.07% for Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD). Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) promotes economic growth, while profit-and-loss sharing (PLS) marginally hinder economic growth.

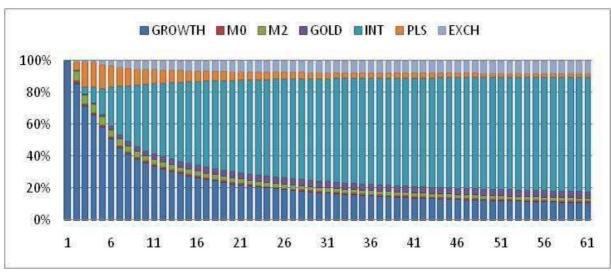

Figure 4.4: Forecast Error Variance Decomposition for Growth Model

#### 4.6 Analysis

#### 4.6.1 Inflation Model

Interest system in conventional financial system induces inflation with 38.44% share, while its counterpart, PLS system in Islamic financial system, curbs inflation with 2.11% share. These results inline with the prohibition of riba (usury or interest) in Islamic economics, which could damage the economy with high inflation and price increase overtime. In a country adopting dual financial system, where interest system operates side by side with PLS system, the objective of price stability and low inflation could be achieved by increasing the share of PLS system or reducing the share of interest system in the economy. Fiat money (M0) and multiple fiat currency (EXCH) in conventional financial system induces inflation with 15.69% and 0.72% share, while its counterpart Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) in Islamic financial system, curbs inflation with 0.66% share. Although these figures are small, they are inline with Islamic economics, which suggest the adoption of gold or gold backed currency system.

Fractional reserve banking system in conventional financial system creates new money which eventually will induce inflation while narrow banking system in Islamic financial system does not create new money, so that it will not induce inflation. The result shows that fractional reserve banking system (M2) induces inflation with 0.16% share.

#### 4.6.2 Growth Model

Interest system in conventional financial system hinders economic growth with 71.72% share, while its counterpart, PLS system in Islamic financial system, only slightly hinders growth with 2.22% share. These result inline with the prohibition of riba (usury or interest) in Islamic economics, where *riba* could damage the economy with misallocation of resources, asset flows to financial sector (not to real sector), and decoupling of financial and real sector. As a resulted there is always a gap between interest rate and real productivity that leads to market distortion. In a country adopting dual financial system, where interest system operates side by side with PLS system, the objective of economic growth could be achieved by reducing the share of interest system or increasing PLS system in the economy.

Multiple fiat currency (EXCH) and fiat money (M0) in conventional financial system hinders economic growth with 7.86% and 0.96% share. While its counterpart, Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) in Islamic financial system promotes growth with 4.07% share. Although these figures are small, they are inline with Islamic economics, which suggest the adoption of gold or backed money system. The result shows anomalies that fractional reserve banking system (M2) promote economic growth with 2.01% share. The anomaly could be resulted from very tight money supply condition where M2/GDP in 2012 has only reached 40% (see figure 4.5) this means that when M2 is raise under tight money supply, it will promote growth until it reached sufficient money supply (M2  $\approx$  GDP).

GDP M2 M2/GDP 9000 46% 45% 7500 41% 43% 42% 41% 40% 6000 38% 36% 4500 31% 3000 26% 1500 21% O 16% 2004 2005 2006 2007 2008 2009 2010 2011 2012

Figure 4.5: M2/GDP Indonesia 2004-2012 (Rp. Trillion)

## 4.6.3 Overall Analysis

**Table Summary Result** 

INFL↑ GRWTH↓	INFL↑ GRWTH↑	INFL↓ GRWTH↓	INFL↓ GRWTH↑				
Conventional							
INT; EXCH; M0	M2	-	-				
Islamic							
-	-	PLS	GOLD				

From result shows interest system (INT) is the most inducing inflation with 38.44% share and the most curbing economic growth with 71.72% share, followed by multiple fiat currency (EXCH) with 0.724% share in inducing inflation and 7.86% share in curbing economic growth, fiat money (M0) with 15.69% share in inducing inflation and 0.96% in curbing economic growth. Meanwhile, Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) is the only one variable that provides positive impact to economy with 0.66% share in curbing inflation and 4.07% in promoting economy growth. Profit-and-loss sharing system (PLS) is the biggest variable that curbing inflation with 2.11% share and also slightly (negligibly) curbing economic growth with 2.22% share. Fractional reserve banking system (M2) induces inflation with 0.16% share and promotes economic growth with 2.01% share.

The results show anomalies that fractional reserve banking system (M2) in conventional financial system only induce slightly inflation with 0.16% share and promote economic growth with 2.01% share. The anomaly could be resulted from very tight money supply condition where M2/GDP in 2012 has only reached 40% (see figure 4.5). This means that when M2 is raise under money tight supply, it will promote growth until it reached sufficient money supply (M2  $\approx$  GDP).

#### 5. CONCLUSION AND RECOMMENDATION

#### **5.1 Conclusion**

The result shows that in conventional financial system interest rate is the main source of inflation with the share of 38.44%, while fiat money, fractional reserve banking system and multiple fiat currency give trivial share to inflation with the share of 15.69%, 0.16% and 0.72%, respectively. Meanwhile, under Islamic financial system, PLS system and Gold (or Gold-backed) Money and/or Single Gold Standard (GOLD) are the main cure for inflation, where they curb inflation with the share of 2.11% and 0.66%, respectively. The results also show that in conventional financial system, interest system, multiple fiat currency and fiat money are the hindrance of economic growth with the share of 71.72%, 7.86%, and 0.69%, respectively. Conversely, fractional reserve banking system promotes economic growth with the share of 2.01%. Meanwhile, under Islamic financial system, Gold (or Gold-backed) Money and/or Single Gold Standard promotes economic growth with the share of 4.07%. Conversely, PLS system slightly hinders economic growth with the share of only 2.22%. To curb inflation and promote economic growth in dual financial system, such as Pakistan, Malaysia and Indonesia can be achieved by increasing the share of PLS system. If interest system is replaced by PLS system, inflation could be decreased by 40.33%, while economic growth could be increased by 69.50%.

The results show anomalies, where fractional reserve banking system in conventional financial system only induces inflation slightly with only 0.16% share and promotes economic growth with 2.01% share. The anomaly could be resulted from very tight money supply condition where M2/GDP in 2012 has only reached 40% (see figure 4.5). This means that when M2 is raised under tight money supply, it will promote growth until it reached sufficient money supply (M2  $\approx$  GDP).

#### 5.2 Recommendation

Under dual financial system in Indonesia, to minimize the negative impact of inflation and promote growth can be achieved by returning to gold standard and increasing the share of PLS system. It is sound difficult, but it is not impossible to be implemented gradually. The suggestion for government, central bank and Financial Service Authority (FSA) to minimize the negative impact of inflation, promote growth and enhance the stability of the financial system are as follows.

- The government should have political will and courage to gradually and systematically return to gold standard for a better economy;
- Increase central bank gold reserves;
- The government should ensure people freedom to choose a completely different fair currency;
- Implement gold payment system (including e-gold payment);
- Implement multilateral payment arrangements in gold with other country;
- Convert state owned conventional bank to state owned Islamic bank;
- Develop gold based Islamic financial products, such as gold account;
- Encourage people to save in gold and open two account (fiat money account and gold account)
- State owned enterprises should use Islamic finance for part of their financial activities;
- Muslim civil servants should have account in Islamic bank;
- Islamic businesses and organizations should use Islamic finance for their financial activities;
- Conduct research to develop Islamic financial system

# INSTRUMENTS FOR MEETING CAPITAL ADEQUACY REQUIREMENTS OF ADDITIONAL TIER 1 AND TIER 2 UNDER BASEL III: A SHARI'AH PERSPECTIVE

Beebee Salma Sairally<sup>1</sup> Marjan Muhammad<sup>2</sup> Madaa Munjid Mustafa<sup>3</sup>

# **ABSTRACT**

Basel III has reformed regulatory capital requirements for banking institutions in order to further strengthen the banking sector's resilience, by increasing the minimum capital levels to be maintained by banks as well as redefining the criteria for qualifying regulatory capital instruments. Inevitably, Basel III regulations have an impact on Islamic banking institutions (IBIs). The main concern is whether the Basel III capital instruments are acceptable from the Shari'ah perspective. This research thus compares the qualifying AT1 and T2 capital instruments under Basel III. Furthermore, it examines Shari'ah issues related to subordination, arising in both equity-based and exchange-based contracts when used for structuring AT1 and T2 capital instruments. The study relies on the content analysis of the classical and contemporary literature as well as case studies of *musharakah* and *mudarabah sukuk* issued for meeting regulatory capital requirements under Basel III and Basel III.

The study finds that there are two possible approaches to comply with Basel III and Shari'ah requirements. First, to avoid the Shari'ah issues related to the issue of subordination, it recommends *musharakah* instruments for both AT1 and T2 capital whereby CET1, AT1 and T2 will all be ranked *pari passu* with one another. This approach would still be compliant with the philosophy of Basel III which in substance aims to strengthen the resilience of the banking sector by increasing the total equity of the Risk Weighted Assets (RWA). The second approach is to use *musharakah sukuk* for AT1 and convertible *murabaha* or *ijarah sukuk* for T2 instruments to achieve the effect of subordination among CET1, AT1, T2 and current and saving accounts and general creditors during going-concern and gone-concern scenarios. However, the Shari'ah issues surrounding the current structures of these exchange-based contracts need to be resolved first before this approach can become a reality.

Keywords: Basel III, Capital Adequacy Requirements, Additional Tier 1, Tier 2, Subordination

#### 1. INTRODUCTION

The Rosel III regulators

The Basel III regulatory framework has set out new capital and liquidity standards for banking institutions. In particular, Basel III has increased the minimum capital levels to be maintained by banks and redefined the criteria for qualifying regulatory capital instruments to be included under Tier 1 (T1) and Tier 2 (T2) capital. The overall objectives of the reforms are to enhance the banking sector's ability to absorb shocks arising from financial and economic stress and reduce the risk of spillover from the financial sector to the real economy (BCBS, 2011: 1).

The revised definition of regulatory capital by Basel III has in turn raised some key questions concerning the capital raising exercise of Islamic banking institutions (IBIs). It is asked whether the Basel III capital instruments are equally acceptable from a Shari'ah perspective – in terms of contracts and characteristics – and in terms of

<sup>&</sup>lt;sup>1</sup> A Researcher at the International Shari'ah Research Academy for Islamic Finance (ISRA), Malaysia and can be contacted at salma@isra.my

<sup>&</sup>lt;sup>2</sup> A Researcher cum the Head of Research Affairs Department at ISRA and can be contacted at marjan@isra.my.

<sup>&</sup>lt;sup>3</sup> a Research Assistant at ISRA and a Master's student at the International Centre for Education in Islamic Finance (INCEIF), Malaysia. He can be contacted at <a href="mailto:madaa.m@gmail.com">madaa.m@gmail.com</a>.

meeting the objective of strengthening the resilience of IBIs in the event of economic and financial stress. Accordingly, regulatory bodies such as Bank Negara Malaysia (BNM) and standard setting bodies such as the Islamic Financial Services Board (IFSB) have issued guidelines for IBIs on the maintenance of regulatory capital in compliance with Basel III regulations. The Capital Adequacy Framework issued by BNM (2012) is applicable to IBIs in Malaysia; while Exposure Draft-15 issued by IFSB (2012) – which is still going through the process of revision based on public consultation and expected to be finalized by the end of 2013 – provides guidance to regulators and IBIs worldwide on the maintenance of high-quality regulatory capital components which comply with Shari'ah rules and principles.

Currently discussions about suitable instruments which will meet both Shari'ah requirements and the objectives of Basel III are not yet settled. This research accordingly looks into the regulatory capital instruments for IBIs and in this respect, has set out the following main objectives: (i) to examine the key criteria for classifying capital instruments under Additional Tier 1 (AT1) and Tier 2 (T2) capital under Basel III; (ii) to discuss the current subordinated *sukuk* issued by IBIs worldwide for meeting regulatory capital requirements; (iii) to examine the Shari'ah issues relating to the capital instruments of IBIs arising in both equity-based and exchange-based contracts; and (iv) to deliberate on the most suitable Shari'ah-compliant contracts for raising regulatory capital by IBIs that will meet the objectives of Basel III.

Accordingly, the research is organized as follows: **Section 2** examines the definition of capital and criteria of the instruments from Basel III perspective. **Section 3** thereafter examines the current subordinated *sukuk* issued by IBIs for meeting regulatory capital. **Section 4** then deliberates on the Shari'ah issues arising from the consideration of equity-based and exchange-based contracts to structure AT1 and T2 capital instruments. In particular, this section focuses on the issue of subordination and conversion of the capital instruments. In the light of the discussions, **Section 5** deliberates on the Shari'ah-compliant structures most suitable for meeting regulatory capital requirements of IBIs. **Section 6** finally concludes the discussion.

## 2. CAPITAL: BASEL III PERSPECTIVE

The need for good quality capital is essential during times of crisis. Basel III effectively aims to ensure that banks have sufficient regulatory capital to meet their obligations in the event of losses and thus reduce the need for bail out by the public sector – as was the case during the last financial crisis. This section examines the definition of regulatory capital under Basel III, delineates the criteria set out by Basel III for classifying instruments under T1 and T2 capital, and summarizes the type of instruments that will meet Basel III criteria for T1 and T2 capital.

## 2.1. Definition of Regulatory Capital: From Basel II to Basel III

It is noted that Basel II classified capital under Tier 1, Tier 2 and Tier 3. While total regulatory capital has been maintained at 8% of risk-weighted assets (RWA) under Basel III (similar to Basel II), Basel III abolished Tier 3 and classified regulatory capital under only T1 and T2. The components of T1 and T2 have also been changed from 4% each under Basel II to T1 being 6% and T2 being 2% under Basel III. Common Equity Tier 1 (CET1) under Basel III has been increased from 2% under Basel II to 4.5% to improve the quality of the capital base. Moreover, a Capital Conservation Buffer CET1 of 2.5% has been added which is to be attained by 2019. This will increase total regulatory capital to 10.5% as compared to the current 8% of RWA. These changes are depicted in Figure 1.

Figure 1: Basel III Changes to Capital Structure Basel II Significant Basel III increase in CET1 to improve 2.5% quality of Buffer CET1 capital base 2019 8 % Tier 2 Tier 2 Tier 2 2% Tier 2 1.5% Additional Tier 1 4 % Max 100% Tier 2 of Tier 1 Max 50% of Tier 1 Common Equity T1 Loss Absorption Going Concern Innovative 2% Tier 1 4.5% 4 % Tier 1 At least Common 50% of Tier 1 Equity T1 2%

Adapted from KFH Research Ltd. (2011: 9), European Central Bank (2010: 126); BCBS (2006)

As indicated above, Basel III has distinguished between going-concern (where the bank is still solvent and continuing operation) and gone-concern (where the bank is insolvent and will be wound-up) scenarios and has thus specified the type of capital instruments that will be affected by adverse economic conditions based on the stage at which the crisis happens. T1 capital, which comprises Common Equity Tier 1 (CET1) and Additional Tier 1 (AT1), will absorb losses during going-concern. T2 refers to gone-concern capital, which will absorb further losses when the bank reaches the point of non-viability (but may not be necessarily wound up).

Given the distinction between going-concern and gone-concern capital, it means that losses will be deducted from respective capital components in certain specific order: first, it will be borne by CET1; then followed by AT1 capital; ultimately, further losses will be absorbed by T2 capital when the bank reaches the point of non-viability. In principle, depositors and general creditors will be last to bear losses in the event of liquidation. This ranking of the capital instruments supports the overall objective of Basel III which aims at ensuring that the bank has sufficient capital to bear losses during times of crises. Hence, the strategy adopted by Basel III is for banks to issue capital instruments which make capital available on a long term basis and which are equity-like in principle – or at least be convertible to common equity or has mandatory write-down features – such that they have the ability to absorb losses by being ranked below other categories of liabilities.

## 2.2. Criteria for Regulatory Capital

According to Basel III, the key criteria for the instruments issued by banks to meet the CET1 (particularly common shares), AT1 and T2 capital requirements are summarized in Table 1.

<sup>&</sup>lt;sup>4</sup> In between the situation of financial health during going-concern and the winding-up scenario during gone-concern is also the situation of non-viability where the bank is still running but faces times of financial stress. Often, measures are taken at this point to ensure continuity in the operations of the bank so that it is not necessarily wound-up.

Table 1: Key Criteria for Classifying Capital Instruments under Basel III

Common Shares	AT1	T2
Issued and paid-in	Issued and paid-in	Issued and paid-in
Most subordinated claim in liquidation of the bank	Subordinated to depositors, general creditors and other holders of subordinated debt of the bank (i.e. it must be senior only to common equity)	Subordinated to depositors and general creditors of the bank (i.e. it must be senior to AT1 and common equity)
Absorb losses on going-concern basis and pari-passu within the highest quality of capital	Absorb losses on going-concern basis	Absorb losses on gone-concern basis
	Not secured, nor guaranteed by bank or related entity that enhances seniority of claim vis-a-vis other creditors	Not secured, nor guaranteed by bank or related entity that enhances seniority of claim vis-a-vis other creditors
Principal is perpetual (i.e. has no scheduled repayment/maturity date) and never repaid outside of liquidation.	Perpetual in nature (i.e. has no scheduled repayment/maturity date) and has no step-up or other features which provide incentives to redeem Callable after minimum of 5 years at initiative of bank only subject to conditions	Minimum maturity shall be at least 5 years and has no step-up or other features which provide incentives to redeem  Callable after minimum of 5 years at initiative of bank only subject to conditions
Bank does not create an expectation at issuance that instrument will be bought back, redeemed or cancelled	Any repayment of principal (through repurchase or redemption) must be with prior supervisory approval	Investor has no right to accelerate repayment of future scheduled payments (coupon or principal) except in bankruptcy and liquidation
Dividend is fully discretionary and non-cumulative. Non-payment is not an event of default.	Dividend/coupon is fully discretionary and non-cumulative. Non-payment is not an event of default.	
Distributions paid only after all legal and contractual obligations have been met and payments on more senior capital instruments made.	Distribution of profits should not be linked to the credit rating of the bank.	Distribution of profits should not be linked to the credit rating of the bank
Classified as equity for accounting purposes	Instruments cannot contribute to liabilities exceeding assets	
	Instruments classified as liabilities must have principal loss absorption capacity through either (i) conversion to common shares at a pre-specified trigger point or (ii) write down mechanism which allocates losses to the instrument at a pre-specified trigger point	
Bank can not directly or indirectly have funded the purchase of the instrument.	Neither the bank nor a related party to the bank can purchase the instrument.  Instrument can be issued indirectly	Neither the bank nor a related party to the bank can purchase the instrument.  Instrument can be issued indirectly

via an SPV and proceeds must be	via an SPV and proceeds must be		
immediately available.	immediately available.		

Source: BCBS (2011)

Based on the criteria set out in Table 1 above, AT1 and T2 capital instruments should in principle be:

- (i) Long-term in nature with maturity of at least 5 years for T2 instruments and perpetual for AT1 instruments (although AT1 instruments may be callable after minimum of 5 years at the initiative of the bank subject to certain conditions). This criterion limits the redemption of the instruments, hence assuring the availability of the capital raised through the issuance of these instruments on a long-term basis.
- (ii) Subordinated instruments that can be ranked junior in right and priority of payment compared to other creditors and would be able to absorb losses in the event of non-viability. In the case of T2 instruments, they will absorb losses only under gone-concern scenarios. T2 instruments rank junior in their rights of payment compared to deposit liabilities and general creditors and senior vis-à-vis AT1 instruments. On the other hand, AT1 instruments will bear losses in even going-concern scenarios and will rank junior to T2 instruments. Nonetheless, both AT1 and T2 instruments will rank senior to common equity (CET1).
- (iii) Unsecured in nature (i.e. not backed by any collateral or covered by any guarantee of the bank). This ensures that there is no security to rely upon for repayment of the capital raised through the instrument during times of losses and consequently the instrument will be able to absorb losses.
- (iv) In the case of AT1 capital instruments, debt instruments must have principal loss absorption capacity through mandatory conversion to common shares or write-down at a pre-specified trigger point. Conversion of debt instruments to equity structures at some trigger point ensures that the instrument will not have its capital guaranteed (or represent liabilities) and thus is able to absorb losses (by representing equity).

Therefore based on the above criteria for classifying capital instruments, CET1, AT1 and T2 capital can take the form as described in Table 2. Table 2 further compares the capital instruments with those under Basel II.

# 3. SUBORDINATED SUKUK ISSUED BY IBIS AS REGULATORY CAPITAL

This section examines the types of *sukuk* which have been issued by IBIs for meeting regulatory capital requirements. It is noted that so far only two *sukuk* have been issued worldwide based on Basel III capital requirements – notably, the subordinated, perpetual *mudarabah sukuk* issued by Abu Dhabi Islamic Bank (ADIB) in 2012 as AT1 capital; and the issuance of a USD 1 billion AT1 perpetual *sukuk* by Dubai Islamic Bank (DIB) in March 2013.

A list of subordinated *sukuk* issued by various IBIs as T2 capital under Basel II is provided in Table 3. It is to be noted that the criteria for T2 capital under Basel II align with the need to issue subordinated capital instruments under Basel III. Accordingly, the *sukuk* issued in compliance with Basel II are still deemed relevant to the discussion of this paper.

Table 3: List of Subordinated Sukuk Issued by IBIs

	IBIs	Programme	Issued Amount	Issuance Date	Shari'ah Structure	Maturity	Profit Rate	Type of Capita l	In Co mpli - ance with
1	CIMB Islamic Bank	RM 2,000 mil	RM 550 mil	25 Sep 2009: RM 300 mil	Musharakah	25 Sep 2025	5.85%	Т2	Base 1 II
	CIMB Islamic Bank			21 Apr 2011: RM 250 mil	Musharakah	21 Apr 2021	4.20%	T2	Base 1 II
2	Maybank Islamic		RM 1,000 mil	31 Mar 2011	Musharakah	31 Mar 2021	4.22%	Т2	Base 1 II
3	Bank Muamalat Malaysia		RM 400 mil	15 June 2011	Musharakah	15 June 2021	5.15%	T2	Base 1 II
4	Am Islamic Bank	RM 2,000 mil	RM 600 mil	30 Sept 2011	Musharakah	30 Sept 2021	4.40%	Т2	Base 1 II
5	Bank Al Jazira		SAR 1,000 mil	29 Mar 2011	Mudarabah (51%) and Murabahah (49%), callable after 5 years	29 Mar 2021	SIBOR +170 bps	Т2	Base 1 II
6	Saudi Hollandi Bank		SAR 775 mil	2009	Mudarabah callable after 5 years	2019	SIBOR + 190 bps	Т2	Base 1 II
7	Saudi British Bank		SAR 1,500 mil	2012	Senior 2008 SR1,705 million SABB notes	2017	-	T2	Base 1 II
8	Bank Syariah Mandiri		bil (\$ 29,972,7 52) and IDR 150 bil (\$16,348 ,773)	19 Dec 2011	Mudarabah (callable after 5 years)	19 Dec 2021	10%	T2	Base 1 II

9	Abu Dhabi Islamic Bank (ADIB)	USD 1,000 mil	2012	Mudarabah	Perpetual	6.375%	AT1	Base 1 III
1 0	Dubai Islamic Bank (DIB)	USD 1,000 mil	2013	Mudarabah (callable at year 6)	Perpetual	6.25%	AT1	Base 1 III

In general, the following key features were observed about the *sukuk* issued by IBIs for raising regulatory capital:

## i. General Obligation Sukuk

In practice, IBIs have been issuing general obligation *sukuk* whereby the *sukuk* is linked neither to any specific project nor to any underlying asset. No specific assets are also purchased with the *sukuk* proceeds; instead, the *sukuk* proceeds (total or partly) are co-mingled in the general Shari'ah-compliant financial services business of the obligor (IBI). Under this type of *sukuk*, the obligor will have a general obligation to pay the *sukuk* holders.

The appropriate Shari'ah structure suitable for issuing general obligation *sukuk* is in fact unrestricted equity-based contracts, which do not require a specific underlying asset to be associated with the issuance (Mokhtar, unpublished). Indeed, from Table 3, it is noted that most of the *sukuk* issued have been structured using the *musharakah* or *mudarabah* principles. The *musharalah sukuk* in some cases referred to (i) a partnership being established among the *sukuk* holders (investors) (e.g. AmIslamic bank, CIMB Islamic bank) and (ii) in other cases represented a partnership established between the *sukuk* holders and the IBI (e.g. Maybank Islamic, Bank Muamalat Malaysia). The first form essentially works like a *wakalah*, with the *sukuk* holders (investors) representing the principal (*muwakkil*) and the IBI representing the agent/manager (*wakil*); yet the structure has been recognized as a *musharakah sukuk* on basis of the partnership formed among the *sukuk* holders. The second form is a *musharakah* which is formed between the issuer (IBI) which contributes its share of the business and the *sukuk* holders who invest their share of capital to the partnership venture.

Even when the *sukuk* has been called a *mudarabah sukuk*, essentially the *sukuk* represented a *musharakah* structure, with the partnership formed between the *sukuk* holders and the IBI. One such case is the *mudarabah sukuk* issued by the Saudi Hollandi Bank where both the *musharakah* and *mudarabah* principles apply; the bank, in this case represented a *mudarib* (manager) of and a *musharik* (partner) in the ownership of the portfolio of assets (Elgari, n.d.). The forms of *musharakah* and *mudarabah* subordinated *sukuk* issued in practice are as depicted in Figure 3 below.

Mudarabah Sukuk Musharakah Sukuk Musharakah Sukuk Bank (as one side of Bank (as mudarib-Bank (as a manager of the partnership) managing the venture) the musharakah venture) Sukukholders Sukukholders Sukukholders (where the (representing the other (represent investors as musharakah is among side of the partnership) rabb al-mÉl) the sukukholders) (Essentially a musharakah between (Essentially a wakalah but (Musharakah is between the bank the bank and sukukholders called a musharakah) and the sukukholders) but called a *mudarabah*)

Figure 3: Forms of Mudarabah and Musharakah Subordinated Sukuk issued in Practice

Source: Authors' Own

#### ii. Subordinated Sukuk

Overall, the principle of subordination has been applied to the equity-based *sukuk* issued. In general, the ranking of the subordinated *sukuk* vis-à-vis other obligations of the issuer follows the order as below: (i) Deposit liabilities and other liabilities; (ii) Senior Creditors; and (iii) Subordinated *Sukuk* ranked *pari passu* with other Subordinated debt of issuer.

The Principal Terms and Conditions (PTC) of most of the *sukuk*, however, do not specify the ranking of the *musharakah* or *mudarabah sukuk* vis-à-vis ordinary share capital. AmIslamic Bank is the only exception which clearly specifies that the *Musharakah Sukuk* will rank senior to ordinary share capital.

#### iii. Unsecured Sukuk

The *sukuk* represented unsecured obligations of the issuer and no collateral is given to back their repayment. In the case of the Malaysian *sukuk*, although no collateral was used as security for the *sukuk*, the elements of Purchase Undertaking and Sale Undertaking (PU and SU) were present to ensure purchase of the trust assets by the obligor. It is noted that according to the practice in Malaysia, it is allowed to include a PU to repurchase the assets from the *sukuk* holders at nominal value at maturity (Saripudin et. al., 2012). According to Securities Commission Malaysia (2012: 161), PU is not considered a condition in the contract between the issuer and the investors as it is not included in the main *sukuk* contract. In form, therefore, it is not deemed as representing the guarantee of capital repayment of the *sukuk*.

## 4. SHARI'AH ISSUES RELATING TO CAPITAL INSTRUMENTS FOR IBIS

According to Basel III, some instruments would have to be ranked senior or junior to others to enable them bear losses either under going-concern or gone-concern scenarios (e.g. T2 bears losses only under gone-concern and is ranked senior to AT1; AT1 bears losses even during going-concern scenario and is ranked senior to common equity). This therefore necessitates the issuance of subordinated instruments by banks for their capital raising purposes. Subsequently, the questions asked are: What is meant by subordination? Would the issuance of subordinated instruments by IBIs implicate any issues from the Shari'ah perspective? This section will discuss

the issue of subordination in relation to both equity-based and exchange-based instruments, along with discussing the issue of conversion of capital from the Shari'ah perspective. This is because AT1 instruments under Basel III can either be converted into common equity upon some trigger event to enable them bear losses or be writtendown.

#### 4.1. What is Subordination?

The key characteristic to achieve loss absorbency is through subordination. Subordination is "a transaction whereby one creditor (the subordinated or junior creditor) agrees not to be paid by a borrower or other debtor until another creditor of the common debtor (the senior creditor) has been paid" (Wood, 2007: 177). According to FSA (2007: 6), subordinated instruments act as a buffer to absorb losses during a gone-concern situation thus providing protection to all senior creditors, especially depositors.

## 4.2. Subordination in relation to Equity-based Instruments

As elaborated in Section 3, most of the IBIs have so-far raised regulatory capital via equity-based *sukuk* such as *musharakah* and *mudarabah* structures to meet both Basel II and Basel III requirements. Although some of the equity-based *sukuk* are structured using *mudarabah*, the structure is essentially a *musharakah* whereby a partnership is formed between the *sukuk* holders and the IBI as the capital raised from the *sukuk* holders (investors as *rabb al-mal*) is co-mingled with that of the issuer (IBI as *mudarib* who manages the *musharakah* venture) and used for the general obligation of the IBI. In theory, the *rabb al-mal* in *mudarabah* subordinated *sukuk* has an ownership claim over the proportion of the assets financed by his *mudarabah* funds. However, in practice, once the assets have been used by the IBI for its general obligation (not for a specific asset), the *mudarabah* funds of the *rabb al-mal* can no longer be distinguished from the IBI's assets. Hence, although the structure is called *mudarabah*, in essence it takes the ruling of *musharakah*.

Meanwhile, there are two forms of *musharakah* subordinated *sukuk* issued by IBIs as regulatory capital under Basel II: (i) partnership between the issuer (IBI) and the investors (*sukuk* holders); and (ii) partnership among the investors, where the issuer acts as a manager/agent (*wakil*) of the venture and investors become principal (*muwakkil*).

It is noted that in principle, wakalah contract can also be used to raise regulatory capital to meet Basel III requirements for AT1 as under this contract, the loss is borne solely by the principal (investors) and the profit also belongs to him. As such, the element of subordination is inherently embedded. Nonetheless, similar to the mudarabah structure, the wakalah sukuk is also essentially a musharakah as the capital raised will be used for the general obligations of the IBIs, not for investment in a specific asset. Even though in theory the muwakkil of the wakalah fund has the ownership claim over his proportion of assets, once his funds are co-mingled with the manager's assets, the segregation between both funds are quite impossible. Thus, even though the structure is called wakalah, in essence it works like musharakah.

Therefore, the paper is of the view that only *musharakah sukuk* can be used for structuring AT1 instruments for meeting Basel III requirements. Other equity-based structures such as *mudarabah* and *wakalah sukuk* (either restricted or unrestricted) cannot be considered for AT1 under Basel III for the capital raised thereof should be used for specific assets, similar to the investment account holders (IAH) account, thus cannot be calculated as part of the IBIs' capital.

Given the above facts, the discussion on subordination in relation to equity-based instruments will focus on the concept of subordination in the *musharakah* contract. Accordingly, this section looks in detail whether ordinary shareholders can be subordinated to equity-based *sukuk* holders despite *musharakah* is the underlying contract for both, or should each ordinary shareholders and equity-based *sukuk* holders be ranked *pari passu* with one another in terms of payment. The section also examines the need to achieve loss absorbency via the conversion of equity-based *sukuk* into ordinary shares.

## 4.2.1 Subordination in Musharakah Contract

In principle, under a *musharakah* contract, it is not possible for one partner to be subordinated vis-à-vis another partner, whereby one partner has a priority in receiving payments (i.e. the expected profit on the periodical distribution date and capital in the event of winding up) based on the following two fundamental rules of a *musharakah* contract: "*Profit is based on the agreement of the parties, but loss is always subject to the capital contribution [of investment]*" (Al-San'ani, 1403H, 8: 248).

## Profit and Loss Sharing among Musharakah Partners

The above rule underlines how profit is to be distributed and loss is to be shared among partners in a *musharakah* contract. Although jurists unanimously agree that each *musharakah* partner should bear losses in proportion to their capital contribution only (Al-Sarakhsi, 1993, 11: 156), they have different opinions regarding the bases for entitlement to profit. Hanafis and Hanbalis view that partners are entitled to profit based on three factors: wealth, work and liability for bearing loss, relying on the following principle: "The entitlement to profit is either due to wealth (mal) or work ('amal) or liability for bearing loss (daman)" (Al-Kasani, 1986, 6: 62)

Accordingly, they allow for *musharakah* partners to agree on the profit to be in proportion to the capital contribution or in excess of it based on stipulation. Hence, they permit excess profit for excess work, except that Hanbalis allow the excess of profit to be merely based on stipulation, regardless whether the partner is a working or sleeping partner (Ibn Qudamah, 1968, 5: 23); while Hanafis argue that if partners stipulate that only one partner will manage the *musharakah* venture, then the sleeping partner will not get more than his capital contribution (Al-Sarakhsi, 1993, 11: 154).

The AAOIFI (2010: 208) also adopts the opinion of Hanafis where the Shari'ah standard on *musharakah* provides that: In principle, the shares of profit must be in proportion to the percentage of each partner's contribution to the Sharika capital. Nevertheless, the partners may agree to make profit-sharing not proportionate to their contributions to capital, provided that the additional percentage of contribution to the capital is not in favour of a sleeping partner. If a partner did not stipulate a condition that he be a sleeping partner, then he is entitled to stipulate an additional profit share over his percentage of contribution to the capital even if he did not work.

Malikis and Shafi'is, on the other hand, opine that the proportion of profit, similar to the sharing of loss, should conform to the capital contribution (Al-Madani, 1994, 3: 605; Al-Sharbini, 3: 227).

While the above arguments indicate that there are differences of opinion among schools of thought with regard to the percentage of profit due to each partner, no discussion is found in the *fiqh* literature on whether it is possible to give priority of payment to one partner in a *musharakah* venture before another partner is paid.

Nonetheless, some contemporary scholars have allowed subordination in *musharakah*, through the concept of *tanazul*. The resolutions of the Securities Commission Malaysia Shari'ah Advisory Council (2007: 92-93) provide that non-cumulative preference shares are permissible based on the concept of *tanazul*, which refers to "surrendering the rights to a share of the profits based on partnership, by giving priority to the preference shareholders". This *tanazul* is willingly given upfront by the ordinary shareholders to the preference shareholders during the Annual General Meeting (AGM) of a company.

The definition, at a first glance, indicates that *tanazul* connotes the same meaning with *isqat al-haq* (relinquishment of one's right), which is normally discussed in the context of *ibra*'. Yet, *ibra*' itself has been

defined by jurists in two ways, either as *isqat* (relinquishment of one's right) or *tamlik* (transfer of ownership), or both as in the case of providing *ibra*' for outstanding debts.<sup>5</sup>

Nevertheless, a closer look at these terminologies, i.e. *isqat al-haq* and *ibra*', reveals that they are related to something which has been established, or the causes for entitlement have already existed, while *tanazul* in the context of *musharakah* is related to something which is yet to exist (Hasan, 2010). In other words, when one partner forgoes his right to be ranked *pari passu* with other partners in receiving payments, neither the profit nor the causes for his entitlement to profit (i.e. the investment) have yet existed.

Hasan (2010) suggests that this kind of *tanazul* can be considered a gift for something which is not in existence (*hibah bi al-ma'dum*), based on the view of Malikis who allow one partner to willingly give more profit to another partner on a charitable (*tabarru'*) basis. Al-Khurashi (n.d, 6: 45-46) mentions:

"Profit and loss are based on the capital contribution, which means that when the capital of partnership gains profit or loss, it is compulsory to distribute it among the partners according to their capital contribution, which can be equal or variant, whether they stipulate it or are silent about it. Similar to profit and loss, work shall also be proportionate to capital. The sharikah is void when any variance is stipulated, as each partner is entitled to a fee for the work done for the other partners. This means the sharikah is void when variance to the profit is stipulated in the contract... Nevertheless, one of the partners can make a voluntary donation, give a loan or a hibah after the contract. In other words, he can donate a portion of the profit or the work to his partner after concluding the contract [emphasis added]. He can also give him a loan or gift him something [from the profit] after concluding the sharikah contract, because what comes after the [conclusion] of contracts is different from what is included in them."

The above quotation indicate that Maliki jurists allow the percentage of profit distribution to be in excess of the capital contribution (i.e. different from the percentage of capital contribution) if it is voluntarily given via *tabarru*' or *hibah* after the conclusion of the contract, not before or in the contract. For instance, if A contributes 30% and B contributes 70% of capital, in the contract, A and B shall receive 30% and 70% profit respectively (whether it is stipulated or otherwise), as profit should be proportionate to the capital contribution. Nevertheless, after the conclusion of the *musharakah* contract, both can negotiate to amend the percentage of the profit where B can voluntarily give 10% of his profit percentage to A, and thus the new percentage of profit shall be 40% for A and 60% for B.

By saying this, Malikis do not in any way indicate that one of the partners can have a priority in getting the profit or the capital as embodied in the concept of subordination. Therefore, it is inaccurate to claim that *hibah bi alma'dum* can be a basis for allowing *tanazul* of right that has not been acquired or established, as Malikis' opinion in this context is similar to that of Hanafis' and Hanbalis' on permitting variance of profit from the capital contribution, as mentioned earlier, except that the former do not allow for a stipulation in the contract unlike the latter.

In line with this, AAOIFI (2010: 204) rules that the determination of the percentage of profit due to each partner should not be deferred until the realization of the profit; rather to be determined at the time of concluding the *musharakah* contract. However, partners may mutually agree to amend the percentage of profit sharing on the

<sup>-</sup>

Ibn Humam (n.d, 4: 389) defines *ibra*' as "waiving the ownership that is in one's liability", while Al-Khurashi (n.d, 4: 7) defines it as "considering one's debt to be a gift to [the debtor]". Accordingly, the Hanafis and an opinion of the Malikis and the Shafi'is and the preponderant view of the Hanbalis refer to *ibrÉ*' as an act of relinquishing one's right. On the other hand, some Malikis, Shafi'is and Hanbalis consider *ibrÉ*' as an act of transferring the ownership of one's right. Other jurists such as Ibn Nujaym are of the view that *ibrÉ*' can refer to both meanings, as in the case of providing *ibrÉ*' for outstanding debt. See: Al-Mawsu'ah Al-Fiqhiyyah (1983, 1: 148-149).

date of distribution. A partner may also relinquish a portion of the profit that is due to him in favour of the other partners on the date of distribution.

Moreover, if one of the partners is given priority in receiving payment either through stipulation in the contract or through a promise after the contract, this will go against one of the *muqtada al-'aqd* (nature and implication of the contract) and objective of *musharakah* which is about the making of profit and sharing it among the partners. Al-Sarakhsi (1993, 11: 156) states:

"This contract is a trust-based contract, and its objective is to gain profit, which is attained through the conscientious discharge of fiduciary duties. The amount of capital contributed by each partner should be made clear because, when it comes time to distribute the profit, each partner's capital contribution must be accounted for in order to determine the profit."

Similarly, with regard to loss, jurists unanimously agree that each *musharakah* partner should bear losses in proportion to their capital contribution only. Indirectly, it can be said that jurists do not agree on giving conditional priority to others in receiving payment so that loss is borne by one partner only. Accordingly, AAOIFI (2010: 204) provides:

"It is not permitted, therefore, to agree on holding one partner or a group of partners liable for the entire loss or liable for a percentage of loss that does not match their share of ownership in the partnership. It is, however, valid that one partner takes, without any prior condition, the responsibility of bearing loss at the time of loss".

Based on the above arguments therefore, it can be summarized that: (i) Hanafis and Hanbalis agree that the ratio of profit sharing can be equal to capital contribution or in excess of it based on the agreement among the partners in the contract; while Malikis allow for voluntary renegotiation of the profit sharing ratio in excess of capital contribution after the conclusion of the *musharakah* contract; (ii) there is no discussion among jurists that one of the partners can have a conditional priority in getting the profit or the capital as embodied in the concept of subordination; (iii) jurists unanimously agree that losses should be borne by each partner in proportion to capital contribution and thus no partner can be ranked junior to absorb more losses. Nevertheless, one partner can voluntarily bear the loss at the time of loss without any prior condition.

## Unilateral Promise (Wa'ad) for Isqat al-Haq

Although as mentioned above, it is not possible for *tanazul* to be based on *hibah bi al-ma'dum*, one possible mechanism of structuring subordinated equity-based instruments is via *wa'ad bi isqat al-haq*, commonly known as *wa'ad bi tanazul* (promise to relinquish one's right). According to AAOIFI (2010), a *wa'ad* (promise) is not considered an integral part of a transaction and as such would not lead to a combination of two contracts in one. However, since *wa'ad* is legally binding according to Hanafi (Ibn Nujaym, 1999: 247) and Maliki scholars (Ibn Rushd, 1988: 15: 318) if it is contingent upon a condition or related to a cause (in our case, the cause being the loss in the event of non-viability), the promisor (equity *sukuk* holder) has no option but to forgo his right to receive the profit or capital. Accordingly, the inclusion of the *wa'ad* will lead to violation of the *mughada al-'aqd* of the *musharakah* contract, which is about sharing profit and loss. Therefore, this paper is of the view that subordination of equity holders via *wa'ad* is a *hilah* (legal stratagem) and should not be adopted.

Knowing the fact that Muslim jurists unanimously agree that *musharakah* partners rank *pari passu* in terms of loss, can we still rank *musharakah sukuk* holders above ordinary shareholders in order to meet Basel III requirements? This issue will be deliberated in the following sub-section.

### 4.2.2. Subordinating Ordinary Shareholders vis-à-vis Musharakah Sukuk holders

Under Basel III, ordinary shareholders (CET1) are considered the lowest in rank compared to AT1 and T2 capital instruments. Shari'ah issues therefore arise if AT1 and T2 instruments were structured using *musharakah* contracts which usually represent *sukuk* whose proceeds are invested in the general financial business of the IBIs. In substance therefore these general obligation *musharakah sukuk* are similar to ordinary shares and should be ranked *pari passu*. However, based on the argument provided in Section 4.2.1, where some scholars have allowed for subordination of one partner vis-à-vis another on the principle of *tanazul*, ordinary shareholders can be subordinated in ranking vis-à-vis *musharakah sukuk* holders (whether AT1 or T2) if they agree that they are the last in rank to receive payment and agree to waive their right of receiving payment on the basis of *tanazul*. In other words, the *musharakah sukuk* holders will be given priority to receive payment compared to ordinary shareholders.

However, based on the justifications given earlier, this paper is of the view that subordination of CET1 vis-à-vis *musharakah sukuk* is not possible. From a Shari'ah viewpoint, they should be ranked *pari passu* and be treated equally in terms of loss absorption.

Accordingly, from the Shari'ah perspective, it is not possible to maintain Basel III's ranking order of CET1 (ordinary shares) representing the most subordinated claim in the event of liquidation, to be followed by AT1 and then T2 capital, if both AT1 and T2 are structured using *musharakah* contracts (unless legal stratagem like *wa'ad bi tanazul* is applied). Nonetheless, if the IBIs would like to comply with the philosophy of Basel III which in substance aims to increase the percentage of total equity in 8% of the RWA, they can issue *musharakah* subordinated *sukuk* for both AT1 and T2 instruments (as an additional capital) without making any distinction between going-concern and gone-concern capital.

## 4.2.3. Conversion of Equity-based Sukuk into Ordinary Shares

If equity (*musharakah*) *sukuk* holders and ordinary shareholders are ranked *pari passu*, the question asked is whether it is necessary for equity-based *sukuk* to be converted into ordinary shares in the event of loss?

From the Shari'ah perspective, as argued earlier, both ordinary shares and the general obligation equity-based *sukuk* are categorized equally and thus will bear losses equally in the event of loss or liquidation. Hence, there is no need to 'convert' equity-based *sukuk* into ordinary shares *per se* to make them absorb losses. In addition, if the *musharakah sukuk* issued by the IBIs is classified as non-voting common shares or Class B shares – like in conventional finance – the *sukuk* holders are ranked *pari passu* with the ordinary shareholder in the event of loss. Yet, both can mutually agree that equity *sukuk* holders may receive a higher profit rate compared to the shareholders. This is permissible based on the opinion of Hanafis, Hanbalis and AAOIFI standard mentioned earlier regarding profit and loss sharing, provided that equity *sukuk* holders do not stipulate a condition that they are sleeping partners even though they do not actually work.

Nonetheless, from a practical perspective, it can be argued that these equity-based *sukuk* after all represent a different legal form, especially in the case of Malaysia where generally equity-based *sukuk* include features such as purchase undertaking (PU) or sale undertaking (SU) which, in substance, provide some form of guarantee of capital to the *sukuk* holders. As such, their conversion into ordinary shares is necessary to make them actually bear losses.

It should also be noted that although Basel III suggests that AT1 instruments can be written down, such mechanism for the equity-based *sukuk* cannot be adopted as it is not in line with the nature of equity contracts which are inherently loss absorbent.

## 4.3 Subordination in relation to Exchange-based Instruments

This section discusses the possibility of structuring AT1 and T2 using exchange-based contracts. The discussion will focus on two main issues: (i) subordinating AT1 to T2 capital instruments and (ii) subordinating T2 capital instruments to depositors and other creditors of the IBI.

## 4.3.1 Subordinating AT1 to T2 Capital Instruments

There are two possible scenarios that can be discussed in relation to the subordination of AT1 to T2 capital instruments: (i) subordinating equity-based AT1 to exchange-based T2 capital instruments; and (ii) subordinating exchange-based AT1 to exchange-based T2 capital instruments.

As for the first scenario, it can be said that subordinating holders of AT1 capital instruments to holders of T2 capital instruments is justified since the holders of the equity-based AT1 instruments are considered partners of the IBI's shareholders and as a result, they are exposed to losses whilst the IBI is still in operation. On the other hand, the holders of exchange-based T2 instruments represent liabilities and are entitled to receive payments of their outstanding debt, with their right of payment being unaffected by the normal losses borne by the IBI during the course of its operations. Therefore, T2 capital instruments remain immune from bearing any losses during the going-concern scenario. The same rule applies when the IBI reaches the point of non-viability (gone-concern scenario), because all the outstanding debts resulting from T2 capital instruments are a liability that must be settled as long as the IBI is still in operation regardless of whether it reached the point of non-viability or not. Finally, in the event of the IBI declaring its bankruptcy T2 exchange-based capital instruments will still be senior to AT1 equity-based instruments. Therefore, the debt claims of such instruments must be settled first before holders of AT1 equity-based capital instruments and common shareholders can receive their share of whatever remains of the IBI's assets.

The second scenario as we have mentioned above involves the subordination of AT1 exchange-based capital instruments to T2 exchange-based capital instruments. Such a scenario is unlikely because having AT1 capital instruments structured using exchange-based contracts is not in line with the Basel III requirements, which requires that such instruments should be perpetual in nature and no debt instrument can have such characteristic. Therefore, there is no need to look into such a scenario from Shari'ah perspective, since it is impossible for such a scenario to exist in reality.

## 4.3.2 Subordinating T2 Capital Instruments to Deposit Liabilities and General Creditors

This sub-section addresses the issue of subordinating T2 capital instruments to current and saving accounts and general creditors of the IBI during the going-concern, gone-concern (non-viability) and liquidation scenarios.

Since we have already established in the previous sub-section that it is not possible to issue exchange-based AT1 capital instruments, the only plausible scenario is having AT1 equity-based capital instruments and T2 exchange-based capital instruments along with current and saving accounts and general creditors of the IBI. In such a scenario, AT1 capital instruments rank lower than the debt claims of T2 capital instruments, current and saving accounts and general creditors of the IBI during the going-concern, gone-concern (non-viability) and liquidation scenarios. This is due to the reasons mentioned in the previous sub-section. However, the debt claims of T2 capital instruments cannot be ranked junior to the debt claims of current and saving accounts and those of the general creditors of the IBI during the gone-concern and liquidation scenarios. In other words, all debt claims must be ranked *pari passu* with one another in terms of their right to receive payment. The Shari'ah evidence for such position can be seen in various Hadiths that call upon the debtor to repay his creditor without giving preference to one creditor over the other. Among these hadiths is the saying of Prophet Muhammad - peace be upon him - (Al-Bukhari, 1422 A.H., 3:124-125, Hadith No. 2387) in which he stated: "Whoever takes the money of people with the intention of repaying it, Allah will repay it on his behalf, and whoever takes it in order to spoil it, then Allah will spoil him"

The above-mentioned Hadith is general in nature and call upon debtors to pay their creditors without giving priority for some creditors over others, as all of the creditors have equal rights in terms of receiving payment of their outstanding debts.

#### 4.3.3 Mechanisms to Subordinate Exchange-Based T2 Capital Instruments

As mentioned earlier, Basel III suggests that AT1 instruments can be subordinated either through write-down mechanism or conversion to common shares at a pre-specified trigger point. Thus, the main issue of discussion in this sub-section is to find out whether these two mechanisms which were suggested to subordinate AT1 capital instruments, can also be used to achieve the effect of subordination for T2 exchange-based capital instruments without contravening the rules and principles of Shari'ah.

#### Write down Mechanism via Ibra'

The first mechanism suggested by Basel III to achieve the effect of subordination is the use of a write-down mechanism, whereby a portion of the outstanding debt will be written-down at a pre-specified trigger point. Therefore, we have the scenario of using *murabaha* and *ijarah sukuk* for structuring T2 capital instruments. In this regard, the main question is: can the use of write-down mechanism achieve the desired effect of subordinating T2 exchange-based capital instruments to current and saving accounts and general creditors of the IBI during the gone-concern and liquidation scenarios.

Before attempting to provide an answer to this question, it is essential that the mechanism of write-down be briefly discussed from the Shari'ah perspective. In this regard, it can be said that the mechanism of write-down is linked to the concept of *ibra*', which can be defined either as *isqat* or *tamlik*, or both as in the case of providing *ibra*' for outstanding debts.

## i. Classical Jurists' Views on Ibra'

The general ruling concerning *ibra*' is that it is recommended because it is a type of *ihsan* (benevolence), since it involves relinquishing one's right to receive one's outstanding debt from an insolvent debtor and even if the debtor is solvent, then providing *ibra*' will strengthen the relationship between the creditor and the debtor (Al-Mawsu'ah Al-Fiqhiyyah, 1983, 1:147). This view is based on the Qur'an (2: 280) when Allah says: "And if the debtor is in a hard time (has no money), then grant him time till it is easy for him to repay, but if you remit it by way of charity, that is better for you if you did but know."

Furthermore, the Prophet (Al-Tirmithi, 1975, 3:591, Hadith No. 1306) mentioned the great rewards that await those who give respite to insolvent debtors as he said: "He who gives respite to someone who is in straitened circumstances, or grants him remission, Allah will shelter him in the shade of His Throne, on the Day of Resurrection, when there will be no shade except His shade."

Having said that, it is important to note that Muslim jurists did not discuss the issue of providing *ibra*' as a condition that can be stipulated in the initial agreement, rather they discussed the issue of having a conditional *ibra*' that takes place after the initial agreement has been executed (Al-Attram, 2006: 345, 355). In this regard, they discussed its pillars, conditions, types and various other issues related to it without deliberating on the issue of including it as a condition in an exchange-based contract. One reason could be due to the prohibition of combining an exchange-based contract with a charitable one. The prohibition of such combination is based on a Hadith by the Prophet (Abu Daud, n.d., 3: 283, Hadith No. 3504) in which he said: "It is not permissible to combine a loan and sale in one contract, or two conditions in one contract of sale, or gaining profit from an item not in your ownership, or to sell what you do not possess."

In this regard, Ibn Taymiyyah (2003, 29: 62-63) affirmed the prohibition of combining an exchange-based contract with a charitable contract as the inclusion of the latter is done to facilitate the execution of the exchange-based contract and is not done solely for the purpose of charity. The logic behind such prohibition can be attributed to the fact that the essence of an exchange-based contract is based on the principle of justice, which is reflected through the equivalency of the two counter values (Al-Sarakhsi, 1993, 13:197; Al-Kasani, 1986, 5: 187). On the other hand, a charitable contract is based on the principle of benevolence, since one party does not get anything in return for what he gave the other party. Therefore, combining an exchange-based contract with a charitable one is not permissible as each one has its own purpose.

Furthermore, jurists are of the opinion that *ibra*' is a type of contract that must be issued in a form that is not appended to the future, regardless of whether the time in the future is specified or not. In other words, the effects of the contract must take place immediately as long as its pillars and conditions are fulfilled (Al-Mawsu'ah Al-Fiqhiyyah, 1983, 1:166).

Based on the above arguments, it can be summarized that: (i) jurists considered *ibra*' a type of charitable contract. Therefore, combining it with an exchange-based contract is not permissible since each type of contract has its own unique purpose. As such, including a charitable contract in an exchange-based transaction will not be for the purpose of charity; and (ii) jurists unanimously agree that *ibra*' is a type of contract whose effects must take place immediately and cannot be appended to a time in the future.

# ii. Ibra' in Contemporary Applications

At this point, it is important to note that contemporary scholars debated the issue of including *ibra*' as a condition in a financing agreement, whereby an IBI provides *ibra*' for the early settlement of an outstanding debt due by the customer. In this regard, it was the opinion of the *Shari'ah* Advisory Council of BNM that the inclusion of such a clause is permissible (BNM, 2010: 123). On the other hand, the Council of the Islamic Fiqh Academy prohibited the inclusion of such a clause in the financing agreement (OIC Islamic Fiqh Academy, 1985-2000: 135).

However, it is to be noted that the above-mentioned resolutions by the SAC of BNM and the Council of Islamic Fiqh Academy are not directly related to the issue of providing *ibra*' by the *sukuk* holders to the IBI. This is because in the case of the IBI providing *ibra*' to the customers, such an *ibra*' is given in the case of early settlement (or implicitly when the customer defaults given the fact that the total outstanding debt becomes due), whereby the IBI waives the unearned profit from the liability of the customer. However, in the case of *sukuk* holders providing *ibra*' to the IBI, they are being requested to waive not only their unearned profit but also their principal amount at a pre-specified trigger point.

Moreover, it can be argued that *ibra*' in a financing agreement is a mechanism to ensure that the principle of justice is achieved in the transaction, since the IBI is being asked to waive its unearned profit for the remaining duration of the contract only. This mechanism is justified since the profit arises because of the deferment and since the debtor was able to settle his debt before its due time. As such, the IBI cannot request the customer to pay the full price and if it does, then the IBI is taking that portion of the price without counter-value. In this regard, Ibn Abideen cites the case of a person purchasing an asset for ten on a spot basis and then selling it to another party for twenty on a deferred payment basis, the deferral period being ten months. If the buyer settles the debt or dies after five months, the seller shall take five as profit and leave the other five (Ibn Abideen, 1992, 6: 757). Based on this, if the customer settles his debt before its due time, the IBI should be compelled to forgo its unearned profit, without the need to mention this as a condition in the agreement (Al-Attram, 2006: 361). On the other hand, in the case of the *sukuk* holders, they are being asked to forgo their principal, which gives strong ground to assume that it is a genuine case of combining an exchange-based with a charitable contract.

Based on the above general discussion, it can be said that the use of the write-down mechanism for T2 *murabaha* and *ijarah* capital instruments can achieve the desired effect of subordinating the claims of the holders of such instruments to the claims of current and saving accounts and general creditors of the IBI during the gone-concern and liquidation scenarios. However, the use of the write-down mechanism is not in line with Shari'ah rules and regulations because it will lead to the combination of an exchange-based contract with a charitable contract. This is because when the holders of the *murabaha* or *ijarah sukuk* agree to write down the *murabaha* outstanding debt or outstanding rental payment they are in effect combining *ibra*' which is a charitable contract with *murabaha* and *ijarah* both of which are exchange-based contracts.

As a result there is a strong ground to argue that the inclusion of an *ibra*' clause in the agreement will have an effect on the pricing of the instrument.<sup>6</sup> In other words, the inclusion of such a clause will be in return for an increase in the rate of return of the instrument – in the case of *murabaha*, increase in the mark-up and in the case of *ijarah*, increase in the rental payment– which is why such a combination is prohibited.<sup>7</sup> Moreover, the *ibra*' clause will be appended to an unknown time in the future, which is the time when a pre-specified trigger point is reached.

#### Write-down Mechanism via Wa'ad bi Ibra'

The use of a unilateral binding promise (wa'ad) given by the holders of the sukuk to write down the outstanding debt or outstanding rental payment can be an alternative mechanism that can achieve the effect of subordination for T2 capital instruments. In this regard, since the wa'ad is not considered an integral part of the contract, the issue of combining an exchange-based contract with a charitable one will not arise. However, since the wa'ad is binding on the sukuk holders if it is contingent upon a condition or related to a cause (in our case, the cause being the trigger of non-viability, then the promisor (i.e. the sukuk holder) will have no option but to relinquish his right to receive the principal amount of the outstanding debt. Therefore, the inclusion of the wa'ad – although it resolves the problem of combining an exchange-based contract with a charitable contract – will not lead to the equivalency of the counter-values being exchanged between the buyer and the seller, as the sukuk holders will still be required to waive their right to receive their outstanding debt. In other words, when we look at the transaction in its entirety, the result would be the same as compared when the write-down mechanism is included in the agreement via a clause, which means that in essence the whole arrangement is in fact a combination of an exchange-based contract with a charitable contract. As such, this paper is of the view that the use of the write-down mechanism via wa'ad bi ibra' should not be adopted.

#### Conversion into Ordinary Shares

With regard to T2 exchange-based capital instruments, there is the possibility of converting the outstanding debt resulting from *murabaha sukuk* or the outstanding rental payment resulting from *ijarah sukuk*.

One possible way to look at the issue of converting the outstanding debt into ordinary shares is by considering it a form of selling debt to the debtor. In this case, it can be said that such sale falls under the sale of a confirmed debt (principal plus outstanding installments) to the debtor. An example of such type of confirmed debt is the price of an already purchased item, or the compensation for a usufruct that has already been utilized. In these two

Ibn Taymiyyah (1995, 29:62-63) stated that combining *tabarru*' contract with *mu'awadhah* contract is done to facilitate the *mu'awadhah* transaction and not for the purpose of charity. Therefore, the charitable contract becomes part of the price. To illustrate this point he gave the example of a person who gave another person a loan of 1000 and sold him an asset worth 500 for 1000. In this example, the seller agreed to lend the 1000 to the buyer only because of the higher selling price of the asset and the buyer agreed to pay the higher price of the asset only because of the loan he is going to receive from the seller. Thus, in reality the seller gave the buyer an asset and 1000 in return for 2000 from the buyer. It is clear from this example that the inclusion of the *tabarru*' contract had an effect on the pricing of the asset, which was sold by the seller for a price higher than the market price. In the case of the sukukholders, they are agreeing to forgo their principle itself in case the IBI reaches the point of non-viability. Therefore, if receiving a loan from the seller can have an effect on the pricing of the sold item, receiving an *ibra*' for the entire outstanding debt at the point of non-viability will definitely have the same effect on the pricing of the instrument. As a result, the commodities will be sold to the IBI for a mark-up higher than the normal mark-up in the market in the case of *murabaha sukuk*, or the asset will be rented for a higher rental than the normal rental in the market in the case of *ijarah sukuk*.

This is similar to the practice of tranching in *sukuk* whereby investors subscribe to a single *sukuk* issuance that has multiple classes with different ratings (e.g. Class A – AAA; Class B – AA; Class C – BBB, etc.). In such a mechanism, subscribers to Class A tranche will receive a lower rate of return and face a lower probability of loss; while subscribers to Class C will receive a higher rate of return and face a higher risk of loss.

examples the debt has already been established on the liability of the debtor, which is why it is called a confirmed debt.

The majority of jurists permitted the sale of confirmed debt to the debtor. (Al-Kasani, 1986, 5:148; Ibn Rushd, 2004, 3:215; Al-Nawawi, n.d., 9:275; Ibn Qudamah, 1968, 4: 37-38). Thus, the creditor can sell the debtor the confirmed debt, which is established on the debtor's liability for its repayment in kind. This group of jurists relied on the following Hadith (Al-Taylasi, 1999, 3:393, Hadith No. 1980) which is narrated by Abdullah Ibn Umar who said:

"I used to sell camels at al-Baqi for dinars and take dirhams for them, and sell for dirhams and take dinars for them. I would take these for these and give these for these. I went to the Apostle of Allah (peace be upon him) while he was about to enter the house of Hafsah. I said: Apostle of Allah: I sell camels at al-Baqi'. I sell (them) for dinars and take dirhams and I sell for dirhams and take dinars. I take these for these, and give these for these. The Apostle of Allah (peace be upon him) then said: There is no harm in taking them at the current rate so long as you do not separate leaving something to be settled.".

The underlying reasoning for allowing such sale of debt is the fact that the debtor is already in possession of what is established on his liability. Therefore, if he pays the price of such liability to the creditor, then this sale will be akin to a normal sale whereby the two counter values are exchanged at the same time (Al-Zuhaili, 1997, 26).

It is important to note that Muslim jurists regarded the issue of selling debt to the debtor as a mechanism that can be used in reducing the overall amount of debt in the society and at the same time enabling the creditor to obtain an asset in return for his outstanding debt. In other words, the issue of selling debt to the debtor was not discussed in the context of providing a loss absorbing mechanism; whereby the IBI can convert a debt into ordinary shares and by doing so subordinate the claims of holders of T2 capital instruments to saving and current accounts and general creditors of the IBI. Nevertheless, this does not mean the use of such mechanism is not Shari'ah compliant, because its use still achieves the same purpose envisaged by Muslim jurists, when they allowed the sale of debt to the debtor, which is the reduction of the overall debt in the society. Thus, converting outstanding debt into ordinary shares is tantamount to changing the method of paying the outstanding debt from using cash to using ordinary shares. As a result, the relationship between the IBI and the *sukuk* holders would not end upon the sale of the outstanding debt as in the case of the classical sale of debt to the debtor; rather it would change from that of a debtor and creditor relationship to a partnership. This means that the creditors of the IBI have become its new partners and they can share the losses of the IBI on a pro rata basis.

Based on the above the *sukuk* holders (creditors) will sell their debt owed by the issuer (IBI) in return for ordinary shares. It can be argued that this arrangement can be included as a clause in the sukuk agreement and will not be considered a form of combining two contracts, because converting outstanding debt into ordinary shares is a method of payment and not a new contract. This argument is plausible given the fact that the conversion will only take place when the IBI becomes financially stressed upon reaching the point of non-viability. Thus, if the Shari'ah encourages creditors to give grace period to debtors who are in financial difficulty, then it becomes obvious that the Shari'ah will not have an objection to changing the method of payment for the insolvent debtor from paying in cash to paying in ordinary shares via the sale of the outstanding debt by the creditor. Thus, it is envisaged that the *sukuk* holders will enter into an exchange-based contract, which is based upon the principal of equivalency of the two counter values. This exchange-based contract, be it murabaha or ijarah, will include a clause to convert the outstanding debt into ordinary shares only if a pre-specified trigger point is reached. This means that if the IBI does not face financial difficulties, it is obliged to pay the debt using the traditional method of payment. However, if the point of non-viability is reached then the method of payment will automatically change, whereby a conversion formula is used to determine the number of ordinary shares that the creditor deserves for his outstanding debt. However, it must be noted that the use of the conversion formula must have the intended objective of giving the creditor the equivalent value of his outstanding debt in the form of ordinary shares.

It is important to note that the *murabaha sukuk* based on the concept of *tawarruq* will raise serious Shari'ah objections as to the legitimacy of such structure. This is because the OIC Fiqh Academy in its 19<sup>th</sup> session has declared the use of both types of *tawarruq* (organized and reversed) to be not in line with Shari'ah principles. Thus, this can be an obstacle for the use of the contract in structuring exchange-based T2 capital instruments. Moreover, *murabaha sukuk* are not tradable in the international market which will make it less attractive to potential investors. As for *ijarah sukuk* the outstanding rental payment may not be enough to the extent that its conversion at the point of non-viability can be a viable option. The only remaining option would be for the *sukuk* holders of *ijarah sukuk* to convert the *ijarah* assets under their ownership into ordinary shares. In other words, the *ijarah sukuk* agreement would contain a binding unilateral *wa'ad* to convert the *ijarah* assets into ordinary shares at the point of non-viability. In other words, this type of convertible *ijarah sukuk* would be similar to the normal type of *ijarah sukuk* with the only major difference being the use of conversion mechanism to convert the value of the *ijarah sukuk* with the only major difference being the use of normal *ijarah sukuk*. At this point, it is important to note that the conversion of the *ijarah* assets would obviously not fall under the issue of selling debt to the debtor, because the assets being converted are owned by the *sukuk* holders and are not debts owed to them by the IBI.

The first issue that we encounter with the use of *ijarah sukuk* is the fact that asset-backed *ijarah sukuk* cannot be used in structuring T2 capital instruments, since such type of *sukuk* can be classified as secured in nature, which in turn will not be in line with Basel III requirements of issuing unsecured capital instruments. Therefore, the only option is to use asset-based *ijarah sukuk*, whereby the legal ownership stays with the IBI and the beneficial ownership is transferred to the *sukuk* holders. However, just like in the case of *murabaha sukuk*, the use of asset-based *ijarah sukuk* has come under strong Shari'ah criticism, which was culminated with the OIC Fiqh Academy prohibiting the current structure of *ijarah sukuk*, as it is a form of *inah*.<sup>8</sup>

Based on the above, it can be concluded that the use of both *murabaha* and *ijarah sukuk* for structuring T2 capital instruments will raise serious Shari'ah concerns, which must be adequately addressed if exchange-based contracts are to be used in structuring T2 capital instruments.

# 5. SHARI'AH-COMPLIANT STRUCTURES MOST SUITABLE FOR MEETING REGULATORY CAPITAL REQUIREMENTS

In the light of the Shari'ah issues associated with both equity-based and exchange-based regulatory capital instruments and given the trend in the market about the kind of regulatory instruments being issued by IBIs, the following question is asked: what are the most suitable Shari'ah-compliant structures that will meet Basel III capital requirements? As discussed, the key Shari'ah concern related to meeting Basel III requirements is about subordinating the instruments so that the ranking of CET1, AT1 and T2 is maintained and accordingly, ensuring that CET1 and AT1 will bear losses under going-concern scenario while T2 instruments bear losses only in the event of non-viability or gone-concern.

The following deliberates on the most appropriate Shari'ah contracts for structuring AT1 and T2 capital instruments:

1. In order to develop perpetual, subordinated, unsecured AT1 instruments, the most appropriate Shari'ah contract would be *musharakah*. However, if AT1 instruments are thus structured, they would rank *pari passu* with CET1 (ordinary shares) in the event of loss given the capital raised through the instruments would be

\_

The OIC Fiqh Academy in its 20<sup>th</sup> session has declared the impermissibility of selling an asset on a cash basis with the stipulation that the seller leases the asset via a lease ending with ownership, whereby the total rental payments and repurchase price [paid by the sukuk issuer] would be more than the cash price [paid by the sukukholders]. Such stipulation is impermissible regardless of whether it is mentioned explicitly or implicitly, because this would be a form of *Inah* and therefore *sukuk* cannot be issued using such structure.

co-mingled in the general financial business of the IBI. Accordingly, as partners in the IBI's business, losses would have to be borne in proportion to capital contribution and no partner can be ranked junior to another to absorb more losses, unless ordinary shareholders voluntarily agree to bear the loss when it occurs or legal stratagem like *wa'ad bi tanazul* is applied.

Whether or not AT1 *musharakah sukuk* would have to be converted into ordinary shares at the point of non-viability would be a matter of complying with (conventional) legal requirements to change the status of the *musharakah sukuk* into ordinary shares. Conversion of the AT1 instruments into ordinary shares would not affect the Shari'ah ruling applicable to the instruments. Moreover, if the *musharakah sukuk* is similar to non-voting shares or Class B shares of conventional finance, no conversion is required as both equity *sukuk* holders and ordinary shareholders are ranked *pari passu* in terms of loss. However, ordinary shareholders can agree on giving a higher profit rate to the *musharakah sukuk* holders because from the Shari'ah perspective, there is no objection of having a different profit sharing ratio from their capital contributions.

- 2. AT1 capital instruments structured using exchange-based contracts is not in line with the Basel III requirements, which requires that such instruments should be perpetual in nature and no debt instrument can have such characteristic.
- 3. If T2 capital instruments are also structured using *musharakah* contract, then CET1, AT1 and T2 capital instruments will all be ranked *pari passu* with one another in the event of loss. As such, it will not be possible (i) to make a distinction between going-concern and gone-concern capital, (ii) for CET1 to represent the most subordinated instruments, and (iii) to rank T2 senior to AT1 and CET1 as per Basel III requirements. This means that it will not be possible for IBIs to comply technically or in form with Basel III requirements.
- 4. If on the other hand, T2 capital instruments are structured using exchange-based contracts in the form of *murabahah* and *ijarah sukuk*, this will enable exchange-based T2 capital instruments to be ranked above *musharakah* AT1 capital instruments during going-concern scenario without causing any Shari'ah concerns. As for subordinating exchange-based T2 capital instruments vis-à-vis current and saving accounts and general creditors, conversion of the exchange-based T2 capital instruments into ordinary shares at the point of non-viability is a possible option. However, serious Shari'ah concerns are raised in regards to the use of *tawarruq* in the structuring of *murabaha sukuk* and the use of sale-and-leaseback mechanism followed by repurchase of the asset in *ijarah sukuk*. Both of these structures have been prohibited by OIC Fiqh Academy resolutions, which mean that their use in structuring convertible exchange-based T2 capital instruments is not viable unless the Shari'ah issues surrounding them are resolved.

#### 6. CONCLUSION

This research examines the regulatory capital requirements under Basel III and deliberates on the qualifying AT1 and T2 capital instruments that can be issued by IBIs to meet both Shari'ah requirements and Basel III criteria and objectives. In this respect, the subordinated *sukuk* which have been issued under Basel II and Basel III have been examined. Moreover, the Shari'ah issues, especially related to the aspect of subordination, arising in both equity-based and exchange-based contracts when used for structuring AT1 and T2 capital instruments have been examined.

It may be concluded that there are two possible approaches to comply with Basel III and Shari'ah requirements. First, is to avoid the Shari'ah issues related to the issue of subordination altogether and instead recommend *musharakah* instruments for both AT1 and T2 capital whereby CET1, AT1 and T2 will all be ranked *pari passu* with one another. This approach will still be compliant with the philosophy of Basel III which in substance aims to strengthen the resilience of the banking sector via increasing the total equity of the RWA, and thus enable IBIs to absorb losses in the case of financial stress. The second approach is to comply fully with the ranking order as required by Basel III by using exchange-based contracts in the form of *murabaha* and *ijarah sukuk* for structuring

T2 capital instruments along with the use of conversion mechanism to achieve the effect of subordinating T2 capital instruments to current and saving accounts and general creditors. However, the Shari'ah issues surrounding the current structures of exchange-based contracts namely *murabaha* and *ijarah sukuk* need to be resolved first before this approach can become a reality.

# CONVENTIONAL INSURANCE AND TAKĀFUL: CONCEPTUAL AND OPERATIONAL DIFFERENCES

# Seyed Mohamed Mohamed Mazair<sup>1</sup>

#### **ABSTARCT**

Insurance is an inescapable arrangement for individuals and business organizations in the contemporary world. There are two types of Insurance companies which are mainly dealing with insurance operations through two different concepts. One is conventional insurance companies. Other one is *Takāful*, Islamic alternative model of conventional insurance.

The conventional insurance and Islamic insurance are similar in some elements. Both of them provide protection in the event of unforeseen events and contributions must be made to start the coverage. The insurance company receives payment in the form of premium and will compensate policyholder in the event of covered losses or damages sustained by him/her.

This paper chiefly focuses to study the conventional and *Takāful* insurance comparatively to bring out the differences between them based on conceptual and operational framework. The differences between Islamic and conventional insurance lie in the ownership and financing of the company, in the management and accounting systems, in the entities in which the premiums are invested etc.

**Keywords**: *Takāful*, Islamic insurance, Differences between *Takāful* and conventional insurance

## 1. INTRODUCTION

According to the human history, the insurance appears simultaneously with the appearance of human society. Basically, a form of people helping each other inside their community when catastrophes occurred is called insurance. This type of insurance has survived to the present day in some parts of the world where modern insurance system is not widespread so far.

As Dorfman (1978, p.3) described, that the Insurance is a financial arrangement which redistributes the costs of unexpected losses. Insurance is a risk-sharing arrangement. In this arrangement between two parties, one party (the insurer) agrees to indemnify another party (the insured) against certain losses specified by a contract (the policy). Furthermore, Insurance is an economic device by which individuals and organizations can transfer pure risks (that is, uncertainty about financial losses) to others. Thus, economic units may now choose the risks that they would like to bear and that they are comfortable with. The "unwanted" risks may be transferred to others in exchange for a fee or a premium.

Moreover, the change is natural and unavoidable in every aspects of the life. This is the fact the whole history of mankind points out. In this way, the old order has given place to new and the agrarian society has been transformed into a modern industrial society. The process of industrialization has been so rapid that it may rightly be described, as the revolution. This revolution did not eliminate the chance of loss of life and property. The development in transportation industry, the increased use of machinery, swift expansion of technology, all these are followed by risks like accidents, hazards and injuries.

271

<sup>&</sup>lt;sup>1</sup> Mr. SMM. Mazahir is a senior Lecturer in Islamic Studies, South Eastern University of Sri Lanka, Currently he is a PhD candidate in Islamic Insurance (Takaful), University of Malaya, Kuala Lumpur, Malaysia.

To mitigate the seriousness of consequences of these unexpected perils and to cover the chances of loss, insurance is introduced to such an extent that this institution has become an essential of the modern life and it influenced in almost all spheres. And also, some of the important legal and socio-economic institutions, which have developed in the west during the last four hundred years and have left strong impacts on the Muslim society, are their present forms and structures. Islam enunciates the conflict with values and principles. The course of history has forced these institutions and organizations over Muslim society. Muslim scholars and economists are becoming more and more conscious of this conflict and applying themselves to task of wittingly the Muslim society. To achieve this purpose, it is necessary that the objective study of the contemporary institutions and the law of Islam should be made and then attempt to develop the alternate socio-economic system, which can fulfil Muslim need without violating the fundamental principles of Islam. One of the measures adopted in modern times for the institutions of economy and finance is insurance. (Syed Umar Faroog, 2010, pp. 55, 56) The eminent Islamic scholars name it as Takaful. This target had been achieved by examining carefully all theories and practices covered by the established field of conventional economic and finance using Islamic laws and values as enshrined in the Al Qur'ān and the Al Hadīth (report of the sayings or actions or consent of Muhammad). The economic activities, which are permitted by Shari'ah, based mainly on the prohibition of interest (ribā), engaging in permissible (halāl) dealing, and avoiding Prohibitive (harām) dealing, Prohibition of entering into contracts containing uncertainty (gharar) or speculation or Gambling (maisir) and Payment of Zakāh.

As we discussed, the background of  $Tak\bar{a}ful$ , Islamic alternative to insurance, is based on the concept of social solidarity, cooperation and mutual indemnification of losses of members. It is a pact among a group of members who agree to jointly indemnify the loss or damage that may inflict upon any of them out of the funds they donate collectively. As per practice of the Takaful companies, a part of contributions (premiums) under  $Tak\bar{a}ful$  system falls under the category of donation in order to spread liability with the objective of common good. The remaining part of the premium is given on the basis of  $Mud\bar{a}rabah$ . Therefore, structure of  $Tak\bar{a}ful$  that comprises the contracts of  $Mud\bar{a}rabah$ , Tabarru' (to donate for benefit of others) and mutual sharing of losses, is made so as to eliminate the element of absolute uncertainty so far as determination of contributions is concerned.

This paper intends to make a case for  $Tak\bar{a}ful$ , an Islamic instrument of insurance and conventional insurance. This is an exploratory comparative study which provides a base for an understanding of  $Tak\bar{a}ful$  with a comparison to conventional insurance. And also it tries mainly to clear a common doubt among public masses that the conventional insurance and Islamic insurance are same in all aspects and there are no any differences between them.

## 2. LITERATURE REVIEW

Several scholars have written about this subject in their literature. For instance, Essential Guide to  $Tak\bar{a}ful$  (Islamic Insurance) by Engku Rabiah Adawiah and Hassan Scott, Islamic and Modern Insurance – Principles and Practices by Mohd. Ma'sum Billah,  $Tak\bar{a}ful$  and Retakāful – Advanced Principles & Practices by Tobias Frenz and Younes Soualhi, Al Ta'mīn wa aḥkāmuh by Sulaiman bin Ibrahim,  $Tak\bar{a}ful$  (Islamic Insurance): Concept, Challenges, and Opportunities by Safdar Jaffer, Farzana Ismail, Jabran Noor and Lindsay Unwin. But they did not focus their views on the matter itself. Some explained the subject in detail. Meanwhile others briefed it with other subjects. I tried to focus the issue and to differentiate between two types of insurance in the angle of the concept as well as the practice.

#### 3. RESEARCH METHOD

This work is based on secondary data. Secondary data has been collected from several sources. Relevant literature has been gathered from a number of books. Extensive data has been collected through websites, and database articles. To receive objective of the study information work by different authors and organization have been used. We have used secondary data most of which is in English. Comparison between the conventional insurance and Islamic insurance (*Takāful*) has been done based on the collected data.

# 4. CONVENTIONAL INSURANCE AND TAKAFUL: CONCEPTUAL AND OPERATIONAL DIFFERENCES

In detail, the research paper contains the following subheadings:

#### 4.1 What is Insurance?

Insurance as Ali described "Insurance is to act as a risk transfer mechanism, to provide peace of mind and protect against losses. Either can handle risk: assumption, combination, transfer, or loss prevention activities. Insurance schemes utilize the combination method by persuading a large number of individuals to pool their risks into a large group to minimize overall risk" (Ali, 2000).

As Qureshi (2011, pp.279, 280) defines, insurance is a mechanism whereby individual or business enterprises by paying out contribution (termed 'premium' in insurance) transfer some of the uncertainty of risks to the insurer. Insurer in the event of loss from insured peril compensates the victim (insured) out of the contribution so gathered from large numbers of insured. The contribution is usually a very small amount compared to the amount of protection available. The concept of insurance is basically an arrangement to mutually help one another in the event of an unfortunate event causing loss to any of the member(s). In short the mechanism of insurance inter alia brings about peace of mind, social stability and economic growth.

Insurance provides the peace of mind and protection to trade and industry, which ultimately contributes towards human progress. Thus insurance is a force contributing towards economic, social and technological progress of human being. Without insurance cover and industries, economic and social activity of the world will come to a grinding halt, or at least would have slowed substantially. (Syed Umar Farooq, 2010, p.57)

#### 4.2 Conventional insurance

Insurance is a risk transferring mechanism whereby the individual or the business enterprise can shift some of the uncertainties to the shoulder of others. Under this assumption, all the people would desire to live in a healthier, comfortable and peaceful condition. To meet these facilities, different enterprises provide various services. They innovate, insurance product to undertake risk and uncertainty. (Syed Umar Farooq, 2010, p.57)

The conventional insurance is being implemented through state or private owned Insurance companies or corporations. They collect premiums from policyholders and invest them in interest-based activities mostly. Whenever losses occurred for policyholders, they pay them insurance payment indicated in the agreement. If there are no unfortunate incidents defined in the agreement within the specified period any payments will not be paid at all from the insurance company to the participants. This

is the common practice in conventional insurance. In addition to some companies give some bonuses and special offers in the sense of competition and promotion.

## 4.3 Takāful (Islamic Insurance)

According to Al-Omar (1996) the risk sharing is very important with in Islamic finance. The *Shari'ah* manages the risk sharing by insisting on the use of well - defined contracts when financial transactions taken place. The contract is to be clear and well formulated to avoid all kinds of misunderstanding and confusion. In this way the uncertainty is lowered and the desire to minimize the risk is met.

Takāful is derived from the Arabic root-word "Kafala", a verb, which means guarantee, bail, warrant or an act of securing one's need. Therefore, Takāful (in its reciprocal form) means joint guarantee, whereby a group of participants agree to mutually guarantee each other against a defined loss. In the context of Islamic insurance, Takāful refers to an arrangement for a mutual indemnity in providing protection and compensation to the participants who suffered from perils or hazards. (Engku Rabiah Adawiah, 2008, p.03) In his research, Azeem Pirani, Head of Marketing & Alternate Distribution at Pak-Qatar Family Takaful Limited States that this method of risk mitigation has been used for centuries, albeit under different names. Prior to the advent of Takāful, as we know it today, the most common has been 'Mutual Insurance' which, although similar, is not identical. Takāful is based on the principle of solidarity, mutual help, brotherhood and cooperation among members of the community.

The elements which were against the *Shari'ah* in conventional insurance were subject to great deliberation and discussion to ensure that social and mutual protection mechanism like insurance can be used by 1.57 billion Muslim population with great freedom and without the worries of religious constraint for the greater social and economic benefits. As mentioned aspects like interest, uncertainty and gambling were cardinals to exit to make insurance *Shari'ah*-compliant. Beside these elements as per Wikipedia following principles are the essence of *Shari'ah*-compliant insurance:

- Policyholders cooperate among themselves for their common good.
- Every policyholder pays his subscription to help those who need assistance.
- Losses are divided and liabilities spread according to the community pooling system.
- Uncertainty is eliminated with respect to subscription and compensation.
- No advantage can be derived at the cost of others (Wikipedia, 2012)

Mahmood (2008) said, *Shari'ah*-compliant insurance is based on principles of mutual cooperation ( $t\bar{a}$ 'awun) and donation (tabarru'), where the risk is shared collectively and voluntarily by the group of participants. It is derived from an Arabic word meaning 'joint guarantee' or 'guaranteeing each other'. According to Redzuan, Rahman & Aidid (2009), the majority viewpoint by many contemporary Islamic jurists and scholars is that, for an insurance system to be acceptable by Islamic tenets, it must be founded on the principles of (1) mutual cooperation (2) tabarru' (donation). These are the essence of *Shari'ah* insurance, which embraces the elements of mutual guarantee, mutual protection and shared responsibility. Tabarru' means donation, gifts or contribution. Participants in a *Shari'ah* insurance scheme mutually agree to relinquish as donation, a certain proportion of their contributions, into a *Shari'ah* fund, to provide financial assistance to any members of the group suffering from a loss. Under *Shari'ah* insurance, each participant contributes a certain proportion of the full amount of his contribution as tabarru. Obaidullah (2005) said donations from all participants are accumulated into a common fund called 'tabarru'

fund' or 'risk fund', from which compensation or indemnification is paid to participants suffering a defined loss. Jching (2008) said *Shari'ah*-compliant insurance is also built on the principle of mutual cooperation where each participant participates in each other's losses and the *Shari'ah* insurance operator facilitates this cooperation using its expertise. (Qureshi, 2011, pp.281, 282)

The origin of Islamic insurance started before the era of the Holy Prophet Muhammad (S.A.W) which is based on " $\bar{A}qilah$ " mutual co-operation (Klingmuller, 1969). Later such insurance transaction was steadily practiced and was even made mandatory in some cases during the period of the second Caliph, *Saydina* Omar (R. A.A). During the period of 14th to 17th century a *Sufi* Order of the *Kazeeruniyya* was very active especially in port cities in Malabar and in China. This order served as a kind of marine travel insurance company.

In 19th century, a *Hanafi* lawyer Ibn Abidin (1784 -1836) was the first Islamic scholar who came up with the meaning, concept and legal entity of insurance contract. He was also the first person, who repeated the word insurance in the context of a legal constitution, and not in a customary practice (Klingmuller, 1969). In 1906, Muhammad Baqit *Mufti* of Egypt approved the idea of insurance which was explained by Ibn Abidin. In the period of twentieth century, a well-known Islamic jurist, Muhammad Abduh issued two 'fatwas' mentioning that an insurance transaction is like the transaction of 'al-mudarabah' financing technique, while the other was that a transaction which is similar to endowment or life insurance are legal. (Mher Mushtaq Hussain, 2011, p.25)

In the later part of the 20<sup>th</sup> century, Islamic insurance companies have been started in several places of the world as *Shari'ah* compliant insurance. At present, there are more than 200 hundred *takāful* companies provide various Islamic insurance products to not only Muslims but also non-Muslims.

## 4.4 Islamic Insurance (Takaful) and Conventional Insurance – A Comparison

Conventional insurance and Islamic insurance can be evaluated through various viewpoints. In this article, Islamic and conventional insurance are compared on the following bases:

#### 4.4.1 Governance

First of all, the governance viewpoint the Takaful principles have their roots in *Shari'ah*. Sacred orders of Allah in Al- Qura'n, religious, social and commercial practices of The Holy Prophet (SAW),  $Ijm\bar{a}'$  (the agreement of whole Islamic world on an issue) and  $Qiy\bar{a}s$  (comparative arguments), form the basis of *Shari'ah*. *Shari'ah* is the constitution of Islamic world. According to Islam, the basic principles of *Shari'ah* are necessary for an action to be approved religiously. The opinions and interpretations of Al-Qura'n and Al-Sunnah from suitable, prominent Islamic Shari'ah scholars also considered in this regard.

In conventional insurance system rules and regulations are made according to human mind and thinking. Currently, most of the rules implemented in the insurance world are driven from western philosophy which is naturally on the basis of materialism and secularism. Based on this idea, there are regulatory institutions in almost all countries in the world.

#### 4.4.2 Goal

The goal of conventional insurance is to maximize profit in favour of shareholders because they are stock companies and ignore client while in contrast  $Tak\bar{a}ful$  goal is well-being and self-sustaining operation without earning high profit. In another word, the payment of premiums to pool is voluntary for mutual assistance without individual monetary gain.

# 4.4.3 Risk Transfer/Sharing

Conventional Insurance is a mechanism whereby individual or business enterprises by paying out contribution (termed 'premium' in insurance) **transfer** some of the uncertainty of risks to the insurer. Insurer in the event of loss from insured peril compensates the victim (insured) out of the contribution so gathered from large numbers of insured. The contribution is usually a very small amount compared to the amount of protection available. Unlike conventional insurance, which risk is transferred from the insured to the insurer, the  $Tak\bar{a}ful$  Insurance mutual risk is **shared** amongst the participants.  $Tak\bar{a}ful$  operations are based upon the principles of mutuality, whereby each participant makes a donation to a  $Tak\bar{a}ful$  fund. In the event of its loss, the participant will receive the amount of its claim.

# 4.4.4 Ownership

*Takāful* fund is managed by operator but ownership is of participants. They have a complete right of contribution and benefits. In conventional insurance the policyholder purchase policy and there exist seller – purchaser relationship. *Takāful* company performs trustee and operator functions. In conventional insurance there exist one to one relationship between policy holder and company.

## **4.4.5** Monitoring committee

In *Takāful* companies, having a is one of the mandatory committees should be included in the system of *Takāful*. The *Shari'ah* Supervisory Board is to be formed by the operators and their role is to review the operations, supervise its development of *Shari'ah* insurance products, and determine the *Shari'ah* compliance of these products and the investments. The *Shari'ah* Supervisory Board have to carry their own independent audit and certify that nothing relating to any of the operations involve any element that is prohibited by *Shari'ah*. (Qureshi, 2011, p.287) While in conventional insurance there is no such *Shari'ah* supervisory committee to monitor the activities of the company in order to be under the Shari'ah guideline.

#### 4.4.6 Unlawful elements

Different elements like *Ribā* (Interest), *Gharar* (uncertainty) and *Maysir* (Gambling) are involved in conventional insurance. For instance, in non-life policies if a policyholder does not make a claim, his insurance company keeps the whole amount. If he/she cancels the policy contract also loses all premiums which he/she has deposited. Likewise if the insurance company terminates its activities, the policyholders will be refunded proportionally.

The uncertainty is also observable in the conventional insurance. The premium Payment from the policyholder is certain but is uncertain from the shareholders or the company as well as the benefits to be paid depend on the outcome of future events not known at the time of contract. In order to eliminate the element of uncertainty in the *Takāful* contract, the concept of "*tabarru*" (to donate or give away) is

incorporated in it. In relation to this, a participant agrees to relinquish as *tabarru*' certain proportion of his *Takāful* instalments or contributions that he agrees or undertakes to pay thus enabling him to fulfil his obligation of mutual help and joint guarantee, should any of his fellow participants suffer a defined loss. In *Takāful* the element of uncertainty is eliminated as subscription and compensation is concerned.

And also there are some features alike gambling in conventional insurance. The policyholder pays his premium, he/she might get a very big amount if the losses indicated in the policy occurred, if not he/she will lose all the premiums paid. It works by mere chance, speculation and conjecture and not from work, taking responsibility or real sector business.

The nature of the principles of  $Tak\bar{a}ful$  is different from the conventional insurance because all the operation in  $Tak\bar{a}ful$  is in line with the Shari'ah principles. The operation of  $Tak\bar{a}ful$  is based on the principle of Al-  $Mud\bar{a}rabah$  which is profit and loss sharing techniques which is alternative to interest  $(Rib\bar{a})$  in Conventional Insurance.

As a result of these non-permitted elements, the majority of Muslim scholars have generally decided that the practice and operation of conventional insurance as currently practiced do not fulfil the rules and requirements of *Shari'ah*. Therefore, in June 1972 the Malaysian National *Fatwa* Council resoled that the present-day life insurance as provided by the conventional insurance companies was not in line with the principles of *Shari'ah*. Similarly, in comprehensive deliberation, the *Fiqh* council of The Muslim World League in 1978 and the *Fiqh* Academy of the Organization of Islamic Conference (OIC), at gathering in December 1985, resolved that no form of insurance, life or general, confirmed to Islamic principles and therefore it was *ḥarām* (prohibited). (Suraiya Hashim, Asnida Shahideen and Wan Roshidah Fadzim, pp.199, 200)

## 4.4.7 Operation

Takaful system operates in such a way that the participants contribute their money as premium to a company. The company divides the contributions into two parts i.e. donation (*Tabarru'*) for meeting mortality liability or losses of the fellow policyholders and the other part for investment. Accordingly, the clause of *Tabarru'* is incorporated in the contract. Both the accounts are invested in *Shari'ah* compliant investments and returns thereof distributed on *Muḍārabah* principle between the participants and the *Takāful* operators. The profit attributable to the participants is credited into the two accounts respectively.

Conventional insurance operates in such a way that premium is paid by policy holders to insurance company and then this amount is invested by insurance company in interest bearing or non-*Shari'ah* compliant investing areas. Amount of interest and profit is received by insurance companies and then surplus is retained in the company without distributing it among policy holders and only claims are met with this surplus. And also Takaful operates on mutual assistance principle. Conventional insurance operates on business principle.

#### 4.4.8 Contract

Conventional insurance is a buy-sell contract in which the insurance company offers and sells protection and the participants (policyholders) accepts and buys the premium at a certain price. In case of Islamic insurance, the participants give up individual rights to attain collective rights over contribution and benefits along with

the *Takāful* operator as the one who manage the fund. The contract under Islamic insurance is usually involves the concepts of *Tabarru'*, *Muḍārabah* and *Wakālah*. (Jacky Lim, 2010)

#### 4.4.9 Investment

According to Billah (2001) the distinction between the conventional insurance and *Takāful* business is more visible with respect to investment of funds. While insurance companies invest their funds in interest-based avenues and without any regard for the concept of *Ḥalāl-o-Ḥarām*. *Takāful* companies undertake only *Shari'ah* compliant business and the profits are distributed in accordance with the initially agreed ratios in the *Takāful* contract. (Syed Umar Farooq, 2010, p.58) In addition to that the Governments of the countries in which Muslims are in majority have introduced a legal framework which helps in introduction of new *Shari'ah* compliant products. *Muḍārabah* certificates are the instruments which are evolved from such legal framework. While a conventional insurance company invests in interest based instruments like treasury bills, certificates of deposits, interest bearing bonds etc... (Hakim, 2007)

## **4.4.10 Surplus**

Likewise the policyholders of *Takāful* share in any surplus or loss from the pool collectively. *Takāful* system has a built-in mechanism to counter any over-pricing policies of the insurance companies, because whatever premium charged, the surplus would normally go back to the participants in proportion to their contributions. (Syed Umar Farooq, 2010, p.58) While in conventional insurance profit is not shared between members in a specific ratio and in some year bonus is provided and sometime not. Moreover, if unfortunate lose not happened the paid premiums will not be reimbursed.

*Takāful* differs from conventional insurance in the sense that the company manages and employs the funds for investment, business and administration on behalf of the participants. Profits attributed to the participants' funds are shared between the *Takāful* company and the participants according to an agreed formula. In case of insurance, the premium funds become property of the company and any profits or losses go to the company's account.

#### 4.4.11 Forfeiture

In insurance contract there is clause that insurer can forfeit the premium amount that is paid by the policy holders under certain circumstances. *Islam* does not allow the forfeiture of premium, wholly or partly, as the amount of premium is consider as loan by insured to insurer. In *Takāful* there is no forfeiture of contributions and it is distributed among the participants in form of surplus (Mahmood, 1991).

## 4.4.12 Encouragement for goodness

Takaful helps people to accumulate their saving for goodness of whole community. An opportunity is provided by  $Tak\bar{a}ful$  scheme to people to practice Islamic way. The Holy Prophet (PBUH) saying is "whosever removes the hardship from believer, Allah will remove hardship from him one of the hardship of the Day of Judgment" (Ṣaḥīḥ Muslim). Insurance is vice versa.

The following table briefs the differences between *Takāful* and conventional insurance:

ISSUE	CONV. INSURANCE	TAKĀFUL
Governance	No religious consideration,	Al-Qura'n, Al-Hadīth,
	solely profit motivated	<i>Ijmā'</i> , <i>Qiyās</i> , Islamic
		Ethics
Organizational	Profit for shareholders	Mutual for participants
Principle		
Basis	Risk transfer	Cooperative risk sharing
Laws	Secular/Regulations	Shari'ah & prudential
		regulations
Ownership	Shareholders	Participants
Management status	Company management	Operator
Form of contract	Contract of sale	Cooperative, Wakālah or
		Muḍārabah. Waqf with
		Tabarru' (contributions)
Responsibility of	Policy holders pay premium	*Participants make
Policy	to the insurer	contribution to the scheme
holders/Participants		*Participants mutually
		guarantee each other under
		the scheme
Investments	No restriction, mostly	Shari'ah compliant, Ribā-
	Interest based, non-Shari'ah	free
	compliant	
Profit	Belong to shareholders	Shared between
		participants and operator
		based on profit sharing
		principles
Surplus	Shareholders' Account	Participants' Account
Shari'ah Council	Not applicable	Obligatory

# 5. RESULTS

After comparing conventional insurance with  $Tak\bar{a}ful$ , it is indicated that  $Tak\bar{a}ful$  is more suitable than conventional insurance to whole mankind especially to the vast Muslim community of the world.

This article gives a comparative analysis of Islamic and conventional insurance system. In this way it is an addition to the literature on the subject. It has a managerial implication in the shape of guidance to the potential buyer of the insurance. It will give a clear picture to who intend to choose an insurance policy providing essential guidelines through differentiating the insurance companies.

#### 6. CONCLUSION:

The Muslims all around the world wish to go side by side with modern commerce. They are not willing to follow non - Islamic practices. They are looking for Islamic alternatives to prevailing financial instruments and practices. Islamic banking is a great success not only in Muslim majority but also in Muslim minority countries. Major international banks are today offering *Shari'ah* compliant products. In the similar manner *Takāful* presents an Islamic alternative to insurance.

The interpretations made by scholars provide a complete framework governing Islamic Insurance. In this article the suitability of Islamic insurance over conventional one along with its applicability in Muslim world is discussed. Ahmed (2010) reported that the Islamic principles can prohibit the global crisis to occur. Islamic insurance funds are invested in interest-free securities which reduce the chances of the crisis in this industry. Resultantly it provides a solid support for Islamic insurance.

To maintain Islamic behaviours a Muslim may adapt his practices to and comply with *Shari'ah* principles. The models of *Takāful* are helpful in categorizing it. *Tawakkul* concept best deals with *Takāful* because firm belief in Allah is compulsory but taking due care is also necessary. *Takāful* and conventional insurance models are different because of their permissibility in Islam. Conventional mode is based on *Ribā*, *Gharar* and *Mysir* which are prohibited in Islam.

The discussions on whether conventional insurance is in line with the *Shari'ah* have manifold but the widely accepted view is that conventional insurance is contrasting to *Takāful*. The major conceptual and operational paradigms are enough to define such contrasts.

# SUSTAINABLE DEVELOPMENT THROUGH THE ISLAMIC INSURANCE SYSTEM IN SUDAN

Fatima A. Galal<sup>1</sup>
Zuriah A. Rahman<sup>2</sup>
Mohamed Azam M. Adil<sup>3</sup>

#### **ABSTRACT**

Several Islamic insurance and solidarity companies have been established since 1979; first in Sudan and later in Saudi Arabia, and then in various other Islamic countries. There are currently about 200 companies of Islamic insurance in all parts of the world, spreading over the Islamic world. This number indicates that the Islamic insurance industry has begun to prove and improve itself that is a strong competitor to traditional insurance industry. This paper evaluates and analyses the challenges on several issues related to Islamic insurance in Sudan for the period 1979-2011. This paper also covers semi-structured interviewed at the preliminary in order to address the research questions, and hypotheses of this research. A planned questionnaire to find out the sustainability and challenges facing Islamic insurance in Sudan has been set. Smart PLS has been used to evaluate and analyze the result of sustainability in Sudan. A brief content analysis of Islamic insurance systems for sustainability was discussed to examine its challenges for research in the future. This research found that the link between Sudanese customers perception and his satisfaction with using Islamic model as in Sudan. This paper concludes with a discussion on the significant light of sustainable development in Islamic insurance industry in Sudan and Muslim countriesneeds to propagate the research and publication in the areas of Islamic economics and Islamic management.

Keywords: Islamic insurance, Sudan, sustainability, Smart PLS

#### 1. INTRODUCTION

Islamic insurance industry to sustain facing many challenges globally and even from region to region, some challenges are: the argumentative issue on the ownership of the Islamic insurance fund that is the *tabarru*' fund and the surplus distribution accumulated from the risk fund are some of the many issues faced by the industry (Tobias, 2010), there is also diversity of the opinions that certain practices are *Shari'ah* compliant, most of the *Shari'ah* experts do not have enough knowledge about the insurance system while many Islamic insurance practitioners themselves are lacking in the knowledge and information about *Shari'ah* principles with respect to Islamic insurance

# 2. LITERATURE REVIEW

For the modern Islamic insurance the practiced started in 1979 with Faisal Islamic Bank in Sudan, for the reason to insure the bank's properties in *halal* insurance, established the Islamic Insurance Company Ltd, as the first cooperative insurance company in the world with pure capital from the bank as base for the company. Sudan adopted a system called '*mudarabah* of Islamic solidarity', the system was composed of

<sup>&</sup>lt;sup>1</sup>A PhD student at Arshad Ayub Graduate Business School Faculty of Business Management, University Teknologi MARA, Shah Alam, Malaysia. Corresponding author: ommusaab@yahoo.com

<sup>&</sup>lt;sup>2</sup>Dean of Arshad Graduate Business School Faculty of Business Management, University Teknologi MARA, Shah Alam, Malaysia.

<sup>&</sup>lt;sup>3</sup> Deputy Director of International Institute of Advanced Islamic Studies, Malaysia

a combination of *mudarabah* and solidarity where the contribution paid is divided as follows: 87.5% is regarded as capital for *mudaraba* to be invested for the payer in the form of Al *mudarib* according to the *Shari'ah* rules, 12.5% is taken as a donation to the solidarity fund and is subject to the rules of Solidarity, however, this system did not meet acceptance due to the inflation in Sudan and it was abandoned (Aldarir, 2006).

When the participant contributes to the fund, he is indirectly applying the golden principle of 'bear ye one another's burden'. He said, however, not all companies including insurance companies in Sudan itself comply with the recommendation to accept *ta'awun* as a basis for Islamic insurance. The constraint is due to poor fund for the initial capital, as nowadays nobody wants to invest something for free. When they contribute their money, they are actually expecting something in return, which is the financial reward or profit sharing (Billah M. M., 2004).

#### 2.1 Challenges faced development of Islamic insurance

Many challenges faced development of Islamic insurance in Muslim countries. The ownership to the contribution paid by the participant, and the consequence related to this ownership in case of surplus or deficit is one of the most prominent problems in Islamic insurance industry (Shibili, 2009). Another argumentative challenge issue on the ownership of the Islamic insurance fund that is the *tabarru*' fund and the surplus distribution accumulated from the risk fund are some of the many issues faced by the industry(Tobias, 2010). There is also diversity of opinions that certain practices are *Shari'ah* compliant or not (Jacky, 2010). Some services are accepted as *Shari'ah* compliant by some *Shari'ah* scholars in certain regions while it is not by other scholars in other regions based on the report done by Islamic Research & Training Institute Islamic Development Bank, concluded that this can lead to layers of regulatory difficulty(Institute of Islamic Banking and Insurance, 2000). In addition, another problem is that most of the *Shari'ah* experts do not have enough knowledge about the insurance system while many Islamic insurance practitioners themselves are lacking in the knowledge and information about *Shari'ah* principles with respect to Islamic insurance. This causes the variation of opinions among scholars, academicians, professionals and other key players in the industry.

Moreover, there is no evidence to support if any of the existing models can be considered unique and preferred from among the others, because all of these depend on the functions and factors which are suitable to the respective country where they are being practiced(Mohamed, 2007).

Sudan, as the founder of Islamic insurance in the modern economy since 1979, (Khan, 2011) also has Islamic regulatory environments, which naturally accommodates the Islamic insurance markets, at the same time it is the only country with a complete *Shari'ah* finance system (Bekkin, 2007).

# 3. RESEARCH METHOD

The data in Sudan have been collected in an easy approach due to the fact that the author is from the same country so this added to the ease of distributing and collecting the questionnaire but not in full because some companies have been revoked as Red Sea insurance or some companies closed after Sudan became two countries such as Juba insurances. In total, twelve companies were covered to fill the questionnaire, and where some selected for the interview schedule. To study the sustainability of Islamic insurance in Sudan, questions were set up and distributed into four parts: one for operators (insurers) in Islamic insurance, one for participants (customers) in Islamic insurance to check the similarities and differences of Islamic insurance. The reliability of the instrument that was used in the research to collect the data is

important, but in this research and due to the small sample size which affects the normality of the data, it was not possible to apply the reliability check.

The data gathered from the questionnaire will be analyzed using Statistical Package for Social Science (SPSS) Version 20 programmes(Creswell, John W., 2008). SPSS was used to do manipulation checks and to calculate Cronbach's alpha for the constructs. Since the sample size is relatively small (Islamic insurance organizations) and for the interpretation of the research objectives, partial least squares structural equation modeling (PLS-SEM) is used. SmartPLS is a program that conducts a Partial Least Squares analysis which allows to simultaneously examining theory and measures (Hulland 1999).

The research sample size between 56 respondents from customers 50 respondents from operators 13 respondents for *Shari'ah* board members, and 21 respondents expert in the Islamic insurance field observations was increased to 200 re-samples to ensure convergence using this bootstrapping method.

#### 4. RESULTS

The findings of the study revealed that there is a large sector of the Muslim population in Sudan needs to be exposed to Islamic insurance practice, also there is a significant light of sustainable development in Islamic insurance industry in this country.

Table 1 points out all the constructs of customer questionnaires and their indicators. The path coefficient analysis included all indicators consisted of one indicator to each.

Are Islamic insurance operation	Q11	Similarities and Differences of Islamic			

The path coefficients and significance outcomes of the Smart PLS structural model (or inner model) for Sudan, results are presented in Figure 1. The bootstrap samples are used to estimate the statistical significance of the PLS path model coefficients.

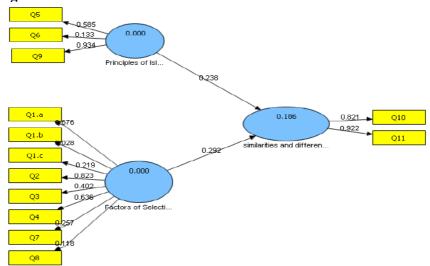

Figure 1: PLS Structural Model of similarities and differences - Sudan

The result of the first hypothesis to show the sustainability in operation of Islamic insurance is shown in Table 2, for Sudan is strongly supported (p<0.01) by the empirical outcome of the structural model. Sudan shows supported result by the question of Principle of Islamic insurance where the t-value is 1.932. The sign of both the coefficients is consistent with the expectation, but the effect is not strong enough (t-value 2.876) to be significant. The expectation was:

## The similarities and the differences in Islamic insurance models affect the operation.

Another sustainable challenging issue on the ownership of the Islamic insurance fund and the surplus distribution accumulated from the risk fund are some of the many issues faced by this questionnaire specially when answering item 5 (Does your Islamic insurance company disclose appropriate information to you on the management of Policyholders fund?), the result showed low t-value (0.3806).

Table 2: First hypothesis testing result- Sudan

Table 2.1 list hypothesis testing result- Sudan				
Hypothesis	Relationship	t-	p-	conclusion
		value	value	
Sudan				
$H_1$	Factors of selection → Islamic insurance principles	3.116	0.292	Supported
$\mathbf{H}_1$	Principles of Islamic insurance Islamic insurance principles	1.932	0.238	Supported

This part is focused on the Protecting one another that governs Islamic insurance between the models in Sudan, while considering the models' operation globally, contract design, policyholder fund, surplus distribution, claim handling, disclosure/ transparency, principle /practice, operators, investment, and Shari'ah board members activities. It shall analyze the Protecting one another in the models that constitute

the *modus operandi* of the insurance and shall compare between the models in various jurisprudence. The questionnaire has been set-up to answer the research question:

Do the similarities and differences in Islamic insurance models affect the operation (contribution-underwriting-claim-surplus) of each model practiced in the selected country?

Table 3 points out all the constructs of Operators' questionnaires and their indicators. The path coefficient analysis included all indicators consisted of one indicator to each.

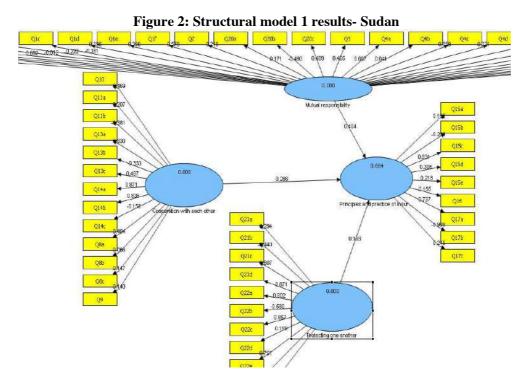

Table 3: Measurement items of the constructs - operator's indicator

Table 5: Measurement items of the constructs – operator's indicator			
Construct	Items	Indicators	
The <i>Qard Hassan</i> is permissible to mitigate against default in the payment of the claims	Q10	Cooperation with each other

This model is practice in this organization	Q16	Principles and practice of insurance with Shari'ah rules	
Islamic insurer receive an absolute fixed	Q17	Principles and practice of insurance	

amount of fees		with Shari'ah rules
From Shari'ah perspective which model	Q21	Protecting one another
are Shari'ah compliant		
Do you agree to develop standard	Q22	Protecting one another
processes for		
Shari'ah compliance, audit and review	Q23	Protecting one another
of the Shari'ah rulings		
Do you agree to have Islamic insurance	Q24	Protecting one another
model globally as best practice		

In this specific section, the partial least square (PLS) Path Modeling aims to estimate the relationships among operator's respondents in the questionnaire distributed from Q1 to Q24.

The aim of the model as in Figure 2 was to analyze the influence of the latent variables: operation the business paradigm, fund and surplus distribution, and *Protecting one another* on the dependant variable, Protecting one another. Whereas Protecting one another only consisted of one indicator which was assumed to be able to explain the latent variable completely, operation the business paradigm, fund and surplus distribution, as well as *Protecting one another* which were assumed to reflect variations in the latent variable.

Mutual responsibility, Cooperation with each other, and *Protecting one another*, statistical t-value for Sudan respondents showed significant results varied from 1.4197 to 2.8991

Table 4: PLS Results- the Protecting one another of Islamic insurance models for Sudan

	Original Sample (O)	Sample Mean (M)	Standard Error (STERR)	T Statistics (IO/STERRI)
Sudan				
Cooperation with each other - >Protecting one another	0.2861	0.2785	0.116	2.4669
Mutual responsibility ->Protecting one another	0.4037	0.4412	0.1392	2.8991
Protecting one another ->Protecting one another	0.1934	0.1842	0.1362	1.4197

Therefore the second objective of the research which is: To examine the principles of insurance and *Shari'ah* rules that governs Islamic insurance has been achieved, which implies why the Islamic insurance is sustained in Sudan.

The third challenge of sustainability is shown in the PLS result in Table 5 points out, that the model explained (92.1 percent) of the variance in the frequency to select rationale model with respect to selected latent variables. Contract Design and Principles and Practice of insurance were found to be statistically significant at the p<0.01 level and Surplus Distribution statistically significant at the p<0.05 level. Investment Distribution and Policyholder's fund Distribution were not found to be statistically significant in the model. As Contract Design and Principles and Practice of insurance were found to be statistically significant in the model and furthermore had the highest path coefficient there is sufficient evidence to support the third hypothesis, that Contract Design and Principles and Practice of insurance are the most important reason for *Shari'ah* board members to select the rationale model. Accordingly hypothesis 3 is supported.

Table 5: PLS Results - Rationale selected model

Item	Path Coefficient	t-value
Rationale Model Selection- Sudan		
Investment Distribution	***0.340	1.902
Policyholder's fund Distribution	***0.710	7.633
Contract Design	-0.811	0.997
Surplus Distribution	**0.141	1.014
Principles and Practice of insurance	-0.092	2.315
$R^2 = 0.921$		

The path analysis using Smart PLS demonstrates the effects of different constructs (Contract Design, Principles and Practice of insurance, Distribution, and Claim & Transparency) according to the interdependencies stated in the assumption (The Rationale Model) and along with their corresponding levels of significance (t-values). Bootstrapping resampling served to test the level of significance of the path coefficients (pc) as in Table 6.

6: PLS Results - Rationale selected model

Item	Path Coefficient	t-value
Model Harmonization with legal busines	s operation - Sudan	
Contract Design	**0.186	1.2741
Fund distribution	***0.677	6.1022
Claim & Transparency	***0.543	4.6104
Principles and Practice of insurance	***0.874	5.9500
$R^2 = 0.869$		

<sup>\*\*</sup>Significant at the p<0.05 level; \*\*\*Significant at the p<0.01 level

# 5. CONCLUSION

Since the Sudan government determined to apply the *shari'ah* rules in the country to all sectors and economy insurance as one of the sector affected by that rules, this result match exactly why Sudanese customers select Islamic insurance, where there is no conventional insurance for the customers to compare or select based on any other factor. Insurance whether it is Islamic or conventional is recognized on a number of specific basic principles and upon which its fundamental legal and technical applications are based, these principles work for the general insurance. Those principles resolve the way to calculate the compensation for the insured in case of maturity protect the insurer from moral hazard from the insured and all these minimize expenses for the organization to maximize profit.

This research also has implications for sustainable practice. The important Islamic insurance factors affected participants s in models usein Sudan means that attempting to recognize it and measure it may be a good management practice in order to ensure use continuance. At the same time, providing a supportive environment from the organizations, media and government also improves the customers' attraction.

The sustainable practice of the principles and practice of Islamic insurance with *Shari'ah* rules in this study would assist operators in two ways. First, the author has provided a range of scales in nine sections as: Contribution/Contract design, Policyholder Fund, Surplus Distribution, Claim/ Handling, Disclosure/ transparency, Principle/ practice, Operators views, Investment views, and *Shari'ah* Board members' suggestions. These scales can be fruitfully used by insurers to measure various factors of Islamic insurance system models after its implementation. Second, the model which has established relationships between these latent variables holds great secure as a diagnostic tool for identifying and isolating the principles and practice of insurance with *Shari'ah* rules problems.

# SHARIAH ISSUES RELATED TO OWNERSHIP OF TAKAFUL BENEFIT AND HIBAH IN FAMILY TAKAFUL IN MALAYSIA

Nan Noorhidayu Bt Megat Laksana<sup>1</sup> Nurdianawati Irwani Abdullah<sup>2</sup> Akhtarzaite Abd Aziz<sup>3</sup>

#### **ABSTRACT**

This preliminary paper will explore and identify the issues on ownership of  $tak\bar{a}ful$  benefit to determine the ownership in Participant Special Account (PSA) or  $tabarru\tilde{N}$  fund since the ownership issue is much related to hibah issues. Besides, the researcher will identify the problem facing in hibah issue especially the validity of making hibah and the conditional time of executing hibah to the participant in Participant Personal Account (PA). This research adopts qualitative and quantitative methods and the instrument of these methods is semi-structured interviews. In order to achieve the objectives, primary data will be collected to solicit the views, opinions and experiences of  $Shar\tilde{E}\tilde{N}ah$  advisors,  $Shar\tilde{E}\tilde{N}ah$  officers and  $tak\bar{a}ful$  experts. Through this study, it will provide crucial insights to the literature by revealing whether the nomination process which practice among all  $tak\bar{a}ful$  operators in Malaysia is standardised and follows the Islamic Law of inheritance ( $far\tilde{E}id$ ) or by the practice of hibah in the distribution of  $tak\bar{a}ful$  benefits.

**Keywords**: Ownership, takaful benefit, *hibah*, family takaful.

#### 1. INTRODUCTION

In family *takāful*, there are two different accounts namely, Participant Personal Account (PA) and Participant Special Account (PSA). According to Nasser (2011), Participant Personal Account refers to the investment which is done by the *takāful* operator on behalf of policyholder and the profit will be shared between policyholder and the *takāful* operator according to a pre-agreed ratio. Meanwhile, Participant Special Account (PSA) refers to the policyholder's contribution in the form of *tabarruÑ* which will be placed in this fund and will be used to fulfil the obligation of mutual help if any misfortune arising from death or permanent disability.

Meanwhile, nomination refers to authorizing a person in a *takāful* policy to receive and administer the *takāful* benefits upon the death of the insured (Younes, 2010). The *takāful* operator needs to take the responsibility to distribute the *takāful* benefits to the nominee. In nomination process, the distribution of *takāful* benefit is different to the Muslim participant and non-Muslim participant. For Muslim participant, a nominee is considered as an executor while for non-Muslim participant, a nominee will considered as an absolute beneficiary. It was clearly provided by the provision under Section 167(1) and Section 167(2) of the Insurance Act 1996 that the nominee (Muslim) acts as an executor and not as an absolute beneficiary. Thus, an executor must distribute the monies to the beneficiaries who are determined according to Islamic law of inheritance (*farÉ il*).

Currently in practice, some *takāful* operators in Malaysia provide an option of giving *hibah* in nominations process to the participants in a family *takāful* plan (nurdianawati, 2010). Besides, according to Mohd Shahrulnizam (2010), the only *takāful* operator in Malaysia that has already

<sup>1</sup> PhD candidate at Institute of Islamic Banking and Finance (IIBF), International Islamic University Malaysia, Kuala Lumpur. Tel: 013-2391877, Email: <a href="mailto:faryzdayu@yahoo.com">faryzdayu@yahoo.com</a>

<sup>&</sup>lt;sup>2</sup> Nurdianawati Irwani Abdullah is an Associate Professor at Department of Finance, Kulliyyah of Economics and Management Sciences, International Islamic University Malaysia, Email: <a href="mailto:irwani@iium.edu.my">irwani@iium.edu.my</a>

<sup>&</sup>lt;sup>3</sup> Akhtarzaite Abd aziz is an Associate Professor at Department of Fiqh and Usul al-Fiqh, Kulliyyah of Islamic Revealed Knowledge and Human Sciences, International Islamic University Malaysia, Email: drzetty@yahoo.com

applying *hibah* is *takāful* Ikhlas, while other *takāful* operators still using *farÉ'iì* method for the distribution process. In this situation, the nominee will be considered as a sole beneficiary through *hibah*. It is different in nomination process without *hibah*, where the nominee is merely considered as an executor. Furthermore, according to the *Sharī'ah* Advisory Council of Bank Negara of Malaysia on 21<sup>st</sup> April 2003, participants can give the *takāful* benefits as *hibah* since it is a right of the participant itself.

Recently, the Section 2 of IFSA 2012 limits the beneficiaries of takāful benefits reads as follows: proper claimant means a person who claims to be entitled to the whole or part of the takaful benefits under a takaful certificate as executor of the deceased takaful participant, parent or guardian of an incompetent nominee or an assignee or who claims to be otherwise entitled to the takaful benefits under the relevant law

Based on the clause above, it is clearly mentioned about the limitation of beneficiaries which include spouse, children, employee and dependent. In nomination process,  $tak\bar{a}ful$  benefits can be given to the beneficiaries only under Permissible  $Tak\bar{a}ful$  Interest (PTI) or Insurable Interest. Besides, these four categories of the beneficiaries may receive  $tak\bar{a}ful$  benefits as simply as can according to the nomination form which is appointed by the policyholder if he died.

With regards to the clause above, the categories of the beneficiaries of  $tak\bar{a}ful$  benefits is limited to four categories only. However, the issue that might be appears here, if the policyholder wants to give  $tak\bar{a}ful$  benefits other than four categories that mentioned earlier. Therefore, according to IFSA 2012, the policyholder may give  $tak\bar{a}ful$  benefits other than four categories through hibah. The purpose of giving  $tak\bar{a}ful$  benefits through hibah is to address the limitation in nomination. When hibah form is signed by the policyholder to give the beneficiaries  $tak\bar{a}ful$  benefits, he may appoint anybody that he likes to receive the  $tak\bar{a}ful$  benefits.

In addition, some scholars argue that, the takaful policies are meant to secure or protect the rights of the close beneficiaries, especially the immediate family who their lives depend on him. Thus, distributing the sum covered as  $far \acute{E}'i \grave{l}$  might hinder the objective of the takaful contribution. Maybe the deceased has an adopted son who still dependent on him, but not eligible as an heir through  $far \acute{E}'i \grave{l}$ . He is the real beneficiary compared to those who not dependent on the deceased like his uncles and aunties (Mohd Shahrulnizam, 2010). Rasulullah s.a.w once said that, as reported in Sahih Muslim (had $\acute{E}$ th number 3991) as follow:

"...to leave your heirs rich is better than to leave them poor, begging from people; that you would never incur an expense seeking therewith the pleasure of Allah, but you would be rewarded therefor, even for a morsel of food that you put in the mouth of your wife."

Therefore, it is better to make the sum covered as *Hibah*, so that it will benefit those who really in need and achieve the real intention or objective of *takaful* contribution.

Thus, this study will explore and examine the issues on ownership of  $tak\bar{a}ful$  benefit to determine the ownership in Participant Special Account (PSA) or  $tabarru\tilde{N}$  fund since the ownership issue is much related to hibah issues. Besides, the researcher will identify the problem facing in hibah issue especially the validity of making hibah and the conditional time of giving hibah to the participant in Participant Personal Account (PA). Finally, this study also will provide an empirical study related to the issues in this research in order to examine the theoretical aspects is relevant to the practice of  $tak\bar{a}ful$  industry.

#### 2. LITERATURE REVIEWS

#### 2.1 Definition of Property

According to Zuhaylê (1989), the Arabic word  $m \dot{E}l$  includes all things that can be possessed and owned by individuals. Furthermore, Saleem (2012) added that things which are cannot possess such as free air, birds in the sky, fish in the river, and undiscovered minerals inside the earth or the heat from the sun are not considered as private property ( $m \dot{E}l$ ). Thus, a thing could only be considered as property if it is beneficial use in accordance with the commonly accepted customs.

Muslim Jurists of *fiqh* have different opinions on the definition of property. According to Ibn al-'AthÊr (1991), property (*mÉl*) means everything that one can own. Besides, Ibn ManĐËr (1990), stated that *mÉl* as things that can be possess and can be owned. Thus, according to Azman (2008), these definitions originally used by the Arabs to refer only to gold and silver, however, its application was further extended to include things owned physically, as well as camels.

Moreover,  $Hanaf\hat{E}$  defines property  $(m\acute{E}l)$  as a thing that can be possessed and used by the people (Zuhayl $\hat{E}$ , 1989). Ibn  $\tilde{N}$ óbid $\hat{E}$ n (1998), also added that  $m\acute{E}l$  as a thing that is desired by human nature and also is capable of being stored when it is needed. The  $Hanaf\hat{E}s$  limits the meaning of property to valuable things that individual can own or possess and store for the time of necessity (Saleem, 2012). Hence, according to  $Hanaf\hat{E}s$  also, right and usufruct are not  $m\acute{E}l$  because they are not capable of being stored.

The definition of property  $(m \dot{E}l)$  from other Schools of fiqh such as  $Syafi\tilde{N}Es$ , MElikEs and  $\times anbalE$ , includes all valuable things which have financial value and in the case of destruction, the destroyer is liable to pay compensation (ZuhaylE, 1989). Besides, according to them, the financial value of a certain thing determines whether it is considered as property or not.

Furthermore, they do not accept the opinion that stated if a certain thing, usufruct or a right has financial value, it is considered a property. They also added that assets are owned not necessarily for their own sake but for the sake of usufruct and rights cannot be accepted. On the other hand, usufruct has monetary value can be considered as property (Saleem, 2012). Therefore, it can be said that in the modern application,  $tak\bar{a}ful$  benefit is also treated as property ( $m\dot{E}l$ ).

The statement that mentioned  $tak\bar{a}ful$  benefit is also treated as property  $(m\dot{E}l)$  has been stated and enacted by the Islamic Financial Services Act (IFSA) 2012 as follows;<sup>4</sup>

Property means any movable or immovable property, whether tangible or intangible and includes;

- (a) any right, interest, title, claim, chose in action, power or privilege, whether present or future, or whether vested or contingent, in relation to any property, or which is otherwise of value;
- (b) any conveyance executed for conveying, assigning, appointing, surrendering, or otherwise transferring or disposing of immovable property of which the person executing the conveyance is the proprietor or has possession or in which he is entitled to a contingent right, either for the whole interest or for any less interest;
- (c) any security, including any stock, share, and fund;
- (d) any negotiable instrument, including any bank note, bearer note, Treasury bill, dividend warrant, bill of exchange, cheque and negotiable certificate of deposit; or
- (e) any mortgage or charge, whether legal or equitable, guarantee,

<sup>&</sup>lt;sup>4</sup> Clause 2, Islamic Financial Services Act (IFSA) 2012.

lien or pledge, whether actual or constructive, letter of hypothecation, trust receipt, indemnity, undertaking or other means of securing payment or discharge of a debt or liability, whether present or future, or whether vested or contingent;

To sum up, it can be stated that, from the clause it is clearly mentioned about  $tak\bar{a}ful$  benefit is also treated as property  $(m\dot{E}l)$  as any right, interest, title, claim, chose in action, power or privilege or whether present or future and others. Therefore, the issue whether  $tak\bar{a}ful$  benefit can be treated as property  $(m\dot{E}l)$  cannot be denied or questioned anymore as this issue has been recently gazette in the provision of Islamic Financial Services Act (IFSA) 2012.

# 2.2 Definition of Ownership

Ownership signifies the rights to exploit and utilize the wealth and resources provided by Allah s.w.t. and such right is transferable through legitimate methods. Moreover, the owner deserves the right of ownership as long as he utilizes the gift endowed to him properly. The object of ownership, for example  $m\dot{E}l$  must be "something of value, permissible and capable of being possessed" (Qalri, 1973). It also can be tangible or intangible like intellectual property.

There are many definitions of ownership in *Islém*. Al-Korafi (2001), states that the ownership is a legal statement, on something or on its utility that gives right to whom it is granted to use the owned thing and to get compensation for it. Besides, Ibn Ashat (n.d), added that ownership is the ability of acquiring the legal right to use something or its utility by someone or his representative by proxy. Ibn Taymiyyah (1978), states that the ownership is 'the legal ability to use something", while Khafif (1990), defines ownership as the legal ability that allows someone to exclusively use and benefit from something.

According to Al-ZuhaylÊ (2003), ownership (*al-milkiyyah*) is an Islamic legal term which signifies the relationship between a human being and property which renders the property specifically attached to him, thus, giving the owner the right to deal in that property unless there is a legal impediment preventing him from such dealing. Besides, Yunus (n.d), added that the Hanafis consider usufruct and legal right as owned item and not as property hence rendering ownership a more general concept than property.

With regards to the definition of ownership, jurists have defined ownership in similar way, perhaps the most appropriate definition is "an exclusive association of the owned item with its owner, which gives the owner the right to deal in what he owns in any way that is not legally forbidden" (Ibn Al-Humam, n.d). If refer to this definition, the acquisition of a property by an individual entitles him to exclusive association with that property in legal way, thus, using or dealing with it as long as there is no legal impediment to such dealing.

Moreover, the exclusiveness of the ownership prevents others from using the property or dealing in it without legal authorization such as guardianship, agency and others. However, it is crucial to state that, ownership is not limited and focus on social and legal aspects, but it also gains political significance as it relates to a number of claims, liberties, powers and immunities in relation to the things or property a person owns. According to Yusuf (1977), he added that the right of ownership remains as the exclusive domain of owner as long as he uses it properly and does not harm to others.

In *IslÉm*, the right of man over things is limited and qualified. This is due to the fact that everything being subservient to Allah s.w.t. law and will and the human being as the vicegerent of Allah. Therefore, it will lead human to deliver and fulfill his trust with utmost care and in a manner that is in accordance with the *SharīÑah* principles.

From western jurist, Holland (1900) defines ownership as the essence of such rights lays not so much in the enjoyment of the thing, as in the legal power of excluding others from interfering with the enjoyment of it. It can be summarized the above definitions by saying that the ownership is a legally defined relation between a person and a thing and its utility that one can use only in *halÉl* ways and prevent others from using it unless by proxy and the owner of the thing can get compensations for it.

#### 2.3 Division of Private Ownership

According to Saleem (2012), private ownership can be classified into two broad divisions which are complete ownership and incomplete ownership.

#### 1. Complete Ownership

This type of ownership combines both legal and beneficial ownership in a person which entitles him to all right over all property. In other words, it can be said that, the owner has complete authority to use, exploit or acquired his property according to a lawful way. An example of this type of ownership is he may sell his property, give it as a gift, or create a waqf or give it to others through making a will (waliyyah). Besides, this form of ownership is continued to exist as long as the owner does not transfer the property to the others through valid contract.

## 2. Incomplete Ownership

Under incomplete ownership, it's separated into three types which are ownership over right, ownership over a property only and ownership under usufruct only (Saleem, 2012).

# a. Ownership over Rights (×uqËq al-IrtifÉq)

This type of right is refer to the right included in a land such as the right of irrigation, the right of water, the right of drainage, the right of passage, the right of upper or lower floor neighbours and others. These rights are included to the land and cannot be independently traded. Therefore, anyone who owns the land owns these rights.

# b. Ownership over a Property only (Milk al-Nayn)

This ownership refers to a situation where a property is owned by one person and its usufruct by another. For instance, in a leased house the legal ownership is belongs to the lessor while the usufruct is owned by the lessee. In addition, the lessee has the right to take possession of the house and use it for the period of the lease. Therefore, during the leasing period the owner's right over his own property is not complete as he cannot lease the same house to others or cannot sell it without the lessee's permission (Saleem, 2012).

## c. Ownership over Usufruct (Milk al-ManfaÑah)

Usufruct refers to an owner legally owns the asset another person enjoys the benefits of the asset. Thus, ownership over usufruct can be gained through borrowing  $(i\tilde{N}\acute{E}rah)$  and lease  $(ij\acute{E}rah)$ , for instance a person borrows a book or leases a house. Besides, benefical ownership could also be obtained through waqf, where a person transfers of a certain property to the ownership of Allah for the purpose of charitable as recognised by the Islamic law.

#### 2.4 Takāful Benefits as a Mal (Property)

The question that will be raise here regarding the property is, whether  $tak\bar{a}ful$  benefit can be treated as a property  $(m\dot{E}l)$ ? Basically, we will give a real and tangible asset as a gift to another person. For example, during our son's  $20^{th}$  birthday, we may give him a car as a gift. Its normal and no issues related to that practice. On the other hand,  $tak\bar{a}ful$  benefits are intangible as at the time you make it as Hibah, it is still an intangible benefit and not been cash yet (Mohd Shahrulnizam, 2010). Thus, is it qualified to be made a gift? Should gift is a real and tangible assets only? In order to answer this kind of question, an analysis based on the literature review may help to answer this question. Therefore, as mentioned earlier in the literature review it can be concluded that property can be included as tangible or intangible property.

The word  $m\acute{E}l$  are mentioned 83 times in the  $Qur'\bar{a}n$  and  $a\acute{l}\acute{E}d\^{E}th$ . It is also categorized among the five essential values under the protection of  $Shar\bar{\imath}\~Nah$ . However, the  $Qur'\bar{a}n$  and the Sunnah do not mentioned specifically the meaning of  $m\acute{E}l$ . There was a disagreement among Schools of fiqh as to what amounts to property. For examples, they did not agree on whether usufruct, debt and certain rights could be considered as properties or not.

However, in modern times, intellectual properties, patents, copyrights, franchises, confidential information and trade secrets are recognized as new forms of property. For  $tak\bar{a}ful$  benefit, it can be considered as property and no doubt to categorize it in one of the characteristic of property. Besides,  $tak\bar{a}ful$  benefit can be includes under intangible property. This is because intangible property refers to a property which does not have its own physical or material existence. The examples of intangible properties are services, financial rights and intellectual properties.

Furthermore, according to Islamic Financial Services Act (IFSA) 2012,  $tak\bar{a}ful$  benefit can also treated as  $m\acute{E}l$  (property) because from the clause, it is clearly mentioned about  $tak\bar{a}ful$  benefit as any right, interest, title, claim, chose in action, power or privilege or whether present or future and others. Therefore, the issue whether  $tak\bar{a}ful$  benefit can be treated as property ( $m\acute{E}l$ ) cannot be denied or questioned anymore as this issue has been recently gazette in the provision of Islamic Financial Services Act (IFSA) 2012.

Clause 2, IFSA also mentioned *takāful* benefit includes any benefit, pecuniary or not which is secured by a *takāful* certificate and 'pay' and other expressions, where used in relation to *takāful* benefit, shall be construed accordingly (Azman, 2008). Besides, *takāful* certificate "includes a *takāful* cover note or any contract of *takāful* for family *takāful* business or general *takāful* business whether or not embodied in or evidenced by a document in the form of a *takāful* certificate". <sup>5</sup>

# 2.5 Ownership of Takāful Benefits

After stating that  $tak\bar{a}ful$  benefit can also treated as  $m\dot{E}l$  (property), the question that will be raise in this statement is who own the  $tak\bar{a}ful$  benefit. This issue related to the ownership of the  $tak\bar{a}ful$  benefit. In fact, any property should have an owner. Therefore,  $tak\bar{a}ful$  benefit is owned by the participant in two ways; firstly, from the Participant Account (PA) and secondly from the Participant Special Account (PSA).

According to Clause 2, Islamic Financial Services Act (IFSA) 2012 participant means "any person who is permitted by the rules governing a payment system to send payment instructions or settlement instructions to the payment system and who is bound by the rules governing the payment system". Therefore, in family *takāful*, there are two different accounts namely, Participant Personal Account (PA) and Participant Special Account (PSA).

As mentioned earlier in the literature review, Participant Personal Account (PA) refers to the investment which is done by the  $tak\bar{a}ful$  operator on behalf of policyholder. Meanwhile, Participant Special Account (PSA) refers to the policyholder's contribution in the form of  $tabarru\tilde{N}$  which will be placed in this fund and will be used to fulfill the obligation of mutual help if any misfortune arising from death or permanent disability.

The issue that rises regarding ownership is who owns the Participant Account and Participant Special Account. Basically PA is owned by the participant, while in PSA is owned collectively by the group of participant. At one stage, *takāful* benefits belong to the participant in Participant Account maybe it can be considered as private ownership and complete ownership. The reason of being participant to have private ownership is because the owner entitles to a bundle of rights over a certain property to the exclusion of others and this allows him to exploit it and to appropriate or dispose of it in a lawful way. Thus, this type of ownership suitable to apply as a participant can become an owner of a property through valid contracts. For examples, contracts of sale, gift, donation and will. Furthermore,

-

<sup>&</sup>lt;sup>5</sup> Islamic Financial Services Act 2012.

for PA it is suitable to include under complete ownership as this type of ownership combines both legal and beneficial ownership in one person and entitles him to all rights over that property or *takāful* benefits.

At another stage,  $tak\bar{a}ful$  benefits belong collectively by the group of participant under PSA that may consider also as private ownership. However, under this type of ownership, it can be classified into incomplete ownership and ownership over usufruct only ( $milk\ al-ManfaNah$ ). The reason of why PSA includes under incomplete ownership and ownership under usufruct because while an owner legally owns the asset another person enjoys the benefits of the asset as he owns its usufruct and this also could be referred as beneficial ownership. Even though, this type of ownership is not exactly same with the function of PSA, however it can be apply as ownership over usufruct because it entitles the participant to make a will (waliyyah) where after his death his property or its usufruct should belong to another.

In addition, ownership over usufruct could also be granted through permission where a person permits another to use, for instance his car or computer. Therefore, in PSA, the contact of  $tabarru\tilde{N}$  is used to mutually agreed and help the other participant in the event of lost or death. Furthermore, the participants mutually agree to transfer  $tak\bar{a}ful$  benefits to the nominee in the event of death of the policyholder.

Both PA and PSA can be classified into private ownership. However, under private ownership it can be classified into two types of ownership which are complete ownership and incomplete ownership. The comparison between complete ownership in PA and incomplete ownership in PSA is, in PA the participant entitles him to all rights over that property or  $tak\bar{a}ful$  benefits. Meanwhile, according to fiqh schools usufruct is a type of property and could be inherited. Thus, a beneficial ownership entitles a person to possess the property and to treat the property as a trust and take all necessary measures to protect it.

# 2.6 Family Takāful

A family *takāful* plan is a long term saving and investment instrument which provide a financial benefits in the event of tragedy to the customer or participant (Zuriah and Hendon, 2009). Similar to conventional insurance, family *takāful* plan can be purchased by an individual or by a group such as employees of an organization. According to Nasser and Jamil (2011), family *takāful* plan will be eligible for personal tax relief same with life insurance. Besides, the amount of relief for an ordinary family *takāful* plan is RM6,000 per year less any contributions paid to approved retirement benefit schemes.

In family *takāful* plan, a participant will pay the contribution and will credited into separate accounts which are Participant's Account (PA) and Participant's Special Account (PSA) under *mulÉrabah* contract or Participant's Risk Account (PRA) under *wakÉlah* contract (Zuriah and Hendon, 2009). Moreover, according to Engku Rabiah and Odierno (2008), the *takāful* benefits consist of the balance from the PA prior to the death of the participant and the unpaid amount of *takāful* contribution from the date of the participant's death until the date of maturity of the *takāful* certificate from the PSA.

The family  $tak\bar{a}ful$  plan is a financial programme that pools efforts to help the needy in times of need due to death or other hazard resulting in personal injury and disablement. However, scholars and  $tak\bar{a}ful$  practitioners viewed that money from PA is considered as inheritance whereby the nominee is responsible to distribute it according to the Islamic law of inheritance since this money is the right of the participant during his lifetime. On the other hand, money from the PSA ( $tabarru\tilde{N}$  account) which is considered as  $tak\bar{a}ful$  benefit is not part of the inheritance since it is not the right of the participant during his life.

The argument among the scholars is on PSA ( $tabarru\tilde{N}$  account). The issue will involve is on the ownership of the  $tak\bar{a}ful$  benefit. The validity of a nominee to be considered as a sole beneficiary is still questionable.

#### 2.7 Hibah in Family Takāful

Currently in practice, the concept of *hibah* is widely practised in the family *takāful* products which are offered by some *takāful* operators. *Takāful* Ikhlas is the first *takāful* operator which provided a proposed *hibah* form in family *takāful*. In the event of the death of policyholder, the policyholder can give away the *takāful* benefits as a form of *hibah*.

In addition, some scholars argue that, the takaful policies are meant to secure or protect the rights of the close beneficiaries, especially the immediate family who their lives depend on him. Thus, distributing the sum covered as  $far \acute{E}'i \acute{l}$  might hinder the objective of the takaful contribution. Maybe the deceased has an adopted son who still dependent on him, but not eligible as an heir through  $far \acute{E}'i \acute{l}$ . He is the real beneficiary compared to those who not dependent on the deceased like his uncles and aunties (Mohd Shahrulnizam, 2010). Rasulullah s.a.w once said that, as reported in Sahih Muslim (had $\acute{E}$ th number 3991) as follow:

"...to leave your heirs rich is better than to leave them poor, begging from people; that you would never incur an expense seeking therewith the pleasure of Allah, but you would be rewarded therefor, even for a morsel of food that you put in the mouth of your wife."

Therefore, it is better to make the sum covered as *Hibah*, so that it will benefit those who really in need and achieve the real intention or objective of *takaful* contribution.

#### 2.8 Definition of *Hibah*

According to Haqqi (2009), in Islamic law literature, the terms *hibah*, *hadiyyah*, *ruqba*, *'umra* and *minhah* applied to a transaction in which the ownership of property is transferred from the first party to the second party. Literally, *hibah* means signifies the donation of a thing from which the donee may derive a benefit. Meanwhile, in legal terminology *hibah* is "to give the ownership of property to another without compensation" (Al-Shirbini, 977H).

Besides, hibah is a contract by which a person during his lifetime transfers his property with immediate effect and without consideration to another person who accepts it. In other words, Haqqi (2009) also added that hibah is a transfer of the right of property in the substance or tamlik al-Nain by one person to another without consideration or Niwal, but the absence of consideration is a condition in it. Thus, the person who offers the property to others binds himself unilaterally and it should be given without anything in return.

Hibah differs from *ladaqah* whereby the latter is a gratuitous transfer of property made with the intention of obtaining recompense in the hereafter. Meanwhile, according to Al-Shirbini (977H), *ladaqah* is "property given for a thing which is pleasing to God". However, *hibah* differs from *hadiyyah* due to *hadiyyah* is property brought or sent as a gift to someone.

On the other hand, according to Saleem (n.d), *hibah* includes *hadiyyah* and *ladaqah*. If the intention is to gain closeness to AllÉh s.w.t by helping the poor it is called *ladaqah*. Meanwhile, if it is taken to the person out of respect to whom it is given, it called *hadiyyah*. Therefore, it can be concluded that, every *ladaqah* and present are *hibah* but not the reverse. Besides, every *hibah* is not necessary *ladaqah* or present. Thus, a contract of *hibah* takes effect by transfer of ownership and by cancellation of discharge for example the gift of a debt to the debtor (Saleem, n.d).

In addition, *hibah* should be given during the lifetime of the donor otherwise it will consider as *waliyyah*. The giving of *hibah* whether great or small is praised. Besides, giving or exchanging gifts

may create brotherly feelings among people. Thus, it can be seen in the example where, if a man has three sons, one of whom dies in the lifetime of his father leaving children, these children are excluded from the inheritance of their grandfather by their uncles. However, the grandfather may provide for them by way of *hibah*. Therefore, he may in his health also make a gift to one of his children whom he thinks deserve to have a greater position of his wealth and this act should not harm his other children (Saleem, n.d).

#### 2.8 Conditions of Hibah

According to *Hanafis*, *hibah* has two conditions, which are offer and acceptance. Some of the *Hanafi* scholar's added pillar of *hibah* is receipt or possession (*qabI*). Therefore, it can be concluded that, whether it is by offer and acceptance, it will complete when it is possessed or received by the donee. However, according to the majority of *Fiqh* schools, *hibah* has four conditions, which are donor (*al-wÉhib*), donee (*al-mauhËb lahu*), gift (*al-mauhub*) and expression (Saleem, n.d). Besides, according to Al-ÑÓqil (1978), the conditions of *hibah* are *ÊjÉb and qabĒl* (give and accept), donor and done and expression (*Îighah*). Thus, the discussion conditions of *hibah* will be explained as follows.

#### i. Gift (Al-Mauhub)

The details of gift (*al-mauhub*) as the condition of *hibah* are as follows (Saleem, n.d);

- 1. The property should be in existence. This means that anything over which dominion or the right of property may be exercised or anything which can be reduced into possession or exists as a specific entity or as an enforceable right or anything that comes within the meaning of  $m \dot{E} l$ , may form the subject of gift. Furthermore, the property should be capable of delivery. This includes the gift of all valuable properties, usufruct, negotiable instruments, proprietary rights and landlord's right are valid.
- 2. The gift (*al-mauhub*) should be owned by the donor, it cannot be *mubÉh* (common property). This means that the property is rented or pledged cannot be given as a gift to others as the ownership is not complete and the donor has no possession.
- 3. The thing given must be known, familiar and precisely determined. For example, it is not valid if a person says that: he has given one of these two houses as a gift.
- 4. The existence of things should have its separate and independent. If it is divisible, it must be divided and distinguished from, not joined to or occupied with anything else that is not given. Therefore, it cannot consider as *hibah* when the gift of a crop without the land on which they stand or a tree without a land.
- 5. The gift should come into the possession of the donee (qabì al-mauhëb). The ownership of the donee is not established unless he receives and possesses the gift. Besides, hibah is not permissible without possession. According to Hanafis and ShafieÑs, they argued that qabì is a condition that binds the contract of hibah. The gift is void whether the donor or the donee dies before the receipt. However, if the giver dies before it is collected, then it becomes part of inheritance, unless that gift was maid during his final illness. According to Mélikis, a donee becomes the owner of the gift by the contract of gift, the other schools, however argue that a donee becomes the owner only when he obtains possession of the property.
- 6. According to the majority of the schools, they stipulate that possession of the gift should come with the permission of the donor. Hence, the gift does not become the property of the donee unless it is possessed by the donee with the permission of the donor. On the other hand, *MÉlikis* say that possession (*qabi*) is valid even without permission from the owner.
- 7. Finally, possession could be taken directly or through representatives. For example when a child is given gift, he may receive it through his  $w\acute{E}l\acute{E}$  or when the property is in the hands of the donee as  $wad\acute{E}\~Nah$ , since here is already an existing possession, the give is complete. Therefore, this is the case of the donee in possession.

#### ii. Expressions

The most obvious form through which consent could be express is through spoken words or verbal communication. It is also the most frequently used, as it is easier and clearer. Islamic law does not stipulate the use of specific phrases for expressing consent. However, the words used should show a definite and present intention to form a particular contract.

An offer for the gift can be made expressly. For example, a donor may use the following phrases to constitute a gift contract: I made a gift of this thing to you, I made you the owner of it, I made it for you, this is for you and I bestowed on you or give you this. Furthermore, give can also be made by implication or metaphorically. For example, by sending, receiving or when a husband buys a pair of earring to his wife. Jurists are also said that consent may be expressed through conduct, gestures, writings and any other method that is customarily regarded as indicative of consent.

# iii. ÔjÉb and QabËl

The argument has been made by the  $Hanaf\hat{E}$  which stated that  $\hat{E}j\hat{E}b$  and  $qab\hat{E}l$  is not part of the conditions of hibah. The reason is  $\hat{E}j\hat{E}b$  itself can be considered as pillar of hibah. On the other hand,  $qab\hat{E}l$  is not part of the pillar of hibah because it's considered as a condition ( $shur\hat{E}t$ ) of hibah.

However, according to  $han \acute{E}bilah$ ,  $shafi\~Ne$  and  $m \acute{E}lik\~E$   $\^Ej\'Eb$  and  $qab\~El$  is part of the condition of hibah. The reason is hibah can be considered as a contract and to make a contract, should have  $\^Ej\'Eb$  and  $qab\~El$ .

# iv. Donor (Al-WÉhib) and Donee (Al-MauhËb Lahu)

Transactions could only take place through mutual consent. The issue that who is capable of giving a valid consent is therefore a fundamental issue in Islamic transactions. The consent given by a child or a lunatic to a certain transaction is not valid. They do not have the capacity to manage their wealth or to trade with it. In order to conclude a contract, a person should have the requisite legal capacity (*ahliyyah*). Ahliyyah refers to the legal capacity which enables a person to acquire rights or to undertake obligations.

A donor or a done must be classified or intentionally into  $tabarru\tilde{N}$  because contract of hibah is considered as contract of  $tabarru\tilde{N}$ . Besides, a donor and a done must be matured enough to make hibah, not crazy and can receive the right and obligation. Thus, a donor and a done cannot be considered as insanity, mad or crazy otherwise the contract is void. Insanity refers to an abnormal state where a person's maental capability is affected. All contracts performed by an insane person are invalid (Al- $\tilde{N}$ Óqil, 1978).

## 3. CONCLUSION

This conceptual paper attempts to disclose the  $Shar\bar{\iota}$  ah issues related to ownership of  $tak\bar{a}ful$  benefit and hibah in family  $tak\bar{a}ful$  in Malaysia. The focus of this study is the ownership issue of  $tak\bar{a}ful$  benefit in family  $tak\bar{a}ful$ . In terms of ownership, the study has examined the view of property from  $Shar\bar{\iota}$  ah and non- $Shar\bar{\iota}$  ah framework, devolution and management of property and relation of ownership in  $tak\bar{a}ful$  benefit. Although the  $tak\bar{a}ful$  business in Malaysia consists of both family and general, the study only focuses on the ownership in family  $tak\bar{a}ful$  business. This approach is taken as the family  $tak\bar{a}ful$  business because this type of  $tak\bar{a}ful$  singularly related to death.

Moreover, this study also will provide an empirical study related to the issues in this research in order to examine the theoretical aspects is relevant to the practice of  $tak\bar{a}ful$  industry. Therefore, this study proposes for future development to overcome those  $Shar\hat{E}\tilde{N}ah$  issues in family  $tak\bar{a}ful$ , which is issue on ownership of  $tak\bar{a}ful$  benefit must clearly stated by  $Shar\hat{E}\tilde{N}ah$  Advisory Council of Bank Negara Malaysia in order to avoid any conflict among the legal heir and as a matter of ensuring justice and fair contribution.

# SELECTION FACTORS OF THE ACCEPTANCE AL-IJARAH THUMMA AL BAY (AITAB) IN SHAH ALAM

Remali Yusoff<sup>1</sup> Nor' Azurah Md. Kamdari<sup>2</sup> Dayang Norainie Awang Masri<sup>3</sup>

#### **ABSTRACT**

One of the latest innovative products of Islamic banks is the Islamic hire-purchase facility or *Al-Ijarah Thumma Al-Bay* (AITAB), which designed to meet the current demand of customers that focusing in motor vehicles. Therefore, this research was conducted to study the factors that influenced customers to choose *Al-Ijarah Thumma Al-Bay* (AITAB) in Shah Alam, Selangor. A total of 150 customers in Shah Alam, were selected as respondents through and analyzed using 'SPSS for Window' version 17.0. The comparative result is from using *Principal Component Analysis* (PCA) in Factor Analysis and the result will delineated into three cluster namely religious obligation, level awareness, and social influence. The main objectives of this study are to determine the relationship between religious obligation, level awareness, and social influences of AITAB among peoples in Shah Alam. Overall, the finding revealed that customers have generally positive views of selection factor. One of the most important factor was religious obligation that shown as important criteria in choosing AITAB facility.

**Keywords:** AITAB, Shah Alam, Islamic Banking, Factor Influences

#### 1. INTRODUCTION

Islamic banking system has emerged as competitive and a viable substitute for the conventional banking system during the last three decades. Islamic banking refers to a system of banking that complies with Islamic law and also known as Shariah law. The core principles that govern Islamic banking are mutual risk and profit sharing between parties, the guarantee of fairness based on an underlying business activity or asset. Activities that involve interest (riba), gambling (maisir) and speculative trading (gharar) are prohibited.

Conventional banking is essentially based on the debtor-creditor relationship between the depositors and the bank on one hand, and between the borrowers and the bank on the other. Interest is considered to be the price of credit, reflecting the opportunity cost of money. Islamic law considers a loan to be given or taken, free of charge, to meet any contingency. Thus in Islamic banking, the creditor should not take advantage of the borrower. When money is lent out based on interest, more often that it leads to some kind of injustice.

The first Islamic bank in Malaysia was established in 1983. In Malaysia, the roots of Islamic banking go back to 1963 when the government established Tabung Haji or Pilgrims Management and Fund Board. Currently, Malaysia has a significant number of full-fledged Islamic banks

<sup>&</sup>lt;sup>1</sup> School of Business & Economics, Universiti Malaysia Sabah.

<sup>&</sup>lt;sup>2,3</sup> Faculty of Business and Management, Universiti Teknologi Mara, Johor

including several conventional institutions who have established Islamic subsidiaries. It is because the response from the consumers towards Islamic products has given an impact to the conventional banking services. In fact, the Islamic banking products are well accepted by the non-muslims too.

The growth of Islamic banking system in Malaysia has enhanced to an introduction of Islamic financial innovations. There was various Islamic finance products produced in Islamic bank such as Al-Ijarah (leasing), Al-Mudharabah (profit sharing), Al-Musharakah (partnership), financial institutions that have a great deal of flexibility, creativity and choice in the creation of Islamic finance products. In this research, researcher only limited to study Al-Ijarah and focusing at Al-Ijarah Thumma Al-Bay (AITAB) facility.

Bank Islam initiated the earliest operation of AITAB in Malaysia. AITAB is one of the latest innovative products of Al-Ijarah in Islamic banks, which designed to meet the current demand and avoid certain risks in the financing of consumer durables and motor vehicles. Since its first inception more than 10 years ago, AITAB has increasingly grown in popularity and continuously expanded partly due to the heightened demand by customers (N. Irwani & Asyraf, 2006). AITAB is considered as one of the Islamic banking products, which adds the Islamic banking financial menus to serve bank customers better. AITAB facility is of value to practitioners in order to increase the sales of Islamic financing products in addition to their efforts to elevate the customer base.

#### 2. BACKGROUND OF STUDY

Islamic leasing (Al-Ijarah) growing fast today and many bank used Al-Ijarah as one of their product for its customers. Prior studies on Al-Ijarah widely investigated in term of economics, legal and financial aspects, accounting, customers' perception and comparison or similarities Al-Ijarah with conventional leasing. However, no study has been carried out to investigate the factor that influenced customer to choose Al-Ijarah in Shah Alam, Selangor. This paper essentially analyzed the factor considered by customer in choosing Al-Ijarah. Al-Ijarah was popularly recognized as Al-Ijarah Thumma Al-Bay (AITAB). In this time, the researcher focuses on AITAB and the sample on customers, which had experienced to used Al-Ijarah or Islamic car financing.

#### 3. PROBLEM STATEMENT

Al-Ijarah in Malaysia has been grown rapidly especially in AITAB transaction. Since its growing faster nowadays, it showed that the Islamic products had a big potential than conventional products. Therefore, this study attempted to investigate the factor that contributes to the fast growing of AITAB from customers in Shah Alam, Selangor. There was increased customer who had buy motor vehicles by using AITAB transaction, but we do not know what factor influencing them to choose AITAB. From this research, we want to determined factor of religious obligation, level of awareness, social influence towards choosing of AITAB.

## 4. OBJECTIVES OF THE STUDY

In general these research objectives are to determine the relationship between the acceptances of AITAB among customers with the religious obligation, the level of awareness, and the social influence.

The research focuses are:-

- I. To determine the relationship between the acceptances of AITAB among customers with the religious obligation.
- II. To determine the relationship between the acceptances of AITAB among customers with the level of awareness.
- III. To determine the relationship between the acceptances of AITAB among customers with the social influence.

## 5. SIGNIFICANT OF STUDY

Al-Ijarah is one of important Islamic products especially for Islamic banking sector that can contribute into Malaysian economic growth. Therefore, researcher hope from this finding of this research it can improve the development in Islamic banking system not only in fully-fledged Islamic banking institution but also in conventional financial institution with Islamic windows.

#### 6. HYPOTHESIS

A hypothesis can be defined as a tentative, yet testable, statement, which predicts what you expect to find in your empirical data. Along this line, hypothesis can be defined as a logically conjectured relationship between two or more variables expressed in the form of testable statement (Sekaran & Bougie, 2003). A null hypothesis ( $H_0$ ) is a hypothesis set up to be rejected in order to support an alternate hypothesis. Alternate hypothesis ( $H_a$ ) is the opposite of null hypothesis (Sekaran & Bougie, 2010). In this research, it is important to test whether Islamic leasing/Al-Ijarah have significant relationship with religion obligation, level awareness and social influence. Therefore, this study attempts to test the following hypotheses:

- I. H<sub>O</sub>: There is no significant relationship between the acceptances of AITAB among customers with the religious obligation.
  - $H_a$ : There is significant relationship between the acceptances of AITAB among customers with the religious obligation.
- II. H<sub>o</sub>: There is no significant relationship between the acceptances of AITAB among customers with the level awareness.
  - H<sub>a</sub>: There is significant relationship between the acceptances of AITAB among customers with the level awareness.
- III. H<sub>0</sub>: There is no significant relationship between the acceptances of AITAB among customers with the social influence.

H<sub>a</sub>: There is significant relationship between the acceptances of AITAB among customers with the social influence.

#### 7. LIMITATIONS

The researcher faced difficulty to search information to do the analysis in order to obtain data collection and information because questionnaire distributed only to customers who had experienced to used AITAB facility or Islamic car facilities offering in Shah Alam, Selangor. It is because we want to look how customers in Shah Alam perception compares with previous studied. Besides, this research is only concentrate in area of Shah Alam. Thus, the information gathered will be slightly different if the researcher does the same research in the other places. People have different background of knowledge and educational level, so their pattern of gathering the information about AITAB would be different from one and the other.

When some of the respondents reluctant to give collaboration to the researcher, it contribute to limitation of cooperation. The progress of the research become slowly and difficulty when some of respondents refuse to give collaboration to answer the questionnaire that given to respondents. Thus, because of that situation the researcher required more time in order to get respond from the respondents chosen.

#### 8. LITERATURE REVIEW

#### 8.1 Overview of Al-Ijarah (IATAB)

Al-Ijarah Thumma Al-Bay (AITAB) is a type of lease contract, in which the legal title of the leased asset will be passed to the hirer at the end or at the end of the rental period when hirer purchase the asset. The asset comprises of machinery, equipment, software and hardware or motor vehicles which are non-hire purchase act goods. Islamic hire purchase had many activities involved such as trade, commerce, industry, agriculture and fish cries, housing and personal advances. In fact, it had been known as a popular technique of financing among some Islamic banks, such as the Islamic Development Bank, Bank Islam Malaysia Berhad, Tabung Haji, and commercial banks in Pakistan (Ahmad, 1995). Besides, Al-Ijarah expand in the world of Islamic banking and finance, though its full potential for financing long-term business assets that be supposed to be look into (Vogel & Hayes, 1998).

According to Seif. I and N. Irwani, (2007), Al-Ijarah contract became one of the most popular financing modes in Malaysia because the fact that only few people can afford to buy house, land or vehicle on cash basis. In Malaysia, Islamic financial institution had introduced vehicle financing as one of the main popular properties based on Al-Ijarah Thumma al-Bay (AITAB) concept due to customer's demand. Almost all banks provide AITAB for vehicles as one of their product financing except Bank Pembangunan and HSBC that provide AITAB for financing of machinery and industrial goods (N. Irwani & Ashraf, 2006).

# 8.2 Religious Obligation

In definition, religious obligation refers to the role of religion in affecting one's choices and activities (Hanudin et al, 2011). There was few studies which initiated the idea that religious obligation were the most factor influences customer chooses Islamic products or services such as AITAB. For instance, according to Sulaiman (2003), the Islamic differences worldview based on

Shariah can influences Islamic society. An Islamic principles, values and goals have to be obeyed by Islamic bank when offering Islamic personal financing. This can help bank to make decision to find Islamic personal financing and influences individual to use Islamic personal financing. Besides, Hanudin (2010) found that adherence to Syariah were found to be a key factor to explain why bank customers choose AITAB facility.

Based on Metwally (1996), religion was the most important factor in figuring attitudes of Muslims towards Islamic banks followed by convenience and traditional services. Further, in 1998, a study was conducted by Metawa and Almossawi on the Bahrain customer's perception and they found the most religion was significance factor to influence customer to use of Islamic bank services than followed by profitability.

A study by Haron, S., Ahmad, N. and Planisek, S., on Bank Patronage Factors of Muslim and Non-Muslim Customers (1994), in a small town at Kedah and Perlis with a Muslim dominant population discovered that, only about 63 percent of the Muslims can understand the distinguish of Islamic bank and conventional banks, while only 39 percent of the Muslims respondents believe that religion is the only reason why people supported the Islamic bank. A parallel circumstances occurred in Singapore, where only 22.6 percent of Muslims deposit money in Islamic banks solely because of religion (Gerrard, Cunningham & J. Barton, 1997).

However, there was studied that stated religious obligation factor not influence customer for using Islamic personal financing. For example, Hanudin et al, (2011) had investigated of customers of two fully fledged Islamic banks in Malaysia: Bank Islam Malaysia Berhad and Bank Muamalat Malaysia Berhad and stated that attitude, social influence and pricing of Islamic personal financing was the most important factor in influencing the intention to use Islamic personal financing than religious obligation. This generally consistent with findings elsewhere in the literature stated that religious factor is an insignificant effect in selecting Islamic banks' services in Jordan. In fact there are some other factors which are influencing the decision criteria of the customers that is the level of profitability (Erol & El-Bdour, 1989).

#### 8.3 Level Awareness

Self-awareness means a capacity to perceive the self in relatively objective terms whilst maintaining a sense of subjectivity (Prigatano & Schacter, 1991). Clearly, it is an ability of someone to understand the nature of impairment and appreciate its implications. Malaysian Muslims' awareness of the Islamic banking products and services were high compared to non-Muslim customers (Muslim & Zaidi, 2008). This particular study was found that most of Islamic banking customers were satisfied with overall service quality perceived by their bank. As Islamic products and services enter in the markets, attitudes, perceptions and knowledge is important consideration in other to introduce new method (Gait & Worthington, 2008).

From studied of N. Irwani and Ashraf in (2006) on a critical appraisal of AITAB operation: issues and prospects, stated that AITAB had potential for promising future prospect due to increase of Islamic awareness among Malaysian public towards AITAB which offers competitive services with and attractive features. Besides, both bankers and customers had confidence to engage with AITAB since it had legal protection provided by the Hire Purchases Act 1967. They attempt to address some challenges and prospects of implementing AITAB in Malaysia and viewed in future prospect in four aspects which are strong public acceptance, competitiveness, legal protection and proposed Shariah law of AITAB. They stated that customer who accept and understands operation AITAB will come to institution because they know the benefits that being offer, for example full margin of financing and lower penalty for late payment. Therefore, researcher

concluded that Bank Negara Malaysia (central bank) and banking industries have to make strategy to enhanced AITAB facility by increasing public understanding and awareness in the product.

Similar researcher by N. Irwani and Ashraf in (2006) but difference in topic study, that was regarding of customers' perception of Islamic hire purchase facility in Malaysia found out that 61 percent customer knowledge and aware about AITAB from various sources such as advertisements, banks' prospectus, conferences and seminars. Surprisingly, they discovered that customer's unaware that actually the used AITAB through car financing schemes provided by Islamic banking scheme.

In UK, Omer (1992) tested 300 Muslim on their patronage factors and awareness of Islamic financing methods and found that there was a high level of ignorance of Islamic finance principle among Muslims in the UK. Although UK muslims not aware about Islamic financing methods, but religious motivation comprised the most significant factor in their strong preference for Islamic banking services.

One of the contributing factors to this absence of awareness among Muslims is the lack of understanding of Islamic banking. A study conducted in Pakistan showed that customer's awareness level towards Islamic banking products is good in some of the general products such as current accounts, time deposit account. But most of the customers are unaware of the different Islamic financial products such as Murabahah, Ijarah. They concluded that Islamic banking industry have to give consideration to providing awareness to their customers (Khattak & Rehman, 2010).

A study was conducted by Muslim and Zaidi, (2008) showed that a good understanding of the terms in term of product and services offered by Islamic bank. The result shows that 84 percent know the meaning of Riba and 75 percent know the meaning of Mudharabah, 61 percent know the meaning Murabahah and Ijarah was 64 percent are generally understood. Meanwhile, Naser, Jamal and Al-Katib, (1999) reported that Jordan's customer more aware of Islamic terminology such as Murabahah, Mudharabah, Musharakah and Ijarah but unfortunately most of customers not using it at Islamic banking. This study also showed that only 47 percent of customer unaware of Ijarah. In general, most of the customers were aware about fundamental products of Islamic banks but have no knowledge about the complex Islamic financial system (Metawa & Almossawi, 1998).

N.irwani and Ashraf, (2006) that conducted a study on a critical appraisal of Al- Ijarah Thumma al- Bay (AITAB) operation on issues and prospect determined customers had lack awareness because of lack understanding or knowledge among the dealers. For example, customer's choice between conventional and Islamic financing facility depends mostly on the dealer's explanation and recommendation. However, not all dealers able to educate customer and in reality, dealer even tend to suggest customer using conventional facility either they lack knowledge of AITAB or truly not want their customers expose with Islamic financing facility.

#### 8.4 Social Influence

Many of previous studies referred social influence as subjective norms. Subjective norm refers to the individual's view regarding probability of the potential referent group or individuals to engage or not in a behavior. Almost every day of one's individual will influence by opinions, deeds and advices of other peoples (Fishbein & Ajzen, 1975). Md. Taib, Ramayah and Razak, (2008) found that postgraduate students was influential by subjective norm in behavioral intention

to engage on Islamic home financing. Similarly, Hanudin and Rosita (2011) concluded that subjective norm had relationship with determinants of individual's intention to use ar-Rahnu. The researcher stated that friends, family members and teachers could be the agents to impacting individual's reaction pertaining to Islamic pawnshop use.

While, Zarehan, and Nahariah, (2011) found that there is a relationship between management and external computing support on IT usage. Management support able to influence Malaysia bankers to ensure sufficient allocation of resource and extent of IT usage. Hanudin et al, (2011) also found that social influence was a key determinant of the intention to use Islamic personal financing after attitude. Besides, previous study conducted by Hanudin in 2010, which the topic is about AITAB facility in Labuan market indicate that financial counseling available and car dealer relationship were found to be significant relationship in choosing AITAB. Social information processing theory (Salancik & Pfeffer, 1978) addressed mechanism by which peers influence individuals' behavior and attitudes to behave. It point out that social environment plays a role in shaping an individual's behavior by focusing his or her attention on certain circumstances.

In contrast, some of the previous studies have reported insignificant social influence or subjective norm toward behavior intention however it depend on the scope of study. For example, Lewis, Agarwal and Sambamurthy, (2003) found that subjective norm had no a direct impact on intention to use information technology. Furthermore another point of critique regarding social influence was found in 2009 by Eckhardt and Andreas. They studied of subjective norm in information system top journal over two decades and found that subjective norm was significant negative impact.

# 8.5 Summary of Literature Review

As showed in **Table 1.1**, the patronage studies largely focus on religious obligation, level awareness and social influence. Therefore, this study will contribute further knowledge about factor that influence customer to choose AITAB by select those variables stated above that had being used by other researcher.

Table 1.1: The Patronage Studies on Factor Influenced Customers to Choose Al-Ijarah

## **8.6** Theoretical Framework

Figure 3.1 above is a theoretical framework based on two types of variables which are Independent Variables and Dependent Variable. The Independent Variables consist of level of awareness, religious obligation and social influence. The Dependent Variable consists influences of consumer in choosing AITAB.

Figure 1.1: Theoretical Framework

### 9. DATA COLLECTION METHOD

In this research, the researcher used the set of questionnaire, which distribute to all customers who had experience of using the AITAB facility. A total of 150 questionnaires were distributed to individuals having experienced of the AITAB facility in area of Shah Alam, Selangor. Certain potential groups of people were identified based on their experience of using the AITAB facility. The identified groups consisted of people in selected banks, people in street or residential area, Selangor's government staff, university lecturers and driving schools. The respondents in each of the identified groups were selected based on convenient sampling.

In conducted the survey, the potential respondents were politely approached, and were asked whether they have ever signed up for an Islamic car financing. A brief explanation was given with respect to the objectives of the survey and the contribution they would make by participating in the survey. Once they had agreed to participate, the researcher then handed over the designated questionnaire to the participating respondent alone to answer the questionnaire and did not interfere in any way, to avoid potential bias such as the respondents feeling panicky, threatened or being influenced by the researcher. Once completed, the respondent then returned the questionnaire to the researcher. This approach is similar with studies of customers' perception of Islamic Hire purchase facility in Malaysia conducted by N. Irwani and Ashraf (2006).

The questionnaires will distributed in one month period which is on November 2012, during various working hours and various days of week except in Friday as respected "Jumaat" prayer time. The process of data collection continued for one month. The questionnaire was dividing into three sections. The first section consists of demographic data, which focuses on the respondent background while second section consists of the measurement of three independent variables that were religious obligation, level awareness and social influence and last section consists the questions of dependent variables. The questionnaire was written in both the Malay and English languages. To measure the respondents' perceptions, the study used the five-point likert type ranking scales from "1"- strongly disagree to "5"- strongly agree. From a total of 150 questionnaires distributed, 140 were returned. This response was considered large enough and sufficient for statistical reliability and generalization. **Table 1.2** depicts the response rate of different groups of respondents.

Table: 1.2 Respondent, Distribution of Questionnaires

No.	Desmondants	Number of	Number of
	Respondents	Issued	Returned
	People in selected banks		
	(Automobile Islamic Maybank,		
1	Maybank Islamic)	50	43
	People in street or residential		
2	(Shopping complex, town street)	30	30
	Selangor's government staff		
3	(Lembaga Zakat Selangor)	50	47
	University lecturers		
	(Universiti Teknologi Mara, Shah		
4	Alam)	10	10

	Driving schools				
	(Institute Mandu	Cekap	Hi-Tech		
5	Sdn Bhd)			10	10
Total				150	140

From the **Table 1.2**, it is observed that people in selected bank and Selangor's government staff have the highest response of 50 peoples for each group to the questionnaires. Both of the bank that selected, mostly had customers who had bought a car by using Islamic personal financing. Most of them were either waiting for their turn at the counter, or were simply accompanying their friends or relatives to the bank. Besides, the staffs who work at the bank also being ask whether they had used, AITAB scheme or not. However, total seven questionnaires not returned from them because there were some respondents not give participation and went back without return back the questionnaires and there were also some staff who missing the questionnaires. Besides, Selangor's government staff in Lembaga Zakat Selangor had been choosen to fill questionnaires because the obvious reason was that they were entitled to special government schemes of owning a private car, which was jointly provided by government and one of the Islamic banks. At there, three questionnaires were not return back by staff.

Apart from the above respondents, questionnaires were also distributed in the street or residential area such as shopping complexes and town streets. Response rate was relatively low (30 respondents) which not surprising due the fact that most of the peoples on the street were in a hurry and less likely to cooperate to the survey. Finally, only ten respondents response was obtained from university lecturer and driving school. Most of the lecturers were busy to their work and rushing to go to the class. In driving school, from researcher's observation, their tiring work environment in which they are constantly exposed to hot and wet weather and having to deal with various attitudes of driving students made them less cooperative.

# 9.1 Method Analysis

In analyzing the collected data, statistical Package for Social Science (SPSS), version 17 will be used to make the evaluation more accurate and appropriate. For this study, the researcher will use Reliability analysis to study the properties measurement scales and the items that compose the scales. It calculates a number of commonly used measures of scale reliability and also provides information about relationship between individual items in the scale. "Cronbach's Alpha" will be use in this study to find out internally consistency reliability of the study by measuring all variables into the data. Other than that, the Factor Analysis will be tested. Factor analysis is a statistical method used to describe variability among observed variables in terms of fewer unobserved variables called factors. (Nor'Azurah, Nurul Haida & Wan Asma, 2006). This statistical tool stated the method, which can assist the researcher to reduce large number of items to some smaller number by showing which variables belong mutually and which seem to show the same thing. The analysis is also important in confirming the construct validity of the scales using the principal component analysis (Emory & Cooper, 1991). Kaiser-Meyer-Olkin (KMO) in factor analysis will explained adequacy test whether the partial correlations among variables are small. Bartlett's test of sphericity tests whether the correlation matrix is an identity matrix, which would indicate that the factor model is inappropriate. Factor Analysis conducted to find the most variables or most factor that influenced customers to choose AITAB. Next after that the analysis will used Kruskall Wallis Test. It is a non-parametric method for oneway analysis of variance used to determine if three or more samples originate from the same distribution. The Kruskal-Wallis test essentially a standard one-way analysis of variance, with ranks assigned to the data points replacing the data points themselves. It conducted in the hypothesis test to assess any significant relationship between independent and dependent variables by the different groups involved in this survey. These non-parametric tests are appropriate when measurements of the variables under investigation are in ordinal scale. Using this method, we can determine the relationship strength between the independent and dependent variables. Significance values that lower than 0.05 (p < 0.05) means, that null hypothesis is rejected and alternative hypothesis accepted.

#### 10. FINDING AND ANALYSIS

## 10.1 Reliability

The reliability of a measure is established by testing for both consistency and stability. Cronbach's alpha is a reliability coefficient that indicates how well the items in a set are positively correlated to one another. Cronbach's alpha is computed in terms of the average intercorrelations among the items measuring the concept. The findings of reliability test shows as follow by **Table 1.3.** This table show Cronbach's Alpha for the overall scale question is equal to 0.957. It means that 95.7% from 35 questions developed regarding factor influenced customers to choose AITAB are acceptable. Thus, the internal consistency reliability of the measure used in this study can be considered to be excellent. SPSS also found out Cronbach's Alpha based on standardized items that is equal to 0.959. Thus, it means that, 95.9% from questions had internally consistent reliable variance. Basically, the different between both are the first Cronbach's Alpha employ covariances among the items and not based on standardized items whereas second Cronbach's alpha based on standardized items employs the correlation among items and it based on assumption that all the items have equal variances which often false in practice.

**Table 1.3: Reliability Analysis** 

Cronbach's Alpha	Cronbach's Alpha Standardized Items	Based	on	N of Items
0.957	0.959			35

# 10.2 Frequencies Distribution

A set of data organized by summarizing the number of times a particular value of variable occurs. It will measure information of the respondents answer from the questionnaire. Frequencies distribution is useful to summarizes respondent's background on some basic statistics consist of eight questions of personal information, which is the question that asked about the gender, age, race, religion, education, employment, and monthly income of respondents.

**Table 1.4: Distribution of Respondents** 

			Per cent
		Frequency	%
Gender	Male	73	52.1
	Female	67	47.9
Marital			
Status	Single	59	42.1
	Married	78	55.7
	Divorced	3	2.1

1	30 years and		
Age	below	63	45
	31-40 years	38	27.1
	41-50 years	22	15.7
	51 years and		
	above	17	12.1
Race	Malay	129	92.1
	Chinese	4	2.9
	Indian	7	5
Religion	eligion Muslim		92.1
	Christian	4	2.9
	Buddhist	5	3.6
	Others	2	1.4
	Secondary or		
Education	lower	40	28.6
	Diploma or STPM	42	30
	Bachelor	48	34.3
	Master or PHD	10	7.1
Employment	Government	37	26.4
	Private Company	69	49.3
	Self-Employment	20	14.3
	Others	14	10
Monthly			
Income	Below RM 2000	51	36.4
	RM2001-RM3000	33	23.6
	RM3001-RM4000	29	20.7
	RM4000 above	25	17.9
	Missing (no		
	response)	2	1.4

As can be seen in **Table 1.4**, the sampled respondents comprised 52.1% male and 47.9% females, and at the time of survey, 78% of the respondents were married. The majority respondents' age were 30 years below (45.0%), followed by the range between 31-40 years (27.1%), 41-50 years (15.7%), and above 51 years (12.1%). In terms of races, most of the respondents were Malay and Muslims (Islam). There were also non-Muslim who had using Islamic loan, which were Indian (5%) and followed by Chinese (2.9%) which profess Buddhist, Christian, and others religion. The majority of the respondents had Bachelor level in their education level (34.3%) followed by Diploma or STPM (30.0%), secondary or lower (28.6%) and the lowest was Master or PHD (7.1%). Most of respondents who had bought a car by using Islamic loan in Shah Alam were private company employees (49.3%) while the rest were government, self-employment and others. Lastly, the results reported in **Table 1.4** also indicated that most of the respondents were in the below RM2000 (36.4%) monthly income group. Meanwhile, 23.6% of the survey respondents earned RM2001-RM3000, followed by RM3001-RM4000 (20.7%) and above RM4000 was 17.9%.

# 10.3 Ranking (mean)

In this study, the researcher use "mean" to identify the major factor influenced customers to choose AITAB among respondents. The "mean" useful to measure central tendency that offers a general picture of the data without unnecessarily inundating one with each of the observation in a data set.

**Table 1.5: Statistics for Religious Obligation** 

The The Television of Telegraphic	N			
Variables	Valid	Missing	Mean	Ranking
Aitab is in line with an Islamic Philosophy	140	0	3.75	4
of doing banking business				
Aitab is based on Islamic principle business implementation	140	0	3.85	2
An introduction of aitab is based on al- Quran and Hadith	140	0	3.66	7
AITAB is free from riba/interest	140	0	3.57	9
AITAB is free from fraud	134	6	3.6	8
I choose AITAB because of my religious understanding	140	0	3.74	5
I choose AITAB because of my religious belief	140	0	3.86	1
I choose AITAB because it is according to Shariah guidelines	140	0	3.74	5
I choose AITAB because my adherence toward religious	140	0	3.8	2
I choose AITAB as financing method for the last resort	140	0	3.01	10

**Table 1.5** shows the rank of the variables by the mean factor. The highest mean is 3.86 for question seven, in which respondents viewed that they choose AITAB because of their religious belief. The lowest mean is 3.01 for question ten, indicates there were lowest respondents to choose AITAB as financing method for the last resort. The result for question ten is consistent with the result of N. Irwani & Ashraf. W (2006) that indicated small minority and the lowest mean who agree with the statement.

**Table 1.6: Statistics for Level Awareness** 

	N			
Variables	Valid	Missing	Mean	Ranking
Before this, I was aware about AITAB	130	10	3.12	8
scheme Previously, I already know and understand	140	0	3.06	10
about AITAB scheme	110		2.00	10
AITAB is a good alternative to acquire asset	140	0	3.54	5
AITAB offering good pricing quality	140	0	3.54	5
AITAB is different from conventional hire	139	1	3.73	3
purchase				

AITAB is one of the best Islamic banking products	140	0	3.76	1
I always saw AITAB promotion in mass media	140	0	3.11	9
I choose AITAB because of the charged	140	0	3.46	7
impose are lower that conventional hire purchase				
I choose AITAB because it more safety	140	0	3.64	4
Overall, AITAB had very good promising	140	0	3.76	1
future prospect				

**Table 1.6** shows the rank of the variables by the mean factor. There were two questions had the highest mean which is 3.76 for question six and ten, in which respondents viewed that AITAB is one of the best Islamic banking products and overall, AITAB had very good promising future prospect. The lowest mean is 3.06 for question two, indicates there were lowest respondents in previously, already know and understand about AITAB scheme.

**Table 1.7: Statistics for Social Influence** 

	N			
Variables	Valid	Missing	Mean	Ranking
Most people who are close to me think that I have to choose AITAB	140	0	3.3	5
It is expected by others that I should choose Islamic personal financing	140	0	3.52	1
Most people who are important to me think that AITAB is useful	140	0	3.39	4
Most people who are important to me think that AITAB is beneficial	140	0	3.45	2
Most people are assume me familiar with the need of Shariah	140	0	3.45	2
I choose AITAB because of influenced by car dealer	140	0	3.09	7
I choose AITAB because the bank choose it	140	0	3.06	8
I choose AITAB because of influenced by my family	140	0	2.79	9
I choose AITAB because of influenced by my friends	140	0	2.79	9
I choose AITAB because of influenced by my company decision to take only Islamic loan scheme	140	0	3.21	6

**Table 1.7** shows the rank of the variables by the mean factor. The highest mean is 3.52 for question two, in which respondents viewed that it was expected by others that they should choose Islamic personal finanacing. There were two questions had the lowest mean which is 2.79 for question eight and nine, indicates that only minority of the respondents were influenced by their family and friends to choose AITAB.

**Table 1.8: Statistics for Choosing AITAB** 

Variables	N		Maan	Daulsin a
Variables	Valid	Missing	Mean	Ranking
I am interested to use Islamic hire purchase (AITAB)	140	0	3.69	1
I am interested to use Islamic hire purchase (AITAB) in the future	140	0	3.09	4
I will use Islamic hire purchase (AITAB) someday	140	0	3.12	3
I like to use Islamic personal financing	140	0	3.50	2
I will definitely recommend Islamic hire purchase (AITAB) to others	140	0	3.06	5

**Table 1.8** shows the rank of the variables by the mean factor. The highest mean is 3.69 for question one, in which respondents viewed that they were interested to use Islamic hire purchase (AITAB). The lowest mean is 3.06 for question five, indicates they were lowest respondents agree to definitely recommend Islamic hire purchase (AITAB) to others.

## Variables:

- **R1** AITAB is in line with an Islamic philosophy of doing banking business
- **R2** AITAB is based on Islamic principle business implementation
- R3 An introduction of AITAB is based on al-Quran and Hadith
- **R4** AITAB is free from riba/interest
- **R5** AITAB is free from fraud
- **R6** I choose AITAB because of my religious understanding
- R7 I choose AITAB because of my religious belief
- **R8** I choose AITAB because it is according to Shariah guidelines

- **R9** I choose AITAB because my adherence toward religious
- **R10** I choose AITAB as financing method for the last resort
- L1 Before this, I was aware about AITAB scheme
- L2 Previously, I already know and understand about AITAB scheme
- L3 AITAB is a good alternative to acquire asset
- L4 AITAB offering good pricing quality
- L5 AITAB is different from conventional hire purchase
- L6 AITAB is one of the best Islamic banking products
- L7 I always saw AITAB promotion in mass media
- L8 I choose AITAB because the charged impose are lower compared to conventional hire purchase
- L9 I choose AITAB because it more safety
- L10 Overall, AITAB had very good promising future prospect
- Most people who are close to me think that I have to choose AITAB
- S2 It is expected by others that I should choose Islamic personal financing
- Most people who are important to me think that AITAB is useful
- Most of people who are important to me think that AITAB is beneficial
- Most people are assume me familiar with the need of Shariah
- S6 I choose AITAB because of influenced by car dealer
- S7 I choose AITAB because the banks choose it
- S8 I choose AITAB because of influenced by my family
- S9 I choose AITAB because of influenced by my friends
- S10 I choose AITAB because of influenced by my company decision to take only Islamic loan scheme

**Table 1.9** shows the results for the factor analysis by used items in the questionnaire. The results reveal the presence of three factors with thirty (30) items of choosing AITAB facility. The eigenvalue for the three factors are 14.213, 3.365, and 2.111 respectively. These three factors explain a total of 65.63% of the variances. Specially, Factor 1 has fourteen (15) significant loadings, Factor 2 nine (10) significant loadings and Factor 3 has five (5) significant loading respectively. Factor analysis found three dimension which explains 65.63% variance, whereas maximum variance explained by Religious Obligation (R = 47.38%) followed by Level Awareness (L = 11.22%) and Social Influence (S = 7.04%).

The first factor (*Religious Obligation*) delineates a cluster of relationship attributes are 'AITAB is in line with an Islamic philosophy of doing banking business' (R1), 'An introduction of AITAB is based on al-Quran and Hadith' (R3), 'I choose AITAB because of my religious belief' (R7), 'AITAB is based on Islamic principle business implementation' (R2), 'I choose AITAB because of my religious understanding' (R6), 'I choose AITAB because my adherence toward religious' (R9), 'Most of people who are important to me think that AITAB is useful' (S3), 'I choose AITAB because it is according to Shariah guidelines' (R8), 'Most of people who are important to me think that AITAB is beneficial' (S4), 'AITAB is free from riba/interest' (R4), 'AITAB is free from fraud' (R5), 'It is expected by others that I should choose Islamic personal financing' (S2), 'Most people are assume me familiar with the need of Shariah' (S5), 'Most people who are close to me think that I have to choose AITAB' (S1), and 'AITAB is one of the best Islamic banking products' (L6). The nature of the highly loaded variable on this factor suggests that it can be named "Religious Obligation" contributes 47.38% of the factor that influenced customers to choose AITAB. Since Factor 1 has the highest eigenvalue and variance (eigenvalue = 14.213, variance = 47.376%), it necessary the most important factor that has influenced customers to choose AITAB.

Turning to an interpretation of independent dimensions based on the varimax rotated matrix as given in **Table 1.9**, one can see that the first factor (Level Awareness) delineates a cluster of relationship amongst the following attributes are 'AITAB is offering good pricing quality' (L4), 'I always saw AITAB promotion in mass media' (L7), 'AITAB is a good alternative to acquire asset' (L3), 'Previously, I already know and understand about AITAB scheme' (L2), 'Before this, I was aware about AITAB scheme' (L1), 'AITAB is one of the best Islamic banking products' (L6), 'Overall, AITAB had very good promising future prospect' (L10), 'I choose AITAB because it more safety' (L9), 'AITAB is different from conventional hire purchase' (L5), and 'I choose AITAB because the charged impose are lower compared to conventional hire purchase' (L8). The nature of the second higher loaded variable on this factor suggest that it can be named "Level Awareness" contributes 11.22% of the factor influenced customers to choose AITAB and has the second higher eigenvalue and variance, (eigenvalues = 3.365, variance = 11.218%).

The third factor (Social Influence) delineates a cluster of relationship attributes are 'I choose AITAB because the bank choose it' (S7), 'I choose AITAB because of influenced by my friends' (S9), 'I choose AITAB because of influenced by my family' (S8), 'I choose AITAB because of influenced by car dealer' (S6), and 'I choose AITAB because of influenced by my company decision to take only Islamic loan scheme' (S10). The nature of the third loaded variable and contributes the most less of factor influenced customer to choose AITAB which around 7.04%. Since Factor 3 has the third eigenvalue and variance, (eigenvalue = 2.111%, variance = 7.037%).

In testing whether factor analysis was appropriate for the factor selection AITAB, KMO and Bartlett's Test of Sphericity were conducted. The KMO measures the sampling adequacy which should be greater than 0.5 for a satisfactory factor analysis to proceed. Looking at the **Table 1.10**, the KMO measure is 0.901 which is above the acceptable level 0.5. From the same table, we can see that the Bartlett's test of sphericity is significant. That is, its associated probability is less than 0.05. The Bartlett Test of sphericity at 0.000, it means it is below the alpha value of 0.05, thus significant. Therefore, the validity of this study is considered to be **acceptable**. Based on this favourable results, factor analysis was conducted using Principal Component Analysis (PCA) and Varimax Rotation with Kaiser Normalization. The result of varimax rotated factors given in **Table 1.9** along with communality values of each variables, eigenvalues, percentage of explained variance.

### 10.5 Hypothesis Tests

## **Hypotheses 1:**

H<sub>0</sub>: There is no significant relationship between the acceptances of AITAB among customers with the religious obligation.

H<sub>a</sub>: There is significant relationship between the acceptances of AITAB among customers with the religious obligation.

Table 1.11: K-W Test Result Comparing the Mean Ranks of Relationship between Religious Obligation with Choosing AITAB

Degree of Influence	Value	Total (%)	N	Mean Rank	Chi- Square X <sup>2</sup>	Asymp. Sig. (p)
<b>Strongly Agree</b>	5	32.14	45	91.68	$X^2 =$	.000
Agree	4	35.00	49	66.90	23.287	.000

Disagree	2	7.14	10	63.90	
Strongly Disagree	1	2.86	4	49.88	
Neutral	3	22.86	32	50.88	
Total		100	140		
df	4				

The first hypothesis was used *Kruskall-Wallis Test*. **Table 1.11** shows that while there is significant relationship between the acceptances of AITAB among customers with the religious obligation ( $H_a$ ). The chi-square,  $X^2$  values for the variables is 23.287 at 0.05 confidence interval; 4 degree of freedom. The significance level (p = 0.000) for the 'Relationship between Religious Obligation with Choosing AITAB' is lower than 0.05 level, indicating the existence of variations between the variables. Hence, the alternative hypotheses should be accepted. That mean we reject the null hypothesis ( $H_0$ ) which there is no significant relationship between the acceptances of AITAB among customers with the religious obligation. From frequency results, the result show that majority customers have opted for religious obligation as a factor to choose AITAB. Hence, the alternate hypothesis is accepted, thus **null hypothesis is rejected.** 

# **Hypotheses 2:**

 $H_{\rm O}$ : There is no significant relationship between the acceptances of AITAB among customers with the level awareness.

H<sub>a</sub>: There is significant relationship between the acceptances of AITAB among customers with the level awareness.

Table 1.12: K-W Test Result Comparing the Mean Ranks of Relationship between Level Awareness with Choosing AITAB

Degree of Influence	Value	Total (%)	N	Mean Rank	Chi- Square X <sup>2</sup>	Asymp. Sig. (p)
<b>Strongly Agree</b>	5	13.08	17	95.44		
Agree	4	30.00	39	72.78		.000
Disagree	2	16.15	21	44.67		
Strongly Disagree	1	13.85	18	55.33	$X^2 =$ 22.383	
Neutral	3	26.92	35	60.57		
Total		100	130			
df	4					

**Table 1.12** shows that while there is significant relationship between the acceptances of AITAB among customers with the level awareness ( $H_a$ ). The chi-square,  $X^2$  values for the variables is 22.383 at 0.05 confidence interval; 4 degree of freedom. The significance level (p = 0.001) for the 'Relationship between Level Awareness with Choosing AITAB' is lower than 0.05 level,

indicating the existence of variations between the variables. Hence, the alternative hypotheses should be accepted. That mean we reject the null hypotheses  $(H_O)$  which there is no significant relationship between the acceptances of AITAB among customers with the level awareness. From frequency results, the result show that customers have opted for level awareness as a factor to choose AITAB after religious obligation.

Hence, the alternate hypothesis is accepted, thus **null hypothesis is rejected.** 

## **Hypotheses 3:**

H<sub>O</sub>: There is no significant relationship between the acceptances of AITAB among customers with the social influence.

H<sub>a</sub>: There is significant relationship between the acceptances of AITAB among customers with the social influence.

Table 4.12: K-W Test Result Comparing the Mean Ranks of Relationship between Social Influence with Choosing AITAB

Degree of Influence	Value	Total (%)	N	Mean Rank	Chi- Square X <sup>2</sup>	Asymp. Sig. (p)
Strongly Agree	5	17.14	24	87.58		
Agree	4	25.71	36	84.89		
Disagree	2	14.29	20	63.90		
Strongly Disagree	1	7.86	11	62.32	$X^2 = 17.318$	.002
Neutral	3	35.00	49	56.09		
Total		100	140			
Significant	0.001					

The third hypothesis was shows that while there is significant relationship between the acceptances of AITAB among customers with the social influence ( $H_a$ ). The chi-square,  $X^2$  values for the variables is 17.318 at 0.05 confidence interval; 4 degree of freedom. The significance level (p=0.002) for the 'Relationship between Social Influence with Choosing AITAB' is lower than 0.05 level, indicating the existence of variations between the variables. Hence, the alternative hypotheses should be accepted. That mean we reject the null hypothesis ( $H_0$ ) which there is no significant relationship between the acceptances of AITAB among customers with the social influence. From frequency results, the result show that customers have also opted for social influence as a factor to choose AITAB after religious obligation and level awareness.

Hence, the alternate hypothesis is accepted, thus **null hypothesis is rejected.** 

### 11. CONCLUSION

There is a general acceptance AITAB throughout the Islamic banking system in Shah Alam, and all the factors influenced customers have positive relationship with choosing AITAB. As the data are nonparametric so *Kruskall Wallis* test is calculated between independent variables and dependent variable and results shows that there is positive relationship between independent variables such as "*Religious Obligation*", "*Level Awareness*", and "*Social Influence*". From *Factor Analysis*, the results show that the religious obligation was the most important and most influential variables in choosing AITAB.

The result of the survey conducted among 150 AITAB customers reveal that a large majority of them are choose "Religious Obligation" as factor influenced to choose AITAB in Shah Alam. Shah Alam is a modern city with a unique identity of "Malay City" and most of the their residents were muslim. In line with this identity, Shah Alam was declared the first city in the world with no entertainment outlets to avoid any vice activities. Therefore, it shows that Shah Alam area had strong knowledge about religious views. Besides, the result also shows that 92.1% of the respondents fill the questionnaire were muslim. However, the findings are not consistent with previous studies (Hanudin et al, 2011) because the researcher found that religious obligation is not significant determinant of the intention to use Islamic personal financing. The reason because, the sample for the study were customers in the city of Labuan, East Malaysia that we know that area comprised many population of non-muslim.

The customers had choose religious obligation as reasons, but there are some other factors that motivate the customers for choosing AITAB such as "Level Awareness". This result proof that most of the respondents are highly educated because 36.3% of the respondents was from bachelor level education and 30.0% of the respondents from diploma and STPM level education that indicated the highest percentage among the others.

The results from in this study also indicated "Social Influence" had significant relationship with choosing AITAB facility. The findings are consistent with previous study (Taib et al., 2008 and Hanudin et al., 2011), for instance, the clients' attitudes and social influence are both found to be significant of the intention to use Islamic personal financing. From the questionnaire, many respondents agreed that most of the people that important for them think that AITAB is beneficial. Besides, most of them agreed that they choose Islamic personal financing because of influenced by company decision to take only Islamic scheme in other to get dividend.

As conclusion, there is a strong relationship between religious obligation, level awareness, and social influence in choosing AITAB. Hence, this show AITAB is declare as the best product of Islamic Banking. Furthermore, this will bring a better promising future in Islamic Banking.

## 12. RECOMMENDATION

From the conclusions of the study, the following recommendations can be reasonably forwarded for Islamic banks in Shah Alam. First, among the age categories, 30 years below was the most categories fill the questionnaires. Therefore, Islamic banks should target its marketing mix toward this category. Such a technique will ensure attraction of job market entering people towards Islamic bank products/service and also retention of the people who are likely to remain long-term loyal customers.

Second, religious principles remain at the heart of people's preference for choosing Islamic products. This indicates that the banks should remain highly dedicated to Islamic principles. Any

attempts to introduce any products/service (particularly the ones that have a fixed amount of profit upfront instead of a ratio of profit sharing) that may have substantial similarity with the traditional banking products/services should be thoroughly explained on the basis on Islamic principles and should be checked for customers' acceptance.

Third, Islamic banks should try to find out some ways to better familiarize its customers with the Islamic products. Even though, there was significant relationship level awareness with choosing AITAB, however, 34.3% and 33.6% choose "Neutral" that AITAB if free from riba/interest and free from fraud. The percentages indicated the highest percentage from five ranges of scale. It means, customers still confused about some information in Islamic products. Therefore, its better for Islamic banking advertise more information regarding Islamic products so that customers more aware.

Based on results and personal observations it is recommended that the Islamic banks in Shah Alam should increase its attentions towards social influence through car dealer, agent, staff and so forth. In this early period of Islamic banking, there is a need for experienced and shariah knowledgeable staff for developing products and in the banking operation region. There is a need to encourage Islamic banks to have their own Islamic banking training forum, which will enhance the staff quality.

Like other previous studies, this study also has its own limitations, which fall three categories. Firstly, this study only surveyed customers who had bought car by using Islamic personal financing and limited to (N=150) and therefore the sample size was 140, after made the screening work to the questionnaires. This would lead to further investigation by conducting similar studies with a large sample size to verify and extend the results of this research. Secondly, the study only conducted in area Shah Alam. The results may differ if the same study is conducted in other cities or town in the state or the country. Future research should work to compare the extent of AITAB financing facility in different or any other cities elsewhere in Malaysia. Lastly, the study examined only three factors which is religious obligation, level awareness and social influence and found that all factor had significant relationship for choosing AITAB. Future study should consider other potential factor such as "reward", "Islamic banks performance", "substitution effect between Islamic and non-Islamic financing products", and the "experience of Islamic personal financing bank customers.

# ISSUES ON PERSONAL FINANCE: A STUDY ON FOREIGN MUSLIM STUDENTS OF THE INTERNATIONAL ISLAMIC UNIVERSITY MALAYSIA (IIUM)

S. M. Ferdous Azam<sup>1</sup> Moha Asri Abdullah<sup>2</sup>

#### **ABSTRACT**

**Purpose** – The aim of this paper is to assess the issues related to personal finance encountered by foreign Muslim students studying at the International Islamic University Malaysia (IIUM). In general, this research seeks to identify the issues on personal finance faced by the foreign students of the IIUM related to particularly how they are facing and dealing with the consequences as well as the way to overcome such challenges.

**Design/methodology/approach** – This study uses a qualitative approach of case study research similar to that employed by previous researches. Open-ended interviews were carried out on eight international postgraduate Muslim students pursuing their bachelor's degree programs in the IIUM.

**Findings** – The result indicates that as far as personal finance is concerned, the majority of the international postgraduate Muslim students do engage in personal financial planning and they survive with a limited level of income and planned expenditure. While they struggle to manage their personal finances, some students seek to have financial support from the university or other possible alternatives.

**Research limitations/implications** – The study contains a number of limitations such as time constraint as well as narrow sampling area and scope.

**Practical implications** – The results are primarily beneficial for academicians and researchers to understand the related issues pertaining to how the foreign Muslim students deal with their personal finances during their study, especially in learning institutions overseas.

**Originality/value** –This research explores the issues on personal finance especially that faced by foreign Muslim students, while revealing the problems and challenges that the students encounter during their studies. This study also designates ways to overcome those challenges.

**Keywords:** Financing, Personal financing, Foreign students, Case study, International Islamic University Malaysia

Paper type Research paper

## 1. INTRODUCTION

Personal finance in the general term refers to a measurement or an estimation of a person's expenses to a certain issue (Murphy and Yetmar, 2010). Students who study in universities, especially those located overseas, usually spend and disburse a huge amount of money for their studies. Specifically, when a student studies overseas, he or she commonly intends to spend more money than while studying in his or her own country. To provide a sophisticated and sufficient amount of personal finances for the term of

<sup>&</sup>lt;sup>1</sup>PhD Researcher, Department of Business Administration, International Islamic University Malaysia, Corresponding author: sakeeb06@gmail.com

sakeeb06@gmail.com
 Prof. Dr. Moha Asri Abdullah is currently Head of the Department, Department of Economics, International Islamic University Malaysia

studying in foreign universities, financial planning is very important for a student to contribute to a continual fund for the study. In general, if a student prepares a budget and keeps a certain amount of money for some specific purposes with proper managing, it can be reckoned as financial planning for that specific student. Hilgerth et al. (2003) found and elaborated a strong relation between financial knowledge and financial behavior. Usually, knowledge on personal finance is very important and it basically derives a person (student)'s financial behavior (Chen and Volpe, 1998). Specifically, if a student has good knowledge with regard to how expenses are incurred and he or she has high concern on personal finance matters, such knowledge may provide and draw some important solutions for the student. Basically, solutions are usually sought after when some problems already exist. As for students, they usually face difficulty with the source of fund for their studies and that is the main problem they face. As aforementioned, studying overseas requires a big allocation of money, especially for living expenses and tuition fees. Sometimes the exchange rate becomes the main culprit to deal with. The volatility of the Foreign Exchange (FOREX) market does not give assurance that an international student can stay overseas with a stable position in terms of spending. On the other hand, another significant reason that students perhaps fail to plan for their personal finances is because they lack real financial knowledge. However, as for the international students, those who are studying abroad by spending a big amount of money their financial planning are much more important. It is due to these situations that this particular study aims to examine the issues on personal finances faced by international students, particularly those studying in the International Islamic University Malaysia (IIUM). Furthermore, the study will enhance the knowledge on personal finance among the international students' during their study in the university. In addition, this qualitative study briefly aims to put forth the critical issues related to personal finance faced by the international students during their studies, such as, how do they finance their studies, what are the sources of their funds, how do they manage their finances, and the problems or challenges that entails, as well as the ways to overcome them. Nevertheless, the precise objective is to draw a clear distinction regarding the issues on personal finance among foreign students. Moreover, this research does have some specific objectives as well:

- i. To identify issues on personal finance among international Muslim students studying at the IIUM.
- ii. To investigate the problems faced by foreign Muslim students in managing their finances.
- iii. To explore the main challenges in managing the students' personal finances and the way to overcome the challenges.
- iv. To understand the international Muslim students' standard of living in terms of financial means during their study in the IIUM.

#### 2. LITERATURE REVIEW

The evaluation of personal finance education has shown that the financial competency like behavior, attitude, and knowledge of adult students is positively impacted (Langrehr, 1979; Tennyson and Nguyen, 2001) with the issues of personal finance. However, people's lack of literacy and understanding on personal finance can be considered as a major problem in making financial sophistication (Mandell, 2004). For instance, past studies have investigated this specific issue on personal finance, such as the accuracy of knowledge (Bernheim, 1988), or the adequacy of households (Auerbach and Kotlikoff 1991), and so on. In addition, an institutional survey was conducted to investigate the respondents' personal finance condition during the same time (Bernheim, 1988), and the research revealed that personal financial issues are quite fundamental for everyone. Nevertheless, people generally do have limited financial knowledge and it is often that their lifestyles do not equate with the personal finance issues that they encounter. Therefore, it is important to frequently create the consensus especially among those who are faced with personal finance problems now and then. In general, students face personal financial problems as some of their lifestyles are like hand to mouth. For instance, as the behavior of a person varies to another, different attitudes of the students may draw various issues related to personal finances.

At times, their level of income or their family's income also affects their financial behaviors. Some students take support from their families, yet, whether their family supports them or whether their support is sufficient, appear as common questions as well. In addition, in the international academic arena or universities overseas, it is more often observed that students do have different family backgrounds, educational backgrounds or cultural backgrounds. As stated by Ballard and Clanchy (1991, p. 10), students usually come to the universities with different types of behavior and unique individual personalities. With this different personalities and cultural backgrounds, they also tend to behave differently. For example in the IIUM, there are many students, with different behaviors, who have come from Asia, Africa, and Middle East or the West. The different attitudes and behaviors in terms of different cultures are also reflected in the various personal financial issues.

# 2.1 Attitude towards Personal Financing of the Students

As aforementioned in the Introduction section, the way of identifying student's personal finance condition often depends on the student's financial planning and their source of funds. Students from various backgrounds and family cultures create some similarities and dissimilarities in terms of attitudes (Kingston and Forland, 2008; Wong, 2004). In most cases, attitudes on financial planning depend on the individuals. Hogarth and Hilgerth (2002) and Moore (2003) reported that most people do not understand the concepts of financial issues and assume that they do not think of their savings in terms of specific purposes. It is found that some students think that it is quite difficult to manage their educational and other expenses while studying abroad. They usually have to borrow a good amount of money to settle the cost of tuition fees and other attendant living expenses. However, borrowing is not a permanent solution for a student. In fact, it might at best temporarily mitigate their burden. Thus, some students remain in a state of anxiety that sometimes affects their studies as well; making it a stressful journey for them. On the other hand, there are some students who consider study as an interesting element. Especially those who have no tension concerning money matters and their families stay with them during their studies. Their attitude towards study and issues on personal finances is positive (Bernheim et al. 2001). It is because their sources of funds allocated for personal finances are quite obvious and much sophisticated. However, being a foreigner or an international student, it is not always easy to sustain quite comfortably in universities abroad, but students' attitudes regarding personal finances sometimes draw some different directions at which and how they can maintain the challenges of financing issues.

## 2.2 Income and Managing of Personal Finance

Income or the means of financial support is an important issue on personal finance for a student. In addition, often it is observed that students from low income families usually do not take risk to take on a brave step to study in universities abroad unless they can obtain scholarship. If they come and join the overseas universities with their low level family income, they tend to seek part-time jobs to support their studies (Murphy and Yetmar, 2010). The present research however targets students who usually do not get involved with part-time jobs outside the campus, but those who support their studies by doing various academic related jobs such as being a research assistant. In the postgraduate level, it is also difficult for the students if they work outside and at the same time study full-time. Especially those who work in the companies and corporate level, it is seen that they are usually part-time students. Besides, some of the students can manage study loans or scholarships during their studies. On the other hand, students from high income families are not concerned much about the spending during their study period. However, the gradual increase in study and living expenses with volatile foreign exchange rate insists for international students to consider their personal finances during study period. The importance of well-planned personal financial planning has been discussed in past research (Lim, 2003). Lim (2003) basically focused on

financial planning and allowed readers to understand how planning can be defined in terms of personal finances.

## 2.3 Students' Background, Behavioral Differences and Financing Issues

Different cultures and family issues are also crucial elements that play a key role in crafting the personal finances for students. Fundamentally, students' financial behavior seems to be different in terms of gender differences (Hayhoe et al., 2000) and culturally it defers from nation to nation due to different geographical locations. Kingston and Forland (2008) discovered that personal pressures are created from the expectations of students from some particular culture. This pressure may arise due to financial tension which later on creates some psychological burden as well. In explaining and defining an idea based on family differences, it is observed that in Asian countries people prefer to have a large number of family members. For example in Malaysia, people usually do have big families consisting of large number of family members and they can generally maintain that well. On the other hand, people from the West and some part of China tend to keep the family small. However, according to Kennickell et al. (1996), the members of a large family size are more concerned about their financial issues rather than of a small family. Now if this family parameter is considered, it is observed that people of different family structures do have different financial perception and planning on personal finance matters. In fact, some students do perceive education as an investment and therefore, they consider all their spending as an investment like the similar activity in business (Grattan, 2005). This educational investment concept also grows from different cultural backgrounds. On the other hand, there are some students who consider educational expense as an inferior issue, yet still they are willing to pay big amount of money because of the goodwill of the family and to secure a stable future. In fact, as it is discussed based on perceptional differences is all about the students' background in term of family and cultures. Therefore, issues are viewed in many perspectives for many related reasons wherein early exposure to financial concepts has positive effects on money management skills (Huddleston et al., 1999). Moreover, because of these diversified reasons, students with different background faces different kinds of problems and challenges regarding personal financing. Hence, the solution for those challenges related to personal finance for foreign students can be defined based on individuals and their diverse perceptions, while the solutions depend on how they view the problems.

### 3. RESEARCH METHOD

The present research is a qualitative research and therefore the method adopted in this particular research is of a qualitative research approach. Among the various kinds of approaches, this research employs the case study approach. Creswell (1998) stated that this case study approach is a circumscribed system or an issue discovered by one or more cases. As Boyer (1990) mentioned, this type of research is relevant as it brings new insight on the original research. Furthermore, in a case study research, researchers usually explore one specific issue or several related issues over time. This study attempts to explore the issues in personal financing faced by the Muslim international students during their study at the IIUM. Basically, different types of students are observed in terms of the degree they are pursuing with different age variation and financial condition to have an overall and aggregated idea. However, this study seeks to identify the issues on personal finances from various tones of international students.

# 3.1 Sampling

The percentage of Muslim students in International Islamic University Malaysia (IIUM) is approximately 95% whereby eight international Muslim students were taken as sample from the faculty of Economics

and Management Sciences. This qualitative research uses the purposive sampling technique. Purposive sampling technique is usually used in a study on a certain group of people. For instance, in this particular research, the international students who study in the IIUM are the main target respondents. A total number of eight respondents are taken for the interview based on their availability of time and research objectives. Six male and two female students with different levels of study and demographic profiles were selected for the interview. The sampling also considered that all the demographic options will be covered by those eight respondents and the academic qualifications must be of at least the Masters or PhD degrees. Moreover, the interview was recorded and transcribed accordingly.

### 3.2 Data Collection

The data was collected from the conduct of face to face interview among the target respondents. However, before the interview was conducted, the sample questions were distributed among them to present to them an idea of the interview content. This was relevant as it allowed for them a mental preparation for the interview that was to be recorded, and this allowed them to embellish the answers which they answered against the questions. However, a brief verbal consent was attained from the respondents before agreeing to the interview and after they get prepared, the interview was conducted. The maximum time required for the interview session was 11 minutes and 26 seconds; the minimum was 5 minutes and 22 seconds. During the interview session, the description and the purpose of this research were clearly explained to the interviewees, i.e. the students. In fact, it was clearly mentioned to them that the interview was conducted for a Doctoral Mini Research under the subject of Qualitative Research. Additionally, the researcher is interested to know about their personal finances encounter during their study at the university. Hence, the participation seems crucial to the success of this particular research. It was also stated that they just need to spare a few minutes only to give their opinions against enclosed questions through the interview. The interviewees were given the right to stop and even depart at any time during the interview session should they intend to. Besides, it was secured that the participation in this research is voluntary and highly appreciated, while the response and all shared information are kept confidential. In fact, none of the interview session was declined, withdrawn or postponed by the students. All of the interviews were conducted at various places near the Kulliyyah of Economics and Management Sciences (KENMS) and the Library surrounded area of the IIUM campus. However, during the interview sessions, few questions were asked regarding the issues on personal finance, such include the financial support to study at the university, the source of fund, the issues in managing the finances, etc. Besides, there were questions that are related to the respondents' personal opinions as well. In fact, they also explained the problems that they face in managing the source of capital and its main challenges in providing the finance during the study period. They also gave their opinions and drew suggestions to overcome those problems and challenges regarding personal finance. While taking the response on six demographic questions, it was told to the students that personal information will be kept highly confidential as it is mentioned earlier. Demographic questions were enclosed in Part-A of the questionnaire comprising some basic questions like gender, age interval, marital status, geographic area or region, level of study and personal expenses per month. Even though some additional and external topics came about during the interviews, those unrelated issues were skipped while reporting the research. Moreover, the interviews were recorded through a mobile device (Nokia 5800) voice recorder and the responses were transcribed into written document.

## 4. DATA ANALYSIS

Several studies stated that usually case study research and its data analysis process provides more general to more specific observations (Creswell, 1998; Palys, 1997; Silverman, 2000). By discussing and conducting interviews among the international Muslim students of the university, some observations that

were pointed out may derive significant findings on the personal financing for an international Muslim student. Before evaluating and justifying their opinions, respondents' personal and demographic information will be evaluated accordingly in the next section.

# 4.1 Respondents' Demographic Information

In the general term, demographic information involves respondents' personal information. As it is mentioned, in this particular research, the target respondents are the students, more specifically the international students. This demographic information is very important for the research because it states respondents' personal background, allows the research to know about them, and thereafter can effectively relate their experiences based on their unique demographic characteristics. However, their unique experiences create a significant impact on the issues pertaining personal finance. Personal experiences and philosophical stance formulate the research direction (Crotty, 1998, p. 2; Guba and Lincoln, 1990, as cited in Patton, 2002, p. 98). For this particular research, there were few specific questions raised to identify the respondents' demographic characteristics. The questions were semi-structured based on the elements that are related to explore the issues on personal finance. For the demographic part of structured questions, there are some common questions that were asked pertaining to the respondents, such as their gender, age range, marital status, geographical location or region, the latest degree qualification that they have obtained and their monthly expenditures etc. Their prompt responses against those questions during the interviews are provided in Table 1 below:

**Table 1: Respondents' Demographic Information** 

Interviewees	Gender	Age Range	Marital Status	Geographical Location/ Region	Last Degree Obtained	Monthly Expenditure Range
Interviewee-	Male	31 and Above	Married	Asian	Masters	RM500 to RM1,000
Interviewee- 2	Female	20 to 25	Single	Others	Bachelor	RM500 to RM1,000
Interviewee-3	Male	26 to 30	Single	Asian	Bachelor	RM500 to RM1,000
Interviewee- 4	Male	31 and Above	Married	African	Masters	Less than RM500
Interviewee- 5	Male	26 to 30	Single	Asian	Masters	RM500 to RM1,000
Interviewee-	Male	31 and Above	Married	Asian	Masters	RM500 to RM1,000
Interviewee-	Female	26 to 30	Single	Asian	Masters	RM500 to RM1,000
Interviewee-8	Male	31 and Above	Single	Asian	Masters	RM1,000 and Above

Based on the information in Table 1, it is observed that the total number of respondents or interviewees is eight, which indicates that the findings will be explained based on the eight students' opinion. As aforementioned, the eight respondents are international postgraduate students consisting six male students and two female students. Among them, three students are married and the other four students are single. The interviewees, i.e. students are from various geographical locations including six from Asia, one from Africa and another one from another part of the world. Among them are six PhD students and two

Masters students of various age ranges. Most of the cases it is observed that, their average expenditure range between RM500 to RM1,000.

During the interview sessions, some specifications were set pertaining the equipment used, time duration for each interview and the locations for the interviews. Table 2 provides a brief illustration on the interview.

**Table 2: Interview Synopsis** 

Table 2: Interview Synopsis							
Interview/Transcription	Equipment Used for Interview	Time Duration for Interview	Venue for Interview Conducted				
Interview and Transcription No: 1	Samsung Galaxy S3 mini Mobile Device	8 Minutes 17 Seconds	OSR (Operating System and Research) Lab, KENMS				
Interview and Transcription No: 2	Nokia 5800 Mobile Device	9 Minutes 38 Seconds	Economics Canteen				
Interview and Transcription No: 3	Nokia 5800 Mobile Device	6 Minutes 9 Seconds	Beside the Undergraduates Computer Lab, KENMS				
Interview and Transcription No: 4	Samsung Galaxy S3 mini Mobile Device	7 Minutes 43 Seconds	OSR (Operating System and Research) Lab, KENMS				
Interview and Transcription No: 5	Samsung Galaxy S3 mini Mobile Device	5 Minutes 54 Seconds	Level-2, KENMS				
Interview and Transcription No: 6	Samsung Galaxy S3 mini Mobile Device	6 Minutes 31 Seconds	Outside of the Library				
Interview and Transcription No: 7	Nokia 5800 Mobile Device	5 Minutes 22 Seconds	Car Parking Area, KENMS				
Interview and Transcription No: 8	Samsung Galaxy S3 mini Mobile Device	11 Minutes 26 Seconds	OSR (Operating System and Research) Lab, KENMS				

Based on Table 2, it is observed that the equipment used was a mobile device for voice recording during the interviews. There were two major reasons for using the mobile device. Firstly, it is portable and

always available and could be used whenever seemed necessary or suitable for the interviews. Secondly, the device is convenient for the transfer and storage of the recorded data since it allows data storage via Bluetooth or using cable to the laptop or personal computer. In addition, the time duration for each interview sessions can easily be tracked, where the long interview was about 11 minutes and 26 seconds and the short one was 5 minutes and 22 seconds. The interviews were conducted mainly at the KENMS area and nearby the campus library. Moreover, the participation from the respondents of the interview was very satisfactory in terms of students' willingness.

#### 5. RESULTS

A number of total eight international students were selected based on various factors, including gender variation, different types of age range and their marital status, diverse geographical location or region, and their academic qualifications as well. As for the academic qualification, students were selected among those with at least a Masters or PhD degree. This is because in the undergraduate level, students are not that much aware regarding their personal finances or financial management. However, those eight students had at least a few years of experience in the university and they are able to justify their issues in personal financing. Additionally, information on their monthly expenditure also clarified the students' habit and behavior in terms of personal financial issues.

## 5.1 Personal Financing at the University

Among the eight students under study, every student stated his or her own opinion regarding issues on personal finance. As expectedly, many common issues were expressed For instance, when asked iftheir finances at the university was self-sponsored or financed, they replied quite clear-cut like "I'm a self financed student" or "I take money from my father... I'm self finance student" and "..basically, I am self-financed or self-sponsored student" etc. Besides, there were a couple of students who stated that they somehow are able to manage the assistantship from the university.

"I'm financing at IIUM from different sources... from my own savings... from my father..and some part of the fees I provided from my Research Assistantship income."

"..through money from little job that I get involved here in this university."

For those self-financed students, some of them did have plans for studying overseas and therefore, they saved money for this purpose.

"Before coming here I used to work for an institution about 6 years and I could able to save money for this purpose... I'm now spending my own saved money so you can say I'm self finance student."

Conversely, there are some students who have partial of full scholarships during their study in this university;

"..half of my tuition is sponsored by IIUM endowment fund... rest of the half and plus living expenses are covered by my family..."

"Alhamdulillah, I am having a scholarship which covers all kinds of tuition fees and provides monthly allowance to meet the basic needs."

Therefore, it can be said that, the students' personal finances at the IIUM does vary, and the students are getting different kinds of opportunities while some of them have financial benefits that are of either full or partial basis, whereas some of them are totally self-financed during their studies at the university.

### 5.2 The Sources of Fund

In the present research, the source of funds basically refers to how the students obtain funding or financial support during their study in the university. As for the self-financed students, it was reported that their funding sources are from their family or their personal savings. For instance, among the responses to the question pertaining to what is their source of fund: "from my family, my father gives me money for all of my expenses and so on" and "..my savings and my family... they are my sources of fund." While, the students who are on partial or full scholarships, pointed out the issue as:

"IIUM endowment fund and my father do provide me the finance."

"I get some certain allowance each and every month..in fact they (scholarship board) also do provide my tuition fees and hostel fees as well."

In addition, some students do get financial benefit from the university through some temporary basis jobs such as research assistantship and so on.

"Funds are from research work and research assistantship."

"..deposit from my previous job and doing RA (Research Assistantship) at the university right now.."

As aforementioned, some students have planned in advance, even financially, for the degree that they are currently pursuing. Therefore they already have savings for the purpose to further their study. Additionally, they also somehow have managed the financial assistantships from the university.

"..from my previous job salary which was saved for the study... recently I'm working as a Research Assistant and that's my only source of fund."

"..before I started my PhD studies, I was working back home. Here, I used to teach one course at the undergraduate level for a few semesters... my source of income comprise the combination of my own income from my job at home, the remuneration I used to receive for teaching part-time and also the financial support I get from my family."

# **5.3 Managing the Finance**

After identifying the financial situation and fund sources of the students, the the respondents were asked on how they can manage their personal finances. Most of the cases it is observed that they are quite apprehensive regarding the management of their personal finances. Therefore, some of them plan their personal financing reasonably and attempts to manage in that direction.

"To be honest, it's bit difficult to manage. Can say living hand to mouth..."

"Finance is managed by making sure that unnecessary things are not considered in my expenses. I totally focus on academic and food stuffs.."

"I plan with my limited amount of income. Whenever I need extra money.. I borrowed from my father and paid him back. I usually try to settle off my tuition fees on installment basis which release me from some pressure."

"I spend mostly to buy foods and other stuffs at least 60 percent of it.. and then to buy study materials about 20 percent.. and lastly I do best to save about 20 percent of my ready funds roughly.."

"..I've to think about all my personal expenses, including settling my academic expenses... like my tuition fees as well as hostel and whatever money that I spend..."

Moreover, based on the discussion, it is also found that besides their monthly expenditures, students are more or less worried about paying off the tuition fees and hostel fees. However, these are the things which are required in every new semester.

"..from my personal savings I allocate the expenditure in a way that it could cover all. Like I allocate the money to pay for tuition fees, Mahallah (hostel) fees, food and other expenses..."

"Well.. I've to think first about paying for my tuition and Mahallah (hostel) fees..there are other recurrent living expenses like food, transport, mobile (phone) and so on. Also, I no longer teach here as a part-timer. So..whatever money that I spend is what I can bring or source from my home."

In addition to that, surprisingly it is also observed that some students do not make any plans for their personal financing at all.

"There is no financial management even though I'm a finance and management student... the whole amount is just spent according to the necessary cause."

# 5.4 The Problems Raised to Manage the Fund

When the questions were raised regarding problems that they usually face to manage the source of capital, the respondents explained many important things in various perspectives.

"...sometimes I need extra money as I am using personal vehicle... it requires some maintenance. In this regard I fail several times throughout the financial crises. Sometimes the deposit of my monthly salary that I am getting as an RA is d is delayed into my account, which botheeeeers me a lot"

"The amount for RA is very minimal as most of the PhD students havefamilies, wife, kids..it's been really tough to manage.. you know?"

"..the sources of capital is not always steady... it has been off and on. At times there will be work to perform and at many other times there may not be work to do that will earn one income..... work done are paid after one month of carrying the task.."

While discussing the problems, some students clarified that, the main problem is managing the financing and source of capital continuously.

"Managing money and all sorts of expenses is not that easy as I can tell you. You know what, there are always some uncontrollable expenditures you must be experiencing..tiding up the money with a certain level each and every month is not easy.. so it's really quite hard to manage you know."

In addition, one of PhD students explained clearly about the consequences that he had to go through. "It's indeed a bit hard to manage my educational and other expenses while studying in a PhD program. At one stage, I had to borrow a good amount of money to defray the cost of tuition fees and other attendant living expenses... but borrowing doesn't solve my problem..it might at best temporarily mitigate my burden.. so.. basically.. I remain in a state of perennial anxiety that affects my concentration in my studies.."

Finally, there were some students who do not think that they have any problems regarding managing of personal finance.

"Not much problem though father is loaning to finance my study..you know studying abroad is always expensive!"

"I am spending my own saved money but alternatively I think that if I need money... my father will backup me..."

In fact, it is observed that they do have sophisticated family backup for their own financial shortage.

## 5.5 The Challenges and the Way to Overcome

Focusing on the challenges of personal finance and its solutions, the students' perception seemed to revolve around a mixture of overall financial issues. One of them has stated that when the student's account gets blocked because of payment due to the university, it causes mental pressure and big headache for the study life. As his statement is quoted:

"The main challenges are collecting the money in definite time. If I pay on installment basis, the institution will block my student account which gives a major pain. I cannot get any benefit from the institution. The best way is if there is permanent system of scholarship or research assistantship provided by the institution."

Several students mentioned that since they are international students and if they are faced with some emergencies and desperately need money, for instance, it becomes also a challenge for them. However, fluctuations in exchange rate also plays a vital role here.

"The main challenge is money sending time... seems like I'm having some urgency but can't get money right now on hand..my father maybe cannot send instantly because of international transfer.."

"The challenge is mostly the increasing rate of exchange as per time goes on and I don't think there is any solution that an individual can come up with."

Alternatively, as for students whom are attached with inter university jobs and so on, their money receiving time also turns out to be a major challenge for them.

"..the challengeis the inability to get little to do in order to effectively finance one's study at the university.. at times the little job done is paid towards the end of the next month or even higher than that period if claim form is submitted later than 3rd day of the next month... often than not, money would have been borrowed before receiving money for the little job done... I think payment for job done as research assistant or otherwise is paid latest by 3rd day of the following month as against the present arrangement."

When asked about the solutions for the challenges, most of the students think they should be able to handle the challenges as international students. At the same time, they also seek the equal participation and contribution from the university.

"...I believe IIUM should provide students with at least partial tuition waiver for all the admitted PhD students. Ok, you may think why I'm saying so.. from my explanation for PhD students... since they have to commit for at least around four years to continued study and research in their PhD program, a partial waiver of tuition fees would go a long way to offset their financial hardship. With the ever-increasing semester fees, the students more often than not remain anxious as to how to manage their financial burden. Besides, coping with the rigors of a PhD study I believe that before starting their program..students also should be certain of the availability of funding.."

Moreover, it is also observed that students evolved with the research assistantship are somehow frustrated as well and this frustration also becomes a challenge for them.

"University should increase the RA amount and pay every month. However, the present scenario is quite awful as during the short semester, there is no RA payment..does it mean we will not eat and spend during this whole 3 months? Then how? ..frankly speaking.. as a foreign student.. we don't get loan like that of the locals and I think the university should take this into consideration."

The solution for such issues of personal finance among foreign students can be viewed from individual's understanding. An optimistic student clarified his personal opinion as follows:

"Ummatic scholarship... such kind of scholarship should continue for at least two years provided the students can maintain good standing in their academic studies. Besides, offering scholarship or assistantship from my understanding, would also help IIUM significantly as it can then attract many outstanding students to its various PhD programs from different parts of the world."

# 6. CONCLUSION

This research addresses the issues on personal finance, especially among foreign Muslim students, particularly those who are studying at the International Islamic University Malaysia. However, this study has a significant role to identify the elements that play major role in managing personal finance. Basically, the study also emphasizes and strengthens the direction of those subsequent consequences. However, most of the respondents of this study derived the same point that personal financing and its proper planning for a student is very important during the study life especially studying in overseas universities. This statement is also found in previous researches (Bernheim, 1988; Chen and Volpe, 1998) which basically derives a person's financial behavior. Besides, the respondents frankly stated their personal opinions regarding issues underlying personal finances. There were many common issues that arose while explaining the facts and effects. The self-sponsored students view thing regarding personal finances that those who have partial of full financial supports from other alternatives like funds, scholarships or assistantships. However, for some of those self-financed students who are currently pursuing their study in the IIUM have had early plans for studying overseas and therefore, they have saved money for this purpose. Conversely, there are some students who simply did not set any plans for studying in foreign universities, or lacked on current personal financial planning. Basically, financial knowledge draws a person's financial behavior (Hilgerth et al., 2003) and personal finance sometimes very much depends on financial planning of a student. Additionally, it is also observed that in this university, students do have different types of sources of funds and the students are getting the opportunities from the institution itself, which does not equal for those who are self-financed students. In addition, during the interview sessions, in most of the cases it is observed that students are quite anxious in managing their personal finances. Therefore, some of them plan their personal finances reasonably and try to manage well in that direction. While focusing on the challenges in managing personal finances, it can be said that when the students are faced with financial constraints, it creates mental pressure for their study life. Moreover, students whom are attached with inter university jobs and so on; their money receiving time also turns out to be a major challenge for them. Therefore, students evolved with the research assistantship are somehow frustrated with related procedures in terms of unsteady income as well and this frustration also becomes a challenge for them. On the other hand, most of the students think they should be able to handle with the challenges as international students. Therefore, while struggling with their personal finances, some students seek to have financial support from the university or other possible alternatives. Hence, they also seek the equal participation and contribution from the university. However, by analyzing the consequences of this research and related issues, it may be resolved that the results obtained from this research will be valuable for academics and researchers to understand the related issues faced by the foreign students while they deal with their personal finances during their study in

universities abroad. Moreover, further research is required since this particular study contains a number of limitations, including time constraint as well as narrow sampling area and scope.

# REPLICATING SERVQUAL IN MALAYSIAN CREDIT CARD INDUSTRY. A MULTIGROUP ANALYSIS.<sup>1</sup>

Nuradli Ridzwan Shah Mohd Dali<sup>2</sup> Dr. ShumailaYousafzai<sup>3</sup> Hanifah Abdul Hamid<sup>4</sup> Abdullaah Jalil<sup>5</sup>

#### **ABSTRACT**

The aims of this paper are to investigate using confirmatory factor analysis whether the existing functional service quality model can be used in the context of Malaysia and compares the functional service quality model provided for credit card consumers specifically to see if there are any differences between the three different groups of credit card users in Malaysia. This study used online survey for the purpose of data collection. A comparison between different types of credit card users using the measurement model (CFA) was conducted. The findings from the CFA for the FSO model revealed that the replication of the Servperf model without any modification in the context of Malaysia possessed the discriminant validity concerns for Responsiveness, Reliability, Assurance, Empathy and Staff Conduct dimensions. Secondly, the multigroup comparison of the credit card holders revealed that there are differences between the groups as indicated in the findings. The findings from this study can be used by the banking industry in identifying the differences between diverse religious and cultural values for different groups to facilitate different marketing strategies. Furthermore, the findings revealed that different types of credit card users behave differently in their post-purchase behavioral. A distinction contribution of this study is that it is the first contextual study conducted in the Islamic credit-card industry.

**Keywords:** Islamic banking, Islamic credit cards, Servqual, Servperf, Functional service quality

## 1. INTRODUCTION

This is a ground breaking study exploring the post purchase behavioural of banking users' satisfaction in the context of credit card industry. The major contributions of this paper can be attributed to the new knowledge of the existing customer satisfaction theory and the first contextual comparison study affecting different groups of Malaysian credit card users' satisfaction. It builds from service quality and customer satisfaction theory but with a specific context of Malaysian banking system. The uniqueness of Malaysian banking system which runs on a parallel banking system, allows the Islamic banking (designed to meet the needs of the Muslims) and conventional banking (assimilating the western banking) to compete and operate side by side. Theoretically, customers' satisfactions are positively affected by banking service quality. Logically, the theory can be accepted if the products and services offered by the Islamic banks are of the same functions as the conventional banking. However, many

<sup>&</sup>lt;sup>1</sup>An earlier version of this paper was awarded as best paper at the Global Business Management Conference (GBMC 2012) organised in Cardiff, United Kingdom, July 2012. The authors wish to acknowledge the reviewers and editor for their contribution to this paper.

<sup>&</sup>lt;sup>5</sup> Lecturer, Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia

studies have shown that the selection (pre-purchase), usage (consumption) and customer's satisfaction (post-purchase) of Islamic banking users are religiously motivated. However, there are also studies that argue that the Islamic banking users are profit motivated merely the same as the conventional banking users. Building from previous theory, this paper aims to investigate whether the existing Servqual model can be applied to different categories of Malaysian banking users. Specifically, this study compares different categories of credit card users. Findings from the study revealed that the Servqual model can be applied in the Islamic banking with modifications and functional service quality factors affecting credit card users' satisfaction vary between three different categories of credit card users. The three different types are credit card users who use Islamic credit card, conventional credit card and those who use Islamic and conventional credit cards concurrently. The findings give powerful marketing implications for the banking industry in strategizing their marketing efforts towards the different groups of credit card users. This paper is organised into six sections with the objective to highlight the differences between different groups of credit card users' service quality perceptions affecting satisfaction. The next section will discuss Islamic banking, the existing literature, different groups of credit card users in Malaysia and the research hypotheses. The following section explains how the data is collected and analysed in order to answer the research questions. The findings are discussed in section four followed by a discussion and conclusion in the last sections.

#### 2. LITERATURE REVIEW

Islamic Banking. Before the establishment of the first Islamic bank in 1983, banking industry is monopolised by conventional banks. With the uprising of Islamic banking and finance, approximately a decade after the introduction of the first Islamic bank, the Malaysian government take the initiatives to allow conventional banks to offer Islamic banking products. Ever since, the Islamic banking industry has been flourishing and growing at an enormous rate. This is due to the fact that the Islamic banking industry is strongly supported by Malaysian government, as well as, the consumers' high level of acceptance. Therefore, Malaysia has a very unique financial system, where two different ideological systems can operate in harmony.

Even though the Islamic banking and conventional banking operate in the same system, the philosophy of Islamic banking is dissimilar with the philosophy of the conventional banking. This is because the aim of conventional banking is profit maximization while the aim of Islamic banking is *falah* maximization which means acquiring profit according to *Shari'ah* (Islamic laws) as well as fulfilling social welfare duties. An Islamic banking organisation must serve or satisfy God in which differentiates it from non-Islamic bodies (Hassan & Lewis, 2007). The system is religiously and politically motivated. Ideally, it will have to consider the benefit of the whole society, as well as other priorities in the Islamic states (Awwal Sarker, 1999; Dusuki, 2007; Dusuki & Abdullah, 2007). The co-existence of the Islamic banking and conventional banking in Malaysia has a strong root from the Malaysian government willingness to provide legal and financial infrastructural support and enablers for both systems to compete within the same market.

Even though, one can argue that the functions of Islamic banks are similar to that of conventional banks, the Islamic banking has distinctive approaches (Ahmad, 2000; Chapra, 2000; Dusuki, 2007; Hassan & Lewis, 2007; Iqbal & Mirakhor, 2007; Khan, 2010; Warde, 2000; Zainol, Shaari, & Muhammad Ali, 2008) that can be identified from three dominant principles.

The three dominant principles of Islamic banking, differentiate Islamic banking from its conventional counterparts. Firstly, Islamic banking strives for a just, fair and balanced society as envisaged by Islamic economics (Chapra, 2000; Dusuki, 2007; Dusuki & Abdullah, 2007;

Warde, 2000). The prohibitions of interest, excessive risks (speculation), gambling and uncertainty are to provide an equal playing field to protect the interests and benefits for all parties involved in Islamic banking and to promote social harmony (Ahmad, 2000; Chapra, 2000; Dusuki, 2007; Dusuki & Abdullah, 2007). Ideally, social harmony can be achieved between the rich and the poor, if wealth is distributed equally as in the socialist economics, however it limits the freedom to accumulate wealth. In contrast, wealth in the capitalist economy is distributed according to the free market, resulting in broadening gap between the rich and the poor. Unlike the capitalist and socialist economy, the Islamic economics allows an individual to accumulate wealth and at the same time the poor is taken care of through obligatory wealth transfer mechanism (*zakah*).

Secondly, Islamic banking is structured around the principle of brotherhood and cooperation, which stands for a system of equity sharing, risk sharing and stake taking (Ahmad, 2000; Dusuki, 2007; Dusuki & Abdullah, 2007; Obaidullah, 2005). Ideally, loans are not entitled to any addition or excess of its original principal according to the *Shari'ah*. Instead of loans, risk sharing through partnership is encouraged. On the other hand, risk-sharing contracts will be irrational for the capitalist since it involves higher risk. However, if the parties involve are equally risk-averse, two ethical distribution properties seem to be associated with profit sharing contracts (*mudharabah* contracts). They are fair risk-sharing and fair income ratios, indicating that these types of contracts are better than loan contracts (Tag El-Din, 2008). The loan contracts are one sided favouring the lenders only.

Thirdly, as a system grounded on the ethical and moral framework of the Islamic law of *Shari'ah*, Islamic banking is also characterised by ethical norms and social commitments (Ahmad, 2000; Chapra, 2000; Dusuki, 2007; Dusuki & Abdullah, 2007; Khan, 2010; Obaidullah, 2005; Warde, 2000). It is morally filtered by the *Shari'ah* rules, on permissibility (*halal*) and prohibitions (*haram*), to promote a social harmony and practical legal framework (Ahmad, 2000; Dusuki, 2007; Dusuki & Abdullah, 2007) restricting the Islamic banks from financing any project, which conflicts with the moral value system of Islam. For example, the Islamic banks cannot finance companies producing alcoholic beverages, companies involved in gambling activities and conventional insurance companies. What is noteworthy from the three major principles of Islamic banking is how the Islamic banks crucially compromise the profit motives, satisfying customer needs (Evans, Jamal, & Foxall, 2009, p. 5) and in the same time meeting religious, moral and social obligations as explained above? Can the Islamic banks apply the same strategies (One size fits all) used by the conventional banks? In answering the research questions, the literature is examined and is discussed in the following.

A Critical Review: Customer Satisfaction in Islamic Banking. Only banks that are best able to apply effective consumer-oriented marketing management capabilities within an Islamic environment will survive (Shook & Hassan, 1988). Theories in service quality and customer satisfaction revealed that there are significant relationships between these two concepts. Nevertheless, these two concepts are not straightforward to measure. One of the most frequently used measurement scales is Servqual developed by Parasuraman (1988). There are also many modified versions of Servqual to measure banking service quality (Arasli, Katircioglu, & Mehtap-Smadi, 2005; Han & Baek, 2004; Kanning & Bergmann, 2009; Kumar, Kee, & Manshor, 2009; Ladhari, 2009; Muslim & Zaidi, 2008; Newman & Cowling, 1996; Osman, et al., 2009; Othman & Owen, 2001; Sadek, et al., 2010; Wong, Rexha, & Phau, 2008). The Servqual model compares the customers' perception on the bank's performance (P) against the customers were satisfied but if the € is greater than P, (the) customers will be dissatisfied because their expectation of the bank's performance is higher than what the bank actually performed.

Servqual is also referred as gap model or functional service quality (FSQ) or in which FSQ is defined as the process, or how the service is provided (Lassar et al. 2000). Therefore the idea

on how severely different types of credit card users perceived the process of the services provided can affect customer satisfaction model will provide some contribution in theoretical and marketing implications on how consumers behave when they are religiously motivated. Specifically, as mentioned earlier, this paper aims to investigate if the one size fits all strategy can be applied for different groups of credit card users.

Undoubtedly, studies in customer satisfaction are in abundance in the literature since this concept is universally accepted in business. Unsurprisingly, the number of academic papers is still relatively large in the banking industry. However, if we define our scope to only customer satisfaction in the Islamic banking industry, interestingly the number is too small. For example, this study has conducted a systematic database search and managed to identify thirty seven articles dated from 1988 until 2010 with the keyword search employing customer satisfaction and banking. The thirty-seven passed through a filtration process separating them from the mass studies in customer satisfaction. Eighty-two percent of the studies focused on conventional banking. Only eight studies in the context of Islamic banking were found from the search (Haque, 2010; Khattak & Rehman, 2010; Masood, Chichti, Mansour, & Iqbal, 2009; Muslim & Zaidi, 2008; Naser, Jamal, & Al-Khatib, 1999; Osman, Ali, Zainuddin, Wan Rashid, & Jusoff, 2009; Othman & Owen, 2001; Sadek et al., 2010).

From the literature found from the systematic database search mentioned above, a critical review were conducted, three constructive discussions were laid out for this study. One criticism of the literature on Servqual has some methodological flaws in the operationalization of the (P) minus (E) (Abdullah, et al., 2004; Angur, et al., 1999; Cronin & Taylor, 1992; Osman, et al., 2009; Othman & Owen, 2001). This led to the creation of an alternative model named Servperf and is claimed to be superior to Servqual in term of its consistency in its results (Abdullah et al., 2004; Angur, Nataraajan, & Jr, 1999; Cronin & Taylor, 1992). Not limited to Servperf, other models have also been created such as Banksery (Aykiran, 1994) and other models (Aldlaigan & Buttle, 2002; Bahia & Nantes, 2000; Cui, Lewis, & Park, 2003; Guo, Duff, & Hair, 2008; Johnston, 1997; Lassar, Manolis, & Windsor, 2000; Levesque & McDougall, 1996; Malhotra, Ulgado, Agarwal, & Wu, 2005; Mukherjee & Nath, 2005; Petridou, Spathis, Glaveli, & Liassides, 2007; Stafford, 1996). Out of all the models created, Servperf is the most similar with the original Servqual model. The only difference is that Serverf advocates insist that the performance of the service quality is measured instead using the disconfirmation theory (Abdullah, et al., 2004; Angur, et al., 1999; Cronin & Taylor, 1992; Osman, et al., 2009; Othman & Owen, 2001).

During the past 30 years, the majority of customer satisfaction literature is in the context of conventional banking, however, in recent years, there has been an increasing amount of literature in the context of Islamic banking industry. The literature can be further diagnosed into topics of research. The researchers have divided the research into two major domains, which are customer satisfaction research in conventional banks and Islamic banks. The articles were grouped according to the similarity of the topics being discussed by the authors. There are nine topics, which were discussed in the context of conventional banks. The topics identified are; market segmentation, determinants of service quality and customer satisfaction, critics on Servqual, disconfirmation theory, comparative study, the importance of service quality dimensions, technological based service quality, culture and loyalty. As for the Islamic banking and finance (Islamic Banking and Finance), the review revealed that there were five topics being discussed, and they were the impact of bank's reputation towards customer satisfaction, compliance to Shari'ah as an additional Servqual dimension, the different impacts of culture to service quality perceptions and customer satisfaction, and the different demographic segmentation of the banking customers affecting customers' satisfaction. The review is synthesised and we found that future studies can contribute in further detail by comparing and providing the demarcations between the Islamic and conventional banking users' satisfaction.

In addition to the five dimensions of service quality developed by Parasuraman (1988), there are several authors who came out with a new dimension named as staff conducts (Aldlaigan &Buttle, 2002; Avkiran, 1994; Johnston, 1997; Levesque & McDougall, 1996). Therefore, this study will employ six dimensions affecting FSO. The dimensions are 1) reliability, 2) assurance, 3) tangible, 4) empathy, 5) responsiveness and 6) staff conducts.

Islamic Credit Card in Malaysian Banking Industry. The conventional credit-card nature of business is usury, interest and fee based, and it allows any kind of transactions as long as the business transaction is legal. This is in contradiction with the Islamic law where interest is prohibited for the lenders (taker) or borrowers (giver). This prevents group of Muslims from using the conventional credit card, alternatively they subscribed to Islamic credit card. One more group of credit card users continue to use the conventional credit cards with necessary actions taken to avoid the interest charges. For example the cardholders benefit from the interest free period and pay the whole amount spent or charged to their conventional credit card as to avoid any interest charges as act to obey to the rules on the prohibition of interest. This method of paying the whole sum charged to the conventional credit cards is allowed by several Islamic scholars especially for Muslims who reside in countries where the Islamic banking industry is small or not available.

Another type of Muslims group that use conventional credit cards, use the card without any remorse of any religious repercussions. They perceived that the Islamic credit card and the conventional credit cards are no less different from each other. The third group of credit card users use both types of credit cards, i.e. the Islamic and conventional credit card. This group of people are quite difficult to predict because they are not in any of the ends in which they can shift to either side if they wish to do.

However, the majority of the Islamic scholars disallowed the usage of the conventional credit cards. A comparison between the Islamic and conventional credit-cards apart from the conceptual differences (such as the interest elements), raise questions such as which "offers more value of money; charges low penalty rate; gives free bonus points; looks fancier; and gives annual fee waiver" (Mohd Dali & Abdul Hamid, 2007). Controversially unaccepted for the Middle Eastern scholars, the Malaysian bankers and Shari'ah scholars use bay' al 'inah<sup>6</sup> principles in two separate contracts namely bay' al-mutlak<sup>7</sup> and bay' bithaman ajil<sup>8</sup> (Bakhshi, 2006; Kahf, 2003). For example, Bank Islam (M) Bhd incorporates the qardhul hassan principle in its credit-card along with the bay' al 'inah despite the controversy of bay' al 'inah as the back door of interest. However, The Malaysian Shari'ah Council has passed a resolution approving the usage of Bay al 'inah contract in credit-card in 2001(Bank Negara Malaysia, 2010). Bay' al 'inah is permitted by the Malaysian Shari'ah scholars to satisfy the needs of Muslims as well as to sustain the progress of Islamic banks (Shaharuddin, 2009). Examples of the Islamic credit-cards offered by Malaysian banks using the Bay' al-Inah contracts are Maybank Islamic and AmIslamic Bank (M) Bhd. In addition, the holders of the card are only permitted carry out halal transactions, which exclude transactions that do not meet Shari'ah requirements. Examples of the prohibited transactions are transactions in bars, discos, night clubs, purchase of alcohols, escort and massage services and gambling (Ferdian, Dewi, & Rahman, 2008). This is supported by an examination of the terms and conditions of the Islamic credit-cards offered by eight banks in Malaysia revealing that there is a clause in the terms and conditions stating that the credit-cards cannot be used for purchasing the prohibited transactions as mentioned above. However, there are some problems in implementing and monitoring the above restrictions because the banks do not have the capacity to check the cardholders' purchases and transactions conducted in approved

<sup>&</sup>lt;sup>6</sup> Instantaneous sales and buy back agreement

<sup>&</sup>lt;sup>7</sup>Cash sales

<sup>&</sup>lt;sup>8</sup>Deferred sales

<sup>&</sup>lt;sup>9</sup>Halal refers to permissible or not prohibited according to Islamic law

merchants and purchases made overseas. For the non-Muslims, the above-prohibited transactions will restrict them to purchase liquor or any prohibited transactions, which might create dissatisfaction for them. However, if they want to control themselves or their supplementary cardholders' from dealing with such transactions, Islamic credit-cards can serve the purposes. The credit card users in Malaysia can be divided into three types of groups (Mohd Dali, Abdul Hamid, Shahimi, & Wahid, 2008). The first group prefers to use the conventional credit card (CCC) since the conventional credit card cards have been established for more than three decades. The second group of credit card users prefers the Islamic credit card (ICC) only as a religious conformity. The third group of credit card users prefers to own both CCC and ICC. It is also the aim of this study to see if there are any differences between the three groups. Therefore the following hypotheses are developed:

H1: The six Functional Service Quality dimensions confirm the CFA test

H2: There are no differences between three types of credit card users such as the CCC, ICC and credit card users who use both types.

### 3. RESEARCH METHODOLOGY

This section will explain the data collection and data analysis used for this study. This study used an online survey created using Google since it could reach a bigger target audience, and is faster and cost effective. The researcher made a cover page using a unique domain name (phdsurvey.nuradli.com/survey.htm) in order to avoid the long Google URL address. The final data collection process was conducted over a period of four (4) weeks, commencing from 7<sup>th</sup> of November 2011 until 8<sup>th</sup> of December 2011. The overall response to this survey was very positive with a total of 666 respondents participating in the survey. Eighty three respondents do not own any credit-cards, therefore, were screened out. In addition, 10 respondents were deleted because they are working overseas and are using international banks. The total useable respondents were 560 respondents. Approximately, 186 (33.2%) respondents were conventional credit-card users, 219 (39.1%) were Islamic credit-card users and the remaining 155 (27.7%) were having both credit-cards. Please refer to table 1 for the respondents' demographic profiles.

**Table 1: Demographic Profiles of the Respondents**

This study employed the confirmatory factor analysis (CFA) in order to measure the validity of the FSQ model. Firstly, the FSQ model was evaluated using the CFA and the overall goodness of fits (GOF) of the model is assessed through the examination of  $\chi^2$ /DF, CFI, TLI, NFI, AGFI, GFI, RMSEA, PCLOSE.

Table 2: Characteristics of Different Fit Indices Demonstrating Goodness of Fit across
Different Model Situations

	N > 250
No of vars (m)	m≥30
$\chi^2$	Significant p-values can be expected
$\chi^2/DF$	< 3
CFI or TLI	≥ 0.90
RNI	> 0.90
SRMR	$\leq 0.08$
	CFI ≥ 0.92
RMSEA	< 0.07
	CFI ≥ 0.90

Source adopted from Hair et al. (2006, p. 753).

In the current study, the number of samples is 560 and m is greater than 30. A great discussion of the respective index can be referred to Hair et al. (2006, p. 753). Some argue that values above 0.9 are acceptable cut offs (Bentler and Bonnett 1980; Hoyle and Panter 1995). This rule is often disputed and disregarded (Bollen 1989; Hoyle and Panter 1995). Cohen (1988), for example, has a lower cut-off, of 0.8 (Wong and Jeffery 2002). Bollen (1989) suggested that a significant criterion "may be simply to compare the fit of one's model to the fit of other, prior models of the same phenomenon" (Wong and Jeffery 2002). For example, quoted from Moss (2009), a CFI of .85 may represent progress in the context of a study where the best prior model had a fit of .70 (Bollen 1989). Therefore, since this is an initial study in the context of ICCs, any results obtained presently can then become the cut off for future In addition, the model's reliability, convergent and discriminant validity were also assessed through the examination of Composite Reliability (CR), Average Variance Extracted (AVE), Maximum Shared Squared Variance (MSV), and Average Shared Squared Variance (ASV). Reliability can be measured by the Composite reliability and the threshold is 0.7. Convergent validity can be identified with two indicators. The composite reliability must be greater than AVE and AVE must be above than 0.5. The discriminant validity problems can be identified with two indicators. MSV must be lower than AVE and ASV must be lower than AVE. Convergent validity problem means that the variables do not correlate well with each other within their parent factor; i.e., the latent factor is not well explained by its observed variables. Discriminant validity problem means that the variables correlate more highly with variables outside their latent variable than with the variables within their latent factor (J.F. Hair, et al., 2006, p. 776).

If there are problems identified after the evaluation of the model's GOF, reliability, convergent and discriminant validity, the model measures have to be refined and design a new study (J.F. Hair, et al., 2006, p. 776). One contributing factor to the problem might come from the different nature of the respondents. For instance, in this study, there are three different groups which are CCC, ICC and BOTHCC. This multigroup comparison is conducted using AMOS in order to see if there are any differences between the groups. Therefore, this study changed its mode from confirmatory to exploratory mode. In the exploratory mode, problematic items that have low factor loading (below 0.7) and squared multiple correlation (below 0.5) will be deleted, then convergent and discriminant validity were assessed and lastly the model are re-specified after factor analysis are conducted, if necessary (Byrne, 2010; Joseph F. Hair, Black, Babin, Anderson, & Tatham, 2006). The three models comprising different credit card users such as conventional credit card users (CCC), Islamic

credit card users (ICC), respondents who have both Islamic and conventional credit cards (BOTHCC) will be compared in the next section.

### 4. FINDINGS

This section, will discuss the CFA for all the credit cards users, followed by a multigroup analysis of the three different groups. Then the models for the three different groups are respecified to overcome the validity problems noted in CFA and multigroup comparison.

# 4.1 CFA for Functional Service Quality (FSQ)

This subsection aims to examine the first-order CFA model designed to test the multidimensionality of a theoretical construct of FSQ. Specifically, the functional service quality (FSQ) is a multidimensional construct composed of six factors - reliability (R), Assurance (AS), tangible (Tan), empathy (Emp), responsiveness (Res) and staff conduct (St). The theoretical underpinning of this hypothesis derives from the Servqual model proposed by Parasuraman et al. (1988) and the additional dimension named as "staff conduct" found by several authors (Aldlaigan & Buttle, 2002; Avkiran, 1994; Guo, et al., 2008; Johnston, 1997; Levesque & McDougall, 1996; Stafford, 1996; Sureshchandar, Rajendran, & Anantharaman, 2002). This study followed from earlier work in which the five-factor structure of Servqual (22 items) is used but with an additional staff conduct factor (4 items). The functional service quality dimensions are reliability (r1-r5), assurance (as1-as4), tangible (tan1-tan4), empathy (emp1-emp5), responsiveness (res1-res4) and staff conducts (st1-st4). There are 26 items explaining the functional service quality constructs. CFA was conducted to confirm the factor structure. All the indices are within the acceptable range CFA indicate a good fit to the observed data ( $\chi^2$ /df=2.44; CFI=0.96; GFI=0.92, RMSEA=0.05; TLI=0.96). Figure 1shows the results for the FSQ model.

**(**4) Reliability €39 €3) 0 as4 tan1 tan2 tan3 Tangible tan4 emp1 80 €33 **1** Empath: .89 **€13** 81 13 70 **2 €**2) .86 €20 res3 ponsiveness **€3** 68 €25 **2**5 aff Conduct **€2**}

Figure 1: CFA for FSQ

Interestingly to take note is that all the factor loadings are above 0.7, except for two items, which are r5 (0.53; the item is deleted since the R<sup>2</sup> is too low) and res4 (0.68). In addition, all covariance connecting between the latent constructs are strongly positive (above 0.5). Furthermore, the convergent and discriminant validity tests for FSQ model were conducted and shown in Table 3.

Table 3: Convergent and Discriminant Validity for FSQ

			•	at 0.001, Con	•	•		_	Varianc	e Explai	ined, MS	SV=Max	imum	

The overall composite reliability figures as shown in Table 3 are above 0.7 showing that the constructs are reliable. In addition, the AVEs are above 0.5 showing that the constructs have convergent validity. However, there are some discriminant validity concerns for Responsiveness, Reliability, Assurance, Empathy and Staff Conduct dimensions. The square root of the AVE for the dimensions mentioned above is less than one of the correlations with another factor. This problem is expected since some of the items developed by Parasuraman (1988) were identified to be overlapping. This is consistent with the findings of Cui et al. (2003) stating that Servqual is facing validity problems. Since all items from the original measure with a new dimension staff conduct were included in the CFA, some of the items might overlap with other items in different construct. This can be solved by deleting the affected items or by converging with the affected constructs. However, the problem might be due to the differences between the credit cards' users. In the following section, a multigroup CFA is conducted.

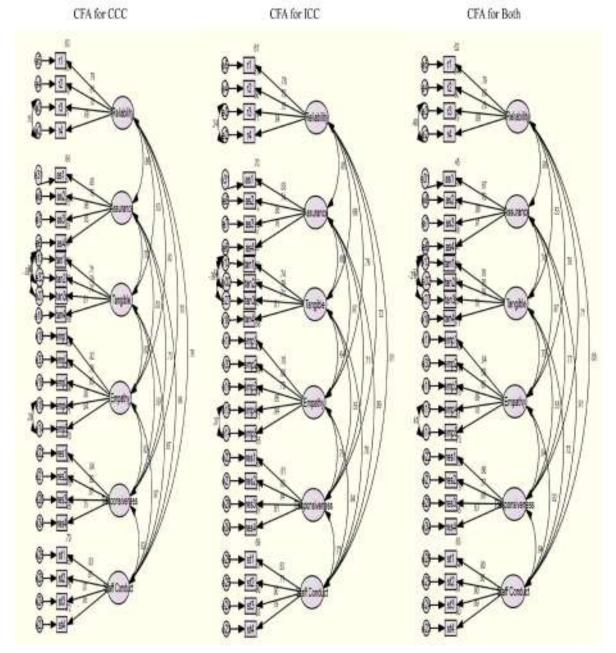

### 4.2 CFA Multigroup Comparisons

The credit card users in Malaysia can be divided into three types of groups as mentioned earlier in the paper. The first group prefers to use the conventional credit card since the conventional credit card cards have been established for more than three decades (CCC). The second group of credit card users prefers the Islamic credit card only as a religious conformity (ICC). The third group of credit card users prefers to own both CCC and ICC (BOTHCC). In this section, a multigroup CFA is explored and presented to deepen our understanding about the differences between the credit-card users. The results for individual groups for CCC, ICC and BOTHCC are shown in the following sub-sections.

### 4.2.1 CFA for CCC, ICC and BOTHCC Groups (FSQ Model)

CFA indicate a good fit to the observed data ( $\chi^2/df=1.826$ ; CFI=0.941; GFI=0.839, RMSEA=0.039; TLI=0.93). The CFA factor loadings results for CCC, ICC and BOTHCC credit card users are acceptable (above the 0.7 thresholds) for all the items in FSQ model as shown in Figure 2.

Figure 2: CFA for CCC, ICC and Both Credit Card Users

The results shown in Figure 2 shows the FSQ model is consistent for all three groups. However, if we examine the individual groups, the models will have some issues with convergent and validity issue. For example, the convergent and discriminant validity results for CCC are shown in Table 4.

Table 4: Reliability, Convergent and Discriminant Validity for CCC

	Convergent Validity		Discriminant Validity					Matrix v Diagona		e Square
	CR	AVE	MSV	ASV	Responsiveness	Reliability	Assurance	Tangible	Empathy	Staff Conduct
Responsivene	0.91	0.73	0.75	0.64	0.85					
SS	5	0	2	4	5					
	0.91	0.72	0.82	0.65	0.78	0.85				
Reliability	2	2	6	9	0	0				
	0.92	0.76	0.82	0.73	0.80	0.90	0.87			
Assurance	7	1	6	4	5	9	2			
	0.88	0.65	0.59	0.52	0.68	0.65	0.77	0.80		
Tangible	1	0	6	0	2	1	2	7		
	0.93	0.73	0.82	0.73	0.86	0.85	0.88	0.74	0.85	
Empathy	2	2	8	1	3	8	6	9	6	
	0.93	0.77	0.82	0.73	0.86	0.83	0.90	0.74	0.91	
Staff Conduct	2	3	8	0	7	6	3	6	0	0.879

It shows that there is no reliability and convergent problems for the CCC constructs because the a) CRs > 0.7, b) CRs > AVEs, c) AVEs are greater than 0.5. However, this model has some discriminant validity issues because the AVEs are lesser than one of the correlations with another factor. This can be detected when the correlation is greater than 0.85. The convergent and validity tests were also conducted for the ICC group and the following results were identified and is shown in Table 5.

Table 5: Reliability, Convergent and Discriminant Validity for ICC

	Convergent Validity		Discriminant Validity			Correl of AVE i			ith the S	quare
	CR	AVE	MSV	ASV	Responsiveness	Reliability	Assurance	Tangible	Empathy	Staff Conduct
Responsiveness	0.885	0.661	0.691	0.608	0.813					
Reliability	0.907	0.709	0.806	0.685	0.788	0.842				
Assurance	0.917	0.735	0.857	0.734	0.786	0.898	0.857			
Tangible	0.870	0.626	0.604	0.538	0.654	0.748	0.750	0.791		
Empathy	0.908	0.666	0.828	0.703	0.826	0.830	0.910	0.731	0.816	
Staff Conduct	0.916	0.732	0.857	0.737	0.831	0.867	0.926	0.777	0.884	0.856

The convergent and discriminant validity results for ICC show that *no* convergent problems are detected. However, this model has some discriminant validity issues because the AVEs are lesser than one of the correlations with another factor. This can be detected when the correlation is greater than 0.85. The convergent and validity tests were also conducted for the BOTHCC credit card users and the following results were identified and shown in Table 6.

Table 6: Reliability, Convergent and Discriminant Validity for Both

	Convergent Validity		Discriminant Validity				tion Ma Diagona		1 the Squ	uare Root
	CR	AVE	MSV	ASV	Responsiveness	Reliability	Assurance	Tangible	Empathy	Staff Conduct
Responsiveness	0.902	0.698	0.781	0.656	0.835					
Reliability	0.924	0.753	0.856	0.674	0.786	0.868				
Assurance	0.895	0.682	0.882	0.776	0.830	0.925	0.826			
Tangible	0.879	0.644	0.630	0.531	0.644	0.640	0.794	0.803

Staff Conduct	0.936	0.786	0.893	0.789	0.884	0.880	0.939	0.784	0.945	0.887

Source: This Research

The convergent and discriminant validity test results for BOTHCC credit card users shows that *no* convergent problems are detected. However, this model has some discriminant

validity issues because the AVEs are lesser than one of the correlations with another factor. This can be detected when the correlation is greater than 0.85. Even though, the findings show that the model has an overall good fit however; the respective groups have some issues with discriminant problems. In addition, the results for the model of multigroup invariant analysis revealed that the groups are different at the model level (Unconstrained  $\chi^2$  1402.2; Fully constrained  $\chi^2$  1485.7; p-value=0.002). The problems of the discriminant validity might arise from the differences in the multigroup, which will be examined in the following sub-section.

### 4.2.2 CFA Multigroup Differences Analysis (FSQ)

Multigroup difference analysis was conducted to identify if there are any significant differences found in any of the construct between groups. The differences were analysed by determining the z-score between the estimates between any two groups. An examination of the z-score in Table 7, there is a significant difference between CCC and ICC for emp2, emp3, r2, res4, st3, and tan3.

0.05; \* p-value < 0.10 Source: This Research

There are also significant differences for items comparing ICC and BOTHCC credit card users. The items are as, emp1, emp3, emp4, r2, res2, st1. As for the CCC and BOTHCC credit card users, the items found significant difference are as1, as2, emp1, emp3, emp4, r3, and res4. The results show that one size does not fit all for FSQ. In order to solve the problems, the models are re-specified in the exploratory mode.

## 4.3.1 Model Re-specification for CCC

Factor analysis was conducted using promax rotation, and eight items were found to be problematic. They were deleted because the factor loadings are below than 0.5, or they cross loaded into other constructs. The items were r5, as1, as2, as3, as4, st2, emp1 and emp2. Since there is no item loading in assurance, therefore, only five final constructs and 18 items will be used in the further analysis. The model is shown in Figure 3.

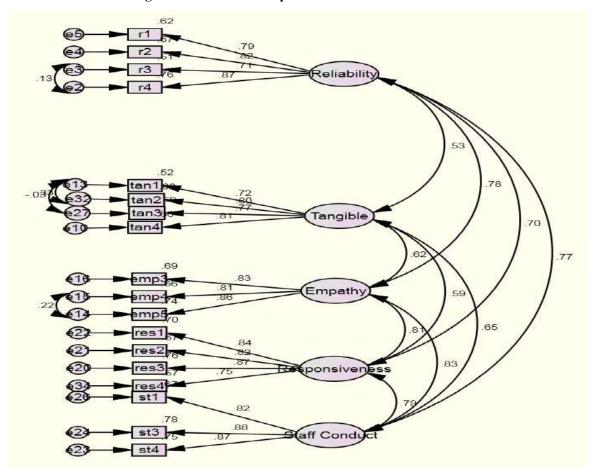

Figure 3: CFA after Re-specification for CCC

In addition, CFA indicates a good fit to the observed data ( $\chi^2$ /df=1.709; CFI=0.965; GFI=0.899, RMSEA=0.062; TLI=0.955). The CFA factor loadings results for CCC are acceptable (above the 0.7 thresholds). Furthermore, the reliability, convergent and discriminant validity as shown in table 8 managed to overcome the validity issues of the original FSQ model presented earlier.

Table 8: Reliability, Convergent and Discriminant Validity after Re-specification (CCC)

	Converge	nt Validity	Discrimina	nt Validity				latrix w	
	CR	AVE	MSV	ASV	Responsiveness	Reliability	Tangible	Empathy	Staff Conduct
Responsiveness	0.892	0.675	0.664	0.532	0.821				
Reliability	0.877	0.642	0.615	0.494	0.700	0.801			
Tangible	0.857	0.600	0.425	0.361	0.591	0.534	0.774		
Empathy	0.874	0.698	0.682	0.586	0.815	0.784	0.619	0.835	
Staff Conduct	0.892	0.733	0.682	0.580	0.791	0.765	0.652	0.826	0.856

The most striking result to emerge from the data is that there is no reliability, convergent and discriminant validity issue for the five constructs because a) CR > 0.7, b) AVEs > 0.5, c) correlation is less than 0.85.

## 4.3.2 Model Re-specification for ICC

Factor analysis was conducted using promax rotation, and nine items were found to be problematic. They were deleted because the factor loadings are below than 0.5, or they cross loaded into other constructs. The items were r5, as1, as2, as4, st2, res4, tan3, emp1 and emp2. Since there is no item loading in assurance, therefore, only five final constructs and 17 items will be used in the further analysis. The model is shown Figure 4.

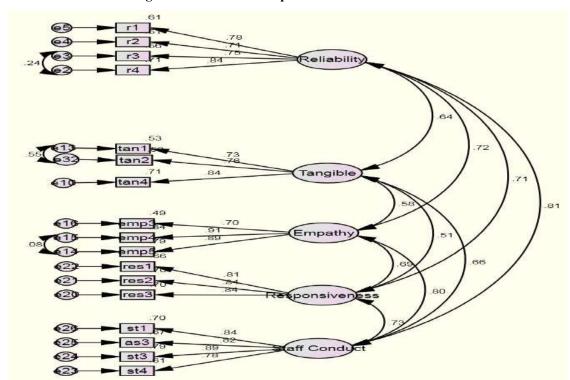

Figure 4: CFA after Re-specification for ICC

In addition, CFA indicates a good fit to the observed data ( $\chi^2$ /df=2.014; CFI=0.959; GFI=0.897, RMSEA=0.068; TLI=0.948). The CFA factor loadings results for ICC are acceptable (above the 0.7 thresholds). Furthermore, the reliability, convergent and discriminant validity is shown in Table 9.

Table 9: Reliability, Convergent and Discriminant Validity after Re-specification (ICC)

	Conve Vali	_		ninant dity	Factor C		Matrix wi E in the Di		are Root
	CR	AVE	MSV	ASV	Responsive ness	Reliability	Tangible	Empathy	Staff Conduct
Responsiveness	0.867	0.685	0.537	0.443	0.828				
Reliability	0.856	0.599	0.656	0.519	0.707	0.774			
Tangible	0.820	0.603	0.436	0.359	0.508	0.637	0.777		
Empathy	0.877	0.706	0.640	0.492	0.691	0.716	0.581	0.840	
Staff Conduct	0.900	0.693	0.656	0.567	0.733	0.810	0.660	0.800	0.833

Source: This Research

There is no reliability, convergent and discriminant validity issue for the five constructs because a) CR > 0.7, b) AVEs > 0.5, c) correlation is < 0.85.

### 4.3.3 Model Re-specification for BOTHCC

Factor analysis was conducted using promax rotation and thirteen (13) items were found to be problematic. They were deleted because the factor loading are below than 0.5, or they cross loaded into other constructs. The items were r3, r5, as1, as2, as3, as4, emp2, emp3, res4, as1, tan3, st4 and tan4. Since there is no item loading in assurance, therefore, only five final constructs and 13 items will be used in the further analysis. The model is shown in Figure 5.

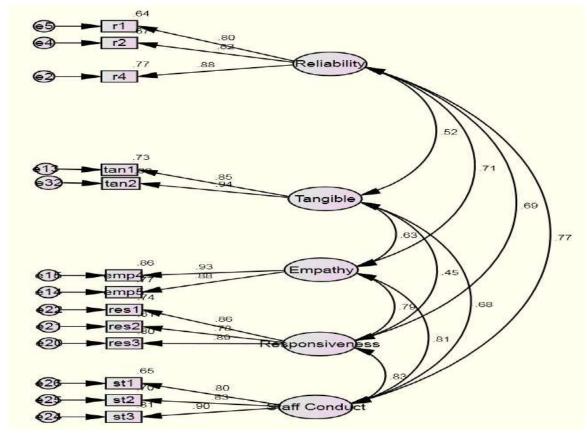

Figure 5: CFA after Re-specification for Both

Source: This Research

In addition, CFA indicates a marginally good fit to the observed data ( $\chi^2/df=2.314$ ; CFI=0.941; GFI=0.854, RMSEA=0.093; TLI=0.924) because RMSEA is greater than 0.08 with a significant Pclose. The CFA factor loadings results for all BOTHCC items are acceptable (above the 0.7 thresholds). Furthermore, the reliability, convergent and discriminant validity is shown in Table 10.

Table 10: Reliability, Convergent and Discriminant Validity after Re-specification (Both)

	Convergent Validity		Discriminant Validity		Factor Correlation Matrix with the Square Root of AVE in the Diagonal				
	CR	AVE	MSV	ASV	Responsiveness	Reliability	Tangible	Empathy	Staff Conduct
Responsiveness	0.883	0.717	0.686	0.498	0.847				
Reliability	0.872	0.694	0.588	0.459	0.689	0.833			
Tangible	0.893	0.807	0.461	0.334	0.452	0.518	0.898		
Empathy	0.897	0.813	0.659	0.549	0.793	0.709	0.635	0.902	
Staff Conduct	0.884	0.718	0.686	0.599	0.828	0.767	0.679	0.812	0.847

There is no reliability, convergent and discriminant validity issue for the five constructs because a) CR > 0.7, b) AVEs > 0.5, c) correlation is < 0.85.

#### 5. DISCUSSION

As mentioned earlier the aims of this paper are to investigate using confirmatory factor analysis, whether the existing functional service quality model can be used within the context of Malaysia and compares the functional service quality model provided for credit card consumers, specifically to see if there are any differences between the three different groups of credit card users in Malaysia. The findings from the CFA for the FSQ model revealed that the replication of the western model without any modification in the context of Malaysia possessed the discriminant validity concerns for Responsiveness, Reliability, Assurance, Empathy and Staff Conduct dimensions. The findings are consistent with the findings of Cui et al. (2003) stating that Servqual is facing validity problems. However, there are several studies using Parasuraman (1988) model or Othman & Owen (2001) model reporting that the models are reliable such as Muslim & Zaidi (2008), Sadek, et al., (2010) and Osman, et al.,(2009) but no attempts were conducted to assess the convergent and discriminant validity. Therefore, this study has contributed a significance finding that the adaptation of the existing model without any modification can be superficial. The model might show a good GOF indices and reliability results. However, it might fail the discriminant validity.

Secondly, the multigroup comparison of the credit card holders revealed that there are differences between the groups as indicated in the findings. The differences identified in the confirmatory and exploratory modes. The Z score difference tests for the different groups revealed that there are significant differences between the groups for several items. In addition, the numbers of items used in different groups are different because some items were found to be problematic in the factor analysis during the exploratory mode. For instance, CCC has 18 items. ICC has 17 items, and BOTHCC have 13 items. As for the constructs, the assurance dimension did not manage to be a contributing factor in all three groups. This is supported by Han & Baek (2004) because they claimed that the assurance dimension would have less human interaction while conducting online banking. In addition, Arasli, Mehtap-Smadi, & Katircioglu (2005) also eliminated assurance dimension for the banking studies

conducted in Cyprus. As for the case of Malaysia, Kumar, et al., (2009) the assurance dimension was also eliminated.

The findings have a significant impact to facilitate the banking industry to segment its market for different diverse religious and cultural value. The findings show that different models are required for different groups of people in the post-purchase behavioural in the banking industry. Failure to meet the different needs of the diverse groups will end up the banks to be positioning their efforts and financial strengths erroneously.

### 6. CONCLUSION

Customer satisfaction is an important research area to understand consumer post purchase behaviours especially in the context of banking and credit-card service industry. This research, studying the difference between the Islamic credit card holders, conventional credit card holders and customers who own both types of the credit cards found that there are differences between the different types of groups. The re-specified models for the different groups revealed that assurance dimension did not form significantly for the CCC, ICC and BOTHCC users. In addition, the idea of one size fits all does not apply to the current context because there are significant differences between the three groups. The result explicitly implies that in the context of CCC, ICC, and BOTHCC some modification or addition to the dimensions is recommended. The study, however, only tested for the measurement models (CFA). This study recommends that structural test to be conducted in order to determine the relationships between the latent constructs and customer satisfaction. However, since there are differences between the credit cards users, the structural relationships might be similar or different between the models. Nevertheless, the overall FSQ model is still relevant with a condition some minor adjustment can be made based on the contextual and industry.

# Does Faith Move Stock Markets? Evidence from Saudi Arabia

Alessandra Canepa and Abdullah Ibnrubbian

Brunel University London

November 1, 2012

### Abstract

This paper investigates the effects of religious beliefs on stock prices. Our findings support the viewpoint that the religious tenets have important bearing on portfolio choices of investors. It is found that Shariah-compliant stocks have higher return and volatility than their non-Shariah compliant counterparts.

Keywords: Islamic Religion, Stock Returns, Volatility, Stochastic Dominance, Saudi Arabia.

# 1 Introduction

The role of beliefs, social norms and values has not been widely studied in financial literature. Yet, it seems intuitive that individuals operating in different social environments would exhibit different behavior. In the end, markets do not make decisions, but people do and interactions among individual choices, corporate culture and social norms are unavoidable.

Prior research suggests links between individual religiosity and risk aversion. For example, Miller and Hoffmann (1995) reports a negative correlation at individual level between religiosity and attitude towards risk. Similalry, Osoba (2003) uses individual panel data to show that risk-averse individuals attend churches more often than risk-seeking individuals. Hilary and Hui (2009) examine if religion affects corporate behavior in US. They find that firms located in counties with higher level of religiosity display lower degrees of risk exposure. Extant literature also acknowledge that religiosity and social norms have some bearing on investment decisions of institutions such as pension plans and corporate-decision making in general. In this paper we endeavour to add to the existing body of knowledge by focusing on the relation between religion and financial markets. This study focuses specifically on Islamic religion and examines the market effects of ethical norms in the novel setting of stock markets.

Islamic religion imposes several restrictions on individual investment choices. Most notably, the prohibition of investing in "sin stocks" (i.e. publicly traded companies involved in producing alcohol, tobacco, and gaming) and interest bearing securities. We postulate that in countries where religion plays a heavy role in dictating individual behavioral code and social norms, portfolio selection is affected.

To investigate the market effects (if any) of ethical norms we focus on a country where religion constitutes an integral part of society, namely Saudi Arabia. This country is an ideal setting in which to study this phenomenon, for several reasons. Firstly, Muslims constitute 97% of population. Also, Saudi Arabia is a conservative society that has adopted the most austerely puritanical

form of Islam. The country also plays a central role in the international Muslim community as the host of the two holy cities of Makkah and Medina and this is a paramount to the country identity. Secondly, although Islamic finance services industry is expanding rapidly in the homeland of Islam, non Shariah-compliant stocks are available on the market and there is no legal obligation to invest in these securities. Portfolio selection is entirely left to market participants and any moral obligation depends on the ethical attitude of investors. Finally, as a result of its development and the peculiarity of the Saudi economy (Saudi economy is heavily dependent on oil revenue), the Saudi stock market has several characteristics that makes it unique among emerging-market bourses. Market capitalization and trading volume have multiplied by some orders of magnitude in the last few years, yet the large majority of investors are individuals rather then institutions. Also, foreign investment is very limited as GCC national and other Arab residents account for a small proportion of buy and sell transactions, whereas the non-Arab resident proportion is close to zero.

It is clear from the few highlights above that Islamic religion plays an integral part of everyday life in the country determining much of the interaction within the society. The prominent role of religion in the society together with recent developments of the Saudi stock market constitute a rare opportunity for a social scientist to observe a phenomenon in an almost lab-made experiment in which to test the effect of religious tenets on financial markets: starting from 2001 onward, first-time local individual investors (i.e. not institutional or professional mutual fund managers) entered a "conventional" (i.e. not only Islamic finance oriented) and relatively thin stock market in large number and started trading massively.

A natural question arises at this point: Is portfolio selection of market participants affected by social environment? In other words, is there any market effect that can be ascribed to religious prescriptions? Moreover, given the very large proportion of retail investors versus institutional investors in the market how this affects stock prices? Is there an interaction between religious tenets

concerning financial investment and portfolio choice of retail investors? These are the issues addressed in this paper.

We begin our investigation by classifying stock returns according to their degree of compliance with Islamic finance principles. First, we hypothesize that shares of stocks which are less Shariah-compliant should be held in smaller proportions in the religious minded investor's optimal portfolio. We test this hypothesis by considering the stochastic dominance principle for portfolio selection of a risk averse investor. Consistent with our predictions, we find that stocks that are more Shariah-compliant have higher returns and are associated with higher relative risk. Next we investigate the effect of retail investors on the volatility of returns. Given the massive increase of retail investors in the market that occurred in the recent years we postulate that by increasing trade volume of stocks which are more Shariah-compliant, religious tenets affect the volatility of returns. According to behavioral finance literature noise traders acting on the base of noisy signal create additional source of systemic risk in the market, therefore increasing volatility of the assets affected by the action of noise traders. Looking at the evolution of trade volume in different stock market sectors it is found that individual investors trade more actively in Shariah-compliant stocks. Given the strong relation between trade volume and volatility it appears that by pushing away stock prices from their fundamental values noise traders affect volatility of Shariah-compliant stocks. Finally, because individual investors tend to place small orders their actions have to be coordinated in order to make an impact on the market. Accordingly, in order to test this hypothesis tests for herding behavior in the stock market are conducted.

Overall, our findings on the effect of religious tenets in the context of stock market strongly support the viewpoint that religious prescriptions can have important effect for market in the country under consideration.

The rest of the paper proceeds as follows. Section 2 provides some theoretical background. In Section 3 the results of the empirical investigation are reported and the methodology used is discussed. In Section 4, the relation-

ship between price volatility and trade volume is investigated. Finally, some concluding remarks are given in Section 6.

# 2 Background and Theoretical Motivation

Economists have long realised the importance of understanding individual portfolio choice. A rich theoretical literature demonstrates how portfolio decisions
depend on factors such as risk aversion and investment opportunities. Early
contributions analyse static models in which an investor selects the portfolio
that maximizes expected utility function given total wealth and the risk-return
patters of available assets (Tobin (1958)). More recent research has moved to a
dynamic framework in which a portfolio is selected to maximize expected lifetime utility. The empirical literature on portfolio choice seeks to find observable
variables that explain cross-sectional variations in portfolio behavior. Typically,
covariates include resources available to the household (total wealth and income)
as well as demographic characteristics (age, race, gender, marital status). The
role of religion has received little attention, yet in many communities religious
tenets play a role in shaping economic behavior and market outcomes, overriding
at times the profit motive.

In this paper we aim at investigating if religion affects portfolio selection. From the theoretical point of view our paper relates to the literature of ethical investments where portfolio selection is realised on the basis of ethical principle along with the traditional mean-variance relation. Following this literature we postulate that investors' religious considerations restrict the set of securities available for portfolios selection to a subset of the available stocks in the market.

Testing whether religion affects portfolio selection directly requires microlevel data on individual ownership. Ideally, one should analyse the link level of religiosity and risk attitude. Unfortunately, this type of data are not available to us. Therefore, we adopt and indirect approach and analyse the return behavior in the Saudi stock market. Underneath this approach lays the idea that portfolio composition of a religious minded investor is affected by the degree of Shariahcompliant element of the assets. If this is true one should see an effect of the stock price.

Before describing the empirical analysis we briefly review some basic principle of Islamic finance. One of the main pillars in Islamic finance is the prohibition of collection or payment of interest (riba). In general, any interest or predetermined payment over the principle is not allowed according to Islamic religion. Other forms of restrictions Muslims face are the prohibition of gambling, investing in businesses that are considered sinful or socially irresponsible such as companies that produce alcohol or weapons. Also, many practices associated with stock trading such as margin trading (i.e. borrowing to invest) or short selling are not allowed in Islamic finance. Other important considerations relates to derivative products, such as futures and options which are in general considered invalid instruments in Islamic finance.

Islamic investors have, however, a range of choices when constructing their financial portfolio. These include among other interest free bank deposits, investment in Islamic unit trusts and investments in stock markets. For a review on principles and methods of Islamic finance see for example Gait and Worthington (2007).

# 3 Stock Market and Islamic Law: a Stochastic Dominance Approach

In this section we test the hypothesis that there is a relation between stock market returns and Islamic law. A battery of methodologies has been used in order to test this hypothesis. As a first approach some descriptive statistics are reported. We then go a step further and investigate the hypothesis that returns and in particular the return volatility is higher for Shariah-compliant stocks by using the stochastic dominance approach.

### 3.1 The Empirical Investigation

The data under consideration consists of daily closing prices for Saudi stock market general index (TASI) and the sector indexes. The period considered in this study covers from January 1<sup>st</sup> 2002 to April 1<sup>st</sup> 2008. There are 6 sectors in the stock market. Namely, the sectors are: Banking, Industry, Cement, Agriculture, Services, and Telecommunications. However, we do not include Telecommunication in the study as it consists of one company only and few data are available for this sector.

In order to investigate if Shariah law affects the stock returns the five sectors were classified according to the degree of compliance with Islamic finance principles. Unlike other countries with high proportion of Muslim population Saudi stock market does not offer a Shariah compliant index such as the Malaysian SI index for example. However, Al-Shubily and Al-Osaimi provide highly regarded lists where companies offering securities on the market are classified by authoritative religious experts. In these lists financial services that provide interest (riba), or publicly traded companies involved in producing alcohol, tobacco and gaming are considered not suitable to a devoted Muslim and classified as "haram". On the other side, Shariah-compliant companies enjoy the status of "halal" and can be considered by investors seeking to make their investment based on Islamic jurisprudence. Finally, companies whose business activities are Shariah-compliant, but sources of funds for some activities are not compliant are considered "mixed". Investment in this kind of stock is considered halal, but investors have to relinquish a proportion of their dividends in order to "purify" their profits for the non Shariah-compliant part of their revenues. In principle, the higher this proportion, the less Shariah-compliant is the company and therefore the less suitable the stock is for a pious Muslim investor. Therefore, by considering the distinction between haram, halal and mixed type of securities it is possible to rank each of the five sectors according to the degree of Shariah-compliant element.

According to this criterion the Banking sector is the less compatible with the Islamic principles as there is only one bank trading in Shariah-compliant equities, the remaining 8 being conventional banks. The Cement sector has 8 firms which are classified as mixed companies. According to the Al-Osaimi 2008 list<sup>1</sup>, the proportion of dividend that has to be waived for stocks in this sector ranges from 7% to 15%. The Industrial sector includes 23 joint companies. Some of these firms offer Shariah-compliant securities, but the majority of the publicly traded companies in this sector are classified as mixed. According to the Al-Shubily 2007 list, investors must alienate an amount between 3% and 10% of their dividend per share in order to purify their revenues. The Service sector contains 22 joint companies of which 14 companies are Shariah-compliant and 8 companies are in the mixed category. In this sector the percent that has to be waived to clear revenues is small compared to other sectors. According to the Al-Osaimi 2008 list this proportion ranges between 0.02% and 0.60%. Finally, the Agriculture sector includes 9 joint firms. All companies are Shariah-complaint and therefore suitable for a religions minded investor.

For ease of interpretation the ranking of the sectors according to the degree of Shariah-compliance element of stocks is summarised in Table 1.

Table 1. Ranking of Shariah-compliant stocks by sector.

Sector	Shariah-compliant element				
Bank	Approximately 90% haram				
Cement	Mixed: $6\%$ - $15\%$				
Industrial	Mixed: $3\% - 10\%$				
Services	Mixed: $0.02 - 0.60\%$				
Agriculture	100% halal				

Note: The ranking is in reverse order with the Banking sector being the less Shariah-compliant sector and Agriculture 100% halal.

We next consider the returns for the five sectors and investigate if there is a relation between the ranking of sectors reported in Table 1 and the distribution of returns.

<sup>&</sup>lt;sup>1</sup>Note: The Al-Osaimi and Al-Shubily lists are published annually. However, looking at the published lists between 2000 and 2006 the proportion of dividends that had to be waived did not change substantially. Therefore, only the lists published in 2007 and 2008 were considered.

### 3.2 A First Look at the Data

For the empirical investigation daily returns for each sector and the general market index (TASI) were calculated as:

$$R_t = \ln(P_t/P_{t-1})$$

where  $P_t$  and  $P_{t-1}$  are the closing prices on day t and t-1, respectively.

As volatility is unobservable a proxy was calculated by using the squared returns after filtering returns from the (estimated) conditional mean. That is, for the general index and each sector indexes a proxy for volatility has been calculated as

$$\sigma_t = \left(R_t - (1/T)\sum_{j=1}^T R_t\right)^2. \tag{1}$$

As shown Hansen and Lunde (2006) the expression in (1) provides a unbiased estimator of the unknown data generating process of return volatility. Recently, other proxy for volatility have been suggested. A well known example is realised volatility where volatility is estimated using intraday observations of daily stock prices. Assuming that the log of the series of stock prices are a continuous semimartingale processes, realised volatility also is a consistent estimator of the true underlying volatility process. However, we did not have access to intraday stock prices. Thus, given that square returns provide a unbiased estimator of the true unobservable volatility the former were used as a proxy of volatility.

Table 2 reports some basic univariate statistics for the Saudi returns throughout the sample. The mean, minimum, maximum, standard deviations, skewness and kurtosis indices are reported. The mean returns for the 5 sectors are positive, ranging from a maximum of 0.096 for Industrial to a minimum 0.055 for the Cement sector. The positive sign reflects high growth in Saudi stock market during the period under consideration. From Table 2 it is of interest to note that the Banking sector which is the least Sharia-compliant sector and the Cement sector which is ranked second in Table 1 have the lowest standard deviation.

On the other side, Agriculture is the most volatile sector followed by Service and Industrial.

Table 2. Summary statistics of the daily returns for the five sectors in the Saudi stock market.

Sector	Mean	Std. Dev.	Skewness	Kurtosis	
Bank	0.055	1.150	-0.640	10.653	
Industrial	0.096	2.930	-0.451	6.621	
Cement	0.056	1.688	-0.609	10.600	
Service	0.053	2.153	-0.909	6.382	
Agriculture	0.083	2.788	-0.457	3.670	
Tasi	0.064	1.507	-1.027	9.929	

From Table 2 it also appears that stock returns in each of the sectors are negatively skewed and leptokurtic, as the skewness and kurtosis indices are higher than zero and three, respectively. Excess kurtosis in stock return has been well documented in many equity market studies in both developed and emerging markets.

The preliminary investigation in Table 2 suggests that the magnitude of the standard deviation of returns is a good match with Table 1, where the ranking of the sectors according to the degree of Shariah-compliance is reported. In order to further investigate this issue, below we use the stochastic dominance method to compare the returns in different sectors of the Saudi stock market. The theory of stochastic dominance provides a systematic framework for comparing relationship between two distributions. With respect to the simple mean-variance approach it has the advantage of exploiting the information embedded in the entire distributions of stock market returns instead of finite set of statistics.

### 3.3 The Stochastic Dominance Analysis

Before presenting the results of the empirical investigation we briefly define the criteria of stochastic dominance.

Define X and Y be two stochastic processes for the returns of any two sectors. Let  $U_1$  denote the class of all von Neumann-Morgestern type of utility functions, u, such that  $u' \geq 0$ , also let  $U_2$  denote the class of all utility functions in  $U_1$  for which  $u'' \leq 0$ , and  $U_3$  denote a subset of  $U_j$  for which  $u''' \leq 0$ . Let  $X_1, ..., X_p$  be p observation of X and  $Y_1, ..., Y_m$  denote the m observation in Y and let  $F_1(x)$  and  $F_2(x)$  be the cumulative distribution functions of X and Y respectively, then we define

**Definition 1.** X first order stochastically dominates (FSD) Y if and only if either:

- i)  $E[u(X)] \geq E[u(Y)]$  for all  $u \in \mathcal{U}_1$
- *ii*)  $F_1(x) \leq F_2(x)$   $\forall x$  with strict inequality for some x.

According to Definition 1 investors prefer higher returns to lower returns, which implies that a utility function has a non-negative first derivative. Second order stochastically dominate (SSD) also takes risk aversion into account, but it posits a negative second derivative (which implies diminishing marginal utility) of the investor's utility function. This is sufficient for risk aversion. More formally, the definition of SSD is as follows:

**Definition 2.** X second order stochastic dominates Y if and only if either:

- $i) E[u(X)] \ge E[u(Y)]$
- ii)  $\int_{-\infty}^{x} F_{1}(t) dt \leq \int_{-\infty}^{x} F_{2}(t) dt \ \forall \ x \text{ with strict inequality for some } x.$

Whitmore (1970) introduced third-order SD by adding the condition that utility functions have non-negative third derivative. This assumes the empirically attractive feature of decreasing absolute risk. It is clear that higher order efficient sets are subsets of the lower efficient sets.

Testing for stochastic dominance can be based on comparing (functions of) the cumulate distributions of the five sectors. Of course, the true cumulated distribution functions (CDFs) are not known in practice. Therefore, stochastic dominance relies on the empirical distribution functions. In the literature

several procedures have been proposed to test for stochastic dominance. An early work by McFadden (1989) proposed a generalization of the Kolmogorov–Smirnov test of first and second order stochastic dominance among a number of prospects (distributions) based on i.i.d. observations and independent prospects. Later works by Klecan et al. (1991) and Barrett and Donald (2003) extended these tests allowing for dependence in observations, and replacing independence with a general exchangeability amongst the competing prospects. An important breakthrough in this literature is given in Linton, Maasoumi and Whang (2005) where consistent critical values for testing stochastic dominance are obtained for serially dependent observations. The procedure also accommodates for general dependence amongst the prospects which are to be ranked. Since stock market returns are well known to have fat-tail distributions in this paper the inference procedure suggested by Linton et al. (2005) is adopted.

### Hypotheses of Interest and Test Procedure

Let  $\Xi$  denote the support of  $\{X_{tk}: t=1,...,N,\ k=1,...,6\}$  where k includes the five stock market sectors as well as the all share index TASI. Also, let s=1,2 represents the order of stochastic dominance. Under the null hypothesis returns in sector i stochastically dominates returns in sector j (for  $i,j \in k$ ). For each k and  $x \in \Xi$ , let  $D_i^s(x)$  and  $D_j^s(x)$  the empirical distribution function of sector i and j. To test

$$\mathcal{H}_0: D_i^s(x; F_i) \leq D_i^s(x; F_i) \qquad \forall x \in \mathbb{R}, \ s = 1, 2$$

versus

$$\mathcal{H}_1: D_i^s(x; F_i) > D_i^s(x; F_j) \quad \forall x \in \mathbb{R}, \ s = 1, 2.$$

Linton et al. (2005) consider the Kolmogorov-Smirnov distance between functional of the empirical distribution functions of the returns and define the test statistic as

$$\hat{\Lambda} = \min \sup_{x \in \mathbb{R}} \sqrt{N} \left[ \hat{D}_i^s \left( x; \hat{F}_i \right) - \hat{D}_j^s \left( x; \hat{F}_j \right) \right]. \tag{2}$$

where

$$\hat{D}_{i}^{s}\left(x;\hat{F}_{i}\right) = \frac{1}{N(s-1)!} \sum_{t=1}^{T} 1(X_{it} \leq x) \left(x - X_{it}\right)^{s-1}$$

and  $\hat{D}_{j}^{s}$  is similarly defined. Under suitable regularity conditions Linton *et al.* (2005) show that  $\hat{\Lambda}$  converges to a functional of a Gaussian process. However, the asymptotic null distribution of  $\hat{\Lambda}$  depends on the unknown population distributions, therefore in order to estimate the asymptotic p-values of the test we use the overlapping moving block bootstrap method. Let B be the number of bootstrap replications and b the size of the block. The bootstrap procedure involves calculating the test statistics in  $\hat{\Lambda}$  using the original sample and then generating the subsamples by sampling the N-b+1 overlapping data blocks. Once that the bootstrap subsample is obtained one can calculate the bootstrap analogue of  $\hat{\Lambda}$ . Defining the bootstrap analogue of (2) as

$$\hat{\Lambda}^* = \min \sup_{x \in \mathbb{R}} \sqrt{N} \left[ \hat{D}_j^{s*} \left( x; \hat{F}_i \right) - \hat{D}_j^{s*} \left( x; \hat{F}_j \right) \right], \tag{3}$$

where

$$\left(\hat{D}^{*}(x,\hat{F}_{k}) = \frac{1}{N(s-1)!} \sum_{i=1}^{N} \left\{1\left(X_{2i}^{*} \leq x\right) \left(x - X_{2i}^{*}\right)^{s-1} - \omega(i,b,N) 1\left(X_{2i} \leq x\right) \left(x - X_{2i}\right)^{s-1}\right\},\,$$

and

$$\omega(i,b,N) = \begin{cases} i/b & \text{if } i \in [1,b-1] \\ 1 & \text{if } i \in [1,N-b+1] \\ (N-i+1)/b & \text{if } i \in [N-b+2,N] \end{cases}.$$

The estimated bootstrap p-value function is defined as the quantity

$$p^*\left(\hat{\Lambda}\right) = \frac{1}{N-b+1} \sum_{i=1}^{N-b+1} 1\left(\Lambda^* \ge \hat{\Lambda}\right).$$

Under the assumption that the stochastic processes  $X_k$  are strictly stationary and  $\alpha$ -mixing with  $\alpha(j) = O\left(j^{-\delta}\right)$ , for some  $\delta > 1$ , when  $B \to \infty$  the expression in (3) converges to (2). Note also that asymptotic theory requires that  $b \to \infty$  and  $b/N \to 0$  as  $N \to \infty$ .

### Stochastic Dominance Results

Figure 1 plots the cumulate distribution functions for each of the sectors and the TASI general index. The left panel shows the CDFs of the daily returns over the sample period, whereas the CDFs of the volatility are plotted in right panel. Considering the returns first, we can see that the CDF of the Banking sector is shifted to the left and intersect with CDF of Industrial, Cement sectors and the TASI. This clearly rules out first order stochastic dominance of the Banking sector on the other sectors. On the other hand, the CDF of Agriculture is shifted to the right and does not intersect with the CDFs of Industrial, Cement and the general index. This seems to indicate that returns in the Agriculture sector first order stochastically dominates these sectors. Turning to the CDFs of the volatility, Figure 1 illustrates that there is FSD-dominance for the different sectors considered as all the empirical CDFs do not intersect. Interestingly enough, the ranking is again an exact match with the ranking of sectors in Table 1 as the volatility of Agriculture clearly FSD all the other sectors. Note that in this case FSD means that return volatility is higher for stocks in the Agriculture sector than in for stocks in other sectors. SSD is interpreted in a similar way.

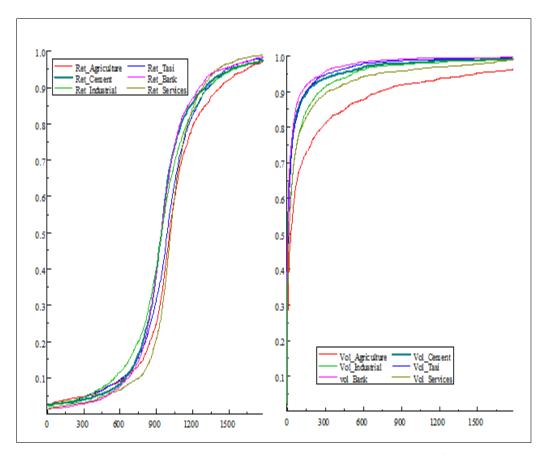

Figure 1: CDFs for the returns and return volatility for different sectors and the TASI general index. Note: Ret\_Tasi and Vol\_Tasi indicate the CDF of the returns and volatility, respectively. The CDFs of the sector indexes are defined in a similar fashion.

Table 3a-b and Table 4a-b report the p-values of the FSD and SSD tests for the returns and volatilities, respectively. The p-values were obtained using the bootstrap algorithm described above with B=1000 replications. To investigate the effect of the stock market crash in February 2006 the analysis was conducted splitting the sample in two sub-periods (i.e. pre and post February 2006) and then repeated considering the whole period.

From the top panel Table 3a it appears that the null hypothesis that the returns in the banking sector FSD or SSD the other sector and the general

index is strongly rejected for both the sub-periods. Coming to the middle panel returns in Industrial sector SSD returns in the Banking and Cement sectors, whereas the null hypotheses is rejected for the other sectors and the TASI. In the bottom panel the null hypothesis that Cement SSD Bank is not rejected, so in this case the test for stochastic dominance is inconclusive. However, both FSD and SSD null hypotheses are rejected for the other sectors. In Table 3b the null hypothesis that Services SSD all the others sectors but Agriculture is not rejected. Similarly, Agriculture SSD all the other sectors including Services. However, there is also evidence of FSD of Agriculture on Industrial, Cement and the TASI. Finally, the general index FSD Cement and SSD Bank and Industrial, whereas the null hypothesis of SSD of Agriculture is rejected.

Turning to the volatility, from the top panel of Table 4a it is clear that the null hypothesis that the Banking sector stochastically dominates the other sectors is strongly rejected: for all sectors, no matter the sub-period considered, the null is rejected in favour of the alternative hypothesis. It is interest to note that the null hypothesis is also rejected for the Tasi Index.

In the middle panel of Table 4a, when the period 2002-2008 is considered, Industrial is first order stochastically dominated by Services and Agriculture, but first order stochastically dominates Banking and Cement. This is in agreement with the ranking of sectors according to the degree of Shariah-compliance given in Table 1. Results for the two sub-periods follow a similar pattern.

The bottom panel of Table 4a reports the p-values for the hypothesis that the Cement sector stochastically dominates the other sectors. Looking at the 2002-2008 period, it is clear that the null hypothesis of FSD is rejected for all but the Banking sector.

Table 3a. P-values for the test for first and second order stochastic dominance (returns) by sector.

Sector	Period	SD	Bank	Industrial	Cement	Services	Agriculture	Tasi
Bank	2002-	$2\mathrm{nd}$	-	0.000	0.008	0.000	0.000	0.003

To summarise our results, the stochastic dominance analysis reveals that portfolios of stocks containing Shariah-compliant assets stochastically dominate their counterparts. As a result, risk-averse investors maximizing their utility function prefer Shariah-compliant stocks to other assets that do not fulfil religious tenets. Also, high returns of Shariah-compliant stocks are explained by the higher risk they carry. However, stochastic dominance analysis only allows us to rank the distributions of returns and does not provide an explanation on why returns and unconditional volatility of returns in particular are higher for Shariah-compliant stocks. To get further insights on this issue we consider the recent evolution of the stock market and in particular the relation between trade volume and conditional volatility.

## 4 Retail Investors, Volatility and Religious Tenets

The literature on the causes of stock market volatility is vast, but there now is widespread consensus that changes in price volatility are affected by investor behavior other than the fundamentals. This is especially true during periods of financial turmoil. Shiller (2000) for example analysed the dramatic rise in stock prices that occurred during the 1990s in the US and suggested that the run-up in stock price volatility was driven by sociological and psychological factors and not justified on the base of changes in the fundamentals. Other important factors affecting volatility are for example the speed with which financial transactions are carried out and the degree of integration of the domestic market with other markets (i.e. the level of global interdependence of between financial markets). In this sense, the Saudi stock market has developed significantly in the last ten years. Trading order volume has multiplied by some order of magnitude, a process facilitated by the incorporation of new trading technologies and market regulation. In order to better understand this phenomenon we look at the evolution of the stock market in more details.

The Saudi stock market experienced an impressive increase in the number of market participants in the recent years. According to the Samba Report (2009) the number of market participants increased from 52,598 in 2001 to 1.5 million at the end of 2005. The overflow of investors associated with the limited number of shares offered in the market inflated asset prices and caused a surge in volatility<sup>2</sup>. The bubble eventually busted in February 2006 when the market collapsed.

Periods of boom followed by painful bust are common in financial markets, however like many emerging markets, the Saudi market is heavily dominated by retail investors. In 2008 individual investors accounted for 88% of buy transactions. Saudi corporations placed less than 10% of transaction orders and mutual funds registered only 1.5% (note that in the majority of large OECD bourses institutional investors account for around 90% of transactions). Also, in the same year foreign participation accounted for only approximately 0.1%, whereas GCC citizens was less than 2%.

As foreign participation is extremely limited in the stock market it is logical to infer that at least during the period of price run-up the most active participants were first-time local investors attracted into the stock market in large number by returns well above the stock fundamental values. In behavioral finance literature individual investors are often viewed as noise-traders (see for example Black (1986) or Kyle (1985)). Several studies confirm that noise-traders (also called uninformed investors) acting on non-fundamental information affect the level of asset prices by trading when markets are unusually bullish or bearish. Noise traders acting in concert on non-fundamental signals can introduce a systematic risk which should manifest itself as added price volatility of assets affected by the actions of noise traders.

The relationship between noise traders and volatility is found to be significant in Brown (1999), whereas the relation between individual behavior and price movements is considered in Kaniel *et al.* (2008). See also DeLong, Shleifer, Summers and Waldam (1990) or Hvidkjaer (2006) among others.

<sup>&</sup>lt;sup>2</sup>Between 2003 and its peak in February 2006 the TASI gained an impressive 700%, with market capitalisation soaring at more than twice the country GDP. During this period the Saudi bourse was one of the largest stock market in the world by value traded, this despite having only 78 listed stocks (many of which with a limited free float).

Against this background, in this paper we acknowledge theoretical models explaining the relation between noise-traders and volatility and postulate that by increasing trade volume for Shariah-compliant stocks religious tenets affect the volatility of returns. In particular, we are interested in investigating if Sharia-compliant stocks are more traded than other stocks and to what extent this affects volatility. If religious prescriptions are binding, then investors should select Shariah-compliant stocks. As individual investors mainly place small orders, we should see that the rate of change in the trade volume should affect volatility more in Shariah-compliant sectors.

In order to test this hypothesis we investigate to what extent volatility in a given sector is affected by changes in trade volume. As a proxy of trade volume we use the number of shares traded in each sector in each given day. From Figure 2 it appears that trade volume is higher in the Industrial and Service sector. This is probably due to the large number of companies in these sectors (note that together stocks in the Industrial and Service sectors constitute 70% of all share traded, a large number of shares traded in these sectors in therefore expected). It is interesting however, that trade volume in Agriculture is high with respect to the size of the sector. There are 8 companies in this sector and more or less the same number in the Banking sector. However, the number of shares traded in Agriculture is significantly higher than the number of shares traded in the Banking sector. Interestingly enough trade volume growth in Agriculture is in correspondence with the exponential expansion of market participation that occurred in recent years. In order to further investigate this phenomenon we look at the relation between trade volume and stock market volatility.

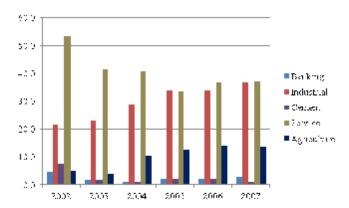

Figure 2: Trade volume by sector as a percentage of the number of shares trated.

To model volatility we consider a GARCH type model. Since the seminal papers by Engle (1982) and Bollerslev (1986), GARCH models have been successfully used to study the behavior over time of financial market volatility. Following Glosten, Jagannathan and Runkle (1993) (GJR) we specify the behavior of the returns as

$$R_{kt} = \delta + u_{kt}$$

$$\sigma_{kt}^2 = \omega + \alpha u_{kt-1}^2 + \gamma u_{kt-1}^2 I_{kt-1} + \beta \sigma_{kt-1}^2 + \kappa DVOL_{kt}$$

$$(4)$$

where  $R_{kt}$  are the realised returns in a given sector and the TASI and  $u_{kt} \sim N(0, \sigma_{kt}^2)$ . The conditional variance is specified as function of the mean volatility  $\omega$ ,  $u_{kt-1}^2$  which is the lag of the squared innovation from the mean equation (the ARCH term) and which provides information about volatility clustering,  $\sigma_{kt-1}^2$  which is the last period's forecast variance (the GARCH) term,  $DVOL_t$  is the first difference in (log) volume at period t, and finally  $I_{kt-1} = 1$  if  $u_{kt-1} > 0$  and  $I_{kt-1} = 0$  otherwise. Finally, the  $\gamma$  coefficient is meant to capture asymmetric effect of news on volatility.

The model in (4) has been estimated separately for each sector and the general index TASI. The estimated parameters as well as the misspecification

tests are reported in Table 5. Columns 2-6 in the top panel of Table 5 report the estimated parameters for the five sectors, whereas in the last columns the estimation results for the general index TASI are given. Robust standard errors are given in parenthesis. Also, due to the non-normality of the innovations, the distribution of the  $\{u_t\}$  process was approximated by a Student-t distribution.

The estimated parameters tell an interesting story. Trade volume affects the conditional variance of returns as the parameter  $\kappa$  is significant in all the estimated models. As expected, all the estimated signs of DVOL are positive, meaning that an increase in trade volume positively affects volatility. Looking at the magnitude of the estimated coefficient, the Agriculture sector has the highest estimated parameter followed by Industrial and Services, whereas the Cement and Banking sectors have the lowest estimated coefficient.

Looking at the  $\omega$  parameter, it appears that the estimated mean volatility is the highest in the Agriculture sector and the lowest for stocks in the Cement sector, with the estimated mean parameters of the other sectors falling in between the two. This result is in agreement with the findings of the stochastic analysis reported in Section 3 where it was found that the unconditional volatility of the Agriculture sector stochastically dominates the other sectors. Coming to the  $\alpha$  parameter, once again volatility clustering is much higher for stocks in the Agriculture sector. The Industrial, Cement and Service sectors show a similar estimated coefficient, but the magnitude of the estimated ARCH parameter for the Banking sector is about one third with respect to its counterpart in Agriculture. As the sign of  $\gamma > 0$  a leverage effect exists in all sectors, but the effect of bad news on volatility (given by  $(\alpha + \gamma)$ ) is much higher for the Agriculture sector. Finally, volatility persistence (given by  $\beta$ ) is relatively high in all sectors as well as the general index TASI.

Table 5. Estimated GJR(1,1) model for sectors and all share index.

Note: \*, \*\*, \*\*\* indicate significance at 1% and 5% and 10%, respectively.

To summarise our findings, looking at the evolution of trade volume in different stock market sectors from Figure 2, it appears that individual investors trade more actively in Shariah-compliant stocks. Given the strong relation between trade volume and volatility it is evident that individual investors, acting as noise traders, push away stock prices from their fundamental values thus affecting volatility of Shariah-compliant stocks. These results are in agreement with behavioral finance models (see for example DeLong, Shleifer, Summers and Waldam (1990)) where noise traders acting in concert affect stock prices in a systematic way. According to these models noise traders acting on the base of noisy signal create additional source of systemic risk in the market. This additional risk materialized itself as added volatility of the assets affected by the action of noise traders. Once that the extra-risk is priced by the market, returns of these assets increases.

#### 4.1 Robustness Checks

From Table 5 it is clear that trade volume affects the conditional volatility of returns. Since this is particularly true for Shariah-compliant stocks we infer that religious minded investors trade more actively in these stocks. However, given that individual investors tend to place small orders their actions have

to be coordinated in order to make an impact on the market. To check the validity of this assumption we test for herding behavior in the stock market. Following Chang, Cheng and Khorana (2000) we specify a non linear model that allows controlling for asymmetric relationship between cross-sectional absolute deviation of returns (CSDA) and market returns. The model is specified as follows

$$CSDA_{kt}^{up} = \mathring{\beta} + \mathring{\gamma}_{1t}^{up} |R_{mt}^{up}| + \mathring{\gamma}_{2t}^{up} (R_{mt}^{up})^2 + \varepsilon_t, \tag{5}$$

where

$$CSDA_{kt}^{up} = \frac{1}{N} \sum_{i=1}^{N} |R_{kt} - R_{mt}|,$$

and  $R_{mt}^{up}$  is the absolute value of the equally-weighted realized return portfolio of all available securities in a given sector (market for the TASI) during periods when the market is up. Similarly, the following equation is meant to capture herd behaviour during periods when the market is down

$$CSDA_{kt}^{down} = \mathring{\beta} + \mathring{\gamma}_{1t}^{down} \left| R_{mt}^{Down} \right| + \mathring{\gamma}_{2t}^{down} \left( R_{mt}^{down} \right)^2 + \varepsilon_t. \tag{6}$$

The intuition behind the model in (5)-(6) is that according to the capital asset pricing model the relationship between market return and equity return dispersion should be positive and linear. This is because individual securities have different reactions to the market return to reflect the different investors' beliefs in the rational market. On the other side, if during periods of relatively large price movements market participants herd around indicators such as the average consensus of all market constituents, a non-linear behavior between  $CSAD_{kt}$  and the average market returns should result. In particular, if investors conform to the market consensus, deviations of the individual securities return from  $CSDA_{kt}$  should increase at decreasing rate or decrease as average price movement increases. Therefore a significantly different coefficient  $\gamma_2$  in (5)-(6) implies the presence of herding.

Table 6. Regression results of the daily cross-sectional absolute deviation (asymmetric model).

Tasi	$0.001^*$ $(0.0002)$	$1.610^*$ $(0.044)$	$-8.253^{*}$ (0.687)	0.65

Note: \*, \*\*, \*\*\* indicate significance at 1% and 5% and 10%,respectively.

Table 6 reports the estimated coefficient of equations (5)-(6). In Table 6, the top panel refers to the herding behavior during periods of rising market, whereas the model in the bottom panel is intended to capture the behavior when the market is down. Once again the model has been estimated separately for each sector and the TASI. The estimated standard errors are reported in brackets, whereas the adjusted  $\bar{R}^2$ -coefficient in the last column.

From Table 6 it appears that the coefficient  $\gamma_2^{up}$  and  $\gamma_2^{down}$  are negative and statistically significant. This suggests the presence of herd behavior in all sectors as well as the market index, thus confirming the validity of our assumption that noise traders in the market act in concert.

## 5 Conclusion

In this paper we investigate the effect of Islamic tenets on the Saudi stock market and we show that religious norms have a significant effect on stock prices. We show that Shariah-compliant stocks have higher returns and volatility then their non-Shariah compliant counterparts. In particular, we found a close match between return volatility and the degree of compliance with religious tenets. These results have important implications for both corporations seeking to raise capital in the stock market and investors.

Looking at the relation between trade volume and volatility, our findings suggest that individual investors do act as noise traders in the market under consideration. In this sense our findings are in agreement with behavioral finance models where in an economy with risk averse agents noise traders bearing a larger amount of risk relative informed traders earn higher expected returns. According to these models psychological biases and sentiment cause noise traders to trade systematically as a group. From our results it appears that speculation based on sentiment is profitable when trading in Shariah-compliant stocks, given that noise traders are not driven out of the market and therefore able to influence prices.

Overall, from our empirical analysis it is evident that the level of volatility of the stock market cannot be explained with any variant of the efficient market model in which stock prices are formed by looking at the present discounted value of future returns. In this sense behavioral finance models are more helpful. However, there is still something to desired from these models as they fail to consider the interaction between individual choices (rational or not) and environmental factors. From our results it appears that the combination of market structure (i.e. retail versus institutional investors) and ethical norms can have a substantial role in shaping stock market volatility and ultimately the financial stability of a country.

## A VEHICLE FINANCING COMPARATIVE STUDY BETWEEN IJARAH IN MAYBANK BERHAD AND BAI BITHAMAN AJIL IN BANK ISLAM MALAYSIA BERHAD

Wan Muhammad. Zainuddin Wan Abdullah<sup>1</sup> Muhammad Ridhwan Ab. Aziz<sup>2</sup> Syadiyah Abdul Shukor<sup>3</sup>

#### **ABSTRACT**

This paper examines the relationship between service quality factors and customer satisfaction of auto financing in Maybank Berhad and Bank Islam Malaysia Berhad. Two auto financing product involved, Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad. Propose area of research will be in the Klang Valley specifically in Wilayah Persekutuan Kuala Lumpur and Putrajaya. The researcher will be using CARTER as a basic service quality model in order to check the relationship and impact of service quality on customer satisfaction and customer loyalty. Demographic profile will also be used as a moderator variable to measure the relationship between service quality with customer satisfaction. Demographic factors such as age, gender, education and income is seen as able to influence the customer satisfaction. Data will be collected from 350 respondents through self-administered questionnaires. Further, data will be analyzed using SPSS version 19.0. Sixteen hypotheses will be tested using Pearson correlation, Hierarchical Regression, One Way ANOVA and also Independent Sample T- test.

**Keywords**: Service quality, Overall customer satisfaction, Customer loyalty, Maybank Berhad, and Bank Islam Malaysia Berhad.

#### 1. INTRODUCTION

Nowadays banking industry is changing rapidly. The increasing of deregulation, and globalization, the operating environment for banking industry is expected to become more dynamic and competitive. Financial institutions across the globe are re-examining how they are meeting their customer's needs today and developing business plans needed to align them strategically to remain competitive and profitable in the future.

Islamic banks in Malaysia are facing a lot of challenging environments. They must be able to adopt and assimilate in fast changing situation. Globalization and technological advancement have led to an open and integrated banking industry. This situation has created a very stiff competition in market place.

Islamic banking is distinct and unique from conventional banking because of the Islamic principles, collectively referred to as Shariah, governing economics, social, political and cultural aspects of Islamic societies (Mukesh et al, 2010). There is a moral filter based on the definitions of halal (Permissible) and haram (Prohibited) providing an expedient legal framework (Chapra, 1992).

<sup>&</sup>lt;sup>2,3</sup> Senior Lecturers, Universiti Sains Islam Malaysia. Corresponding author: wandpp07@yahoo.com

Islamic banking refers to a system of banking that complies with Islamic law also known as Shariah law. The underlying principles that govern Islamic banking are mutual risk and profit sharing between parties, assurance of fairness for all and that transactions are based on an underlying business activity or asset. These principles are supported by Islamic banking's core values whereby activities that cultivate entrepreneurship, trade and commerce and bring societal development or benefit is encouraged. Activities that involve interest (riba), gambling (maisir), and speculation trading (gharar) are prohibited. Through the use of various Islamic finance concepts such as Ijarah (leasing), Bai Bithaman Ajil (differed payment), mudharabah (profit sharing), musyarakah (partnership), and financial institution have a great deal of flexibility, creativity and choice in the creation of Islamic finance products.

Islamic finance has grown tremendously since it first emerged in the 1970's. Current global Islamic banking assets and assets under management have reached more than USD 1 trillion. Malaysia's Islamic finance industry has been in existence for over 30 years. The enactment of the Islamic banking Act 1983 enabled the country's first Islamic Bank to be established and thereafter, with liberalization of the Islamic financial system, more Islamic financial institution have been established. Presently, Malaysia's Islamic banking assets reached RM389.3 Billion as at June 2011, strengthening the country's position as the global hub for Shariah-compliant financing with an average growth rate of 18% to 21% annually. (Ministry of Finance, 2012)).

Currently there are many player engaged in auto financing in Islamic banking. Various auto financing products being offered by banking industry to cater the demand from prospect of hirer purchase applicant. Several auto financing products offered by Islamic banks such as Ijarah by Maybank berhad, Bai Al-Innah by Bank Rakyat Malaysia Berhad, Bai Bithaman Ajil by Bank Islam Malaysia Berhad and so forth. Customers have plenty of choices to choose the bank amongst Islamic bank in the industry.

To date, however there is no attempt have been made to specifically conceptualized customer satisfaction and customer loyalty in auto financing in Islamic banks in Malaysia. Hence, the aims of this research is to ascertain and examine the relationship between antecedents or causes of customer satisfaction towards customer loyalty in Islamic banking industry in Malaysia. Specifically, this paper will examine the relationship of service quality with customer satisfaction towards customer loyalty in Maybank Berhad and Bank Islam Malaysia Berhad.

This paper will be conducted through comparative study measure. Two auto financing products will be involved, Ijarah from Maybank Berhad and Bai Bithaman Ajil from Bank Islam Malaysia Berhad. Currently, the most popular Islamic auto financing are Ijarah by Maybanks Berhad and Bai Bithaman Ajil by Bank Islam Malaysia Berhad. However, there are also many complaints by the public regarding the weakness of the implementation of these two products. Comparatively in certain aspects of auto finance products, Ijarah of Maybank is better than Bai Bithaman Ajil of Bank Islam Malaysia Berhad. In term of finance processing period, Maybank takes about five working days to settle the application whereby Bank Islam takes more than one week to process the application. Time is an essence for business communities. Likewise regarding customer service by both bank, no extra effort made by both banks to further assist customer in auto finance application.

Nurulain Othman, (2009), says that one of the issue being complaint by public is regarding of the higher profit rate of Bai Bithaman Ajil in Bank Islam Malaysia Berhad and subsequently higher instalment repayment compared to conventional bank in Malaysia. A study in Pakistan by Fahad Zafar, (2012), regarding Ijarah auto financing, revealed that the weakness in implementing the product will lead to the dissatisfaction to the customer. Similarly, same problem are happened in Malaysia whereby there is lack of trained finance officer in handling

the Ijarah financing product will lead to customer dissatisfaction. Therefore, the main problem here is the lack of customer satisfaction regarding service quality with regards to the Ijarah of Maybank Berhad and Bay Bithaman Ajil of Bank Islam Malaysia berhad. Thus, this paper will look into characters and dimensions that will influence customer to vigilantly choose the bank which offer better product as well as offer better service quality. There is an urgent need to investigate the economic environment surrounding the competitive business strategy of auto finance in Malaysia Islamic banking industry.

#### 2. LITERATURE REVIEW

#### 2.1 Concept of Service quality

Many researchers (Parasuraman et al., 1985; Mukesh, k., et al., 2010; Firdaus, A., et al., 2010) believe that service quality is an elusive concept, and there are considerable arguments among researchers of how to conceptualise this phenomenon. However they acknowledge that service quality is a dynamic, multidimensional concept, incorporating a number of aspects of both past and present service experience. Service quality has been described as aform of attitude but not equivalent to satisfaction that results from the comparison of expectations with performance (Parasuraman et al., (1988; Bolton, R.N. and James, H.D. 1991). It's also defined as the difference between customer expectation of service and perceived service. If expectations are higher than performance, then perceived quality is less than satisfactory and hence customer dissatisfaction prevailed (Parasuraman et al., 1985)

#### 2.2 Concept of Customer satisfaction

Customer satisfaction is one of the essential components of any organization's strategy because customer is the ultimate source of income for the companies. Regarding customer satisfaction, in the banking industry from the last one and half decade the bankers pay attention towards its customer satisfaction.

That's all due to the competition in banking industry and some banks consider customer satisfaction as the principal component of their marketing strategy, (Naveed., A.K., Kashif., U.R., 2010). That's why with the competition mostly the ultimate customer benefited. Now, many financial institutions are trying to increase the customer satisfaction and their retention towards the financial institution through improving the service quality and the products they offered to its customers, the with this effort they will achieve their target objective.

## 2.3 Concept of Customer Loyalty

Customer loyalty is important to a business. The only way a company grows is through the satisfaction of its customers. It determines the integrity and honesty of a business, where the customer can feel confident in dealing with them on a daily or weekly basis. The customer returns because they have been treated fairly, and with respect and decency. They become loyal to the business, as long as the business returns that respect to the customer.

It is more costly to service disloyal customers because they are the ones who keep your employees busy with their complaints. Additionally, unhappy customers become more price-sensitive. If price not in their expectation, they will switch to the rival which offer better and profitable to them. Moreover profitable customer loyalty refers to customers who exhibit both behavioural and attitude loyalty and provide profit for the firm, (Kumar., V. et al., 2013).

The strength of these attitudes is the key predictor of a brand's purchase and repeat patronage. Also define by Oliver (1997, p.392), Loyalty is a deeply held commitment to re-buy or repatronize a preferred product/service consistently in the future, thereby causing repetitive same-brand or same-brand set purchasing despite situational influences and marketing efforts having the potential to cause switching behaviour. Customer loyalty is concerned with the likelihood of customer returning, making business referrals, providing strong word-of-mouth references and publicity (Bowen and Shoemaker, 1998).

### 2.4 Theoretical Framework and Hypotheses

This paper examined the relationship among service quality, customer satisfaction and customer loyalty within the context of Islamic banking in Malaysia. Specifically, researcher will conduct research on Islamic banking products (i.e., Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad). Figure 1 presents the theoretical framework for the research paper and the hypothesized relationship are indicated.

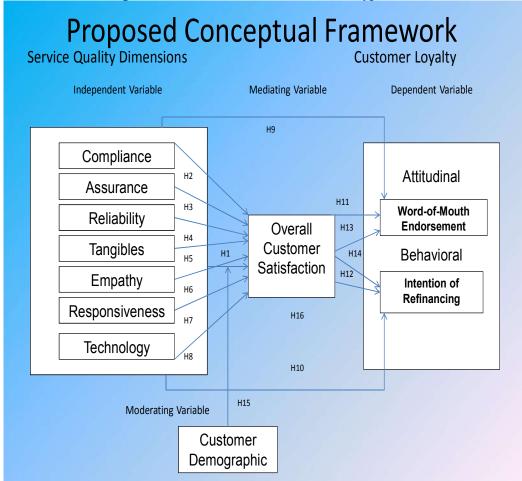

Figure 1: The theoretical framework and hypotheses

Source: Othman & Owen (2001)

#### 2.4.1 Relationship between service quality and customer satisfaction

A substantial number of empirical studies on bank service quality were sighted in the literature, most of these studies measured service quality by using and adapting SERQUAL model (Mohammed, H., Shirley, L., 2009; Muslim, A., Zaidi, I., 2008; Jaya, S., Mahalingam, S., 2011; Lo, L.K., et al 2010; Manshor, A, T., et al, 2011).

Service Quality called "SERVQUAL" is an instrument for measuring the gap between the services. Parasuraman et. Al (1985), considered that a customer's assessment of overall service quality depends on the gap between the expected and perceived service. Thus, the key

to managing perceived service quality is to minimize this gap. Parasuraman et. Al (1988), recast from 10 original determinants into only 5 dimensions: *tangibles, reliability, responsiveness, assurance and empathy*.

However since this paper are regarding Islamic banking, therefore study should take into consideration about Islamic Compliance value. Recently, there are number of study using new model adapted from SERQUAL to measure service quality in Islamic Banking. In Kuwait, Othman and Owen (2001a) developed an instrument called CARTER to measure service quality in Islamic banking. CARTER incorporates an extra dimension which is "Compliance with Islamic Law". The authors defined six dimensions as follows: *D1: Compliance, D2: Assurance, D3: Reliability, D4: Tangibles, D5: Empathy, and D6: Responsiveness.* 

Meanwhile, in order to check the validity of the dimensions or constructs, another research made by Othman and Owen regarding service quality in Kuwait Finance House (2001b), they made assessment about dimensionality of CARTER. Six dimensions were being factor analysed using Principle Factor (PF) followed by Varimax Rotation. Result shows for all dimensions are above 0.50. Also with KMO, which is result shows 0.821( above 0.600) and under Bartlett Test Sphericity, indicated highly significant (0.000). In conclude, the factor analysis test for CARTER variables has resulted as the proposed factors and dimensions.

In Malaysia, researcher such as Shahril et. al (2004), authors using CARTER to measure service quality in Bank Islam Malaysia Berhad. As expected, result shows that all six dimensions have significant relationship with service quality. Amongst six dimensions, Islamic Compliance was given the highest ranking. 95% respondents believed that the Bank Islam should offer products that acceptable by Islamic Law.

Ismah Osman, et al. (2009), the measurement in this paper also based on CARTER model developed by Othman and Owen (2001). Self administered questionnaires is based on six variables adapted from CARTER model, namely Compliance, Assurance, Reliability, Tangibles, Empathy, and Responsiveness. Result disclosed that the all dimensions measured by researcher have significant relationship with customer satisfaction. Also other researcher using CARTER model to measure service quality are such as Shafie et. al (2004), Osman et al. (2009), Muslim, A., and Zaidi, I. (2008), Norma, M.S. (2012), only adopt research of Othman and Owen (2001) in measuring service quality of Islamic bank in Malaysia.

In order to consider the complete rotation process of auto financing and also after review many previous research papers, researcher would like to propose an adoption model of CARTER with modification to the original items and also introducing one new dimension to suit the local Islamic banking context. This new dimension will be incorporated into existing CARTER's dimensions as component of service quality. Technology aspect is not considered in SERQUAL and CARTER. This aspect play an important role in customer satisfaction as it help to improve after sales service, for example customer can pay monthly instalment through ATM or E-banking without time limitation, constraint and without having long queuing through counter service. To support this argument, several previous literatures will be used as a basis of research references. First research, by Vinita, K and Saroj, K.D.(2012), they measure the relationship between service quality and customer satisfaction with the dimension of "Process Through Technology" shows that good and efficient internet banking services lead to higher customer satisfaction.

Second, research by Manshor, A, T., et al, (2011). Beside adopted SERQUAL model to measure service quality in Islamic bank and conventional bank, they also came up with new dimension which is called" Convenience" incorporated in the existing dimension of SERQUAL. This dimension takes into consideration the internet banking technology to facilitate banking businesses. Result proved that service factors together with new dimension

i.e. Convenience, have significant impact on customer satisfaction. Therefore, based on situation in auto mobile industry and previous literature, technology of internet banking play an important role in customer satisfaction.

Another research in area of Islamic banking in Indonesia, Irwan., M. et al, (2013), measure between service quality and customer satisfaction and trust. They used three dimensions to measure customer satisfaction. The dimensions are system of service, reliability, and responsive. Dimension, "System of Service" taking into consideration regarding internet banking facility to facilitate banking business. Result indicated that service quality has significant influence on customer satisfaction. Thus, with all the literatures being discussed, it's reveal and supports the proposal of introduction of new dimension called technology.

Hence, this new dimension together with CARTER model has a positive and significant influence on customer satisfaction. Thus, based on the literatures being discussed, following are several proposed hypothesis:

H1:	There is a positive and significant relationship between service quality and
	overall customer satisfaction in Ijarah of Maybank Berhad and Bai Bithaman
	Ajil of Bank Islam Malaysia Berhad.

H2:	Compliance has a significant impact on overall customer satisfaction in Ijarah
	of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H3:	Assurance has a significant impact on overall customer satisfaction in Ijarah
	of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H4: Reliability has a significant impact on overall customer satisfaction in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H5: Tangible has a significant impact on overall customer satisfaction in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H6: Empathy has a significant impact on overall customer satisfaction in Ijarah of

Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H7: Responsiveness has a significant impact on overall customer satisfaction in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H8: Technology has a significant impact on overall customer satisfaction in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

# 2.4.2 Relationship between service qualities with customer loyalty (intention of refinancing).

Loyalty is developed over a period of time from a consistent of meeting, and sometimes even exceeding customer expectation (Teich, 1997). Further, Lo Liang, K., et al (2010), in their study, they measure the relationship between six dimensions of CARTER model as service quality compare to customer loyalty. Their finding shows that service quality have significant relationship with customer loyalty. Good service quality offered by banks will lead to loyalty by its customers. Boulding et al. (1993) also found positive relationship between service qualities and repurchase intentions and willingness to recommend. Lenka et al. (2009) also found that service quality has a positive impact on loyalty.

In terms of refinancing which is another aspect of loyalty, Gremler and Brown (1996) offer one definition that related to this paper: the degree to which a customer exhibits repeat purchasing behaviour from a service provider, possesses a positive attitudinal disposition toward the provider, and considers using only this provider when a need for this service exists. Thus, this paper argues that service quality has a positive and significant relation on loyalty. Hence, following the hypothesis being made:

H9: There is a positive and significant relationship between service quality and loyalty in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

 H10: Service quality factors have a significant impact on loyalty in Ijarah of MaybankBerhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

# 2.4.3 Relationship between overall customer satisfactions with customer loyalty (word of-mouth endorsement)

Arisara Seyanont, (2007), in her dissertation, research made about respond from restaurant's customer in Phuket, Thailand. Measuring relationship between customer satisfaction and loyalty which is concerning of spreading a word-of-mouth. The result indicated that spreading word-of-mouth associated with high customer satisfaction. Thus, this paper argues that overall customer satisfaction has a positive and significant impact on customer loyalty. Hence, following the hypothesis proposed:

H11: There is a positive and significant relationship between overall customer satisfaction and word-of-mouth endorsement in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H12: There is a positive and significant relationship between overall customer satisfaction and refinancing in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H13: Overall customer satisfaction has a significant impact on word-of-mouth endorsement in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

H14: Overall customer satisfaction has a significant impact on refinancing in Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

# 2.4.4 Customer satisfaction as a mediating variable between service quality and loyalty.

Customer satisfaction plays an important role in customer loyalty. Previous literatures show that service quality together with customer satisfaction will lead to customer loyalty. Hyung, S.L. (2013), their research indicated that the result of the study reveal that service quality and customer satisfaction positively affect customer loyalty. They tested several models, result of the research in Model 6 is ( $\beta = 0.53$ , p<0.01), with R<sup>2</sup> = 0.22 (Relationship between service quality with loyalty). Result in Model 7, customer satisfaction as a mediating role is ( $\beta = 0.24$ , p<0.01), with R<sup>2</sup> = 0.41. Resulted in R<sup>2</sup> increasing of 0.19. Thus, result show that there is a significant mediating role of customer satisfaction on the relationship between service quality and customer loyalty.

#### 2.4.5 Relationship between service qualities with demographic (Moderator)

As for demographic variable, it has been widely recognized that demographic factors have a great impact on consumer attitude and behaviour (Jayawardhena & Foley, 2000; Matilla, 2001; Karjaluotoet al., 2002). Moreover, both attitude and non-attitudinal variables also influence behaviour (Eagly & Chaiken, 1993). So it's important for Islamic banks to recognize and use them in making better and appropriate strategy concerning gender factor.

Ahasanul, H. (2010) stated in his research that gender as demographic factor is a measurable variable and the findings provide straight forward application in the decision making process of Islamic banking service. Thus, this paper argues that overall customer satisfaction has a positive and significant impact on customer loyalty. Hence, following the hypothesis proposed:

H15: There is a significant difference of service quality factors based on customer's demographic profile on overall customer satisfaction

between Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

# 2.4.6 Significant differences in customer satisfaction between Ijarah and Bay Bithaman Ajil

There are lot of complaints about customer satisfaction regarding Bay Bithaman Ajil of Bank Islam Malaysia Berhad. This complaint due to the weakness and time consumed in the processing of automobile financing application. On the other hand, Ijarah of Maybank Berhad quite popular in the market and also less complaint about customer satisfaction. Therefore, this paper will look into the differences of customer satisfaction between two banks and what are the factors constitute to this discrepancies. Thus, this paper argues that there is a significant difference of customer satisfaction between Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad. Hence, following the hypothesis being made:

There is a significant difference of customer satisfaction between Ijarah of Maybank Berhad and Bai Bithaman Ajil of Bank Islam Malaysia Berhad.

#### 3. RESEARCH METHODOLOGY

The paper was design to explore the service quality of customer satisfaction and customer loyalty for customers of auto finance in Maybank Berhad and Bank Islam Malaysia Berhad. This diagram provide a complete view on the research methodology used to conduct this paper. The complete flow of research methodology has been organised in the following figure.

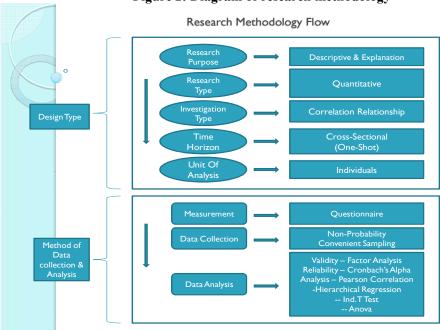

Figure 2: Diagram of research methodology

Source: Uma Sekaran (2003)

#### 3.1 Research design

Regarding research design, researcher will be using quantitative type. Then, the purpose of the paper is to explain and describe to reflex the events involved.

According to Earl Barbie, (2013), concept of explanation involved identifying variables that explain specific situation regarding research purpose being studied whereby descriptive studies answer question of what, where, when, and how. Hence, this methods is suit for this paper, whereby researcher will be using CARTER model as a studying based variables and also a set of questions also will be based on this variables as well to facilitate the study. A part from that, researcher will conduct a cross-sectional study based on observations representing a single point in time. Meaning researcher will set certain time frame to make observation through survey's data collection method. Variables or dimensions in this paper will be analyzing through correlational statistics (r). The correlation coefficient provided a measure of degree and direction of relationship. The square of a correlation coefficient yields the explained variance (r-square). Correlation was the most appropriate in order to determine properly the relationship of service quality attributes, overall customer satisfaction, and customer loyalty. The research design explained will enable the researcher to answer the research questions.

#### 3.2 Subject and location of study

The population for this research paper consist of customer residing in Wilayah Persekutuan Kuala Lumpur and Putrajaya. Most major economic activities are happen in this area and this location being selected because they have most of the branches of the Maybank Berhad and Bank Islam Malaysia Berhad. People in this area also most of them possess higher education status and also high buying power. Klang Valley has the highest rate of auto financing application compared to the other area in Malaysia. The sample is from bank customers who involved in auto finance of Islamic banking transaction.

Based on the general guidelines by previous researchers on simple size required from given population such as (Nunnally, 1978); Tabachnik and Fidell, 1996), from statistical perspective a minimum 260 are required for this research paper. However researcher are proposing 350 samples to be collected from prospective respondents. Our study will include male and female proportionately i.e. male respondents male 60% and female 40%. In terms of racial composition, we will be expected the respondent of about 95% of Malays, and 5% others, (Manshor, A, T., et al, (2011). In terms of age, we will base on financing eligibility requirement set by banks; age will be from 20 years old to 60 years old.

#### 3.3 Measurement of variables

Since this paper employ qualitativetype of technique, the measurement of data will conducted through structured questionnaire. A self reporting questionnaire is designed based on previous research with modification to suit local and current situation of Islamic banking industry in Malaysia.

The propose instrument contains four parts.Part I, regarding service quality with comprised of seven dimensions. Here we are proposing 43 questions, it's consisting of about 6 dimensions with 35items taken from CARTER model (Othman and Owen, 2001b). An additional new propose dimension, "Technology", with additional four statements.

Further, an additional five new statements added to the existing CARTER model to suit objective of the research. Part II, regarding question of overall service quality statement required to fill in percentage manner. Part III; consist of question of overall customer satisfaction with 2 items, word-of-mouth endorsement with 3 items, and refinancing with 3 items. Lastly part IV regarding demographic profile. To facilitate the study, the items will be

positively worded. A seven-point Liker Scale, ranging from 1-strongly disagree to 7-strongly agree, is used in part 1 and part 3.

Questionnaire will be proposed and made through closed-ended questions with Tunnel format. There will be no sensitive issue and no confidential data will be requested, also a simple and direct forward question to the respondent. This to ensure that there is no bias to the respondents. The sequencing of question in questionnaire will be arranged correctly and smoothly.

The sequence of questions started with the question of the attributes of dimensions, then customer satisfaction and loyalty in four pages and followed by demographic profile in one page.

#### 3.4 Data collection methods

Data collection will be conducted by researcher and third party assistance. Questionnaire will be distributed using non-probability convenience sampling method. Two steps will be employed by researcher, first the researcher will distribute questionnaire to the respondent at the selected branches of Perodua car dealers and also at Proton car dealers. The bulk of questionnaire will be managed by appointed agent in the branches. Their duty is to distribute questionnaire directly to respondent who are coming to the branch to collect their brand new car. The respondent will ask to fill the questionnaire spontaneously within ten minutes and then once finished, agent will collect the questionnaires and simultaneously give souvenir as token of appreciation. Agents will be given complete and ample training regarding understanding, administrating the questionnaire. Second, researcher will call previous customers through assistance from selected car dealers. Then researcher will make call interview to fill the questionnaire, part of that, researcher will go directly to the target respondents to fill the questionnaires. Other method, researcher also will find target respondents through friends, neighbour and schools and also any appropriate method to fill the questionnaire by explain them the purpose of the survey.

Two types of Islamic auto financing under this study are Ijarah under Maybank Berhad and Bay Bithaman Ajil under Bank Islam Malaysia Berhad. The respondents will be of those who are already had Islamic auto financing account with respective bank. The time frame for account holders will be accounted from 2011 until current year. The reasons for this time frame selected is to ensure that the research will only reflex current situation including after sales services provided by the banks and also to ensure account holder still have the memory regarding the financing application and the process involved in the respective banks.

### 3.5 Proposed Data analysis Procedures

To check content validity, the draft will be reviewed by two subject matter expert, one from expert in Islamic banking industry and the other one from language expert to ensure correct translation being made to the questionnaire from English into Bahasa Malaysia and vice versa.

To ensure the construct validity, the dimensions will be checking using factor analysis method. An Exploratory Factor analysis (EFA) and Confirmatory Factor Analysis (CFA) will be employed. Then, factor extraction (Kaiser Criterion) with eigenvalue must be greater value of 1.0 will be retaining in the factor solution (Tabachnik and Fidell, 1989). Factor rotation such as Direct Oblimin using structure and pattern matrix and communalities with cut off loading 0.45 (Blaikie, 2003) will be used to check whether correct variable being measure by correct items.

Under confirmatory factor analysis, the goodness-of-fit statistic (GFI) will be employed as this method generally considered as the most reliable measure of absolute fir in most circumstances (Diamantopoulos, and Siguaw, 2000). These two steps are very important to validate the questionnaire besides using established service quality model. Then reliability of the scale in this paper will be certified using several methods, first by using the established model of service quality such as CARTER by Owen and Othman. Second, checking will be made using statistical tool through Cronbach's Alpha with prescribed 0.70 thresholds (Nunnaly, 1978).

This paper will be proposing a few statistical methods in the presenting of the result. First, researcher will be using descriptive statistic to determine the mean and standard deviation score of each dimensions for both banks. Second, Pearson correlation to check the strength, direction and significant relationship between independent variables and dependent variable. Third, Hierarchical regression to determine the impact of the dimensions proposed on customer satisfaction and on loyalty. One Way ANOVA to test significant difference of service quality factors on customer demographic profile ( gender, marital status, age and education level). Also we will be using Independent sample-t-test to check the mean score customer satisfaction between Maybank Berhad and Bank Islam Malaysia Berhad.

#### 4. EXPECTED RESULT

Theoretically, result of the research will clarify and endorse the relationship between service quality and customer satisfaction that have been studied by previous researcher. Most of the previous literature suggested that there is a relationship between service quality factor and customer satisfaction and customer loyalty.

Practically, the proposed research paper in local Islamic banking context regarding service quality with customer satisfaction and customer loyalty is expected to be an important complement to traditional measures of economics performance, providing useful information to the banking institutions, shareholders, investors, government regulators, and most importantly to customers.

Also, result from study will act as the guidance to management of the bank to be more conscious about customer satisfaction and also the factors contributed to customer loyalty. Management of the bank should consider the factor that will influence their customer in terms of satisfaction.

#### 5. CONCLUSION

The operations of auto finance in Islamic banks are based on Islamic (Shariah) Law which is different in terms of spirit, process and practice from conventional banks. Nowadays Islamic banks are operated in a globally integrated banking industry which is characterised by strong competition and rapid changes in technology. Since the auto finance provided by Islamic banks are generally undifferentiated with conventional bank, Islamic banks will have to compete on the basis of high quality and flexibility of products and procedures offered by its finance staff to its customers in order to gain a competitive advantage against their rivals.

#### PARAMETER OABD DALAM TRANSAKSI PEMBIAYAAN TAWARRUO

(The Qabd Parameters in Tawarruq Financing Transactions)

Hussein 'Azeemi Abdullah Thaidi<sup>1</sup>
Paizah Ismail<sup>2</sup>
Azman Ab Rahman<sup>3</sup>
Muhamad Firdaus Ab Rahman<sup>4</sup>

#### **ABSTRACT**

This paper will examine the concepts and parameters of qabd in the implementation of financing based on tawarruq instruments. This study adopts the documentation approach for the collection of data and the writings of fiqh scholars related to the qabd concept. The objective of the study is to identify the actual concept of qabd from the perspective of past and present Islamic scholars relating to the fiqh muamalat. In addition, the parameters of qabd performance according to the discussion of the Islamic fiqh scholars will be reviewed and evaluated in detail. The results of the study indicate that Islam emphasizes the implementation of qabd element in the tawarruq without compromise. Neglecting this element will result in the impaired implementation of the tawarruq contracts and may give rise to gharar, which in turn might lead to infighting among the contracting parties. At the end of the study, the authors have proposed a comprehensive and rational parameter based on the guidelines set by the Shariah.

Keywords: Qabd, Tawarruq, Parameter.

## 1. PENDAHULUAN

Pembiayaan *tawarruq* banyak memberi kemudahan kepada pengguna untuk mendapatkan kecairan dana bagi tujuan memenuhi kehendak harian. Pada masa yang sama, ia juga turut menjadi komponen penting dalam menyumbang keuntungan besar kepada portfolio sebuah institusi kewangan.

Kepesatan pembangunan instrumen *tawarruq* ini adalah selaras dengan Pelan Sektor Kewangan 2011-2020 yang menjangkakan landskap sistem kewangan Malaysia mampu menyediakan aktiviti kewangan Islam yang lebih besar dengan lebih penekanan terhadap pengurusan dana Islam di Malaysia melalui penubuhan bank pelaburan, pengurus dana dan penyedia khidmat nasihat kekayaan Islam dengan jangkauan global dan bertaraf dunia (BNM, 2012).

Sungguhpun demikian, Persidangan MajmaÑ Fiqh Islami pada April 2009 telah mengambil keputusan untuk mengharamkan perlaksanaan *tawarruq* (Zuhayli, 2009; Haddad, 2009; Dabu, 2009). Keputusan ini patut diberi perhatian serius kerana ia dikeluarkan oleh badan yang berauntentik tinggi dalam menerbitkan resolusi bagi isu *muÑamalat maliyyah*. Pengharaman ini pada dasarnya bukan berpunca dari konsep atau sifat *tawarruq* itu sendiri, tetapi disebabkan oleh perlaksanaannya yang telah melanggar prinsip-prinsip jual beli menurut Syarak. Antara punca utama pengharaman ini ialah berlakunya

<sup>&</sup>lt;sup>1 3,4</sup>Fakulti Syariah dan Undang-Undang, Universiti Sains Islam Malaysia (USIM). Corresponding author: hussein ath@gmail.com\_firdaus\_srcisum@yahoo.com

hussein.ath@gmail.com, firdaus\_srcisum@yahoo.com <sup>2</sup> Pakar Perunding, Jabatan Fiqh dan Usul, Akademi Pengajian Islam, Universtiti Malaya (UM). Email: paizahismail@um.edu.my

kepincangan dalam proses pindah milik (*qabd*) pada transaksi pembiayaan *tawarruq* yang seterusnya mewujudkan unsur *gharar* yang dilarang keras oleh Islam. lantaran itu, makalah ini sedaya upaya cuba menjawab dua persoalan utama:

- i) Bagaimanakah konsep *qabd* menurut fiqh muamalat?
- ii) Apakah parameter perlaksanaan *qabd* menurut perbincangan ilmuwan fiqh Islam?

Kajian akan dilakukan menerusi metod kepustakaan terhadap kajian-kajian para sarjana silam dan moden dan ia dapat diagihkan kepada beberapa fasal: fasal pertama membincangkan tentang konsep *qabd* dalam Islam, fasal kedua membahaskan tentang pembiayaan *tawarruq* dan fasal terakhir akan mengusulkan parameter *qabd* yang dirasakan rasional untuk perlaksanaan pembiayaan *tawarruq*.

#### 2. DEFINISI QABD

*Qabd* dari segi literal merujuk kepada tindakan mengambil sesuatu dengan tapak tangan (Ibn Manzur, 1988). Perkataan ini turut digunakan bagi menunjukkan perpindahan milik sesuatu barang dari satu pihak kepada pihak yang lain (al-Matrazi, 1979). Menurut istilah Syarak pula, *qabd* bermaksud pemilikan sesuatu barang dan mempunyai kemampuan untuk menggunanya (al-MawsuÑah al-Fiqhiyyah, 1988; Musa, 2012). Daripada pentakrifan ini, beberapa elemen penting mestilah wujud dalam perlaksanaan *qabd*:

- 1) *Qabid*: pihak yang dipindahkan pemilikan barang kepadanya. Dalam konteks pembiayaan tawarruq, ia merujuk kepada pemohon biaya.
- 2) *Muqbid*: pihak yang memindahkan pemilikan barang kepada *qabid*. Dalam konteks pembiayaan *tawarruq, muqbid* merujuk kepada pihak bank.
- 3) Maqbud: pemilikan komoditi atau objek yang menjadi tumpuan pihak berkontrak

#### 3. PENSYARIATAN QABD

Antara dalil yang menerangkan tentang aplikasi *qabd* adalah seperti berikut:

Daripada Ibn ÑUmar r.h. bahawa Nabi sallallahu Ñalayhi wa sallam bersabda:

Maksudnya: Sesiapa yang membeli bahan makanan, jangan dia jual semula sehingga selesai melakukan (*qabd*) terhadap makanan itu (Bukhari no. 2133, Muslim no. 1526).

Ibn ÑAbbas r.h dalam komentarnya terhadap hadis di atas menyatakan bahawa *qabd* bukan sekadar terpakai pada makanan sahaja, tetapi pada setiap jenis barang (Muslim no. 1525). Hakim bin Hizam r.h pula menukilkan bahawa Rasulullah *sallallahu Ñalayhi wa sallam* bersabda:

Maksudnya: Jika kamu membeli sesuatu, janganlah menjualnya semula kecuali kamu melakukan *qabd* terhadapnya (Bayhaqi 1933, Ahmad 1977).

Zayd bin Thabit r.h pula menceritakan bahawa Rasulullah sallallahu Ñalayhi wa sallam:

-

<sup>&</sup>lt;sup>3</sup> Hadis ini dinilai hasan oleh al-Bayhaqi.

<sup>&</sup>lt;sup>4</sup> Hadis ini dinilai sahih oleh al-Hakim.

Maksudnya: (Nabi) melarang daripada menjual komoditi yang dibeli sehinggalah seorang pedagang memilikinya dan mampu meletakkannya di atas kenderaan tunggangannya (Hakim, 1978; Abu Dawud no. 3499).

Dalil-dalil tersebut membuktikan bahawa terdapat tegahan (*al-nahy*) yang jelas terhadap jual beli tanpa *qabd*. Kaedah usul fiqh pula menyatakan bahawa setiap tegahan di dalam nas membawa maksud pengharaman. Atas dasar ini, difahami bahawa perlaksanaan *qabd* dalam jual beli adalah wajib dan pengabaian elemen ini boleh mengakibatkan akad tersebut menjadi *fasid*. Berkait dengan transaksi *tawarruq* pula, Shaykh Bin Baz (1992) mengulas bahawa jika seseorang ingin menjual semula sesuatu komoditi bagi mendapatkan kecairan tunai, dia perlu membeli komoditi tersebut dan perlu berlakunya pemilikan sempurna, kemudian dia boleh menjualnya semula kerana seseorang dilarang menjual barang yang bukan miliknya<sup>5</sup>.

## 4. IMPILKASI PERLAKSANAAN QABD

- 1) **Perpindahan hak Penjagaan Aset**: perlaksanaan *qabd* menyebabkan beban penjagaan aset berada di bawah tanggungjawab pembeli menurut pandangan majoriti fuqaha (Ibrahim, 1984). Oleh itu, segala penambahan atau penyusutan nilai aset adalah berada di bawah tanggungjawab pembeli kerana itulah fungsi akad jual beli. Di dalam aplikasi tawarruq semasa, pejagaan komoditi secara rapi amat penting supaya tidak berlaku penyusutan nilai kerana biasanya ia digunakan sebagai aset sandaran untuk tempoh yang lama (Zulbahri Zainuddin, 2011).
- 2) **Kewajipan Membayar Harga Aset**: perlaksanaan *qabd* akan menerbitkan obligasi ke atas pembeli untuk membayar harga aset serta merta kecuali berlaku persetujuan antara pihak berakad agar pembayaran dibuat secara bertangguh kerana pada asalnya, hak pemilikan melalui transaksi jual beli dikira sah setelah berlakunya pembayaran harga komoditi dan ia tidak memadai sekadar berlakunya *qabd* (Ibn Juzayy, 1982; Kasani, 1982). Menurut amalan pembiayaan *tawarruq* semasa, bank selalunya bersetuju supaya pemohon biaya membayar harga belian pertama secara bertangguh. Dalam konteks ini, bank (penjual) perlu serta merta menyerahkan komoditi kepada pemohon biaya (pembeli) seperti mana pandangan yang telah disepakati fuqaha (Nawawi, 1928 dlm. Sawas, 2000).
- 3) **Keupayaan Menggunakan Aset**: dengan terlaksanya *qabd*, maka akan berlaku pemilikan yang sah terhadap aset bagi pihak pembeli dan dia boleh memanfaatkan aset tersebut sepenuhnya (Sawas, 2000).

#### 5. JENIS-JENIS *QABD*

Melalui penilaian terhadap kajian-kajian para fuqaha, *qabd* dapat diagihkan kepada tiga jenis yang utama (Suruhanjaya Sekuriti, 2006; Sawas, 2000):

## 5.1 Pertamanya: Qabd Haqiqi

Ia merujuk kepada perpindahan hak milik sesuatu aset secara fizikal seperti mana yang dijalankan menurut adat kebiasaan. Contoh yang biasa diamalkan seperti transaksi jual beli dan gadaian terhadap aset mudah alih (manqul) di mana qabd haqiqi dianggap berlaku apabila apabila wujud pengambilan komoditi. Termasuk dalam jenis qabd haqiqi ialah jual beli aset tidak alih (Niqar) seperti rumah atau blok kedai di mana qabd berlaku secara takhliyyah iaitu tindakan mengosongkan premis oleh pemilik asal dan

<sup>&</sup>lt;sup>5</sup> Larangan ini adalah berdasarkan hadis yang bermaksud: jangan kamu jual barangan yang bukan milik kamu (al-Turmidhi no. 1233).

penyerahan kuncinya kepada pembeli premis. Dalam pentadbiran hartanah moden, pertukaran nama pada sijil pemilikan sudah memadai untuk dikira sebagai *qabd* yang sempurna.

## 5.2 Keduanya: *Qabd Hukmi*

Ia meruju kepada pindah milik yang berlaku bukan secara zahir. Namun Syarak tetap mengiktirafnya dan status pemilikannya menyamai qabd haqiqi. Qabd hukmi boleh berlaku melalui beberapa jenis kaedah:

- 1) *Muqasah*: iaitu konsep tolak selesai hutang. sebagai contoh, jika pelanggan insuran mempunyai deposit sebanyak RM 50 ribu, dalam masa yang sama mempunyai obligasi hutang tertunggak dengan syarikat insuran sebanyak RM 25 ribu, maka pelanggan tersebut hanya layak menerima pembayaran berjumlah RM 25 ribu sahaja manakala bakinya boleh diambil oleh syarikat insuran.
- 2) *Itlaf*: iaitu kerosakan pada komoditi. Sebagai contoh, seorang pembeli yang sedang meneliti barang mudah pecah lalu berlaku kerosakan pada barang tersebut disebabkan tindakannya, maka pembeli mestilah membayar harga barang tersebut. Ini kerana menurut Syarak, sekiranya berlaku kerosakan barang disebabkan oleh pembeli (walaupun sebelum berlaku akad), qabd dianggap sempurna.
- 3) Tindakan terdahulu: ia merujuk kepada tindakan terdahulu yang menunjukkan qabd berlaku lebih awal. Contohnya dalam kontrak sewa dan beli rumah, ketika tempoh penyewaan, penyewa telah menduduki premis sewa dan ia merupakan qabd yang awal. Kemudian rumah tersebut dijual kepadanya, maka qabd hukmi telah berlaku walaupun qabd hakiki adalah selepas akad jual beli.

## 5.3 Ketiganya: *Qabd* yang diiktiraf Syarak

Konsep pindah milik yang tidak disebut di dalam nas Syarak, namun ia dibolehkan melalui prinsip-prinsip Syarak. Sebagai contoh, pemilikan terhadap barang yang dijumpai tanpa pemilik (*luqatah*) atau rampasan terhadap barang larangan yang dilakukan oleh pemerintah, ia dikira pemilikan yang sah menurut Syarak. Termasuk juga dalam kategori ini ialah tatacara *qabd* yang diluluskan oleh pihak pemerintah atas asas untuk memudahkan urusan manusia dan memenuhi keperluan masyarakat yang semakin kompleks kerana sememangnya Islam bersifat luas dalam hal-hal muamalat.

#### 6. PEMBIAYAAN BERASASKAN TAWARRUQ

Secara literal, *tawarruq* berasal dari perkataan *al-waraq* atau *al-wariq* yang dapat diertikan sebagai harta atau daun pada pokok (Ibn Faris, 1984). Menurut istilah Syarak pula, *tawarruq* merujuk kepada tindakan seseorang yang membeli komoditi dengan harga bertangguh, kemudian menjualnya kepada pihak yang bukan penjual asal dengan harga tunai (Al-Suwaylim, 2003; Ibrahim 2009).

Daripada pentakrifan secara istilah, beberapa kesimpulan dapat dibuat:

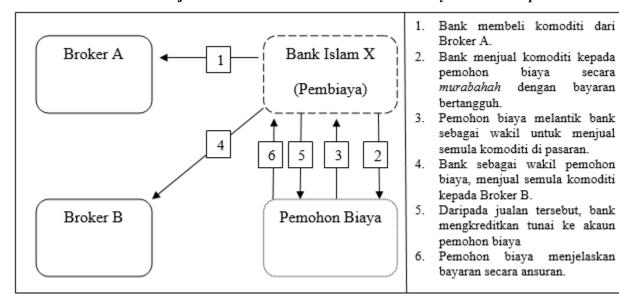

- 1. Pembiayaan *tawarruq* mestilah melibatkan sekurang-kurangnya tiga pihak bertransaksi:
  - i. **Pihak pertama**: pemohon biaya wang tunai (*al-mustawriq*).
  - ii. **Pihak kedua**: penjual barang kepada pihak pertama.
  - iii. **Pihak ketiga**: pembeli komoditi daripada pihak pertama dan dia bukan daripada pihak kedua.
- 2. Proses penjualan mestilah dilakukan ke atas komoditi yang dimiliki oleh penjual dengan harga tangguh.
- 3. Berlakunya proses pemilikan (*qabd*) komoditi secara penuh daripada penjual kepada pembeli selepas selesai akad jual beli dilakukan.

Tawarruq pada asalnya telah diperkenalkan oleh mazhab Hanbali sebagai akses mudah untuk mendapatkan cairan tunai (ÑUthmani, 2009). Dalam konteks semasa, instrumen tawarruq telah

dimodenkan bahkan telah wujud usaha menggandingkannya dengan instrumen Syariah yang lain seperti *ijarah*, *musharakah* dan *mudarabah*. Pemodenan ini telah terbukti mampu memesatkan lagi pembangunan produk perbankan dan pasaran modal Islam (sukuk) dan mencipta keuntungan besar bagi sebuah institusi kewangan Islam. Secara umumnya, pemakaian *tawarruq* oleh institusi perbankan Islam bertujuan untuk mencapai matlamat berikut (Zaharuddin, 2012):

- 1. Mekanisma untuk bersaing dengan produk konvensional
- 2. Menawarkan perkhidamatan mendapatkan keciran dana yang efisyen untuk individu dan institusi perbankan lainnya.
- 3. Menawarkan instrumen pendapatan tetap yang patuh Syariah bagi masyarakat awam.

Gambaran perlaksanaan pembiayaan *tawarruq* yang diamalkan di institusi perbankan Islam secara umumnya dapat dicermati melalui rajah di bawah:

Rajah 1: Carta Aliran Perlaksanaan Pembiayaan Tawarrug

Melalui apa yang digambarkan dalam Rajah 1, ambiguiti perlaksanaan *qabd* selalunya muncul pada peringkat kedua kerana pemohon biaya biasanya tidak mengetahui secara spesifik perihal komoditi yang dijualkan kepadanya. Jika *qabd* tidak berlaku, bagaimana mungkin pemohon biaya boleh menjual semula komoditi kepada Broker B kerana dia tidak memiliki komoditi tersebut secara sah. Selain itu, masalah turut timbul pada kondisi komoditi itu sendiri yang rosak teruk tanpa penyeliaan rapi sehingga mengakibatkan nilainya menyusut. Turut berlaku juga di mana perlakasanaan puluhan kontrak jual beli yang dilakukan secara serentak ke atas komoditi yang sama lalu mencipta unsur *gharar* pada pemilikan komoditi berkenaan (Daghi, 2008). Dalam pada itu, wujud juga isu persepakatan awal yang wujud akibat tindakan bank yang menjadi wakil pemohon biaya untuk menjualkan komoditi kepada pembeli baru kerana mengikut konsep *tawarruq* yang asal, pemohon biaya perlu berusaha sendiri menjual semula komoditi kepada pihak ketiga (Haddad, 2009).

# 6.1 Rukun Pembiayaan Tawarruq

Tawarruq sebenarnya merupakan akad hasil manifestasi akad  $bay\tilde{N}$  (jual beli). Atas asas ini, perbincangan rukun tawaruq akan merujuk terus kepada rukun jual beli itu sendiri. Menurut pandangan majoriti

mazhab (Maliki, ShafiÑi dan Hanbali)<sup>6</sup>, jual beli atau *tawarruq* mengandungi tiga rukun. Pertamanya, pihak-pihak yang berkontrak (*mutaÑaqidan*) yang merujuk kepada penjual dan pembeli. Keduanya, lafaz kontrak (*sighah*) yang mengandungi unsur penawaran (*ijab*) serta penerimaan (*qabul*) dan ketiganya, komoditi (*maÑqud Ñalayh*) yang menjadi tumpuan akad (Zuhayli, 1985). Namun begitu, rukun yang menjadi tumpuan utama kajian ini adalah pada *al-maÑqud 'alayh* dan ia perlu memenuhi syarat-syarat berikut:

- a) Komoditi mestilah wujud<sup>7</sup> pada masa akad dilaksanakan dan ia dimiliki oleh pengguna (ÑAli, 2003).
- b) Komoditi mestilah mampu untuk dipindah milik (*qabd*) kepada pembeli (Zuhayli, 1985)<sup>8</sup>
- c) Komoditi mestilah boleh dimanfaatkan dan berharga pada kaca mata Syarak (Zuhayli, 1985)
- d) Komiditi mestilah jelas pada pengetahuan pembeli<sup>9</sup> dan ditentukan sifat, kuantiti serta harganya.
- e) Komoditi mestilah tidak bercanggah dengan kehendak akad itu sendiri serta menepati undangundang Syarak (Abdul Hakam, 2012).

Syarat-syarat yang ditetapkan ini bertujuan agar akad *tawarruq* yang terlaksana jelas pada pengetahuan pihak-pihak berkontrak tanpa wujud unsur *gharar* atau *jahalah* yang dilarang keras dalam Islam dan boleh mengakibatkan pertelingkahan antara pihak yang berkontrak. Oleh yang demikian, segala prosedur perlaksanaan *tawarruq* perlulah dicermati dengan sebaiknya. Apa-apa unsur yang boleh mendatangkan *gharar* perlulah dihindari.

# 7. KESIMPULAN PARAMETER QABD

Parameter *qabd* yang diusulkan ini perlu diikuti oleh pihak pembiaya dan pemohon piaya. Parameter ini dirumuskan berdasarkan pandangan-pandangan fuqaha dan nas-nas Syarak. Ini bermakna, sekiranya parameter ini dipenuhi, maka perlaksanaan *qabd* dalam pembiayaan *tawarruq* dikira menepati Syarak dan terlaksanalah pemilikan yang sah serta sempurna pada komoditi yang seterusnya akan menatijahkan implikasi-implikasi *qabd*.

**Parameter 1**: perlaksanaan *qabd* mestilah membuktikan perpindahan komoditi *manqul* melalui serahan tangan dari satu pihak ke pihak yang lain pada waktu akad.

*Qabd* terhadap komoditi melalui serahan tangan secara serta merta adalah kaedah *qabd* yang paling jelas lagi terhindar dari *gharar* serta mampu membuktikan bahawa transaksi jual beli benar-benar berlaku. Kaedah lain yang turut berkongsi taraf yang sama dengan serahan tangan ialah:

- i) Tindakan penjual melalui penunjukan terus terhadap komoditi dari sudut kondisi, nilai dan kuantitinya (ÑAyni, 1981).
- ii) Melaui serahan sijil yang mewakili pemilikan barang secara spesifik dari aspek kondisi, nilai dan kuantiti (JuÑayd, 1986).

**Parameter 2**: Mestilah berlakunya *Takhliyyah* pada aset igar

\_

<sup>&</sup>lt;sup>6</sup> Terdapat segelintir kecil fuqaha mazhab yang berpandangan bahawa qabd termasuk rukun jual beli kerana tanpanya akad dikira tidak sah dan tidak sabit implikasi hukum-hakam jual beli (Sawas, 2000).

<sup>&</sup>lt;sup>7</sup> Syarat kewujudan komoditi ini dikecualikan dalam transaksi *bayÑ al-salam*. Namun begitu syarat ini tetap perlu dipenuhi walaupun komoditi tidak dibawa semasa akad dijalankan.

<sup>&</sup>lt;sup>8</sup> Syarat ini telah disepakati oleh semua mazhab. Apa sahaja yang dikhuatiri tidak boleh untuk diserahkan atau memang berada di luar kemampuan penjual untuk menyerahkannya sama ada disebabkan jaraknya, pemilikannya, ketiadaan kepakaran untuk membuatnya, mengusahakannya atau lain-lain sebab, ia tidak boleh dijual kepada pihak lain (Zaharuddin, 2012).

<sup>&</sup>lt;sup>9</sup> Terdapat dua kaedah untuk memaklumkan kepada pembeli akan kondisi komoditi. Pertamanya ialah dengan mengisyaratkan atau menunjukkan komoditi ketika majlis akad. Keduanya, kaedah penceritaan sifat, kadar dan jenis komoditi (ÑAli Haydar, 2003).

Jika aset sandaran adalah dari jenis harta tidak alih, fuqaha mazhab bersepakat bahawa penjual mestilah melakukan *takhliyyah* iaitu mengosongkan premis sehingga membolehkan pembeli menggunanya atau menjualkannya kepada pihak lain (Sawas, 2000). *Takhliyyah* juga oleh berlaku penjual penjual memberi izin kepada pembeli untuk mengambil komoditi di premisnya (Suruhanjaya Sekuriti, 2006).

# Parameter 3: Berlakunya penyerahan komoditi daripada penjual kepada pembeli

Setiap perlaksanaan qabd tidak memadai hanya dengan penerangan melalui tutur kata atau penyerahan dokumen sahaja. Ia mestilah disusuli dengan perpindahan komoditi dari jagaan penjual kepada jagaan pembeli bagi melayakkan pembeli untuk menjualnya semula kepada pihak pembeli yang baru (Bin Baz, 1992). Hal ini boleh dilakukan dengan mengasingkan komoditi tersebut dari aset lain yang dimiliki oleh penjual atau dengan merekodkan rujukan pemilikan pada dokumen pemilikan yang menunjukkan tempat penimpanan komoditi (AAOIFI, 2010).

# 8. PENUTUP

Daripada perbahasan kajian ini, dapat dirumuskan bahawa Syarak amat memberi penekanan terhadap perlaksanaan *qabd* di dalam akad *tawarruq*. Status *qabd* sama ada sahih atau *fasid* di dalam pembiayaan tawarruq dapat ditentukan melalui parameter *qabd* yang telah diusulkan. Pengabaian parameter *qabd* akan mengakibatkan kerosakan pada akad yang seterusnya menggagalkan berlakunya implikasi pemilikan pada komoditi untuk diurus niagakan kerana pada dasarnya, parameter ini adalah dibahas berteraskan nas-nas Syarak dan pandangan sarjana yang berkelayakan. Kajian ini seterusnya mencadangkan agar perlaksanaan *qabd* oleh institusi kewangan Islam dapat dicermati dan diteliti semula agar *tawarruq* bukan hanya mendapat nilaian patuh Syariah pada produknya sahaja, tetapi apa yang lebih mustahak ialah pada perlaksanaannya. Kajian ini juga menyarankan agar isu-isu lain seperti kaedah penyeliaan komoditi dan penggunaannya secara serentak dapat dijalankan agar segala kepincangan dapat diatasi dan perlaksanaan pembiayaan *tawarruq* benar-benar mampu memenuhi hajat masyarakat muslim yang inginkan produk pembiayaan 100 peratus mematuhi prinsip Syarak.

# SHARIAH-COMPLIANT FINANCING FOR AGRICULTURE IN ISLAMIC BANKING INSTITUTIONS

Muhammad Mohamad Yusoff<sup>1</sup> Muhammad Ridhwan Ab. Aziz<sup>2</sup>

# **ABSTRACT**

Among of the roles of Islamic financing in agriculture is to prevent involvement of *haram* elements in funding agriculture-based projects. It is also important to entrepreneurs to use banking and financing instruments which is Shariah-compliant. This paper aims to propose financing methods for Muslim entrepreneurs in funding their agro projects through Shariah-compliant products and services offered by Islamic banking institutions, with basis of *Fiqh Muamalat* contracts. The methodology of this paper is through qualitative research based on document-analysis on previous articles and literatures on several types of *Fiqh Muamalat* contracts. The general finding of this paper shows that there is a need to have Shariah-compliant financing in Islamic institutions, based on *Fiqh Muamalat* contracts.

**Keywords:** Shariah-compliant, agriculture financing, Islamic banking institutions

#### 1. INTRODUCTION

One of the main contributors to local economy in most countries of the world is agriculture – its products ranging from plant-based foods to household materials. According to Ken (2006), agriculture has two meanings; 1) by narrow or daily definition, farming, and 2) by wide definition, an activity which relates to the production process of human needs which originated from plants or animals, accompanied by efforts of renew, reproduce and reconsider economic factor. The second definition matches with the main topic of this research very well. Malaysia is no exception since this country was well known for local plantations such as rice, fruits, cocoa, rubber and palm oil. This country also had cultivation of common livestock including chickens, cows and goats. These plentiful natural resources had opened a wide opportunity for people to begin a highly potential business and may receive high expectations of wealthy income due to stable demand-supply chain.

Entrepreneurs who wished to begin their agriculture-based projects – "agro projects" in short – would require some funds to purchase required materials and as their financial capital for the projects. Being a large project and receiving high demand from local citizens, this may take a lot of hard work and effort, so a good management and entrepreneurial skill is essential for each agro-entrepreneur.

Muslims are encouraged to involve in entrepreneurial business, since it was a part of *Sunnah* practiced by the beloved Last Prophet Muhammad (*SAW*), and even there was several *dalils* mentioned in the Holy Quran and Hadith which mentions about business and its benefits. Allah also mentioned that humans were *khalifahs* of the Earth, which means that humans not only should become his own leader but also should administer the natural resources gifted by Allah, which is coincidental with recommendations to Muslims involving in agrobusiness.

Nowadays, local banking institutions in Malaysia offer Islamic banking products and services, after the National Shariah Advisory Council advises Bank Negara Malaysia to include Shariah-compliant instruments. This is because Islamic banking, due to its moral and ethical Islamic practices, was highly trusted and

<sup>&</sup>lt;sup>1</sup> Muhammad bin Mohamad Yusoff is a postgraduate student at Faculty of Economics and Muamalat, Universiti Sains Islam Malaysia (USIM). Corresponding author: hamano87@gmail.com.

<sup>&</sup>lt;sup>2</sup> Lecturer, Universiti Sains Islam Malaysia (USIM).

accepted by the people including non-Muslim, and the benefits gained could be shared by both institutions and people. Therefore, businessmen and entrepreneurs are recommended to use these products and services to support their projects and ensure the outcome is truly *halal* (permissible).

# 2. LITERATURE REVIEW

As stated by Amir (2000), Allah wanted humans to work on land, including agriculture and food production, which are promised to be the most *halal* income for mankind. The teachings and guidance mentioned in the *al-Quran*, *al-Hadiths* and *as-Sunnah* was perfectly written to aid humans with rules of resources and product allocation. Allah mentioned that the natural resources is always infinite, not as claimed by Western markets or scholars, unless humans departed from the teachings and guidance which had been foretold by Islam. Unfortunately, Muslim nowadays being too dependent to products and services offered by other countries, especially Western countries, and even being governed by their rules and regulations. He urged that Muslim should prevail and secure their food to secure our country. Muslim should also cooperate together to develop their own agriculture and food resources so we could become competitive as other developed countries.

According to Dr. Baharudin (2006), management is required to ensure perfection of administration. Both management and administration should base on the values of Islam in order to enhance the prestige of Islam, race and the country. The performance to achieve the highest level of excellence could also be exchanged though the excellence in providing services to those in need. Muslim should become a role model to others since Islamic management system model contains work ethics and moral values.

In second quarter of the year 2008, there are about 1.48 billion people who are employed in Malaysian agriculture sector, which proves that the agriculture sector the most important sector for Malaysian economy development (Ministry of Agriculture and Agro-based Industry, http://www.moa.gov.my/web/guest/statistik-pertanian, 3<sup>rd</sup> March 2011). Meanwhile, among the members of Pertubuhan Peladang (Farmers Association) in Malaysia, there are about 700,000 people who are known to have direct involvement in agriculture. These people were mostly Muslim, and they are in need of further *riba*-less, Islamic funds, which is why it is urgent for Islamic financial institutions to provide Islamic finance to these farmers and agro entrepreneurs (Ministry of Agriculture and Agro-based Industry, http://www.moa.gov.my/, 7<sup>th</sup> March 2011).

Financing for agriculture sector under Islamic banking system (Islamic banks which reinforces Islamic Banking Act 1983 and Islamic Banking Scheme) had increased from 31.5 billion in 2007 to 41.3 billion in 2010 (Bank Negara Malaysia, http://www.bnm.gov.my, 4<sup>th</sup> March 2011). This increase is a good indication that between 2007 until 2010, the roles of Islamic banking and financing institutions in supporting the government in agriculture sector development and Islamic funding for agro entrepreneurs are appreciated and needed truly, and sometime in the future, more Islamic financing institutions are able to provide more Islamic financing.

In the Annual Report 2009 published by Bank Negara Malaysia (BNM) (2009), there is several imbalancements between total allocations and total approvals in Small and Medium-sized Enterprises (SMEs) special funds, which is administered by BNM. One of the examples of this issue is regarding to Fund for Food (3F) program, it's total allocation was stated as 1.3 billion, however, the total approval was 1.7 billion (Bank Negara Malaysia, http://www.bnm.gov.my, 4<sup>th</sup> March 2011). This would mean the fund demand is larger than the available funds of BNM. Ironically, even in special funds for Small and Medium Industries 2, there are still other unbalance funds, which is 6.7 billion of total allocation and 12.8 billion of total approval. This inequality is urgently in need of new Islamic funding facility which could overcome and administer the issue.

According to Rajhi (2010), agricultural credit is expected to be a requirement in agricultural development for agricultural initiative, including farm credit which had been long identified as a main input. These inputs allocation is important since they are considered as an alternative to already available resources such as labour, land, equipment and raw materials.

One of the major constraints in agricultural development is capital insufficiency. Modern farm inputs (e.g. fertilizers, improved seeds, feeds and plant protection chemicals, agricultural machines) are required over the hoe and machete technology in order to improve agricultural production. Yet, only a small number of farmers who had enough financial resources are able to afford the inputs mentioned.

According to Amir Shaharuddin, et. al. (2005), Small and Medium-sized Enterprises (SMEs) played an important supportive role in Malaysian economy. Many Islamic banks in Malaysia (e.g. Affin Islamic Bank Berhad, Bank Islam Malaysia Berhad, Kuwait Islamic Finance (Malaysia) Berhad) and even conventional commercial banks (e.g. Alliance Bank Malaysia Berhad, HSBC Bank Malaysia Berhad, Public Bank Berhad) have provided financing and facilitating business transactions to the SMEs, including providing total financing which had been increased by 29.6 percent from 2003 to 2004. Some of the products offered included Fiqh Muamalat contracts such as special investment account (mudharabah-based), trust receipts (murabahah-based), Islamic guarantee letters (wakalah-based), overdraft (bai bithaman ajil/bai 'inah-based) and more, however, upon observation, it seems the mentioned products are not utilized by most SMEs customers fully. The reason is because of ineffective marketing strategy by Islamic banks which failed to attract the customers fully.

Abd. Rahman Rasid (2001) said that lack of financing is one of the main reasons why agriculture industry cannot be developed further in Malaysia. Furthermore, both Islamic and conventional banking system are not intensively provide funding to agriculture or due to several factors, including risk of agriculture, incompatible sources of financing, lack of banking experts and people marginalize the agriculture sector. Until now, according to Muhammad Ridhwan (2010), Agro Bank is the only bank able to provide funding and financing facilities to Agro entrepreneurs intensively, although some of the products offered are not Shariah-compliant yet.

Muhammad Fauzi (2008) mentioned that, based from his research on the Holy *al-Quran*, Allah had mentioned 83 verses related to concepts of agriculture. Some good examples had been stated in *Surah al-An'am* (verse 141) and *Surah an-Nahl* (verse 11). These verses mentions about the variety of plants and its products which gifted by Allah for human needs and as one of the proofs of Allah the Most Wise. The Holy al-Qur'an itself mentioned about agriculture, horticulture, botany, and geology the most. According to him, there are three main concepts of agriculture in Islam; 1) Islam encourages the people to involve in agriculture since it is the easiest way to gain good rewards (*pahala*) while earning beneficial and *halal* income, 2) Islam encourages marketing agro-products, but prohibits any form of frauds or monopoly, and 3) Islam, however, discourages any agricultural activities with doubtful and invalid purposes according to Islam, such as planting grapes to produce beer, although the grapes itself is *halal*.

According to Hazaruddin (2001), in Islam, management could be viewed as a complement of business, as long it is according to *syara*'. Allah mentioned in the Holy *al-Quran* at verse 29 of *Surah an-Nisaa*', in which Allah prohibits the Muslim to consumes each other's wealth in wrong ways, unless by acceptable business. Muslims also need to acquire themselves with management skills for business; aspirational skills, interaction skills and technical skills. Since Islam emphasizes good ethics to be practiced by Muslim business managers, such as trust, cooperation, and responsible.

Khaliq (2004) mentioned that even though organizational environment need for Islamic knowledge is becoming more important day by day, only a few Muslims going well with accurate ways of gaining objectives of Islam in organizations. Some others may able to contribute something well to his organization but only work in non-Islamic culture, and some others may involve in healthy competition between firms but with wrong Islamic background knowledge.

According to Syahnaz (2009), Islam advises its people to be wise in managing their lives including monetary management. Islam does allow the people to make monetary loan, however, this action should not be practiced all times unless it is necessary. The implementation of Islamic loan plan, known as *qard al-hassan*, should be featured and extended in driving the *riba*-less Islamic economy system. All agencies should support this honorable intention directly in an attempt to uphold Muslims' socio-economic standards in this country.

Dr. Joni Tamkin, *et. al.* (2009) mentioned that there are higher risks in agricultural investments due to various factors, although it is rare because the risks involve weather and natural disaster effects toward agro productions. Recent and advanced farming technology was able to minimize the effects. He also mentioned that although there are few banks offered Islamic financing facility, but due to importance of agriculture towards Malaysian economy, these banks are willing to provide financial support towards agro entrepreneurs, which is good opportunity to expand the agro business.

Muhammad Ridhwan (2010) stated that in the case of local Islamic banking institutions such as Agro Bank, Bank Kerjasama Rakyat Malaysia Berhad and Maybank Islamic Berhad, these banks used *Bay' Bithaman Ajil* and *Bay' al-Innah* contract types when dealing with Islamic financing for agriculture. However, the contracts mentioned are not suitable for agribusiness according to Shariah view. This is because in *Fiqh Muamalat*, there are other more suitable contracts which could use for dealing with agri-business transactions such as *al-Muqasat*, *al-Muzara'ah* and *Bay' Salam*. At the same time, the application of *Bay' Bithaman Ajil* as selectable contracts used in current Islamic banks are argued and disagreed by several Islamic scholars, since they said that it is a back-door method against *riba* (interest) transactions. Before owning a property, a seller must fulfill some certain requirements in *Fiqh Muamalat* before the asset would later to be sold to other buyers.

Fatimah (2010) mentioned about the development of new supply chain of agro-food marketing in Malaysia, which traces the new retail formats' growth and its structural effect towards small local fresh producers. New super retailers were able to capture an important market share of local fruits and vegetables in similar cost of small time local retailers within less than ten years. Their procurement system indirectly separates the small farmers from the supply chain. Small time wholesalers or traders who acted as middlemen had been replaced by emerging new type of intermediaries and packing houses at farm level. Small farmers who wished to integrate into the new supply chain should have a major revamp of their current system, such as enhancement of productivity, product quality and institutional restructuring, with support of local government.

## 3. RESEARCH METHOD

The paper adopts qualitative research based on several literature works on Islamic finance and agriculture. The literature works and articles will be analyzed to extract information regarding to financing methods and Islamic contracts which can be used by Muslim entrepreneurs in funding their agro projects through Shariah-compliant products and services offered by Islamic banking institutions. The document analysis will also be made to gain information on what types of *Fiqh Muamalat* contracts which is suitable for financing and funding agriculture-based projects.

# 4. CONCLUSION

There are several forms of *Fiqh Muamalat* contracts which are suitable to agro-entrepreneurs to finance agro-projects, which may benefit them as well. These Shariah-compliant instruments will also ensure that the outcome of the projects were truly *halal* (permissible) without any involvement of *haram* (non-permissible) elements, such as usury and interest. It is very important to Muslim agro-entrepreneurs to realize the benefits of financing their projects using Shariah-compliant financing and banking products and services not only because to guarantee the *halal* outcome, but also to ensure the entrepreneurs' work and effort will be an acceptable *ibadah* in their life.

# MAQASID SHARI'AH IN ISLAMIC FINANCE: ASSESSMENT ON IDEOLOGIES OF MUSLIM PHILOSOPHERS AND ECONOMISTS

Nooraslinda Abdul Aris<sup>1</sup>
Rafidah Mohd Azli<sup>2</sup>
Rohana Othman<sup>1</sup>

#### **ABSTRACT**

The development of maqasid shari'ah shows the high intense to be relevant to any field of academic studies. This includes the Islamic finance area which comprises of Islamic banking, Takaful and Islamic capital market. Islamic banking in particular has created concern among the scholars with regards to achieving the social justice for the ummah and general society. Maqasid shari'ah in contemporary context has to be deduced from the original sources rather than the fiqhi literature. This paper therefore discussed the literature of maqasid shari'ah in Islamic Finance with relation to its impact towards social welfare. References and assessment were made based on renowned Muslim philosophers and economists namely Imam al-Ghazali, Ibn Qayyim, Imam al-Shatibi, and Ibn Ashur on their ideologies. The study confirmed that Islamic finance needs to make maqasid shari'ah as the main focus of their operation and performance as it would be a great contribution to the ummah and their future achievement. The most relevant ideas of the philosophers are proposed towards building a framework of maqasid shari'ah base for Islamic finance model.

**Keywords**: Magasid shari'ah, Islamic finance, Islamic banking, social welfare

# 1. INTRODUCTION

Islamic finance as known as Islamic transaction law is founded on *Shari'ah* principles. *Shari'ah* is not just a law, it represents the idea that all human beings and governments are subject to justice under the law – extends to everything from business contracts and marriage to punishment and worshipping. The explicit intention of Islamic finance is to meet the financial needs of the society with integrity and in a manner that is just, fair, trustworthy and honest, while ensuring a more equitable wealth distribution.

Islamic finance offers similar services as conventional finance: taking deposits, giving loans, providing trade finance, investing in financial assets, and distributing insurance. Islamic finance encourage business and trade activities that generate fair and legitimate profit in which the business transaction must be accompanied by an underlying genuine trade and business-related activity (MIFC, n.d.). The promotion of fairness in Islamic finance is visible via the risk and profit sharing

<sup>&</sup>lt;sup>1</sup> Accountancy Research Institute & Faculty of Accountancy, Universiti Teknologi MARA Malaysia. Corresponding author: nooraslinda@salam.uitm.edu.my

<sup>&</sup>lt;sup>2</sup> Academy for Contemporary Islamic Studies (ACIS), Universiti Teknologi MARA Malaysia

characteristics. Thus, in a nutshell, Islamic finance embraces the feature of materiality and validity of transactions and mutuality of risk sharing. The application of the principles of Islamic finance and adherence to *shari'ah* could help alleviate poverty and stabilize economies.

Shari'ah is a set of norms, values and laws that governs Islamic way of life, in all its aspects, like faith and worship, as well as the economic, social, political and cultural components in Islamic society (ISRA, 2011). In terms of the Islamic economic system, the philosophical foundations which serve as bases upon which they are formed include *tawhid*, *rububiyyah*, *risalah*, *akhirah*, *istikhlaf*, *tazkiyah*, *kafalah*, *adalah* and *falah*.

Maqasid shari'ah is classified into two main categories namely general objectives (maqasid 'ammah) and specific objectives (maqasid khassah). Islamic finance can generally be categorized under maqasid khassah, the specific objectives. Nevertheless, the general objectives are also very relevant and directly related as the aim of Islamic finance includes preserving the wealth of society. Therefore it is important to investigate into the objective of wealth examination, along with the general objectives of Islamic finance.

This paper shed light on the literature of *maqasid shari'ah* or objective of Islamic law. The characteristics, classification and principles of *maslahah* are highlighted in conjunction with the current situation of Islamic finance. The impact of *maqasid shari'ah* is discussed which focusing on the social welfare within the Malaysian society.

Many scholars have agreed that the ultimate objective of *maqasid shari'ah* is to serve the interests of all human beings and to save them from harm. Others opined that *maqasid shari'ah* is surrounding on the issue of preservation and promotion of human welfare. Islamic scholars have generally considered that the fundamental value and objective of *shari'ah* is the realization of the *maslahah*, or public interest. It is important to highlight that *maslahah* sometimes has the same connotations as *maqasid*, and at times scholars have used the two terms interchangeably. Thus, it is arguably essential that when talking about *maqasid*, one must delve deeper into the principles of *maslahah* as well.

Therefore, we include a comparison and assessment of the concept among four major Muslim scholars namely Imam al-Ghazali, Ibn Qayyim, Imam al-Shatibi and Ibn Ashur to provide guidance for future researches and enlighten the finance industry. This conceptual research found that, Muslim scholars have provided guidance and standard on the application of *maqasid shari'ah* throughout our Islamic financial transaction, contracts and activities. It needs effort and support from all side of the relevant parties in this area in realizing the standard that we can call it the *Shari'ah-based* of Islamic finance. The sections of this paper are as follows.

## 2. LITERATURE OF MAQASID SHARI'AH IN ISLAMIC FINANCE

# 2.1 Definition

Shari'ah can be interpreted to mean "the way", or "a clear path to be followed (Qur'an 45:18). Al-Qurtubi defines shari'ah as the canon law of Islam, as in all the different commandments Allah (s.w.t.) has given to mankind (Al-Qurtubi, n.d.). The fundamental value and objective of shari'ah is the realization of the maslahah, or public interest. It is important to highlight that maslahah sometimes has the same connotations as maqasid, and at times scholars have used the two terms interchangeably. Many scholars have agreed that the ultimate objective of maqasid shari'ah is to serve the interests of all human beings and to save them from harm.

In Arabic, the term *maqasid* means goals, or purposes. "*Maqasid* of the Islamic law highlights rationales, purposes and common good in the Islamic rulings and stresses their importance, while basing itself on the Islamic scripts and observing the Islamic faith" (Al-Shaikh-Ali & Auda, 2006). Many scholars have agreed that the ultimate objective of *maqasid shari'ah* is to serve the interests of all human beings and to save them from harm. However, others have defined *maqasid shari'ah* in different ways. Al-Ghazali, Imam al-Shatibi, Ibn Ashur and Ahmad al-Raysuni opined that *maqasid shari'ah* is surrounding on the issue of preservation and promotion of human welfare.

Al-Ghazali has described *maqasid shari'ah* as the importance of preserving the well-being of the people through the safeguarding of their faith (*din*), their lives (*nafs*), their intellect ('*aql*), their posterity (*nasl*), and their wealth (*mal*), while at the same time highlighting that these five points, when fulfilled adequately, serve public interest and is therefore desirable. However, whatever is done not in accordance with these five points is against public interest and should therefore be removed. (Al-Ghazali, 1973).

Imam al-Shatibi defines *maqasid shari'ah* from a more epistemological perspective, inferring that the aim of *shari'ah* is to free man from selfish endeavors in order for him to realize his place in the scheme of things and serve God willingly and wholeheartedly (Al-Shatibi, 1975).

Ibn Ashur explains that the *maqasid*, in promoting the well-being and virtue of man, also preserves, in consequence, the social order of the community and its healthy progress. He points out that virtue, or *salah*, can be fulfilled through thinking intelligently and doing good deeds, as well as utilizing all the gifts that God has bestowed on him, in a righteous manner that may benefit society as a whole (Ibn Ashur, 2001).

Ahmad al-Raysuni has defined the overall objective of *maqasid* as the preservation of an ordered and peaceful society wherein the people placed there on earth, act as its responsible caretakers, as God had placed them there as His vicegerents. As such, using all the resources at his disposal, they must therefore live justly and promote moral propriety and integrity, in thought and action, for the benefit of all (Al-Raysuni, 2005).

There are similar ideas identified in the *maqasid shari'ah* discussion by the Muslim scholars which are the context of community, society and human being development, either in the area of spiritual or material order. Based on our observation, the social welfare and public interest become the authentic approach among them in defining *maqasid shari'ah* which is united and collective.

There are also some ideas especially the approach and segment of life extracted from the literature which are considered distinctively defined by the Muslim scholar. One of the differentiations is on the approach and segment of life. Al-Ghazali stresses the sequence of the five priorities in human life. Whereby, Al-Shatibi utilises the epistemological instrument in defining *maqasid shari'ah*.

Hence, it can be concluded that the welfare, public interest and justice on community and society in all area of life is the main focus of *maqasid shari'ah*. The objective of five main points of preservation as mentioned by Al-Ghazali is to discard human being from the bad characteristic such as selfish and individualism. Islam suggests the collective culture in all area of life, as discussed by Ibn Ashur and Al-Raysuni. The progress of community and the social order must be utilized by the man's virtues. The moral propriety and integrity are becoming the conditions of the peaceful society.

# 2.2 Characteristics of Magasid Shari'ah

There are four main characteristics of *maqasid shari'ah*. Firstly, it is the basis of legislation serving the interests of all human beings and protects them from harm. Secondly, is universal, as the aim of

Islamic law is to serve the interests of mankind and require the adherence of all human beings. The third is inclusive (absolute), encompassing all human acts irrespective of whether they relate to 'ibadah' (responsibilities to God) or mu'amalah (responsibilities to other human beings). Lastly is definitive, as they have been taken from many different sources, and not just from one single text or item of evidence (Dusuki and Bouheraoua, 2011).

# 2.3 Classification

Islamic scholars divide maqasid shari'ah into two main categories: general objectives (maqasid 'ammah) and specific objectives (maqasid khassah). Al-Shatibi (1975) further divides the general objectives into three sub-categories, which are essentials (daruriyyah), complementary (hajiyyah) and embellishments (tahsiniyyah). Daruriyyah means the interests of life which people essentially depend upon, consisting of the five objectives of Shari'ah; religion, life, intellect, posterity and wealth. However, some scholars have proposed additional daruriyyah such as equality, freedom and protection of the environment, arguing that although the five original daruriyyah are vital for human welfare, necessities are not confined to them. The hajiyyah consist of interests that supplement the essential interests, and of which the neglect would lead to hardship but not to the total disruption of the order of life. This is said to be needed in order to alleviate hardship. The tahsiniyyah is interests whose realization leads to refinement and perfection.

*Maqasid khassah* involves the distinguishing objectives of Islamic legislation, in which a specific discipline, for example, financial transactions or family law, are addressed. Ibn Ashur expresses that the aim of these objectives is to put stress on the importance of public interest, discouraging people from allowing their own personal interests harm their established public ones, through every human flaws such as carelessness and vain desires (Ibn Ashur, 2001).

# 2.4 Principles of Maslahah

Maslahah has always been used, as a juristic device, to promote public benefit and prevent social evils and corruption. Al-Ghazali, in his concept of maslahah, describes it as "the preservation of the ends of the Shari'ah", that is, the preservation of its objectives. Essentially, the fundamental meaning of maslahah lies in the all-encompassing universal objectives such as the protection of faith, life, posterity, intellect and wealth, and do not solely refer to the mere "human goals" as many have thus defined it (Al-Ghazali, 1973).

Al-Shatibi reiterates this by categorizing *maslahah* as the only overriding objective of *shari'ah* that is broad enough to include all measures thought to be beneficial to people, including the administration of people and '*ibadah*. He defines *maslahah* as a principle which involves the subsistence of human life, the completion of man's livelihood and the acquisition of what his emotional and intellectual qualities require of him (Al-Shatibi, 1975).

Ibn Ashur describes two main kinds of *maslahah*; one of obvious benefits for human beings (e.g. consumption of food, wearing clothes, associating with the opposite sex, etc.), which in relation to this *Shari'ah* has deemed unnecessary the laying down of rules for its achievement as it has been assured of man's natural desire to pursue this *maslahah*. Rather, *shari'ah* places more stress on removing the obstacles in the way of achieving these obvious benefits. One of less obvious benefits for human beings (e.g. the paving and widening of roads, the provision of night security guards, etc.), which unlike the in the case of the previous *maslahah*, *shari'ah* is deemed it necessary to intervene by prescribing it, as well as enacting penalties for abandoning and violating it. *Maslahah* can be prescribed in part, for individuals, and in part for society as a whole.

Ibn Qayyim considers the concept of *Istislah* in his economic point of view. *Istislah* or consideration of public interest (*al-maslahah al-'ammah*) is referring to enactment of law where there is no *Shari'ah* rule, guided by public interest. It must be in accordance with the spirit and objectives of *shari'ah*; it should be logical and rational; and it should be adopted to remove some general hardship. He summarized his jurisdicial methodology that is based on wisdom and people's welfare (Auda, 2008).

Maslahah concept is very relative to the moral economy because it seeks to establish justice, eliminate prejudice and alleviate hardship, cooperation and mutual support within the society, realisation of public interest, public benefits and prevent social evils or corruption, securing the benefit and repelling harm (Dusuki, 2010).

The pyramid of maslahah acts as an ethical filter mechanism, exemplifying three levels of judgment that demonstrate their different degrees of importance, in relation to the fulfillment of responsibility, that could be useful to managers for resolving ethical conflicts. It is important to note that the preservation of the three categories in their order of importance is vital for the pyramid to work. Also, all three levels are interrelated and mutually dependent. The essential elements (*daruriyyah*) are at the bottom level as they deal with the preservation and protection of essential needs, and must therefore look out for the interests of the public and everyone involved. Thus, IFIs have a religious, moral and social responsibility to avoid engaging in any business activities which may prove detrimental to society. On the second level, are the complementary (*hajiyyah*), which are necessary in order to remove difficulties, but whose absence does not threaten the normal order of life. IFIs, after fulfilling the needs of the first level should then further extend their responsibilities, as exemplified in the second category. Finally, at the highest level of the pyramid are the embellishments (*tahsiniyyah*) which aim to perfect the conditions of life. In this category, it is inferred that Islamic firms have the responsibility to engage in activities that lead to improvements of public life conditions.

# 2.5 Impact of Magasid Shari'ah on social welfare in Islamic Finance

Islamic finance can be categorized under *maqasid khassah*, the specific objectives. It is also related to *maqasid 'ammah* as the aim of Islamic finance includes one of the five *daruriyyah* i.e. the preservation of wealth, which is interrelated with the other four *daruriyyah*, especially the preservation of religion. Thus, investigating and examining the objective of wealth along with the general objectives of Islamic finance is necessary.

Maqasid shari'ah require IFIs to comply with the standards of virtue and moral consciousness that have been advocated by the Shari'ah (Dusuki & Bouheraoua, 2011), which expects a balance, upheld by firms, in relation to the rights and responsibilities of the individual and of society (Chapra, 1992). As such, the many prohibitions established by the shari'ah should be treated with the aim of providing a level playing field in order to protect the interests of everyone involved as well as create the harmonious society that has been envisioned by the maqasid shari'ah. One could argue that the maqasid shari'ah provide, especially for financial institutions, a framework for decision-making and a means to adapt to change. Furthermore, they act as guidelines for moral judgment (Dusuki & Bouheraoua, 2011).

Maqasid shari'ah reflects the holistic view of Islam, which has to be looked at as a whole, not in parts, for Islam is a complete and integrated code of life, and its goals encompass all way of life, including individual and society, in this world and the hereafter (Dusuki, 2010). Social welfare responsibilities and religious commitments to achieve the Islamic economic objectives, including social justice, equitable distribution of income and wealth and promoting economic development (Dusuki, 2008b) must be uphold at all times. The values become the guidance of Islamic finance

collectively. The values as prevailed within the ambit of *shari'ah* are expressed not only in the minutiae of its transaction but in the breath of its role in society (Dusuki, 2008b).

Maqasid shari'ah is also important to be established in institutional level. In other words, there is the need to organize an institution that serve the public interest and welfare by preserving the five basic needs which are the religion, life, intellect, progeny and wealth. There are certain areas in Islamic finance especially banking sector that seems parallel to maqasid shari'ah which concerns the public interest and social welfare. They are the corporate social responsibility (CSR), service quality (SERVQUAL), customer satisfaction, public or stakeholder awareness, stakeholder perception, poverty alleviation, microfinance and charity. However, the current practice of islamization the conventional to shari'ah compliant is not really fulfilling the objective of shari'ah. The question by many is to what extent these institutions can apply the maqasid shari'ah concept and methodology.

There was an early study by Jasser Auda (2008) that suggests in operationalize and systemize the principals of *maqasid shari'ah*. The reason of the study is current application is reductionist rather than holistic, literal rather than moral, one-dimensional rather than multidimensional, causal rather than teleological, lack of consideration and functionality of the overall purposes and underlying principles of the Islamic law as a whole. In his study, the theory of *maqasid shari'ah* is used as the philosophy and fundamental methodology for assessing classic and current juridical theories, systems theory is constructed to define a new method for analysis.

Other researches on *maqasid shari'ah* in Islamic finance areas include the application of *maqasid shari'ah* in the CSR (Dusuki and Irwani (2007), the stakeholder perspective (Dusuki, 2008a), Islamic capital market (Dusuki, 2010) and Islamic banking products (Habib Ahmed, 2011). It also was suggested that *maqasid shari'ah* will be the main concern if the Islamic microfinance is to be applied in the Islamic banking (Ahmed, 2004; A. W. Dusuki, 2008b; A. Wajdi Dusuki et al., 2008).

# 3. ASSESSMENT ON MUSLIM SCHOLARS' IDEOLOGIES

Islamic finance literature frequently refers to economic justice, equitable distribution of opportunity and wealth, ethics, morality, equity and fairness in business dealings. Critics, however, contend that the prevailing practice of Islamic finance is not sufficiently connected with such ideals. We therefore decided to make an assessment of ideologies on application of *maqasid shari'ah* in Islamic finance. The assessment was made based on the four Muslim scholars' ideology namely Imam al-Ghazali, Ibn Qayyim, Imam al-Shatibi and Ibn Ashur. These scholars were chosen for their significant contribution. In order to understand their views, it is equally important to analyse their background.

# 3.1 Imam Al-Ghazali

Muhammad b. Muhammad b. Ahmad, *al-Imam al-Kabir* Abu Hamid al-Ghazali *Hujjat al-Islam* or better known as Imam al-Ghazali was an important and outstanding Muslim scholar of the medieval period. He was born in AH 450/AD1058 at Tus in Khurasan and died in AH 505/AD1111. Al-Ghazali was one of the religious reformers of the Islamic community during an era of great political turmoil in the fifth century of Hijrah. He made important contributions in all field of Islamic teaching: jurisprudence, theology, philosophy and Sufism. He also studied on psychological, political and metaphysical aspects by combining philosophical and doctrinal approaches and allying rational argumentation with revealed knowledge. Al-Ghazali left behind a massive of intellectual legacy and wrote about 100 treatise of immense cultural value. His works are read throughout the world and translated to English, Spanish, French, German, Urdu and Malay. His greatest works were *Ihya'* 

*'Ulum al-Din* (The Revival of the Religious Sciences), *Maqasid al-Falasifah* (The Aim of the Philosophers) and *Tahafut al-Falasifah* (The Incoherence of the Philosophers). He is celebrated in the Muslim world as a scholar and thinker, and his works are regarded as standard references for Islamic teachings (Mat Akhir, 2010).

# 3.2 Ibn al-Qayyim al-Jawziyya

Sham Al-din Muhammad Ibn Abi Bakr or better known as Ibn al-Qayyim's was born in a small farming village near Damascus, Syria in AH 691/AD 1292 and died in AH 751/AD 1350. He was a famous Sunni Islamic jurist, commentator on the *Qur'an*, astronomer, chemist, philosopher, psychologist, scientist and theologian. He lived in a time in which there was strife and internal confusion and chaos, as well as an external threat which was menacing the Islamic state. The resources of knowledge that Ibn al-Qayyim relied on were the Qur'an, the Sunnah and the Ijmaa, Fatwa and Oiyas. His knowledge encompasses the field of religion and the Arabic language and his vast knowledge including the Sunnah, Figh, Arabic Language, 'Hadith, as well as, being a scholar of healing through divine medicine. He learned with many teachers including his father such as Abu Bakar Ibn Ayub, Ibn Taimiyyah, Abu Bakar Abdul Da-im, Abu Abdullah Ibn Abi al-Fat'h and Muhammad Safi ad-Din al-Hindi. Ibn al-Qayyim al-Jawziyya's contributions to the Islamic library are extensive, and they particularly deal with the Qur'anic commentaries, and understanding and analysis of the prophetic traditions. He compiled a large number of studies besides his own books, including Tahthib Sunan Abi Dãwoud (Emendation of Sunan Abi Dãwoud), Al-Kalām al-Tayyib wa-al-'Amal al-Sălih (The Essence of Good Words and Deeds), Commentaries on the book of Shaikh 'Abdullāh al-Ansāri: Manāzil-u Sā'ireen (Stations of the Seekers), which is considered the epitome of knowledge of sufi books; and, Zãd al-Ma'ãd (Provisions of the Hereafter), from which this book on the medicine of the prophet is extracted, besides other manuscripts copied with his own handwriting, and which are preserved in the Central Library in Damascus, Syria (ibngayyim.com).

# 3.4 Imam Al-Shatibi

Imam al-Shatibi or Ibrahim bin Mosa bin Muhammad al-Shatibi al-Gharnati is the great Andalusian Jurist, wrote that it is incumbent upon the Mufti to carry people on a way that is balanced and moderate. He is one of the foundational scholars in usul al-figh and followed the Maliki school of thought. He was an important jurist, grappling with significant issues of political, economic and social change. His family's descent was from the Banu Lakhm. His Kuniyat was "Abu Ishaq" and his surnames were "Al-Lakhmi", "Al-Gharnati", "Al-Maliki" and "As-Shatibi". The date and place of his birth are unknown but he died 1388 (8th Shabaan 790 H) in Granada. His bases for Magasid Shari'ah were the numerous *Qur'anic* verses and Hadith that emphasize moderation and caution regarding one's expression of faith. He learned from very prominent scholars such as Imam Ibn al-Fakhar al-Abeeri, Abu al-Qasim al-Satti, Imam Abu Abdullah al-Tilmasani, Imam Abu Abdullah al-Magri, Shaikh Abu Saeed bin Lab and became master in Arabic language and Ijtihad. His most important work is the Muwafawat fi usul al-sharia a treatise that contributed immensely to the conception of Islamic law, particularly the concept of maslahah (benefit or public interest). Others famous books of Imam al-Shatibi were Al-Aitesaam, Shara a;a al-Khutasa, Al-Itifaq fi Elm al-Ishtiqaq, Kitab al-Majalis and Kitab Al-ifidaat wa Al-inshadaat. Imam al-Shatibi's environment present challenges to the application and adaption of Islamic law and his worked returned to prominence in the 19<sup>th</sup> century with the emergence of Rashid Rida (1865-1935) and Muhammad Abduh (1849-1905) who cited al-Shatibi's ideas.

### 3.5 Ibn Ashur

Muhammad al-Tahir ibn Ashur was born in Tunis AH 1296/AD 1879 and died in AH 1879/AD 1973. Ibn Ashur's methodology takes a centrist position between two contemporary extremes, namely, 'noeliterism', which ignores rationales and valid re-interpretations of the Islamic rulings for the sake of literal traditional views, and 'neorationalism', which ignores the religious and cultural identity of Muslim in its quest for 'modernization' and 'rationality' (Ibn Ashur, 2001). He combined a thorough knowledge of the classics with a desire to revive Islamic civilization. He saw himself as a bridge between the classical Islamic legal heritage and the needs of a modern world.

Figure 1: Timeline of the four scholars

Figure 1 above shows the timeline for each scholar. It shows that the idea of *maqasid shari'ah* had been into discussion for more than 950 years. The findings may be beneficial to others in defining and proving that *maqasid shari'ah* principles are relevant and crucial in Islamic finance as it ensure society are well protected from undesirable outcome. We also intend to highlight the most relevant ideology in promoting the social welfare institution.

# 4. FINDINGS

Deducing from the four scholars mentioned earlier, *maqasid shari'ah* did not take much interest during the first three century. There were significant developments in the formulation of the theory of *maqasid* during the time of al-Ghazali (d. 505/1111) and al-Shatibi (d. 790/1388). Ibn Ashur then proposed *maqasid* as a methodology for the renewal of the theory of Islamic law.

Table 1 below provides a summary of the importance ideology from the four Muslim scholars. These would assist further research in Islamic Finance.

#### 5. DISCUSSION AND CONCLUSION

Table 1 above produces the evidence that Muslim scholars have provided guidance on the application of *maqasid shari'ah* throughout our daily life. The current concern is on the extent of the application of *maqasid shari'ah* in Islamic finance especially the finance and banking system.

Ibn Khaldun stated that the development or decline of economy or society is depend on the interaction of moral, economic, political and historical factors over a long period of time. The sovereign or political authority, beliefs and rules of behaviour or the *shari'ah*, people, wealth or stock of resources, development and justice, in a circular and interdependent manner, each influencing the others and in turn being influence. The concept of *asabiyyah*, which has been translated as social solidarity, Social capital and social infrastructure, group feeling and social cohesion has provides protection, makes possible mutual defense as well as the settlement of claims and performance of all agreed activities. Justice necessitates certain rules of behaviour called institutions in institutional economics and moral values in religious worldviews. Good governance is recognition of private property and respect for individual freedom within the constraint of moral values is a part of Islamic teachings and has always been prevalent in Muslim thinking (Chapra, 2008).

Islamic finance as part of an Islamic economic system has an inherent orientation. The overall goal of this system is to realize the *maqasid shari'ah* which at the end enables growth and justice (Siddiqi, 2004). This implies that Islamic finance will need to fulfill both, the legal and social requirements.

Achieving *maqasid shari'ah* from legal aspect of transactions mean underlying objectives of exchange is fulfilled. These include upholding property rights, respecting consistency of entitlements with the rights of ownership, linking transaction to real life activity, transfer of property rights in sales, prohibiting debt sales, etc (Kahf, 2006). Accordingly, IFIs will need to ensure the contracts used fulfill the form and substance as outline by *shari'ah*.

Social aspects of financial institutions can be assessed by examining their involvement in socially responsible activities, from a product perspective the social role can be determine by the market segments and the needs served (Ahmed, 2011). Welfare can be enhanced by promoting the three level of maslahah - *daruriyyah*, *hajiyyah* and *tahsiniyyah*. The needs can be categorized into three types of financial products and services, namely the survival or basic products (savings, checking), security or complementary products (insurance, pension, endowments) and lastly growth products (investments, mutual funds) (Xiao and Anderson, 1997). Figure 2 below provide summary of the application of *maqasid shari'ah* in Islamic finance.

Figure 2: The pyramid of maslahah and possible application in Islamic Finance

Clearly, whatever the decision of IFIs in operating its business in terms of product, service and/or operation, maqasid shari'ah could be applied. The concept of priority should be the main focus in all decision making and administration. Each maslahah (daruriyyah, hajiyyah and tahsiniyyah) is supporting upon each other. This model is very relevant to be applied in every level of management and parts of Islamic banking and finance industry. This observable fact will give the proof that Islam recognize the authority of reason (aql) if it is applied in line with the means of revelation (the Holy Qur'an and Sunnah). There is no superstition that shari'ah is not suitable for the contemporary and modern millennium economy.

Maqasid shari'ah is an important topic of discussion relating to Islamic finance, especially banking sector. Taking the ideas of the great Muslim scholars', it is hope to enable and enhance further understanding of the reader and assist researcher in the area. As Islamic finance grows and foster, it is expected that the base for the current practices will slowly redefined to pursue the real objective of shari'ah in ensuring just, fair and equitable distribution of wealth among the society.

The benefits of Islamic finance have to go beyond social responsibility and the reduction of wealth gaps and poverty. Economic benefits have to be clear as this will enable social justice and welfare being achieved. International initiatives and domestic infrastructures coupled with the supports and collaboration from regulators and supervisor of the industry is crucial towards a financially stable economy.

# Acknowledgement

The team members would like to express their gratitude to Ministry of Higher Education and Research Management Institute (RMI), Universiti Teknologi MARA (UiTM) Malaysia and FRGS for providing the financial means and facilities. This article would not have been possible without the financial and mutual support of the grant provider, family, and friends.

# EXPLORING UNDERGRADUATE STUDENTS' UNDERSTANDING OF SHARI'AH BASED AUDIT: IMPLICATIONS FOR THE FUTURE OF SHARI'AH AUDITING LABOR MARKET IN BRUNEI

Hisham Yaacob<sup>1</sup> Fathima Shafeek<sup>2</sup> Hairul Suhaimi Nahar<sup>3</sup>

#### **ABSTRACT**

The worldwide Islamic finance industry had grown remarkably in the past decades, primarily propelled by the strong demand for shari'ah (Islamic Law) compliant banking products by Muslims and non-Muslims alike. Behind the façade of such outstanding industry's development, there remain unresolved critical governance issues warranting for immediate attention by industry stakeholders. Besides the presence of significant variations with regards to the scope and framework for shari'ah audit in the currently available shari'ah governance policy standards, another imperative issue surrounds the relatively small pool of knowledgeable and competent shari'ah auditors (vis-à-vis conventional auditors) to perform shari'ah auditing of Islamic financial transactions and hence, the institutions. Arguably, these pose a significant threat to the coordinated development of this religiously rooted industry. The study's conjecture is that education holds the key to resolve the issue. Accordingly, it undertakes a preliminary survey on Bruneian undergraduate students in the field of accounting, business and shari'ah related, majority of whom are expected to be part of Brunei's future shari'ah auditing labor market. The study finds that students' understanding of shari'ah auditing is arguably "rudimentary" in nature. While the characteristics and knowledge expected of shari'ah auditor are well understood, the students are however unsure of the primary objective for shari'ah auditing. These highlight the practical imperative for the Brunei government to consider a holistic revamp of its education strategies in meeting future market demands for qualified and well trained *shari'ah* auditors.

Keywords – Islamic accounting, Islamic finance, shari'ah audit, shari'ah auditor

# 1. INTRODUCTION

Islamic finance has become a credible alternative to conventional, usury-based financing industry, registering a growth in excess of 20% in the past decades (Global Islamic Finance, 2012). The religiously rooted industry has more than three hundred industry players called "Islamic Financial Institutions (IFIs)" operating in almost eighty countries globally with total assets stood at US\$1.3 trillion in 2011 (Grewal, 2012, PwC, 2011) and reached US\$1.6 trillion in 2012 (Global Islamic Finance, 2012). The Islamic finance assets in the Asian region alone constitute 22% of that amount (Grewal, 2012). Official statistics produced by KFH Research, an independent professional research house indicate that Islamic banking activities

<sup>&</sup>lt;sup>3</sup> Senior Lecturer at the Universiti Putra Malaysia, Malaysia.

primarily drive the industry's expansion globally with an estimated asset size of USD1.1 trillion as at 2011, which value attributed to almost 81% of the whole *shari'ah* based finance assets worldwide. This is followed by *sukuk* (Islamic bond) with 14% Islamic finance assets portion, equivalent to approximately USD178.2 billion outstanding *sukuk* value as at 2011. The global Islamic finance assets are further expanded by the Islamic fund management activities (4.5%) which assets under management closed to USD60 billion from 876 funds as at 2011. The remaining portion of the world Islamic finance assets (0.5%) as at 2011 came from *Takaful* (Islamic insurance).

Amongst the growing Islamic finance market in South East Asia (SEA) is a small Islamic Nation of Brunei, a sovereign state located on the north Coast of Borneo Island. The country's population stood slightly above four hundred thousand as at July 2011 (US Department of State, 2011). Despite its small size geographically, Brunei recorded the second highest Human Development Index (HDI) among SEA nations (Singapore being the first) and this small Nation is classified as a "developed country" (United Nation, 2011). Consistent with its "developed country" status, Brunei is ranked fifth in the world by gross domestic product per capita at purchasing power parity of approximately US48,000 per capita (International Monetary Fund, 2011). This makes Brunei the fifth richest nation out of 182 nations in the world, primarily due to its extensive petroleum and natural gas field exploration and discovery activities.

The Brunei Islamic finance industry was practically introduced in 1991 following the establishment of the Country's Trust Fund named *Tabung Amanah Islam Brunei Darussalam*, followed by the conversion of a conventional bank (Island Development Bank) into a full-fledged Islamic bank (Islamic Development Bank of Brunei (IDBB)) in January 1993 and later merged with Bank Islam Brunei Darussalam (BIBD). Among the Country's notable Islamic finance progress includes the introduction of equity-based Islamic products of *Musharakah* (partnership) to finance Small and Medium Enterprises (SMEs) and a home-ownership financing based on *Musharakah Mutanaqisaha* instrument by BIBD in 2010. *Sukuk* (Islamic bond) issuance remains a rare debt instrument in Brunei with only two issuances to date. Its first *Sukuk Ijarah* was only available in 2006, issued by the then IDBB and subsequently a short-term money market *Sukuk Ijarah* program issued by the government.

The government continuously supports the Islamic finance development by providing the necessary infrastructure including the establishment of a regulatory authority called "Autoriti Monetari Brunei Darussalam" in 2010. It takes up the role of a central bank for Brunei, functions as a government institution that supervises and regulates the operations of the country's Islamic banks. Further, the Centre for Islamic Banking, Finance and Management (CIBFM) was also established in 2012 by the Ministry of Finance, which aims at developing human talents required for the industry. Among others, it provides professional learning courses in various academic disciplines including banking, finance, insurance, capital market as well as general management.

At the global front, the immediate observable impacts arising from the emergence of Islamic finance industry are diverse. Among others it includes the surfacing of Islamic accounting to cater for the accounting and reporting requirements of Islamic financial transactions, *shari'ah* governance in the form of *shari'ah* audit or review, the consistent and increasing demand for knowledgeable and qualified individuals to

serve as *shari'ah* advisors and *shari'ah* supervisory board members, and finally the official establishment of standard setters for IFIs such as the Accounting and Auditing Organization for Islamic Financial Institution (AAOIFI) and the International Financial Services Board (IFSB). The former is an international non-profit organization established in 1991 which main objectives are to develop and disseminate Islamic based accounting and auditing thought and standards for IFIs. The latter on the other hand issues standards and guiding principles with the aim of promoting and enhancing prudential stability of the Islamic financial services industry globally.

Behind the façade of such outstanding industry's development however, there remain unresolved critical issues warranting for immediate attention by industry stakeholders. The notable major impediments to the coordinated growth of this sacred industry include weak Islamic finance supporting infrastructure in markets in which Islamic finance activities are currently operating (PwC, 2011). It covers that of legislative, regulatory, legal, accounting, tax, human capital and *shari'ah* governance and business framework. In the specific context of *shari'ah* governance, the *shari'ah* audit in effect pillars the *shari'ah* governance framework of IFIs by providing independent assurance to IFI's diverse stakeholders on matters related to IFI's operations including products and services (Mohamed-Ibrahim, 2008). This effectively ensures that IFIs are operating strictly within a *shari'ah* based operating environment.

Prior academic literature specific on shari'ah audit has indeed highlighted prevalent problems facing the Islamic finance industry which include the small and limited pool of available skilled human capital (Kasim, Mohamed-Ibrahim and Sulaiman, 2009) in terms of knowledge and qualification (Rammal and Parker, 2010) and lack of proper shari'ah audit framework (Shafii, Salleh and Shahwan, 2010). Yaacob and Donglah (2012) conduct a survey in Brunei but they are using the postgraduate students as sample. They find that the postgraduate students' lack of understanding of shari'ah auditing is mainly due to inadequate exposure by the institutions of higher learning and the industry. The study conclude that there is an impending need to promote shari'ah audit as a future potential career in order to address the shortages of talent (qualified and knowledgeable manpower) in the Islamic finance industry. Recent survey (in 2011) conducted by PriceWaterhouseCoopers (PWC), a global professional accounting firm in Malaysia further reveals alarming shari'ah governance issues including the urgency in expanding the talent pool of shari'ah auditors, enhancing the comprehensiveness of shari'ah audit scope and improving shari'ah audit methodologies (PwC, 2011).

Arguably, the above identified problems represent a significant threat to the coordinated development of this religiously rooted industry. The study's conjecture is that education holds the key to address the above human capital issues. Accordingly, it undertakes a preliminary survey on Bruneian undergraduate students (currently enrolled in business and management related programs), whom are expected to be part of the country's *shari'ah* auditing labor market in the future. The survey aims at gauging undergraduates' knowledge on *shari'ah* auditing and their propensity of choosing *shari'ah* auditor as a prospect career. Among others, the students were asked on their perceptions with regards to *shari'ah* auditor's roles and responsibilities, characteristics needed for a *shari'ah* auditor and their current understanding with respect to the most suitable qualification(s) to become a *shari'ah* auditor.

The study finds that the understanding of Bruneian students towards *shari'ah* auditing is "*rudimentary*" on average. They understood well the characteristics and knowledge expected of *shari'ah* auditor but surprisingly however, they are unsure of the primary objective for *shari'ah* auditing activities. The results underscore the practical imperative for the Brunei government to consider a holistic revamp of its education strategies in meeting future market demands for qualified and well trained *shari'ah* auditors. The study considers the awareness on Islamic finance and its components among the undergraduate students as a crucial educational strategy as awareness forms part of the self-development processes. Awareness is however expires only when individuals deemphasize the importance of acquiring and broadening their knowledge frontier.

The paper is organized as follows: A discussion on auditing in general is presented next, followed by discussion on *shari'ah* audit. The roles, responsibilities and code of ethics of *shari'ah* auditor are also presented with the aim of putting the empirical survey into perspective. This is followed by sections explaining the empirical approach to the survey and its corresponding results. Final section presents relevant discussions arising from the empirical results, conclusion and some recommendations and suggested future research.

#### 2. AUDITING AS A DISCIPLINE AND PROFESSION

Auditing is a specialized field which practically branches out from accounting. It involves individuals referred to as "auditors" to undertake the responsibilities of attesting that the "auditee(s)"—the one being audited have done their work according to prescribed pre-agreed rules, standards or regulations. Audit comes in various forms including but not limited to financial, management and performance audit. In the specific context of financial audit, the American Accounting Association (AAA) defines auditing as:

"A systematic assessments of evidences regarding economic events and to ascertain the correspondence of the two and communicate the results to interested users". (www.aaahq.org/audit)

In a much broader context, the International Federation of Accountants (IFAC), the global umbrella body for the accountancy profession defines auditing as:

"An independent examination of financial statements or related financial information of an entity whether profit or not, irrespective of its size, or legal form, when such examination is conducted with a view to expressing an opinion thereon". (www.ifac.org)

Audit process is usually performed at auditee's premises during which an auditor will comprehensively assess auditee's systems and records for among others, accuracy and validity. This involves audit activities of analyzing firm's relevant risks as well as identifying system's loopholes and subsequently recommending the necessary controls. These practically require auditors to understand client's business processes and environment. In the specific context of financial audit, auditing activities and the corresponding independently expressed audit opinions conceptually adds credence to the financial statements produced by firm's management. Accordingly, this helps building confidence among financial statement users in relying on the audited financial statements to make appropriate and relevant decisions (Karim, 1990).

The auditing profession and hence its activities are primarily guided by professional standards called the International Standards on Auditing (ISA) issued by IFAC through the International Auditing and Assurance Standards Board (IAASB). Mirroring the operations of International Accounting Standard Board (IASB), the IAASB operates as an independent standard-setting body with the focus of serving the public interest by developing quality auditing and assurance standards as well as facilitating the convergence of international and local (national) auditing and assurance standards. Similar to the expected end results of global convergence to International Financial Reporting Standards (IFRS) developed by IASB, the IAASB also envisaged that the convergence efforts towards single assurance standards would improve the quality and consistency of global auditing practices, thereby strengthening public confidence in the auditing and assurance profession.

#### 3. SHARI'AH AUDIT

Extant literature on auditing claims that shari'ah based auditing is relatively new, the earliest being after the emergence of IFIs during 1980s. The Islamic history however explains the reverse whereby the institution of hisbah was noted to have already established during the time of Prophet Muhammad (Peace Be Upon Him). It aims at assisting human being in worshipping Allah the Almighty by ensuring Allah's rights and the rights of other human beings are being properly observed and fulfilled. Even though it was institutionalized for the purpose of enjoining good and forbidding evil in general (as oppose to focusing specifically on economic and commercial activities), it forms an integral part of wider effort in establishing just economy in the society (Kasim et al., 2009). The contemporary role of the shari'ah auditor resembles the role of muhtasib in the traditional hisbah institution in the early period of Islam (Yaacob, 2012). The muhtasib or al-khatib audits and checks on compliance and subsequently suggests recommendations on worldly matters from shari'ah perspective (Kasim, 2010). Arguably, while shari'ah audit may have some similarities with that of social accountability audit (e.g. see Courville, 2003) in the specific context of auditing techniques, it is however significantly different in their respective philosophy.

The fact that auditing is not peculiar to the religion of Islam is further substantiated by the availability of auditing essence in various verses in the main source of knowledge to the Islamic religion called *Al-Quran*. The book is considered as the most sacred scriptures to Muslims and it contains the words of Allah which was sent down to His Messenger, Prophet Muhammad (pbuh). The followings are several audit related verses found in the Holy Scriptures:

"Then as for he who is given his record in his right hand, He will be judged with an easy account, and return to his people in happiness" (Ouran, 84:7-9)

"And indeed, [appointed] over you are keepers, Noble and recording. They know whatever you do"
(Quran, 82:10-12)

The above verses indicate that Muslims (and non-Muslims alike) will be audited by Allah in the hereafter, during which human book of deeds will be presented and human will subsequently be rewarded or punished based on the "audit outcome". Comparably and in the specific context of Islamic financial system, shari'ah audit presents a system of compliance checking on its operations with regards to shari'ah

rulings. The reward and punishment system comes in the form of public perceptions (negative or positive) and confidence towards the *shari'ah* based products offered by the IFIs. Consistent with such indirect *Quranic* explanation on auditing, *shari'ah* auditing has been comprehensively defined by Mohamed-Ibrahim (2008) as "a systematic process of objectively obtaining and evaluating evidence regarding assertions about socio-economic, religious and environmental actions and events in order to ascertain the degree of correspondence between those assertions and shari'ah, and communicating the results to users" (p.22).

The AAOIFI on the other hand provides a liberal view of audit from *shari'ah* perspective by merely referring it to the term "*shari'ah review*" without any further specifications. In AAOIFI's documents, the term "*shari'ah audit*" is used interchangeably to represent the checking of IFI's financial statements. The objective of IFI's auditing according to AAOIFI is "*to enable the auditor to express an opinion as to whether the financial statement are prepared, in all material respects, in accordance with shari'ah rules and principles, the accounting standards of AAOIFI and relevant national accounting standards and practices in the country in which the financial institution operates" (AAOIFI, 2010).* 

Shari'ah audit primarily aims at singularizing the religiously rooted financial system from its conventional counterpart, by undertaking the role of certifying the validity and enforceability of Islamic financial contracts adopted. Such role which is absent in the conventional financial system effectively addresses stakeholders' perceptions and hence public confidence towards IFI's operations. In a wider context, shari'ah audit forms an integral structure to the internal governance mechanisms of IFIs by providing the necessary supervision and monitoring towards the whole spectrum of IFI's operations (Garas and Pierce, 2010).

Accumulating academic literature (empirical and theoretical) has highlighted critical problems associated with *shari'ah* auditing. Khan (1985) for instance in discussing the role of *shari'ah* auditor, argues the unreasonable situation of having auditors '*ingrained with secular capitalist philosophy*' to audit IFIs on matters relating to *shari'ah* compliance. Khan (1985) further suggests that auditing on IFIs must ideally be done by auditors trained in accounting and audit, as well as having the necessary knowledge on *shari'ah* and *fiqh*. Recent survey by Grais and Pellegrini (2006) reveals the fact that the existing compliance structure in IFIs is alarmingly inadequate to address the issues of *shari'ah* compliance. They argued that the reliance on internal *shari'ah* review alone provides little assurance to IFI's customers on the entity's compliance level towards *shari'ah* rulings in their operations. Perhaps the most observable problem in *shari'ah* auditing is the lack of expertise and human talent to perform *shari'ah* audit, a point highlighted by Besar, Abd-Sukor, Abdul-Muthalib *et al.*, (2009) in their recent survey in the Malaysian context.

### 4. DESIRABLE ETHICAL DIMENSIONS OF SHARI'AH AUDITOR

The *shari'ah* highly emphasizes morality or ethics in human conduct, consistent with the sayings of Prophet Muhammad (pbuh) (the *hadith*):

"I have been sent to complement the noblest morals".

Accordingly, individuals undertaking *shari'ah* auditing activities are expected to have the following fundamental characteristics (not exhaustive) as promulgated by the Islamic religion. The first is integrity, referring to individual's consistency with his or

her innate purpose (Quran, 7:26). It reflects the extant of individual's life being kept in alignment with their intrinsic function of worshipping Allah (Quran, 51:52). Integrity effectively requires *shari'ah* auditor to be honest and truthful in all actions. As the end output of *shari'ah* auditing comes in the form of independent opinion with regards to *shari'ah* (non)compliance, observing integrity ensures accurate and impartial opinions by auditors. In this regards, accurate and impartial opinions further require auditors to be well-versed in their discipline and able to exercise authority with high competency. Islam further emphasizes the characteristics of *vicegerency* (*khalifah*) and accountability (Haniffa and Hudaib, 2010; Nahar and Yaacob, 2011). Human beings in Islam are effectively temporary trustee to resources available on earth (Haniffa and Hudaib, 2010). Being Allah's vicegerent, human undertook the responsibility (*taklif*) of being the *khalifah* in this world.

# Allah says in the Quran:

Truly, we did offer Al-Amanah (the trust or moral responsibility or honesty and all the duties which Allah has ordained) to the heavens and the earth, and the mountains, but they declined to bear it and were afraid of it (i.e. afraid of Allah's torment). But man, bore it. Verily, he was unjust (to himself) and ignorant (of the results)" (Quran, 33:72).

Undertaking the responsibility necessitates human to take care and develop this world according to Allah's will. They will subsequently be made accountable for whatever (in)actions or decisions they made in this world (Nahar and Yaacob, 2011). Shari'ah auditors are therefore expected to constantly observe strong ethical values as the auditing tasks are principally an amanah (trust) to be questioned in the hereafter. The trust of expressing independent, correct and impartial opinions bears great repercussion not only to the auditors but also to other individuals relying on their opinions.

# 5. INVESTIGATING UNDERGRADUATE STUDENT'S UNDERSTANDING OF SHARI'AH AUDITING: THE METHOD

This empirical work aims at investigating Bruneian undergraduates' knowledge on *shari'ah* auditing and their propensity of choosing *shari'ah* auditor as a prospect career. Specifically, the students were asked on their perceptions with regards to *shari'ah* auditor's roles and responsibilities, *shari'ah* auditor's characteristics and their current understanding with respect to the most suitable qualification(s) to become a *shari'ah* auditor. Adopting a quantitative approach, this study used self-developed questionnaire survey to gather primary data from respondents. This is considered as the most appropriate method in collecting perspective information from respondents (Ghauri and Gronhaug, 2010).

There are only three universities currently operating in Brunei (University A, B and C), all of which are used as the research sample. University A is the oldest university in the country, established nearly three decades ago. University B is a full-fledged Islamic university while university C is the youngest university, a former technical college recently upgraded to university status. All universities currently offer bachelors degree in business, economics, finance and accounting related programs. University A is the only university in the country which currently offers Masters Course in Islamic finance by coursework and by research.

Target respondents are undergraduate students in the field of business, finance, accounting and *shari'ah*. These students are selected as they are expected to become part of *shari'ah* auditing labor market in the future. Prior study by Yavas & Arsan (1996) found that students with accounting or auditing academic background are very likely to favor auditing as their career of choice. As *shari'ah* auditors are also expected to possess business and *shari'ah* knowledge, students enrolling in these two courses are also considered. First year students were also surveyed as they were found in previous studies to have made decisions with regards to their choice of profession during the first two years of their university studies (Gul *et al.*, 1989; Mauldin *et al.*, 2000; Paolillo and Estes, 1982).

A total of 69 students agreed to participate in the survey, representing 27% from University A, 40% from University B and 33% from University C. The number is reasonable as students' enrolment is on average, relatively small across the three universities given the small country's population. Further, a portion of the wealthiest elite societal group in the Country sent their children overseas (mainly western Nations) for quality education abroad, leaving a handful of youth to populate local universities. From the 69 copies of questionnaires distributed, 10 were unusable leaving only 59 copies available for analysis.

# 6. THE UNDERSTANDING OF UNDERGRADUATE STUDENTS TOWARDS SHARI'AH AUDITING: FINDINGS AND DISCUSSIONS

Table 1 to 3 below explain respondents' demographic information, with 29% of them are male and the remaining 71% are female. Majority of respondents (95%) are in the age range of twenty (20) to twenty four (24) years old and mostly in their second and third year of study (87%). Only eight (8) respondents (13%) are in their final year of study.

Table 1: Gender distribution (n = 59)

Gender	Frequency	Percentage
Male	17	29
Female	42	71
Total	59	100

**Table 2: Age distribution (n=59)** 

Range	Frequency	Percentage
15 - 19	1	2
20 - 24	56	95
25 - 34	2	3
Total	59	100

Table 3: Year of study distribution (n = 59)

Year of Study	No	%
2 <sup>nd</sup>	24	41
$3^{\rm rd}$	27	46
4 <sup>th</sup>	8	13
Total	59	100

Table 4 below shows the distributions of respondents according to their currently enrolled program. It indicates that almost all universities offer courses in finance with University C having the highest number of students enrolling for the course. University B being the sole full-fledged Islamic university in the country is the only university providing respondents studying *shari'ah*.

Table 4: Enrolled program distribution (n=59)

Tuble iv Emiliana program unseriouvion (ii es)				
	Enrolled program	(%)	Enrolled program	(%)
U. A	Business administration	5	Economics	2
	Accounting & Finance	18	Others	2
U.B	Islamic Finance	18	<b>Business Management</b>	3
	Shari 'ah	14	Others	5
U. C	Accounting	-	Management	-
	Finance& commerce	2	Others	-
	Finance	31		-

Table 5: Shari'ah auditor's role (n=59)

Shari'ah auditors role	(%)
a) To express an opinion on the true and fair view of the financial statements	36%
b) To check that IFIs activities are <i>shari'ah</i> compliant	24%
c) Both	40%

Table 5 above indicates that only 40% of the respondents expect *shari'ah* auditors to do both jobs of the normal financial auditors (i.e. expressing opinion as to whether the audited financial statements provide a true and fair view of IFI's financial positions) and the true role of *shari'ah* auditors (i.e. checking IFI's *shari'ah* compliance). This implies that majority of undergraduate students surveyed (60%) are not aware of what the precise role of *shari'ah* auditors. This is unsurprising as there are no specific academic courses or sections in any courses that touch on *shari'ah* auditing. The 40% view is however commendable as their understanding is apparently based on piecemeal knowledge of conventional auditing and *shari'ah* in isolation.

Table 6: Characteristics of shari'ah auditors

Characteristics	(%)
Honesty	92
Accountability	81
Highly Ethical	78
Confidentiality	68
Competency	64
Independence	41

Respondent's views on the characteristics of a *shari'ah* auditor (based on AAOIFI) indicate high awareness among Brunei undergraduate students towards the expected characteristics traits of *shari'ah* auditors. They ranked honesty as the first

expected trait (92%), followed by accountability (81%), highly ethical (78%), confidentiality (68%), competency (64%) and the least is independence (41%). The low scoring on independence trait could potentially be attributed to their misconception with regards to the status of *shari'ah* auditor being part of the company, equivalent to the internal auditor or company's *shari'ah* advisors.

Table 7: Knowledge needed in a shari'ah audit profession

Discipline	%
Islamic Finance	93
Shari'ah	92
Auditing	81
Accounting	78
Conventional Finance	53

Students were also asked of their views with regards to the necessary knowledge background to become *shari'ah* auditor. They ranked Islamic finance as the most important knowledge background (93%) followed by *shari'ah* (92%), auditing (81%), accounting (78%) and the least important is conventional finance (53%). This reflects student's single-sided views whereby checking on *shari'ah* compliance to them requires little, if not none of conventional finance knowledge. This view effectively disregards the fact that Islamic finance knowledge is primarily developed based on conventional finance techniques modified to suit *shari'ah* requirements. Knowing both dimensions of finance essentially enables *shari'ah* auditors to analyze financial transactions and subsequently check on *shari'ah* compliance more effectively.

The final part of the questionnaire deals with questions of whether the profession of *shari'ah* auditor should be further emphasized in the Muslims dominated country and the student's view of making *shari'ah* auditor as a career choice. An overwhelming response of 91% agrees that *shari'ah* auditing should be properly developed and the regulatory framework and structure must be strengthened. These necessitate for this religious based profession to provide more exposure to potential participants in its labor market. Among common reason given by respondents in the questionnaire is the fact that Brunei is a country established under the Malay Islamic Monarchy system, with majority of the population are Muslims. This reinforces the practical imperative of properly developing the Islamic finance and putting it in the mainstream financing industry. Therefore, having a sound *shari'ah* auditing framework in fortifying the industry's integrity is not an option to Brunei.

Unfortunately, nearly three quarter of the respondents (approximately 70%) confirms that they are not aware of *shari'ah* audit being another profession available in their career choice list. A heartening rate of 60% of the respondents however plans to consider *shari'ah* audit as their prospect career upon graduation. These results should send a clear alarming signal to the Bruneian government as the development of this religiously based industry is known to be a function of human capital development. Coordinated efforts are imperatively required to expose *shari'ah* audit as another promising profession in light of the industry's robust and exponential development.

In this regard, the government in collaboration with industry players and academia should therefore work towards developing a strategic, short and long term blue print for human capital development in meeting the industry needs. For instance, comprehensive revamp of the current academic curriculum should be done to reflect

the market demand for knowledgeable and competent *shari'ah* auditor. For instance, universities in Brunei should consider incorporating *shari'ah* audit and Islamic finance as core subjects in their degree programs, or at least part of the respective conventional courses, even though the degree programs may not be purely Islamic. This should preferably be done at the earlier year of student's study period as the first course taken by students at undergraduate level provides significant impact on students' perceptions towards the prospective profession (Jackling and Calero, 2006).

A more ambitious plan when the knowledge has been fully developed is to have stand-alone courses on *shari'ah* auditing and Islamic accounting and finance. As for graduated individuals without *shari'ah* knowledge, educational and professional institutions may offer a focused certified *shari'ah* programs, providing them with the necessary *shari'ah* knowledge of becoming *shari'ah* auditor. On the other hand, *shari'ah* graduates without accounting and finance background could also be offered courses on accounting and finance certification, thereby offering them with equal opportunities of becoming *shari'ah* auditors.

Apart from that, industry-academic linkages must also be further strengthened, engaging in activities that disseminate relevant information on Islamic finance including *shari'ah* audit to the public. IFIs could consider organizing frequent visits to higher institutions and employment roadshow to public, informing the "*positive sides*" of the profession such as vast employment opportunities available in the industry and long term career prospect (Dalci, Arasli, Tumer *et al.*, 2013) particularly on *shari'ah* auditing.

#### 7. CONCLUSION

Despite the exponential growth of the Islamic finance industry and the fact that it forms an integral part of the industry's governance structure, *shari'ah* audit has perplexingly gained scarce attention (Sultan, 2007). The focus of both academic research and industry's attention mainly falls on the industry's assets, products and services. De-emphasizing the check and balance (governance) perspective of the industry is unwarranted as it will adversely affect the industry's sustainability in the long run. As the sacred industry develops, the increasing demand for competent *shari'ah* auditors is inevitable. The current shortages on qualified individuals in the labor market has effectively dampens the industry's vision to serve the *ummah* and becoming a viable alternative to conventional, *shari'ah* non-complaint finance.

This study finds that *shari'ah* audit has not been comprehensively introduced to the potential auditing labor market participants (i.e. the undergraduate students). This is despite the students are currently enrolled in Islamic finance, accounting, business and *shari'ah* courses. The students are however found to have at least some basic ideas of what *shari'ah* audit is all about, particularly on the roles and ethical characteristics of *shari'ah* auditor. Concentrated and coordinated efforts between the government, industry and academia are further required to ensure the continuous supply of knowledgeable and qualified *shari'ah* auditor are not disrupted, potentially giving disastrous impact to this *shari'ah* based industry.

# ORIENTASI SIKAP KEUSAHAWANAN MUSLIM DALAM KALANGAN BUMIPUTERA: KAJIAN TERHADAP USAHAWAN BELIA BUMIPUTERA (MUSLIM ENTREPRENEURIAL ATTITUDE ORIENTATION AMONG BUMIPUTERA: THE STUDY OF BUMIPUTERA YOUTH ENTREPRENEUR)

Zoolhilmi Ahmed<sup>1</sup> Buerah Tunggak<sup>2</sup>

# **ABSTRAK**

Kertas ini dirangka bagi mengemukakan cadangan kajian terhadap orientasi sikap keusahawanan Muslim dalam kalangan usahawan belia Bumiputera.Perbincangan yang diutarakanakan mengupas dan memberi gambaran umum tentang latar belakang masalah keusahawanan dalam kalangan Bumiputera khususnya golongan belia, serta penglibatan agensi-agensi yang berkaitan membantu meningkatkan penyertaan dan tahap daya keusahawanan dalam kalangan Bumiputera di Malaysia. Kemudian skop perbincangan dikhususkan dalam mengenal pasti beberapa permasalahan utama yang membawa kepada pembentukan objektif, persoalan dan hipotesis kajian.Kertas ini seterusnya akan menerangkan kepentingan kajian yang hendak dijalankan berdasarkan kepada skop kajian yang ditetapkan. Dapatan kajian ini dijangka akan menunjukkan dan membuktikan kepentingan lima sub-skala orientasi sikap keusahawanan Muslim (iaitu; etika Muslim, keperluan kepada pencapaian, inovasi, kawalan personal dan penghargaan diri) dalam menentukan tahap kecenderungan dan kebolehupayaan seseorang dalam bidang keusahawanan.

Kata Kunci: Sikap, Keusahawanan Islam, Usahawan, Belia, Bumiputera.

# **ABSTRACT**

This paper is designed to propose the study of Muslim entrepreneurial attitude orientation among youth Bumiputera entrepreneurs. The discussion raised will peel and gave an overview of the background of the problem among the Bumiputera entrepreneurship, especially the youth, as well as the involvement of relevant agencies to help increase the participation and level of entrepreneurship among the Bumiputera in Malaysia. Then the scope of discussion devoted in identifying some of the major problems that led to the formulation of objectives, questions and hypotheses of the study. This paper will further explain the importance of the research to be carried out based on the scope of the study set. The findings of this study are expected to demonstrate and prove the importance of the five sub-scale Muslim entrepreneurial attitude orientation (namely, Muslim ethics, the need for achievement, innovation, personal control and self-esteem) in determining a person's level of interest and capability in the field of entrepreneurship.

Keywords: Attitude, Islamic Entrepreneurship, Entrepreneur, Youth, Bumiputera.

# 1. PENGENALAN

Sejak manusia mencapai era ketamadunan lagi, pembangunan dan pertumbuhan ekonomi sangat berkait rapat dengan *survival* kehidupan individu, masyarakat mahu pun negara. Kedudukan penting perniagaan dan relevannya dalam konteks sistem ekonomi global telah mengangkat bidang keusahawanan sebagai suatu disiplin yang menjadi tonggak kepada pembangunan dan pertumbuhan ekonomi negara (Syed Othman, 1989; Ab. Aziz, 2001; Muhammad Ali, 2003). Agama Islam sendiri mengiktiraf keutamaan keusahawanan dalam mencari kehidupan yang terbaik dan diberkati. Hal ini dapat dijelaskan melalui hadith Nabi Muhammad (SAW) yang bermaksud:

Daripada Rifa'ah Ibnu Rafi' bahawa baginda Nabi (SAW) telah ditanya; "Apakah jenis mata pencarian yang paling baik?". Maka baginda menjawab; "Hasil usaha sendiri, dan setiap perniagaan yang bersih (dari tipu daya dan khianat)".

(RiwayatAl-Hakim, 2:2211)

Bidang keusahawanan merupakan bidang yang berpotensi luas dan mempunyai peluang yang tidak terbatas untuk diceburi oleh golongan belia. Justeru, usaha-usaha membangunkan masyarakat usahawan belia Bumiputera dalam bidang ekonomi dan perniagaan perlu diberikan tumpuan, dan Buerah (2007) menyimpulkan dalam kajiannya penumpuan tersebut harus diarahkan kepada tiga aspek penting iaitu sikap terhadap keusahawanan, kemahiran menguruskan perniagaan, dan program pembangunan dan latihan keusahawanan. Ini kerana hasrat untuk melahirkan masyarakat mandiri dan berdikari yang bermula di peringkat belia menuntut kepada perubahan sikap dan nilai. Pembentukan sikap akan membantu kepada proses pembangunan manusia yang seimbang antara roh dan jasad, kerana pembangunan usahawan Bumiputera tidak cukup sekadar penekanan kepada aspek-aspek luaran sahaja, malah ia memerlukan kepada pemupukan sikap positif terhadap bidang keusahawanan (Syed Othman, 1989; Buerah & Hussin, 2011). Malah Shetty (2004) menyarankan agar penyelidikan keusahawanan harus difokuskan kepada tahap atau orientasi keusahawanan.

#### 2. BUMIPUTERA DAN PEMBANGUNAN EKONOMI

Fenomena usahawan atau keusahawanan di Malaysia hanya bermula sekitar tahun 1970-an iaitu setelah penggubalan dan pelaksanaan Dasar Ekonomi Baru (Ab. Aziz, 2001). Masyarakat Bumiputera selepas merdeka hinggalah pengenalan Dasar Ekonomi Baru masih merupakan golongan petani tradisional yang mengusahakan tanah dengan tanaman makanan untuk keperluan sendiri atau jualan kecil-kecilan dengan kadar pengeluaran yang terhad dan penggunaan teknologi yang ala kadar (Norhasni, 2007).

Melalui pelaksanaan Dasar Ekonomi Baru (DEB), pelbagai agensi telah ditubuhkan untuk merancakkan pertumbuhan ekonomi negara terutamanya dalam sektor pertanian oleh kerana bidang keusahawanan Bumiputera pada waktu itu adalah berasaskan pertanian, seperti Lembaga Kemajuan Tanah Persekutuan (FELDA), Lembaga Penyatuan dan Pemulihan Tanah Persekutuan (FELCRA), Lembaga Kemajuan Pekebun Kecil Perusahaan Getah (RISDA) dan lain-lain lagi. Kemudian diwujudkan juga agensi-agensi yang lebih terarah kepada kemudahan kredit atau pembiayaan seperti Majlis Amanah Rakyat (MARA), Tabung Ekonomi Kumpulan Usaha Niaga (TEKUN), dan Perbadanan Usahawan Nasional Berhad (PUNB) yang pada asasnya bertujuan membantu dan menggalakkan usahawan Bumiputera terutamanya golongan belia supaya maju dan berkembang dalam bidang keusahawanan. Penubuhan agensi-agensi seumpama ini jelas menunjukkan keprihatinan dan kesungguhan pihak kerajaan (Norhasni, 2007) untuk mencorakkan hala tuju dan sudut pandang baru dalam masyarakat Bumiputera terhadap bidang keusahawanan dan pengurusan perniagaan yang dapat membantu meningkatkan taraf sosio-ekonomi mereka.

Dalam kaitan ini, Mohd. Ali (1994) menjelaskan bahawa usaha bantuan keusahawanan dengan menyediakan kemudahan-kemudahan kewangan kepada usahawan PKS Bumiputera bagi mencapai matlamat DEB adalah sebenarnya selaras dengan Islam. Sebagai contoh, tindakan seumpama ini pernah diamalkan pada zaman Rasulullah (SAW) terutamanya ketika permulaan Kerajaan Islam Madinah dan juga pada zaman Saidina Umar Al-Khattab dalam usaha membantu umat Islam membina dan membangunkan dalam sistem ekonomi yang adil dan membela kepentingan umat Islam. Justeru dapat difahami dalam konteks aplikasinya di Malaysia, tindakan tersebut adalah sesuai berdasarkan sudut

ketidakseimbangan penglibatan Bumiputera (yang majoritinya Muslim) dalam sektor ekonomi berbanding kuasa perdagangan kaum lain. Jurang perbezaan ini menurut Muhammad Ali (2003) perlu diberi perhatian, dan tindakan segera perlu diambil bagi memastikan kedudukan bangsa, agama dan negara ini tidak kekal membangun hanya di persisiran arus perdana bangsa-bangsa lain selama-lamanya.

# 2.1 Pengupayaan Usahawan Bumiputera

Pengalaman keusahawanan dalam kalangan masyarakat Bumiputera Malaysia dalam konsep perniagaan moden menurut Muhammad Ali (2003) adalah sangat singkat, berbanding syarikat-syarikat utama China yang hampir menjangkau usia 100 tahun penubuhannya. Sementara syarikat-syarikat Jepun pula telah beroperasi hampir 200 tahun, dan syarikat-syaraikat tertua di Eropah telah beroperasi melebihi 300 tahun dalam pasaran. Namun demikian, syarikat-syarikat utama Bumiputera di Malaysia yang aktif sehingga kini secara umumnya adalah berusia tidak lebih dari 40 tahun iaitu setelah pelaksanaan Dasar Ekonomi Baru.

Dalam usaha mewujudkan kecemerlangan ekonomi yang mengutamakan peranan usahawan di Malaysia, pelbagai dasar pembangunan negara telah diperkenalkan oleh pihak kerajaan (Buerah, 2007). Antaranya ialah Dasar Ekonomi Baru (1971-1990), Dasar Pembangunan Nasional (1991-2000), Dasar Wawasan Negara (2001-2010), dan yang terkini Misi Nasional (2006-2020). Wan Liz Ozman dan Sulzari (2002), dan Ab. Aziz dan Zakaria (2004) dalam menyokong usaha dan dasar kerajaan ini telah mengemukakan pandangan David McClelland, seorang tokoh sarjana psikologi yang terkenal dengan Teori Motivasi Pencapaian, yang menjelaskan antara faktor yang mendorong kepada kejayaan usahawan ialah faktor-faktor luaran, iaitu; bantuan dan sokongan kerajaan, ketersediaan bahan mentah dan buruh yang mudah dan murah, galakan daripada entiti perniagaan yang besar, dan permintaan yang menggalakkan untuk produk. Justeru, melalui pelaksanaan pelbagai dasar yang telah diperkenalkan, hasrat membangunkan masyarakat usahawan Bumiputera menjadi semakin penting.

Walau bagaimanapun, kegagalan negara sehingga hari ini mencapai sasaran 30 peratus pemilikan ekuiti atau saham Bumiputera yang menjadi matlamat dalam DEB yang berakhir pada tahun 1990 menjadi satu petanda terhadap desakan kepada pengupayaan yang lebih giat dan tersusun dalam bidang keusahawanan khususnya ke atas usahawan Bumiputera sedia ada perlu dilaksanakan. Merujuk kepada dokumen Hala Tuju Transformasi Ekonomi Bumiputera yang dilancarkan pada 26 November 2011 dan kenyataan oleh Unit Perancangan Ekonomi (EPU) yang dikeluarkan pada 23 April 2012, pegangan ekuiti Bumiputera secara relatifnya tidak banyak berubah antara tempoh 1990 dan 2010 dengan Bumiputera hanya memiliki 19 peratus pada 1990, manakala 23 peratus pada 2010. Walaupun data yang diperolehi menunjukkan kenaikan, tetapi ia masih berada di bawah pencapaian sebenar. Bahkan jika mengambil pandangan Tan Sri Muhammad Ali Hashim, bekas Ketua Eksekutif Johor Corporation, ekuiti bumiputera yang sepatutnya dicapai ialah 65 peratus bukannya 30 peratus, kerana jumlah penduduk Muslim di Malaysia ialah 65 peratus.

Sementara itu, laporan oleh BERNAMA (2011, November 26) bertajuk "Teraju Dedah Keadaan Semasa Pemilikan Ekuiti Bumiputera" mendedahkan bahawa menurut Peneraju Agenda Bumiputera (TERAJU), sekretariat kepada Majlis Tindakan Agenda Bumiputera (MTAB), pemilikan ekuiti Bumiputera hanya lebih tinggi dalam sektor yang mempunyai sumbangan kecil kepada Keluaran Dalam Negara Kasar (KDNK) dan majoriti syarikat Bumiputera adalah kecil dengan 65 peratus daripadanya menjana keuntungan kurang daripada RM 250,000.00 setahun. Manakala syarikat yang dikuasai oleh Bumiputera dengan pegangan ekuiti sekurang-kurangnya 51 peratus, sekadar membentuk 25 peratus daripada anggaran 800,000 syarikat berdaftar di Malaysia. Seterusnya laporan oleh Badrila (2012) dalam Harian Metro (24 April 2012) turut mendedahkan bahawa bilangan syarikat Bumiputera telah menurun daripada 73,230 pada tahun 2009 kepada 70,216 pada tahun 2010. Selaras dengan matlamat negara untuk mewujudkan Masyarakat Perdagangan dan Perindustrian Bumiputera (MPPB) yang benar-benar berdikari, keadaan ini seharusnya tidak boleh dipandang ringan oleh semua pihak, baik di pihak kerajaan, mahu pun masyarakat Bumiputera itu sendiri khususnya usahawan Bumiputera.

Rendahnya tahap pencapaian usahawan Bumiputera adalah berkait rapat dengan rendahnya tahap pencapaian ekonominya. Ironisnya, kecemerlangan ekonomi sesebuah negara banyak bergantung kepada tahap daya keusahawanan yang tinggi dalam kalangan usahawan (Muhammad Ali, 2003; Buerah & Hussin, 2011), dan keseimbangan taraf ekonomi di antara bangsa atau etnik (Mohd. Ali, 1994) terutamanya bagi negara berbilang kaum atau masyarakat majmuk seperti Malaysia. Namun pada hakikatnya, ekonomi negara pada hari ini, dan kebanyakan pencapaian ekonomi negara secara globalnya adalah hasil pencapaian keusahawanan dari masyarakat bukan Bumiputera.

Kajian ke atas syarikat Permodalan Nasional Berhad (PNB) dan syarikat-syarikat jawatankuasa pelaburan asing pada 2006 menunjukkan bahawa syarikat yang dikuasai usahawan Bumiputera lebih berkemungkinan untuk memiliki penyertaan Bumiputera yang lebih tinggi dalam pengurusan, berbanding dengan syarikat asing dan bukan Bumiputera (BERNAMA, 2011). Oleh itu penguasaan Bumiputera dalam syarikat adalah penting bagi memastikan Bumiputera berupaya mengisi jawatan pengurusan sekaligus menambahkan pendapatan dan peluang pekerjaan kepada ahli masyarakat (Mohd Noor & Samsuri, 2008) khususnya Bumiputera. Dapatan ini bertepatan dengan pandangan Muhammad Ali (2003)yang menyatakan peningkatan status ekonomi Bumiputera hanya akan dapat dilakukan dengan memastikan para usahawan yang berkemahiran dalam bidang perniagaan diketengahkan oleh kerajaan atau pihak yang bertanggungjawab untuk diamanahkan mengetuai organisasi korporat dan mengurus aset strategik demi kepentingan bangsa dan negara. Justeru, adalah penting agar para usahawan Bumiputera dibekalkan dengan ilmu, kemahiran dan sikap yang menepati ciri-ciri ahli perniagaan yang berkaliber, berwibawa, berintegriti dan berjaya.

# 2.2 Sikap Keusahawanan Usahawan Bumiputera

Perkembangan Islam di nusantara yang bermula berabad lamanya adalah hasil daripada keusahawanan Islam (Mohd. Ali, 1994). Bidang ini telah memberi impak yang besar kepada sejarah Melayu dan Tanah Melayu khususnya apabila Raja Melaka memeluk Islam, maka Islam telah berkembang ke seluruh negara selari dengan perkembangan Melaka sebagai sebuah negara dan pusat perdagangan utama dunia. Amalan keusahawanan ini telah subur dan bertahan sehingga berlakunya penjajahan oleh pihak Barat (Mohd. Ali, 1994). Kesan dari penjajahan tersebut, hari ini golongan Bumiputera terutamanya Melayu-Muslim menurut Muhammad Ali (2003) sudah tidak mempunyai kelebihan minda dan jiwa raga warga penghijrah yang tersedia dengan konteks hidup yang mewajibkan penerimaan pembaharuan dan memaksa pembinaan sikap keusahawanan untuk survival.

Majoriti Bumiputera-Melayu tidak berani untuk mengambil risiko, sedangkan ia adalah berlawanan dengan prinsip keusahawanan itu sendiri. Sikap ini terbukti dan dapat diperhatikan antaranya melalui pemilikan ekuiti Bumiputera sebanyak 23 peratus, yang mana menurut laporan oleh BERNAMA (2011) bahawa kira-kira 12 peratus daripadanya adalah dalam bentuk pegangan amanah dan beberapa institusi kerajaan. Keadaan ini menunjukkan lebih separuh daripada saham yang dimiliki tersebut diuruskan oleh institusi kerajaan yang sekaligus melindungi Bumiputera daripada risiko sebenar perniagaan. Mereka merupakan pelabur pasif dalam perusahaan yang dijalankan oleh entiti kerajaan. Menurut Mahathir (2012), bukanlah menjadi matlamat DEB untuk memupuk sikap dan mentaliti pasif ke dalam diri masyarakat Melayu dan Bumiputera. Namun realitinya majoriti masyarakat Bumiputera bukanlah golongan yang berdaya usaha dan sanggup mengambil risiko.

Hakikatnya sikap dan pemikiran, pandangan dan pegangan secara umumnya boleh berubah, begitu juga dengan aspek sikap terhadap keusahawanan (Muhammad Ali, 2003; Harris & Gibson, 2008). Menurut Harris dan Gibson (2008), seseorang yang menerima maklum balas positif tentang keupayaan atau potensi keusahawanan, mereka mempunyai jangkaan yang lebih tinggi terhadap keusahawanan. Oleh itu, Muhammad Ali (2003) menegaskan bahawa untuk maju dan tidak terus ketinggalan, usahawan Bumiputera tidak dapat lari daripada kewajipan untuk memperbaharui sikap, minda dan jiwa raga serta meningkatkan semangat keusahawanan.

Pendekatan sikap telah dipertimbangkan untuk menjadi salah satu alternatif yang lebih baik bagi kajian personaliti keusahawanan. Menurut Crant (1996), sikap keusahawanan boleh dirujuk sebagai pertimbangan atau kecenderungan individu untuk memiliki, menubuhkan dan menjalankan perniagaan.

Sikap juga boleh diandaikan sebagai ramalan tingkah laku manusia. Sikap keusahawanan yang efektif dan beretika mengikut garis panduan ajaran Islam yang menjadi pegangan seseorang usahawan Muslim akan melahirkan ciri-ciri usahawan yang menepati kehendak ajaran Islam seperti kebebasan, kejujuran, berilmu dan berkemahiran, serta akauntabiliti (Buerah & Hussin, 2011).

Usahawan mempunyai ciri-ciri tertentu yang membezakan mereka antaranya seperti sanggup mengambil dan menanggung risiko, berinovasi, berinisiatif, mempunyai penghargaan diri yang tinggi, berkehendak kepada pencapaian dan seterusnya mempunyai kawalan personal. Menurut Mohd Noor dan Samsuri (2008), kajian-kajian terdahulu telah banyak menunjukkan bahawa individu-individu yang mempunyai ciri-ciri ini mempunyai sikap yang tinggi untuk menjadi seorang usahawan. Sebagai rumusan, setiap usahawan perlu mengenali dan memperbaharui diri sendiri. Hal ini dapat dibantu dengan menjalankan penyelidikan ke atas kesedaran dan sikap mereka.

# 2.3Keusahawanan Dalam Kalangan Belia Bumiputera

Bidang keusahawanan merupakan satu bidang yang diberi perhatian khusus oleh kerajaan sesuai dengan matlamat Wawasan 2020 (Mohd Noor dan Samsuri, 2008). Perkara ini dapat diperhatikan melalui pelaksanaan pelbagai dasar yang telah diperkenalkan selepas merdeka lagi. Perkembangan bidang keusahawanan hari ini sesuai dengan dasar-dasar yang dilaksanakan sejajar dengan hasrat membangunkan masyarakat usahawan dengan menanamkan nilai-nilai keusahawanan terutamanya dalam kalangan belia Bumiputera.

Islam telah terlebih dahulu menekankan usaha-usaha perniagaan dan keusahawanan. Dalam hal ini, Rasulullah (SAW) sendiri telah menunjukkan contoh dengan melibatkan diri secara praktis menceburi bidang keusahawanan ini sejak usianya 12 tahun lagi dengan berdagang ke Syria bersama bapa saudaranya Abu Talib. Selanjutnya pada usia belianya, baginda telah pun memulakan perniagaan sendiri dengan mendapatkan modal dari pelabur yang berminat dengan mengamalkan konsep *mudharabah* (Sobri, 1992; Mohd. Ali, 1994; Ashadi, 2008; Buerah & Hussin, 2011). Lebih membanggakan, pada usia 24 tahun sahaja baginda telah pun menceburkan diri dalam perniagaan yang melibatkan urusan perdagangan import dan eksport barangan yang meliputi 13 bandar-bandar perdagangan besar sehingga ke Syria, Yaman dan Bahrain (Sobri, 1992; Mohd. Ali, 1994).

Hasrat kerajaan pada masa kini ialah melahirkan ramai golongan belia yang menceburi bidang keusahawanan sepenuh masa dan menjadi usahawan yang berjaya. Pada masa kini semakin ramai golongan belia Bumiputera yang terbukti telah berjaya dalam perniagaan, tetapi peratus yang terlibat dalam bidang ini adalah masih terlalu kecil. Walaupun Indeks Belia Malaysia 2011 yang dikeluarkan oleh IPPBM menunjukkan peningkatan minat belia terhadap bidang keusahawanan dari skor 63.3 pada 2008 kepada 68.6 pada 2011, namun realiti penglibatan belia terutamanya Bumiputera masih rendah berbanding populasi belia Bumiputera di Malaysia yang besar iaitu seramai lebih kurang 8 juta orang. Kebanyakan golongan belia Bumiputera lepasan pengajian tinggi yang memiliki ijazah masih rela menunggu kerja dalam sektor awam dan swasta daripada menceburi bidang keusahawanan melalui pelbagai peluang yang dibuka oleh banyak institusi dan agensi.

Melihat kepada perkembangan ini, golongan belia Bumiputera berpendidikan seharusnya mengambil sikap berani menceburkan diri dalam bidang keusahawanan (Norhasni, 2007). Tanggapan bahawa kerjaya usahawan sukar dan tidak stabil untuk menjamin masa depan perlu dikikis selaras dengan tahap kematangan dan pendidikan yang dimiliki oleh golongan belia Bumiputera masa kini. Bahkan penglibatan mereka dalam bidang keusahawanan yang kebanyakannya melalui sektor perniagaan kecil sebenarnya berkemungkinan menjadi sumber utama pekerjaan pada masa depan bagi banyak negara (Harris & Gibson, 2008).

Menurut Laporan Banci Penduduk oleh Jabatan Perancangan Bandar dan Desa pada tahun 2000 menunjukkan golongan belia sahaja mewakili 42.1 peratus daripada penduduk Malaysia seramai 26 juta orang pada ketika itu. Golongan belia telah dikenal pasti sebagai paling produktif, mempunyai idealisme, berfikiran matang dan kumpulan sasaran yang paling berpotensi untuk dibangunkan yang mampu menyumbang kepada pembangunan negara (Norhasni, 2007). Justeru, suatu transformasi perlu

dilakukan untuk memupuk minat dan mengubah persepsi belia terhadap bidang keusahawanan. Belia yang dimaksudkan di sini dapatlah ditakrif sebagai golongan lepasan sekolah yang berusia 18 tahun ke atas sehingga peringkat awal dewasa iaitu 40 tahun.

Sejajar dengan hasrat kerajaan meningkatkan penglibatan belia Bumiputera sebagai usahawan, maka kajian ini akan mengkaji orientasi dan sikap yang dimiliki oleh usahawan belia bagi dijadikan input berguna oleh belia yang baru menceburi bidang ini dan juga kepada pihak yang berkepentingan. Ini kerana secara realitinya, Muhammad Ali (2003) secara sedar dan kritis telah menyifatkan masyarakat Bumiputera di Malaysia sebenarnya bangsa "minoriti" dalam konteks pencapaian ekonomi dan mereka juga adalah kumpulan "baru mendatang" dalam konteks penglibatan perniagaan dan keusahawanan sezaman. Lantas, sesuatu harus dilakukan dengan bermula dengan mengenali dan memperbaharui diri usahawan Bumiputera di peringkat yang seawal mungkin.

# 3. PERNYATAAN MASALAH KAJIAN

Usahawan belia Bumiputera hari ini memerlukan sokongan bukan sahaja dalam bentuk khidmat nasihat tetapi juga dalam bentuk kemudahan kewangan untuk memasuki pasaran yang telahpun dikuasai oleh orang lain, kerana bidang perniagaan ini menuntut seseorang usahawan itu untuk mempunyai kemahiran, pengetahuan serta ketahanan fizikal dan mental bagi menghadapi segala bentuk masalah yang mungkin timbul (Mohd Noor & Samsuri, 2008). Namun disebalik pelbagai peluang-peluang keusahawanan yang dibuka oleh pihak kerajaan, usaha melahirkan dan membangunkan lebih ramai usahawan Bumiputera yang lebih berdaya saing masih belum mencapai matlamat walaupun setelah lebih 40 tahun digerakkan sejak pelancaran DEB (Wan Liz Ozman, 2002; Muhammad Ali, 2003; Buerah, 2007). Keadaan ini menunjukkan bahawa bidang keusahawanan sehingga ke hari ini masih lagi dilihat sebagai sesuatu yang asing walaupun bukan lagi terpencil, khususnya dalam kalangan belia Bumiputera.

Sikap usahawan Bumiputera yang terdiri ramai daripada golongan belia yang masih bersifat dan bermentaliti pasif walaupun sudah masuk ke alam perniagaan (Mohammad Noorizzuddin & Wan Rasyidah, 2006; Norhasni, 2007), adalah tidak selari bukan sahaja dengan matlamat asal DEB bahkan agama Islam sendiri menolak dan tidak menganjurkan sikap yang sedemikian. Keadaan ini boleh dilihat dengan lambakan usahawan belia Bumiputera yang terlalu bergantung kepada subsidi atau bantuan agensi kerajaan (Norhasni, 2007), namun sebaliknya apabila tiba giliran mereka untuk memulangkan kembali hasil pelaburan tersebut, terutamanya dalam bentuk bayaran balik pembiayaan, usahawan-usahawan ini gagal berbuat demikian lebih-lebih lagi secara teratur dan berjadual (Muhamad Salleh, 2003). Selain itu, kekurangan penglibatan golongan belia Bumiputera berpendidikan tinggi atau lepasan institusi pengajian tinggi dalam bidang keusahawanan sedikit sebanyak membentuk pola budaya keusahawanan yang tidak sihat dalam kalangan usahawan Bumiputera (Muhamad Salleh, 2003, Nurizan *et al.*, 2008). Keadaan ini menurut Akmaliah Zaidatol dan Habibah (2004) akan seterusnya menyumbang kepada pembentukan cara fikir usahawan yang kurang dan tidak menitik beratkan berkaitan program pendidikan serta latihan keusahawanan yang berterusan sebagai alternatif meningkatkan prestasi perniagaan dan sebagai medium pengalaman secara tidak langsung.

Dalam kaitan penampilan sikap ini, Islam mengingatkan agar setiap individu Muslim termasuk usahawan perlu melengkapkan diri dengan nilai dan etika Islam sepanjang masa dan ketika. Ini kerana berbeza dengan kelompok usahawan lain, usahawan Muslim bukan sahaja perlu menjalankan perniagaan yang halal, bahkan mereka harus terikat dengan ruh dan etika perundangan syariah agar sentiasa dipatuhi secara menyeluruh dalam setiap aspek kehidupan (Mohammad Noorizzuddin & Wan Rasyidah, 2006). Menurut Mohammad Noorizzuddin dan Wan Rasyidah (2006) lagi, bagi menampilkan identiti sebagai usahawan muslim, sifat-sifat yang baik dan kewajipan-kewajipan asas dalam agama perlu dihadiri dan diamalkan dalam jiwa dan diri seseorang usahawan. Justeru, penglibatan umat Islam dalam bidang keusahawanan hendaklah selari dengan ajaran yang telah digariskan dalam Al-Quran dan As-Sunnah. Bagaimana pun, suasana dan persekitaran perniagaan kini menunjukkan refleksi yang berbeza di mana jika diperhatikan pengamalan ajaran dan kewajipan asas Islam dalam kalangan usahawan belia Bumiputera hari ini boleh dipersoalkan.

Berdasarkan pemerhatian dan pengalaman pengkaji ketika berada dalam proses perniagaan, baik di pasar-pasar malam mahu pun di pejabat dalam amalan korporat, seakan berlaku pencanggahan antara amalan Islam dan perniagaan. Diperhatikan tidak ramai usahawan atau peniaga Muslim yang akan mengutamakan untuk bergerak mencari ruang solat, surau atau masjid khususnya apabila laungan azan dikumandangkan menandakan masuknya waktu solat yang tertentu. Bahkan adab dan etika berpakaian sebahagian usahawan dan peniaga dalam kalangan belia juga kurang diambil peduli. Keadaan-keadaan ini pastinya bertentangan dengan pandangan yang menganjurkan agar usahawan Muslim perlu menunaikan tanggungjawab beragama seperti bersolat, berpuasa dan zakat untuk menghilangkan keraguan dalam diri dalam menjalankan perniagaan kerana perniagaan sebagai wadah jihad ekonomi (Akmaliah Zaidatol & Habibah, 2004). Ini kerana tiada percanggahan di antara Islam dan perniagaan (Akmaliah Zaidatol & Habibah, 2004; Mohammad Noorizzuddin & Wan Rasyidah, 2006) seperti yang telah dibuktikan antaranya melalui hadith Rasulullah (SAW) daripada Al-Miqdam (RA) yang bermaksud:

"Sebaik-baik makanan yang dimakan oleh seseorang itu ialah hasil dari pekerjaan tangannya sendiri, sesungguhnya Nabi Allah Daud a.s. makan sesuatu dari hasil pekerjaan yang dilakukannya sendiri."

(Sahih Al-Bukhari, 3:2072)

Maka, adalah wajar satu kajian dijalankan bagi melihat dan membentuk kefahaman yang mendalam terhadap sikap keusahawanan dalam kalangan usahawan belia Bumiputera khususnya di kawasan perbandaran utama yang biasanya menjadi tanda aras atau contoh yang menjadi trend ikutan di kawasan dan bandar yang lebih kecil. Di samping itu, kajian ini cuba mengkaji sama ada wujud perbezaan di antara usahawan yang mempunyai pengalaman perniagaan, pendidikan formal yang tinggi, dan kekerapan mengikuti latihan keusahawanan dari sudut pendekatan orientasi sikap. Adakah dengan pengamalan disiplin dan ajaran asas dalam Islam yang lebih baik dapat membezakan usahawan belia Bumiputera terhadap sikap mereka menjalankan perniagaan bagi menambahkan pendapatan dan peluang pekerjaan kepada ahli masyarakat?

# 4. OBJEKTIF DAN PERSOALAN KAJIAN

Kajian ini dijalankan bagi meneliti orientasi sikap keusahawanan Muslim dalam kalangan usahawan belia Bumiputera di daerah Johor Bahru yang mendapat bantuan pembiayaan MARA. Sehubungan itu, beberapa objektif kajian digariskan bagi mencapai matlamat tersebut, iaitu:-

- i. menentukan tahap orientasi sikap keusahawanan Muslim dalam kalangan usahawan belia Bumiputera.
- ii. mengukur perbezaan tahap orientasi sikap keusahawanan Muslim berdasarkan faktor-faktor pengalaman perniagaan, tahap pendidikan formal, dan kekerapan mengikuti program latihan keusahawanan.
- iii. mengukur tahap pengamalan kewajipan asas dalam Islam yang lebih baik dalam kalangan usahawan belia Bumiputera dapat mempengaruhi orientasi sikap keusahawanan Muslim mereka.

Melalui objektif kajian yang telah digariskan dan bagi memenuhi objektif tersebut, kajian ini akan menjawab persoalan-persoalan berikut sebagai asas kepada penyelidikan yang akan dijalankan, iaitu:-

- i. Apakah orientasi sikap keusahawanan Muslim dalam kalangan usahawan belia Bumiputera?
- ii. Adakah wujud perbezaan orientasi sikap keusahawanan Muslim berdasarkan faktor-faktor pengalaman perniagaan, tahap pendidikan formal, dan kekerapan mengikuti program latihan keusahawanan?
- iii. Sejauh manakah pengamalan kewajipan asas dalam Islam yang lebih baik dalam kalangan usahawan belia Bumiputera dapat mempengaruhi orientasi sikap keusahawanan Muslim mereka?

# 5. HIPOTESIS KAJIAN

Hipotesis kajian penting dalam membantu penyelidik memfokus kajian, memberi rangka rumusan dapatan kajian dan meningkatkan kebolehpercayaan kajian (Chua, 2006). Hipotesis yang dikemukakan bagi kajian ini adalah seperti berikut:-

 $\mathbf{H0_1}$ : Tidak terdapat perbezaan yang signifikan dalam orientasi sikap keusahawanan Muslim di antara usahawan belia Bumiputera yang mempunyai pengalaman perniagaan yang lama dengan pengalaman perniagaan yang kurang.

**H02**: Tidak terdapat perbezaan yang signifikan dalam orientasi sikap keusahawanan Muslim di antara usahawan belia Bumiputera yang mempunyai tahap pendidikan yang tinggi dengan tahap pendidikan yang rendah.

**H03**: Tidak terdapat perbezaan yang signifikan dalam orientasi sikap keusahawanan Muslim di antara usahawan belia Bumiputera yang kerap mengikuti program latihan keusahawanan dengan yang kurang mengikuti program latihan keusahawanan.

**H04**: Tidak terdapat perbezaan yang signifikan dalam orientasi sikap keusahawanan Muslim yang tinggi di antara usahawan belia Bumiputera yang mengamalkan kewajipan asas dalam Islam dengan lebih baik berbanding yang kurang mengamalkannya.

# 6. METODOLOGI KAJIAN

Bagi tujuan perlaksanaan, kajian ini akan menggunakan kaedah penyelidikan campuran (mixed-method) iaitu menggunakan kedua-dua kaedah penyelidikan kuantitatif dan kualitatif. Reka bentuk kajian pula berdasarkan reka bentuk explanatory, di mana kajian akan dimulakan dengan penyelidikan kuantitatif melalui soal selidik bagi mendapatkan dapatan awal dan diikuti oleh penyelidikan kualitatif melalui temu bual bagi menghuraikan dapatan awal yang diperoleh. Sementara itu, kaedah persampelan kajian yang akan digunakan ialah persampelan rawak mudah bagi kaedah soal selidik dan persampelan bertujuan bagi kaedah temu bual. Bagi tujuan soal selidik, instrumen yang akan digunakan ialah skala Muslim Entrepreneurial Attitude Orientation (MEAO) yang akan menilai sikap keusahawanan dari lima aspek atau sub-skala, iaitu; etika Muslim, keperluan kepada pencapaian, inovasi, kawalan personel dan penghargaan diri.

Seramai 108 daripada 150 orang respondan akan dipilih sebagai sampel kajian bagi menjawab soal selidik. Seterusnya seramai 7 orang respondan akan ditemu bual yang terdiri daripada 5 orang sampel kajian soal selidik dan 2 orang pegawai MARA yang terlibat dalam pengurusan pembiayaan usahawan. Akhirnya, segala data yang diperoleh melalui soal selidik MEAO akan dianalisis menggunakan kaedah analisis MANOVA bagi menilai tahap orientasi sikap keusahawanan dan perbezaan yang wujud, dan kaedah korelasi Pearson bagi menentukan hubungan yang wujud antara pembolehubah-pembolehubah kajian. Manakala data temu bual pula akan dianalisis menggunakan kaedah analisis tema, iaitu data-data kualitatif daripada temu bual dikategorikan mengikut tema-tema dan sub-tema tertentu mengikut koding-koding yang dibina berdasarkan data-data kuantitatif yang telah dikumpul.

# 7. KEPENTINGAN KAJIAN

Pertamanya, kajian ini penting bagi memberikan gambaran umum kepada pihak kerajaan dan pihak-pihak tertentu seperti agensi-agensi dan institusi-institusi pembiayaan berkenaan indeks atau pola orientasi sikap keusahawanan Muslim dalam kalangan usahawan yang menerima bantuan pembiayaan dan sekaligus menjawab beberapa isu berkaitan usahawan belia Bumiputera terutamanya yang mendapat bantuan pembiayaan.

Keduanya, kajian ini penting bagi membolehkan pihak agensi dan institusi pembiayaan seperti MARA menilai semula faktor dan kaedah pemilihan usahawan penerima bantuan pembiayaan, termasuk dengan menjalankan ujian soal selidik orientasi sikap keusahawanan Muslim ke atas pemohon, supaya dapat menyesuaikan atau menyenarai pendek usahawan pemohon mengikut kategori pembiayaan yang sesuai.

Ketiganya melalui garis panduan tambahan yang dibuat berdasarkan ujian orientasi sikap keusahawanan Muslim terhadap usahawan yang terlibat, kajian ini penting bagi membolehkan pihak agensi dan institusi pembiayaan menentukan bentuk dan kaedah latihan keusahawanan yang lebih sesuai dan berkesan untuk diikuti oleh usahawan-usahawan yang menerima bantuan pembiayaan berdasarkan pola orientasi sikap keusahawanan Muslim yang sama atau hampir.

Keempat, kajian ini penting bagi membuktikan dan menjadi penyataan justifikasi kepada golongan usahawan belia Bumiputera Muslim khususnya supaya timbul rasa perlu kepada program latihan keusahawanan atau lain-lain program pembangunan diri sama ada secara formal atau informal supaya boleh lebih berjaya dalam perniagaan.

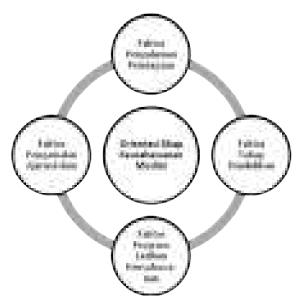

Kelima dan akhirnya, kajian ini juga sangat penting bagi membuktikan dan menunjukkan bahawa dengan lebih berdisiplin dalam mengamalkan kewajipan asas dalam Islam dengan lebih baik, para usahawan Muslim boleh lebih berjaya dan diberkati dalam perniagaan. Selain itu ia penting bagi menanamkan rasa keyakinan bahawa semakin dekat dengan Allah, maka akan semakin dekat dengan kejayaan.

# 8. KERANGKA KONSEPTUAL KAJIAN

Dalam kajian yang akan dijalankan ini, terdapat dua pembolehubah yang terlibat iaitu orientasi sikap keusahawanan Muslim dan faktor-faktor demografi berkaitan pengalaman, pendidikan, latihan keusahawan dan ajaran Islam. Orientasi sikap keusahawanan Muslim merupakan pembolehubah bersandar, manakala faktor-faktor demografi pula ialah pembolehubah bebas. Dimensi-dimensi dalam orientasi sikap keusahawanan Muslim yang hendak dikaji adalah lima sub-skala orientasi sikap keusahawanan Muslim iaitu; (1) Etika Muslim, (2) Keperluan kepada Pencapaian, (3) Inovasi, (4) Kawalan Personal, dan (5) Penghargaan Diri. Sementara itu, pembolehubah faktor-faktor demografi pula terdiri daripada pengalaman perniagaan, tahap pendidikan formal, kekerapan mengikuti program latihan keusahawanan dan pengamalan ajaran Islam yang lebih baik.

Rajah 1 di bawah menunjukkan hubungan bagaimana faktor-faktor demografi menjadi pembolehubah bebas yang boleh mempengaruhi pembentukan orientasi sikap keusahawanan Muslim yang merupakan pembolehubah bersandar. Melalui proses pembentukan sikap keusahawanan Muslim yang tepat, insya-Allah akan mampu melahirkan generasi usahawan belia Bumiputera yang berjaya dunia dan akhirat, iaitu bukan sahaja berusaha mengejar keuntungan dunia semata-mata tetapi juga memastikan syariat Islam terpelihara, tertegak dan tersebar melalui penampilan akhlak, nilai dan etika Islam yang sekaligus dapat menjadi medan dakwah dalam jalur perniagaan secara tidak langsung.

Rajah 1 : Kerangka konsep pembentukan orientasi sikap keusahawanan Muslim

#### 9. JANGKAAN HASIL KAJIAN

Hasil kajian ini dijangka akan dapat mengukuhkan lagi kepentingan dan keutamaan keempat-empat sub-skala asas dalam instrumen orientasi sikap keusahawanan, iaitu; keperluan kepada pencapaian, inovasi, kawalan personal, dan penghargaan diri, dalam menentukan tahap kecenderungan dan kebolehupayaan seseorang terhadap bidang keusahawanan. Selain itu, kajian ini juga akan mengesahkan pembentukan sub-skala kelima iaitu etika muslim sebagai penilaian dari aspek sikap keusahawanan yang lebih menekankan ciri-ciri Islami. Akhirnya, kajian ini dijangka akan dapat mengangkat kepentingan pengamalan ajaran-ajaran atau kewajipan-kewajipan asas dalam Islam khususnya dalam kalangan usahawan Muslim supaya tidak dipisahkan dari sebarang urusan perniagaan dan keusahawanan.

#### 10. KESIMPULAN

Berdasarkan kepada sorotan terhadap latar belakang masalah, pernyataan masalah, objektif dan persoalan serta kepentingan kajian yang dikemukakan, maka penyelidik berpendapat bahawa kajian ini mempunyai asas terhadap keperluan kepada penyelidikannya. Keutamaan terhadap aspek sikap adalah kunci utama dalam perubahan dan mencapai kejayaan dalam kehidupan lebih-lebih lagi dalam bidang keusahawanan yang sememangnya penuh dengan cabaran. Bidang keusahawanan juga telah dinilai dan diiktiraf sebagai satu disiplin kehidupan yang penting oleh Islam, bahkan perspektif Barat turut memberi penilaian serupa. Justeru penglibatan Bumiputera Muslim khususnya golongan belia dalam keusahawanan dilihat oleh banyak pihak sebagai kritikal terutamanya apabila ia berkaitan dengan survival ekonomi masyarakat Islam yang dominan dalam sesebuah negara seperti Malaysia.

# ENTREPRENEURSHIP AND ISLAM: AN EXPOSITORY STUDY ON CHARACTERISTICS OF MUSLIM ENTREPRENEUR

Syahida Abdullah<sup>1</sup> Said Adekunle Mikail<sup>2</sup>

#### **ABSTRACT**

Entrepreneurship is reckoned as the main impetus for the growth of economy. It has been discussed from different perspectives including but not limited to economics, psychology, sociology and religion. This paper focuses its discussion on entrepreneurship from Islamic perspective. The study aims to provide a brief comparison between conventional entrepreneurship and Islamic entrepreneurship. This is discussed by looking at the objectives of entrepreneurship and ultimate goal of an entrepreneur from both conventional and Islamic perspectives. Thispaper then examines the characteristics of entrepreneurs on the basis of secondary sourcesfrom the perspective of Islam. The paper highlights the characteristics of Islamic entrepreneurs andargues that Islamic values have great influence on the success of Muslims' entrepreneurial endeavor. The study then focused on the characteristics of entrepreneurs in Islam significantly on the four main attributes of a Muslim: honesty, wisdom, trust, and deliver and sharing by sharing some examples of successful Muslim entrepreneurs in the early days of Islam. The study concluded that the success of Muslim entrepreneurs is significantly related to the 4 main attributes of a Muslim, and itappears that Islamic religion has a positive impact on the success of Muslim entrepreneurs in their entrepreneurial endeavor.

**Keywords:** Muslim entrepreneurs, Honesty, Wisdom, Trust, and Deliver and Sharing.

# 1. INTRODUCTION

Entrepreneurship study encompasses various disciplines: economics, psychology, sociology and religion. In the religion realm, entrepreneurship has often been discussed rather independently or in isolation. The relation between entrepreneurship and religion was regarded complex and has poor or no connection. In response to this note, this paper embarks to study on entrepreneurship in the context of Islamic religion.

Islam encourages Muslims to earn living through entrepreneurial activities, and this is evidenced in its primary sources of reference, namely Quran and Hadith. There are several Quranic verses and sayings of the Prophet (pbuh) that encouraged Muslims to become entrepreneurs. In fact the Prophet Muhammad (pbuh) himself was exposed to entrepreneurial activity since he was a young boy, and he grew up being an entrepreneur with special entrepreneurial traits that distinguished him from most of the others in the realm. These special traits have astonished many people and aspired many to become successful entrepreneurs.

Generally, studies have shown that characteristics of entrepreneurs are associated with their performance in terms of success or failure of their ventures, which is weighed by looking at the business survival or growth (Perry, 2001; Cooper, Dunkelberg, and Woo 1988; Bailey, 1986; etc.). This study therefore looks into the characteristics of Muslim entrepreneurs in relation to their success in entrepreneurial endeavor specifically focusing the moral values from Islamic perspective. Thus, the research is library based with information obtained from secondary sources.

.

<sup>&</sup>lt;sup>1 2</sup> Researchers at ISRA. Corresponding email: syahida@isra.my

This paper comprises six sections; the first section starts with an introduction. The second section provides a brief literature review on entrepreneurship from conventional perspective. It is then followed by a review on the legitimacy of entrepreneurship in Islam in section three. Section four delineates the key characteristics of entrepreneurs according to the Islamic principles. Section five then provides some examples of successful Muslim entrepreneurs in the early days of Islam. Finally, section five summarizes and concludes the paper.

# 2. ENTREPRENEUSHIP FROM CONVENTIONAL PERSPECTIVE

Entrepreneurship from the conventional perspective has been discussed from various disciplines, and the early literature on entrepreneurship discussed it from the economic view point: Cantillon (1755) and Say (1803) regarded entrepreneurship as an economic activity that is risky and opportunity based. Cantillon (1755) regarded entrepreneurs as people who seize opportunities to earn profit with assumed inherent risk and were directly involved in the equilibrium of supply and demand. Say (1803; 1815) viewed entrepreneurs as change agents who play significant role as leaders and managers in business realm. Schumpeter (1928) then, made a significant contribution to the field of entrepreneurship by introducing the idea of innovation, which was noted as the exploitation of new opportunities. Indeed, Schumpeter extended the idea of innovation as a dynamic process of creative destruction that changes the basic technological and demand parameters of the economy (Schumpeter, 1943). He introduced two theories, known as Mark I and Mark II. The Mark I theory noted that entrepreneurs are not mere traders; instead, they are the people who create innovation and technological change in a nation. Meanwhile, the second theory, Mark II specifically argued that the activities of innovation and technological change are generated by big-sized firms that have adequate resources and capital.

Besides that, entrepreneurship was also viewed from other aspects such as personality traits, behavior, social and environmental influences; for instance, Weber (1930) has discussed on the behavior aspect, in which a value system is regarded essential to an entrepreneur's behavior (Syahida and Amran, 2008). Other scholars like McClelland (1961; 1971), and Chandler and Redlick (1961) (2001) have looked into the entrepreneurship field from psychological aspects such as behavioral, personal traits, motivational factors, incentives and more prominent is the 'need for achievement' as factors towards achieving entrepreneurial success. McClelland's theory of needs classed needs as achievement, affiliation or power, in which a person's motivation and performance is influenced by these three needs. Accordingly, a person with a high need for achievement is characterized as having the desire to take personal responsibility in decision making, working hard, setting goals of achievement and proper planning (McClelland, 1961). Other characteristics of entrepreneurs include risk-taking (Gelderen et al., 2006; Norton and Moore, 2006), locus of control (Rotter, 1966; Brockhaus, 1976), and few others.

Consequently, entrepreneurship has also been discussed from religion perspective. Weber (1976) in his study *The Protestant Ethic and Spirit of Capitalism* noted that the main motivation factor of the early entrepreneurs in Europe was the interrelation between Capitalist development and profit seeking. However, Tawney (1926) argued that only upon the separation between religion and business transaction, the Capitalists achieved success. Hofstede (2001) claimed that the relationship between Confucius teachings and economic growth is not proven despite suggestions made. Dodd and Seaman (1998) noted that the entrepreneurship and religion are two fields that are interdependent and the relationship between them is complex. Seymour (2003) viewed that the study on the relationship between religion and entrepreneurship is scarce and he therefore suggested more research to be carried out. Concomitantly, the next section discusses entrepreneurship from Islamic perspective.

# 3. THE LEGITIMACY OF ENTREPRENEURSHIP IN ISLAM

Muslims have traditionally favored to commerce activity since before the Prophet era. The Prophet (pbuh) has highly regarded entrepreneurial activity as the major source of income generation for economic development of Ummah. In a hadith by Nu'aym ibn Abd Al-Rahman who narrated that the Prophet (pbuh) said nine out of ten sources of income is derived from business activity. Muslims are therefore encouraged to earn living through entrepreneurial activities as it spurs the growth of a nation's economy. Indeed, the legitimacy of sale being permissible is evidenced in Quran as stated in al-Baqarah, part of verse 275, "But Allah has permitted trade" (2:275), "But take witnesses whenever you make a commercial contract" (2:282), "But let there be among you traffic and trade by mutual good will" (4:29), and "It is no crime for you to seek the bounty of your Lord" (2:198).

It is also observed in the "Sunnah" (tradition and sayings of the Prophet pbuh): The Prophet was asked: "Which are the best forms of income generation?" He replied: "A man's labor, and every legitimate sale<sup>5</sup>, i.e. devoid of cheating or treason. Moreover, the Messenger (pbuh) was sent to mankind while people traded among themselves, and he accepted the practice. Generally, the Muslims acknowledged sales are permissible with adherence to the rules of Shariah. According to the Imam Al-Shafi'i: "The general rule for all sales is permissibility as long as they are concluded by consenting capable decision makers except for what the Messenger of Allah (pbuh) has forbidden, or what is sufficiently similar to that which the Messenger of Allah (pbuh) has forbidden; and anything different from those is permissible following the permissibility of sales stated in the book of Allah Almighty" (meaning from the verses 2:275, 2:282, 4:29, and 2:198).

Based on these injunctions from the primary sources of Shariah, it is clear that Islam encourages entrepreneurship. Therefore in Islam, entrepreneurship is regarded as part of "ibadah" as it aims to achieve the blessings of the Glorify Allah. Every deed is a count towards the blessing of the Almighty Allah. Muslims are encouraged to earn living from sources that are permitted or 'halal' and spend it wisely for the benefit of all. Kayed and Hassan (2011) noted that earning income from halal sources and gaining profit through entrepreneurial activities will lead the Muslim entrepreneurs to fulfill ibadat of a 'financial nature' including giving of zakah and charity simultaneously meeting the immediate and extended families needs and requirement, in which the entrepreneurs will be rewarded generously in the hereafter. Besides earning from the permitted sources, effective management of resources and the provisions provided by Allah is among the characteristic of "Khalifah" or vicegerent of Allah. Thus, it is necessary for an entrepreneur to acquire both codified and tacit knowledge and use them wisely for an effective management and success of his entrepreneurial endeavor.

Having adequate knowledge will enable an entrepreneur to act justly. "Deal not unjustly, and you shall not be dealt with unjustly" [2:279]. "Woe to those that deal in fraud those who when they have to receive by measure from men exact full measure. But when they have to give by measure or weight to men give less than due. Do they not think that they will be called to account?" [83:1-4]. Every entrepreneurial activity thus has to conform to the principles of Shariah and meet the objectives of Shariah.

Shariah is defined by Al-Qardawi<sup>2</sup> as the judgements of Allah and his Prophet as laid down in the Quran and the Sunnah (the life and teaching of Muhammad). Maqasid Shariah, or the objectives of Shariah is the foundation for the Shariah rules and regulations; it provides the knowledge, understanding and justification for the principles of Shariah. The aim of Maqasid Shariah is to benefit and protect the Ummah generally, and to discipline and structure the living of the Ummah according to the rulings of Shariah. The rulings is meant for one's daily activity, which encompasses *ibadah* (relationship between man and the Almighty Allah); muamalah, (relationship between man and mankind); *aqidah* (belief

<sup>&</sup>lt;sup>2</sup> Al-Oaradawi (2007: 16-22)

system); *ahkam* (legislation and rulings); and *akhlak* (system of ethics and moral). As such, the purpose of Shariah in Islam is huge that it embraces all aspects of human's life, including the economic and social wellbeing in order to get the blessings from the Almighty Allah.

The general rules of Shariah emphasize on five objectives of Shariah that includes the protection of Islamic religion "deen", protection of human life "nafs", protection of intellect "aql", protection of progeny "nasab", and protection of wealth "maal". With regard to material wealth, the permissibility of sales entails the permissibility of different types of sales including the permissibility of "salam", or payment in advance, barter sale, sleeping partnership, crop sharing, and the like to encourage the entrepreneurial activity to flourish among Muslims and to spur economic growth.

# 4. THE CHARACTERISTICS OF ENTREPRENEUR IN ISLAM

"The truthful and honest trader is among the prophets, the righteous, and the martyrs" (Al-Tirmidhi classified it as a *hadith hasan*). Realizing entrepreneurship is part of Islam and is integrated into the religion, the entrepreneur and the entrepreneurial activities have to conform to the Shariah principles. Therefore, the characteristics of entrepreneurs in Islam differ from the characteristics of conventional entrepreneurs. The conventional entrepreneurs are often inspired by 'profit' making, who constantly seek to maximize profit even at the expense of the others. There is no question on the means of achieving the profit; what matters is the final output. In addition, the conventional economic system regards resources as limited, therefore, the entrepreneur is required to grab as much wealth as possible without considering other human being. Also, often the business activity is separated from the religious aspect.

Oppositely in Islam, the entrepreneur is required to carry out entrepreneurial activity with reference to the Shariah principles as outlined in the Al-Quran and Hadith. The Muslim entrepreneurs are required primarily to have faith in the Almighty Creator, Allah. Having that notion in mind restricts Muslims from all activities that are prohibited in Islam so as to adhere to the rules and regulations of Islam. Hence, ownership of wealth is totally belongs to the Almighty Allah, while human are entrusted as Khalifah or vicegerent to carry out duties and responsibilities in the right path according to the Shariah principles. The purpose of Shariah in Islam is huge that it embraces all aspects of human's life, including the economic wellbeing in order to get the blessings from the Almighty Allah. The comprehensiveness of Maqasid Shariah includes the objectives and purposes to abide by in economic activities that encompass entrepreneurial activities.

As the wealth in Islam is regarded abundant, Muslims are required to acquire and use the wealth accordingly and not to monopolise; instead, share with the rest of the Ummah, which then leads to the concept of brotherhood. With that, the ultimate aim of the Muslim entrepreneur is not merely profit; instead, it is as part of Ibadah to get the blessings from the Almighty Allah.

Indeed, the means of achieving the profit is also of concern to the Muslim entrepreneurs as Muslims are required to take care of the relationship between Muslims and the Creator Allah; between Muslims and other human beings; and lastly between Muslims and other creatures or beings in this world. Thus, an entrepreneur should continuously act according to the Shariah principles so as to seek pleasure of the Almighty Allah in this world and the world hereafter.

Referring to the verse 26 from surah Qasas:

26. Said one of the (damsels): "O My (dear) father! engage Him on wages: truly the best of men for Thee to employ is the (man) who is strong and trusty"....

According to Umar, Ibn Abbas, Shurayh Al-Qadi, Abu Malik, Qatadah, Muhammad ibn Ishaq and others said:

"When she said: إِنَّ خَيْرَ مَنِ اسْتَأْجُرْتَ الْقَوِيُّ الْأَمِينُ (Verily, the best of men for you to hire is the strong, the trustworthy), her father said to her, `What do you know about that?'

She said to him, 'He lifted a rock which could only be lifted by ten men, and when I came back with him, I walked ahead of him, but he said to me, walk behind me, and if I get confused about the route, throw a pebble so that I will know which way to go." (Source: Tafsir Ibn Kathir)

This particular verse from surah Qasas indicates the importance of the attributes of being 'strong' and 'trustworthy'. The word 'strong' connotes a combination of physical, mental and emotional strength that a human being should possess in carrying out duties, including entrepreneurial activities. It is also an indication on the significance of good health that is necessary in performing economic activity. Meanwhile, the word 'trustworthy' is a positive moral value that is highly expected and respected in a Muslim. The word 'trustworthy' incorporate the values of honesty and truthfulness. In the above verse, the Prophet Musa was known as a 'trustworthy' person and therefore is very much adored and respected. Similarly, such noble value is regarded important in all activities of a Muslim, including economic activity. This is as commanded by the Almighty Allah in the following verses of the Quran:

"Verily, God does command you to render back your Trusts to whom they are due." (Quran 4:58)

"He said, "O my people! Worship God, you have no other god but Him, and give not short measure or weight, I see you in prosperity; and verily I fear for you the torment of a Day encompassing. And O my people! Give full measure and weight in justice and reduce not the things that are due to the people, and do not commit mischief in the land, causing corruption. That which is left by God for you (after giving the rights of the people) is better for you, if you are believers." (Quran 11:85-86)

The verses above present the firm commands of the Almighty Allah on the attribute of 'trustworthiness' towards his followers in the activities carried out, without compromising the economic activity. Being trustworthy is an important character for an entrepreneur to ensure right measurement, justice and prosperity of the Ummah or believers. Alternatively, not complying to such command is believed to lead to mischief on the land and corruption. In addition, there is the sayings of Prophet Muhammad that indicate the importance of being a 'trustworthy' person "A hypocrite is known by three traits: When he speaks, he lies; when he promises, he reneges; when he is entrusted, he cheats." (Saheeh Al-Bukhari, Saheeh Muslim).

Therefore, a Muslim entrepreneur is required to possess good ethical conduct that includes being honest, wisdom, trustworthy, and sharing. Honesty is an ethical value which demonstrates a high level of integrity and truthfulness, with total absence of negative attribute such as lying and cheating as shown in the Quran, Allah says: "*Truly, Allah does not guide one who transgresses and lies.*" (Al-Quran: 40:28) (Syahida and Ahcene, 2011). Wisdom is the tacit and codified knowledge that one has to possess in order to have a good understanding of their business industry and other factors such as human capital, finance, technology and environment. This is as illustrated in surah Yusof, verse 55:

55. (Yusof) said: "Set me over the store-houses of the land: I will indeed guard them, As one that knows (Their importance)."

This verse indicates the wisdom or knowledge that is important in managing any task expected of a Muslim. In this respect, it is regarded necessary for a Muslim entrepreneur to equip himself with adequate knowledge to manage effectively. It is the responsibility of each individual Muslim to acquire pertinent

knowledge that is related to his or her field of entrepreneurial activity. Thus, the success of an entrepreneurial endeavor depends on the wisdom of the entrepreneur.

Trust is a value that is regarded highly in Islamic ethic. Quran regarded 'amanah' or trust as one of the major principles in Shariah which must be taken into consideration in all aspects of life, it is not restricted to business or finance but it goes beyond that to include the daily Muslim activity (Syahida and Ahcene, 2011). There are some verses in Quran that specifically stress on the importance of 'trust' in Islam. "Those who faithfully observe their trusts and their covenants," (23:08), and: "Surely Allah commands you to make over trusts to their owners and that when you judge between people you judge with justice; surely Allah admonishes you with what is excellent; surely Allah is Seeing, Hearing," (04:58), and: "O you who believe! Be not unfaithful to Allah and the Messenger, nor be unfaithful to your trusts while you know." (08:27). 'Trust' is an attribute that is necessary in a Muslim entrepreneur as he is involved in economic activity which often creates communication with different groups of people. Being a good entrepreneur necessitates him to build the 'trust' quality in him so that a healthy network is created with the customers and other entrepreneurs in the market. Indeed, upholding the trust value is a virtue to all Muslim entrepreneurs that can lead to success in this world and the hereafter.

Sharing is also an ethical value that has received high importance as it enables one to have a noble character. Muslims are urged to 'deliver and share" any knowledge of Allah to the least possible so that the message of Allah is delivered and disseminated to as many people possible.

67. O Messenger. proclaim the (message) which hath been sent to Thee from Thy Lord. if Thou Didst not, Thou wouldst not have fulfilled and proclaimed His mission. and Allah will defend Thee from men (Who mean mischief). for Allah guideth not those who reject Faith. (5:67)

39. (it is the practice of those) who preach the messages of Allah, and fear him, and fear none but Allah. and Enough is Allah to call (men) to account. (33:39)

Besides sharing knowledge, Muslims are required to share any form of possession he or she owns, which includes wealth and property. Realizing that entrepreneurs are closer to the Ummah in term of economic relation, the sharing activity is believed to be carried out effectively. This includes sharing of the message from the Almighty Allah to His believers. Moreover, having acquired economic control in any particular community, the entrepreneur is believed to be capable of influencing the Ummah effectively through the means of sharing of knowledge and other wisdom thoughts. The act of sharing leads to prosperity and harmony within the Ummah.

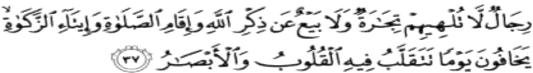

Having acquired good ethical conduct will enable one to be successful in this life and the life hereafter. In Khuluk Almuslim (Muslim's Behavior) Imam Al Ghazali outlined seven steps for success that include knowledge and gnosis stage; repentance stage; temptation stage; obstacle stage; motivation stage; imperfections stage; and praise and thankful stage (Al-Ghazali, 2004). The scholar Al-Qurtubi noted several factors of concern in achieving success; they are: "halal", referring to the livelihood that are in accordance to what is being outlined by Allah; "qanaah", which means being pleased and thankful with one's earning; "taufiq", requesting for the blessings of the Almighty Allah in proportion to one's expectation; "sa'adah", referring to spiritual happiness; and "jannah" or paradise, which emphasizes worldly success as a bridge to the ultimate success in the life hereafter (Hernandez, Noruzi and Sariolghalam, 2010).

# 5. ENTREPRENEURIAL PRACTICES IN EARLY DAYS OF ISLAM

This section shares divine supports and practices of predecessors on business and entrepreneurship in Islam. Thus, it shows the support of Islam for entrepreneurship and development in its entire ramification as long as Islamic value has not been jeopardized, that is ethical development grounded on the divine guidance.

Islam requires every individual to be productive and hardworking. It also requests everyone of us to be perfect in all our undertakings. Therefore, the Prophet connects the love of Allah with perfection in any undertakings that a Muslim assumes. "For indeed Allah loves everyone who perfects his undertakings" (al-Tabarani no. (891); Abu Ya'la 4386); al-Bayhaqi 4:334; Ibn 'Adiy 6:2359)

Below are some reports in Islamic heritage that encourage engagement in business and promote self-sustainability. The focus here is on reports from business practices of companions and their successors. Prior to that, there is a verse which denotes the great quality of companions and their submission to Islamic value even in their work place. They had inner conviction to the extent that when the prayer time arises they leave whatever they are doing for prayer in due time. The Almighty Allah who His knowledge encompasses everything praises them. This praise is also for those who follow their footsteps.

"[Are] men whom neither commerce nor sale distracts from the remembrance of Allah and performance of prayer and giving of zakah. They fear a Day in which the hearts and eyes will [fearfully] turnabout" (Quranic international, 24: 37).

Ibn Battal in his illustration on *hadith* of al-Barra' and Zayd ibn 'Arqam when the Prophet (pbuh) asked them on how do they make money exchange, in which *hadith* ends with the above verse. He said: ""the companions were blacksmiths, perforators, when someone hears the call for prayer while lifting up hammer and stitching gauze, he leaves the work instantly and go for prayer". (Ibn Battal, p. 2938) In addition to that, ImÉm has provided chapters in his book *Sahih al-Bukhari* on the common crafts among the companions (Sa'd al-Shathari, p.338-340), in addition to trading and other businesses. The report of Ummu al-Mu'minin; 'A'ishah affirmed this information when she said (May Allah be pleased with her): "The companions of the Prophet (pbuh) are self-employed people" This report indicates that most of the companions are working for themselves in order to get means for lawful living.

In addition, the reports about Abu Bakr, 'Umar, and 'Abdul Rahman ibn 'Awf were recorded for their excellent performance in trading and business actives. This does not prevent them from being in company with the Prophet (pbuh).

As for Abu Bakr, Ibn Abi Mulaykah reported that 'Aishah-May Allah be pleased with her-said that: AbU Bakr was the most prominent trader of Quraysh tribe until he assumed the position of caliphate" (Abu Bakr al-Khalal, p.91).

It is recorded by al-Tabarani from *hadith* narrated by Ummu Salamah that: Abu Bakr went to Busra as a trader during the life of the Prophet (pbuh). His close relation with his [the Prophet] does not prevent him [Abu Bakr] from his trade. This is because he is so engraved in trade due to having pleasure and satisfaction with earnings can be realized from trading and the Prophet does not ban him [Abu Bakr] from trading for their closeness and affection for each other. This is because the Prophet (pbuh) likes trading (Abu Bakr al-Khalal, p.92).

With regard to 'Umar, he was reported to have said: 'Umar said: Oh Mankind, Allah prescribed to you to take your money and seek for the bounty of Allah, there is *ibadah* and *sadaqah* (charity) for doing so. By Allah, I wish to die with my offshoot on my way to seek for the ounty of Allah than dying on my bed (Abu Bakr al-Khalal, p.105).

'Umar also said: I'm busy with market so I did not have time to be with the Prophet (pbuh) (Ibn Battal, p.2984). In Islam, there is no restriction as long the business is still in conformity with principles of Shariah. Thus, market in Islam is open for poor and rich, scholars and wealthy individuals among the community. To that effect, 'Umar was reported to say: "I was so busy going to market for trading and did not have enough time to stay with the Prophet (pbuh) like Abu Hurayrah and other companions.

Then 'Abdul Rahman ibn 'Awf is a leading companion in business activities, Imam al-Bukhari reported that: "'Abdul Rahman ibn 'Awf said when we migrated to Madinah, the Prophet associated al-Ansar (people of Madinah who hosted Muhajirun) as brothers with Muhajirun (Muslims who migrated from Makkah to Madinah). It happened that I'm the brother of Sa'd ibn al-Rabi', and he [Sa'd] told me I'm one of the very rich among al-Ansar, I'll give you half of my wealth..., 'Abdul Rahman prayed for him saying: May Allah bless your wealth and your wives. "Is there any market for trade?" asked 'Abdul Rahman. He replied "yes, suq Qaynuqa" that is Qaynuqa' market. Can you show me the way? Asked 'Abdul Rahman. In the down 'Abdul Rahman headed to the market and left over cheese and cooking fact. He went the following day, and did not take long he appears in yellowish symbol which is a sign for marriage. When the Prophet (pbuh) saw him, he asked did you marry. Yes, said 'Abdul Rahman. The Prophet (pbuh) asked him to do walimah to celebrat it (Sa'd al-Shathari, p.330). In another report of Sahih al-Bukhari, "We headed to market and got profit and left over cheese and ghee, and brought them for his family. We stayed a while and came out cheerful with yellow stain on his head..."

Apart from the companions, there are some reports related to the successors of the companions that denoted for being productive entrepreneurs. Specifically, it was recorded that Abu Ayub said: "Focus on your business, because by so doing you will remain a noble person among your people as long as you do not ask anyone" (Abu Bakr al-Khala, p.26). Similarly, this was reported in the book called "Shu 'ab al-Iman" of al-Bayqi: "Stay with your business because it gives you contentment from asking people and integrity for you religion" Ibn Abdul Barr, 2:14) On another instance, Ishaq ibn Yasar was passing nearby mercers [dealers in textiles] and said: Keep to your business because your father [Prophet Ibrahim "peace and blessing of Allah be with him"] is a mercer". Similar reports were also related that Shu'bah, Bishr ibn al-Harith (Abu Bakr al-Khalal, p.26). Meanwhile, Sufyan al-Thawri saw some youths sitting down in the Mosque during the day, he [SufyÉn] asked them: "why are you sitting down here this time?" What else can we do? Said the youth. He said: "you should look for bounty of Allah, do not be liabilities on Muslims" (Abu Bakr al-Khalal, p.51).

The evidences above provide crystal clear indication that the development by means of entrepreneurship is strongly encouraged and promoted in Islam. Thus, Muslims do not need the transformation from Islamic values to the so called modern secular society. Rather Islam is a modern and developmental religion. The manifestation of it being developmental has been vividly noticeable in leading global modernization for decades while Europe in the midst of Dark Ages (Kayed and Hassan, p.10). Therefore, Islam does not tolerate unproductive and idle individual meanwhile the production and services should not be harmful, inhuman, unhealthy, and deceitful. All these are inconsistent with justice and mutual interest for human that are the primary objectives that are promoted through Shariah (Islamic law).

# 6. CONCLUSION

This paper contributes significantly to the literature in entrepreneurship by providing an understanding on the positive co-relation between entrepreneur characteristics and his success. It has relied primarily on secondary sources of information in providing explanation on the attributes of Muslim entrepreneurs and the influence of positive moral values on entrepreneurial endeavor. As such, the paper elaborated on the legitimacy of entrepreneurship in Islam with particular reference to the primary sources, namely Quran and Hadith. Moreover, the objectives of Shariah or Maqasid Shariah are discussed as the foundation for the Shariah rules and regulations, which the Muslim entrepreneurs aim to achieve. In addition, the study focused on the comparison between conventional entrepreneurship and Islamic entrepreneurship based on economic objectives and ultimate goal of entrepreneur.

This study clarifies the promotion of entrepreneurship and development in Islam. It affirms that Islam does not deter the progress and development of Muslims. Rather people of integrity once they embraced Islam, it enhances their skills to be more productive and prudent in whatever they do. The example of this can be inferred in history of many companions such as Abu Bakr, 'Umar, 'Uthman, 'Ali and Abdul Rahman ibn 'Awf and many others. It must be made clear that success factors are peculiar and relative because it depends largely on the objective, vision and mission intended to achieve. Thus, the objectives of Muslim entrepreneurs should not be for mundane affairs alone rather it should be to realize *falah* which is eternal bliss through their undertakings. Therefore, one must be sincere and honest to himself by commitment to that very objective which is divinely designed and the rest should be secondary objectives.

Thus, this study confirms four main attributes: honesty, wisdom, trust, and deliver and sharing contribute in the promotion of the success of Muslim entrepreneurs. The study also confirms that Islamic religion has a positive influence on the success of Muslim entrepreneurs, specifically in relation to their characteristics. The Muslim entrepreneurs are influenced by their faith in religion. As such, the Muslim entrepreneurs should continuously make effort to improve the moral values so as to gain success in their entrepreneurial endeavor as well as ultimate success in the hereafter.

# THE MUSLIM ENTREPRENEURS CHARACTERISTIC FROM MU'AMALAT PERSPECTIVE

Mohd. Faizal P.Rameli<sup>1</sup> Muhammad Ridhwan Ab. Aziz<sup>2</sup> Kalsom Ab. Wahab<sup>3</sup>

# **ABSTRACT**

Entrepreneurship is a part of Islamic economics and businesses. Entrepreneurship is the pursuit of opportunity beyond resources controlled. Prophet Muhammad SAW and his companions are examples of this. Entrepreneurship is refers to the capacity required for identifying and generating innovative business ideas, mobilizing resources, organizing production, marketing the products, managing the risks and constantly working for growth and excellence of the business. Islam always invite all Muslims to be an innovative and active entrepreneurs. There for, there are a lot of Muslims becomes the successful entrepreneurs in the world. Unfortunately, Muslims have lost their confidence, their characters and souls through the time. This research aims to analyse the characteristic of entrepreneurs from *mu'amalat* perspective which are derives from al-Quran and al-Hadis. This research also concludes that Islam is not opposite with entrepreneurship. Islam warmly invites all Muslims to be entrepreneurs in their life by given the rules that should be followed by all Muslims.

**Keywords:** Entrepreneur, Entrepreneur Characteristic, Muslimpreneur, Islamic Entrepreneurship.

#### 1. INTRODUCTION

Entrepreneurship is a process of searching and steering through the earth's tracts goes beyond simply finding employment opportunities or even engaging in basic entrepreneurial activities. It is also refers to the capacity and willingness to develop, organize and manage a business venture along with any of its risks in order to make a profit (www.BusinessDictionary.com, n.d.). The search implies the exploration of the unknown in order to discover new horizons and uncover new opportunities for the benefit of humankind. Such active search involves taking risks and requires innovative thinking and that is "entrepreneurship" (Sadeq, 1993).

In economics, the combination of entrepreneurship with land, labour, natural resources and capital can produce profit. Entrepreneurial spirit is characterized by innovation and risk-taking, and is an essential part of a nation's ability to succeed in an ever changing and increasingly competitive global marketplace (www.BusinessDictionary.com, n.d.).

All the economics functions in the Islamic economics has been regulated by the concept of livelihood (*al-Rizq*) as well as lawful (*halal*) and unlawful (*haram*) sources of earnings (Muhammad Ridhwan Ab. Aziz, 2011). The term *al-Rizq* is applied to connote livelihoods and means of further production, which has been intimated by the Prophet Muhammad SAW and predetermined by Allah SWT (Joni Tamkin

Borhan & Muhammad Ridhwan Ab. Aziz, 2009; Muhammad Ridhwan Ab. Aziz, 2011). One way to gain lawful livelihood is through entrepreneurship activities.

Islam is one of the religions that try to encourage people to be an entrepreneur. Islam encourages men to remain always in search of bounties of Allah. Islam accords business and entrepreneurship a place of high esteem (Mohammed Solaiman & Sanoara Yasmin, 2012). Entrepreneurship is a factor that can change the economic problems of any country. It is also engage lots of people as employee or self-employed. Until a few years ago, most of the countries in the world were following other systems namely socialist rather than the capitalist system (Vargas-Hernández, Mohammad Reza, Noruzi, & Sariolghalam, 2010) especially since the fall of the Berlin Wall (De Soto, 2006).

In recent years, the world has witnessed many big financial scandals leading researchers to express different views with regard to holding to higher ethical standards (M-Said Oukil, 2013). While, the religiously committed entrepreneurs exhibited a less tolerant attitude than others in the matter (Emami &Nazari, 2012).

Perkins (2003) analysed the role of Islam in the process of wealth creation and confirmed Weber's conclusions that Islam is an economic hindrance and barrier to prosperity and fulfilment of human ambition, potential and welfare. However, the claims that Islam has the propensity to deter development (Weber, 1963) and that Muslims in general are low in achievement (McClelland, 1961) have been conceptually challenged even by western intellectuals. A number of western thinkers, in addition to Muslim scholars, have acknowledged the progressive nature of Islam and recognized its positive attitude towards prosperity and the desirability of engaging in productive entrepreneurial activity (Wilson, 2006; Zapalska, Brozik, & Shuklian, 2005).

L.P. Dana asserts that religions are neutral and do neither promote nor prohibit entrepreneurship (Dana, 2011) but numerous other authors strongly argue that Islam does not block development through private initiatives and does in fact permit or encourage entrepreneurship (Beekun, 1996; Haneef, 2005; Pistrui & Fahed-Screih, 2010). In fact, entrepreneurship is a part of Islamic culture as showed by Prophet Muhammad SAW and his companions. Islam always invite all Muslims to be innovative, entrepreneur and active.

Islam is a religion of knowledge (Sullivan, 2004) and Islamic tradition has always included a positive approach to economic activity and noted that the Prophet Muhammad SAW was a merchant before his prophetic mission (Wienen, 1997). As the result, a lot of Muslims entrepreneurs becomes a successful entrepreneurs in the world.

# 2. ISLAMIC ENTREPRENEURSHIP: AN OVERVIEW

Entrepreneurs can be described as someone who searches for change, responds to it and exploits it as an opportunity, creates an organisation to pursue it, helping businesses grow and become profitable (Bygrave & Hofer, 1991; Drucker, 1985; Kuratko & Hodgetts, 2004).

The sense of brotherhood creates a bond and a sense of unity in which all work together as a team. The cooperative and collaborative work within the team and between teams in Prophet Muhammad and his companions' era created powerful drivers for innovative societal change. Collaboration is necessary for entrepreneurs to derive innovative solutions that go beyond the traditional, and in which individuals are the key vehicles for such transformation and innovation (Austin, James & Reficco, 2009).

In Islam, there is no separation between entrepreneurial activities and religion. Islam has its own entrepreneurship characteristic and guiding principles based on al-Qur'an and al-Hadis to guide entrepreneurship operation (M-Said Oukil, 2013). By virtue of the human nature, the person must

firstly be a Muslim, then the entrepreneur. He has the responsibility to perform ibadah and be a khalifah. Muslim entrepreneur should search for Allah's SWT blessings above all other factors. Muslim entrepreneurs perform entrepreneurial activities not solely for profit, but above all, to fulfil the fardu kifayah (Vargas-Hernández, Mohammad Reza, Noruzi, & Sariolghalam, 2010).

Islam fulfils an important need by providing the means to satisfy both physical and spiritual need by establishing a framework for behaviour and providing a sense of existence. Islamic moral and ethical values are incentives to achieve greatness of spirit, helping to develop tolerance and empowering with adaptive capacities in response to life's challenging events. Islam provides the individual with a sense of self-respect and family values, and promotes a unified society in a brotherhood imbued with social responsibility. Allah SWT says:

The believers are but brothers, so make settlement between your brothers. And fear Allah that you may receive mercy (Al-Hujurāt 49: 10)(Abdullah Yusuf Ali, n.d.).

By applying Islamic norms and values of the characteristic with prudent use of social, environmental, and economic resources, Islam has created the new communities outside *Al-Jazeera Al-'Arabia* in an innovative entrepreneurial manner. These new communities were given considerable freedom in how they created their local social and economic values under the umbrella of *al-Qur'an* and *al-Hadis*, maintaining synergetic ties with the Islamic leadership. Through this unification of scientific, social, ethical, and economic values they were able to prosper for hundreds of years.

Furthermore, social change implemented under Islamic entrepreneurship influenced neighbouring Europe and other geographical regions through social and commercial interaction. The actions of current civilizations provide testimony to the success of Islamic social entrepreneurship as they currently are faced with developing solutions to their own social problems. Entrepreneur and entrepreneurship have a special place in Islam. An Islamic entrepreneurship model is sourced from the *al-Quran* and *al-Hadis*. Islam sees everything as a comprehensive element in life, including entrepreneurship. Therefore, in Islam, entrepreneurship includes all aspects of life, whether it is for the world or the hereafter (Ummi Salwa, Shahbudin, & Kamaruzaman, 2013).

# 3. METHODOLOGY

This study will employ content analysis as an approach in data analysis. Content analysis is the method of analysing documents in order to describe and quantify phenomena systematically and objectively (Downe-Wamboldt, 1992; Krippendorff, 1980; Sandelowski, 1995). It's allows the researcher enhancing the understanding of the data by testing the theoretical issues.

Content analysis was first use in the 19<sup>th</sup> century (Harwood & Garry, 2003) is a method of analysing various types of documentation (Cole, 1988) such as hymns, newspaper and magazine articles, advertisements and political speeches. The uses of content analysis in communication, journalism, sociology, psychology and entrepreneurship during the last few decades has shown steady growth (Neundorf, 2002). Content analysis will give the possibility to distil the words into fewer content related categories. Therefore, every words, phrases and the like would share the same meaning (Cavanagh, 1997).

In this way, content analysis helps researchers to build-up a picture of the characteristic of the entrepreneur portrayed in the *al-Qur'an* and *al-Hadis*. For the purpose of this research, the meaning of *Qur'anic* verses in *al-Mu'jam al-Mufahras li Alfazh Al-Quran Al-Karim* (Muhammad Fuad 'Abd Al-Baqi, n.d.) and The Meaning of The Holy Qur'an (Abdullah Yusuf 'Ali, 1987) will be analysed to find out the characteristics of entrepreneurs. This finding then, will be supported by various hadis and other document such as book and journal articles in related discussion.

# 4. MUSLIMPRENEURS CHARACTERISTIC

Al-Qur'an recognizes man as a being at once rational, volitional, acquisitive, and ethical. Being primarily a book of moral guidance, al-Qur'an advises all Muslim that it is in their best interest to pursue a moderate course. That is, Muslim should act to provide for existence on this material plane without sacrificing their moral sensibilities. Al-Qur'an insists on the harmony of Muslim's spiritual and material interests. It is guidance on how to achieve success in this life and the next (Imad A. Ahmad, 1994).

For the purpose of this study, a Muslimpreneur is defined as a Muslim who involved in entrepreneurial activities, perceives an opportunity and creates an organisation to pursue it based on Islamic principles. The holistic characteristics of Muslimpreneurs has inculcated rule of metaphysics which are abstract like sin, merit, hell and heaven that becomes the trigger to human's behaviour in structuring entrepreneurial development.

The implication from the concept of property as trust, test, instrument and its inabsolute ownership will make Muslimpreneurs more careful in searching and spending. Thus, Muslimpreneurs should differ from other entrepreneurs in their motives and aims. It is hoped that if they are able to manage their business successfully, they should also have good performance in terms of faith and belief towards Allah SWT (Solahuddin Abdul Hamid & Che Zarrina Sa'ari, 2011).

# A. Taqwa as a framework

A successful Muslim entrepreneurs must have faith (taqwa) to Allah SWT. Allah SWT says: O you who have believed, shall I guide you to a transaction that will save you from a painful punishment? [It is that] you believe in Allah and His Messenger and strive in the cause of Allah with your wealth and your lives. That is best for you, if you should know (Al-Sāff. 61: 10-11) (Abdullah Yusuf Ali, n.d.)

Through this decree, an entrepreneur must believe in Allah and strive in the search of wealth to improve himself and do all of Allah and the Prophet's teachings (Shuhairimi Abdullah, 2013; Yazilmiwati Yaacob & Ilhaamie Abdul Ghani Azmi, 2012). The successful entrepreneur is when he has 'taqwa' to Allah SWT and greatness of 'iman' through gaining lots of profit from the entrepreneurial activities (Mohammad Sahar Bin Mat Din, 2007).

Islam generally has a positive attitude to entrepreneurship and the rights of ownership (Zapalska, Brozik, & Shuklian, 2005). Wilson (2006) also acknowledged the uniqueness of the Islamic code of business ethics and the positive contributions that "trust" can render to the economic activity in the form of cost effectiveness and organization competence (Wilson, 2006). Religion shapes the society by giving meaning to a society's ethical structures, encouraging or discouraging certain behaviours (Dodd & Seaman, 1998).

In Muslim countries, which are usually defined as high-context cultures, people tend to be fatalist meaning that they do not believe that they have much control over events that affect them (Raven & Welsh, 2004). They strongly believe in destiny and events being controlled by fate. In Muslim culture, fatalism is characterised by the phrase "Insha Allah", which means "If God wills it" (Rice, 1999). This means that a Muslim will do their best but the external outcome may not be under their control. For example, there is a widespread belief that strongly religious countries are not receptive to innovation and proactive (Herbig & Dunphy, 1998; Slowikowski & Jarratt, 1997; Tansuhaj, Randall, & McCullough, 1991). This is explained by the high fatalism shaped by the religion of these cultures. In Muslim countries, fatalism is generally associated with less willingness to try new technical and

non-technical products and with higher levels of perceived product risk (Slowikowski & Jarratt, 1997; Tansuhaj, Randall, & McCullough, 1991). Confirming this, Farid (2007) advocates that Islam encourages a conservative culture that leads to risk-averse attitude among Muslim entrepreneur.

# B. Halal as a top priority

Added to the *taqwa* is the concept of "*Halal*" (which can be translated as accepted by the religion) might discourage Muslim entrepreneurs to sell alcohol and pork which are considered to be "*Haram*" (which can be translated as not accepted by the religion) (Basu & Altinay, 2002). Allah SWT says:

Eat of the things which Allah hath provided for you, lawful and good; but fear Allah, In whom ye believe. (Al-Māidah. 5: 88) (Abdullah Yusuf 'Ali, 1987)

The suggestion that religion has a key role to play in shaping the mode and the level of entrepreneurial activity in a given society is gaining widespread acknowledgment and recognition. The link between religion and economic activity in the wider context was explored and demonstrated by the various studies (Dodd & Seaman, 1998; Guiso, Sapienza, & Zingales, 2002; Hirschman, 1983; Sood & Nasu, 1995; Wienen, 1997).

Among the basic rights that all individuals are entitled to, and should enjoy, is access to income. Chapra (1985) explained that socio-economic justice, based on the theory of "social equilibrium", implies that people are entitled to have equal opportunity and does not entail that they should be equal in poverty or in richness. Earning lawful (*Halal*) living is tenable through engagement in productive activities, namely: employment (working for others) and being self-employed and employing others (undertaking entrepreneurial activity). Allah SWT says:

O ye people! eat of what is on earth, lawful and good; and do not follow the footsteps of the evil one, for He is to you an avowed enemy. (Al-Baqarah. 2: 168) (Abdullah Yusuf 'Ali, 1987)

Although Islam endorses working for others for fixed salary, it encourages and stimulates Muslims to embark on entrepreneurship as the preferred option to earning *Halal* income. Beg, (1979) noted that Islam does not only motivate Muslims to be entrepreneurs, but in fact, it makes it obligatory on them to work hard and gain *Halal* earnings beyond their immediate needs in order to care for the community and the Muslim *ummah* at large.

Earning *Halal* income through entrepreneurship and helping others to earn a living spares the public wealth from being exploited by a few and discourages them from being dependent on the state. Public wealth belongs to the Muslim *ummah*, so it should be utilized in projects that serve the common need and the common interest of society.

#### C. Do not waste

Islam encourages people to enjoy blessings of life without waste, Allah SWT says:

Oh children of Adam! eat and drink but waste not in excess, for Allah does not love the wasters (al-A'rāf 7: 31) (Abdullah Yusuf Ali, n.d.)

Prophet Muhammad SAW asked his followers not to over use water even while having the ablution for prayer next to a flowing river. He encouraged his people to remove harmful objects from the path of people and considered that the lowest manifestation of belief. Prophet Muhammad SAW encourage people to plant trees to benefit future generations (Ozalp, 2007). The Prophet SAW said:

There is no Muslim who plants a plant or a tree, except that whatever is eaten from it is a

charity for him. Whatever is stolen from that is a charity for him. Whatever is eaten from it by an animal is a charity for him. Whatever a bird eats is a charity for him, no one suffers a loss except that it will be a charity for him till the Day of Judgement. (Muslim. Book 10: #3764) (Muslim ibn al-Hajjaj, n.d.)

# D. Worship to Allah SWT is a priority

Sadeq (1977) pointed out that entrepreneurship in Islam is highly regarded, and forcefully argued that Islam provides not only the incentives but also the conducive framework for economic and entrepreneurship development (Sadeq, 1977). His argument is based on the interpretation of the *Qur'anic* verse and on the many traditions of the Prophet Muhammad SAW. Allah SWT says:

And when prayer is over, disperse in the world and search for the bounty of Allah (Al-Jumu'ah 62: 10) (Abdullah Yusuf Ali, n.d.)

It is He Who made the earth manageable for you, so traverse ye through its tracts and enjoy of the sustenance which He furnishes: but unto Him is the resurrection (Al-Hijr 15: 67) (Abdullah Yusuf Ali, n.d.)

# E.Practicing high moral value

The Holy *al-Qur'an* and the traditions of the Prophet Muhammad SAW explicitly praise entrepreneurship and commend moral entrepreneurial activity such as the elimination of *riba*. Allah SWT says:

But Allah hath permitted trade (bay') and forbidden usury (riba) (Al-Baqarah 2: 275) (Abdullah Yusuf Ali, n.d.).

# *F. Trustworthy*

The economic transaction of buying and selling for profit (bay') implies the existence of the entrepreneur. Abu Sa'ēd reported that the Prophet said:

The truthful trustworthy merchant is with the Prophet (SAW) the True ones and the martyrs (on the Day of Resurrection) (Al-Tirmidhi. Book 14: #1213) (Muhammad ibn 'Isa Al-Tirmidhi, n.d.)

Furthermore, the Prophet Muhammad SAW and many of his close companions were trustworthy and successful entrepreneurs. He explicitly emphasized the importance of entrepreneurship and encouraged Muslims to actively participate in business and entrepreneurial activity.

Narrated by Hudhaifa that the Prophet said:

Once a man died and was asked: "What did you use to say (or do) (in your life time)?" He replied, "I was a business-man and used to give time to the rich to repay his debt and (used to) deduct part of the debt of the poor." So he was forgiven (his sins). Abu Mas'ud said: "I heard the same (Hadis) from the Prophet". (Bukhari. Sahih Bukhari. Volume 3, Book 41: #576) (Bukhari, n.d.)

# *G.* Concern for the welfare

The Islamic social welfare system or Zakat, in which everyone is obligated to give a percentage of their excess goods to community is just one example of such mercy between community members. Many texts in al-Qur'an and al-Hadis encourage Muslims to offer charity in different forms. Allah SWT says:

O you who have believed, bow and prostrate and worship your Lord and do good that you may succeed (Al-Hajj 22: 77) (Abdullah Yusuf Ali, n.d.).

To encourage the faithful to love to spend from their money, land, and other possessions they treasure,

#### Allah SWT says:

Never will you attain the good [reward] until you spend from that which you love. And whatever you spend indeed, Allah is Knowing of it (Ali 'Imrān 3: 92) (Abdullah Yusuf Ali, n.d.).

The ones who establish prayer, and from what we have provided them, they spend (Al-Anfāl 8: 3)(Abdullah Yusuf Ali, n.d.).

Prophet Muhammad was exemplary as an initiative social entrepreneur. The revelation given to Prophet Muhammad was about the establishment of radical forms of social justice in which tolerance, equity, and charity were at the heart of the Islamic ideology (Lovat, 2005). Therefore, they were necessary characteristic for Islamic community to spring in its name. Prophet Muhammad SAW translated these characteristics into action, and his influence will continue for all time.

Prophet Muhammad SAW demonstrated ethnic and religious tolerance, and established social welfare based on an Islamic social entrepreneur system. The Prophet SAW believed that the ancient Jewish prophet and Jesus proclaimed that Allah SWT demands justice and mercy. Prophet Muhammad SAW encouraged people making donations on specific occasions. For example, he encouraged on-going charity with the following advice:

When the son of Adam dies, his actions are cut off except for three – an ongoing charity (sadaqa jāriah) and knowledge which brought benefit and a virtuous son who makes supplication for him. (al-Nawawi. Chapter 12, Book of Knowledge: #1383) (Yahya Ibn Sharaf Al-Nawawi, n.d.)

During the era of caliph Umar Ibn Abdul Aziz, poverty was eliminated from the Islamic community and prosperity has reached all individuals Muslims or non-Muslims. In addition, *al-Waqf* (or suspension), is a type of charity involving property, which constituted a cornerstone in the Islamic economical welfare system, and was a crucial element in building the Islamic civilization. By participating in *al-Waqf*, faithful Muslims donate property, including money, buildings, land, wells, trees, and other possessions, strictly for the sake of Allah, as a form of worship, thanking Allah for His bounty and in anticipation of a reward in the hereafter.

*Al-Waqf* donations provide long-term benefit for many. Orphans, the poor, sick, and students are allowed to use this charity. While meeting the economic needs of society, *al-Waqf* eliminates selfishness and promotes a sense of responsibility towards current and future generations (Habibollah Salarzehi, Hamed Armesh, & Davoud, 2010).

# H. Knowledgeable

The first *Qura'nic* verses reveal to the prophet Muhammad SAW manifest the important of knowledge in Islam. Allah says:

Proclaim! (or read!) In the name of Thy Lord and Cherisher, who created-; Created man, out of a (mere) clot of congealed Blood; Proclaim! and Thy Lord is Most Bountiful; He who taught (the use of) the pen; Taught man that which He knew not. (Al-'Alaq. 96: 1-5) (Abdullah Yusuf Ali, n.d.)

Prophet Muhammad SAW was also committed to education to ensure the importance of knowledge and emphasise the risk of neglecting it. He SAW particularly encouraged his followers to obtain knowledge of religion and law. He SAW taught his followers that his educated companions taught the ignorant, and many of his followers during his time and after who followed this attitude of sharing knowledge are successful entrepreneurs, who played a significant entrepreneurial role in other communities beyond Arabia.

# I. Caring for the society and environment

In Islam, environment and animals are sacred and valuable. Allah SWT says:

But seek, with the (wealth) which Allah has bestowed on thee, the home of the Hereafter, nor forget Thy portion In This world: but do Thou good, As Allah has been good to thee, and seek not (occasions for) mischief In the land: for Allah loves not those who do mischief. (Al-Qashash. 28: 77) (Abdullah Yusuf Ali, n.d.)

In addition, Prophet Muhammad cared for the health of the society, and encouraged women to participate in this sector, enhancing the role of women society. He also encouraged his followers to care for their aged parents and the elderly people in society. He played with children, talking and listening to them, which gave them self-confidence and influenced their future.

Prophet Muhammad educated his followers to be kind to all living souls and to protect the environment. Narrated by Sahl ibn al-Hanzaliyyah, The Prophet SAW came upon an emaciated camel and said:

Fear Allah regarding these dumb animals. Ride them when they are in good condition and feed them when they are in good condition. (Abu Dawud. Book 14: #2542) (Abu Daud Sulaiman bin Al-Asy'ats Al-Sijistani, n.d.).

Narrated by Abu Huraira: The Prophet SAW said: While a man was walking on a road, he became very thirsty. Then he came across a well, got down into it, drank (of its water) and then came out. Meanwhile he saw a dog panting and licking mud because of excessive thirst. The man said to himself "This dog is suffering from the same state of thirst as I did." So he went down the well (again) and filled his shoe (with water) and held it in his mouth and watered the dog. Allah thanked him for that deed and forgave him. The people asked,

"O Allah's Apostle! Is there a reward for us in serving the animals?" He said, (Yes) There is a reward for serving any animate (living being). (Bukhari. Volume 8, Book 73: #38) (Bukhari, n.d.).

# 5. CONCLUSION

The concept of *fard kifayah* (collective obligations) in Islam is based on the ability of society to meet its minimum and basic needs from a specified activity or meet national challenges and obligations. An appropriate share of the Muslim population should undertake entrepreneurial activities by their own choice and according to their own initiative to ensure the continuity of the nation's economic viability. Failure to achieve such a level of performance means that the Islamic Government has to step in and assume it's legal and moral obligation to compensate for any shortfall of the private sector.

Having Islamic characteristic could cause someone to be closely related to Allah SWT and the people. This relationship is based on the concept of 'taqwa' which needs the entrepreneurs totally recumbence to Allah SWT and also have a good relationship with other people. Generally, it can be concluded that the characteristics of entrepreneurs studied in this research is a dynamic foundation for individual relationships between the entrepreneurs with both Allah and other people.

In conclusion, the relationships between the Muslimpreneurs and the concept of *taqwa* will give them the ability and capability in developing their characteristic based on the Islamic needs which is derived from al-Qur'an and al-Sunah. The Muslimpreneurs characteristic is an important asset to obtain high achievement in the field of entrepreneurship.

# THE EFFECTS OF SPIRITUALITY ON SOCIAL ENTREPRENEURSHIP FROM ISLAMIC PERSPECTIVE

Suhaimi Mhd Sarif<sup>1</sup> Yusof Ismail<sup>2</sup> Luqmanul Hakim Paiman<sup>3</sup>

#### **ABSTRACT**

Spirituality in social entrepreneurship has formed a considerable awareness among the Muslim scholars in recent times. Although much scholarly work exists regarding spirituality, however, most were carried out from the western perspective. A previous Social entrepreneurship literature has been based on behavior, intentions, and contextual variables and ignores or subordinates spiritual concepts. As social entrepreneurship includes innovative programs to improve livelihood to those who have no financial power, thus, it is the duty of the Muslim entrepreneurs to take initiative and innovate social security to satisfy the needs of the society. Realizing the current situation regarding spirituality in Islam and its effects on entrepreneurial outcomes, this exploratory study aims to explore how spirituality effects on social entrepreneurship from Islamic perspective which continues to create meaning for the Muslim entrepreneurs. Based on the feedback of 20 women social entrepreneurs in Klang Valley, there are six reasons for them to venture into social entrepreneurship. These reasons are paired with the key Islamic spirituality for social entrepreneurship that is in line with the objective (magasid) of the religion on the social responsibility. The results from the qualitative research method are not generalizable, but they could give some insights to Muslim scholars, policy makers and lawmakers to focus more the social entrepreneurship. The future study should use triangulation method and to involve all stakeholders to produce more rigorous and comprehensive results and contribution to the theory and practice.

**Keywords:** Spirituality, Social entrepreneurship, Muslim entrepreneurs

# 1. INTRODUCTION

Spirituality in social entrepreneurship has formed a considerable awareness among the Muslim scholars in recent times. Although much scholarly work exists regarding spirituality (Daya, 2005), however, most were carried out from the western perspective (Kedah & Isa, 2011). Until 1970, there was very little interest in and research on the ways spiritual affects the organizations (Becker, 2011). However, a few studies did emerge in the medical, social and behavioral sciences (Allport, 1950; McFadden, 1995, 1996; Wulff, 1997). More recently, there has been an expansion of interest in this topic. Koenig, colleagues and Larson (2001) looked at both positive and negative effects of research on spirituality on health, while Saksa (2011) studied the importance of the spirit at work and explored how employee engagement is related. Now there is inventive research in these areas across international and multidisciplinary contexts (Clift, 2011; Coleman, Ivani-Chalian & Robinson, 2004; Ellor, 2009; Hank & Schaan, 2008).

However, the number of research conducted on spirituality from Islam perspective is very limited. Nevertheless, its impact to the overall development of modern organizations is enormous. Moreover, government and commercial institutions' failure to solve the social issues has created the need for social entrepreneurship and creativity (Salarzehi, Armesh & Nikbin, 2010). Social entrepreneurship includes innovative programs to improve livelihood to those who have no financial power. Thus, it is the duty of the Muslim entrepreneurs to take initiative and innovate social security to satisfy the needs of the society. Realizing the current situation regarding spirituality in Islam and its effects on entrepreneurial outcomes, this exploratory study aims to explore how spirituality effects on social entrepreneurship from Islamic perspective which continues to create meaning for the Muslim entrepreneurs.

## 2. LITERATURE REVIEW

## 2.1 SPIRITUALITY

Spirituality can refer to an ultimate or an alleged immaterial reality; an inner path enabling a person to discover the essence of his/her being (Ewert, 19.9.2), or the "deepest values and meanings by which people live" (Sheldrake, 2007, pp. 1). According to Becker (2011), spirituality is often viewed as more subjective and personal. Spirituality refers to a "search for significance" in ways one regards to be sacred (Pargament, 1997). One's spiritual life develops through relationships with self, others, a inspirational power, and all living beings (Becker, 2011). Spirituality reflects one's deepest sense of worth, meaning, connections with ultimate reality, or the ground of all being (Puchalski et al., 2009; Tillich, 1976). Spiritual expression may include experiences of a transpersonal nature and behaviors such as prayer or meditation in which one finds support and meaning (James, 1985).

From a holistic perspective, spirituality can be viewed as essential or core nature; one domain among the psychological, biological, emotional, and social aspects of a person; and the overarching content of self-surrounding one's being (Canda & Furman, 2010; Carroll, 2001). In religions point of view, spirituality is an integral aspect of religious experience. The term "spiritual" is now frequently used in contexts in which the term "religious" was formerly employed (Hogan, 2010). According to James (1985), spirituality highlights humanistic ideas on qualities such as love, compassion, patience, tolerance, forgiveness, contentment, responsibility, harmony, and a concern for others.

Meditation, prayer and contemplation are the common spiritual practices that are intended to develop an individual's inner life. Spiritual practices such as mindfulness and meditation can be experienced as beneficial or even necessary for human fulfillment without any supernatural interpretation or explanation (Afton, Kapuscinski & Masters, 2010). Spirituality in this context may be a matter of nurturing thoughts, emotions, words and actions that are in harmony with a belief that everything in the universe is mutually dependent (Gorsuch & Miller, 1999). This stance has much in common with some versions of Buddhist spirituality (Lama, 1999). According to Fuller (2011), a modern definition of "spirituality" is as follows:

Spirituality exists wherever we struggle with the issues of how our lives fit into the greater scheme of things. This is true when our questions never give way to specific answers or give rise to specific practices such as prayer or meditation. We encounter spiritual issues every time we wonder where the universe comes from, why we are here, or what happens when we die. We also become spiritual when we become moved by values such as beauty, love, or creativity that seem to reveal a meaning or power beyond our visible world. An idea or practice is "spiritual" when it reveals our personal desire to establish a felt-relationship with the deepest meanings or powers governing life.

According to Margaret, Burkhardt and Nagai-Jacobson (2004), spiritual experience includes useful business or social connections with a larger reality with other individuals or the society. Spirituality is often experienced as a source of inspiration or orientation in life (Waaijman, 2002). It can encompass belief in immaterial realities or experiences of the immanent or transcendent nature of the world (Schmidt, 2005).

# 2.2 SPIRITUALITY FROM ISLAMIC PERSPECTIVE

Scholars in Islamic history did not write at length about spirituality as it was never a discussion. Some discussion did take place when Islam came into contact with Hindu philosophy due to elements of the new thinking (e.g. Hindu asceticism being espoused by some) (Khan, 2009). The issue of spirituality in Islam can only refer to two matters; either the reality of the created or it can be the *ruh*, translated often as soul (Khan, 2009). The *ruh* definitely exists and is proven in the definite *Qur'anic* texts, and hence Muslims are obliged to believe in it.

The concept of spirituality is very much related to Islam since all aspects of Muslims' lives have to deal with it given that the main purpose of man's creation is only to worship Allah (Rulindo, Hidayat & Mardhatillah, 2011). Islam recognizes that, human being consists of two parts. The first part is the body which is the physical dimension. The second part is the spirit, which is called "nafs" (in Arabic language) while the human is living and "ruh" (soul) when the human dies (Kamil et al. 2011). According to Nasr (1987), spirituality in Islam deals primarily with the inner dimension of a person's life and embrace the outward elements of Islam as means to achieve spiritual life. The root of Spirituality can be traced to faith (Iman) and is demonstrated by the Islamic rituals of prayer, fasting, pilgrimage to Mecca (haj) and charity (zakah) Nasr (1987). In line with this contention, Hawa (2004) posits that spirituality could not be maintained unless all rituals (Ibadah) of fasting, pilgrimage to Mecca (haj) and charity (zakah) are observed regularly. Al-Helali (2000) mentioned that spending in Allah's ways gets a person closer to Allah.

"The essence of Islamic spirituality... is the realization of Unity as expressed in the *Qur'an*, on the basis of the prophetic model and with the aid of the Prophet. Since the principle of Unity governs all facets of Islamic life, the quest for spirituality in Islam is therefore not restricted to some narrowly conceived domain, apart from the general life of the community; what distinguishes the spirituality of Islam from the religion taken as a whole, then, is "the dimension of depth or inwardness", so that the forms of the religion are interiorized, rather than opposed; and the journey from the form to the essence which it expresses can be conceived as the movement from the outward to the inward, the periphery to the centre, which is the locus of realized Unity" (Nasr, 1991, pp. 13).

Worship in Islam covers emotional, spiritual and physical aspects. Al-Gazzali (2004) stressed that, *Ibadah* such as prayers (*salat*), fasting (*saum*), charity (*zakah*), and pilgrimage to Mecca (*haj*) are expected to improve a person's relationship with Allah and people. Anything short of that become just empty rituals with no value since they lacked spiritual tinge. Additionally, all the rituals Allah instructed the believers to carry out such as fasting and prayer are only for their benefits so they could reach to the highest state of spiritual and physical fitness (Ibrahim, 1997). Similarly, the role of spiritual factors in shaping human behaviour is well recognised in Islam. Hawa (2004) explained that, Islamic spirituality is capable of producing a complete Muslim who would worship Allah and also be a valuable member to his society through kindness. Ali (2005, p. 34) also captured that "Spiritual and mental needs strengthen the quest for perfection and actualization of one's potential in serving the community and organization, while pursuing his/her activities". Spiritual people enjoy minds that are motivated towards good deeds and "complete satisfaction and self-actualization" (Ali, 2005, p. 28).

According to Khan (2009), in Islam, spirituality is defined as the linking of actions to the purpose of life. So for instance, a Muslim's purpose of life is to worship Allah, hence spirituality in this sense is linking the actions of an individual to the purpose of their life. Actions on their own, without using this framework are just that actions. They are material constructs of time, space and objects. A Muslim always complies with the actions in line with the teachings of Islam in order to seek the pleasure of Allah. Thus, all actions undertaken for the pleasure of Allah are spiritual because they link the material action with the purpose of life.

Nasr (1987) states that spirituality in Islam is the realisation of *tawhid* and based on consciousness of Allah. He added further that, the basic of spiritual aspect of one's life is to live by the will of Allah and follow His command. Therefore, to be guaranteed a life of spirituality, one should live in the world of *Qur'an* and according to its injunctions. Hawa (2006) similarly maintains that *tawhid* is the catalyst required by the spirit for its purification and that emphasis should be placed on important role of *ibadat* (such as *salat*, fasting, *zakah* and *zikr*) in order to bring spirituality into people's lives.

Inevitably we must realize our relationship with Allah سبحانه وتعالى when undertaking any action, whether it is spiritual or material, thus making sure that our actions is in accordance to the commands and prohibitions of Allah سبحانه وتعالى and ultimately attaining his pleasure.

To relate spirituality to workplace, Toor (2011, as cited in Mawdudi, 1948,) maintains that, Islam encourages the man to integrate his work and everyday objectives with religion and spirituality and grow every day on earth while establishing God's will. In a similar vein, Bouma, Haidar, Nyland, and Smith (2003) hypothesize that one's spiritual endeavours in Islam must take place in the context of *ummah* relations (of which work is an essential part). They noted further that a worker becomes alienated from both the output of production and the society if work is considered as purely a secular activity only. Thus Islam rejects perceiving work as merely a secular activity or a means to attain material pleasures (Bani-Sadr, 1980).

## 2.3 SOCIAL ENTREPRENEURSHIP

According to Mair and Martí (2006), social entrepreneurship, as a practice and a field for scholarly investigation, provides a unique opportunity to challenge, question, and rethink concepts and assumptions from different fields of management and business research. According to Salarzehi et al., (2010), entrepreneurship pointed out to those, who have been looking for better ways to do works done, and with experiencing economic development as a result. By using limited resources and facilities, entrepreneurs offer more productivity and efficiency to add more values. Commercial entrepreneurs are innovators who are pursuing economic goals (Dees et al., 2001). They always are in search for change, smart reaction to the changes and use the maximum benefit form changes. Entrepreneurs have individual-specific resources that facilitate the recognition of new opportunities and the assembling of resources for the venture (Alvarez & Busenitz, 2001). Where commercial entrepreneurship is more on business by taking the risk is their concern to achieve the profitability goals, instead, social entrepreneurship is as a complementary to business entrepreneurship, have a special position in social development (Salarzehi et al., 2010). The nature of Social entrepreneurship is the cooperative activities such as charity, goodwill, and sense of responsibility for the problems of the vulnerable and deprived classes of the society (Gliedt & Parker, 2007). The necessity for social entrepreneurship in modern society is impasse of capitalist system which has emphasis on personal profitability and ignoring the rights and needs of susceptible classes, caused the added severity of poverty and deprivation and increase the gap between classes in the society (Salarzehi et al., 2010).

Social entrepreneurship is seen as differing from other forms of entrepreneurship in the relatively higher priority given to promoting social value and development versus capturing economic value (Mair &

Martí, 2006). In the past, social enterprises have been modeled on tenets of 'not-for-profit' charitable organizations that have attracted human and social capital with pro-social, community-spirited motives, and have engendered survival strategies premised on grant dependency (Chell, 2007). The essence of social entrepreneurship is an innovative voluntarily and the kind of friendship with a combination of good will (Weerawardena, 2006). These kinds of entrepreneurs give services to human being aim to get an inner satisfaction. Social entrepreneurship is a process in which individuals and groups and social sectors working voluntary in order to produce value by using remained social assets and opportunities (Salarzehi et al., 2010). In societies, people gather together and get along to have cooperation and bilateral cooperation in order to solve social issues. Social capital on the base of trust has been created to that extant in which they can create long lasting capacity for dealing with issues (Miri, 2006).

Social entrepreneurship is the innovation for the problems and social issues (Salarzehi et al., 2010). Social entrepreneurship as a process that catalyzes social change and addresses important social needs in a way that is not dominated by direct financial benefits for the entrepreneurs (Mair & Martí, 2006). Social entrepreneurs normally use the innovative measures to create a mechanism of social security and mobilize resources to deal with social issues. Social entrepreneurship seeks to identify the social and society needs thus, they have encountered ups and downs (Alvord & Brown, 2004).

At the organizational level, companies can employ strategies that simultaneously fulfill both economic and also social and environmental responsibilities so that the different dimensions of corporate activities reinforce rather than weaken each other (Enderle & Tavis, 1998). Enderle (2010) have pointed out some examples such as: activities such as feeding hungry workers in poor areas will improve their productivity; empowerment of workers on the shop floor will have a similar wealth enhancing effect; extending a plantation's water system into the local squatter community or investing in a hospital will improve worker health and motivation with a resulting productivity and positive cash-flow impact. As mentioned by Friedman (2005), economic growth not only generates the means for social and environmental progress, but also social and environmental advances can enhance the economic performance of companies.

## 2.4 SOCIAL ENTREPRENEURSHIP FROM ISLAMIC PERSPECTIVE

Islam is not a new religion. It is in essence, the same message and guidance provided by Allah SWT revealed to all His Prophets. The *Qur'an* is a living proof of the existence of Allah, the All Powerful. It is also a testimony of the validity of the Islamic way of life for all times. Arabic the language of the *Qur'an*, unlike the languages of other revealed books, is a living, dynamic and a very rich language. Millions of people all over the world speak and use Arabic in their daily life. This is further testimony to the unchanging character of the *Qur'an*.

"... Those who truly fear God, among his Servants, are those who have knowledge...", (35:28).

The message which was revealed to the Prophet Muhammad is Islam in its comprehensive, complete and final form.

"Let there be no compulsion in Religion: truth stands out clear from error: whoever rejects evil and believes in Allah (one God) has grasped the most trustworthy hand hold that never breaks. And Allah hears, and knows all things", (2:256).

Past evidence confirms that good actions are rooted from people's beliefs and social culture and social believes of every nation are the essence of personality and communities in trends of friendship and voluntary behavior (Salarzehi et al., 2010). Berger (2006) have studied the religion's effects on charity activities in Canada, and found that, religious belief is influential for expansion of charity and voluntary. Bekker et al., (2007) instituted that, the religious values and morale behavior is extremely important.

Wang and Grady (2008) also confirmed that, religious belief is one of factors that determine the voluntary action and increase in charitable and humanitarian assistance.

Salamon and Anheier (1997) have compared different religions in regard to charity activities and found out that, Islam contributes more the charity activities. Values and common religious symbols in Islamic culture such as alms, pay attention to poor and the deprived, offerings, devotion, *Ehsan* and being kind with slaves, friendship, cooperation and participation and dedicated to property goals for charity have been shown that capabilities of the vast social entrepreneurship in Islam (Salarzehi et al., 2010).

In Islam, Our 'an emphasizes to help the weak and poor people who are considered charity and devoting.

"You cannot attain to righteousness unless you spend (in charity) out of those things which you love." (3:91).

"People always have been invited to charity and *Ehsan* in the *Qur'an* and we cannot find a chapter in Quran that does not say about budding life or property in the way of God" (Bandarchi, 1998). Verses of Quran and many of traditions, has inspired the paradise to Muslims for humanitarian measures and observance. In addition, Allah has created human kind and asked them to be useful to each other.

"Do good to others, surely Allah loves those who do good to others." (2:195).

The Holy *Qur'an* and the *Hadith* mention various categories of people that one has to deal with, and give a great deal of guidance on how to behave towards them.

"Those needy ones who are wholly wrapped up in the cause of Allah, and who are hindered from moving about the earth in search of their livelihood especially deserve help. He who is unaware of their circumstances supposes them to be wealthy because of their dignified bearing, but you will know them by their countenance, although they do not go about begging of people with importunity. And whatever wealth you will spend on helping them, Allah will know of it." (2:273).

The Prophet also said: "Give charity without delay, for it stands in the way of calamity." (Al-Tirmidhi, Hadith 589).

The Prophet Muhammad (peace be upon him) said: "Every Muslim has to give in charity. The people then asked: (But what) if someone has nothing to give, what should he do? The Prophet replied: He should work with his hands and benefit himself and also give in charity (from what he earns). The people further asked: If he cannot find even that? He replied: He should help the needy who appeal for help. Then the people asked: If he cannot do (even) that? The Prophet said finally: Then he should perform good deeds and keep away from evil deeds, and that will be regarded as charitable deeds." (Sahih Al-Bukhari, Volume 2, Hadith 524).

Pure Islam is guideline for, peace, prosperity, good will and social welfare. The principle of social justice in Islam in accordance with Allah ordered in *Qur'an* also approved this point that the poor people and needy have same share from wealth and property rights; because within the framework of Islamic law, all things belong to the essence of Allah (Salarzehi et al., 2010). Furthermore, whatever from his wealth and property that gives some should, forgive and help others. In the Islamic texts it has been emphasized that Allah has hosted reformer slaves and charity that is not only prayer, but are pioneers in the good works (Sami, 2006).

"Spend (in charity) out of the sustenance that We have bestowed on you before that time when death will come to someone, and he shall say: O my Lord! If only you would grant me reprieve for a little while, then I would give in charity, and be among the righteous." (63:10).

#### 2.5 SPIRITUALITY AND SOCIAL ENTREPRENEURSHIP

The study of spirituality as it relates to entrepreneurs and their work organizations has, in large part, been unsuccessful in providing a cohesive explanation of the impact spiritual elements have on an entrepreneur's decision to initiate and maintain a business venture (Kauanui et al., 2008). A significant portion of scholarly work conducted with spirituality and work only pertains to large corporate entities (Ashmos & Duchon, 2000; Burack, 1999; Mitroff & Denton, 1999; Wagner-Marsh & Conley, 1999). The dominance of entrepreneurial research usually ignores spirituality altogether or simply utilizes it as a subordinate factor (Brockhaus, 1980; Cromie & Hayes, 1991; Krueger, 2000).

Ashmos and Dunchon (2000, pp. 136) defined workplace spirituality as the "recognition of an inner life that nourishes and is nourished by meaningful work that takes place in the context of community." The authors have suggested that, individuals are spiritual beings, needing to be fed spiritually at work. Finally, they concluded that, spirituality at work is about bringing together an individual's mind, body and spirit into the workplace environment in which individuals experience more than their required tasks (Ashmos & Dunchon, 2000). These findings are consistent with Mitroff & Denton (1999, pp. 7) in which respondents described spirituality and work as the "basic desire to find ultimate meaning and purpose in one's life and to live an integrated life," which provides a broader definition for spirituality and work.

## 2.6 EFFECTS OF ISLAMIC SPIRITUALITY TO SOCIAL ENTREPRENEURSHIP

There have been extensive arguments on the characteristics of "spirituality in the workplace" as basic themes in Islam because of the recognition of the fact that spirituality and religion in Islam are not distinct entities but rather branches of the same tree (Toor, 2011). For instance, Kriger & Seng (2005) noted that, attributes such as the building of community (Fry, 2003) and concern for social justice within the organisation (Kriger & Hanson, 1999) and its vision, and equality of voice, humility, forgiveness, compassion love, faith, and kindness are all basic Islamic themes found in the Holy *Qur'an* and other popular Islamic literature (Kedah & Isa, 2011).

Kamil *et al.* (2011) conducted an empirical study on the components of spirituality in the business organisation context in Malaysia which found that, Islamic spirituality in the organizational context is explained by four elements (dimensions), namely, Rituals (*Ibadat*), Forgivingness (*Al a'fw*), Belief in Allah (*Iman bil-lah*) and Remembrance of Allah (*Dhikrullah*). Similarly, another study carried out by Mohsen (2007), revealed that spirituality is a construct with three dimensions; Belief, Rituals and Repentance.

Khaliq (2011) considered spirituality synonymous with purification of the heart, which is required to set right all the parts of the human body. He stressed that, for the heart to be purified (spiritual), it must be strong in Islamic belief (*Iman*). Thus to be spiritual, one has to have the firm belief in Allah's greatness and develop divine qualities like "*Taqwa*", (piety) "*Tawakkul*" (trust in Allah) "*Qana'ah*" (contentment) "*Sabir*" (patience) "*Ikhlas*" (purity of intention) "*Risalah*" (prophethood) and "*Akhira*" (the life Hereafter).

According to Abeng (2003), work and participation in all sort of productive activities are considered very important in Islam. In addition, the possession of required skills and technology (referred to as *fadhl* or grace of God) as well as striving to earn a living is highly encouraged and praised in Islam (Abeng, 2003).

Jabnoun (2008) asserts that quality and excellence performance in any job is emphasise by the teaching of Islam. This is buttressed by the following Hadiths:

"Allah, the Almighty wants that when one of you does a job, he or she does it well" (Al-Bayhaqi 4:5312).

However in the process of focusing on Islamic beliefs and value system, entrepreneurs should not be unable to find sight from the rational and scientific approaches of managing the organizational matters (Khaliq, 2011). He further adds that. Islam discouraged irrationality and superstition.

# 2.7 SPIRITUALITY DIMENSIONS FROM ISLAMIC PERSPECTIVE TO SOCIAL ENTREPRENEURSHIP

Some of the spirituality dimensions from Islamic perspective that influence social entrepreneurial performance are discussed below;

# 2.7.1 Islamic Beliefs

One of the sources of motivation in Islam is the belief in Allah. According to Ahmad (2011), a worker with Islamic beliefs draws his/her satisfaction in an organisation not only by need fulfillment as defined by Abraham Maslow's hierarchy of human needs but more fundamentally, from the belief that he/she is a holder of *amanah* (trustee of Allah) on earth. The author further added that, the wonders exhibited by the Muslims recorded in Islamic history can attributed to their high level of Islamic beliefs which is a source of power in human beings that is drawn from Allah the most powerful.

According to Khaliq (2011, p. 261), "the Muslim workers motivation for work and excellent service is derived not only from notion of self-fulfillment upward mobility, uplift of material standards of living or service to the nation but also more fundamentally, from the belief that, a holder *amanah* on earth. He must search industrially for the bounty Allah has provided for his sustenance, either in the form of natural resources to be explored or new processes to utilize available resources. His work is a form of virtuous deed (*amal salih*) which is the key to the attainment of (*falah*) true success in this world and well-being in the hereafter. His work is also a form of (*ibadah*) servitude to God in the broader sense of the word, insofar as it is in conformity with the Devine norms and values; and The reward of his deeds is not confined to this world, but extends to the Hereafter, and similarly punishment for bad deeds is not restricted to worldly life but also takes place after death."

It can thus be inferred a Muslim entrepreneur with strong Islamic beliefs (as a dimension of spirituality) derives satisfaction from doing the business as a holder of *amanah* and hence become motivated.

## 2.7.2 Purity of Intention

Another motivating force from the Islamic point of view that is related to spirituality is purity of intentions (*Ikhlas*). It has the distinct property of moving and changing the direction of mankind (Kedah & Isa, 2011). From the Islamic point of view, human activities (including entrepreneurship) are governed by inner intentions, drives and motives (Ahmed, 2011). The person with purity of intention is motivated to undertake entrepreneurship with the ultimate aim of seeking the pleasure of Allah rather than other ulterior motives such as seeking for wealth, fame, and name (Ahmad, 2011). He further adds that, the person without *ikhlas* may be egotistical and self centered. To show the significant relation to Islam,

"The acts depend on intentions. A man will get whatever he had intended for" (Al-Bukhari and Muslim 1:1).

Amin (2011) argued that, a spiritually guided person will perform all types of activities (be it productive or organizational work) with the basic intention of seeking the pleasure of Allah. Thus the entrepreneur's performance is not consequent upon the reward system (or the profit) but striving to gain Allah's pleasure and avoid His wrath (Ahmad, 2011).

Similarly, believing that work is part of worship will serve as a motivation for increased dedication and involvement (Kedah & Isa, 2011). Thus an entrepreneur with high level of spirituality will not only be bounded by intense feeling of responsibility and accountability before the Almighty, he will also perform his entrepreneurial tasks effectively irrespective of the difficulty of the task at hand, working condition or adequacy of returns (Ahmad, 1988). What guides the entrepreneur in this respect is his basic intention of seeking the pleasure of Allah.

## 2.7.3 *Taqwa* (*Piety*)

Taqwa is the all-encompassing, inner consciousness of one's duty toward Allah and the awareness of one's accountability towards Him as the spirit of taqwa lies in the attitude and mind rather than in an outward form (Maudoodi, 1991). Thus, a person's thoughts, emotions, and inclinations will reflect Islam when immerse in taqwa (Beekun & Badawi, 2009). As noted earlier, Islam recognise work (including entrepreneurship) as a form of worship. In line with this contention, Abeng (2003) observed that the Qur'an elevated al-'amal (productive work) to the level of religious duty and in addition mentioned it consistently in more than fifty verses in conjunction with iman (faith). He further added that, there seems to be symbiotic relationship between faith and work; one cannot exist without the other. According to Mohsen (2007), there are two conditions for good and happy life; one is Iman (belief), second is doing good deeds (amal salih) such as being honest, and helpful. Taqwa (piety or spirituality) represent both concepts and is the quality of fundamental nature that puts a person on the right track (Kedah & Isa, 2011). High level of taqwa will make a person be proactive and avoid any negative behaviour because of his awe and fear of Allah (Beekun & Badawi, 2009). Being the faculty of distinguishing between right and wrong, taqwa is also considered as the most precious gift of all to man (Ahmad, 2011). The Holy Qur'an succinctly put it in the following way:

"Then He showed what is wrong for him and what is right for him" (91:8).

"This is the book; in it is guidance sure without doubt to those who fear Allah (muttaqin), who believe in the unseen, are steadfast in prayer and spend out of what We have provided for them, and who believe in the Revelation sent to you and sent before your time and (in their heats) have the assurance of the hereafter. They are on (true) guidance from their Lord and it is these who will prosper". (2:2-5).

"Verily the most honorable of you with Allah is the one with the most tagwa". 49:13.

Relating this concept to entrepreneurship, it could be inferred that the performance of an entrepreneur (guided by spirituality) who considered his task as a religious and who believe in getting better reward in the hereafter can be enhanced in order to reap more in the hereafter (Kedah & Isa, 2011). In addition, Ali (2005) assert that, during time of difficulties and hardship (as sometimes experienced by entrepreneurs), Islamic spirituality helps in maintaining self confidence and assurance.

# 2.7.4 Contentment (qana'ah)

Another spiritual element that enhances the performance of the entrepreneur is contentment (qana'ah). The quality of contentment possess by a person determine to some extent the level of his consistency in terms of honesty, punctuality, and commitment to work (Ahmed, 2011). A contended person does his

own part of the task carefully and expeditiously, leave the rest to the will of Allah and be satisfied with the outcome (even where result did not match effort) on which he has no control (Kedah & Isa, 2011). As a result, the entrepreneur's energy and momentum is preserved, undue stress leading to frustration and depression is minimized. The Holy prophet in the following *Hadiths* emphasized the need for contentment:

"Successful is the person who embraces Islam, is given humble provision and who remains content with what Allah has given to him" (Muslim).

"Know that if the nations were to gather together to benefit you with anything, it will benefit you only with something that Allah had already prescribed for you, and if they gather to harm you with anything, they would harm you only with something Allah had already prescribed for you. The pens have been lifted and the pages dried" (Al-Tirmidhi 9:2440).

## 2.7.5 Patience (Sabr)

Patience is another dimension of spirituality that is related to entrepreneurial performance. The patience in Islam according to Ahmad (2011) is aimed at preventing the people from prohibited things and keeps them committed on obedience, tolerance and perseverance even in times of adverse circumstances. The Holy *Qur'an* vigorously stressed the virtue of patience in many places:

"And certainly, We shall test you with something of fear, hunger, loss of wealth, lives and fruits, but give glad tiding to the patient ones" (2:155).

"Therefore be patient as did the Messengers of strong will" (46: 35).

"Oye who believe! Seek help and patience in prayer. Truly! Allah is with the patient" (2: 153).

In much the same way, The Prophet (S.A.W) says:

"The Muslim who lives with the people and shows tolerance towards the people and shows tolerance for the harms received from them is better than the Muslim who does not meet them and does not show tolerance for the harms received from them" (Al-Tirmidhi 9:2431).

To think and behave rationally (a requirement for entrepreneurial success) one has to be in position to control his desires and emotions and such can only be achieved through patience (Ahmad, 2011). Similarly, the patience in a leader (in this case an entrepreneur) makes him to be forbearing and wise and also not to retaliate to injustice with injustice (Randeree, 2011). Thus the higher the quality of patience (*sabr*) possess by the entrepreneur, the higher would be the level of maturity, stability, perseverance and tolerance and consequently the better the ability to control his emotion in the workplace for better performance (Ahmad, 2011).

## 2.8 CONCEPTUAL FRAMEWORK

Based on the above discussed literature, Figure 1 illustrates the effects of spirituality on social entrepreneurship from Islamic perspective. Even though there could be other factors affecting entrepreneurial outcomes, spirituality in Islam is selected for this study since other antecedents of entrepreneurial motivation, performance and commitment to social responsibility had been studied and similar result could be expected.

Islamic Beliefs

Purity of Intention

Taqwa (Piety)

Contentment
(qana'ah)

Patience (Sabr)

Figure 1: Conceptual Framework of the Study

The above model suggests that, spirituality in Islam directly influence entrepreneurial performance and commitment to social responsibility.

#### 3. METHODOLOGY

This study uses qualitative research method, specifically personal interview, with the aim to understand the reality of Islamic spirituality and social entrepreneurship, which contributes to contribute to theory and practice specific to the context that is not generalizable to other contexts. The qualitative research method is contrary to the qualitative research method that uses positivism or empiricism to examine the existing theory in a new context for the purpose of confirming or updating it (Guba and Lincoln, 1994; Silverman, 2013). The main feature of the qualitative research method is that it enables the study to explore a context deeply, which is could not be done by the quantitative research method such as survey (Wainwright, 1997; Patton, 1990). Informants have more opportunities to deliberate various issues in depth, especially in the relation to the social and cultural contexts (Myers, 2000). In addition, this method allows the study to understand the thought of informants which is not very easy to obtain in a structured survey. The researchers also can probe and crosscheck the feedback with other pertinent issues raised during the interview. However, the results from qualitative research may not be applied to all situations, but they help generalizations and theories (Ezzy, 2002).

Each personal interview took an average of 30 to 40 minutes. The study recorded the interview by note-taking approach was due to honor the reluctance of the informants to capture their feedback using audio visual tape recording devices. After the interview process, the notes were typed and the hardcopy sent to the informants for verification. The informants were given 14 working days to verify. For the non-reply interview scripts, the study considered them as final. Due to the confidential nature of the information provided by the informants, their names and affiliated organizations are not disclosed.

This study aims to explore the perceptions of social entrepreneurs on the presence of Islamic spirituality in sustaining the social entrepreneurship. The informants came from several types of socially oriented entrepreneurial activities such as food & beverages, printing, catering, grocery, spa boutique, salon and haircut and food supplementary products in Klang Valley, Malaysia. Table 1 summarizes the informants 'background.

**Table 1: Informants' Profile** 

Informants Code	Location of Business	Business Type
SE 1	Wangsa Maju	Food & Beverages
SE 2	Lembah Pantai	Food & Beverages
SE 3	Lembah Pantai	Food & Beverages

SE 18	Cheras	Saloon & Hair Cut
SE 19	Batu	Food Supplementary Product
SE 20	Titiwangsa	Food Supplementary Product

## 4. FINDINGS

The study asked "What are the factors motivate you to involve in socially oriented enterprises?" There were various answers provided by informants. Interestingly, the significant factor was due to the dream and ambitions to be part of the society with an economic aim. SE 1 said:

"I have been helping my parent to do small business in food services in Wangsa Maju area. I like the way my parent conducting their business. They did a small business, just selling food, by back in their minds was to provide nutrition to the people and they can work diligently for the sake of the nation. Some of the working executives would have no time to prepare food for breakfast and lunch and they depend on us to provide them healthy food. When I realized how much I contribute to the nation and the people, from there onwards, I started to fall in love with this business just like my parents. I open a restaurant not far from my parents' stall, not to compete them; for sure I could never out compete them in terms of taste, but to complement them with more contemporary business atmosphere in my restaurant. I hope I can achieve my ambitions to gain the achievement same like my parent business."

Sometimes, social entrepreneurs have the sense of social obligation towards helping the society to be more productive and healthier. SE 2 argued:

"I been living in Lembah Pantai Since 1984, there are stalls there selling variety of food that they never miss to get the support from the loyal customers. People just love to eat food sold by many stalls. Perhaps they rotate on which stall they decided for their meals. I love to see them eating food in the morning and in the afternoon. That show their business has a good future value. So, I started my business running a restaurant cause I am very ambitious that my business can maintain and earns profit."

Sometimes, the individual ambitions could be the spiritual force to open a socially oriented enterprise. SE 3 explained:

"I ventures in this business because I loved to cook. For fulfill my ambitions to be a chef in pastry and bakery business, I go to Giatmara and studied about bakery and pastry. Alhamdullilah, my Bakery & Pastry stall already maintain for 6 years."

The sharing of previous experience and knowledge to the society is another source of spirituality for a social enterprise. SE 4 stated that:

"I was working with Blue Mineral Water for 5 years. I know how their operation and how to manage this business. After think twice, I decide to be entrepreneur in this field. I open business in producing n manufacturing RO water. For started I bit difficult, but right now I have several contract with government agency n private company to supple RO water.

The influence of family contributes to the desire to have a social enterprise. SE 5 said:

"My family has running this printing business about 11 years ago and them getting old. So I need to continue their business in order to make this business running as usual. And as we all now, right now it very tough to get job if fresh graduate, so I continue my parent business."

Likewise, SE 6 felt that her income as a clerk is insufficient to meet her financial need, particularly when the cost of living is increasing in big city like Kuala Lumpur. SE 6 contended:

"It very though life living in Kuala Lumpur, salary working as clerk in government agency is not enough to fulfill my cost of living in Kuala Lumpur. So, I decide to open the printing kiosk in Bandar Tun Razak area to gain some extra money not just for me but also my big family that need my financial support since all of my siblings and children are attending colleges and schools."

As for SE 7, the previous employment has motivated her to switch to social entrepreneur career. SE 7 uttered:

"Food services never end because human eat every day from morning till night. Experience working in this field as manager for two restaurant influences me to start catering business. Basically my client I get from my past job, it makes my business running smooth from starting till now."

The desire to fulfill personal and family expectations becomes the motivation spiritually for SE 8 to pursue her social entrepreneurship career. SE 8 said:

"I have friend that have restaurant and catering business, I always dreams that I can achieve what my friend achieve. Her passion conducting business stimuli me to venture into this field and lot of thing I learn from my friend."

SE 9 argued that her ambition is the pushing factor for her to be a social entrepreneur. SE 9 said:

"As we know, cook is synonym with women, since I lost my job; I start running small catering business from my house. I have to start this catering business to sustain my life."

As for SE 10, her desire to get more fortune became the reason to choose social entrepreneurship. SE 10 said:

"Before I working in Kuala Lumpur, I been working in Pahang for several years, when I migrate to Kuala Lumpur, my saving getting slim because the cost of living in Kuala Lumpur much higher than Pahang. So I open grocery shop at Setiawangsa to support my daily expanses."

SE 11 held that her 20 years observation contributes to her decision to be social entrepreneur. SE 11 said:

"My parent open a grocery shop at Setiawangsa nearby LRT station, it been 20 years ago. For the continuity those businesses I decide just want to continue my parent business."

SE 12 wanted to fulfill her ambition, in which she emphasized that:

"Since secondary school, I like to look beautiful, after finishing secondary school; I go to private college and studied diploma and degree in beautician field. After that, I start open my spa boutique. I love do what my favorite thing and it full my ambitions."

For SE 13, sharing is caring. With this principle, SE ventured into the business. SE 13 argued that:

"I was working as beautician consultant at Sendayu Tinggi for 2 years, after that I resign as beautician consultant and open my stockiest shop at Lembah Pantai to sell Sendayu Tinggi product. I believe this product has it own customer and I can pull over my customer to come to my stockiest shop."

The need for dynamic career has triggered SE 14 to have a thought:

"Since I get VSS from Maybank due to economy crisis in 1997, I open Spa & saloon Beutique Bukit Bintang to continuing my life. I choose to open in Bukit Bintang because it very suitable place and many tourist come here."

As for SE 15, her decision to venture into social enterprise was due to the desire to emulate some successful entrepreneurs in her age group. SE 15 alleged:

"In year 2003 above, Spa Boutique business is one of the new businesses that get recognize in Kuala Lumpur, many women open this business gets success. So I decide to open the same business and get some loan in the beginning. For that year my business get booming, high profit but it not like now."

Sometimes, after spending many years in the industry would make some people to change their career direction. As for SE 16, she has the desire to share experiences in the business ventures. SE 16 thought deeply:

"I open this salon business because I have been working with Spa Company; this is line product that suitable with my experience working."

SE has the desire to fulfill personal and social expectations. SE 17 said:

"I only cater for women customer, it necessary because the hijab wearing difficult to search salon and hair cut for women only. It because, hijab wearing women still need to cut their hair follows what design their want. So, went I give them this good service, I feel happy to because I fulfill my ambition."

The obligation to help the family has motivated SE 18 to venture into social entrepreneurship. SE 18 mentioned:

"For the first place, this business is my parent business. Due to economy crisis they decide to close the business because business loses is getting high and has to maintain very high debt. After I do a research,

and do a proposal to get loan from bank I reopen the business to continue my family business. Alhamdulillah it getting better and I get a lot experience through this business."

The desire to meet economic obligation is another reason for the social entrepreneurship. SE 19 contended that:

"Healthy is very important to human being, when I venture in this food supplement product business, I confident that I can sell this product because the market is too large. I do this business to support my family income. Since now, the Amway product is very well known and has its own regular customer."

Losing employment means unable to meet economic obligations. Thus, SE argued that she has to do something to meet her economic need. SE 20 said:

"Since I don't have high qualification in education, many times I change my job because I can't cater with that job. So I go to attend business course manage by government agency such as TEKUN and MARA, after attend course from MARA they giving my loan to start business and become mentee RX Water Sdn Bhd."

Table 2: Spiritual reasons for participating in social entrepreneurship

	Reasons	Key	Informants (who said this)
		Islamic	
		Spirituality	
1	Desire to fulfill personal and social expectations	IB, PI, PT	SE1, SE 2, SE 3, SE 12, SE
			17
2	Desire to share experiences in the business ventures	QC, PS, PI	SE 4, SE 7, SE 13, SE 16
3	Family obligation to continue family business	IB, PI, PS,	SE 5, SE 11, SE 18
		PT	
4	Economic obligations to get extra income for	PI, PT, QC	SE 6, SE 10, SE 19
	household		
5	Stimuli from other successful social entrepreneurs	IB, PS, PI	SE 8, SE 15
6	Job loss or don't have a proper job	IB, PI, PT	SE 9, SE 14, SE 20

Key: IB: Islamic beliefs (*iman*), PI: Purity of intentions (*ikhlas*), PT: Piety (*Taqwa*), QC: Contentment (*qana'ah*), PS: Patient (*sabr*)

#### 5. DISCUSSION

Based on the feedback of 20 women social entrepreneurs in Klang Valley, there are six reasons for them to venture into social entrepreneurship, namely the desire to fulfill personal and social expectations, the desire to share working experiences, the need to discharge family obligation to continue family business, the economic obligations for extra income, the stimuli from other successful social entrepreneurs, and loss of employment. These reasons are paired with the key Islamic spirituality for social entrepreneurship, namely, IB for Islamic beliefs (*iman*), PI stands for purity of intentions (*ikhlas*), PT for piety (*Taqwa*), QC for contentment (*qana'ah*), and PS for Patient (*sabr*). The feedback from the informants suggested three key Islamic spirituality elements, namely IB for Islamic beliefs (*iman*), PI stands for purity of intentions (*ikhlas*), and PT for piety (*Taqwa*) effect the social entrepreneurship from Islamic perspective. These three aspects are in line with the objective (*maqasid*) of the religion on the social responsibility. According to Chapra (1992), Islamic goals are based on Islamic concepts of human well-being and good life which stress brotherhood/sisterhood and socio economic justice and require a balanced satisfaction of both the material and spiritual needs of all humans (Rice, 1999). Similarly, Toor (2011) have also

recognised that, specific guidelines are available in Islamic ethical system for achieving the moral filter and for conducting business.

Indeed, the practice of social entrepreneurship enables Islamic spirituality to show case in action, which is a complementary to business entrepreneurship in social development (Salarzehi *et al.*, 2010). The nature of Social entrepreneurship is the cooperative activities such as charity, goodwill, and sense of responsibility for the problems of the vulnerable and deprived classes of the society (Gliedt & Parker, 2007). The necessity for social entrepreneurship in modern society is impasse of capitalist system which has emphasis on personal profitability and ignoring the rights and needs of susceptible classes, caused the added severity of poverty and deprivation and increase the gap between classes in the society (Salarzehi et al., 2010).

Al-Qaradawi (1996) further added that, from the Islamic point of view, business organisations are established to meet society's needs by providing goods and services in order to live good life rather than only making profits. Business organisations are therefore expected to serve the society and advance the cause of the community. Furthermore Khalifa (2003 p. 12) in defining business purpose from the Islamic point of view states as follows: "to create and deliver goods (*tayyibat*) needed and valued by the people, to provide opportunity for people to work and realise their mission in life, to develop themselves, to contribute to their societies and to live a good life".

The need for entrepreneurs to be socially responsible and ethical while engaging in business had been stressed by a number of Muslim writers in management (Ahmed, 2005; Khaliq, 2005). According to Fontaine (2011), entrepreneurs can demonstrate commitment to ethics and social responsibility in three ways; first dealing with stake holders (whether shareholders, employees customers or suppliers) in ethical manner. Secondly engaging in business ventures that are not Islamically immoral and thirdly re-investing part of the profit through *zakah* or charitable contribution.

According to Al-Attas (1995), the Islamic principle requires businesses and wealthy individuals to see themselves as caretakers of society's economic resources, holding their property in trust for the benefit of society as a whole and ultimately attaining the blessing of God (who is the ultimate owner of all the resources). Thus the God-consciousness paradigm inspires a firm always to operate in a good and socially responsible manner regardless of the financial consequences. Failure to do so is tantamount to an affront to God's will, with all the attendant consequences in this world and in the Hereafter (Dusuki, 2008).

#### 6. LIMITATIONS OF THE STUDY AND FUTURE DIRECTIONS

This study is based on personal interview method, an approach in the qualitative study. Naturally, it provides a few limitations. Firstly, the study did not interview policy makers that provide the incentives and encouragement for these social entrepreneurs to venture into the enterprises. The feedback from the informants was very personalized, but the encouragement from the regulators does play a role to intensify more people to be social entrepreneurs. Needless to say, the narrow scope of personal interview technique to obtain the feedback only from owners of the enterprises may not represent the entire population. Secondly, the use of note taking technique and subsequent transcription would not compensate for inadequacies of the contents despite the verification from the informants. Hence, may be inadequate to answer the research objective of the study.

Due to limited resources in this particular field of study, the insights from this study could provide some thought to Muslim scholars, policy makers and lawmakers to focus more the social entrepreneurship and also help to visualize the hidden effects of spirituality on the business outcomes. Similarly, it is our hope

that, the study will serve as a stimulant that will accelerate further thoughts and discussions on the potential prospects or promises spirituality in Islam hold for social entrepreneurship as well as other management outcomes. Since the present study only focused on entrepreneurs as leaders of their organisations, future research may consider spirituality in Islam from the perspectives of employees to see whether similar outcomes could be obtained. This study will also help the policy makers to adapt policies directed toward promoting religious values and practices in order to meet the ultimate goal define by Allah and to increase entrepreneurship in the society.

# 7. CONCLUSION

Islam is a way of life, not just a religion. As a result, business entrepreneurs cannot be separated from Islamic values in the other aspects of a Muslim's daily life. The Islamic ethical system is balanced, fair, just, and benevolent, and seeks to respect the rights of both primary and derivative stakeholders without allowing for exploitation, nepotism and other human ills. Islam advocates a tiered, multi-fiduciary stakeholder approach that calibrates what various stakeholders of a business receive in proportion to their inputs. Recent studies in management have dwelled into incorporation of spirituality in entrepreneurship from the Western perspective. In this study, we have attempted to explore the benefits of spirituality in Islam on entrepreneurship outcomes. It is argued that a Muslim entrepreneur that is charged with Islamic spirit is inspired from the heart and is guided in his entrepreneurial pursuit by seeking the pleasure of Allah and is motivated by rewards not only in this world (falah) but also in the life Hereafter (Jannah). Thus, the responsibility of each stakeholder is morally anchored since it is based on the concepts of trust (amana), equity, balance and fairness ('adl and qist), benevolence and excellence (Ihsaan). At all times, mankind must not forget his/her role as God's steward or vicegerent on earth. For Muslims that understand and practice this ethical system, it also contains its own enforcement mechanisms. It is a system that is divinely inspired, a temporal and tailored to fit the needs and rights of God's trustee, man.

# PEMBANGUNAN USAHAWAN MUSLIM BERTERASKAN PARADIGMA AKHLAK: SATU PENDEKATAN

# ENTREPRENEUR DEVELOPMENT PARADIGM BASED MUSLIM CHARACTER: AN APPROACH

Siti Ainul Marziah Muhamad Foat<sup>1</sup> Hairunnizam Wahid<sup>2</sup> Sanep Ahmad<sup>3</sup>

## **ABSTRAK**

Islam begitu mendorong penganutnya untuk menjalankan perniagaan sehingga berniaga itu dikategorikan sebagai fardhu kifayah. Dengan keistimewaan kedudukan perniagaan dalam Islam, maka aspek pembangunan seorang usahawan memainkan peranan yang sangat penting dalam pertumbuhan ekonomi sesebuah negara. Kajian ini mencadangkan model pembangunan usahawan muslim berteraskan paradigma akhlak secara deskriptif. Ia meliputi empat komponen utama iaitu tawakal, sabar, syukur dan sedekah (infaq) yang menjadi prinsip kepada budaya kerja berencana dalam usaha membentuk peribadi usahawan muslim yang menbangun. Kajian mendapati bahawa model pembangunan usahawan berteraskan paradigma akhlak ini mempengaruhi secara signifikan serta berpotensi digunakan bagi melahirkan usahawan muslim yang aktif, produktif dan realistik.

**Katakunci:** Usahawan Muslim, Pembanguanan usahawanan dan Akhlak.

#### **ABSTRACT**

Islam so encourage followers to do business until business is categorized as fard Kifaya. With a special position in Islamic business, then an entrepreneur development aspect plays a very important role in the economic growth of a country. This study suggests a model for muslim entrepreneur development paradigm based on a descriptive character. It covers four main components trusts, patience, gratitude and charity (donation) that the principle of the work culture in an effort to develop a personal plan to muslim entrepreneurs. The study found that the model based development paradigm of moral entrepreneurs is the potential to significantly influence used to produce the active muslim entrepreneurs, productive and realistic.

**Keywords:** Muslim Entrepreneurs, development for entrepreneurs and Morals.

## 1. PENDAHULUAN

Islam merupakan satu cara hidup yang lengkap lagi menyeluruh. Setiap perkara dalam kehidupan bermasyarakat telah disusun atur oleh Allah SWT tanpa sebarang kealpaan termasuk dalam keperluan lapangan keusahawanan. Islam menerima keusahawanan sebagai satu cabang ibadah sehingga mengiktiraf 9/10 daripada sumber rezeki datang dari aktiviti ini. Sehubungan dengan itu, keusahawanan merupakan salah satu bibang pekerjaan yang amat digalakkan dan dituntut dalam Islam. Seperti sabda Rasulullah SAW dalam sebuah hadith yang bermaksud:

"Peniaga yang sangat benar dan beramanah akan dibangkitkan bersama para Nabi, siddiqin dan para shuhada". (Hadith riwayat Hakim dan Tarmizi)

Aqidah, kaedah, idealisme, konsep dan pengajaran Islam mengenai keusahawanan telah lama wujud di dalam al-Quran, Sunnah dan Kitab-kitab fekah yang ditulis oleh ulama'-ulama' besar Islam. Namun demikian, pengajaran Islam dibidang ini tidak begitu menonjol sebagaimana bidang ibadah khusus lain seperti sembahyang, puasa, zakat, haji dan sebagainya (Adnan Alias, 2002). Sehubungan dengan itu, tujuan kajian ini adalah menjurus ke arah memberi sokongan ke atas galakan tersebut.

Usahawan ditakrifkan seorang individu yang berkeupayaan meneroka sesuatu yang baru dan peka terhadap ruang yang ada serta mengenalpasti peluang dimana orang lain melihatnya sebagai sesuatu kekeliruan (Kuratko, 2004). Berdasarkan takrifan tersebut, individu yang bergelar usahawan adalah seorang yang berusaha dengan gigih dan tekun menghadapi pelbagai cabaran serta mempunyai daya kreativiti dan inovasi yang tinggi untuk merebut dan mencipta peluang yang ada.

Keusahawanan pula merupakan sebahagian daripada aktiviti yang berkiatan dengan bidang perekonomian, ia dilihat sebagai orientasi pengembangan ekonomi dan perdagangan yang mempunyai objektif untuk kesejahteraan masyarakat dalam memenuhi kehendak dan keperluan manusia. Dengan kata lain, keusahawanan ialah mencipta perniagaan dengan mencari peluang, mengambil risiko, menterjemahkan idea kepada realiti dengan menggabungkan pelbagai perspektif dalam melahirkan individu usahawan itu sendiri (Haniza, 2008).

Usahawan muslim ditakrifkan sebagai individu yang mengambil tanggungjawab untuk memenuhi keperluan masyarakat dan mengharapkan dua keuntungan iaitu di dunia dan di akhirat dengan menghasilkan sesuatu barang dan perkhidmatan dengan cara yang halal dan tidak bertentangan dengan syariat Islam. Usahawan muslim juga ialah individu yang sentiasa taat dan patuh kepada arahan dan larangan Allah dengan tujuan meningkatkan kesejahteraan penghuni semesta alam (Aziz, 2010). Firman Allah yang bermaksud:

"Sesungguhnya orang-orang yang selalu membaca kitab Allah, mendirikan sembahyang dan mendermakan daripada apa yang Kami kurniakan kepada mereka, secara sembunyi atau secara berterang-terang. Mereka mengharapkan sejenis perniagaan yang tidak akan mengalami kerugian"

(Al-faatir: 29)

Manakala akhlak menurut Islam adalah salah satu dari cabang iman dan ibadat, karana iman dan ibadat manusia tidak sempurna melainkan lahir padanya akhlak yang mulia. Maka sumber akhlak dalam Islam adalah pada iman dan taqwa selain mempunyai tujuan yang jelas mencari redha Allah SWT. Akhlak menekankan tentang perangai, sikap dan etika dengannya seseorang usahawan muslim akan melakukan tindakan secara praktikal. Kerana seorang usahawan mempunyai etika tertentu yang harus dipatuhi, walaupun keuntungan menjadi antara objektif namun harus mengelakkan penipuan dan penindasan serta meningkatkan galakkan kepada kejujuran, kebenaran dan sifat ikhsan.

## 2. METODOLOGI KAJIAN

Kajian ini merupakan kajian jenis deskriptif iaitu membincangkan satu model pembangunan usahawan muslim berteraskan paradigma akhlak. Pengumpulan data dibuat melalui sumber yang diambil daripada buku, jurnal, artikel, maklumat daripada surat khabar dalam talian, majalah, dan laman sesawang yang berkaitan dengan tajuk kajian. Rujukan dibuat bagi mengkaji kepentingan pembinaan akhlak dalam usaha meningkatkan rangka kerja pembangunan usahawan muslim dalam perniagaan. Kajian mencadangkan empat kompenen penting dalam pembentukan akhlak, iaitu sifat tawakal, syukur, sabar dan sedekah (inhfaq) sebagai teras utama pembangunan usahawan muslim serta implikasi paradigma akhlak melalui empat sifat iaitu insaniah, wasatiah, istiqamah dan muhasabah dimana akhlak mempengaruhi secara signifikan dalam pembangunan usahawan muslim.

## 3. KONSEP AKHLAK

Konsep akhlak secara umumnya memainkan peranan yang penting dalam mencorakkan tingkah laku dan kehidupan seseorang. Setiap tingkah laku yang lahir daripada kehidupan manusia sebenarnya adalah cernaan daripada apa yang tersemat di dalam dirinya. Sebagaimana menurut imam Al-Ghazalli: "Setiap yang ada di dalam hati akan menzahirkan kesannya pada anggota badan sehinggalah setiap pergerakannya adalah berlandaskan kepadanya"

Akhlak adalah cerminan individu seseorang. Dengan erti kata lain, iman yang sempurna akan melahirkan akhlak yang mulia. Rasulullah SAW telah bersabda dalam sebuah hadith yang bermaksud:

"Dikalangan mukmin yang paling sempurna imannya ialah yang terbaik akhlaknya". (Hadith riwayat Tarmizi)

Aspek pembangunan keusahawanan berteraskkan akhlak haruslah diambil berat setiap kali ingin melakukan agenda perubahan. Kerana ia boleh dikira sebagai pemangkin perubahan seperti yang pernah disebut oleh Imam As Syahid Hassan Al-Banna sebagai "tongkat perubahan". Pandangan ini menurut beliau benar kerana sebuah krisis yang dihadapi oleh masyarakat khususnya dan dunia amnya adalah merupakan krisis kejiwaan dan kerohanian sebelum ianya menjadi krisis ekonomi, politik atau sebagainya.

Pada dasarnya, muamalah Islam mengandungi 3 doktrin asas yang menjadi pelengkap kepada kesempurnaan konseptual tersebut. Iaitu bersendikan tuntutan akidah, berkonsepkan ibadah dan implikasi dengan akhlak. Kombinasi ketiga-tiga asas ini merupakan adunan yang istimewa dalam merencana aktiviti perekonomian manusia. Refleksi daripada asas-asas pembentukan sistem tersebut mencerminkan kerangka nilai keusahawanan Islam yang diciptakan adalah untuk memenuhi obligasi sosial dan melaksanakan tuntutan umum masyarakat. Merujuk kepada adunan ketiga-tiga komponen tersebut, ia menjadi satu rumusan formula untuk membentuk keusahawanan Islam yang dinamik dan komprehensif, kerana ia mampu membentuk keperibadian individu usahawan muslim. Seperti pada rajah 2 di bawah:

Rajah 2: Kerangka Sistem Muamalah Islam

Sumber: Shuhairimi dan Ku Halim (2010)

## 3. DAPATAN KAJIAN

## 3.1 Model Pembangunan Usahawan Muslim Berteraskan Paradigma Akhlak

Rajah 3 menunjukkan cadangan model pembangunan usahawan muslim berteraskan paradigma akhlak dimana ia mempunyai hubungan yang signifikan. Empat momentum utama model ini ialah tawakal, yang bermaksud mewakilkan atau menyerahkan, dengan kata lain berserah diri sepenuhnya kepada Allah selepas berusaha, ikhtiar dan berdoa. Tawakal akan menjadikan usahawan muslim seorang yang tenang serta matang dalam tindakan kerana telah menyerahkan semua keputusan kepadaNya. Kedua, ialah sabar yang bermaksud menahan diri daripada melakukan sebarang tindakan yang dilarang dalam Islam, seperti marah dan perasaan hasad dengki. Islam menjanjikan kemenangan kepada golongan orang-orang yang sentiasa sabar serta akan memiliki kekuatan jiwa.

Elemen akhlak yang terdapat dalam model pembangunan usahawan Islam seterusnya ialah syukur yang bermaksud menggunakan pemberian Allah dengan menurut perintahNya dengan serta dizahirkan melalui perbuatan dan kata-kata. Dengan itu, Allah akan melipatgandakan ganjaran dengan menambahkan nikmat dalam kehidupan. Terakhir, sifat sedekah (infaq) yang bermaksud memberi dengan ikhlas kepada orang yang memerlukan dengan niat mendapatkan keredhaan Allah tanpa mengharap balasan. Antara kelebihan yang dijanjikan ialah mendapat rezeki yang lebih banyak dan sentiasa merasa cukup walaupun sedikit.

Berusaha Harmoni Tawakal Insaniah Ilmu Tenang Berkhemah Menang Wasatiahh Sabar Matang Kekuatan Akhlak Berpendirian Nikmat Syukur Istiqamah Berdayasaing Hargai Pembangunan Strategi Gandaan Infaq Muhasabah Usahawan Sistematik Muslim Berkat 512

Rajah 3: Kerangka Teori Model Usahawan Muslim

Nota: Adaptasi Daripada Muhammad Syukri (2009), Ab. Aziz (2010), Shuhairimi & Ku Halim (2010).

Jadual 1: Penerangan Pembolehubah Nyata Yang Digunakan Dalam Analisis Data Kajian Ini

Bil	Pembolehubah	Penerangan	
1	Tawakal:	Menyerah diri sepenuhnya kepada Allah	
	I. Berusaha	Sentiasa berusaha dan tidak pernah berputus asa	
	II. Tenang	Bersifat tenang dengan setiap keputusan atau hasil atas	
		usaha	
2	Sabar:	Menahan diri dari sifat mazmumah (negetif)	
	I. Menang	Sentiasa menang di sisi Allah	
	II. Kekuatan	Memberi kekuatan dalam jiwa	
3	Syukur:	Menggunakan pemberiaan Allah dengan patuh	
	T. NEL .	perintahNya	
	I. Nikmat	Ditambhkan nikmat dalam kehidupan	
	II. Hargai	Bersyukur melalui hati, perbuatan dan lidah (kata-kata)	
4	Infaq:	Pemberian kepada orang yang memerlukan dengan niat	
		mendapatkan keredhaan Allah	
	I. Gandaan	Mendapat rezeki lebih banyak	
	II. Berkat	Dikurniakan rezeki yang cukup walaupun sedikit	
5	Insaniah:	Ikhsan terhadap orang lain	
	I. Harmoni	Suasana aman	
	II. Ilmu	Mendidik masyarakat melalui aktiviti muamalah	
6	Wasatiah: Serdahana		
	I. Berkhemah	Mendidik jiwa agar tidak menurut hawa nafsu	
	II. Matang	Rasional dalam setiap tindakan	
7	Istiqamah:	Konsisten	
	I. Berpendirian	Tidak mudah terpengaruh atau terpedaya	
	II. Berdayasaing	Mampu mewujudkan persaingan dalam pasaran	
8	Muhasabah:	Menilai diri sendiri	
	I. Strategi	Tidak mengulangi kesilapan yang sama	
	II. Sitematik	Memudahkan perjalanan atau urusan perniagaan	

# 3.2 Implikasi Paradigma Akhlak Terhadap Pembangunan Usahawan Muslim

Akhlak dan tingkah laku usahawan Muslim yang disaduri dengan nilai-nilai Islam perlu dilihat sebahagian daripada komponen penting dalam kerangka pembangunan usahawan. Meskipun akhlak tersebut dilihat subjektif dan tidak bermotifkan keuntungan, namun mengabaikannya dalam amalan keusahawanan akan menjejaskan usaha untuk melahirkan usahawan muslim yang dinamik dan cemerlang.

Implikasi daripada paradigma akhlak yang mendasari pembangunan usahawan muslim dapat dilihat melalui empat aspek berikut:

# 1. Insaniah

Aspek insaniah ini apabila diserap kedalam sistem keusahawanan Islam, akan membentuk satu sistem yang bersifat harmoni dengan kepentingan umum manusia. Usahawan yang terdidik dengan nilai kemanusian akan sentiasa bersikap toleransi, berkasih sayang, saling bantu membantu, bersikap ikhsan terhadap orang lain dan pelbagai sifat makhmudah yang lain. Justeru itu, tidak akan timbul soal

mengambil kesempatan, menindas orang lain, sikap hasad dengki dan pelbagai sifat mazmumah yang lain. Ini kerana sifat insaniah yang telah sebati dalam jiwa pengusaha atau usahawan akan menjadi penghalang kepada pelakuan yang negatif dan tidak berakhlak.

## 2. Wasatiah (sederhana)

Tuntutan kepada nilai wasatiah (sederhana) amat ditekankan dalam membentuk peribadi usahawan muslim yang berjaya. Bersikap sederhana dalam apa sahaja tindakan mencerminkan sikap kematangan, tenang dan bijaksana. Dalam keadaan ini, ia dapat mengelakkan usahawan daripada bersikap sebaliknya seperti boros atau tidak berhemah ketika berbelanja, tabiat suka berhutang, berlebih-lebihan serta mengikut tuntutan hawa nafsu. Sikap wasatiah ini akan melahirkan ciri ketakwaan yang tinggi serta dapat mendekatkan diri dengan Allah ketika dalam kesenangan dan kesusahan. Menafikan sikap wasatiah ini akan menjurus usahawan tersebut kepada sikap sombong, bangga diri dan angkuh yang jelas bertentangan dengan nilai agama Islam dan norma kehidupan masyarakat.

## 3. Istiqamah

Implikasi sifat istiqamah dalam pendekatan pembangunan usahawan muslim melalui paradigma akhlak bertepatan dengan sabda Rasulullah SAW dalam sebuah hadith yang bermaksud:

"Tidak lurus (istiqomah) iman seseorang hamba itu sehingga hatinya lurus dan hatinya tidak akan lurus sehingga lurus lidahnya". (Hadith riwayat Ahmad)

Istiqamah ditakrifkan sebagai tetap dan teguh di atas jalan yang betul lurus serta membawa keredhaan Allah, istiqamah mendidik usahawan yang berpegang teguh pada pendirian, konsisten dan tidak mudah terpedaya. Melalui sifat ini maka akan lahirlah usahawan yang sentiasa berdaya saing kerana berjaya menetapkan strategi keberkesanan proses, penyelidikan dan pembangunan barangan atau perkhidmatan serta tidak berputus asa meyakinkan kelebihan produk atau perkhidmatan yang ditawarkan menerusi hebahan (pemasaran) yang berterusan.

#### 4. Muhasabah (Penilaian diri sendiri)

Muhasabah bermaksud menilai diri sendiri atas tindakan yang telah dilakukan, secara tidak lansung mampu merancang tindakan yang perlu diambil untuk masa hadapan. Dengan mengaplikasikan amalan ini, usahawan mampu merancang strategi perjalanan keusahawanan dan perniagaan dengan lebih sitematik agar kesilapan yang sama tidak berulang. Sifat ini bertepatan dengan sabda Rasulullah SAW dalam sebuah hadith yang bermaksud:

"Orang yang pintar ialah orang yang menghitung dirinya serta beramal untuk hari selepas kematian sementara orang yang lemah ialah orang yang mengikut hawa nafsunya serta beragan-angan terhadap Allah dengan angan-angan (yang banyak)". (Hadith riwayat Tarmizi)

Perkara-perkara telah disebutkan diatas amat berkait rapat dengan budaya kerja usahawan muslim berjaya. Dimana akhlak mulia yang dimiliki oleh usahawan muslim akan lebih disenangi oleh rakan, pekerja dan juga pelanggan. Melalui akhlak mulia yang mereka miliki akan membolehkan usahawan muslim mewujudkan suasana kerja yang bebas daripada perasaan hasad dengki, takabbur, mementingkan diri sendiri, nepotisme, kronisme dan merendah-rendahkan kemampuan orang lain. Usahawan muslim perlu menyedari disamping membangunkan kekayaan dan keuntungan, mereka juga berperanan sebagai pendidik. Mereka perlu mendidik setiap pihak yang mempunyai kepentingan dengan mereka agar memiliki akhlak yang mulia. Sabda Rasulullah SAW dalam sebuah hadith yang bermaksud:

"Sebaik-baik manusia diantara kamu ialah orang yang baik akhlaknya" (Hadith riwayat Bukhari).

## 4. KESIMPULAN

Bidang perniagaan atau keusahawanan adalah bidang yang sangat mencabar. Ia melibatkan aktiviti-aktiviti pengemblengan sumber pengeluaran, pengurusan organisasi dan pengambilan risiko. Ianya memerlukan iltizam dan daya juang yang tinggi. Oleh kerana itu, model ekonomi yang berpaksikan kepada akhlak tidak akan mengorbankan nilai-nilai murni demi mencapai keuntungan material semata-mata. Dari sudut dimensi Islam, usahawan yang berjaya bukan sahaja cemerlang dalam setiap aktiviti keusahawanannya, tetapi ia juga didominasi dengan nilai-nilai akhlak dan moral yang tinggi. Usahawan yang berjaya bukan sahaja memberi keuntungan kepada dirinya semata-mata tetapi memberi manfaat kepada keluarga, masyarakat, dan negara melalui sumbangan pemikiran dan tanaganya (Shuhairimi Abdullah, 2012). Pendekatan keusahawanan perlu dilakukan secara menyeluruh kerana ia turut memberi kesan kepada pembangunan sosial, ekonomi, ketenteraan, dan politik umat Islam. Justeru itu, kegiatan keusahawanan seperti perniagaan dan perdagangan, kewangan dan perbankan, pelancongan dan perindustrian, pertanian, penternakan dan perikanan perlu dirancang dengan teliti bagi memastikan ia mampu dibangunkan selari dengan tuntutan semasa kearah melahirkan usahawan yang kaya harta dan jiwa dengan akhlak yang mulia.

## ISLAMIC ENTREPRENEURIAL MOTIVATION: AN ANALYTICAL REVIEW

Salmah S.<sup>1</sup> Kalsom Abd. Wahab<sup>2</sup> Asmaddy Haris<sup>3</sup>

#### **ABSTRACT**

This paper is part of a study that discussed on the issues of entrepreneurship and motivation within the Islamic perspective. In analytically reviewing on how intention (niat) motivates entrepreneur toward their behavioral change and actions, the Theory of Planned and Behaviour (TPB) is used. The intention focused on three angles, which are; 1)to perform ibadah, 2)Al Falah and 3)wealth creation. The intention is moved ahead into action by Islamic intrinsic and extrinsic motivation factors and the performance will be analyzed base on the behaviour of the muslim entrepreneur. Thus, this research can help to contribute in the knowledge development of Islamic entrepreneurial motivation which will be useful particularly to the muslim entrepreneurs in Malaysia.

**Keywords**: Islamic entrepreneurship, Islamic motivation and Intention

#### 1. INTRODUCTION

Economic growth is undeniably crucial for any country's development, and entrepreneurship is one of the strategies to help accelerate a country's economic development. Entrepreneurship contributes to economic development through job creation, increasing of wealth and incomes, and linkaging the local economy to the global arena (Henderson, 2002:63). The effect of entrepreneurship to the economic growth is not straightforward and the effect different between countries (Stel *et al.* 2005:16). Thus, entrepreneurship is pertinent.

Entrepreneurship is a process (Shane & Venkataraman's, 2000: 218) and entrepreneurs are the actors either be it individual or group who established businesses with the existence of risk and uncertainty. In facing all the challenges, motivation play a role as a driving force to achieve the needs and expectation (Mullins, 1996: 480 & Ryan & Edward, 1999: 1). There is a rich discussion of conventional literatures in recognizing the essential characteristics and factors contributing to the development of entrepreurship and motivation and Religion is one of them. Within all the famous known religions, Islam is identified as encouraging entrepreneurship (Audretsch *et al.*, 2007:13).

The relationship between religion and enterprise is complex, interdependent, and unclear. Religion affects believer's entrepreneurial activities, influencing their decision to become entrepreneur, enterprise management styles, and the entrepreneur's contact network (Dodd, 1998:71). Weber (1978) (as cited from Urgur, 2009:216) stated that religion has certain effects or plays essential role in shaping the economic. However, the discussion on Islamic entrepreneurship is under-presented and overlooked in the literatures and according to Kayed et al., (2010:380) there is a huge gap addressing on Islamic entrepreneurship in all Arab and Islamic countries. This paper therefore is part of the literature study on the the Islamic entrepreneurial motivation focusing on the intention (*niat*).

#### 2. LITERATURE REVIEW

## 2.1 Islam and Entrepreneurship

Islam is a holistic religion (*syumul*<sup>f</sup>) as it is a way of life (*Addin*) encomposing aspects of economic, social, political and moral aspect of human life (Ataul Huq Pramanik, 2002: 40 & Ahamad Asmadi Sakat et al, 2012: 3251). In Islam, all aspect of live are blended together or not isolated from each other and hence, Islam and business is interrelated. The Prophet SAW is infact, an entrepreneur before he became a prophet and His way of doing business becomes a pertinent reference. To be a good Muslim entrepreneur, one must first be a religious person, and a religious practitioner (religious person who also practice what he learn) (Jose Vargas-Hernandez *et al.*, 2010:125).

Islamic believer or muslim is guided by the Islamic Law or known as *Shari'ah*. *Sharia'ah* is a set of Islamic regulations and principles to guide human actions and interaction with Allah SWT and within human. It's genrated from Allah SWT as stated in Al-Quran, Prophet's act and *Ijma* (accepted under the syariah laws by consensus of opinion) (Ateeq-ur-Rehman et *al.*, 2010:63). In related with business, the culture and principle is include under the *Fiqh muamalat*. *Fiqh muamalat* refer to the *Shari'ah* ruling related to the social relationship between a person and others which among others its cover on business (Abdullaah *et al.* 2011:6 & Surtahman, 2001:12). The association between *Shari'ah*, *Fiqh* and *muamalat* is shown as in **Figure 1**.

Shariah
Fiqh

Muamalat

Figure 1: The Relation between Shari'ah, Fiqh and Muamalat Terms

Source: Abdullaah et al. 2011. p.9

As the creation of Allah SWT, muslims are asked to perform all the instructions of Allah SWT to prove of his/her obedience (Verse Adz Dzhariyat, 51:56<sup>ii</sup>, Verse Al-An'aam 6:162<sup>iii</sup>). In Islam, man are created as the best moulds (Verse Al-Tin, 95:4<sup>iv</sup>), great creation than other creation (Verse Al-Isra', 17:70<sup>v</sup>) and appointed as a *Khalifah* or care taker of the world (Verse Al-An'aam, 6:165<sup>vi</sup>). Muslims believed that the wealth is the risqué own by Allah SWT and man is only a manager or trustee of the wealth (Yusuf Al-Qaradawi, 1988: 39 & Umer Chapra, 2000:30).

"And ye have no good thing but is from Allah..." (Al-Qur'an. Verse An-Nahl 16:53).

Man holds three main duties which are responsible to Allah SWT (*Hablumminal' Allah*), between man (*Hablumminan nas*) and earth (*Hablummin alam*). As a *Khalifah*, man are responsible to Allah SWT and they were ask to work for searching the *halal risque'* (*permited income*) as stated below,

"And when the Prayer is finished, then may ye disperse through the land, and seek of the Bounty of Allah. And celebrate the Praises of Allah often (and without stint): that ye may prosper" (Verse Al-Jumu'ah, 62:10).

Islam asks his believer to work and not depending on other person. Therefore, man would be able equip their needs and Allah SWT had created the resources (Verse Al Baqarah, 2:22 vii). Through resources, man not only would able to equip their survival and physical need but also creating wealth (Kriger & Seng, 2005:778). History shows that the previous Prophet were also working in their life such as Prophet Adam AS was a farmer; while Prophet Nuh AS was a carpenter and the Prophet Muhammad SAW was an entrepreneur and herdsman (Mohd Nasir *et al.*, 2010: 5-6).

## 2.1.1 Intention to become Muslim Enterpreneur

Theory of Planned and Behaviour (TPB) highlighted that intention (*niat*) is the main factor motivating human behavior. The intention indicates how hard individual tried and how much efforts put to perform the behavior Intention is determined by three key elements which are; the attitude toward the behavior, subjective norm, and perceived behavioural control (Ajzen, 1991:181). The diagram of TPB shown as **Figure 2**.

Attitude toward the behavior
(overall individual evaluation of the behaviour)

Subjective Norm
(individual's perception of social norative pressures, or relevant others' beliefs that he or she should or should not perform such behavior)

Perceive behavioral control (people's perception of their ability (ease or difficult) to perform their behaviours of interest)

Figure 2: Theory of Planned Behaviour (Ajzen, 1985, 1988)

In relation with religion, Safiek Moklis recognized that religion is one of the most universal and influential that has significant influence on people's attitudes, values and behaviors at both the individual and societal levels (2009:75). From the Islamic perspective, intention is very important more important than the outcomes (Syed & Ali, 2010:5). The reward will be based on the intention as stated in *Hadith*, "the reward of deed depends upon the intention (*niat*) and every person will get the reward according to what he has intended" Shahih Bukhari. In conjunction, the intention of a muslim entrepreneur to become as an entrepreneur is to perform *ibadah*, to achieve *Al Falah* (success) and for his/her wealth creation.

## a) Ibadah

The philosophy of muslim entrepreneurs involving themselves doing business is part of his/her *ibadah* to portray obedient and subservient to the Creator, Allah SWT and getting His blessing (Allah's SWT Redha or *Mardhotillah*). As stated in the Holy Al-Qu'ran in Verse Adz-Dzhariat, 51:56, "I have only created Jinns and men, that they may serve Me". Therefore to a muslim, every single action and doing of Muslims to improve their life for a better living and for the goodness of mankind and the environment and following Islamic syariat with the sincere intention for Allah SWT will be considered as his/her good-deed or *ibadah*. All the good or bad deed will be measured in the Here-after as stated below,

"Nay! When the earth is pounded to powder, And thy Lord cometh, and His angels, rank upon rank, And Hell, that Day, is brought (face to face),- on that Day will man remember, but how will

that remembrance profit him?, He will say: "Ah! Would that I had sent forth (good deeds) for (this) my (Future) Life!" . (Al-Qur'an. Verse Al-Fajar, 89: 21-23).

Besides doing business as an *ibadah*, it is also a *fardu kifayah* for Muslims (Amran et *al.* 2011:487) and according to Siddiqi (1996: 49), *fardu kifayah* is a collective responsibility which means it must be done by at least someone in the community, or if not, the whole community will be in sin (Jose' G. Vargas Hernandez er *al.*, 2010: 125 & Mohamad Yusuf, 2003: 169). By becoming as an entrepreneur, muslim could apply the Islamic syariat in their activity and Allah SWT will give His help for those who are working for Islam and Allah SWT as stated below,

"O ye who believe! If ye will aid (the cause of) Allah, He will aid you, and plant your feet firmly" (Al-Quran. Verse Muhammad, 47:7).

## b) Al-Falah (Successful)

As an entrepreneur, their goal is to be successful in their business. In the conventional perspective, successful is strongly related with the economic performance such as growth of turnover, profit, investment, personnel, and personal income since the start of the company (Gelderan *et al.*, 2000:172). However, to a muslim the success is measured beyond that. The true muslim believes that all of their action will be evaluated by Allah SWT regardless the deed's size (*Al Zalzalah*, 99:7-8).

"Then shall anyone who has done an atom's weight of good, see it!. And anyone who has done an atom's weight of evil, shall see it".

Verse Az Zalzalah, 99: 7-8

In Islam, *Al-Falah* is not measured in materials or profit (Yazilmiwati et al., 2012:1) but the mean and the way of achieving it (Mohammad Reza *et al.*, 2010:126). Muslim do believe that they are uncounted of all their activity good or bad will be rewarded as stated below,

"Those who persecute (or draw into temptation) the Believers, men and women, and do not turn in repentance, will have the Penalty of Hell: They will have the Penalty of the Burning Fire. For those who believe and do righteous deeds, will be Gardens; beneath which rivers flow: That is the great Salvation, (the fulfillment of all desires)"

Verse Al Buruuj, 85: 10-11

## c) Wealth Creation

In nature, man is created to be very loving on wealth as stated below,

"And violent is he in his love of wealth". Al-Qur'an Verse Al'Aadiyaat (100:8)

In realizing this, the Prophet SAW warned Muslim by saying "The Muslim will not a truly Muslim until he love others as same as like he love himself" (narrated by Anas Ibnu Malik). Imam Al-Ghazali another famous Islamic thinker (year born – death) urged muslims to live moderately in their standard of living or in other word does not encourage muslim to be extreme in gaining materialism. In addition, he suggested that any income over and above the basic necessities of live for oneself and family (eg. food, clothing, and shelter) may be surrounded for the expenditure on the poor (S. Mohammad Ghazanfar et al., 1997:9). Thus, on the basis of a caring religion, every Muslim has the responsibility to help his family, relatives, and others as stated in the Al-Qur'an:

"... Help ye one another in righteousness and piety, but help ye not one another in sin and rancour: fear Allah. For Allah is strict in punishment" (Al-Qur'an. Verse Al Maa'idah 5:2).

Another verse related to this is stated in Verse Al Anfal (8:24)<sup>viii</sup>, Verse Al Baqarah (2:245)<sup>ix</sup> Verse An-Nisaa' (4:36)<sup>x</sup> and Verse Al Imran (3:92)<sup>xi</sup>.

Beside creating wealth for their own good, man are asked to share their profit in order to help prosper the community. It had been mentioned at the number forth in the five pillars of Islam which is "pay zakat". This is parallel with the spirit of Islam which stressed on the development on *ummah* (*community*) in collective (Kriger & Seng, 2005:777). Doing charity through is also a part of muslim responsibility as a *khalifah*. Among the ways to help other people and development of Islam can be through *waqaf*, *sadaqah*, donation, and *zakah*.

## 2.2 Islamic Entrepreneurial Motivation

Wlodkowski, a psychologist and a scholar described motivation with the process of (a) arouse and instigate behaviour; (b) give direction and purpose to behaviour; (c) continue to allow the behaviour to persist; and (d) lead to choosing or preferring a particular behavior (1978:12). There are two type of motivation either intrinsic or extrinsic. The distinct is base on the reason of engagement. The intrinsic motivation means the individual are motivated from within or internal command according to their belief system such as the desire to get power, independence, acceptance, and social status. Meanwhile, extrinsic motivation mean, the individual is inspiring to act in response to the outside factor such as award, money, and benefit (Weiner, 1992: 42).

In Islam, the muslim entrepreneurs are inspired by extrinsic and intrinsic motivation. Muslims are asked to get both, in life and Here-after.

"But seek, with the (wealth) which Allah has bestowed on thee, the Home of the Hereafter, nor forget thy portion in this world: but do thou good, as Allah has been good to thee, and seek not (occasions for) mischief in the land: for Allah loves not those who do mischief." (Al-Quran. Verse Al Qashash, 28:77).

The ultimate goal of extrinsic and intrinsic motivation of muslim is to get blessing from the Mighty Creator Allah SWT, on the Day of judgement. In motivating His creation, Allah SWT promise rewards in order to encourage a man to be an obedient creation and on the other hand goaded strong punishment if he doesn't (Alawneh, 1998: 20). Allah SWT encourages by good recompenses to those who follows His laws and a bad reciprocation for those rebellious, through His strong 'firman' in the Al-Qur'an which are clearly stated in several Verse such as,

"And their Lord hath accepted of them, and answered them: "Never will I suffer to be lost the work of any of you, be he male or female: Ye are members, one of another: Those who have left their homes, or been driven out therefrom, or suffered harm in My Cause, or fought or been slain, verily, I will blot out from them their iniquities, and admit them into Gardens with rivers flowing beneath; A reward from the presence of Allah, and from His presence is the best of rewards" (Al-Ouran Verse Al-Imran (3:195)

"Whoever works righteousness, man or woman, and has Faith, verily, to him will We give a new Life, a life that is good and pure and We will bestow on such their reward according to the best of their actions". (Al-Quran. Verse Al-Nahl, 16:97)

"He who for sakes his home in the cause of Allah, finds in the earth Many a refuge, wide and spacious: Should he die as a refugee from home for Allah and His Messenger, His reward becomes due and sure with Allah. And Allah is Oft-forgiving, Most Merciful". (Al-Qur'an. Verse An Nisaa' 4:100).

As a motivation and for the justice, Allah SWT mentioned that a good Muslim will receive a reward, with the finally seek *Jannah* or heaven are waiting for them. Meanwhile for those who don't, hell is ready as stated below:

"For those who believe and do righteous deeds, will be Gardens; beneath which rivers flow: That is the great Salvation, (the fulfilment of all desires)".

(Al-Quran . Verse Al-Buruuj (85: 11),

The above discussions and evidences showed that the motivational elements are stated in Al-Qur'an in which the up-most motivation is given by the Mighty Creator Himselve that is Allah SWT who inspired His subjects to believe and to hold and works toward His encouragement of the do's and His forbidden of the don'ts.

# 2.3 The Performance of Muslim Entrepreneur

The successful entrepreneur is "the individual who fully committed in Islamic requirements and perform work activities meeting the requirement of it" (Shuhairimi, 2013:334). In this contact, the performance is measured base on intention (*niat*) to perform *ibadah*, getting *Al Falah* (success) and wealth creation in this short life of the earthly world and the effort of pleasing Allah and getting His blessing (Mardhotillah) so to be rewarded by Allah with Jannah in the everlasting life in the Hereafter.

## 2.4 Conceptual framework

Base on the literature, the suggesting model of Islamic entrepreneurial motivation is as below.

# 3. METHODOLOGY

The research will be conducted in qualitative method. Respondent will consist of muslim entrepreneurs in Malaysia.

#### 4. CONCLUSION

Entrepreneurship is part and parcel of the complete way of life of Islam. Islam have their own way of doing business as stated in the *Shari'ah*. As a muslim entrepreneur, the intention (*niat*) is important to justify the reward. The Intention of becoming an entrepreneur is part of the task of performing the fardhu kifayah of *ibadah*, achieving *Al falah* and wealth creation becomes the foundation in understanding the scenario of muslim entrepreneur. The findings of this study is hopes to help in the understanding of Islamic entrepreneurial concept and practices among muslim entrepreneurs and further helps the development of suitable motivational modules to develop new muslim entrepreneurs.

- Verse Al-Israa', 17:70, "We have honored the sons of Adam; provided them with transport on land and sea; given them for sustenance things good and pure; and conferred on them special favours, above a great part of our creation".
- Verse Al-An'aam, 6:165, "It is He Who hath made you (His) agents, inheritors of the earth: He hath raised you in ranks, some above others: that He may try you in the gifts He hath given you: for thy Lord is quick in punishment: yet He is indeed Oft-forgiving, Most Merciful".
- Verse Al-Baqarah, 2:22, "Who has made the earth your couch, and the heavens your canopy; and sent down rain from the heavens; and brought forth therewith Fruits for your sustenance; then set not up rivals unto Allah when ye know (the truth)".
- Verse Al-Anfal 8:24 "O you who believe! Answer Allah and (His) Messenger when he (the Messenger) calls you to that which will give you life, and know that Allah comes between a person and his heart. And verily to Him you shall (all) be gathered".
- Verse Al Baqarah 2:245 "Who is he that will lend to Allah a goodly loan so that He may multiply it to him many times And it is Allah that decreases or increases (your provisions), and unto Him you shall return".
- Verse An Nisaa', 4:36 "Serve Allah, and join not any partners with Him; and do good- to parents, kinsfolk, orphans, those in need, neighbours who are near, neighbours who are strangers, the companion by your side, the wayfarer (ye meet), and what your right hands possess: For Allah loveth not the arrogant, the vainglorious".
- vi Verse Al-Imran, 3:92 "By no means shall ye attain righteousness unless ye give (freely) of that which ye love; and whatever ye give, of a truth Allah knoweth it well".

# AN EXPLORATORY THE FACTORS AFFECTING THE INTERNET BANKING ADOPTION: A QUALITATIVE STUDY AMONG POSTGRADUATE STUDENTS

Nabil Hussein Al-Fahim<sup>1</sup> Wan Jamaliah Wan Jusoh<sup>2</sup>

#### **ABSTRACT**

This paper aims to explore and understand the factors that affect the internet banking adoption among postgraduate' students in International Islamic University Malaysia (IIUM). Approach- Semi-structured interviews with eight informants; four adopters and four non-adopters on postgraduate' students were conducted to explore this issue. The results revealed that adopters and non-adopters realized that internet banking (IB) has several benefits and conveniences. However, non adopters were concerned about some factors like trust, ease of use, awareness and security. The results also showed that adopters had positive influence on use of online banking and they did not have problems with these factors because they had sufficient knowledge and experience in using online banking. This study has several limitations such as the sample used for the study was from a specific group of respondents in Malaysia (postgraduate' students at IIUM). The second limitation was that informants were postgraduate 'students who had limitation on banking transactions. The findings are important to enable bank executives to have a better understanding of clients' perception to adopt internet banking. This will help banks' managers and owners formulate strategies that could significantly affect IBA among their customers.

**Keywords:** (IBA) Internet Banking Service, Explore, adopters and non-adopters, postgraduate's students, IIUM

#### 1. INTRODUCTION

Over the past few decades, the world has been an unprecedented evolution of Information Technology (IT) which affected life as we know it. All industrial sectors have been affected especially the services sector. In recent years, the banking industry has undergone rapid technological changes and development. Therefore, banks have launched several service access methods via new delivery channels like ATM technology and Internet Banking Service (hereafter called as IBS). The growing importance of Information Systems (IS) in banks was the establishment of fully-fledged IBS by Security first Network bank in USA in 1995 (Grandy, 1995). IBS is a new type of information system that uses the innovative resources of the internet and allows customers to engage in financial activities through virtual spaces and environments (Al-Majali, 2011).

Furthermore, IBS is extremely beneficial to both banks and clients. The main benefits to banks are cost savings, time saved, reaching new segments of the population, efficiency enhanced reputation and better customers' service satisfaction. Foley and Jayawardhena (2000) suggest that IBS offers new values to

<sup>&</sup>lt;sup>1,2</sup> A lecturer in International Islamic University Malaysia. Corresponding author: <u>nalfaheem@gmail.com</u>

clients such as reduced costs in accessing and using bank services, increased comfort and time-saving transactions that can be made seven days a week and twenty four hours a day without requiring physical interaction with the bank speed of transaction and better administration of funds (Tuchila, 2000). IBS also offers a competitive advantage to banks by providing an unlimited distribution network. Through this technology, banks are able to provide services electronically such as lowering transaction costs and adding value to the customers' banker relationship. Moreover, a comprehensive online banking service strategy is essential for success in the increasingly competitive financial services market. Competition and changes in technology and lifestyles have changed making it more competitive and innovative. Due to the speed of technological change, bank are forced to continuously search for alternative and innovation services and products to keep with the rapidly change world (Jeevan, 2000). As Booz and Hamilto (1997) predicted that approximately 20% of retail and 30 % of businessmen will use some form of Internet banking within the next five years.

## 1.1 Objective of the study

There are past literatures studies on the adoption of internet banking, several of these studies have tended to focus on developed countries such as USA and UK (Pikkarainen et. al, 2004). However, still not predictable in some developing countries (Kaled, 2008; Zolait et. al, 2010; Al Nahian and Shahriar, 2009; Mohammad and Anton, 2010). Since the success or failure of internet banking is contingent upon the degree of its adoption.

This study attempts to explore and better understand these factors through the sampling (postgraduate' students) customers point of view. The IBS literature suggests five success factors or constructs for IBSA (convenience, ease of use, trust, security and awareness) for this study. The research question for this research can be formulated as: (i) What are main factors which influence the adoption of internet banking services?. In this context the factors that affect the adoption rate of internet banking which were considered in this study are listed as follows: convenience or benefits; ease of use; trust; security and awareness.

#### 2. LITERATURE REVIEW

#### 2.1 Internet Banking

Internet banking or online banking has been defined as "the service that allows consumers to perform banking transactions using a computer with an internet connection" (Lloyd, 2007). Lloyd explains that these transactions include checking the balance in one's bank account transferring funds between accounts and bill paying. Pikkarainen et. al (2004) defined internet banking as "an internet portal used by clients for different types of banking services ranging from bill payment to investments". According to Enu (2000) defined online banking " the use of the internet as a remote delivery channel for banking services and an internet bank is defined as a bank that offers transactional services via the internet. Rahmath and Hema (2011) propose that IB is the latest initiative in the spectrum of innovative banking services, Tele banking, ATM and debit cards. Internet banking has emerged as effective delivery channels for traditional banking products.

With The exception of cash withdrawals internet banking gives customers access to almost any type of banking transaction at the click of the mouse (De, 2001). Electronic banking technologies refer to financial activities that involve use of electronic technology (Lee, 2009) ranging from the now ubiquitous automatic teller machines to other services such as direct deposit, e-fund transfer, e-bill payment, telephone banking and internet banking. Dube et. al (2009) identify that there are three functional levels/

types of internet banking that are currently employed in the market place and these are: Informational, Communicational and Transactional

# 2.2 The adoption of electronic banking

Sathye (1999) defines adoption as" the acceptance and continued use of a product, service and idea. "The critical question is whether customers will accept the electronic form of receiving information and performing transaction. Khaled (2010) explained that individual attitude toward accepting and adopting newly introduced technologies determine the success or failure of such technologies. As Zeithaml and Gilly (1987) found that the main reason for consumers not adoption ATMs was the lack of access, rather than their avoidance of the technology at its introductory stage

Another related study Enu (2000) reported that having access to e-banking technologies is related to whether the consumer is affiliated with a bank that offers a variety of service options including computer banking. He also mentioned that perception of socioeconomic characteristics and innovation characteristics have proposed to influence consumers' adoption technological innovation. Therefore, internet banking adoption is defined as "The customer's usage of multiple services represented in inquiring about account balance applying for a loan, remitting money from one count to another and many other services that are basically carried out online Shih and Fang (2004).

Another author described e-banking as internet banking that involves the provision of banking services such as accessing account transaction funds between accounts and offering internet financial services. Tan and Teo (2000) explained that the challenge to expand and maintain banking market share has influenced several banks to invest more in making better use of the internet.

# 2.3 Theoretical underpinning theory of Internet banking adoption

# 2.3.1 Technology Acceptance Model (TAM)

The Technology Acceptance Model (TAM) is one of a number of studies that have helped in providing theoretical framework for research in the adoption of information technology over the last few decades. TAM has been used extensively as the basis of a range of empirical studies (Muhammad, and Khalil, 2011). Introduced by Davis in 1986 TAM was specially designed to explain and predict the behavior technology acceptance at work by specifying the determinants in belief, attitude, intention-IT usage relationships (Davis, 1989).

Moreover, Moon and Kim (2001) reported that, it is necessary to further explore the nature of technology and using —context factors that may alter the adopter's acceptance. For example, recent research has illustrated that "trust" has a striking affect on users' willingness to engage in internet exchange of money and sensitive personal information. Another example is the perceived risk, Muniruddenn (2007) illustrated that perceived risk is a main determinant of adoption behavior business to consumers (B2C) e-commerce environment. Since the introduction of TAM in 1986, a number of studies have applied it in a broad variety of IT applications to predict user acceptance behaviors of computer technologies such as wireless email, voice mail and online shopping (Gefen and Straub, 2003). As Hamza et. al (2011) mentioned that the TAM posits a user's adoption of new information system is determined by that user's intention to use the system which in turn is determined by the user's beliefs about the system.

Furthermore, Davis (1989) noted that technology acceptance research must address how other variables influence ease of use, usefulness and user acceptance. Therefore, perceived ease of use and perceived usefulness may not explain behavior intentions towards the use of internet banking, necessitating a search for additional factors that can better predict the acceptance of internet banking. Additionally,

Muniruddenn (2007) stated that TAM examines the mediating role of perceived usefulness and perceived ease of use in their relation between external variables and the probability of system use. The use of an extended TAM as a theoretical framework is adopted to test the effect of external variable such as, security, risk, trust and awareness on the intention to use IB.

# 2.4 Factors influencing adoption of Internet Banking

Previous studies will show that altitudinal factors (also referred to as perceptions, characteristics, or experiences) affecting internet banking adoption. Some factors have most frequently demonstrated statistically significant relationship with internet banking adoption such as convenience, perceived ease of use, trust, security and awareness (Lloyd, 2007). These factors demonstrated statistically significant relationship in studies performed in the developing countries such as Norazah (2010) in Malaysia; Emad (2005) and Al-Majali (2011) in Jordan; Salim (2008) in Oman; Naris (2011) in Tunis; Salim (2010) in Labia; Naoufel and Elissar (2007) in Lebanon; Padaachi and Seetanah (2010) in Mauritius; Al Nahian and Shahriar (2009) in Bangladesh.

#### 2.4.1 Convenience

Padaachi and Seetanah (2010) pointed out that banks benefits from lower operating by offering online banking services which require less employees and fewer physical branches and also customers will benefit, around-the-clock availability and speed of IBSs. He also added customers can pay their bills at any place and any time when they access internet because of the versatility of e-payment method. As Pikkarainen et. al (2004) found that internet banking one the cheapest and more efficient delivery channels. He also added that benefits of the end adopters are numerous and include mainly convenience of service (time saved and globally accessible service) lower cost of transaction and more frequent monitoring of accounts among others. Furthermore, Ramsay and Smith (1999) explained that the main motivator for internet banking to be convenience in term 24 a day and 7 days a week access and time saved. Accessibility, which may be related to convenience, has been found important Fang He (2009).

## 2.4.2 Perceived ease of use

According to Muhammad and Khalil (2011) perceived ease of use is defined as: "the extent to which a person believes that using the system will be free of effort". In order to prevent the under-used useful system problem, online banking systems need to be both easy to use and easy to learn Emad (2005). The reason is that effort saved by improved perceived ease of use can enable people to do a better job or accomplish more at work, thus enhancing their job performance (Muhammad and Khalil, 2011).

In addition, Padaachi and Seetanah (2010) reported that perceived ease of use is postulated to have a positive direct effect on attitude toward using IT. Therefore, the higher perceived ease of utilizing a particular IT makes it more likely that the individual will have a positive attitude toward using it. Another related a study in Bangladesh on 400 banks' clients have been revealed positively affects the attitude toward using the technology and the findings imply that banks need to make internet banking ease of use Jannatul (2010). In the same field Kesseven and Boopen (2007) tested the impact of the some factors upon the attitudes of retail users of banking services in Mauritius, he found that the most significant factors are ease of use and trust to adopt of IB. Another study have done by Emad (2005) found that the research threw up three main issues related to perceived ease of use in Oman' banks, easy to manage and easy to learn. The researcher also inferred the difficulty of navigating on internet was highlight by Oman bank managers.

On the other hand, not all studies found that perceived ease of use has a positive effect on the adoption of online banking. For example, in developed counties such as Grandy (1995) reported that, the relationship between ease of use and attitude to use online banking no significant and it has not been added to the model. Another related study in Fenland Pikkarainen et. al (2004) found that the perceived use of use does not influence the adoption of online banking.

### 2.4.3 Perceived trust

Trust can be defined as "generalized expectancy ...that the word, promise, oral or written statement of another individual, or group can relied upon" (Samsudin and Nor Azila, 2009). While Patrick and Andrew (2002) defined trust as "users thought, feeling, emotions, or behavior that occur when they feel that an agent can be relied upon to act in their best interest when they give up direct control". Mohammad and Anton (2010) defined trust in manufacturer distributor as a belief that the partner company will not take unanticipated action that may result in negative outcomes for the firm.

Zakaria (2009) explained that, trust is needed not only in the pre-transaction and transaction phases, but also in post-transaction phase in the form of warranties and reimbursements. He also illustrated that trust in online banking addresses several different aspects of information system, including technical, reliability, and security information quality. Several studies have proved the significant relationship between internet banking and trust or any e-commerce. For instance, Michael (2008) tested on 1,500 banks' clients from the three banks in Jamaica, the findings indicated that trust is indeed a significant factor impacting both perceived usefulness and ease of use to adopt online banking. Moreover, Al-Shukkar and Hasan (2005) pointed out that the online services need the trust element, since trust is one of the main additions influencing the electronic setting.

Furthermore (Nor and Pearson, 2007) in Malaysia, this study has been shown that the relationship between trust and the attitudes of a number of college students towards the IBSA was positive. In the same field, Mohammad and Anton (2010) tested the impact of trust factor on corporate' clients who use internet for banking in Jordan, this study indicated that trust has a significant positive effect on ease of use to adopt IB. The study also showed that, the more a user trusted the bank and its website, the higher their belief that online banking was easy.

#### 2.4.4 Security

Security perceptions are defined as "the subjective probability with which consumers believe that their private information will not be viewed consistent with their confident expectations" (Naha and Saroj, 2010). Security of transactions over the internet is a burning issue and it is an important factor that clients consider before adopting internet banking. Some customers avoid electronic banking as they perceive it as being easily susceptible to fraud (Al Somali and Roya, 2009). Another related study by Sathye (1999) found that 73% avoided the adoption internet banking because they are concerned about security and safety of transactions over the internet. Moreover, he also inferred that clients will not be ready to change from present familiar ways of banking to online banking unless their specific need is satisfied.

#### 2.4.5 Awareness

Rogers (1983) defined awareness of innovation as "innovation's existed and gain some understanding of how function". While Sathye (1999) has defined awareness of innovation as" understanding whether the customer is aware or not aware of service itself and its benefits". He also shows that low level of IBS awareness is a critical factor in causing customers not to adopt internet banking. In this field Al-Majali (2011) indicates that the importance of awareness for the adoption of any innovation and increasing the

awareness levels of innovation of e-commerce among users has been identified as a major catalyst to encourage the adoption of electronic technologies.

Additionally, Kaled (2008) explained that, the banking leader swishing to develop an Internet solution must educate customers on the security measures that awareness behavior is to build a trust relationship between the bank and the customer. He also illustrated that banking leaders then need to offer preferred products based on concepts such as knowing the customer and the customer's history stored within the bank's database. Furthermore, Tan and Teo (2000) suggested that if the banks provide their customers with sufficient information regarding the IBS, the customers will be more aware of these services. He also added that the banks can enlighten their customers on these services via brochures and any promotional campaigns.

#### 3. METHODOLOGY

The qualitative method was used to gain insight into how postgraduate students value online banking by interviewing both adopters and non-adopters of Internet banking. Eight informants were conducted with postgraduate' students who study PhD and master in IIUM and they have accounts in banks. The researcher chose this sample because it was mainly very well educated. Another reason is that, postgraduate's students have knowledge, awareness and several skills on usage of technology, in particular, computer and internet. The sample also contained two groups, the first of which consists of four of internet banking adopters and the second group consists of four non-internet banking adopters. This approach allowed us to understand the perception of postgraduate's students. For the purpose of this study, the convenience sampling technique was employed. It is defined as consisting of participants who are readily available and easy to contact. In spite of, this is considered as the least rigorous technique that involves the selection of the most accessible subjects, but is the least costly to the researcher, in terms of time, effort and money (Marshall, 1996).

Standard semi- structured interview was used not only for the purpose of answering the study questions, but also to explore other additional and related information that may help meet the objective of this study. All interviews were conducted in person. They lasted 14-18 minutes with an average 16 minutes for adopters. However, non-adopters lasted 10-14 minutes an average 12 minutes because they did not have much information about online banking. Furthermore, transactions of adopters were limited with banks just fund transfer because they are not business' students.

A set of interviews topics guided the interviews, with a list of probing questions to draw out informant opinions. Topics were discussed as perceptions to identify the major factors which influence the adoption of online banking service from postgraduates' perception in IIUM. Five factors were discussed with informants; these factors include convenience, perceived ease of use, trust, security and awareness. All eight interviews were audio-taped and transcription process yielded 18 pages.

### 4. FINDINGS AND ANALYSIS

The content analysis determined five affecting factors to internet banking. The interviews among postgraduate' students indicated that some students have adopted internet banking and the others did not have adopted internet banking. Adopters and non-adopters were contrasted to determine possible difference.

### 4.1 Convenience

From the first interview question for most of informants adopters and non- adopters mentioned that internet banking has several benefits and convenience. Mostly, convenience and the benefits were described in terms of lifestyle, workplace use and housebound use, not having to travel, personal safety, not having to wait and also as found in the study, saved time 24/7 access. This has been viewed by the third informant as:

"I found banking online very well because of not having to travel to local branch or anything like that. I can do it twenty four hours a day. "(Adopter 3)

Another informant also has stressed convenience as one the factors. He stated that:

"people want rapidness and fastness, these the main two factors in order to adopt online banking, If you are in your business or in your home, you do not need to go bank and spend time for everything" (Adopter 1). The view of the second adopter informants is supported by the first adopter:

"Many factors to lead to adopt online banking first, reduce the time, pay the bills and if you are in your home or your office you can pay the electricity bill, and water bill instead of going to the office." (Adopter 2)

Another informant adopter said "technology plays vital role especially in financial sector, taking about the facilities to provide holders by using of online banking" (Adopter 4).

Adopters and non-adopters made similar comments related to the issue of convenience, the first non-adopter sated: And another informant indicated that:

"Of course, online banking has too much benefit; first of all, minimize cost, for example, no need to travel from area to another area when you transfer money." (Non-adopter2). The fourth informant also shared the same view with the rest informants (Non-adopters 4). He further elaborated that:

"It is easy and save your time and you do not got to bank if you need or send money just you can transfer from your room."

The findings of the this study reveal that convenience is the most important factor in making the decision to bank using the internet both adopters and non-adopters. Most informants agreed that internet banking has several benefits and convenience. Adopters also felt more comfortable and enjoyable to deal with on this technology.

## 4.2 Perceived ease of use

Ease of use or usability was frequently cited and found linked to students' perceptions of complexity. Although most non-adopters already had experience using computers and internet, they felt that using online banking was difficult. Interestingly non adopters had formed views of complexity. The following was comments about this issue:

"I think one time I try to use and access to online banking, how I do it, I have confuse for using the transaction because it has a lot things inside the website and some people are not good enough in English in these facilities so they do not understand some terms in the bank' website." (Non-adopter 2)

Through this comment, we can see that English language plays essential role to adopt online banking because English' language is computer language.

Other informants mentioned that online banking is new technology and it has several complexes in the first time when the people use it.

"It is difficult for me. I think why it is difficult, I do not use it like hand phone. Any technology is difficult the first time but when I use it, it will become easily." (Non adopter 4)

Another informant is supported this issue:

"people cannot be use the IT; they are not familiar in modern IT system. It will be difficult for them to use modern technology compared to organizations and companies who have information and can use this technology. "(Non-adopter1)

Some customers do not understand technology and they need to guide them to go the bank' website and how to inter to their accounts and open the website? They need to explain and learn using of online banking:

"There is problem even they know online banking; they do not know to use it because many technical terms that has been used. "(Adopter 4)

On the other hand, adopters stated that internet banking is ease of use and they do not face difficulties when they use it and also others mentioned that online banking is easy way to conduct banking transactions. The first informant reported:

"All customers of banks are adopting to find the entrance to online banking is free, it is easy for me to use online banking and I have knowledge in the internet banking." (Adopter 1)

Another adopter said:

"I expect to be easy to do something that, online banking is easy way to conduct banking transactions and I perform my bank transaction on web easily." (Adopter 3)

In this factor, it is observed that most adopters did not face difficulties when they use this technology and they are familiar with using internet banking. However, non-adopters felt that ease of use or the difficulty in using online banking was problem for them. They also felt that using internet banking was complicated to understand and not easy because it is new technology. Therefore, banks should educate their customers to adopt this technology specially students' segment.

#### 4.3 Trust

This statement highlights how the trust was often perceived by informants. Some adopters informants believed that customers' trust depend on the bank:

"The customers' trust depends on the bank because I deposit my money in the bank and I trust in my transactions in the bank so, I also have to trust online banking." (Adopter 1)

The second adopter also shared the same view. He elaborated that:

"The banks have to make a high trust for their customers and they encourage non users to use this technology because it saves time and effort too and non users should use this technology specially universities' students because they have more education compared to other people."

Distrust of technology was also revealed by various comments made about the security and privacy of internet technologies. Some informants did not use online banking because they did not have confidence with small banks in order to achieve their transactions by online banking:

"There is a major factors which is very important in the banking industry so a big bank is trusted because the customers trust to deposit their money in a big bank but small banks have some problems for trusting, I like to deposit my money in a strong bank to use online banking later." (Non-adopter 1)

The third non-adopter informant had another feeling about trust. He said:

"In my case, I do not trust for using of online banking because the hackers and someone access to my account. So, if the bank has risk without online banking no doubt for me, I cannot put money in this bank sometimes".

The view of the fourth informant (non-adopter) is supported by the third informant by stating:

"I do not trust because I will be afraid if my money is lost or any hacker to access to my account, this is important issue and criminal."

To summaries this, trust is one the most critical issues. According to informants, some of them had this concern but non adopters had greater levels of worry, they did not have confidence to make any financial transactions via the Website. Moreover, trust is related to experience with the bank and bank policy, which contributes to customers' trust in bank business practices.

# 4.4 Security

Security is the main challenge because customers are doing the financial transaction through banking web site and they are not sure about the successful transaction or hacking of important personal information. So, the greatest concern expressed by most non-adopters was security. Many non-adopters commented on this:

"I do not like using online banking system because I hear about high hacking people and even though there are a lot of facilities, it has high risk because after I lose my money nobody can be responsibility, I do not have any evidence." (Non-adopter 2)

Additionally, another non-adopter shared the same view, as he stated that:

"I will be afraid if my money is lost or anyone hacker to access my account this is important issue for example, if I send money by internet to my friend and he does not receive, who is responsible for that" (Non adopter 4). From the above statement, there is strong indication, the fear of hackers, lack of trust and privacy are the core of customer's security concerns in internet banking transactions. Furthermore, another informant reported that:

"Security is the major factor and privacy for online banking system because nowadays, banking sector is a big dealing especially for companies, they have many transactions. So, banks have to give reality and security of customers." (Non adopter 1)

Most non-adopters informants had the similar feeling about security. They were afraid from hackers or someone accesses to their accounts when they use online banking.

In contrast, some adopters had a positive feeling for usage of internet banking they mentioned that their faith in banks having strong security measures such as virus checkers and recovery from system failure. For example the second informant explained that:

"Bank seeks to achieve and realize the safety for customers in the use of internet banking for example, my account was closed twice because one hacker entered to my account and bank informed me, I tried the second time but I cannot enter to my account. As well as, he added "banks have a high level of modern virus to protect money and personal information, so that one cannot penetrate this information or have access to personal account or banking transactions." (Adopter 2)

Moreover, another adopter stressed that banks have modern systems to protect their customers' transactions by internet. He said:

"I did not this find problem, some of the banks have following new policies like that change identity or kinds of internet security coders very frequently like mobile phone number, if you have wrong or any mistake through entrance to use online banking for example, transfer money the system will lock directly." (Adopter 1)

The fourth adopter is supported the others, he mentioned that:

"in this regard, banks has technical department, when the customers do their transactions by online, there are many details to protect privacy and security. Bank is serious in particular in terms of protection customers' information, it does not give any information for other."

From the above statement, it can be observed that adopters did not have concern regarding security due to they have sufficient knowledge and experience for using it. However, non-adopters did not deal with this technology and they did not have enough information to use online banking and they also had concern about security. It is observed that Adopter who had a technical background and understood security technology, they had higher levels of confidence in internet security than others.

#### 4.5 Awareness

According to the findings of the interviews, some non-adopters had low awareness of online banking services and they also had little information about online banking. Due to this reason they did not want to know what are advantages and disadvantages on using it. Moreover, they said banks did not provide their customers much information about using this technology. This can be seen that the following informants' statements regarding the awareness:

"I have little information about online banking, I think this phenomena is new I do not know completely about transaction of online banking and he said also banks have to educate their customers and give them information to use online banking and advertising is very important from the banks to customers." (Non adopter 1)" I do not have information about transaction and how to access, how to use just my bank gives me little information for check balance. If the banks provide these services and they have to explain their people how to use, how to do their transactions." (Non-adopter 3)

The fourth non-adopter also supported the previous argument. He mentioned that: "Just I lessen my friend who use internet to send his money from online banking and he buys air plane ticket and he said the bank must gives aware to people to use internet banking." (Non adopter 4) The above comments from non-adopters mentioned that they did not have enough information and they also are not much aware about use internet banking.

In contrast, adopters had a positive feeling regarding the awareness and they have enough information for using online banking. He explained about his information towards using online banking:

"I got information about using internet banking from my bank and my friend tell me about use and banks gives me information to use online banking but just users and when you use this service, bank will guide you what are the next steps." (Adopter 2)

Another adopter has stressed that: "Nowadays, bank gives this option another bank must at least that kinds of options. If you go to the bank or you open online banking service, you have so many advertisements and you will get some discount" (Adopter 1).

As the third adopter mentioned that banks have to educate and aware their clients:

"I think to take about the awareness we can see clients of banks, bank must aware their clients and they have educate adopt online banking and also the society how be developed."

In summary, it can be observed that most non adopter had less awareness of internet banking applications and they had little information about using of online banking because they did not deal with this technology. On the other hand, adopters had more awareness of online banking and they got sufficient information from their knowledge and experience on use it. Table 1 shows summary of informants 'perception between adopters and non–adopters of IB.

#### 5. CONCLUSION

The main objective of this study is to explore and understand the factors affecting the adoption of internet banking by (adopters and non- adopters) students in IIUM. From the analysis, we can come up with the conclusion that there are several factors that need to be considered and it is the duty of banks to make sure that customers start using the internet banking services.

Convenience, twenty four hours availability, time savings and ease of conduction transactions at home were important benefits for internet banking mentioned by adopters. This study showed that students (adopters and non-adopters) realized that online banking will provide them with many benefits in the future.

According to study's findings, security and lack of trust have become a concern to non-adopters. In spite of, online banking provides flexibility in performing financial transactions and banks also have the means strong protection for security of information, non-adopters are reluctant to use the system due to the risk associated with it. Security also is element in the risk and clients are not ready to face any risk on using online banking. Non-adopters also did not believe that banks could protect their transactions when they used it. However, adopters trusted the ability of the banks to protect their transaction and privacy. In this case, banks need to build confidence about internet banking. The objective of the banks on the trust and security issues must be clear and their first priority.

Another issue raised by the non-adopters e-banking was difficult for them to conduct transactions online. They found difficult to understand and not easy while it was found easy for the adopters.

Eventually, the hindrance about awareness of online banking services is that, adopters were more aware and they have enough information on using internet banking. However, non-adopters were less aware of e-banking application and they did not have enough information how to use it. Therefore, , they did not know sufficient information about the advantages of doing transactions online and even banks are not providing much information so that customers can become well aware of online banking services.

#### 6. **RECOMMENDATIONS**

- a. Banks must inform their clients about its security policy through all available media such as their websites or newsletters.
- b. Banks must consider training and education programs that will help clients and non-adopters, in particular, overcome the difficulty of using online banking.
- c. Banks should make an awareness campaign of security aspects of their internet services to encourage the use on internet banking.

# THE OBSTACLES FACING CONVERSION PROCESS FROM CONVENTIONAL BANKS TO ISLAMIC BANKING: A REVIEW OF LITERATURE

Adel Saaid<sup>1</sup>
Zurina Shafii<sup>2</sup>

#### **ABSTRACT**

The main purpose of this paper is to review, theoretically, the obstacles that will be faced by the conversion process. However, a considerable demand for shari'ah compliant products has been created by increasing knowledge about Islamic banking. In particular, conventional banks (CBs) are trying to capture the market by opening Islamic branches/windows or converting themselves into full-fledge Islamic banking. For example, some conventional banks opened Islamic units such as HSBC in 1996, BNP Paribas, CIMB Malaysia in 2003, and Banque de Misr in Egypt in 1980. In turn, some CBs decided to convert to Islamic banking model after the significant growth of Islamic banking such Al-Jaseera Bank in Saudia Arabia, Bank of Sharjah in UAE and so on. Then, the conversion from CBs to Islamic banking is not easy. It is change from the dept-system to equity-system (Garas, 2006). Hence, the practical application indicated that there are a range of obstacles in the process of converting from CBs to Islamic banking. These obstacles are various from bank to bank and country to country based on the situation of each CB and its economic and social environment. This paper will address these obstacles and provide a conceptual framework of solutions.

**Keywords**: conversion process, conventional banking, Islamic banking, motives of converting.

#### 1. INTRODUCTION

The significant growth of Islamic banking in developed and developing economies contributes to its considerable extension and enhances acceptability especially in Muslim countries. However, this movement has attracted many conventional banks in Muslim and non-Muslim countries responded to this growth by establishing Islamic units such as Islamic windows/branches and providing Islamic services and products to their customers such as HSBC, Deutshe Bank, Citibank, Banque De Misr in Egypt (1980), Saudi Hollandi Bank in Saudi Arabia, CIMB in Malaysia (2003), and so on. In turn, there are several conventional banks in Muslim countries, especially in Gulf Cooperation Council (GCC), converted to Islamic banking system such as Aljaseera Bank in Saudi Arabia in 1998, International Kuwait Bank in Kuwait state in 2003, Bank Muamalat in Malaysia which established as a result of merger between Bank Bumiputra and Bank of Commerce in 1999 (Sole 2007).

However, converting from conventional banking to Islamic banking is not easy. It is converting from system to another system. This conversion is from system based on dept-based system to equity-based system (Garas, 2006). Hence, the practical application indicated that there are a range of obstacles in the process of converting from CBs to Islamic banking. These obstacles are various from bank to bank and country to country based on the situation of each CB and its economic and social environment. Duo to the importance of converting process, the Accounting and auditing Organization of Islamic Financial Institutions (AAOIFI) issued the Shari'ah Standard No. 6 to converting from conventional bank to Islamic banking.

<sup>&</sup>lt;sup>1</sup> Ph.D Candidate in the Faculty of Economics and Muamalat in USIM.

<sup>&</sup>lt;sup>2</sup> Associate Professor in the Faculty of Economics and Muamalat & Director, Islamic Finance and Wealth Management Institute (IFWMI), Universiti Sains Islam Malaysia, Nilai,

The main purpose of this standard is to explain procedures, mechanisms, treatments which are required for converting from a conventional bank to an Islamic bank.

The previous studies, Alani & Yaacob, 2012; Al-Atyat, 2007; Mustafa, 2006, Al-Martan, 1999), which have addressed this phenomenon indicate that are a range of obstacles and challenges in process of converting from conventional banks to Islamic banking. These obstacles divided into six categories, namely; (a) administrative obstacles, (b) Human resources obstacles, (c) Regulations and policies obstacles, (d) Shari'ah obstacles, (f) the development of Islamic banking products, (e) the legislative vacuum of control system appropriate to the nature of Islamic banking.

In this contest, the desire of converting from conventional banking to Islamic banking whether by opining Islamic windows/branches or by converting themselves into a full-fledge, are prompted by several motivations. These motivations are varied based on several factors. For example, religious scruple controls conventional banks' customers to prompt the conventional bank's administration to converting to Islamic banking system or offer Islamic banking products. This factor is observable in most Muslim countries. Some CBs are prompted by other factors such as higher profitability, to maintain existing customers, and attract new customers to compete with Islamic banks (Mustafa, 2006).

However, the paper will be divided into four parts. First part will explain the conception of conversion; explain the factor behind the motivations prompted CBs to converting into Islamic banking. Secondly, it will present the sources of converting, the mechanism of converting, the principals (controls) of converting, and the perspectives of supporters and opponents of establishing Islamic branches/windows in conventional banks. Thirdly, the paper will show the main obstacles and challenges will be faced CBs in converting to Islamic banking. Finally, this part will provide some recommendations that can be implemented to facilitate the process of conversion from CBs to Islamic banking.

## 2. THE CONCEPT OF CONVERSION PROCESS

The remarkable growth of Islamic banking system in developed and developing economies in the Muslim world contributes to its significant expansion and enhanced acceptability. This movement has attracted many international conventional institutions such as Standard Chartered Bank, Citibank, HSBC and Deutshe Bank, to respond to this growth by establishing separate Windows/branches and providing Islamic financial services to their customers (Haque & Tariq, 2012).

The increasing knowledge of Islamic banking and finance has created a huge demand for shari'ah based or shari'ah compliant products. Therefore, banks are trying to capture this considerable market by either converting into full-fledge Islamic banks or opening a window/branch for the Islamic based transactions (Alani & Yaacob, 2012).

Recently, converting from conventional banks to Islamic banks becomes the most important event especially in Muslim countries. According to Alani & Yaacob (2012), the converting process from conventional banks into Islamic banking has been happened in the Middle East region. Over one decade, many banks turned from conventional model into Islamic form in countries such as Kuwait, Saudi Arabia and UAE. In addition, they opened Islamic banking branches/windows side by side with conventional system. Also, there are many conventional banks decided to convert to Islamic banking in Muslim countries.

However, this paper address the conception of conversion, some authors use transformation term. Therefore, in this paper converting, switching, and transformation are given the same meaning.

"Convert" in English language means "to change (something) into a different form or properties; transmute or transform." On the other words, "to turn from original or intended use to another or a particular use or purpose (Cambridge Dictionary, second edition, 2013).

In contrast, transformation in English language as defined in Business Dictionary is "In an organizational context, a process of profound and radical change that orients an organization in a new direction and takes it to an entirely different level of effectiveness". Unlike 'turnaround' (which implies incremental progress on the same plane), transformation implies a basic change of character and little or no resemblance with the past configuration or structure (business dictionary, 2013).

According to Rbaia (1989), in terminological meaning, conversion is converting from corrupt situation to favor religiously. Then, converting means "transformation and change from certain situation to another situation. The new situation made by converting must be better than last situation. As it mentioned, the corrupt position in the conventional banks is dealing with transactions that incompatible with shari'ah law (Haram). In fact, favor religiously is avoiding from dealing with interest (Riba).

However, the converting process from conventional bank into Islamic banking differs from conventional bank to another based on different motivations. Thus, it is important to identify the most important motivations that prompting the conventional banks to convert to Islamic banking.

## 3. MOTIVATIONS OF CONVERSION

In this section, the important motivations that inspire conventional banks to converting to Islamic banking are discussed. According to Al-Atyat (2007), the main motivation for converting from conventional banking to Islamic banking is the desire to maximize profits. In fact, in financial management this aim is the main objective for any institute. Since the Islamic banking represents a rich source of profits, hence, it is natural to see conventional banks to resort taking advantage of this field.

In this context, Mustafa (2006) who assessed the phenomenon of transformation from conventional banks to Islamic banking, investigate this research in the Saudi Arabia. In this research, personal interviews are used with officials in the banks which converted to Islamic banking. Furthermore, a questionnaire is designed and distributed among a selected sample of workers in departments of Islamic banking services in conventional banks.

However, Mustafa (2006) argue that the motivation of 82% of conventional banks in Saudi Arabia which converted to Islamic banking was to maintain existing customers of the bank. The results also show that the motivation of 47% of conventional banks was to compete with Islamic banks and attract new customers. Furthermore, the motivation of 24% of conventional banks was increasing the rate of return on investments that comply with Shari'a law compared by the rate of return in conventional formulas.

Following Mustafa (2006), Mamun (2011) investigates the characteristic variables of the Islamic banks in Bangladesh from the bankers' point of view. They answer the questions in a 5 point likert scale from 2 (strongly agree) to -2 (strongly disagree). The results reveal that the most important variable perceived by the respondents is the high growth in net income of the sector (1.05). The findings of this research also show that the Islamic banking is more profitable (0.84).

In addition, Mamun (2011) also explores the main reasons for adopting Islamic banking system in Bangladesh. In this study which titled "prospects and problems of Islamic banking

from banker's perspective: A study of Bangladesh", he tries to find the factors which motivate the adoption of Islamic banking system using a 5 point likert scale from 2 (strongly agree) to – 2 (strongly disagree). The findings indicate that the most important factor which motivates the adoption of Islamic banking is the religious belief of customers (1.27). Furthermore, He argue that the segment of religious people among banking customers feel a strong need to adhere to Islamic principles and rules in every aspect of their lives. Consequently, conventional banks are motivated to convert to this system. According to Mamun (2011), the second reason to adapt Islamic banking system in Bangladesh is higher profitability of Islamic banking system with the rate 0.35.

Alani and Yaacob (2012) also examine the factors motivated conventional banks to converting into Islamic banks in the Middle East. They use the descriptive analytical approach in order to survey senior's directory in Islamic banks and traditional banks that offer Islamic services. This study conclude that risks and profits are the main factors motivated conventional banks in Kuwait to adopt Islamic model and move away from traditional model. Also, religious scruples motivate conventional bank's customers to create Islamic services to meet their needs and convert to Islamic banking system. The results indicate that almost 95% of total customers accepted the Islamic shari'a laws which make conventional banks to offer Islamic services or switch to Islamic banking.

Moreover, the results of Alani and Yaacob (2012) reveal that the success of several conventional banks which converted to Islamic banking model is a reason to encourage other conventional banks to convert to Islamic banking system.

After reviewing the previous studies which interested in the main reasons or motivations to adopt Islamic banking or converting from conventional banks to Islamic banking, in the next section, the sources of converting will be explained.

# 4. THE SOURCES OF CONVERSION

The authority seeking to convert from conventional banks to Islamic banking indicates the source of conversion. This authority may arise from inside or outside of the conventional bank. Moreover, this authority divided into two groups; public-authority or private-authority.

According to Al-Atyat (2007), there are three sources of conversion; first, decision to converting is made by the stockholders or the owners of conventional bank. This source motivated them to repent to Allah (God), and get rid of the businesses and activities contrary to Shari 'ah rules especially Riba (Usury). In addition, sometimes the owners of conventional bank, who thinking to convert to Islamic banking, are influenced by motivations which already explained in previous section. Secondly, another source of conversion is external factors such as new investor(s) who are looking for purchasing the conventional bank and converting it into Islamic banking. They also may have one of the previous mentioned motivations. Thirdly, the source of conversion may originate from the Legal authority (the state) which decided to convert the conventional financial and banking system to comply with shari'a law, namely; Iran, Sudan, and Pakistan.

# 5. THE MECHANISM OF CONVERTING FROM CONVENTIONAL BANKING TO ISLAMIC BANKING

According to Alani & Yaacob (2012); Al-Atyat (2007); and Al-Martan (2005) there are several formulas applied by conventional banks for converting to Islamic banking system. According to the experience of conventional banks converted to Islamic banking, there are two main types of converting process, namely:

- a. Macro Conversion (full-fledge): Macro conversion is the decision which is made by monetary and political authorities happened in Sudan, Pakistan, and Iran. In turn, the full-fledged conversion process also occurred in conventional banks which decided to convert to Islamic banking accordance with the principle of gradual application (step by step). In this process, the bank's management announces its intention to convert according to a declared plan and specific time.
- b. Micro Conversion: In this conversion process, the conventional bank converts one or more of its branches in order to provide only Islamic banking products compliant with Islamic Shari'a. In this method, the conventional bank establishes independent management to oversee the converted branches (Mustafa, 2006).

Accordingly, the Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) issued the standard No. 6 to regulate the process of converting from conventional bank to Islamic banking. This standard determines the process of converting from conventional banks to Islamic banking (Accounting and Auditting Organization for Islamic Financial Institutions, 2012). However, based on prior studies and literature, there are many routes/methods of converting as follows:

## I. Fully converting to Islamic banking

According to Alani & Yaacob (2012), conventional banks believe that this method is the best way to gain customers confidence in the integrity of the application. This method helps conventional banks to achieve their objectives in the relative small size of Islamic market. This method also is the easy way rehabilitated employee to operate their work in the new form.

Al-Atyat (2007) argues that the conventional banks which decided to converting to Islamic banking should stop to deal with any transactions and businesses that is not compatible with Islamic shari'ah especially Riba (usury). In addition, this method is considered as one of the most credible forms of transformation. The examples for the banks which have already completed the process of transformation are National Bank of Sharjah, United Arab Emirates, and Al-Jazerah Bank in Saudi Arabia.

## II. Islamic financing instruments:

Alani & Yaacob (2012) explain that in this case, the conventional banks offer some instruments/transactions such as Murabaha, Musharka, Mudarabah, and so on. In this model, conventional banks offer Islamic instruments and transactions side by side with traditional instruments and transactions (Mustafa, 2006). This method is used in Arab Gulf countries practically Saudi Arabia such as EL-Riad Bank. There are also several foreign conventional banks which offered Islamic instruments side by side with traditional instruments such as HSBC and Citibank Group. The main problem of this method is that the conventional banks may do not separate the Islamic funds from the traditional funds.

#### III. Islamic windows:

In this method, conventional banks allocate some parts or spaces in conventional branches to offer Islamic banking services as well as conventional services (Alani & Yaacob, 2012). In other words, an Islamic window is a simple window within a conventional bank. In fact, Islamic windows conduct business activities only based on shari'ah compatible instruments for customers (Sole, 2008).

Nowadays, the increasing numbers of conventional banks around the world are concerned about the possibility of offering Islamic financial products. According to Sole (2008), in many countries, this interest is a respond to the banks' desire for offering services to a growing Muslim population. However, it is also motivated by the desire of taking advantages from the growing numbers of international investors attracted to shari'ah compliant products.

Regarding this method, Al-Martan (1999) states that the bank is intended primarily to meet the needs of some customers who desire to deal with Islamic banking system. Therefore, in the converting process to Islamic banking system, banks are specialized in the sale of Islamic banking services as well as conventional services. Consequently, a conventional bank may only wants to search the potential of this market, and may be interested in launching a pilot project (Sole, 2008).

Sole (2008) also argues that opining an Islamic window is required the conventional banks to establish the appropriate firewalls to keep away from the commingling of Islamic and conventional funds. He mentions that the expanding of activities in the Islamic windows may prompt the conventional banks to segregate the window into a separate subsidiary.

However, this method does not have necessary administrative and financial autonomy but follow the conventional banks (parent bank) management roles and this is the problem of this method. The examples for this category of banks are Citibank, HSBC, and New Zealand and Australia ANZ group.

### IV. The conversion of some conventional branches into Islamic branches:

In this method, the conventional branches converting into Islamic branches or establish new Islamic branches. This method is opposite to the other methods which are motivated commercially. There are some conventional banks that their organizers decided to converting to Islamic banks by passing the purely commercial objectives. They also decided to inter in Islamic market by engaging in the process of gradual converting through the creation a separate department of Islamic banking. To achieve their goals, they have hired experts and specialist in Islamic banking as a main management department of conventional bank (Al-Matran, 1999). In addition, for further guarantee for the safety of the application and gain more customers' confidence, the department of Islamic banking in conventional banks is arranged by the independence Shari'ah Supervisory Board including a number of shari'a scholars and experts and specialists in Law and Economy (Alani & Yaacob, 2012).

According to Mustafa (2006), the conversion of conventional branches to Islamic branches is more common in the practical application of converting issue. In this regards, the conventional banks are adopting Islamic services in one of two ways;

- a. By establishing the new Islamic branch and this branch is independent to deal with Islamic transactions.
- b. By converting one or more of conventional branches into Islamic branches which are specialized in offering Islamic banking transactions.

Moreover, there are several elements that conventional banks are required to consider in converting a conventional bank to Islamic banking system such as;

- a. The sincere desire of the chief board and the managers of conventional banks which decided to convert to Islamic banking.
- b. Achieving the approval of the monetary authorities such as the central bank and the relevant ministries.
- c. Establishing a legitimate regulator body.
- d. Financial and administrative independence of the branches and units which are converted to Islamic banks.
- e. Training human resources of conventional banks and explaining Islamic banking system for them.
- f. Making contact with customers and preparing media campaigns and announcing the date of conversion.
- g. Gradient (Tadaroj) in the application (Mustafa, 2006).

According to Sole (2007) the advantage of opening a subsidiary than full conversion is that, in full conversion method, the parent bank may continue servicing to its conventional customers, while the subsidiary expands its Islamic activities in clear separation from the conventional business. In this regard, it is important to mention that some Shari'ah scholars have raised concerns regarding legitimacy of stabling Islamic branches subsidiaries of banks using capital form conventional banks. Due to this fact that there is not guaranteed that the funds provided by the parent bank will originate from Islamic compliant sources, the subsidiary's initial capital is not acceptable based on Islamic laws.

The examples for this category of banks are Saudi National Commercial Bank, which is one of the largest banks in Arabian Gulf and Middle East, Banque Misr which opened Islamic banking branches in Egypt, and National bank of Kuwait which bought Boubyan Bank. This bank is considered as an Islamic window of the National Bank (Alani & Yaacob, 2012).

### V. Islamic investment funds:

In this method, the conventional banks establish investment funds based on the Islamic investment methods and laws. In general, these funds are money pots which seek to collect people's savings and invested these funds in portfolio through a specialized expertise and efficiency in the management of portfolio (Alani & Yaacob, 2012). It should be noted that Islamic investment funds method is considered as one of the simplest and fastest way to convert to Islamic banking which resorted by conventional banks as a purely commercial basis. In addition, this method is used to attract and maintain some customers who desire to deal with the provisions of Islamic shari'a (Al-Martan, 1999).

According to Mustafa (2006), there are some conventional banks considered this entrance as a first step towards conversion to Islamic banking such as the National Commercial Bank. National commercial bank creates the National Fund for the global trade goods in 1987 before establishing its first Islamic branch in 1990. Although, there are some conventional banks applied this entrance but they have not established any Islamic branches. These conventional banks include Saudi Hollandi Bank (SHB), and Banque Saudi Fransi (BSF).

#### 6. THE PRINCIPALS (CONTROLS) OF CONVERSION

To manage the converting process successfully, the conventional banks should follow certain principles to guarantee a successful converting process. The principles that the conventional banks should follow in converting process to Islamic banking are as follows:

#### I. Scientific planning for conversion process:

Al-Martan (1999) argues that the success of converting process should be supported by many researches and studies based on scientific planning. These researches should study the market and identify the components of the market, and the size and quality of existing and potential competitors. Moreover, he mentions that most of the conventional banks which are decided to convert to Islamic banking system provide independent research centers to conduct marketing researches and inform the public and potential customers of Islamic banking.

However, Mustafa (2006) suggests that there are six steps for a successful transformation based on scientific planning.

- a. Establishing a specific timetable and declaring it to specialists. This timetable should be officially approved by specialists and experts who specialized in the bank sectors to finish dealing with interest (Riba) or any transactions that do not comply with Shari'ah laws.
- b. Full commitment of implementing the declared schedule. The process of converting should not get longer than the established timetable of converting. Therefore, customers will not lose their confidence about the credibility of the bank conversion.
- c. Complete separation between the funds and activities of the branches and Islamic funds on the one hand, and the main activities of the parent conventional bank on the other hand
- d. Establishing an independent administration to support and manage Islamic branches.
- e. Developing and extending bank's products to become compatible with the rules of the Islamic shari'ah.
- f. Evoke and reward the pure and sincere intention to Allah in the conversion process, and also in the practice of banking activities in according to the rules of Islamic shari'a.

# II. Co-ordination of the Units Converted to Islamic Banking System and other Conventional Units inside the CB:

This principle is used to ensure about the complementarities of converting process and understand the nature of the work to put mechanisms and achieve the coexistence between them and resolve any disputes may arise.

## III. Preparation of Plans for Training the Employees:

As mentioned in previous sections, there is a fundamental difference between conventional banks and Islamic banking system. This difference required training staffs to extend their knowledge and legitimacy about Islamic banking system which is based on the Islamic Shari'a laws.

For appointing the legitimacy of Islamic banking system, the conventional banks are trusted on leading scholars' knowledge and their experience in the field of Islamic banking. They verify the legitimacy of contracts and formulas of investments based on the system of Islamic branches converted. In addition, it is important to make sure that all the activities and operations of these branches are implemented according to the provisions of Islamic Shari'a (Iqbal & Mirakhori, 1999).

## IV. Gradient (step by step) in the Application

Practical experiences have shown that the implement of the conversion from conventional bank to Islamic banking does not happen overnight. Furthermore, the immediate decision of the converting is ineffective due to this fact that business banking is inherently intertwined, complicated and multilateral agreements between individuals, internal and external

institutions, regulators, and so on. Administrating the different legal relationships is an interlocking process that cannot be dealt with at once (Al-Atyat, 2007).

Generally, adapting and applying the principle of gradient gives sufficient time to individuals who lead the conversion process in conventional bank and train employees to know about the nature of Islamic banking system. Furthermore, this principle will allow the conventional banks to contact with customers and the relevant authorities to prepare them for this conversion (Al-Martan, 2005).

# V. Continuity and not Retreat

The decision of converting from conventional to Islamic banking system is made by officials in the conventional bank and announced to the community. This decision requires officials to continue in this direction according to the announced plans. In this regard, based on Al-Sharif (2005), it is not acceptable from the society and customers to fail to complete or retreat the program and return to the conventional system. In Quran, in Ayah 92 of Surah Al-Nahal, Allah said that:

"And not be like a woman who breaks into untwisted strands and the thread which she has spun, after it has become strong. Nor take your oaths to practice deception between yourselves, lest one party should be more numerous than another: for Allah will test you by this; and on the Day of Judgment He will certainly make clear to you (the truth of) that wherein you disagree or used to differ."

### 7. CONVERSION REQUIREMENTS

The converting process from conventional banks to Islamic banking which is based on Islamic shari'ah requires committing to the philosophy of Islamic banking and Islamic banking foundations and activities. Therefore, the nature of the fundamental difference between both systems enforces the converting process to achieve different requirements such as legal requirements, legitimacy, administrative, and general requirements. According to several researchers who investigated the issue of converting process, there are many requirements should be followed to complete the converting process successfully. In next section, the most important requirements will be explained as follows:

## I. Scientific Planning:

Al-Martan (1999) argues that the scientific planning is the essential step to do the converting process successfully by conducting the required studies and benefit from the expertise and research centers.

# II. Complete segregation of funds:

The complete segregation of funds is necessary for conventional banks which are planning to open Islamic windows or Islamic branches. Yaquby (2012) investigates this issue and concludes that the funds of the Islamic investment products and the funds of the financial institution in which shari'a laws are not observed must be completely segregated. In fact, the funds of investors who are very diligent and anxious about earning lawful income should not be merged with the funds of conventional investors who are not observant about the shari'a

laws. Thus, it is important to separate accounts, books, and computer systems for evidencing the complete segregation of funds (Mustafa, 2006).

# III. Shari'ah Supervisory Board:

A shari'ah supervisory board should be created in any conventional bank that decided to open Islamic windows/branches or decided to conduct fully-fledged converting process. This board should consist of trustworthy scholars who are highly qualified and able to issue Fatwa (religious rules) on financial transactions. Furthermore, they should have considerable experience about the knowledge of modern dealings and transactions. Admittedly, the Articles of Association, prospectuses and statues should provide a shari'ah board who's Fatwa and resolutions should be required the financial institution's management to follow shari'a rules (Iqbal et al. 1998). In other words, the Shari'ah board should be independent and free to give opinions on proposed contracts and transactions. Finally, this requirement is considered as one of the most important requirements for the success of any converting process. Moreover, it is important to convince the customers and dealers about the legitimacy of Islamic transactions (Yaquby, 1990).

## IV. Management commitment:

The management of financial institutions which are undertaking such business activities should be fully convinced about the legitimacy of Islamic transactions and fully committed to the converting process. The executive senior management in the conventional bank should be anxious to implement the converting process and obey the rules which are governed it. Regardless of whether fatwa and rules are strict and severe, the sound practices may not happen if the managers are not sufficiently sincere and committed to implement the principles of converting process. In this regard, Mohiuddin (2001) argues that it is important to use the conviction media and advertising campaign. The media and advertising campaign indicate that converting to Islamic banking emerge from the importance of Islamic transactions and meet the desire of a large segment of customers in the deal with Islamic banking mechanisms.

# V. Muslim investors' funds protection:

There is an established standard in Islamic rules about Muslim investors' fund protection. Based on this principle, the mudarib does not warranty the mudaraba funds for the funds provider. Therefore, investment accounts in Islamic financial institutions are not guaranteed by the mudarib. However, this principle does not prevent the parent conventional financial institutions (the original company) from laying down on a required condition. This principle also does not guarantee Muslim investors' funds against trespass, negligence, and fraud. Many financial institutions may sometimes keep away from their responsibility by claiming that their Islamic windows, branches, or sections are privately incorporated based on other reasons and excuses. This is completely unacceptable and precautions should be taken about that. In fact, a similar policy should be particularly set in the Articles of Association or the prospectus of the financial institution (Al-Omar & Igbal, 1999).

# VI. Compliance with the Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) Standards:

The Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) has issued a number of accounting and auditing standards that all Islamic financial institutions should implement and comply with shari;ah laws. The AAOIFI's standards are considered a fundamental groundwork that supports Islamic banking activities by keeping them away from individual and personal reasoning. The collective personal reasoning (ijtihad) of the AAOIFI is an important aspect of Islamic economic life. Therefore, these standards deserve strict adherence. A number of government authorities and central banks in certain countries have

circulated these standards and obliged other financial institutions to comply with them (Al-Martan, 1999). Therefore, any party wish to incorporate or set up an Islamic financial institution that required them to comply with these standards in order to avoid confusion, misunderstanding, and ambiguity, and to seek clarity and sound business activities (Yaquby, 1990).

# VII. Considering the criteria for Evaluating the Efficiency and performance of the employees:

Before converting process, conventional banks consider the employee's efficiency through technical ability and superiority in their field regardless the nature of their belief, their faith, and the extent of their commitment to the provisions of Halal and Haram (legitimate & illegitimate). After converting process, this matter is completely different for the banks. Because, the employees commitment to the provisions of Halal and Haram as well as their mastery and excellence in the field of banking work is very important to the success of the idea of conversion. Thus, the bank's management should terminate the contracts of all staff that their faith or believes are considered as barriers to accommodate the idea of conversion to work in accordance with Islamic Shari'ah. This law should apply in Muslim and non-Muslim economies which are not accepting the idea of conversion (Abu-Hmera, 2009; Al-Atyat, 2007).

# VIII. Teaching, training, research and development:

As mentioned in prior sections, the nature of Islamic banking is greatly different from the nature of conventional banking. Therefore, the conventional bank which is decided to convert to Islamic bank should teach and train the staff in various departments to make them qualified based on the nature of the new system. In this regard, Iqbal et al. (1998) believes that there is a serious lack of scholars who have even a working knowledge about the Islamic fiqh or modern economics and finance. Similarly, many managers of Islamic banks are not very well trained in the use of Islamic finance methods. Unfortunately, very little effort has been made to meet these requirements. In addition, Mohiuddin (2001) argues that it is important for converted banks to select the staffs who believe in privacy of Islamic banking, and it is distinguished through conventional banks.

#### IX. Administrative independence:

According to previous discussion, the Islamic branch is not independent from the parent conventional bank. Al-Sarhi (2010) argues that conventional bank should provide administrative independence for Islamic branch through establish an independent department or independent sector, separate accounts, and independent budget from the parent bank.

# 8. THE OBSTACLES FACED BY CONVENTIONAL BANKS IN THE CONVERTING PROCESS TO ISLAMIC BANKING.

Although there are not enough studies on this topic, some researchers are interested on this phenomenon and investigate the obstacles faced in the process of converting. According to Mustafa (2006); Al-Atyat (2007); Al-Martan (1999); Abdulkader and Mohammed (2009); Al-Sarhi (2010); and Alani and Yaacob (2012), there are six obstacles or challenges faced in the process of converting from conventional banks to Islamic banking.

Alani and Yaacob (2012) argue that the obstacles are different according to the situation of the bank. They are also different based on their importance among banks that choose to open Islamic window and banks that choose full-fledged converting from conventional bank to private Islamic bank. These obstacles are as follows;

- a. Obstacles related to administration.
- b. Human resources obstacles.
- c. Technical obstacles.

Shari'a obstacles

- d. Obstacles related to the development of products.
- e. Market development obstacles.
- f. Obstacles related to the legitimate control.

In general, these obstacles will be addresses in detail in next section.

#### I. Administrative Obstacles:

The conversion process needs some requirements to reach the successful implementation of the bank's converting plan. Al-Atyat (2007) argues that all administrative obstacles and problems faced by conventional banks in converting process are according to provisions of Islamic shari'ah. These obstacles include lack of seriousness of the effects of bank management that does not respond to the developments of conversion process in the appropriate time or making decisions that do not meet all dimensions of the problem faced in the process of converting. In both cases, the results may influence negatively on the converting process and will impede the process of converting to continue. The conventional banks which are decided to convert to Islamic banking try to find wise leadership with distinct experience and high efficiency to lead the conversion process. For example, the results of the emergence sections and new departments change functions in most of departments and divisions, and methods of flow lines of authority and responsibility between departments and functions. This change requires restructuring of the organizational structure of the bank. Additionally, this change requires a call for experts' regulation to participate in the restructuring of the organizational structure. They fit in the new situation by re-organizing governing dependency of the functions and supervisory responsibility. In addition, they re-compilation of jobs in the organizational units to achieve a constant flow of work (the least possible friction between the authorities and responsibilities), re-define the centers of decision-making and responsibility for results centers (centers of flow of information necessary for decision-making, whether in planning or follow-up).

In this regard, Al-Martan (1999) mentions that there is a main problem faced in the process of converting which is related to blurred vision at the whole level of the bank's management with regard to the desire of offering Islamic banking, especially in case of the desire of gradually expanding in this direction. According to Al-Sarhi (2010), this situation will lead to the following negative effects such as:

- a. Personal humility of conviction with credibility of the dual system approach in the bank.
- b. Emergence conflict between Islamic windows/brunches on the one hand, and conventional branches/departments on the other hand which leads to unhealthy competition.
- c. Lake of willing of rest departments (conventional departments) to support Islamic alternatives. Finally, some conventional departments in CB are concerned about losing conventional customers to Islamic unties.

## II. Obstacles Associated with Human Resources

The obstacles related to human resources are appeared increasingly in the converting process from conventional bank to Islamic banking when the same employees continue to work in these banks. Iqbal et al. (1998) argue that teaching, training, and researches are the resources for the development of the authorities. This is more than a discipline like Islamic banking and finance which is still in the beginning stage. In fact, there is a serious shortage of scholars who have even a working knowledge of both Islamic Fiqh and modern economics and finance. Similarly, many managers of Islamic banks are not very well trained in the use of Islamic banking laws.

According to Al-Oqool (2011), human resources are an essential element to the success of any economic institution. Therefore, conventional banks which will be succeed in reaching the goals and objectives of conversion to Islamic banking, need to use the appropriate staffs that are legitimately qualified and have good experiences in banking sector. Due to the different nature and system of Islamic banking and conventional banks, the preparation and rehabilitation of human resources to fit with the new banking situation is a main concern that

should take great interest from conventional bank's leaders who are going to convert to Islamic system (Al-Martan, 1999).

Accordingly, Karbhari et al. (2004) argue that the professional and training courses in banking sector tend to be geared toward conventional banking rather than Islamic banking. They mention that lack of professional training courses for Islamic banking system lead to the lack of qualified staff. In addition, the absence of the required trained staff make Islamic banks resort to the next alternative-recruiting staff from conventional banks.

Following Karbhari et al. (2004), Garbi (2008) states that there is a main difference between working in conventional banks and working in Islamic banking. He points out that the staffs who are working in Islamic banking required to have the qualifications as follows:

- a. Technical qualification: This group includes conventional banking operations with exclusion of all the consequences of interests and Riba.
- b. Legitimate qualification: This group includes accommodate which formats legitimate finance and investment such as Murabaha, Bai' Salam, Ijarah, all kinds of Musharakah, and so on. It should be mentioned that Islamic banking is based on these contracts.
- c. Moral occupational qualification: This group includes self-behaviors which influence the job performance, the rules of behavior with ownership holders and investment owners in the bank, and also the rules of behavior with customers and all dealing with Islamic bank. In addition, Al-Matran (1999) states that, besides the lack of human resources that have expertise in management of treasury instruments, investment and financing services, there is also lack of financial resources that are allocated for training programs of staffs in bank depend on the nature and instruments of Islamic banking.

However, Iqbal et al. (1997) conclude that the absence of trained staff contributes to the slow innovation of Islamic bank's products and instruments. In this regard, Karbhari et al. (2004) mention that according to Kahf (1999) the lack of trained staff affects the relationships with central banks due to the inability to clarify and explain various issues for them.

## III. Obstacles Related to the Regulations and Policies

Al-Matran (1999) stated that based on prior experience, most of the conventional banks that converted to Islamic banking by opening Islamic windows/branches have not considered the following elements:

- a. Inadequacy of accounting system. In fact, the accounting system is based on traditional methods, but Islamic banking needs the new accounting system.
- b. The delay in meeting the needs of the Islamic banking application, technical systems and procedures.

Consequently, these obstacles will be reflected as the weakness of conventional bank's performance converted to Islamic banking such as prolonging and complicated procedures. In addition, they will also be reflected as the weakness of the level of customer service and the relationship between the converted banks and the customers (Mustafa, 2006). For example, most of the tax systems that are appropriate for conventional banks compared to Islamic banks, allow to have interest for tax-deductible. However, the profit which is an alternative to interest under the Islamic banking system is not tax-deductible (Karbhari et al. 2004).

#### IV. Shari'ah Obstacles

Islamic banking and Islamic finance is based on the principles established by the shari'ah rules as well as jurisprudence or rulings (Fatwa) issued by qualified Muslim scholars. However, the main problem or obstacle faced in the converting process from conventional

bank to Islamic banking is shari'ah compliance. In other words, these obstacles include these questions:

- How to treat with the receivables and liabilities which are received or paid before conversion?
- How to deal with the prohibited assets that are in possession of the bank before conversion and the appropriate ways of disposing them?

According to this situation, the bank which decided to convert to Islamic bank needs to deal with following issues:

- a. Exerting possible efforts to adapt the ways of dealing with central bank's deposits, liquidity needs or otherwise in a way that does not conflict with the rules of shari'a, especially rules that govern riba transactions.
- b. Renovating the transactions with conventional banks on the riba free transactions and the application of instruments accepted by Shari'a.
- c. Increasing the transactions with Islamic financial institutions trough bilateral exchange of current or investment accounts and considerable cooperation in the areas of remittances, documentary credits and syndicated financing.
- d. All conventional transactions must be liquidated by the bank which are originated from monetary assets and are liable to pay interest for them.
- e. Dealing with the bank's non-permissible receivables before the decision to convert.
- f. Dealing with the non-permissible liabilities before the decision to convert, whether the conversion is internal or external.
- g. Disposal of impermissible earnings (Accounting and Auditting Organization for Islamic Financial Institutions, 2012).

Moreover, Hassan (2012) argues that the shari'ah controls of conversion process are:

- a. Addressing the shareholders equity which is formed by the difference between the debtor and creditor interest in order to take the possession of the bank before the converting process.
- b. Addressing the interest of deposits which received by conventional banks before converting process.
- c. Addressing the interest of loans which granted by the bank to its clients before the date of converting, and re-preparation of contracts needed to be settled.
- d. Addressing overdraft process.

Ultimately, compliance with Islamic Shari'ah distinguishes between Islamic bank and conventional bank and gives confidence in dealing with the converted bank by customers. Admittedly, these issues are quite complex and dealing with these challenges will convince the bank's customers with the converting process in conventional banks.

In spite of the Shari'a standard No. 6 which is issued by AAOIFI to lead conventional banks to succeed in the process of conversion, there are many jurisprudence and legitimacy challenges that appear during the conversion process. These challenges are not recognized before applying the practical application of the conversion process.

## V. Obstacles Related to the Development of Islamic Banking Products

It is not surprising that the speed of new financial products development within the Islamic banking industry is very slow (Al-Omar & Iqbal, 1999). According to Mustafa (2006), the limitation of Islamic banking products is considered as one of the main challenges faced by Islamic banking in general and conventional banks decided to convert to Islamic banking or offer Islamic products in particular. This shortage appears clearly in the treasury products. Although, Islamic banking market has witnessed a significant development in order to

develop the banking products compliant with Islamic Shari'a, the Islamic banking system is still in the beginning of the development process.

Following the success of the conventional products, it is observed that much of the Islamic products are introduced into the market by adapting and reengineering the conventional products. Islamic products are innovated and value-added products that put by the Islamic financial institutions. But, these products may bring skepticism on the substance of the products and criticism on the institutions and system if the reengineering process is substantially practiced (Muda & Jalil, 2007).

In this regard, Mustafa (2006) argues that Islamic banks follow conventional banks system. However, most of the Islamic banking products are just conventional products modified to match with shari'ah laws. He also mentions that this shortcoming will limit the ability of Islamic banks to compete with conventional banks.

# VI. The Legislative Vacuum of Control Systems Appropriate for the Nature of Islamic Banking

This obstacle illustrates the lack of clarity or perhaps the lack of relationship between Islamic banks or practice of Islamic banking on the one hand, and central banks which organized and observed the banking industry on other hand. In many cases, we find that the central banks have a single system to deal with banks which operate in their countries without discrimination between Islamic banking and conventional banking such as Saudi Arabia and Bangladesh. Sarker (2004) investigates Islamic banking in Bangladesh. He mentions that inspection and supervision of the Islamic banking operations are conducted in Bangladesh based on per general guideline framed for the conventional banks. In fact, some of these countries are not allowed to issue Islamic bank license and they are not called Islamic bank (Mustafa, 2006).

In addition, the supervisory framework is an important part in both Islamic banks and conventional banks. According to Iqbal et al. (1998), the absence of effective supervisory framework is one of the weaknesses of the prevailing system and needs a serious attention. The role of both Shari'ah advisory boards and Central banks needs to be streamlined and strengthened.

However, there are three reasons to explain why regulations and supervision of banking industry are important:

- To increase the accessibility of the information for investors (transparency),
- To ensure the soundness of the financial system
- To improve the control of monetary policy.

In case of Islamic banks, there is an additional dimension of supervision. This dimension is related to shari'ah supervision of their activities (Iqbal, et al., 1998).

### 9. CONCLUSIONS

The conversion from conventional banks to Islamic banking is converting from corrupt situation to favor religiously. Then, the conversion became one of the most important events recently. However, a considerable demand for shari'ah compliant products has been prompted conventional banks around the world to respond to this considerable demand by opening Islamic branches/windows or convert full-fledge to Islamic banking system. Actually, the desire of converting from conventional banks to Islamic banking is prompted by several motivations. These motivations are varied based on several factors, in the name only a few;

religious scruple, higher profitability, to maintain existing customers or attract new customers, and compete with Islamic banks.

In fact, converting from conventional bank to work as Islamic bank is not easy. It is converting from system to system. From system is based on dept-based to system is based on equity-based. Then, duo to the importance of converting process, the AAOIFI has responded to these developments by issued the shari'ah standard No. 6. The main purpose of this standard is to explain procedures, mechanisms and treatments which are required for converting from CB to IB. However, the practical application of converting from CB to IB is illustrated several obstacles and challenges. These obstacles divided into six categories, namely, (a) administrative obstacles, (b) Human resources obstacles, (c) Regulations and policies obstacles, (d) Shari'ah obstacles, (f) the development of Islamic banking products, (e) the legislative vacuum of control system appropriate to the nature of Islamic banking. In general, these obstacles and challenges are varied from bank to bank and country to country depend on the situation of CB, the economic and social factors in the bank environment, and the desire of the employees and managers of the CB. Also, there are several requirements should be followed to complete the converting process successfully such as scientific planning, shari'a supervisory board.

Finally, there are some recommendations to help the conventional bank which is thanking to converting to Islamic banking system successfully. These recommendations are including;

- a) The scientific planning is the essential step to do the converting process successfully.
- b) Complete segregation of funds is necessary for conventional banks which are planning to open Islamic units. This will be gained more customers' confidence.
- c) Developing the conversion timeline and determining the target deadline date.
- d) Conventional bank should be treating the rights of shareholders, which consist of the difference between the interest owed by the bank and the interest owed to it that the bank has taken possession of prior to conversion.
- e) CB should be treating the Interest-Based loans given to clients by CB before the conversion date. Also treating with overdrafts and all transactions are not compatible with Shari'ah rules.
- f) Tackling all necessary human resource and concerns, including training on Islamic banking products and services.
- g) Undertaking conversion of IT systems.
- h) Establish the shari'ah board. This is important to convince the customers and dealers about the legitimacy of Islamic transactions.

# DEVELOPMENTS OF ISLAMIC BANKING SYSTEM IN MALAYSIA AND NIGERIA: AN ANALYTICAL REVIEW

Muhammad Ridhwan Ab. Aziz<sup>2</sup> Khairil Faizal Khairi<sup>3</sup>

#### **ABSTRACT**

Banking system inclusive of Islamic banks plays crucial and important roles in development of economy of a nation; it is a system that must not be neglected. It requires sufficient efforts from different segments of the society especially the regulator, in order for the nation to be moving forward. Therefore, the objective of the current study is to examine the Malaysian and Nigerian approaches towards the implementation of Islamic banking system in their respective countries. This paper is both descriptive and exploratory with aims to contribute to the understanding of the process of Islamization of banking in these countries. The study will have policy implication to the policy makers and the practitioners. It will also be a source of reference for the academicians, students, and other countries in developing Islamic banking system. In the case of Nigerian, the study recognizes a need for more commitment and long-term planning. The study recommends that Nigerian Regulatory Authority should follow the footsteps of Malaysian in developing its Islamic banking system.

**Keywords:** Islamic banking system, Islamic banks, Bank Negara Malaysia (BNM), Central Bank of Nigeria (CBN)

# 1. INTRODUCTION

The increasing globalization of banking and finance mandate a broad, cross-country perspective on banking issues. Indeed, cross-country comparisons can add insight into basic issues in banking that may not emerge, or are only partially discernible, from single-country analyses Barth et. al. (2004). With this in mind, the authors try to review the development of Islamic banking system of Malaysia and Nigeria. Although Nigeria is at a cradle level started Islamic banking system just one year ago compare to Malaysia which is at most advanced, comprehensive and successful level for over thirty (30) years' experience in the industry and system. But there could be some similarities between the two systems based on the premise that Nigerian government through the Central Bank of Nigeria (CBN) has been aligning Nigerian Islamic banking system with that of Malaysia. Evidences of this are found in the CBN governor's speech: Sanusi (2011), Malaysia is arguably one of the major global hubs in Islamic finance and home to a number of operating, regulatory and educational institutions on Islamic finance. Consequently, it is envisaged that a strategic linkage with Malaysia would energize and give the needed momentum to CBN's efforts to facilitate the growth and development of Islamic finance in Nigeria. This also evidenced in the already established relationship between the two countries in the area of Islamic banking and finance. For instance: CBN in 2008 undertook a study tour of Malaysia to understand its regulatory and operating practices. The CBN in May 2009 joined the Council of the Islamic Financial Services Board (IFSB) which is based in Malaysia, as a full member. CBN recently signed a Memorandum of Understanding with the Bank Negara Malaysia

<sup>&</sup>lt;sup>1</sup> Lecturer Crescent University Abeokuta, Ogun State. Nigeria and currently PhD student at Faculty of Muamalat, Universiti Sains Islam Malaysia (USIM).

(BNM) covering a broad spectrum of issues on regulatory cooperation and collaboration including Islamic Banking.

In addition, based on the pioneer achievements and success recorded by Malaysia in terms of Islamic financial system, education, economy, business environmental friendly, Malaysia is the best country to use as a pacesetter in terms of Islamic banking system for Nigeria and other developing countries. Apart from Malaysian success, there are a lot of similarities between the two countries, Malaysia and Nigeria. Basically, the same system of government aside, there are certain similarities between Malaysia and Nigeria. For instance, both countries have not only democratic nations but belong to the same Colonial Master. Having obtained their independent just three (3) years a part, like Nigeria (1960), Malaysia (1957) is a state with Muslims majority (53%) and accommodate people of different religious believes, such as Islam, Hindu, Buddha, Christian. According to MIFC (2012), Malaysian population comprises of 53% Muslim. 17% Buddhist, 12% Taoist, 8% Christian, 8% Hindu, and 2% Tribal. Same as in Nigeria context, Muslims constitute about 55% of 150 million of Nigerian population, Dogarawa (2012). Aside from these, both countries are also multi-racial societies. Therefore, the objective of the current study is to examine the Malaysian and Nigerian approaches towards the implementation of Islamic banking system in their respective countries. This paper is both descriptive and exploratory and aims to contribute to the understanding of the process of Islamization of banking in these countries. The study will have policy implication to the policy makers and the practitioners. It will also be a source of reference for the academicians, students, and other countries in developing Islamic banking system. This paper is organized as follows. Section two explores the origin/history of Islamic banking system in Malaysia and Nigeria after introduction. This is followed by the initiatives taken in Malaysia to develop Islamic banking system and initiatives taken in Nigeria to promote the effective regulation of Islamic banking system. In section four is the current scenario of Islamic banking system in Malaysia and Nigeria and recommendation to Nigerian regulatory authority regarding Islamic banking system. The last section concludes.

### 2. ORIGIN OF ISLAMIC BANKING SYSTEM IN MALAYSIA AND NIGERIA

# 2.1. ORIGIN OF ISLAMIC BANKING SYSTEM IN MALAYSIA

According to INCEIF chair of Islamic finance, Professor Dr. Abbas Mirakhor (2012), Malaysia is seen to be in the driver's seat when it comes to Islamic banking. Malaysian's model of Islamic banking system, today, is one of the most advanced Islamic banking systems in the world, Marimuthum et. al. (2010). According to Tahir et. al (2009), Both Islamic banks and Islamic Insurance (Takaful) has contributed to the development in Islamic finance in Malaysia since the early 70s. There were two (2) primary factors namely: External and Internal, that facilitated the establishment of Islamic banking system in Malaysia in the 1980s, Marimuthum et. al. (2010). The first and internal factor was the establishment of the first Islamic institution by the name, Perbadanan Wang Simpanan Bakal-Bakal Haji (PWSBH), in August 1963 by statute. It was an institution for Muslims to save for their Haj (pilgrimage to Mecca) expense. In 1969, PWSBH (Malayan Muslim Pilgrims Savings Corporation) merged with Pejabat Urusan Haji (the Pilgrims Affairs Department of the government) to form Lembaga Urusan dan Tabung Haji, Pilgrim's Management and Fund Board {now known as Lembaga Tabung Haji (LTH)}. Khir et. al. (2008). The second internal factor was a more formal demand from the Bumiputera Economic Congress in 1980 which passed a resolution urging the government to allow the LTH to establish an Islamic bank in Malaysia to mobilize the savings of the Muslims and to invest them in productive manner in accordance with Islamic law and practices. The third internal factor was the National Steering Committee of Islamic bank which was set up on 30<sup>th</sup> July 1981. The committee submitted its report on 5<sup>th</sup> July 1982, in this report was a recommendation that Islamic Banking Act among others should be legislated to facilitate the establishment of an Islamic Bank. This recommendation was accepted and Islamic Banking Act was legislated towards the end of 1982, and gazette in 1983, which is known as the Islamic Banking Act 1983. With the enacted of this Islamic Banking Act 1983, the first Islamic bank in Malaysian history, Bank Islam Malaysia Berhad (BIMB) was established in 1983. Bank Islam Malaysia Berhad (BIMB) which represents a full-fledged Islamic (commercial) bank in Malaysia. Bank Islam Malaysia Berhad (BIMB) was setup in July 1983 with paid-up capital of RM 80million. The bank commenced its operations on 1 July, 1983. On March 4, 1993, Bank Negara Malaysia introduced a scheme known as Skim Perbankan Tanpa Faedah, SPTF (Interest-free banking scheme). On a pilot basis the scheme involved the three biggest commercial banks in Malaysia, namely: Maybank, Bank Bumiputra Malaysia and United Malayan Banking Corporation. During the pilot period the scheme was successful. Thereafter, Bank Negara Malaysia issued three sets of guidelines on July 5, 1993, one each for the commercial banks, finance companies and merchant banks. With this scheme, commercial banks, merchant banks and finance companies were allowed to offer Islamic banking products and services. Almost all the conventional financial institutions in Malaysia quickly began to offer Islamic banking services. But these institutions are required to separate the funds and activities of Islamic banking transactions from that of the conventional banking business to ensure that there would not be any co-mingling of funds. (Mohamad, 2007).

Bank Muamalat Malaysia Berhad, the second Islamic bank, was established in 1999, Muhammad Ridhwan (2012). On October, 1999, Bank Muamalat Malaysia Berhad (BMMB) commenced operations. The establishment of BMMB was the spin-off effect of the merger between Bank Bumiputra Malaysia Berhad (BBMB) and Bank of Commerce (Malaysia) Berhad (BOCB). Under the merger arrangement, the Islamic banking assets and liabilities of BBMB, BOCB and BBMB Kewangan Berhad (BBMBK) were transferred to BBMB, while the conventional operations of BBMB, BOCB and BBMBK were transferred to BOCB accordingly. In addition, BMMB was given 40 branches of BBMB and BBMBK in various locations throughout Malaysia and a staff workforce of 1,000, migrated from BBMB, BOCB and BBMBK. In Malaysia the Islamic Interbank Money Market (IIMM) was introduced on 4<sup>th</sup> January 1994. In terms of products and services, there are more than 40 Islamic financial products and services that are offered by the banks using various Islamic concept s such as Mudarabah, Musharakah, Bai' Bithaman Ajil (Bai' Muajjal), Ijarah, Ijarah Thumma Al-Bai', Istisna', Qardhul Hassan, and others, (Jamal 2006). According to Marimuthu et. al. (2010), the two external factors were the establishment of Islamic banks in the Middle East (such as in Saudi Arabia, Bahrain, Egypt among others) and the establishment of Islamic Development Bank (IDB) in 1974.

### 2.2. ORIGIN OF ISLAMIC BANKING IN NIGERIA

The first recorded effort to provide Islamic banking services in the history of Nigeria was made by Muslim Bank West Africa Limited in Lagos around 1961. The effort was short lived and the bank was closed down by the then minister of finance, chief Obafemi Awolowo (Orisankoko, 2010). In the late 1980s, conferences and seminars were organized by University based Islamic centers and various Islamic groups among Nigerians, particularly on the evils of interest and the need to adopt interestfree banking (Adebayo, 2010). Bank and other financial institutions decree (BOFIA) was issued in 1991 by the military administration headed by General Ibrahim Badamasi (Retired) to recognize and facilitate the emergence of Islamic banking in Nigeria. The evolution of modern Islamic banking in Nigeria dated back to 1991 with the enactment of the banks and other financial institutions decrees (BOFIA). The decree recognized banks based on profit and loss sharing (sec. 23 and 61 of decree BOFIA). The decree also recognized specialized banks. The designation of non-interest banks as specialized banks in 2010 was based on this provision as Islamic banks are a form of non-interest banks. Between 1993 and 1995 investors started applying for banking license to operate Islamic banks but the initiatives did not materialize due to non-compliance with CBN requirements by the investors (Sanusi, 2011). In 1996, Habib Bank plc opened a non-interest banking window offering a limited number of Shariah compliant products but it was not successful as there was no framework for noninterest banking in the country. Around same period, few microfinance banks especially in the North and South-West parts of the country tried to blend some of their products to look like Shariah compliant but without much success (Dogarawa, 2012). In 2004, demands for the establishment of full-fledged non-interest banks continued from interested investors. An approval-in-principle (AIP) was granted to Jaiz international plc to establish Jaiz bank upon meeting mandatory capital requirement. In 2005, the financial system strategy (FSS) 20:20:20 was launched and among its aims was to create non-interest banking instruments to capture huge unbanked segments. In January 2009, the CBN joined the Islamic Financial Services Board (IFSB) as a full-council member. March 2009, the CBN issued the draft framework for the regulation and supervision of non-interest banks in Nigeria for comments and suggestions by stakeholders. August 2010, the CBN released the new banking model which designated non interest banks among the specialized. In October 2010, the CBN joined 11 other central banks and two multilateral organizations to form the International Islamic Liquidity Management Corporation (IILM) to be based in Malaysia. The aim of the IILM was to provide treasury instruments that are Shariah compliant to address the liquidity management issue of Islamic banks and serve as instruments for open market operations involving Islamic financial institutions. On Monday 20th June 2011, Jaiz bank was granted approval-in-principle by the CBN to operate as a regional interest free bank. An international bank, Stanbic IBTC was also granted license to operate a window of Islamic banking around the same time (Dogarawa, 2011c). Jaiz Islamic bank commenced operations in January 2012.

# 3. INITIATIVES TAKEN IN MALAYSIA AND NIGERIA TO DEVELOP ISLAMIC BANKING SYSTEM

### 3.1. INITIATIVES TAKEN IN MALAYSIA TO DEVELOP ISLAMIC BANKING SYSTEM

Malaysia adopted the approach of gradually implementing a dual financial system, where Islamic financial system is in parallel with the conventional system. Bank Negara Malaysia (BNM) is empowered to regulate and supervise Islamic banking operations in Malaysia. It constantly monitors the operations of Islamic banks through off-site and on-site supervision. Regulatory tools include the minimum requirement for Islamic capital funds, the statutory reserve ratio and other prudential guidelines.

The evolution of Islamic banking and finance in Malaysia can be categorized in to three phases (Yakcop, 2003), namely: (1) Familiarization phase I (1983-1992); (2) Mainstream acceptance and pervasiveness phase II (1993-2002); and (3) Moving forward- the next phase, phase III, beginning 2003, to be used as a strategic developmental tool.

First Phase: In Malaysia, the development of Islamic banking and finance began with a period of discovery, that is, initial period of familiarization (1983-1992). It was an exploratory or experimental stage, where the first Islamic bank, Bank Islam Malaysia, was set up in 1983 under a new Islamic banking Act. With the establishment of public confidence, Bank Islam Malaysia grew from strength to strength to extent that non-Muslims started patronizing Bank Islam Malaysia.

The second phase, which is mainstream acceptance and pervasiveness phase (1993-2002), the entire financial system began to use and apply Islamic financial principles. Both the Islamic and conventional systems are equally comprehensive and viable.

Third Phase, beginning in 2003, Islamic financial principles is needed to be used as a tool of competitive advantage. Both domestically and internationally, the ultimate objective of the Islamic financial system will be to design and put in place an economic system supportive of economic justice. A radical altering of the dominant culture and the restructuring of many important institutions will be required in order to achieve this objective. (Yakcop, 2003).

Malaysia's Overall Strategy in the Development of Islamic Banking: There are four main strategic approaches applied in development of Islamic banking in Malaysia, they are as follows:

- 1. Dual banking system, the objective was a full-fledged Islamic banking system operating on a parallel basis with a full-fledged conventional system.
- 2. A step-by-step approach with three basic elements, in the context of an overall long term strategy, namely: (a.) A large number of instruments, efforts was focusing on creating a large number of different types of Islamic financial instruments, during the first phase. (b.) during phase II, the creation of a large number of institutions that offering Islamic financial services, the Interest-free Banking Scheme, known as Skim Perbankan Tanpa Faedah (SPTF) was chosen because setting up new Islamic banks, even as subsidiaries of existing banks, in terms of logistics and infrastructure are expensive. For instance, in 1993, the cost of setting up one branch of a financial institution in Malaysia was about US Dollar \$200,000, (Yakcop, 2003). (c.) An Islamic Interbank Money Market (IIMM) was set up in January 1994, thus the process of creating an Islamic banking system in Malaysia with all the three (3) maim ingredients in place was completed.
- 3. A comprehensive set of Islamic banking legislation and a common *Shariah* Supervising Council for all Islamic banking institutions: there was in place a comprehensive set of Islamic financial institutions in Malaysia, an important feature of the Malaysian model. In 1993, when Islamic banking was extended to the other financial institutions, the *Shariah* Supervisory Council was transferred to the Bank Negara Malaysia, to be the sole source of interpretation for all Islamic financial institutions in the country.
- 4. A practical and open-minded approach in developing Islamic financial interest: the founding fathers of the system adopted a practical and open-minded approach from the beginning, and this is one of the key factors in Malaysia's success in the implementation of Islamic banking and finance, (Yakcop, 2003). This approach laid emphasize on these three main elements:
- (i) the need for a great deal of research and development work to be done. (ii) realization from the beginning that an Islamic financial system cannot be implemented only on the basis of profit and loss sharing. And (iii) in the implementation of the Islamic financial system emphasis was always placed on substance rather than label.

# 3.2. INITIATIVES TAKEN IN NIGERIA TO PROMOTE THE EFFECTIVE REGULATION OF ISLAMIC BANKING SYSTEM

According to Sanusi (2011 pp. 14-17), in line with its facilitating role, the CBN has undertaken a number of initiatives to promote the effective regulation of Islamic banking and finance in Nigeria. These include:

### 1. Capacity Development

Given the dearth of knowledge, skills and regulatory experience on Islamic banking, capacity development has been an on-going endeavour at the CBN. As part of the learning process towards the development of a robust regulatory framework that meets international standards, the CBN in 2008 undertook a study tour of Malaysia to understand its regulatory and operating practices. The experience provided vital learning points that contributed immensely to the development of the framework issued in January 2011 and on-going implementation efforts. CBN's capacity development efforts got a further boost following the approval in January 2010 of a technical assistance (TA) grant towards capacity development on Islamic banking by the Islamic Development Bank (IDB). Under the TA framework, a team of CBN officials visited Bahrain in May 2011 for two weeks to study the regulatory and operating practices in that country. In addition, the CBN has organized and sponsored several training programs and other initiatives aimed at developing capacity towards the effective regulation and supervision of Islamic banking in Nigeria. These efforts would be sustained in the months and years ahead.

# 2. CBN Membership of the Islamic Financial Services Board (IFSB)

The CBN in May 2009 joined the Council of the Islamic Financial Services Board (IFSB) as a Full member. This decision was hinged on the strategic need to be part of the mainstream global Islamic

financial services industry and leverage the opportunities provided for capacity development. Following its membership of the standards-setting body, the CBN has participated actively in a number of IFSB activities at both council and working group/technical committee levels, which have provided veritable opportunities for learning, experience-sharing and capacity development. The CBN has also benefited from a few training events organized by the IFSB, which have further exposed CBN officials to current developments and best practices on Islamic banking.

### 3. Establishment of the International Islamic Liquidity Management Corporation (IILM)

The CBN in October 2010 joined 11 other Central Banks and 2 multilateral organisations to sign the Articles of Agreement (AA) and Memorandum of Participation (MOP) establishing the International Islamic Liqudity Management Corporation (IILM), based in Kuala Lumpur, Malaysia. The CBN's membership and participation in the IILM initiative provides a veritable platform for addressing the anticipated liquidity management challenge for Islamic banks in Nigeria. The over-arching objective of the CBN is to enable newly licensed Islamic banks 'hit the ground running' devoid of any operational obstacles, thus enhancing their safety and soundness as well as facilitating the orderly growth and development of the nascent Islamic banking sector in Nigeria.

### 4. Inter-agency Collaboration and Cooperation

Given the multi-sector dimension of Islamic banking, the CBN has commenced the process of engaging with critical stakeholders that may have important roles to play in the successful implementation of Islamic banking in Nigeria such as the Federal Inland Revenue Service (FIRS), Securities & Exchange Commission (SEC), National Insurance Commission (NAICOM), Nigeria Deposit Insurance Corporation (NDIC), the Debt Management Office (DMO), Nigeria Accounting Standards Board (NASB) etc. In this regard, the CBN has begun preliminary contacts with the DMO towards the development and issuance of an Islamic bond (Sukuk) in Nigeria. There is also a concurrent effort to engage with the fiscal authorities in Nigeria with a view to addressing the tax neutrality and other level playing field issues that would foster the successful operation of Islamic banks in Nigeria.

### 5. Awareness Creation

As part of efforts to create mass awareness and having regard to Nigeria's diversity, the CBN intends to organize an international conference on Islamic banking which is expected to draw participants cutting across the broad spectrum of the Nigerian society including operators and regulators in the Nigerian financial services industry, religious organizations, the media and academia with support from the IDB.

### 6. Cross-border Linkages and Bridges

As a member and integral part of the global financial community, it is in Nigeria's strategic interest to establish and maintain linkages and bridges with other countries/regions across the world particularly as it seeks to develop the nascent Islamic financial services industry in Nigeria. In this regard, the CBN recently signed a Memorandum of Understanding with the Bank Negara Malaysia (BNM) covering a broad spectrum of issues on regulatory cooperation and collaboration including Islamic Banking. As you are aware, Malaysia is arguably one of the major global hubs in Islamic finance and home to a number of operating, regulatory and educational institutions on Islamic finance. Consequently, it is envisaged that a strategic linkage with Malaysia would energize and give the needed momentum to CBN's efforts to facilitate the growth and development of Islamic finance in Nigeria.

### 7. Non-interest Banking and the New Banking Model

As part of the on-going reforms in the Nigerian banking industry, the CBN undertook a comprehensive review and reversal of the universal banking model hitherto practiced in Nigeria. Under the new regime, Islamic banks were categorized as specialized institutions and may operate as national or regional banks. It is expected that the new arrangement would incentivize prospective investors who might wish to set up Islamic banks in Nigeria. Indeed, the first Approval-in-Principle

(AIP) under the new dispensation was granted on June 3, 2011 to one of the promoters that applied for CBN license to establish an Islamic bank with regional authorization.

# 4. CURRENT SCENARIO OF ISLAMIC BANKING SYSTEM IN MALAYSIA AND NIGERIA

### 4.1. CURRENT SCENARIO OF ISLAMIC BANKING SYSTEM IN MALAYSIA

Today, Malaysia's Islamic banking and finance continues to grow rapidly. A diversity of financial institutions from across the world, supported by a conducive environment that is renowned for continuous product innovation, a broad range of innovative Islamic investment instruments, a comprehensive financial infrastructure and adopting global regulatory and legal practices. The country also placed a strong emphasize on human capital development of the Islamic financial industry to ensure the availability of Islamic finance talent. In turn, all these value propositions have transformed Malaysia into one of the most developed Islamic banking markets in the world, BNM, (2012). Malaysia continues to progress and to build on the industry by inviting foreign financial institutions to establish international Islamic banking business in Malaysia to conduct foreign currency business. Currently, there are about sixty-two (62) Islamic Financial products and services offered by the Islamic banks in Malaysia, using various Islamic concepts as can be seen in Appendix A. According to Muhammad Ridhwan (2012), the main products and services can be categorized into seven (7) major types as follows: Deposit (general), Deposit (other deposits), Investment (investment account), Financing (fund based), Investment (fee based), Trade finance and Card services.

Due to the supportive environment from both the Malaysian government and individuals, now, the country boasts a vibrant Islamic banking and financial institutions with seventeen (17) Islamic banks, five (5) International Islamic bank. Bank Negara Malaysia had issued licenses to many of conventional and international banks to operate special tellers for handling Islamic transactions, participating banks in Islamic banking scheme are: a. six (6) development financial institutions (DFIs) offering Islamic banking services, b. seven (7) investment banks, and c. two (2) commercial banks. Currently, there are Twelve (12) Takaful companies, one (1) International Takaful Operator (ITO) and ten (10) Re-Takaful companies in the country.

The Malaysian Islamic banking industry grew at a compound annual growth rate (CAGR) of 20.2% during 2005-2009 to reach RM233.7bln or 16.4% of total assets of the banking sector. In the same period, total Islamic banking deposits reached RM188.8bln to constitute 17.8% of total deposits in the banking system. On the financing segment, total Islamic financing amounted to RM135.0bln to represent 17.2% of the banking system's total loans and financing, as shown above. In quarter one 2010 (1Q10), the industry continued to illustrate strong performance, as witnessed by

In quarter one 2010 (1Q10), the industry continued to illustrate strong performance, as witnessed by the following:

- Growth in financing. Financing continued to grow by 28.1% y-o-y to RM141.3bln as at end-1Q10, supported by strong growth in the education & health and mining & quarrying segments.
- Healthy deposit growth and ample liquidity. Deposit growth grew by 22.7% y-o-y to RM192.1bln as at end-1Q10 vs. RM156.6bln in 1Q09. The banking system's financing-to-deposit ratio stood at 73.5% in 1Q10 (1Q09: 70.4%), which translates into an excess liquidity of RM50.9bln.
- Firm asset quality. The gross 3-month non-performing financing (NPF) amount reached RM5.8bln as at end-1Q10 vs. RM5.3bln in 1Q09. Net NPF ratio edged down to 2.1% from 2.5% during the same period.
- Strong capitalisation. In 1Q10, the Islamic banking system capitalisation remained strong, with risk-weighted capital ratio (RWCR) of 14.8% (1Q09: 14.7%) and core capital ratio (CCR) of 12.3% (1Q09:12.4%).

In year 2011, the total assets of Islamic banking increased by 24.1 per cent to RM436.1 billion. Representing 23.7 per cent of the total assets of banking system in the country.

Year 2012: Islamic banking business have continued to expand in the first seven months of year 2012, total assets increasing 20.6 per cent to RM469.5 billion, reflecting 24.2 per cent of the country's banking system's assets, the Ministry of finance in the Economic report 2012/2013.

Furthermore, the Economist intelligence unit (2009) described Malaysian achievements and milestones /steps taken as follows:

### 1. The recent financial crisis: Learning from the Malaysian experience:

The experience of the Asian currency crisis in Malaysia suggested that there could be lessons for other regions in the way that the country handled that situation.

### 2. Islamic finance in Malaysia:

There are two important factors that distinguish the Islamic finance sector in Malaysia: first, that it is comprehensive and second, that it liberalised, which gives it good prospects for building links with other parts of the world.

### 3. A shift in underlying assets:

In Malaysia, there had been a move away from real estate towards financing infrastructure and other long-term investments. The experience in Malaysia had been one of looking at developing Islamic finance in its broadest sense across financial markets, the banking sector, *takaful*, equity and debt capital markets, as well as other types of services.

In the world arena, this is the quotation from the global an international organizations which used to describe Malaysia. *Today, Malaysia is among the best countries in the world with the ability to provide good and ready access capital for businesses. How can we use this to progress?*, "The Global Competitiveness Report 2012-2013, World Economic Forum.

### 4.2. CURRENT SCENARIO OF ISLAMIC BANKING SYSTEM IN NIGERIA

Jaiz bank was the first Islamic bank in Nigeria. It was granted Approval in Principle (AiP) by the CBN, for it to operate as a regional interest-free bank. The bank, which was originally billed to commence operation in September 2011 with offices in Abuja, Kaduna and Kano, could not start banking business until January 2012. An international bank, Stanbic IBTC was also granted license to operate a window of Islamic banking around the same time (Dogarawa, 2011c). Jaiz bank plc was created out of the ashes of the former Jaiz International Plc which was set up in 2003/2004 as a special purpose vehicle (SPV) to establish Nigeria's first full-Pledged Non-Interest Bank. It is an unquoted public company owned by over 3000 shareholders spread over the six geographical zones of Nigeria. Jaiz bank plc. obtained a regional operating license to operate as a Non-Interest Bank from the Central Bank of Nigeria on the 11th of November 2011 and begun full operations as the first Non-Interest Bank in Nigeria on the 6th of January, 2012 with 3 branches located in Abuja FCT, Kaduna and Kano. The Regional license allows the Bank to operate geographically in a third of the country. Also, based on recommendations from Islamic Development Bank (IDB), who is also a shareholder of the bank, Jaiz bank plc has partnered with Islamic Bank Bangladesh (IBBL) for technical and management assistance. Jaiz bank plc plans to upgrade to a national operating license by 2013. Consequently, it will increase its current share capital base from N6 billion (USD\$39 million) to N12 billion (USD\$78 million). This upgrade will enable the bank operate in all 36 states of the federation including the Federal Capital Territory. Thus, position it to compete effectively in one of the most thriving sectors of the Nigerian economy. The bank plans to establish 16 branches in 2012 and 100 by 2017. In this regard, the IDB membership of the board is expected to provide a lot technical input. The business potential for a Non-Interest Bank in Nigeria is enormous as such an institution has been long awaited by a population of over 78 million Nigerians representing over 50% of the country's population of 155 million. Jaiz Bank is focusing mainly on retail banking, but promises to offer corporate and commercial banking services.

# 4.3. RECOMMENDATIONS TO NIGERIA REGULATORY AUTHORITY REGARDING DEVELOPMENT OF ISLAMIC BANKING SYSTEM

In general, the findings of the review revealed that in the case of Nigeria, a lots of necessary actions need to be taken with the following recommendations to Nigerian Regulatory Authority regarding development of Islamic banking system. Nigeria should follow the footsteps of Malaysia as follows:

- I. To be more committed and develop long-term planning by embracing Malaysia's overall strategy in the development of Islamic banking system. Malaysian four main strategic approaches:
- 1. Dual banking system, where a full-fledged Islamic banking system will be operating on a parallel basis with a full-fledged conventional system.
- 2. A step-by-step approach with three basic elements, in the context of an overall long term strategy, namely: (a.) A large number of instruments, the efforts should be focusing on creating a large number of different types of Islamic financial instruments, during the first phase. (b.) during phase II, the creation of a large number of institutions that offering Islamic financial services, the Interest-free Banking Scheme, known as Skim Perbankan Tanpa Faedah (SPTF) should be chosen because setting up new Islamic banks, even as subsidiaries of existing banks, in terms of logistics and infrastructure will be expensive. (c.) An Islamic Interbank Money Market (IIMM) should be set up, thus the process of creating an Islamic banking system in Nigeria with all the three (3) maim ingredients in place will be completed like that of Malaysia.
- 3. A comprehensive set of Islamic banking legislation and a common *Shariah* Supervising Council for all Islamic banking institutions should be put in place.
- 4. A practical and open-minded approach in developing Islamic financial interest: Nigeria should adopted a practical and open-minded approach from the beginning, as this was one of the key factors in Malaysia's success in the implementation of Islamic banking and finance, (Yakcop, 2003). This approach laid emphasize on these three main elements:
- (i) the need for a great deal of research and development work to be done. (ii) realization from the beginning that an Islamic financial system cannot be implemented only on the basis of profit and loss sharing. And (iii) in the implementation of the Islamic financial system emphasis was always placed on substance rather than label.
- II. To follow the case of Bank Muamalat in establishing more Islamic banks. The establishment of Bank Muamalat Malaysia Berhad,(BMMB) was the spin-off effect of the merger between Bank Bumiputra Malaysia Berhad (BBMB) and Bank of Commerce (Malaysia) Berhad (BOCB). Under the merger arrangement, the Islamic banking assets and liabilities of BBMB, BOCB and BBMB Kewangan Berhad (BBMBK) were transferred to BBMB, while the conventional operations of BBMB, BOCB and BBMBK were transferred to BOCB accordingly. In addition, BMMB was given 40 branches of BBMB and BBMBK in various locations throughout Malaysia and a staff workforce of 1,000, migrated from BBMB, BOCB and BBMBK. This type of merger arrangement is recommended by the study for existing conventional banks in Nigeria to create rooms for establishment of more Islamic banks in the country.

### 5. CONCLUSION

The study has examined the Malaysian and Nigerian approaches towards the implementation of Islamic banking system in their respective countries. This paper is both descriptive and exploratory with the aims to contribute to the understanding of the process of Islamization of banking in these countries. Based on the pioneer achievements and success recorded by Malaysia in terms of Islamic financial system, education, economy, business environmental friendly, Malaysia is the best country to use as a *pacesetter* in terms of Islamic banking system for Nigeria and other developing countries. The study will have policy implication to the policy makers and the practitioners. It will also be a source of reference for the academicians, students, and other countries in developing Islamic banking system. In the case of Nigerian, the study recognizes a need for more commitment and long-term planning. The study recommends that Nigerian Regulatory Authority should follow the footsteps of Malaysian in developing its Islamic banking system.

# THE CHALLENGE OF SUKUK TRADING IN SECONDARY CAPITAL MARKET BASED ON SHARIA COMPLIANT

Hanandewa<sup>1</sup> Mohamad Heykal<sup>2</sup>

Sukuk instrument and trading mechanisms, especially in the secondary market around the globe are somehow depart from the shariah law. It happens because some sukuk instrument is issued just follow conventional system for making easy to the potential investor. The trading mechanisms for example are basis usually are dominated by bai' al dayn concept, the concept that is against the Islamic law. Much of the motives to adopt this concept are to cater conventional investors demand for familiarity in trading mechanism with conventional bond. The fact, a trading mechanism that fully complies with the shariah law would probably cause anxiety to conventional investors that comprise much of the investors profile in this contemporary financial environment. This is the challenge for Sukuk as one Islamic financial instrument in the word. With the literature study that we used in this research, the author try to proposes the new trading mechanism to minimize the trade-off between conventional and Muslim-devoted investors needs in their sukuk trading in exchange-based secondary market.

**Keywords**: Sukuk, trading, mechanism, Islamic, investors, financial, environment

### 1. INTRODUCTION

With the strong growth of the Islamic banking industry in the world, not only in the Islamic country but also in the western country, make the Islamic capital market, or capital market that relevant with the sharia compliant became the critical and also important component in the Islamic financial system. One of investment instruments in Islamic capital market is sukuk. In accordance with sukuk thus it is necessary to see at first the meaning of sukuk. There is numerous significance of sukuk. However the significance shall see word derivation from sukuk itself. Word derivation of sukuk is *sakk*, or sometime *sakik* as well. Those words are customary to use international trade event taking places in various area governable by Moslem government in the past Midde Age. Various existing facts show that sukuk at hand is most used by various Moslem societies in the Middle Age in forms of bond papers representing financing obligation that comes from trade and also variety of other comercial activities. Nonetheless, the most appropriate meaning of sukuk is investment certificate. This definition is not very different from the definition from AAOIFI that stated in May 2003. It stated that sukuk are "certificate of equal value represent the full ownership of tangible asset. In other word, the issuer of sukuk should have the tangible asset as an underlying asset for that instrument. There are also some characteristic from sukuk, such as:

- -Sukuk is the instrument of Islamic capital market that can be traded. Sukuk can be traded in the stock exchange because of sukuk represent parties who have a clear asset. Also the investor can get benefit from these assets and can also be traded at market prices.
- -Sukuk can be rated. As securities in the capital market, sukuk can be rated by international rating agencies such as Moody's and Standard & Poor's
- -Sukuk can be added. In addition to the major assets and business activities, sukuk can be secured by other assets Islamic compliance

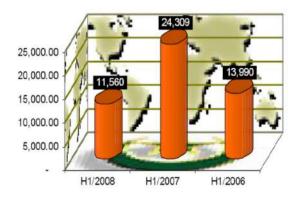

based on that definition, sukuk can be categorized as an Islamic financial instrument that are asset backed, tradable and also compatible with the trust certificates ( Tariq,2004 ). The investor from sukuk will get

the gain advantages as portion inseparable from asset taking foundation of that sukuk. As consequence and effect of that significance, advantages obtained by investor of sukuk shall be divided and distributed to co-investors of the sukuk. In some recent periods of times sukuk has achieved its popularity as one of alternatives of financing instrument instead of conventional bond. In some countries, there knows that sukuk has been important instrument of state budget financing. Recently, some countries have become regular issuers from sukuk instrument for instance Malaysia, Bahrain, Brunei Darussalam, Uni Emirat Arab, Qatar, Pakistan dan States of Saxony Anhalt - Germany. In Europe, the state of Saxony Anhalt is the pioneer state that issued sukuk in Europe and it can raised 100 million Euro. The Publication of sovereign sukuk is commonly designated to necessaries of state financing in general or is aimed at financing particular projects, such as dam building, electical generation unit, harbor, airport, hospital, and toll road. Besides sukuk in addition can be utilized for financing needs (cash-mismach), namely by using sukuk with short period of time (Islamic Treasury Bills) and also can be used as cash market instrument. During just periods of 2004-2007, sukuk issuance globally has increased significantly from USD 7,2 billions in 2004 to USD 39 billions in the end of 2007 (Jobs et al, 2008). In light of trend of 2004-2007 Jobs et al (2008) estimated a number of sukuk globally in circulation will achieve over USD 200 billions in the end 2010. According to projection done by S&P, in next five years, world market of sukuk can penetrate at level of USD 100 billions. The latter depends on credit market stability condition. Meanwhile, Moody party estimated that market of sukuk will increase to 35% per year. In 2010, global market of sukuk would be expected to penetrate up to USD 200 billions, mainly sustained by countries in Gulf area joining GCC, England, Japan, and Thailand (MIFC, 2009). This very bulky volume potency definitely is necessary to be balanced with secondary market availability of sukuk intact for facilitating investor's needs. The below graph shows world development of sukuk:

## TOTAL PUBLICATION OF SUKUK (USD MILLIONS) COMPARISON OF SEMESTER I 2006, 2007, 2008 (A POSSIBLE IMPACT OF SUB-PRIME CRISIS)

Source: Beard, Charles. "Sukuk in H1-2008 – Key Trends and Market Hightlights", Sukuk Research, IFIS, in Ali (2008)

Secondary market in capital market will much assist investors in need of liquidity in order to be capable to sell bond letters or bond papers that they belongs to. Likewise with investor of sukuk can do presentation of sukuk in secondary market in the end will increase observation of the would-be buyers of sukuk. As with the otherwise, secondary market in addition helps investors having excess of liquidity to afford to buy sukuk in way of exposing their interests on observation of the would-be buyers of sukuk. In this regard, secondary market helps provide liquidity for sukuk and afterward will attrack more investor due to facilities for investors to enter market or leave from market. Therefore, higher market activities of sukuk in secondary market will finally increase as well the issuance of sukuk volume.

Based on the previous research that has been done by Tariq, AA (2004) that stated about the accordance and also tradability in financial instrument, there are two types of Islamic financial instrument, there are tradable and also non tradable in the secondary market. For the Islamic financial instrument that classify

as tradable, it should be:

- a. Based on mudharabah certificates: The certificates that show the permanent ownership in a company without control and also management rights
- b. Based on musharakah certificates: the certificates that show permanent ownership in the company that follow with control and also management rights
- c. Redeemable musharakah certificates: The certificates with temporary ownership in the company with or without the management rights
- d. Fixed rate ijara certificates: the ownership of durable assets that given or rent and also or the ownership of usufructs durable assets. Rent is fixed for the period of the contract.
- e. Floating rate of the ijara certificates: The ownership of the durable assets that given or rent or the ownership of usufructs of durable assets

Based on the AAOIFI, the sharia compliant ruling that related to the trading of sukuk are usually influenced by the sukuk assets. The most important rules and also principles of the sharia that considered in the sukuk trade are included:

- -It is permissible for an issuer to undertake that the investor will buy some sukuk at the market value after completing the deal, or at a price to be determined at the time of purchase.
- -It is permissible to trade in securities of ownership of usufructs of tangible assets, subject to forward lease, prior to contract for sub-leasing assets.
- -It is not permissible to trade in certificates of ownerships of usufruct of assets before the assets from which the usufructs is to be made available is defined, except by observing the rules for disposal of receivables.
- -The certificates may be traded through any known means that do not contravene the rules of the shariah such as registration, electronic means, or actual transmission by the bearer to the purchaser.
- It is not permissible to trade in certificates of ownership of usufructs of a described asset before the asset from which usufructs is to be made available is defined, except by observing the rules of disposal of receivables.
- -It is not permissible to trade in murabahah certificates after delivery of murabahah commodity to the buyer ( Thomas,et,al. 2009 )

Unfortunately the trade practices of sukuk currently in exchange of secondary market almost around the world have a problem in their trade mechanism. This trade mechanism of sukuk looks to deviate from the sharia compliant. Adoption to bai' al dayn concept, and instead of hawalah concept in trade mechanism of sukuk has taken causes of this deviation; where the latter is motivated by request to serve demands from conventional investors toward familiarity of trade mechanism with conventional bond. Although the latter can either impede Moslem investor compliant to trade their sukuk due to disobedience with sharia compliant law. On other hand, a trade mechanism fully compliant to Islamic law is likely to cause worry for conventional investors who are most of investor profile in modern finance environment. A new trade mechanism is needed for these both investor profile, namely conventional investor and moslem investor in compliance, to afford to trade their sukuk in exchange of secondary market. The objective of this paper—is to give the opportunity and also the new idea about the best mechanism trade for sukuk as an Islamic capital market instrument. Through this new trade mechanism it can afford to huddle up both investor profile, hopefully can help achieve objective of an exchange of secondary market namely by providing liquidity more appropriate and increasing volume of sukuk.

### 2. RESEARCH METHODOLOGY

The research in this study is categorized as an applied research and also was done based on the literature study. It can be happened based on the condition there are few research about sukuk as an Islamic financial instrument that can be traded in the secondary market. It means that this research is an innovation. According to the viewpoints of several Islamic finance scientist, an instrument of Islamic investment can be traded in secondary market, so far that instrument fulfills three rules of sharia (Ayub, 2007). Firstly, instrument representing ownership of real physical asset or rights of its utilization (usufruct) can be traded at market price. Secondly, instruments representing ownership of debt and cash (money) can be traded yet bound to concepts hawalah and bai' al sarf. And thirdly, instruments represents the ownership of collection of instruments with different classes is bound to rule of dominant instrument class. Based on these three rules, thus sukuk can truly be traded in secondary market.

However, attention in particular is necessary to give in translation of concept *hawalah*. There is significant difference between concept *hawalah* (debt transfer) and *bai'* al dayn (debt sale). In case of purchase and sale of debenture in secondary market follows concept *hawalah*, justified in the syariah, buyer party of debenture holds rights of *recourse* to seller party of debenture in condition the issuer party of debenture does not pay his or her debt by any cause as well. On the other hand, in an equal case it follows concept *bai'* al dayn, not justified in the syariah, buyer or purchaser party of debenture does not hold rights of *recourse* to seller party of debenture.

Although sukuk can be traded, however up to present the sukuk trade in exchange of secondary market global is very minimal, mainly in states of GCC (Gulf Cooperation Council). Based on Wilson (2007) it states that in Europe there are no sukuk that trade in the secondary market. The latter is most probably due to demand is still a bit over in comparison to its supply and most of investors in those states (GCC) in general withhold up to expiry time (Abbas, 2005). At global level, sukuk listed in exchange only contained 14,3% from the whole values of sukuk revolving in periods of time 2001-2007 (Papazian, 2007). Based on similar source, suku that listed in the Indonesian Stock Exchange are led in terms of record quantity (15,3% from a number of sukuk listed in exchange globally), followed by exchange of UEA (14,2%). As a matter of fact, exchange of IndonIndonesian Stock Exchanges leads in term of record quantity of sukuk and it is a bit interesting, apart from Indonesian presence in market of sukuk still relatively new based on the condition that Indonesia implement dual capital market system almost 10 years and it started from 2003. And it only takes small fraction in whole values of sukuk revolving globally. While UEA themselves have been actively consolidating trade of its secondary market in Dubai International Financial Exchange (DIFX), so that making country to have market value of sukuk to be listed highest in the world (Jobst et al, 2008). On other hand, Malaysia as leader in issuance of sukuk globally with contribution of 65,7% upon market share in 2005, seemed to necessarily develop again exchange of secondary market for its sukuk. Although recently secondary market of Malaysian sukuk can be assumed to be most liquid, yet most traded in market of OTC (over-the-counter) is not exchange. One of characteristics on trade in market of OTC is usually marked with a bit great margin for broker. Therefore this regard grants reluctance for brokers to develop exchange based- market transparence and liquid since it can lessen their margin through available competition (Marek, 2007). Besides, once an investor getting involved in trade in market of OTC thus he or she is supposed to conduct again the trade in future, most possibly she or he will choose to return to same broker due to reason of ease of documentation, this is again a luck for the pertinent broker. All those things probably can explain slow growth in secondary exchange based-market of sukuk. But then, in logics, lesser margin that the broker obtains due to the emergence of exchange based-secondary market transparence can be compensated by growth of business volume and trade opportunities.

### VALUATION MODEL OF TODAY'S SUKUK

Most recent development of sukuk trade in secondary market has reaped some criticisms due to variety of comprehension on sharia compliant rules. For instance in Malaysia, in its domination of the sukukissuing value globally, most of sukuk issued is based on concept bai' al 'inah and tabarru', while its trade in secondary market is based on concept bai' al dayn (Ayub, 2007). These three concepts principally are in opposition to sharia compliant. If we want to see again the prohibition in the Islamic contract finance, there are several, and include riba or usury, that defined as the increase in a loan transaction or also the concept exchange of commodity. Beside that there are also concept of gharar and maisir that defined as an element of deception either through ignorance of the essential element of the goods, price and also faulty description of the object of trade, and maisir concept, the activity that are very close to the speculation. And finally bai 'al 'inah concept. Concept bai' al 'inah is almost equal to transaction repo in terminology of conventional finance, namely double sale where there are sales and resale of an instrument between buyer party and seller party by themselves in which its final outcome will be equal to loan with interest. Many Islamic scholars had defined that bai 'al'inah is the way to get the leg al excuse from the riba concept. As we know that in this concept, it involves the sale and buy back assets by the seller. The asset is sold in the cash basis, but on the other hand, it buys with the deferred payment with the price is higher than before. While tabarru' is promising return with certainty or particularity toward sukuk investor, apart from cash flow of project turned to be underlying on that sukuk. Practice abarru' includes regular distribution to sukuk holder and it guarantees return of its capital. Some syariah

experts from Malaysia argue that purchase and sale of debenture in secondary market are justified based on rules from Syafii belief that it can be sold and purchased on its nominal value (Ayub, 2007). Other criticism refers to practices anchoring outcome return of sukuk to LIBOR (London Interbank Offered Rate) or other equivalent local interest rates. Although some parties argue that the later can be used in pricing (price calculation), however payment of outcome return of sukuk related to conventional interest rate can be assumed usury or riba (Usmani, 2002).

All recent development regarding this sukuk is probably based on problems that the financial institution face to arouse sukuk as a thing identical with conventional bond, since it will alleviate in term of risk assessment by investor. Investor will feel more self- conviction to invest on bond letters holding structures not alien for them rather than bond letter with foreign structures and also with term probably assumed to be new. Therefore, innovation toward sukuk is more in side of law in order to abide sharia compliant law however there is no yet innovation financially (Wilson 2008). The latter can be observed on the market price making of sukuk in secondary market. If there is no new innovation financially on sukuk, then market price of sukuk will be equally sensitive like conventional bond on variable of market interest rate. Based on conventional bond valuation, it states that bond price will be higher than its nominal value when interest rate of market corresponding with it is lower than coupon rate and reversely bond price will be lower than its nominal value when interest rate of market corresponding with it is higher than its coupon rate; or expressed through the following equation (Brigham et al., 1999):

of rate, of expressed through the following equation (Brigham et 
$$V = \sum_{t=1}^{n} \frac{C}{(1+Y)^{t}} + \frac{P}{(1+Y)^{n}}$$
 (1)

where: V is market value of bond,

C is coupon payment in periodics,

P is standard payment in due,

Y is interest rate of market in proportion, and

*n* is a number of period of coupon payment.

That valuation will determine decision of investor to conduct purchase of sukuk or not. If valuation process of sukuk follows valuation model of conventional bond then process of making sukuk price in secondary market seems that it is not fully sucject to sharia compliant law. The latter is due to the valuation model of conventional bond does not count interest effect of compound on cash (money) not justified in the syariah. In the syariah, cash must be used as parameter unit and not as an asset affording to produce income by itself and also not as asset traded. Thus, when investor calculates sukuk price by using valuation model of conventional bond thus this has breached the prohition of riba or usury.

In response of this, Papazian (2007) proposed a valuation model equal with equation (1), but he argued that outcome return used is supposed to reflect outcome return on productive activities or real outcome return, and not on interest rate of market. The latter is expressed as follows:

$$V = \sum_{t=1}^{n} \frac{C}{(1+Y_r)^t} + \frac{P}{(1+Y_r)^n}$$
 (2)

dimana: V is market value of bond,

C is coupon payment in periodics,

*P* is standar payment in due,

 $Y_r$  is real outcome return, and

*n* is number of period of coupon payment.

According to Papazian (2007), real outcome return is different with interest rate used in valuation model of conventional bond, where interest rate only reflects compensation on capital and time. Real outcome return is outcome return yielded by an investment calculating not only capital and time. Specifically, real outcome return reflects compensation on capital and resource rather than time. In this regard, a

comparator (*benchmark*) on real outcome return is needed to replace interest rate of market as used in equation (1). Idea of establishing comparator on real outcome return in fact will be supported by a number of syariah expert to replace LIBOR or interest reate of comparator recently mostly used all around the world in calculation of outcome return for instrument of sharia finance.

Yet, a valuation model of sukuk firmly following the sharia compliant law is a model usually yielding market price of sukuk on value of nominal value (pari) all the time. In this regard, anticipation of coupon allotment in the future will not be reckoned in determining market value of sukuk, therefore there is no effect for the cash (money). In fact, valuation like these such things taking places in sukuk trade in Arab Saudi (Marek, 2007). Nevertheless, some parties probably think that valuation model tightly like this is hard to apply since not calculating default risk and opportunity cost upon sukuk by itself. Default risk is a risk where instrument issuer of default risk pays back his or her capital. In comprehension of traditional investor, a purchaser or buyer will bargain at discount price when he or she has perception that sukuk issuer holds probability of default risk or when outcome return of comparator is higher than outcome return of sukuk. Reversely, a seller will ask for premium price when outcome return of comparator is lower than outcome return of sukuk. All the things entirely follow a process of equation (1). But then, sukuk trade getting discount and premium like these involved will be against with sharia compliant—law when sukuk is traded to follow rule of hawalah (debt transfer).

Recently, probably some investors will be reluctant to trade their sukuk due to perception that trade mechanism of sukuk today does not follow terms of syariah, as in effect they will be more likely to choose to hold their sukuk in due rather than to get involved in activities incompliant to the syariah. On the other hand, some investors will also probably be reluctant to trade their sukuk in case sukuk is valued on the real face value compliant to the sharia compliant law, in recollection of this regard thus it does not reckon default risk and opportunity cost. But based on the fact that sukuk right now is one of the important Islamic financial instrument and also there are high global demand from all sector investors for Islamic capital market products make the recent challenge to introduce trade mechanism of sukuk that is new and capable to be compliant to syariah law but it also can accommodate valuation process as in conventional bond. The development of secondary market trading is viewed essential in the inject liquidity. It seems that this sort of trade mechanism will attract traditional investors since they sufficiently know well the valuation process and will attract investors very paying attention on rules of sharia compliant law since they gain assurance that trade done is to fulfill Islamic finance rule. Finally, in case it happens then it will afford to encourage liquidity and volume of sukuk, thus it propels sukuk as an alternatively instrument for conventional bond.

### ALTERNATIVE OF TRADE MECHANISM

In the trade mechanism for sukuk, the most important thing is sukuk is an instrument that have asset backed (Wilson, 2007). When sukuk trade, investor of sukuk will buy and sell the rights to the underlying asset which is permissibe under the Islamic law if we compare with the debt instrument that cannot be traded under Islamic finance scholar. In accordance with syariah stipulation, sukuk can be traded at secondary market on market value recently so far following rules of hawalah. But current problems are many sukuk traded in secondary market in compliance to concept bai' al dayn and not in compliance to hawalah. Most of traditional investors probably will be ready to receive concept hawalah, since in concept hawalah, seller of sukuk is still bound in contingency obligation with buyer of sukuk although they have sold sukuk to the buyer. Consequently, a new trade mechanism is needed to encourage the traditional investor to voluntarily trade sukuk under concept hawalah.

One of ways of stimulating traditional investors to receive concept *hawalah* is by acquaint the third party or agent in function to receive contingency obligation from sukuk seller while they sell their sukuk to the buyer. This agent principally acts as party who will assist sukuk buyer when buyer of sukuk fails to comply their duty. Its mechanism is as follows: when seller sells sukuk to the buyer at market price, discount price or premium to the value of pari, seller transfers contingency obligation of his or her *hawalah* to an agent, just say that agent of *hawalah*, with such a fee or return that will be incurred to seller can be efficient. In this regard the rating agent is a good candidate to act as agent of *hawalah*.

This mechanism provides comfortable situation to the traditional investor, in recollection that sukuk can be traded at market value, either at discount price or at premium toward its value of par. This mechanism can either stimulate investors who highly pay attention on sharia stipulation in order to trade their sukuk since this trade mechanism has been subject to stipulation in sharia compliant law.

#### 3. CONCLUSION

Sukuk trade mechanism in secondary market places is different in every countries. However, most of them are traded in adherence to concept *bai'* al dayn, in which the latter does not follow Sharia rule. Adoption on this concept is most probably to fulfill needs of traditional investors in order to have ease in conduct of valuation on their financial products. On other side, adoption of this concept causes investors much paying attention on syariah stipulation will limit their demand to trade their sukuk since not following the syariah rule. Such a trade mechanism of sukuk recently offered by introducing an agent of *hawalah*. The role of *hawalah* agent is to take over contingency obligation from sukuk seller under concept *hawalah*. Through this regulation, sukuk buyer will refer to agent of *hawalah*, and not the seller of sukuk, if issuer of sukuk fails to fulfill his or her duties.

Therefore, traditional investors can trade their sukuk at market value, namely discount price or premium toward its par value, as with their hope and investors who highly abide syariah stipulation can trade their sukuk without worry on trade mechanism against the sharia law. In the end, all these things can encourage more and more investor to trade their sukuk at secondary market and secondary market as well as to add liquidity and volume of sukuk.

# ISSUES IN SUKUK MUSHARAKAH AND SUKUK MUDHARABAH: CRITICISM AGAINST THE APPLICATION OF INCENTIVE FEE AND INVESTMENT MANAGER ARRANGEMENT\*

Mohamad Syafiqe bin Abdul Rahim<sup>1</sup>

### **ABSTRACT**

The Malaysian Sukuk market has expanded rapidly over the past two decades to become an integral part of the Malaysian capital market. It continues to embrace innovative structure, as underlined by the launch of sukuk using concepts such as Mudharabah, Musharakah and Ijarah. The higher degree of dynamism in the market is reflected by the development of sophisticated Sukuk arrangements that are now structured based on multiple Shariah concepts to meet the needs of the client (Sukuk Issuer). Having to say that, there are several Shariah issues which require further deliberation to ensure its compliance with Shariah. This paper discusses on the Shariah issues in Sukuk Musharakah and Mudharabah where the analysis will focus on the application of incentive fee and investment manager arrangement under these two Sukuk structures applied in Malaysia. This paper will also provide some example of Sukuk which already in the Malaysia market as case study and reference.

**Keywords:** Sukuk, Musharakah, Mudharabah, Manager, Incentive Fee

### 1. INTRODUCTION

One area in Islamic finance that has attracted and continues to attract a lot of interest from the business community worldwide is the global Sukuk market. Sukuk represent one of the most significant instruments of the Islamic capital markets. Sukuk were initially introduced as an alternative instrument which serves the same purpose of providing long-term financing as conventional bonds, however, without compromising the requirements of Shariah (Islamic law). Sukuk have been extensively used for raising government funds via sovereign sukuk issuances as well as obtaining funds for companies through corporate sukuk offerings.

The development of an active Sukuk market is vital in providing alternative funding avenues for individuals, corporate entities and also the government. Tapping into the Sukuk market allows a fund raising entity to reach a wider investor base, thus enjoying a larger funding amount at a competitive rate with the support from the government who provide tax incentive and other benefit for Sukuk issuance.

On the aspect of Sukuk structure, the Sukuk market continues to embrace innovative elements, as underlined by the launch of Sukuk using various types of Shariah contracts such as Mudharabah, Ijarah, Musharakah and Murabahah. Although the development of Sukuk market is a considerable achievement, some structures which attempt to behave and achieve the same economic outcome as conventional bonds have distorted Shariah principles.

\_

<sup>\*</sup> Paper presented in the 5<sup>th</sup> Islamic Economic System Conference (iECONS) 2013 on 4 - 5 September 2013 at Berjaya Times Square Hotel Kuala Lumpur.

<sup>&</sup>lt;sup>2</sup> ISRA-Bloomberg Bulletin, July 2013 Edition

This paper therefore aims to shed light on Shariah issues that arise in Sukuk structure particularly with regards to the application of incentive fee in Sukuk Mudharabah and Sukuk Musharakah and also investment manager arrangement under Sukuk Musharakah. However, this paper will only focus on the Sukuk in Malaysia market and will not make comparison with other Sukuk structure in other countries. The analysis of the above Shariah issues will also refer to the Principal Terms and Conditions of several Sukuk which already in Malaysia market.

### 2. THE CONCEPT OF SUKUK

During the early stage of Sukuk introduction in the market, Sukuk are frequently referred to as Islamic bonds. This term may mislead the people to consider that Sukuk are similar to bonds. In fact, some of the Sukuk introduced in the market during that point of time were classified as Islamic bonds instead of Sukuk. Literally Sukuk means certificates. In its simplest form, Sukuk are certificates of equal value that represent an undivided interest (proportional to the investor's interest) in the ownership of an underlying asset or business, usufruct, services or investments in particular projects or special investment activities.<sup>3</sup>

A similar definition is provided by the Islamic Financial Services Board (IFSB) where in its Capital Adequacy Standard (IFSB 2), defines Sukuk as certificates that represent the holder's proportionate ownership in an undivided part of an underlying asset where the holder assumes all rights and obligations to such asset. Through this concept, Sukuk enjoy the benefit of being backed by assets, thereby affording the Sukukholders or investor a level of protection which may not be available in conventional debt securities or bond.<sup>4</sup>

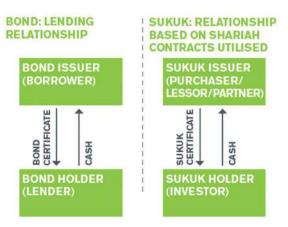

In contrast, conventional bonds are normally issued to evidence debts or mirror loans on which interest is paid. Unlike Sukuk, bonds do not represent ownership on the part of bondholders in the commercial or industrial enterprise for which the bonds are issued. Rather, it document the interest-bearing debt owed to the holders of the bonds by the issuer, who is actually the owner of the enterprise. <sup>5</sup> Nonetheless, Sukuk share some similarities with conventional bonds whereby both are similarly structured based on assets or businesses that generate revenue. The underlying revenue from these assets represents the source of income for the payment of profit on the Sukuk.

The only difference is that conventional bonds are structured based on loan contract where the investors invest their money by way of giving loan with the expectation to gain profit (interest) generated from the business of the Issuer. As for Sukuk, it can be structured based on innovative applications of various Shariah contracts and principles such as sale, lease and partnership as the underlying relationship between the issuer and the investors to enable the latter to enjoy returns on their investment. Diagram 1 below explains the relationship established between the bond/sukuk issuer and holder graphically.

### 3. SUKUK CLASSIFICATIONS

Sukuk can be classified in various manners. The bases for Sukuk classification can be either be the contracts underlying the Sukuk structures, the nature and type of asset represented by the Sukuk, or the Sukuk technical and commercial features. The normal method is to look into the underlying Shariah concepts used in the Sukuk transactions. They include some common Shariah contracts such as Bai Bithaman Ajil, Murabahah, Tawarruq, Ijarah, Istisna', Mudharabah, Musharakah and Wakalah. Securities Commission of Malaysia identified 14 primary Shariah concepts that can be used in structuring Sukuk together with 10 supplementary Shariah concepts to support the primary Shariah concepts.<sup>6</sup>

Notwithstanding the various types of Shariah concepts, it is common that the bank as the Principal Adviser in arranging Sukuk for the clients to structure Sukuk based on the client's financial needs. This may include for the purpose of project financing (including contract financing), corporate finance-related such as mergers and acquisitions, debt restructuring or refinancing and lastly for general working capital of the client. Based on that, the Principal Adviser will review and apply Shariah contracts that best suit the Sukuk structure according to client's needs after taking into account other related issues such as tax, asset ownership, etc. For the purpose of this paper, the author will not explain in details each of the Shariah concepts and how it applies in Sukuk structure. As explain earlier, the main objective of this paper is to highlight and discuss on two appealing Shariah issues under Sukuk Mudharabah and Sukuk Musharakah. The detail explanations of these two Sukuk structures are deliberated in the next section.

#### 4. SUKUK MUSHARAKAH AND SUKUK MUDHARABAH

Musharakah is a form of partnership between two partners or more which is based on profit and loss sharing. In early literature of Islamic jurisprudence, the term Musharakah was referred to as Shirkah or partnership. In the context of business and trade, technically, Musharakah is a contract between the partners to contribute capital to an enterprise or a venture, whether existing or new, or to own an immovable or moveable asset, either on a

\_

<sup>&</sup>lt;sup>6</sup> Appendix 1, Guidelines on Sukuk, issued by Securities Commission of Malaysia

temporary or permanent basis. Profits generated by that venture or real estate or asset are shared in accordance with the terms of the Musharakah agreement, while losses are shared in proportion to each partner's share of capital.

On the other hand, Mudharabah is a contract made between two parties to enter into a business venture. The parties consist of the Rabb al-mal (capital provider) who shall contribute capital to finance the venture, and the Mudharib (entrepreneur) who will manage the venture. If the venture is profitable, the profit will be distributed based on a pre-agreed ratio. In the event of a business loss, the loss shall be borne solely by the Rabb al-mal, unless the loss is due to negligence or mismanagement of the Mudharib in managing the venture.<sup>7</sup>

In the case of Sukuk for investment activities funded through Musharakah or Mudharabah, the Sukuk represents Sukukholder's undivided interests in the specific investments. Sukuk Musharakah is used to raise funds for projects on the basis of partnership contracts. The Sukuk Musharakah holders or investors then become the owners of the project, in proportion to their respective shares. Profits are distributed according to a pre-agreed proportion while losses are pro-rated according to their equity share. The details structure of Sukuk Musharakah is explained as per following diagram 2:

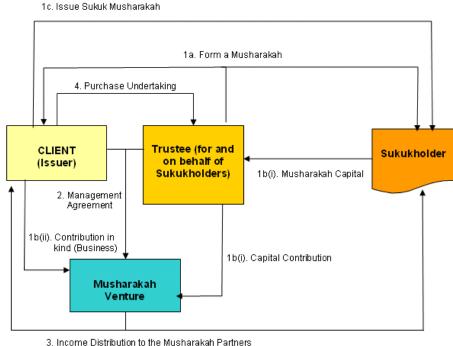

Diagram 2: Sukuk Musharakah Structure

3. Income Distribution to the Mushar

Source: Author's own

The above diagram illustrates the common structure applicable for Sukuk Musharakah in Malaysia. Under (1a), prior to the formation of Musharakah arrangement, the Issuer will identify the Business which will be used for the Musharakah Venture. Sukukholders shall via the Trustee, form a Musharakah arrangement with the Issuer to invest directly into the Business (Musharakah Venture). Concurrently under (1b), each party shall provide capital contribution to the venture whereby the capital contribution of the Sukukholders to the

-

<sup>&</sup>lt;sup>7</sup> Guidelines on Sukuk, p. 44

Musharakah Venture shall be the proceeds raised from the Sukuk Musharakah whereas the Issuer will contribute the Business into the Musharakah Venture (1b).

Under (1c), the Issuer shall then issue Sukuk Musharakah and the Sukukholders shall subscribe to the Sukuk Musharakah issued by the Issuer where the Sukuk Musharakah shall represent the Sukukholders' undivided proportionate interest in the Musharakah Venture. The Musharakah Partners shall also agree that the Issuer will be the manager to manage the Musharakah Venture via a management agreement (refer to item 2). Income from the Musharakah Venture shall be distributed to each Partner based on a profit sharing ratio which will be determined prior to the issuance of the Sukuk Musharakah. Any losses incurred in the Musharakah Venture shall be borne by each Partner in proportion to each Partner's respective capital contribution in the Musharakah Venture (refer to item 3).

Under item 4, the Issuer shall issue a purchase undertaking to the Trustee (for and on behalf of the Sukukholders) wherein the Issuer undertakes to purchase the Sukukholders' undivided proportionate interest in the Musharakah Venture from the Trustee at the relevant Exercise Price upon the declaration of a Dissolution Event or upon maturity of the Sukuk Musharakah. Upon exercising such purchase, the Musharakah Venture will subsequently be dissolved and the Sukukholders shall not have any further rights or interests in the relevant Musharakah Venture. Thereafter, the respective Sukuk Musharakah shall be cancelled, upon satisfaction in full of the Exercise Price.

As for Sukuk Mudharabah, each Sukuk Mudharabah holder or investor, holds equal value in the Mudharabah equity. Profits will be shared on a pre-agreed ratio between the Mudharabah investor and the Sukuk issuer while any loss will be borne solely by the Mudharabah investor as Rabbul Mal. The details structure of Sukuk Mudharabah is explained as per following diagram 3:

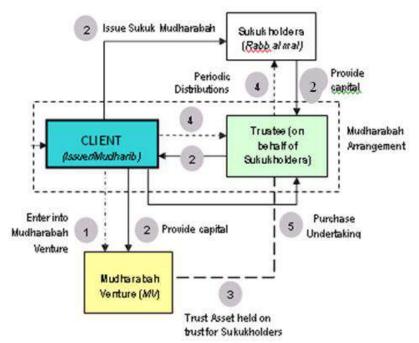

Diagram 3: Sukuk Mudharabah Structure

Source: Author's own

The above diagram illustrates the common structure applicable for Sukuk Mudharabah in Malaysia. Under item 1, the Trustee on behalf of the Sukukholders shall enter into a Mudharabah Venture in its capacity as capital provider (Rabb al-Mal) with the Issuer in its capacity as a manager (Mudharib). The Mudharabah Venture shall be a Shariah compliant business. Under the Mudharabah Venture, the Sukukholders as Rabb al-Mal shall contribute 100% capital via subscription of the Sukuk Mudharabah issued by the Issuer.

The Sukuk Mudharabah issued by the Issuer shall represent the Sukukholders' undivided proportionate interest in the Mudharabah Venture to be managed by the Issuer; hence entitling the Sukukholders to receive its profit portion (refer to item 2). Subsequently, under item 3, the Issuer shall make a declaration of trust in favour of the Sukukholders over all the Issuer's interests in the Mudharabah Venture. Any profit in the Mudharabah Venture shall be shared with the Sukukholders in accordance with an agreed profit sharing ratio of the Sukuk Mudharabah but in the event the Mudharabah Venture makes a loss, the loss shall be borne solely by the Sukukholders (refer to item 4). Under item 5, pursuant to the Purchase Undertaking, the Issuer shall purchase the Sukukholders' interest in the Mudharabah Venture at an Exercise Price upon the declaration of a Dissolution Event or upon maturity of the Sukuk Mudharabah. Upon purchase of the Sukuk Mudharabah, the Mudharabah Venture shall then be dissolved.

From the foregoing explanations, we can summarise that both Sukuk Musharakah and Sukuk Mudharabah structure have almost similar characteristic whereby it involves elements of capital contribution, sharing either the profit or loss and also requirement to have a specific venture where the capital will be invested. However, both structures may also raise Shariah issues particularly on the appointment of manager and also the application of incentive fee arrangement. These two issues will be discussed in the next part of this paper.

### 5. CRITICISM AGAINST SUKUK MUSHARAKAH AND SUKUK MUDHARABAH

Sukuk Musharakah and Sukuk Mudharabah are commonly used in the global Sukuk market and not only limited in Malaysia. However, both have also been criticised by some Shariah scholars. Some of the most notable issues and objection against Sukuk Musharakah and Sukuk Mudharabah are the issues of purchase undertaking and top-up payment which may tantamount to element of capital and profit guarantee. These features thus mimicked those of fixed-income instruments which similar to bonds. Generally, the top-up payment will be made by the Issuer<sup>8</sup> to the Sukukholder in the event of the prevailing return is below the expected return of the Musharakah or Mudharabah venture. In addition, the use of purchase undertaking may resemble the element of guaranteeing the capital since the Issuer is obliged pursuant to the purchase undertaking to purchase Sukukholder's asset in the venture at a price which equivalent to the capital contribution made by the Sukukholder.

Notwithstanding the above issues, it is worth noting that most of Sukuk issued in Malaysia and approved by Securities Commission have applied the above arrangement. However, this is not to say those Sukuk are not in line with Shariah but these are the critical areas where the scholars have differences in opinion and cannot come into one consensus. With due respect to the scholars, another aspects which in the author's opinion has not been thoroughly discussed are the issues of manager appointment and incentive fee arrangement. For the purpose of

<sup>&</sup>lt;sup>8</sup> In the case of Sukuk Musharakah, Issuer as one of the partner whereas under Sukuk Mudharabah, Issuer acts as Mudharib.

explaining these two issues, the author will extract several Sukuk's Principal Terms and Principal (PTC) which already been issued in Malaysia market as reference and case study.<sup>9</sup>

### 5.1 APPOINTMENT OF MANAGER

Generally, under Musharakah contract, it is important to differentiate between Shirkah al-Aqd and Shirkah al-Milk. Some people get confused between these two types of Musharakah. On this matter, Ibn Qudamah for instance explains that "there are two kinds of partnerships namely, joint ownership (Shirkah al-Milk) and contractual partnership (Shirkah al-Aqd)". Shirkah al-Milk means the participation of two or more parties in the ownership of an asset. The ownership of the asset is obtained either by way of Hibah, hadiyyah, inheritance or bequest, wasiyyah, etc, so it becomes jointly owned by them. Shirkah al-Milk does not go through the stages that contractual partnership does, which starts with capital contribution that is then converted into assets/venture. Shirkah al-Aqd on the other hand is a contract between two or more parties on the basis of sharing the profit.

Among the feature which distinguish Shirkah al-Aqd and Shirkah al-Milk are that the former originates from a contract between two parties which involves offer and acceptance whereas this characteristic is absent in the latter since as in the case of inheritance or bequest for instance, the asset is shared between two or more parties without execution of specific contract. Furthermore, the subject of Shirkah al-Milk is only the asset itself, without any agreement upon how to invest it through joint action. As far as Shirkah al-Aqd is concerned, it is established by the agreement to invest the capital or work together and share the profit.

The word "al-Aqd (contract)" means here the contractual partnership which seeks profit. As for Shirkah al-Milk, if it originates from a contract, it would be a contract of purchase or gift or bequest and not a contractual partnership. That is because, it is neither for business nor to generate profit; rather it is only to share or acquire asset. <sup>13</sup> Maybe for that reason, some of jurists have discussed Shirkah al-Milk under the topic of dividing property instead of Musharakah.

The main objective of discussing the above is because each of these two types of Shirkah has its own distinctive. For instance, in terms of the requirement of having an agency between the partners, under Shirkah al-Aqd, it already comprises agency arrangement. As such, each of the partners acts for himself and also for his partners. Therefore, it is not a requirement under Shirkah al-Aqd to have a separate appointment between the partners since such roles already be embedded in the contract.<sup>14</sup>

With regard to Sukuk structure using Musharakah contract in the market, it is important to determine whether it falls under the category of Shirkah al-Aqd or Shirkah al-Milk. According to Dr Abdul Sattar Abu Ghuddah, he mentioned that it is clear that the issuance of Sukuk under Musharakah contract is based on Shirkah al-Aqd and not Shirkah al-Milk. The reason is because Sukuk Musharakah is a joint investment vehicle between Sukukholders and Issuer. Based on that, there is a contract between them in order to establish the partnership in

\_

<sup>&</sup>lt;sup>9</sup> All the Sukuk PTCs were retrieved from Securities Commission's website. http://www.sc.com.my/sc/search\_principle.asp?stype=P&skey=2

<sup>&</sup>lt;sup>10</sup> Ibn Qudamah, Al-Mughni, 5:3

<sup>11</sup> Sarakhsi, al-Mabsut, vol. 11, p. 151

<sup>&</sup>lt;sup>12</sup> Ali al-Khafif, Ahkam al-Muamalat al-Syar'iyyah, p. 545

<sup>&</sup>lt;sup>13</sup> Dr Salih al-Marzuqi, Sharikat al-Musahamah fi al-Nizam al-Saudi, p. 40

<sup>&</sup>lt;sup>14</sup> Kasani, Bada'I, vol. 6, p. 58, Sharbini, Mughni al-Muhtaj, vol. 2, p. 213

investment. Furthermore, the objective of such partnership is to generate profit which to be shared between them.<sup>15</sup>

As far as Sukuk Musharakah is concerned and as practiced in Malaysia market, normally the Sukukholders will appoint the Issuer as manager to manage the Musharakah venture. This can be seen for example in Eversendai Sukuk Musharakah. In that Sukuk structure, both the Issuer and also the Trustee are partners in the Musharakah contract. It is clearly stated in its Principal Terms and Conditions that Eversendai as the Issuer will be appointed as the manager by the Trustee (on behalf of Sukukholders) to manage the Musharakah Venture. The issue here is whether it is really required to have a separate arrangement to appoint the same partner in the Musharakah to manage the venture since as explained earlier; in a normal Sukuk structure, it is classified under Shirkah al-Aqd where the agency roles is already embedded.

From the other perspective, there is another view by AAIOFI which allows such structure on the basis that the appointment is done on a separate and independent contract. As such, the partner who is appointed as manager to manage the partnership becomes an employee of the partnership venture and not acting in the capacity of a partner. <sup>16</sup> Further, the manager is also entitled to receive fee for his role. With due respect, the author is of the view that although the appointment is made independently, but the party appointed as manager is still the same party i.e the partner itself. The main reason for such prohibition is due to the fact that this may raise the issue of conflict of interest.

In addition, the arrangement seems similar to Wakalah (agency) or Ijarah al-Amal (service with wages) contract. Under these two contracts, the agent or service provider shall be paid fee for the service rendered. As such, this may contradict with the nature and spirit of Musharakah contract particularly Shirkah al-Aqd which involves elements of partnership where each partners acts for the benefit of the partnership and any profit or loss should be shared accordingly. Furthermore, the above ruling should also be read together with a condition where the appointment is subject to the manager can be dismissed from its roles at any point of time without the need to amend or to terminate the Musharakah contract.<sup>17</sup>

From the foregoing statement, most of Sukuk Musharakah structures have imposed a condition whereby the Sukuk Musharakah may be terminated in the event of default or dissolution. In this case, the Sukuk shall be terminated if one of the conditions under event of default or dissolution is triggered; and this includes if the Issuer who is the Musharakah Manager, fails to undertake its roles or perform its obligation as stipulated in the relevant documents. For instance, in Imtiaz Sukuk Musharakah, it is stated that if the Issuer or the Obligor fails to observe or perform its obligations under any of the Transaction Documents or the Sukuk Musharakah or under any undertaking or arrangement entered into (including management agreement), the Sukuk will be redeemed by the Sukukholders pursuant to the Purchase Undertaking, thus terminates the Musharakah.

This condition clearly inconsistent with the requirement as mentioned earlier since by right the dismissal of manager shall not give any affect on the status of Musharakah contract. As an alternative, perhaps the partner can be appointed as manager under a separate and independent contract provided that it needs to comply with the requirement set out by AAIOFI whereby the dismissal of manager shall not affect or lead to termination of Musharakah contract. In this case, there must not be any clauses in legal documentation

\_

<sup>&</sup>lt;sup>15</sup> Abdul Sattar Abu Ghuddah, Fiqh Characterization of the Contracts of Partnership (Shirkah al-Aqd) and of Ownership (Shirkah al-Milk) and the Impact of that Characterization on the Application of Sukuk and Musharakah Mutanaqisah

<sup>&</sup>lt;sup>16</sup> AAIOFI (2010), Shariah Standard no. 3/1/3/2

<sup>&</sup>lt;sup>17</sup> Ibid., Shariah Standard no. 3/1/3/5

which stipulates that the Sukuk shall be redeemed thus cancelling the Musharakah contract in the event the Issuer (partner) fails to perform its roles as manager. Instead, the Musharakah shall remain and continue where the partners shall agree to appoint another party as manager to manage the Musharakah.

In addition, the appointment of manager can also be done outside the partnership arrangement such as appointing a third party to manage the venture. For example in Sukuk Imtiaz, the Sukukholders who form a Musharakah amongst themselves appoint a third party (the Issuer) which is not the Musharakah partner, as manager to manage the Musharakah venture.

### **5.2 INCENTIVE FEE**

Another issue which requires further deliberation and analysis is on the application of incentive fee arrangement under Sukuk Musharakah and Sukuk Mudharabah. As required under tenets of Musharakah and Mudharabah contract, all the contracting parties must come into agreement on the profit sharing ratio which to be used as mechanism in determining the amount of profit to be shared. This is a requirement set out by Shariah to eliminate uncertainty and any possibility of dispute. Under a common Sukuk Musharakah structure, the partners shall agree on certain expected return of the Musharakah venture.

In the event the prevailing return exceeds the expected return of the venture, the excess shall be passed to the partner who manages the Musharakah venture and such excess is considered as incentive fee. This structure actually relates to the first issue as discussed earlier. In order to apply the incentive fee arrangement, there must be one manager to manage the venture so that the manager will be entitled to receive the incentive fee. In Bolton Sukuk Musharakah for example, the Issuer shall be appointed as manager to manage the Musharakah Venture. The Sukukholders agree that any excess of the profits from the Periodic Distribution Amount shall be retained by the Manager as an incentive fee.

This may raise Shariah issue since from Shariah perspective; it is not permissible to specify a fixed remuneration or fee for a partner who contributes in managing the Musharakah venture or provides any form of services. The basis of this prohibition is because it may tantamount to guaranteeing the capital of the partner (manager) and it violates the nature of Musharakah since the partner is not being exposed to risk of loss in proportion to his capital contribution. By right, the partner who manages the venture can only receive a greater share of profit than it would receive from the profit sharing ratio agreed earlier.

As for Mudharabah contract, the same ruling shall apply where the distribution of profit must be based on the agreed profit sharing ratio. It is not permissible to earn a share of profit in addition to a fee in Mudharabah contract. <sup>19</sup> Furthermore, under the Shariah Standard of Mudharabah issued by Bank Negara Malaysia, it is also stated that a Mudharib is only entitled to profit for works which are integral to the Mudharabah venture and shall not earn any additional fee for such works. <sup>20</sup> However, some of Sukuk Mudharabah in Malaysia have applied the incentive fee arrangement for example in MNRB Sukuk Mudharabah where any amounts in excess of the the Rabb al-Mal's share of profits expected by the Investor from the Mudharabah Venture (Expected Return) shall be given to the Mudharib as an incentive fee for successfully managing the business. In Nur Power Sdn Bhd Sukuk Mudharabah, the actual income in the Mudharabah venture in excess of the Expected Periodic Distribution amount shall be retained by the Issuer as an incentive fee in its capacity as Manager cum Mudharib.

.

<sup>&</sup>lt;sup>18</sup> Ibid., Shariah Standards no 3/1/3/4

<sup>&</sup>lt;sup>19</sup> Ibid., Shariah Standards no. 8/2

<sup>&</sup>lt;sup>20</sup> Shariah Standard Mudharabah, ruling no. 12.19

In the author's opinion, this is not consistent with the Mudharabah tenets since it is already clear at the outset of the Mudharabah contract and due to the nature of Mudharabah itself that Mudharib is obliged to manage the Mudharabah venture and shall entitle to profit pursuant to the agreed ratio. If this incentive fee arrangement be applied, it clearly redundant and has similar characteristic with the contract of Jualah where the party involved may be rewarded with a fee as a reward for its performance. On that note, if Sukuk, be it using Mudharabah or Musharakah contract is structured with the "excess profit arrangement", it is proposed that the concept of Tanazul be introduced as an alternative to the incentive fee arrangement.

Tanazul means surrendering the rights. It is also known as Isqat Haq 21 in Islamic jurisprudence. It is found that Isqat Haq is closely related to the concept of Ibra' (rebate). Thus, in order to have a clear idea of Tanazul, the concept of Ibra' should be discussed. The term Ibra' literally means elimination, release, removal and acquittal from something. In Islamic jurisprudence, the term refers to an act by a person to withdraw his rights from a person who has the obligation to repay the amount borrowed from him. Thus, dropping rights that are not established as a liability on a person (e.g. pre-emption rights, the right to live in a house that is part of an inheritance) are not considered absolution. They are rather called Isqat Mal.22

According to Shariah Standard of Mudharabah, the Tanazul can be applied where a party is to waive his right to the profits, if any, to the other contracting party on the basis of waiver (Tanazul) on the date of distribution of the profit.<sup>23</sup> The permissibility to waive any partner's right to the profit is based on the fact that a partner who has agreed to a certain profit sharing ratio may agree to waive the rights to profits to be given to another partner on the basis of Tanazul (waiver) at the time of profit realization and distribution. Moreover, pursuant to the principle of Tanazul (waiver), some partners may give some preferential treatment to other partners with regard to profit distribution.

The above structure is also allowed based on the resolution of Shariah Advisory Council of BNM that resolved, it is allowed for any partners under Musharakah contract, to stipulate a condition whereby any partners to the contract may waive (Tanazul) his right on the profit and it to be passed to another partner should the prevailing profit exceeded certain ceiling.<sup>24</sup> In addition to that, the resolution by AAIOFI states that it is permissible to agree that if the profit realised is above a certain ceiling (expected return), the profit in excess of such ceiling belongs to a particular partner. The parties may also agree that if the profit is not over the ceiling or is below the ceiling, the distribution will be in accordance with the agreement<sup>25</sup>. Further, the concept of Tanazul has been approved by Shariah Advisory Council of Securities Commission to be used for Preferences Shares under the Companies Act 1965 where the ordinary shareholders will Tanazul their entitlement to the profit in favour of the preference shareholders in the annual company meeting.<sup>26</sup>

 $^{21}$  Al-Mausu'ah al-Fiqhiyyah, vol. 4, pp. 226-256; see also SC (2009), Resolutions of the Securities Commission Shariah Advisory Council,  $2^{nd}$  edition, Kuala Lumpur: SC, p.93

shareholders in dividing the profits, in accordance with Tanazul.

<sup>&</sup>lt;sup>22</sup>Al-Atram, Abd al- Rahman Salih (2008), Ibra' in Islamic Finance: Adaptation and Application in Contemporary Issues in Islamic Finance: Deliberation, paper presented at the International Shari'ah Scholars Dialogue 2006, Kuala Lumpur: Bank Negara Malaysia, p. 293

Shariah Standard Mudharabah, ruling no. 12.21

<sup>&</sup>lt;sup>24</sup> 53<sup>rd</sup> SAC of BNM meeting dated 29 September 2005. Please refer to BNM (2010), Resolusi Syariah Dalam Kewangan Islam, 2<sup>nd</sup> Edition, p. 40-41 <sup>25</sup> AAIOFI (2008), Shariah Standard No. 12

<sup>&</sup>lt;sup>26</sup> 20<sup>th</sup> SAC of Securities Commission meeting dated 14 July 1999. Based on the resolution, The SAC ruled that non-cumulative preference shares are permissible based on Tanazul where the right to profit of the ordinary shareholder is willingly given to a preference shareholder. Tanazul is agreed upon at an annual general meeting of a company which decides to issue preference shares in an effort to raise new capital. As it is agreed at the meeting to issue preference shares, this means that ordinary shareholders have also agreed to give priority to preference

With regard to the Sukuk structure, some of Sukuk Musharakah and Mudharabah in Malaysia had already using the Tanazul arrangement. For example in TSH Sukuk Musharakah, it is mentioned that in the event that the distributable profits generated from the Musyarakah Venture are greater than the Expected Return, pursuant to Tanazul (waiver) granted from the onset, the Trustee (for and on behalf of the Sukukholders) shall undertake to waive its right on the excess distributable profits from the Musyarakah Venture to the Issuer. In addition, in Nur Power Sukuk Mudharabah, the Sukukholders have agreed that it shall grant waiver/Tanazul in receiving any profit entitlement above the Expected Periodic Distribution.

### 6. CONCLUSION

From the foregoing discussion, it can be summarized that despite the encouraging growth and development of the Sukuk market, it seems that there are still controversial issues that need prompt solutions in order to sustain the development of the Sukuk market. This requires a close cooperation among financial experts and Shariah scholars on one hand, and more interaction and discussion among Shariah boards on the other. The focus of the Islamic capital market shall not be only on how to raise the funds, structuring innovative product and be acceptable to international financial institutions, although these are valid and well needed objectives, but ensuring Shariah compliant should be the utmost priority. This will also help in the growth of real economy and socio-economic development of the society.

# PROFILING LIQUIDITY RISK IN THE DEFAULTED SUKUK ISSUANCE COMPANIES IN MALAYSIA

Wan Hasmanirah Wan Mohammad<sup>1</sup> Nursilah Ahmad<sup>2</sup> Siti Nurazira Mohd Daud<sup>3</sup>

### **ABSTRACT**

This paper is to investigate the extent to which the liquidity risk contributed to the defaulted *sukuk* issuance in Malaysian companies. Five randomly selected companies were analysed for the period 2002 to 2011. But for the purpose of this paper, the paper only highlighted the trend prior to three years before default event. Year of default is varied from one company to another. The study showed that the defaulted event was partly due to liquidity risk. This finding is similar to the financial crisis of 2008-2009 that was, in part, due to liquidity risk. (Saunders & Cornett, 2011). This papers concludes that failure to address the issue may lead to dire consequences, including banking collapse, and by extension, the stability of the financial system (O'Hara, 2003). In this case, the growing numbers of defaulted *sukuk* issuance companies in Malaysia could cause the piling-up of bankruptcy companies especially the privately-owned companies, may somehow affected the banking industry and financial institutions in Malaysia.

Keywords: sukuk, default, liquidity risk

### 1. INTRODUCTION

Based on the achievement, Malaysia's is the main contributor to the world *sukuk* market. As the world number one *sukuk* issuer, Malaysia has been the hardest hit in terms of series of defaulted *sukuk* event in Malaysia. In 2009, the *sukuk* market is labelled as the 'default year'. The year ended with at least 15 cases. In 2010, there were another six default events reported. These default events were notified by respective rating agencies. In Malaysia, so far, there are two rating agencies that authorised for rating and defaulting event, which are Malaysian Rating Corporation Berhad (MARC) and Rating Agency MalaysiaBerhad (RAM). According to RAM rating agencies, there were 24 registered default events in Malaysia from 2003-2010. To date, there are 34 listed defaulted *sukuk* companies in Malaysia registered by both rating agencies ranging from 2002 until 2011.

At the global, the issue was brought up by Al-Eqtisadiah<sup>4</sup>, was one of the first worldwide publications who provided the readers with an in-depth analysis on the defaulted issue. It was written that there were 21 defaulted *sukuk* cases reported in the last 20 months (since 2009) as the total value of such issuance has reached of almost \$2.1 billion. The numbers keep arising each year plus with the recognized worldwide defaulted issuance the figure end up with 31. (Khnifer, 2009). According to the Islamic

<sup>&</sup>lt;sup>3</sup> Lecturer at University Sains Islam Malaysia (USIM)

<sup>&</sup>lt;sup>4</sup> The Saudi financial newspaper

Finance Information Services (IFIS), there were at least 33 *sukuk* default events in the global market for the period 2003 to 2009.

### 2. SUKUK TERMINOLOGIES

The recent modernization in Islamic finance has changed the dynamics of the Islamic financial industry. The demand for *sukuk* has increased in the last few years and gained universal acceptance as a feasible alternative to conventional financial products. *Sukuk* has developed as one of the most significant mechanisms to raise finance in the market through Islamic guidelines. Aside from the obvious attractiveness to Muslim investors, *sukuk* also appeal to conventional investors looking for attractively-priced instruments for regular income and capital gains (Mohamed, 2008).

Sukuk is an Arabic literature from the plural of word sakk, means "legal instrument, deed, or check" (Muhammad Al-Amine, 2008) were extensively used by Muslims in the Middle Ages as papers representing financial obligations originating from trade and other commercial activities. However, the present structure of sukuk are different from the sukuk originally used and are akin to the conventional concept of securitization, a process in which ownership of the underlying assets is transferred to a large number of investors through certificates representing proportionate value of the relevant assets.

In the contemporary meanings, *sukuk* in general is translated as a *shariah*-compliant bond. (Muhammad Al-Amine, 2008) In its simplest form *sukuk* represents ownership of an asset or its usufruct. The claim embodied in *sukuk* is not simply a claim to cash flow but an ownership claim. This also differentiates *sukuk* from conventional bonds as the latter proceed over interest bearing securities, whereas *sukuk* are basically investment certificates consisting of ownership claims in a pool of assets.

Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) defines *sukuk* as being:

"Certificates of equal value representing after closing subscription, receipt of the value of the certificates and putting it to use as planned, common title to shares and rights in tangible assets, usufructs and services, or equity of a given project or equity of a special investment activity"

Whereas the Securities Commission Syariah Advisory Council (SAC) defines *sukuk* as a document or certificate, which documents the ownership of undivided pro-rated pledged assets. The Securities Commission (SC) also differentiates *sukuk* with conventional bonds follows:

"Sukuk structured with a Shariah-compliant assets through the contract of certain exchanges. The contract can be created through the sale and purchase of assets with deferred payment, leasing of assets or participation in the business of money involving interest. It uses various Shariah principles such as bal' bithaman ajil (BBA), mudarabah, ijarah, murabahah and musharakah that allows investors benefit through the transaction."

Malaysian International Islamic Finance Centre (MIFC) stated:

"Sukuk refers to trust certificates of participation securities that grant investors a share of the asset including the cash flow and risks that commensurate from such ownership. Similar to financial bonds in the conventional financial industry, sukuk are proof of ownership title and are utilized by financial institutions to raise cash."

As one of renowned Islamic bodies in Islamic finance, the definition by AAOIFI is accepted and followed by many countries as the guiding principles in *sukuk* concepts and trading mechanism.

### 3. DEFAULTED SUKUK IN MALAYSIAN ISSUANCE COMPANIES

### 3.1 Definition of Default

According to RAM, time of default occurs when there has been any breach of the binding obligations under the original terms of the agreement between the issuer and bondholders, based on the premise that the bondholders are likely to be exposed to monetary loss. This includes the following: (i) a missed interest and/or principal payment, which is not remedied within the grace period; (ii) failure to honour the corporate-guarantee obligations provided to subsidiaries; (iii) the legal insolvency or bankruptcy of the issuer; (iv) a distressed exchange in which the bondholders are offered a substitute instrument with inferior terms (e.g. extended maturities, lower coupons or diminished security packages).

Whereas for MARC, the agency will assign default ratings when it has reasonably determined that payment has not been made on a material obligation in accordance with the requirements of the obligation's documentation. MARC defines default as follow: (i) failure of an issuer/obligor to make timely payment of principal and/or interest under the contractual terms of the rated financial obligation; (ii) bankruptcy filings, administration, receivership, liquidation, winding-up or cessation of business of an issuer/obligor; or (iii) distressed or other coercive exchange of a rated financial obligation, where creditors were offered securities with diminished structural or economic terms compared with the existing financial obligation of the issuer/obligor.

There are many other definitions of default, regulated and found in the literatures. One of which that specifically connected to companies, and not the banking industry as widely referred to in many literatures - since many research are conducted in the banking industry or financial institutions and rarely on defaulted companies or firms - is Sageworks<sup>5</sup>. Sageworks defined default as a loan that experiences any of the following events:

- i. Nonaccrual status
- ii. 90 Days past due
- iii. Troubled debt restructuring
- iv. Write-Down/Charge-Off
- v. Borrower Bankruptcy

# 4. LIQUIDITY RISK

There are many interpretations of liquidity risk described in the literature review. According to IFSB's Guiding Principles of Risk Management (2005), liquidity risk is the potential loss to Islamic banks arising from their inability either to meet their obligations or to fund increases in assets as they fall due without incurring unacceptable costs or losses. Liquidity risk arises from maturity mismatches where liabilities have a shorter tenor than assets. A sudden rise in the borrowers" demands above the expected level can lead to shortages of cash or liquid marketable assets (Oldfield and Santamero, 1997).

Other literature explaination is, liquidity is the ability to meet expected and unexpected demands for cash. This does not necessarily mean that the firm is insolvent: liquidity risk can occur when the companies have more assets than liabilitie, but unable to liquidate those assets in time. This is important risk class for

-

<sup>&</sup>lt;sup>5</sup> The leader in the Financial Analysis of Privately Held Companies

many financial institutions precisely because they often have illiquid assets and more liquid liabilities. (Askari *et.al.*, 2012)

Liquidity crisis in a banking institution could lead to insolvency and bank runs. Consequently, minimizing the liquidity risk is one of the most important aspects of banks" asset and liability management. In essence, the objective of liquidity risk management is to mitigate the impact of the maturity mismatch on the banks" statement of financial position. This requires the understanding of how cash flows are moving within an organization, identifying the existence and location of cash flow strains by measuring emerging liquidity pressures, and taking corrective actions to prevent these pressures from growing (Taylor, 2001).

Two literatures below, strengthened the indication that the presence of liquidity risk is significant and imminent therefore managing its presence should be the financial institutions's top priorities especially in Malaysia. It is not uncommon to argue that the credit spread inherent in many financial instruments could be more aptly explained as being caused by the presence of liquidity risk, rather than the credit risk (Bielecki & Rutkowski, 2002). Managing liquidity is one of the top priorities of a financial institution's assets and liabilities management (Noraini, 2012).

## 4.1 Definition of Liquidity Risk

Liquidity of an asset is its ease of convertibility into cash or a cash equivalent asset. Liquidity risk arises from the difficulty of selling an asset quickly without incurring large losses. For a banking and financial firm "liquidity risk includes both the risk of being unable to fund [its] portfolio of assets at appropriate maturities and rates and the risk of being unable to liquidate a position in a timely manner at reasonable prices." Sometimes it is defined in terms of maturity mismatch between assets and liabilities while at others it is defined in terms of asynchronous timing of cash in flows and cash outflows from the business. The bank regulatory literature defines it as "risk to a bank's earnings and capital arising from its inability to timely meet obligations when they come due without incurring unacceptable losses."

### 4.2 Sources of Liquidity Risk

Liquidity risk emanates from the nature of banking business, from the macro factors that are exogenous to the bank, as well as from the financing and operational policies that are internal to the banking firm. In case of Islamic banks the nature of *sharia* compatible contracts are an additional source of liquidity risk, particularly if the conventional financial infrastructure is maintained.

However, maturity mismatch at a given time is not the only source of liquidity risk. The risk of this kind can arrive from many directions and its pinch depends on various factors. In a nutshell its sources (i) on assets side depends on the degree of inability of bank to convert its assets into cash without loss at time of need, and (ii) on liabilities side it emanates from unanticipated recall of deposits. Using the categorization in Jameson (2001) and adding a few more we can break them into following behavioral and exogenous sources:

- i. Incorrect judgment or complacent attitude of the bank towards timing of its cash in- and outflows
- ii. Unanticipated change in the cost of capital or availability of funding
- iii. Abnormal behavior of financial markets under stress
- iv. Range of assumptions used in predicting cash flows
- v. Risk activation by secondary sources such as:

- a. Business strategy failure
- b. Corporate governance failure
- c. Modeling assumptions
- d. Merger and accusations policy
- vi. Breakdown in payments and settlement system
- vii. Macroeconomic imbalances

In the case of Islamic banks, additional sources of liquidity risk as follows:

- viii "contractual form",
- ix. "sharia restriction on sale of debt", and
- x. "financial infrastructure deficiency"

# 5. PROFILING LIQUIDITY RISK

Table 1.0 below showed the list of selected defaulted *sukuk* issuance companies in Malaysia based on year of default and the respective rating agency.

Table 1.0 List of Selected Defaulted Sukuk Issuance Companies in Malaysia

Name of Companies	Year of Default	Rating Agency
A-ABI Manufacturing of automotive battery	2005	MARC
B-BSA Investment holding	2008	RAM
C-Englo Investment holding and providing management services	2009	MARC
D-Hualon Manufacture of textiles and fibre products	2003	RAM
E-Intel Investment holding and property development	2008	MARC

Source: RAM and MARC

The following calculations that used in this study are derived from primary data that stated, mainly in the companies' Income Statements and Balance Sheets in their financial years statements. To see the symptom of liquidity risk is by looking at the trend three years prior to the default event, each of the companies.

.

Table 1.1: Operating Ratio as a percentage of profit margin of the selected defaulted Sukuk

Bil.	Company/Activity	Profit Margin (%)

	Investment holding and property				
	development				

Source: Companies' Annual Report

Table 1.1 above summarize the defaulted *sukuk* issuance companies in Malaysia three years prior to the default event.

### Findings and Analysis on Profit Margin

The findings show that the profit margin for A-ABI company was fluctuated three years prior to default. The figure is drastically down, two years before default from 21.7 per cent to 4.8 per cent but drastically jump up to 83.9 per cent a year before default. The trend indicates the performance of the company is inconsistent.

The findings show that the profit margin for B-BSA company showing constantly decreasing three years prior to default. The figures down from 34.7 per cent to 20.4 per cent to 15.1 per cent a year before default. The trend indicates the performance of the company was getting poorer.

The findings show that the profit margin for C-Englo company also indicates constantly decreasing three years prior to default. The figures down from 89.7 per cent to 53.0 per cent to 17 per cent a year before default. The trend indicates the performance of the company was getting poorer.

The findings show that the profit margin for D-Hualon company indicates fluctuated in the company activity three years prior to default. The figures fluctuated from 26.7 per cent to 7.6 per cent slightly increased to 8.4 per cent a year before default. The trend indicates inconsistency in terms of company performance.

The findings show that the profit margin for E-Intel company depicted fluctuated in the company activity three years prior to default. The figure slightly increased from 74.0 per cent to 81.3 per cent slump to 38.5 per cent a year before default. This trend indicates the company operating in inconsistent and the performance of the company was getting poor.

Factors contributed to this trend are:

- i. Nature of business. The data shows that manufacturing companies are affected less than investment companies. When manufacturing companies experiencing fall, the fall is not that bad whereas for investment companies, when the business is fall, it fall.
- ii. Global economy and the turmoil. Three out of five companies were registered default in 2008 and 2009. Nonetheless, all these three investment companies were affected tremendously during the Asian financial crisis in 2008 2009.

The table below summarizes the liquidity ratio of the five defaulted *sukuk* issuance companies

**Table 1.2:Liquidity Ratios**

Quick Ratio

#### Findings and Analysis on Liquidity Ratios

Based on Table 1.2 and Figure 1.0, the findings show that all the five companies experienced problems in their liquidity ratios for both current ratio and quick ratio, as the liquidity ratios showing decreasing. This trend indicates poor performance of the company in paying back their debts to creditor. The company ability on amount of current assets to cover their current liabilities were losing their liquidity and this situation is not good for these companies. In the case of B-BSA, the data indicates that one year before default event, the company had liquidated almost all their current assets as the figure showing tremendous decreasing from 3.63 to 3.70 to 0.003. From these findings, the symptoms of liquidity risk were detected in all five *sukuk* issuance companies three years prior to the *sukuk* companies default.

#### 6. CONCLUSION AND RECOMMENDATIONS

The study showed that all the five *sukuk* issuance companies in Malaysia indicated symptoms of liquidity risk three years prior to the *sukuk* companies default. Therefore, it can conclude that the defaulted event was partly due to liquidity risk. This finding is similar to the financial crisis of 2008-2009 that was, in part, due to liquidity risk. (Saunders & Cornett, 2011).

Malaysia is known as the navigator in the Islamic finance and the hub of world *sukuk*, therefore failure to address the issue may lead to dire consequences, including banking collapse, and by extension, the stability of the financial system (O'Hara, 2003). In this case, the growing numbers of defaulted *sukuk* issuance companies in Malaysia could cause the piling-up of bankruptcy companies especially the privately-owned companies, may somehow affected the banking industry and financial institutions in Malaysia.

Therefore, the industry should examine such cases in order to learn and avoid the mistakes and prevent numbers of sukuk default keep arising each year, and to protect the creditors, *sukuk* holders' rights, and parties involved.

#### **ABSTRACT**

**Purpose** – This paper attempts to investigate the causality between the Islamic banks and economic growth of Malaysia.

**Design/methodology/approach** –The methodology employed is time series analysis which comprise of cointegration test, Long Run Structuring Modelling (LRSM), Vector-error correction modelling (VECM), Variance Decomposition (VDC), Impulse Response Functions (IR) and Persistence Profiles (PP). Data used in this study is from January 2000 to December 2010 drawn from the website of Bank Negara Malaysia<sup>4</sup> and Datastream.

**Findings** – The results tend to suggest that Islamic bank financing lead other variables, being the most exogenous compared to others. Thus, this finding has clear policy implication for the government to keep on enhancing Islamic banks' development and subsequently lead to a positive economic growth.

Keywords: GDP, Islamic Banks, Time Series Analysis

#### 1. OBJECTIVE AND MOTIVATION OF STUDY

The rapid development of the Islamic banking and finance industry in Malaysia has staged a very impressive growth. This is well reflected by high growth of the asset of the Islamic banking industry in Malaysia grew by approximately 30 percent per annum since its inception in 1983. At the same time Malaysia economy has experienced growth in GDP as well. From 2000 until 2010, Malaysia's average quarterly GDP growth was 1.20 percent reaching an historical high of 5.70 percent in September of 2009 and a record low of -7.80 percent in March of 2009<sup>5</sup>.

The scepticism whether or not Islamic banks clearly contribute to economy is yet to be resolved. The crucial question is whether the development of Islamic banks encourages economic growth or vice versa. In the first scenario, the supply leading hypothesis, financial sectors act as "supply-leading" to transfer resources to promote and stimulate growth by supplying financial aid to the economy. On the

other hand, the second scenario known as "demand-following" hypothesis implies that an increase in economic growth eventually will lead to more financial services being demanded (Masih et al., 2009).

Nevertheless, the debate whether the financial sector leads economic growth or vice versa has important policy implications for both developed and developing countries. Many studies (Patrick, 1966; Schumpeter, 1911; Robinson, 1952; Masih et al., 2009; Yang Y.Y. and Yi M.H., 2008; Calderon and Liu, 2003; Demetrides & Hussein, 1996; Furqani, H. and Mulyany, 2009; Muhsin Kar et al., 2010; Y. Khalifa Al-Yousif, 2002) investigate the causality between financial development and economic growth. The importance of these studies could assist governments in prioritizing which reforms should be embarked in the financial sectors. Which theory to follow will confer different implications. According to Muhsin Kar et al. (2010), the proponents of the *supply-leading* suggest that government policies should be directed towards improving financial system, since financial development has important causal effects on growth. On the other hand, the supporters of the *demand-following* conquer that the financial development is actually the outcome of economic growth, thus any policies in improving financial development will have only a little effect on growth.

In view of the increasing presence of Islamic banking in the Malaysian financial landscape, it is indeed timely to investigate which hypothesis best explain the relevance of Islamic banking to Malaysian economy. There are few studies done in Malaysia to investigate the impact of Islamic banks on economic growth. It is hope that this study will aid the policy makers in coming out with the best solution in promoting the growth of Islamic banks.

#### 1.1 Development of Islamic Banks in Malaysia

The rapid growth of the Islamic banking and finance industry in Malaysia are made possible with the full backing support by the Malaysian government. The government has provided a strong foundation for the industry to grow such as establishing the financial and legal platform for the rapidly growth industry. The history of Islamic banking and finance in Malaysia started with the establishment of the Pilgrims Management and Fund Board (PMFB) which represents the pioneer interest-free financial institution in the country (Sukmana and Kassim, 2010). The PMFB was set up in August 1969 with the main role of providing a systematic fund mobilization saving for the Muslims enabling them to perform annual pilgrimage in Makkah, simultaneously, persuading them to take part in economic activities and investment opportunities. Since then the awareness of shariah compliant products and services has escalated and more of these products are being demanded. This request was well responded by the government by establishing a steering committee to study its possibility in 1982. In the following year, a comprehensive Islamic financial system has been established which operates in parallel with the conventional financial system. This dual banking model has been enshrined in the Central Banking Act 2009 following recent enhancements, thereby giving significance to Islamic finance.

The new Islamic Banking Act (IBA) was enacted in 1983 and lead to the establishment of the first Islamic bank in Malaysia, Bank Islam Malaysia Berhad (BIMB) in the same year. Progressively Islamic bank has played an important role for the overall Malaysian financial market. This can only be achieved with a strong institutional infrastructure and effective legal, regulatory and Shariah (Bank Negara, 2011). In terms of market share, the Islamic banking system in Malaysia currently accounts for 20 percent of our banking system. Total assets of the Islamic banking sector amounted to RM350.8bil as at end-2010, increasing by 15.7% from end-2009. The Islamic banking sector now accounts for over 20% of the overall banking system in terms of assets, financing and deposits. At present 27 banking institutions (9 Islamic banks and 18 conventional banking institutions) are offering Islamic banking products and services under the Islamic Banking Scheme (Bank Negara, 2010).

#### 2. LITERATURE REVIEW

For many years the correlation between financial development and economic growth has been studied. The crucial question is does financial development promote economic growth or does economic growth promote financial development? These theoretical discussions reveal that there is no consensus on the direction of causality between them. Patrick (1966) identified two possible patterns in the causal relationship between financial development and economic growth. The first one is called *demand-following* which means that when there is economic growth eventually it will induce more and more establishment of modern financial institutions. This will lead to the demand for these services by investors and savers in the economy (Patrick, 1966). This theory is initiated by Robinson (1952) who argues that finance does not exert a causal impact on growth. Instead, financial development follows economic growth as a result of higher demand for financial services. When an economy grows, more financial institutions, financial products and services emerge in the markets in response to higher demand of financial services.

The second one is classified as *supply-leading* which means the establishment of financial institutions and their financing will stimulate growth by transferring these resources to entrepreneurs and economy as a whole (Patrick, 1966). This theory can be rooted back from Schumpeter (1911) who contends that the services provided by financial intermediaries are essential drivers for innovation and growth. A well developed financial system channels financial resources to the most productive use.

Basically the studies on the relationship between financial development and economic growth can be segregated into 3 main groups. The first group favours *a supply-leading* hypothesis, whilst *demand-following* hypothesis is fully supported by the second group. The third group argues that the causality is bidirectional. In the following section, we will explore these 3 groups in great detail.

## 2.1 Supply-leading

Masih et al. (2009) findings are in line with supply-leading theory. Their study are conducted in Saudi Arabia and support the pioneering work of Patrick (1966) who concluded that a *supply-leading* condition is likely to prevail at the early stage of economic development, while a *demand-following* condition is likely to prevail at the later stage of economic development. This is due to the fact that the financial development is still at the early stage in Saudi Arabia. The major policy implication of their findings is that a pro-active policy of growth and reform of the financial sector will help enhance economic growth in an open developing economy.

Calderon and Liu (2003) found that financial development enhances economic growth for all countries. However, when they split the sample into developing and industrial countries, they found evidence of bidirectional causality. Yang Y.Y. and Yi M.H. (2008) provide evidence that financial development causes economic growth, but the reverse is not true in Korea.

#### 2.2 Demand-following

Robinson (1952) and Demetrides & Hussein (1996) states that financial development follows economic growth or "where enterprise leads finance follows". A study done in Malaysia by Furqani, H. and Mulyany (2009) also supports *demand following* hypothesis where financial development follows economic growth. Under this hypothesis, economic growth creates a demand for financial intermediation and causes Islamic banking institutions to change and develop.

## 2.3 Bidirectional causality

Muhsin Kar et al.(2010) investigates the direction of causality between financial development and economic growth in the Middle East and North African (MENA) countries for the period 1980–2007. In order to capture the different aspects of financial development, six different indicators are used. The empirical results support evidence on both demand-following and supply-leading hypotheses.

Therefore the direction of causality seems to be country and financial development indicator specific. Y. Khalifa Al-Yousif (2002) also arrived at same conclusion and strongly support the view that financial development and economic growth are mutually causal, that is, causality is bidirectional. Moreover, the findings of the present paper accords with the view of the World Bank (1993) and other empirical studies that the relationship between financial development and economic growth cannot be generalized across countries because economic policies are country specific and their success depends, among others things, on the efficiency of the institutions implementing them.

Most of these studies are using deposit of the banks, money supply as the measurement to financial development; however we are using Islamic Financing as our indicator for financial development variable. As mentioned earlier determination which hypothesis to follow will eventually aid the policy make in making the wisest decision. However the previous studies fail to provide a direct answer and arrive at compromised conclusion. The recent study (as far as the knowledge of the author) did not apply the recent technique of LRSM and the years covered are not recent as this study attempt to accomplish.

#### 3. METHODOLOGY

Most of previous studies used regression analysis. In this study we use time series techniques, to overcome the regression limitations and time series has proven to surpass regression technique.

## 3.1 Data Descriptions and Tests Undertaken

For the purpose of this study we use monthly time series data from 2000 – 2010. Most of the data are gathered from Datastream and Monthly Statistical Bulletin of Bank Negara Malaysia.

As regards to the variables of interest, we use GDP to indicate the economic growth. Since the data extracted is quarterly, and other variables are all in monthly form, we used the cubic spine interpolation<sup>6</sup> technique to interpose the quarterly data into monthly data. For the purpose of this study, Islamic Banks Total Financing (IBS)<sup>7</sup> is used to represent financial development and three control variables deemed to have a theoretical relationship to GDP. They are Money Supply (M3), Industrial Production Index (IPI) and Interest Rate (INTRATE).

As in any time series estimation procedure, there are several pre-tests conducted before more rigorous investigation techniques are adopted. The steps undertaken are the unit root test, order of Vector Autoregression (VAR), cointegration tests, followed by Long-Run Structural Modelling (LRSM), Vector-Error Correction Model (VECM), Variance Decomposition (VDCs) analysis, Impulse Response Functions (IRF) and Persistence Profiles (PP).

#### 4. ANALYSIS AND FINDINGS

As mentioned earlier, there are 5 variables used to achieve our objective. They are GDP, IPI, M3, IBS and INTRATE. All the variables except interest rate (already in the rate form) are transformed into logarithm, despite this transformation they still remain in level form. To examine the unit roots of the time series variables, we employed Augmented Dickey-Fuller (ADF) tests suggested by Dickey and Fuller (1979). We tested the unit roots of all the variables on the basis of ADF tests and found that they are non-stationary in the level form and stationary in the first difference.

The results of the unit root tests are presented in Table 1 and 2. It can be seen that all variables are

<sup>&</sup>lt;sup>6</sup> This technique uses a special software

<sup>&</sup>lt;sup>7</sup> These data are retrieved from Bank Negara Website

stationary in the first difference or simply, are I(1) process. Result from Table 1 is gathered from The Dickey-Fuller regressions with a linear trend<sup>8</sup>, whereas in Table 2 the outcomes are extracted from The Dickey-Fuller regressions without a trend<sup>9</sup>.

**Table 1: Augmented Dickey Fuller Test Result (Level Form)**

value					

The lag length used in conducting the cointegration test was based on several criteria commonly used in many empirical studies such as AIC and SBC. We also found that when choosing the optimal order of the VAR, there is a conflicting VAR order on the basis of AIC and SBC criteria. AIC chooses VAR (4) whilst SBC chooses VAR (2). In order not to exhaust the degree of freedom we will choose VAR (2).

Table 3: Order of the VAR Model

Order of VAR	Type of Tests	
	AIC	SBC

<sup>&</sup>lt;sup>8</sup> This is due to the fact that in level form the variables are in their level form thus contain trend element.

<sup>&</sup>lt;sup>9</sup> When the variables are in differenced form, the trend element is no longer existed.

After confirming the data suitability by unit root test and lag order, we continue to examine whether there exists long-run equilibrium among the variables by first conducting both the EG cointegration test and JJ cointegration test. Under EG cointegration test, we need to test the residuals either they are stationary or not.

Based on the ADF test in Table 4, the residuals are found to be stationary (we reject the null hypothesis), thus conclude that there is one cointegration vector amongst variables tested. This is probably the limitation of EG cointegration test, which assume only one cointegration from the residuals analysis.

**Table 4: Cointegration Test Engle Granger** 

Test	Intercept with no trend	Intercept with trend
DF	-4.1626	-4.1440
ADF(1)	-4.9936	4.9709
ADF(2)	-6.7227	-6.6919
ADF(3)	-7.3853	-7.3510
ADF(4)	-6.0750	-6.0444
ADF(5)	-6.6393	-6.6057
95% critical value	-2.8870	-3.4497

Another cointegration test JJ, on the other hand bypass this limitation. The results of the Johansen–Juselius likelihood cointegration test shows that the existence of long run co-movement amongst variables (GDP, M3, IPI, IBS and INTRATE). We found there are two (2) cointegrating vectors at 95% significance level on the basis of Maximal Eigenvalue and Trace Stochastic Test (Table 5). An evidence of cointegration implies that the relationship among the variables is not spurious, evidentially there is a theoretical relationship among the variables and that they are in equilibrium in the long run (Masih et al., 2009). In another words, even though these variables may diverge in short-run, in long run however they will converge consequently with at least one direction of causation in the Granger sense, either unidirectional or bi-directional causality.

Table 5: Johansen's test for the number of cointegrating vectors (VAR 2)

Null	Alternative	Maximum	Trace
		Eigenvalue	Stochastic

r=0	r=1	144.8261*	233.9713*
r<=1	r=2	48.8149*	89.1452*
r<=2	r=3	24.6991	40.3304
r<=3	r=4	10.0893	15.6313
r<=4	r=5	5.5420	5.5420

List of variables in the cointegrating vector: (LGGDP, LGIPI, LGM3, LGIBS, INTRATE)

\* denotes significant at 5% significance level respectively,
r indicates the number cointegrating vectors present.

In Table 5, both the Max-Eigen and Trace statistics gave similar conclusion; there are two cointegrating equations as shown by the value of statistics. Under both cases, we will reject the null hyphoteses ( $r \le 1$ ) and accept the alternative ( $r \le 2$ ).

Conintegration only tell us in the long run these variables will move back to equilibrium but unable to test the consistency of these variables with the theory. However LRSM is capable of testing this. According to Masih et al. (2009), to make the coefficients of the cointegrating vector consistent with the theory, firstly, there is a need to impose a normalizing restriction of unity on selected variable at the 'exactly-identifying' stage. Subsequently, we experimenting another variable at the 'overidentifying' stage. In this study we have two cointegrating vectors, thus two dependent variables are chosen for each vector. For the first variable, LGGDP is selected as this is our focus variable, while LGIPI is used for second vector since LGIPI could also be used as growth indicator. We impose a normalizing restriction of unity on the coefficient of LGGDP (Vector 1) and LGIPI (Vector 2).

We found in Table 6, all the coefficients of the cointegrating vector are significant<sup>10</sup>. We could not reject LGIBS in triple occasions. Firstly we test the coefficient of LGIBS on CV1, then CV2 and lastly on both CV1 and CV2 by applying this hypothesis;

 $H_0$ : coefficient of LGIBS = 0

Confirmed with our prediction, when we imposed an over-identifying restriction of zero on the coefficient of Islamic bank financing, we were able to reject our null hyphothesis, thus LGIBS variable is supported by theory. We also test the other two variables M3 and INTRATE, and able to reject the joint restriction of zero in both vectors, thus all these variables entered the cointegrating relationships significantly. After testing all the variables, the final cointegrating vectors remain as CV1 and CV2.

Table 6: LRSM (exact-identifying and over-identifying test)

	CV1 Exact	CV2 Exact	Vector 3 Over CV1	Vector 4 Over CV2	Vector 5 Over CV1 and CV2
LGGDP	1.0000	0.00	1.0000	0.00	1.0000

<sup>&</sup>lt;sup>10</sup> When the value of coefficient/standard error is more than 2, the variable has significant effect on GDP/IPI

As mentioned earlier, cointegration does not tell us which variable is leading or lagging. This is when the VECM plays its important role in determining whether the variable is exogenous or endogenous. There are 3 vital information could be extracted from VECM. One is to specify whether the variable is exogenous or endogenous, secondly it can tell us the significant of the variables in the short run and long run and lastly, the speed of the variables going back to equilibrium in the long run. The coefficient of the lagged error-correction term is a short-run adjustment coefficient representing the proportion by which the long-run disequilibrium in the dependent variable is being corrected in each period. For example in the case of dLGGDP as dependent variable, the cointegration process will take about 4 months to arrive at equilibrium (Table 7).

**Table 7: VECM Estimates** 

VARIABLES	ΔLGGDP	ΔLGIPI	ΔLGIBS	ΔLGM3	ΔINTRATE

to equilibrium		months		months	months
CV1(GDP)	ENDO	-	EXO	EXO	EXO
CV2(IPI)	-	ENDO	ENDO	ENDO	EXO

Looking at Table 7 especially on the error correction coefficients, for CV1 (GDP) we find that the GDP is endogenous and other variables IBS, M3 and INTRATE variables are exogenous. Basically from this result we could infer IBS leads GDP, and consistent with supply leading theory. However, when we look at the second CV2 (IPI), both IPI and and IBS are endogenous and for this reason we need the next step VDC to tell us the relative endogenous and exogenous variables in the long run.

In Generalised Variance Decomposition test, the relative exogeneity or endogeneity of a variable can be determined by the proportion of the variance explained by its own past. The variable that is explained mostly by its own shocks (and not by others) is deemed to be the most exogenous of all (Masih et al., 2009). For this study we use the forecast horizon 25 and 40 to determine the relativity of these variables as in Table 8.

In Generalised VDCs, however the total amount for all variance for each variable of interest is not proportionate to 1, thus we must weigh these variables proportionately to get a total of 100%. The transformation can be deduced as in Table 8.

Table 8: Proportionate Generalized Forecast Error Variance Decomposition 25th and 40th month

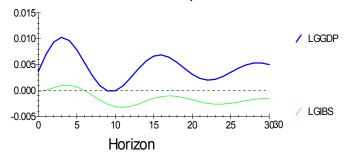

VARIABLE S	MONT H/ (RANK)	ΔLGGD P	ΔLGIP I	ΔLGM 3	ΔLGBI S	ΔINTRAT E	TOTA L
			47.6302	15.7854	1.39567

			57.4780	21.3089	3.51435		
(%)	40 (5)	17.42957	7	5	7	0.26906	100
				9.21615	69.0726		
ΔLGBIS	25 (2)	14.05737	7.36391	5	3	0.289944	100
(0./)	40 (1)	1.56502	9.22852	10.6518	78.1816	0.250105	100
(%)	40 (1)	1.56783	4	2	3	0.370197	100
A D ITD A TE	25 (1)	( (000022	11.5445	1.34107	2.44152	77.07202	100
ΔINTRATE	25 (1)	6.698922	6	4	3	77.97392	100
(0/)	40 (2)	( (01770	11.8538	1.39516	2.55669	77 51251	100
(%)	40 (2)	6.681779	6	2	5	77.51251	100

Based on Table 8, we could conclude on 25<sup>th</sup> month our focus variable IBS (69%) is more exogenous as compared to IPI and GDP. As the period goes on as in the 40th month, the IBS variance increased. In 40th month IBS became the most exogenous variable, thus consistent with the result in VECM. It is clear that IBS is the most influential variable as compared the other 2 growth variables (GDP and IPI), IBS is leading rather than lagging and confirm the supply-leading theory.

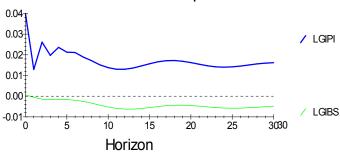

In the next step we applied the generalized IRF in Figure 1. Figure 1 displays the IRF for one standard error shock to the equation for GDP, then IPI and lastly IBS. Generally, one standard error shock to GDP and IPI have a small impact on IBS. The graphs also show us, there is more impact on IPI than GDP, when we shock IBS.

Figure 1: IRF

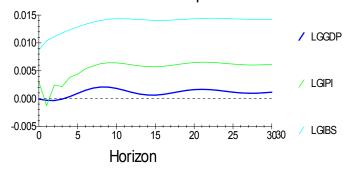

## Generalized Impulse Response(s) to one S.E. shock in the equation for LGGDP

# Generalized Impulse Response(s) to one S.E. shock in the equation for LGIPI

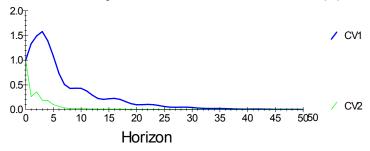

# Generalized Impulse Response(s) to one S.E. shock in the equation for LGIBS

Finally, an application of the persistence profile analysis indicates that if the whole CV1 is shock, it returns to the equilibrium in 30 months. CV2 on the other hand, returns to the equilibrium quicker by 20 months (7 months). This result implied both vectors have a tendency to converge to their long term equilibrium.

Figure 2: PP

# Persistence Profile of the effect of a system-wide shock to CV'(s)

#### 5. CONCLUSION

In this study we want to determine whether or not there is any Granger causality between financial sectors (measured by Islamic Banks financing) and growth (GDP). The direction of this causality is important as this will represent different policy implications for developing countries like Malaysia. For example in the case of supply-leading, policies should aim to financial sector liberalization; whereas in the case of demand-following, more emphasis should be placed on other growth-enhancing policies. Previous studies are inconclusive as to the directions of this causality.

In our study, VECM, Variance Decomposition and Impulse Response tend to confirm with our prediction that indicate that "financial sectors" leads "economic growth" and prove supply-leading rather than demand-following. This conclusion is supported by both cointegrating vectors (CV1, GDP) and (CV2, IPI), as the IBS are proved to be more exogenous than these two variables (GDP and IPI). Our findings are consistent with Masih et al. (1999) and Patrick (1966) who concluded that a supply-leading condition is likely to prevail at the early stage of economic development, while a demand-following condition is likely to prevail at the later stage of economic development. This is true to the scenario of Islamic banking in Malaysia as it has not yet reached its maturity period and still at its infancy. It would be interesting to investigate as how the effect of conventional financing to Malaysian growth.

The major implication from the findings could give a big indicator what Bank Negara is undertaking in ensuring Malaysia to be the hub of Islamic finance is paid off and strongly supported by the findings. Recently, a new Act, the Islamic Financial Services Act 2012 (IFSA) will statutorily enforce and require Islamic financial institutions' business operation and activities are in compliance with Shariah. The objective of the Act is to lay the foundation for a comprehensive regime to promote a robust and resilient Islamic financial system in Malaysia.

Furthermore, Bank Negara has also issued new Islamic Banking and Family Takaful Licences to enhance the financial sector to the next level. Another infrastructure development that is taking shape in the international Islamic financial system is the establishment of the International Islamic Liquidity Management Corporation (IILM) launched in October 2010. Its main task is to issue short-term multicurrency liquidity instruments to facilitate the cross-border liquidity management between financial centres and at the same time enhance the financial inter-linkages<sup>11</sup>. Consequently, all this proactive actions taken by Bank Negara could stimulate economic growth in the future as supported by our findings.

## RIBA ISSUES IN GOLD INVESTMENT AND TRADING: PRACTICE OF SELECTED COMPANIES IN MALAYSIA

Ruzian Markom<sup>1</sup> Hariati Ibrahim@Musa<sup>2</sup>

#### **ABSTRACT**

Gold was used as the most common form of money throughout history. Its role as currency is now replaced by the paper money, but gold has never stop from being the attention of human beings due to its special features that do not present in other commodities. People invest in gold because of various reasons including it is a hedge against inflation and carries an intrinsic and real value. Gold and fiat money are concluded by Muslim jurists as ribawi items therefore the exchange or trading involving them is governed by two basic rules of Shariah i.e. must be of equal weight and the selling and buying must happen at one mailis. The objective of this paper is twofold. The first objective is to study the practice of gold trading in Malaysia and its compliance to the requirements of Shariah. At the same time, it is to provide readers and the stakeholders in gold trading i.e. banks, companies, gold dealers and customers with the Shariah requirements that they must adhere in this business. In meeting the objectives, a case study on the trading practice of selected companies and banks were conducted. The study adopted a qualitative approach by describing and exploring the Shariah issues surrounding the gold trading and investment in Malaysia. The findings showed that many companies involve in gold trading in Malaysia do not have a Shariah panel, thus some of their practice are not in compliance with the requirements of Shariah. This is due to the fact that the establishment of Shariah panel is not a legal requirement in gold trading. Hence, it is recommended that the Shariah Panel is compulsory for Shariah based gold investment and trading industries.

**Keywords:** Riba, gold investment, gold trading, shariah requirement, Shariah panel.

#### 1. INTRODUCTION

Gold is a yellow precious metal that has several qualities which made it exceptionally valuable throughout history. It has special features that make it the most wanted metal for many centuries. Gold is expensive because it is rare, its shiny colour is attractive, durable to the point of virtual indestructibility, highly malleable, and usually found in nature in a comparatively pure form. Gold does not rust or tarnish, malleable so it can be intricate into shape as jewelry and in modern age, is use as a good conductor of electricity. Gold is always perceived as a universal symbol of wealth and power. The word *fiddhoh* (gold) is mention in Holy Qur'an as wealth that is always desired by man in this world <sup>3</sup> and also as the rewards for the believers in paradise. <sup>4</sup>. But the disbeliever would never be able to ransom himself even with an earth in gold. <sup>5</sup> Many people are aware of its benefits start investing in gold. One of the major driver demands for gold is its reputation as the ultimate safe investment. It was confirmed in a study that gold is an effective hedge against inflation. <sup>6</sup> The Alliance Bernstein has carried out an extensive research on inflation and methods of protecting portfolio from it. In its report published on 2011, they have concluded

and advised that real asset including gold tend to raise with inflation therefore offer the potential to protect against it.<sup>7</sup>

Unlike gold, the fiat money devalues quickly and by very much. Malaysian fourth Prime Minister, Tun Dr. Mahathir Mohamad suggested the global trade to revert to the use of gold dinar following the devaluation of the US Dollar (USD).<sup>8</sup> He further added that government must use gold dinar in order to stop the currency war. Pento, in his article opined that gold is the true reserve currency. Odld based coins had the advantage of carrying their value within the gold coins themselves, it really stores the wealth. The fiat money also stores wealth but it is not back by anything, therefore is prone to inflation and limited by the government's monetary policy.

Gold coins circulated all over the world since many centuries ago. With gold in hand, any person will not have to worry about getting stranded in foreign land. Gold has a real value. In order to perform the functions of money as i) medium of exchange, ii) unit of account iii) store of value and iv) standard of deferred payments, a commodity chosen as money must fullfill the following criteria; 11

- It must be easily divided into smaller units, as well as can be merged back into bigger i) units without loss of value.
- It must be fungible i.e. all monetary units are equivalent of value.
- It must be weighable, measurable and countable. iii)
- iv) Its value must be stable over time.
- v) It must be durable and last for long time without being spoilt or destroyed chemically due to weather, heat, pressure etc.
- It must be easily moveable from one place to another. vi)

Gold is commodity that is very desirable to play the role as money as it fulfill the above mentioned criteria.

There is establish an effort propagating the use of gold dinar an silver dirham as an alternative currency. The beginning of the effort to mint the gold dinar in Malaysia started with the launching of the e-Dinar Ltd. in Malaysia in the year 2000 by the then Deputy Prime Minister, Dato' Seri Abdullah Haji Ahmad Badawi at the Islamic Arts Museum, the host of the 4<sup>th</sup> Islamic Political Economy International Conference. <sup>12</sup> In 2002, the *wazirat* of World Islamic Trade Organisation (WITO) Malaysia initiated the first minting of gold dinars in Malaysia from five kilograms of gold according to the standard of Umar al-Khattab which has been adopted by WITO, and this was executed by Islamic Mint Sdn. Bhd. Umar Vadillo, the Director of e-Dinar Ltd, asserts that the Islamic Dinar serve as a symbol of the unity of *Ummah.* <sup>13</sup> Kelantan becomes the pioneer state in Malaysia which introduced the dinar and dirham coins. <sup>14</sup> Dinar Emas Kelantan has its own design but its weight, measure and purity are according to the standard of Umar al-Khattab. 15

The efforts of reasserting the importance of gold in the monetary system also affect the western world. In the latest report (January 2013) of the Official Monetary and Financial Institutions Forum (OMFIF), Desai wrote in his foreword that Western economies have attempted to remove the gold's monetary role, but they have failed. Gold stands ready to fill the vacuum created by the depreciation of the USD and euro. Thus, it is not surprising that big economic powers such as the US, German and Italy has refuse to sell its gold reserve in recent years and India and China has increase their buying of gold. Below is Table 1 explaining the gold reserve of world big economic powers as of 2011.

**Table 1 : Gold Reserve of World Big Economics Powers** 

World	14.4
US	74.5
France	71.4
Germany	71.1
UK	16.2
Russia	8.7
India	9.2
Japan	2.9
China	1.6

Source: World Gold Council Report

It was also reported by the World Gold Council that China has doubled its gold reserve between 2007 and 2012, with possession of 1054 tonnes in July 2012<sup>18</sup>. It is the world's sixth largest holder of monetary gold, but the proportion of gold in relation to total foreign reserves is very low compared with that of the largest holders as can be seen in Table 1.

#### 2. GOLD INVESTMENT IN MALAYSIA

Generally, there are two types of gold investment, i.e., i) by opening gold investment account offered by banking institutions and, ii) investment in physical gold. Some people buy gold jewelry and keep it as investment. This article will mainly focus on the second type of investment and will look into its practice in Malaysia. Emphasis will be made on the Shariah issues that are related to such practice in Malaysia.

As for the first type of investment, until 2013, there are 6 banks in Malaysia that offer Gold Investment Account (GIA) to Malaysians. They are, CIMB Malaysia (Gold Deposit Account), Maybank (Gold Savings Passbook Account), Public Bank (Gold Investment Account), United Overseas Bank, UOB (Gold Saving Account and Premier Gold Account), Kuwait Finance House (KFH Gold Account-i and Junior- Gold Account-i) and Al Rajhi Bank (Gold-i).

The GIA provides the customers with convenience and confidence in investing in gold. Customers will not have to worry about keeping the physical gold. All transactions, buying and selling gold will be recorded in the passbook or statement. Bank requires customers to open an account and the savings will be recorded in the gram units of gold. Each bank may have different conditions. KFH for example requires the customer to maintain at least 2 grams of gold as minimum balance in account. <sup>19</sup> Al Rajhi

<sup>&</sup>lt;sup>16</sup> Desai M., Chairman, OMFIF Advisory Board, Gold, the Renminbi and Multi-currencyu Reserve System (January 2013). This report has been commissioned by the World Gold Council as part of a series of reports analysing the role of gold in the International Monetary System.

<sup>&</sup>lt;sup>17</sup> *Ibid*. p. 9.

<sup>&</sup>lt;sup>18</sup> Ibid.

<sup>&</sup>lt;sup>19</sup> http://www.kfh.com.my/kfhmb/ep/images/v2/documents/products/tnc/KFH-General-Terms-&-Conditions-for-Deposit-Products-Apr-2013.pdf. Last visited on 16/5/2013.

Bank requires a minimum purchase of 10 grams.<sup>20</sup> Maybank put a condition of minimum initial purchase and minimum balance of 1 gram of gold.<sup>21</sup>

At Maybank, when a customer open a Gold Saving Passbook Account, he can purchase a minimum of 1 gram gold by cash, debiting from Maybank current/savings account, or through Maybank Debit/Credit Card.

Among all these investments, only Kuwait Finance House and Al Rajhi comply with Shariah requirements. In these two investments, the physical gold exists during the transaction. Customer is given option either to take the physical gold or leave it under the custody of the bank. Upon customer's request, the bank will show the physical gold to the customer at the time of the transaction. In practice, usually customers prefer to keep the gold with the bank so that they will not have to worry about keeping the gold. In addition, customer is not charge for any payment for this service. When the customer wants to resell the gold, he must ensure that the packaging and the security seal of the physical gold remains intact and the serial number and the barcode printed on the face of the packaging must match with the KFH Malaysia's record.<sup>22</sup>

As for the other 4 gold investment accounts, the validity of the transactions are debatable according to Shariah since the physical gold is not available at the time of the transaction. The transaction did not comply to the ruling of the Shariah in gold trading whereby the gold must exist when the party in concluding the transaction. The physical gold will only available for the purpose of withdrawal at certain weight only. When a customer decides to withdraw the physical gold, he has to wait for the maximum period of 30 days. When the bank informs the availability of the physical gold, then only he can collect it at selected branch. Apparently, the customer is in reality not buying an exist gold. In this case, the proceeds will be converted into RM currency and be paid to customer either in cash or deposit to his Maybank account. The non-existent of the physical gold result in delay thus constitutes *riba*. The gold that he so called 'buy' will only exists upon his request to withdraw the physical gold. The customer may also decide to dispose of the possession of the physical gold.

## 3. GOLD INVESTMENT IN ISLAM

Islam is a unique way of life and its teachings is comprehensive, covering all aspects of life, 'aqidah, 'ibadah, akhlaq and muamalat. Islam encourages Muslims to acquire properties through legitimate means, whether for personal or investment purposes. Investing in gold means that purchasing gold with the hope that it will generate income of appreciate in the future. Investment for future needs is encouraged by Allah.

Islam also accords protection to the individual and his properties that he acquired legitimately. The Prophet Muhammad (PBUH) emphasized during his sermon at the farewell *Hajj*:

"Your lives and properties are forbidden to one another till you meet your Lord on the day of Judgment." <sup>23</sup>

For Muslim investors who seek to invest their money in a Shariah compliant manner, they need to be mindful of certain restrictions and conditions before such investment can be labelled as Shariah compliant. The most important rule in dealing with gold investment and trading is extracted from the most famous *Hadith* reported by 'Ubadah bin al-Samit;

<sup>&</sup>lt;sup>20</sup> http://www.alrajhibank.com.my/personal gold i.shtml. Last visited on 16/5/2013.

<sup>&</sup>lt;sup>21</sup> http://www.maybank2u.com.my/mbb\_info/m2u/public/personal. Last visited on 16/5/2013.

http://www.kfh.com.my/kfhmb/ep/images/v2/documents/products/tnc/KFH-General-Terms-&-Conditions-for-Deposit-Products-Apr-2013.pdf. Last visited on 17/5/2013.

<sup>&</sup>lt;sup>23</sup> Sahih Muslim, Kitab al-Hajj, Vol. 2, p. 615.

"Gold for gold, silver for silver, wheat for wheat, barley for barley, dates for dates and salt for salt, like for like, equal for equal and hand to hand. However, if the commodities differ, then you may sell as you wish provided that the exchange is hand to hand".<sup>24</sup>

Based on the above *Hadith* reported by 'Ubadah, it is clear that gold is included as one of the *ribawi* commodities. It means that *riba* does not only happen in giving loan, but also can happen in trade involving the *ribawi* items. Therefore certain rules must be observed to avoid from the transaction being involved in *riba*.

As to the prohibition of *riba*, there is no disagreement among Muslim scholars that *riba* is prohibited by the injunction in the Holy *Qur'an* and *Sunnah*. *Riba* underwent the gradual process of prohibition. This is not to drastically change the culture that has been rooted in the pre-Islamic trade practices of the Arabs. Hence, it needs the kind of gradualism to prepare the people to accept the final prohibition. The first revelation is verse 30:39, revealed in Makkah, explaining that while interest deprived wealth of Allah's blessings, charity (*zakat*) raised it manifold. The second revelation is verse 4:161, where Allah placed those who took *riba* in juxtaposition with those who wrongfully appropriated other people's property and will be punished by Allah severely. The third revelation, 3:130, revealed around the second or third year after Hijrah, enjoined Muslims to stay away from *riba*. The final revelation on *riba* is 2:275-281, near the completion of the Prophet's mission, which clearly censured those who take *riba* and declared them to be at war with Allah and His Messenger. Allah enjoins trade and prohibits *riba*. "...but Allah has permitted trade and prohibited riba (interest)..." With this revelation, Muslims are required to annul all outstanding *riba*.

It was reported by Jabir R.A that there was a *Hadith* in which the Prophet, peace and blessings of Allah be on him, cursed not only those who give and receive *riba*, but also those who record the transaction or act as witnesses.<sup>25</sup> The Prophet also equated those who took *riba* with one who is guilty of incest with his own mother. <sup>26</sup>

Behind every injunction in the Qur'an there is always reasons and wisdoms for mankind. The prohibition of *riba* has benefits mankind in the moral, social and economic aspect. Firstly, the taking of interest implies taking another person's property without giving him anything in exchange. For example, A lends B RM 1000.00 but A gets RM 500.00 in surplus because of delay in the payment of the loan. This act is prohibited in Islam. The Prophet, peace and blessings of Allah be on him was reported to have said that " *A man's property is as sacred as his blood.*" It implies that taking a man property without giving him something in consideration is prohibited.

Taking interest is an easy way to accumulate wealth. The person who practices *riba* will not bother to take the trouble to work or running business in trade or industry. This will affect the industries, trade and commerce and the whole economic system.

Besides, the practice of usury also discourages people from doing good to another. If interest is allowed in Islam, then people will lend to each other with consideration of making easy profit. It will weaken his feelings of good will and friendliness and lead to hostility between the lender and the borrower. Thus, the prohibition of *riba* has wisdom in the moral aspect.

From the social aspect, taking usury also leads to exploitation and discrimination by the rich to the poor. The lender is likely to be wealthier and the poor will be poorer. This is against the spirit of mercy and

<sup>&</sup>lt;sup>24</sup> Sahih Muslim, Kitab 10, Hadith No: 3852

<sup>&</sup>lt;sup>25</sup> Muslim, Kitab al-Musaqat, Bab la'ana akil al-riba wa mu'kilahu; also in Tirmidhi and Musnad Ahmad.

<sup>&</sup>lt;sup>26</sup> Ibn Majah, Kitab al-Tijarah, Bab al-taghliz fi al-riba; also in Musnad Ahmad.

<sup>&</sup>lt;sup>27</sup> Reported by Abu Na'eem.

charity that is very encouraged in Islam. When there is a huge social gap among the society, it will breed envy and hatred, which could lead to conflicts and threaten the social order. Based on the above reasons, it is obvious that *riba* has significant impacts not only to individual traders but also to the society at large.

Both requirements that must be fulfilled in gold trading are as follows:<sup>28</sup>

- i) *Mutamathilan* must be of equal weight. The standard of purity of the gold is not a matter of consideration. This is based on the hadith of the Prophet Muhammad (peace be upon Him). It was reported by Abu Hurairah, may Allah be pleased with him, reported: Allah's Messenger (may peace be upon him) deputized a person from the Banu 'Adi Al-Ansari to collect revenue from Khaibar. He came with a fine quality of dates, whereupon Allah's Messenger (may peace be upon him) said to him: Are all the dates of Khaibar like this? He said: Allah's Messenger, it is not so. We buy one sa' of (fine quality of dates) for two sa's out of total output (including even the inferior quality of dates), whereupon Allah's Messenger (may peace be upon him) said: Do not do that. But like for like, or sell this (the inferior quality and receive the price) and then buy with the price of that, and that would make up the measure.<sup>29</sup>
- ii) Taqabudh fil hal aw fil majlis— the selling and buying must happen at one majlis (at the same occasion). When A trade in his old gold, B must exchange it with the new gold with the same weight, the process take place in one same occasion.

These two requirements must be fulfilled to avoid *riba al-nasiah*.

The jurists have different views on the '*illah* or underlying rationale of the *ribawi* items (mentioned in the above *hadith*). They have generally categorised them into two bases;

- i. Gold and silver represent currency and medium of exchange. It is a reference to all things that possess the characteristic of being used as money i.e. things that have value (*thamaniyya*).
- ii. Wheat, barley, date and salt represent food stuff. The Zahiris school restrict *riba* to these commodities only but many schools of law extended this to other types of commodities.<sup>30</sup>

If the exchange involves the same items, it must satisfy the requirements of equality and on the spot delivery. Exchanging 10kg Grade A wheat with 10 kg of Grade B wheat and made on the spot, is valid according to Shariah. Exchanging of 10 kg of dates with 10 grams of gold is not governed by the above rules because they are of different basis.

#### 4. ISSUES OF RIBA IN GOLD TRADING

Based on research and personal experience, there are two most important issues in the contemporary gold trading. First is buying gold (except for gold jewelry)<sup>31</sup> with fiat money or currency note such as RM, USD etc. Does this transaction govern by the two above rules? Second issue is buying gold with deferred payment.

In the first issue, first and foremost we must determine whether the *ribawi* items are only conclusive of the six items mentioned in the *Hadith* or extended to other items that share the same characters as the above six. The Muslim jurists have two different opinions on this issue. The first opinion is that the *ribawi* commodities are only confined to the six items in the *Hadith*.<sup>32</sup>

<sup>&</sup>lt;sup>28</sup> Salus, A., Al-muamalat al-Maliah al-Mu'asiroh.p180. Also in al-Buti, T., Al-Buyu' al-Sya'iah

<sup>&</sup>lt;sup>29</sup> Sahih Muslim Hadith No: 2983, Sahih Al Bukhari Hadith No: 4553.

<sup>&</sup>lt;sup>30</sup> Ibn Rusyd, Bidayat al Mujtahid.

<sup>&</sup>lt;sup>31</sup> Majority of Muslims scholars view gold jewelry as not part of ribawi item.

<sup>&</sup>lt;sup>32</sup> School of al-Zahiri and Ibn Uqail forn the Hanbali school.

The second opinion states that the *ribawi* items include other items not mentioned in the *Hadith*. Other items that has the same 'illah as the six are also include as *ribawi* item. However, this second opinion is also subject to disagreement as to the determination of 'illah. Imam Abu Hanifah and Imam Ahmad defines that 'illah in gold and silver is things that can be weighted. In dates, barley, wheat and salt, the 'illah is foods that can be weighted. Therefore, according to this view, metals other than gold and silver are also included as ribawi items. Silk, cotton and other items that can be weighted and measured also include as *ribawi* item.

According the Shafie school, the *'illah* for gold and silver is its current value (*thamanan ghaliban*). And the *'illah* of the other 4 items is type of food. Based on this view, metals other than gold and silver do not include as *ribawi* item. As for food, all type of food included as *ribawi* items disregard whether it can be weighted or not.

According the Maliki school of thought, the 'illah for gold and silver is its use as medium of exchange. The 'illah for dates, barley, wheat and salt is that it is a staple food and can be stored. Thus it is extended to rice and other staple foods.

The fourth opinion is the opinion of Ibn Taymiyyah. He opines that the 'illah of gold and silver is the medium of exchange. Gold and silver include as ribawi items because they are used in exchange of other items. As for the other 4 items, the 'illah is food that can be weighed and measured.

It can be concluded that, the Muslim jurists are in disagreement as to what included as *ribawi* items, other than 6 that was clearly mentioned in the *Hadith*. Therefore, the Muslim society are not bound to hold to one opinion or *ijtihad* only. The disagreement of opinions allows the society to choose the best opinion that does not lead to hardship.

The next important discussion is to determine whether currencies such as MYR, USD, GBP etc is included as *ribawi* item. Previously, before the introduction of fiat money, gold and silver was used as currency. Later, after 1971, the function of gold and silver was replaced with paper money. The Muslims jurist unanimously agreed that in situation where the paper money was use as representing gold or silver, therefore it is regarded as *ribawi* item. Thus, exchanging RM with RM must be of equal value and on the spot delivery. Exchange of RM 100 with 50 USD is allowed but must be made on the spot basis, at the same majlis al-aqd.

In current situation however, the use of fiat money is no longer backed up either by gold or silver. Out of this opinion, fiat currency is not included as *ribawi* items. Fiat money does not have intrinsic value. Its value is not permanent. Fiat money of RM100 is actually only a paper but it has a value of RM 100 because the Central Bank of Malaysia give it such value. It is different from gold and silver which has a real value and its value is always recognised by the society. Imam al-Nawawi in Al Majmu'<sup>33</sup> stated that paper currency value is not permanent.

The second opinion is that fiat money include as *ribawi* item because it plays the role as gold and silver, as a medium of exchange, even though it is no longer backed up by gold and silver. This is the opinion of Imam Malik and supported by Ibn Taymiyyah and contemporary Muslim jurists. Based on this opinion the International Islamic Fiqh Council of the Muslim World League (*Majma' Fiqh al Islam Rabitha al-'Alam al-Islamiy*) has issued a resolution<sup>34</sup> that fiat money or paper currency is an independent form of money and included as *ribawi* item.<sup>35</sup> The rules for gold and silver apply to the paper money. The Muslim

\_

<sup>&</sup>lt;sup>33</sup> Al Majmu' 9/395.

<sup>&</sup>lt;sup>34</sup> Resolution No 6, Regarding Paper Money. B.d./2/37/1406

<sup>35</sup> http://en.themwl.org/content/sixth-resolution-currency-note. Last visited on 24/5/2013.

World League is an Islamic Non-government Organisation (NGO) which was founded in Makkah in 1962. The Organisations of Islamic Countries (OIC) Islamic Fiqh Academy also issued the similar resolution <sup>36</sup>

To conclude this issue, one who holds the first opinion exclude paper currency as *ribawi* item, therefore the buying and selling of gold and silver can be made on deferred basis. The second opinion regard fiat money as having the same role as gold and silver as a medium of exchange, thus they are considered as *ribawi* items and regulated by the two basic rules. Buying gold with fiat money must be concluded at the same *majlis al-aqd*. After full payment made in cash, transfer of ownership occurs and the buyer will take possession of the gold immediately, at the same *majlis al-'aqd*. The first opinion accords a benefit in gold trading. In real practice, it is difficult and dangerous to pay thousand or hundred thousand of money and carry kilograms of gold. However, with regard to the second opinion, Muslim jurists have different view as to what constitute as on the spot.

The second issue in gold trading is with the regard to the requirement of *taqabudh* at one *majlis al-'aqd*. It is a Shariah requirement that the transaction must be on the spot, hand in hand. Muslims scholars however have different opinions as to what are considered as on the spot. One view says that the delay is allowed as long as it is not more than 3 days. This is the rule issued by the JAKIM's Gold Investment Parameter. Delay of 3 days is considered as part of *urf* or the practice in the business, therefore is considered as on the spot.<sup>37</sup>

Another view considered that on the spot means at the same *majlis al-'aqd*. The buying and selling of gold is valid only if the payment and transfer of ownership takes place at the same *majlis*, before the parties separate. This strict view however is difficult to be adhered to especially in this modern business involving banking institution. Following this view, payment must be made on the spot, buyer has to carry with him enough cash to pay the price of the gold bought. If the price is RM300,000, he needs to pay the full price. This is of course, not only dangerous on the part of the buyer to carry the loads of cash, but also to the seller who has to keep it with him.

Islam exercise tolerance on disagreement among ulama on juristic issues. Kamali<sup>38</sup> writes that Islamic law is described as being one of diversity within unity. It encourages the *Ummah* to think, to understand and try to rationalise issues, and not to follow blindly (*taqleed*). *Ikhtilaf* (juristic differences) in Islamic law is reflected in the above issue of determination of *illah*. Resolution of differences must be made in *maslahah* oriented manner, considering the interest of the people. Once a ruling is concluded by the authorities, everyone must comply with such rulings and disagreement must be ended. For the benefits of *Ummah* as a whole, the second opinion was issued as fatwa and must be complied with.

## 5. GOLD INVESTMENT PARAMETERS BY JABATAN KEMAJUAN ISLAM MALAYSIA (JAKIM)

The Fatwa Committee of Jabatan Kemajuan Islam Malaysia (JAKIM) in its 96<sup>th</sup> meeting has agreed and concluded a Gold Investment Parameters. These parameters serve as guidelines to gold trading form the Islamic perspective. The parameters are concluded as follow;<sup>39</sup>

<sup>&</sup>lt;sup>36</sup> Resolution (9) D/3/07/86 was issued in the third conference of the Council of the Islamic Fiqh Academy of the OIC held in Amman, from 11-16 October 1986.

http://www.e-fatwa.gov.my/fatwa-kebangsaan/parameter-pelaburan-emas. Last visited on 24/5/2013.

<sup>&</sup>lt;sup>38</sup> *Islamic Studies Quarterly Journal*, Vol 37, No 3, Autumn 1998, Islamic Research Institute, International Islamic University, Islamabad, Pakistan.

<sup>&</sup>lt;sup>39</sup> http://www.e-fatwa.gov.my/fatwa-kebangsaan/parameter-pelaburan-emas. Last visited on 24/5/2013

## 1) General conditions of sale and purchase of gold

Gold trading transaction must meet all trading tenets outlined by Shariah, the parties to the contract, exchange items, and *sighah* by '*uruf*' practiced. In the event that a transaction does not meet one of the pillars of trading, the transaction is considered void.

## 1) Parties to the contract

Parties to the contract must be a person who has the qualifications to perform a contract (*Ahliyyah al-Ta'aqud*) of the following criteria:

## 2.1 Puberty, understanding and *Rashid*

If the parties to the contract if a madman or a child whether or not *mumayyiz*, then the sales and purchase is not valid. Solemnization by *mumayyiz* child is not valid since the sale involves goods of high value.

## 2.2 Voluntarily

Any sale contract entered into by the two parties must mutually agreed, without any element of force, pressure and exploitation.

## 3)Purchase Price ( al-Thaman )

The purchase price (al-Thaman) should be clear by both parties to the contract during the trading session.

#### 4) The subject matter of sale ( *al-Muthman* )

Purchase goods (*al-Muthman*) shall be an inherent, and is wholly owned by the selling party at the contract. Therefore, the sale and purchase of something that does not exist physically and also sale and purchase something that is not owned by the selling party is invalid.

Purchase goods (*al-Muthman*) shall be that which can be delivered to the purchaser or his representative. If the purchased item cannot be delivered to the buyer, or seller requires not be handed to the buyer, then the contract is void. Purchase goods (*al-Muthman*) shall be known by both parties to the contract at the time of the transaction. It can be done through the following rules;

- i. Seeing it by himself during a sale contract, or before the contract of sale within a period not affect its properties.
- ii. See samples of the product to be bought and sold. This usually occurs during the booking process before the contract is executed.
- iii. Determine the properties and detail of the goods, which are in custom does not create conflicts. In the context of gold, its determination is to identify the authenticity of the old gold purity standard based either steel (such as 24-carat gold), or a new standard based on a percentage (such as 999, 916 gold). Determination of nature must also account for the form of gold, whether in the form of coins, wafers, ingots and so on. Gold scales accurately also is required in the determination of a gold properties.

#### 1) Sighah (Ijab and Qabul)

It can happen either through speech, or a speech that can take the law as written and the like. While trading in *Mu'ataah* is also calculated as sighah by some jurists. In the sale and purchase sighah can not include defer element. For example, someone says, "I sell it to you for RM100 for a period of one year". Offer and acceptance must match and meet each other in terms of features and rates.

## Specific conditions of the Sale and Purchase Gold Items.

Because gold and money are two *ribaw*i items, then additional conditions for a transaction of purchase or sale of gold must meet the following conditions:

- i. *taqabudh* (delivery) between the two items involved in the transaction before the two transacting parties separated.
- ii. Gold trading to be carried on the spot, and cannot happen any delay.

Such conditions are characterized by a special gold items *ribawi*, such as gold bullion and gold coins. This requirement does not include gold jewelry because it was not include as ribawi item. Average *taqabudh* and spot transactions are as follows:

## First condition: Taqabudh

*Taqabudh* (delivery) shall occur on both the sale and purchase of the item price and the purchase of goods (gold), and it must be done before the two sides separated from the contract (in the same *majlis al-'aqd*). Payment can be done via the price of the following methods:

- a. Payment in cash;
- b. Payment by certified check (such as banker's check);
- c. Payment by personal check;
- d. Payment by debit card;
- e. Payment by credit card; and
- f. Transfer money from savings or current account.

In practice, all forms of payment above except (c) is treated as a cash payment by the seller. Payment by credit card is still considered cash because the seller will get the full sales price of the party issuing the credit card. Status of this cash is still an accepted custom by the seller despite the fact that the seller will accept physical or put into his account a few days after the transaction occurs.

The delivery of the purchased gold shall occur in real delivery or other accepted method which has the same effect, namely;

a. Transfer of *dhaman* (security responsibility) from the seller to the buyer; and b. Buyer's ability to obtain the purchase of goods at any time without any hindrance.

The meeting of contract can either occur in physical meeting or by way of implications. The example of contract by implication is offer and acceptance via telephone, short message system (SMS), e-mail, fax and others. But in all situations, the delivery shall occur at the time of the conclusion of the contract, such as by way of *wakalah*. It is noteworthy that the written contract will only start when it is received by the contracting parties. For example, the buyer signed the contract of sale and then sends it by mail to the seller. After three days, the contract is in the hands of the seller. Then the solemnization ceremony began at that time, if the seller agrees, then the contract is to be completed by the seller to sign it, and the purchase of goods to be delivered to the purchaser in fact or *hukmi*.

## **Second condition: On the spot**

Gold trading transaction should occur on the spot and cannot be interfered by any element of delay, either in price or in the delivery of gold delivery. Delay in delivery of gold more than a period of three days after a sale contract is signed is not allowed. In other words, gold submission must be done within the

contract without any delay. This is because in gold trading, a three-day delay is not an uruf, in contrast to foreign exchange issues.

But practically, the seller will deliver the gold after the amount of the payment made by check and so credited to his account. This process usually takes about three working days. In dealing with the period between the receipt of checks and gold, then the seller and the buyer can take the following rules apply: The buyer will only make an order (order) to the seller with the specified type and weight of the gold he wanted to buy. This message will be accompanied by remittance to the account of the seller. At this point, the following should be noted:

- i. At this stage, the gold sale contract has not happened.
- ii. The money is in the account of the seller still does not belong to the seller. It is still owned by the buyer and held in trust by the seller. In this case, it is better if a special account of a trust ( trust account ) opened by the seller.
- iii. Gold still remains the property of the seller and he takes full responsibility for the possession of gold.

iv. At this stage, the buyer can still cancel the order made and the seller must return the money to the buyer. However, in the event of an actual loss due to the cancellation, it may be made a condition that it is to be borne by the purchaser. For example, buyers of gold 100gm order 999 to RM20,000. Currently, the seller has kept the gold and sells it to others who are ready to buy. After three days, when the seller is ready to make the next sale and purchase contract and hand over the gold to the buyer, the buyer rescind its order. During the day the price of gold has fallen to RM 19,000. In other words, the seller will lose RM1,000 if sold to another party.

#### 'Agad related Elements

The involvement of *hibah* in sale and purchase transactions in the form of either grants or cash items are allowed if sufficient conditions of *hibah* present, and does not involve elements that contradict with Islamic law. It is noteworthy that the *hibah* contract in fact is voluntary and it is not in the usual form. In other words, if the promise is not fulfilled by the seller, then the buyer cannot be forced to give *hibah*..

The application *wadiah* in gold investment plans shall conform to the same rules on *wadiah*, among others, is holding *wadiah* is based on the *Yad Amanah*. Someone who buys gold is free to deal with his gold, including lending ( *qardh* ) to others. But must meet the criteria *of lending*, which among others cannot bring the element of interest, there is no element of "Salaf wa bay" which is tied together with a debt sale. Someone who buys gold is free to deal with his gold including lease to make it a money debt, as long as the concept of *al-Rahn* used are in accordance with Islamic law. But theoretically, it should not be encouraged because it indirectly encourages debt in an unnecessary situation.

Wa'd can be entered in gold investment, as long as it is promise from the side rather than exchange of promises from both sides. Wa'd application example in this context is to make a purchase order, the customer makes a deal to buy gold for a price. Purchase agreement is named 'key' price. If the process is regarded as similar as the sale contract, it is not allowed as the delay has taken place. Nature of the transaction shall be free from riba elements, gambling, excessive gharar, and tyranny. In the event that these elements exist, the nature of the transaction is considered as invalid and contrary to the Shariah requirements in gold trading.

The issuance of this Parameter although a little bit late, (many Muslim investors has involved in the non Shariah compliance activities), is among the measures taken by the authorities and serve at least two important goals. It becomes guidelines to sellers, buyers and dealers involve in this business as to how to avoid riba. In addition, it create awareness among the society on the importance of adhering to the Shariah rules in *muamalah*.

## 6. SHARIAH ISSUES IN THE PRACTICE OF GOLD TRADING IN MALAYSIA.

For this discussion, the study is limited to the practice of gold trading by the Public Fine Gold International Sdn Bhd. (Public Gold). This article has selected Public Gold because it is among the pioneers in gold trading in Malaysia and in fact the biggest gold trading company in Malaysia. Public Gold was listed in the Malaysia Book of Record in 2008 as the first locally-manufactured certified gold bullion bar. 40 On 15 July 2008, the share capital of the company was RM 500,00.00. In December 2009, the share capital has increased to RM 10 Million. On 13 September 2012, the company was selected by the Junior Chamber International as the award winner of the Socially Responsible Company under the investment sector.41

As of 2013, Public Gold does not have a Shariah panel, even though there was a discussion made towards establishment of such a panel. 42 In Malaysia, there is no requirement that any company involve in gold trading to have a Shariah panel. What is important that its operation must adhered to a Gold Investment Parameter issued by JAKIM. Many other companies such as Habib Jewels, Poh Kong, Wah Chan etc. also do not have a Shariah panel to regulate their business.

In Public Gold, customer may purchase its product at any of its 18 branches all over Malaysia including Sabah and Sarawak. Public Gold has also introduced an online buying of gold. There are a few steps that a customer needs to do. First, the customer has to register and fill up his personal information at the Public Gold's website. After he has done so, he needs to lock the price. Locking the price means the mutually agreed price of selling. The gold price at the Public Gold is according to the current international market price and is accordingly updated. This is to the advantage of the customer who has the knowledge and expertise in the analytical analysis of the gold price. They know when is the right time to buy and sell to gain maximum profit form the difference between the selling and buying price.

#### 6.1 THE LOCK-PRICE SYSTEM

The 'price locking' system is also a matter of dispute. Some says that it is not Shariah compliant and involves riba al-nasiah (not on the spot). The issue involve is al-wa'd. Locking the price means agreeing on the purchase price. The procedure is that, customer will refer to the sale price of gold in the Public Gold's website. If he decides to buy, he will make a call to the Public Gold and inform that he wants to buy at the current price. The price then will be locked. At this juncture, it works as if the seller and buyer mutually agreed to sell and buy at the quoted price. This amounts to mutual agreement by both parties.

The promise or al wa'd has no specific definition. It could be said as a commitment made by one person to another to undertake a certain actual or verbal disposal beneficial to the second party. 43 Al-wa'd is different from contract as the former is only an information whereby the latter is initiation. Contracts bind the parties once it has fulfilled all the requirements. The binding obligation of promise however depends on the agreement by the parties. Muslim scholars have disagreement with regard to the liability imposed to the parties of the promise. According to Maliki school of thought, the promise merely for sale transaction is permissible. This view says that promise is not binding and cannot be enforce by the court

 $<sup>^{40}\,</sup>http://www.publicgold.com.my/v1/,\,http://jutawanemas.com/v1/news/gold-bar-public-gold-mencipta-rekod-malaysia-book-of-leading-public-gold-mencipta-rekod-mencip$ record/. Last visited on 24/5/2013 http://www.publicgold.com.my/v1/index.. Last visited on 24/5/2013

<sup>&</sup>lt;sup>42</sup> http://pelaburjutawan.wordpress.com/2010/11/28/public-gold-monthly-market-update-syariah-compliance-panel-will-beimplement/. Last visited on 24/5/2013

<sup>&</sup>lt;sup>43</sup> Mohd. Noor. N.A, Aripin, M.A., 2010. Mechanism of Al Wa'ad (Promise): Theory and Application in Islamic Banking in Malaysia. Canadian Social Science Vol 6 No 1. p 81.

except if the party to whom the promise had been broken suffer loss, then the party who breaks the promise must pay damages for the detriment or hardship arises from it.<sup>44</sup>

Generally, the majority of the classical jurists view that although keeping promise is very much emphasis in Islam, the enforcement of the promise is not binding form legal perspective and there is no enforcement by the court. Some scholars such as Samurah bin Jundub, 'Umar ibn 'Abd al- 'Aziz, Ibn Shubrumah, Hassan al-Basri, Ibn Arabi, Imam Bukhari, etc., state that enforcement of promise is binding both by Islam and the law, thus the court has jurisdiction to enforce the promise made.

In the practice of 'lock price' system in Public Gold, it does not form part of the sale contract. If the customer or a dealer decided not to buy after he has locked the price, he is no under legal obligation to continue with the sale. However, in order to avoid such practice to happen again, that particular customer or dealer will be blacklisted for some time. No obligation imposed on the customer to buy. If customer is not given an option, but is force to buy after he locked the price, then it may be invalid according to Shariah. The penalty imposed is one way to manage the risk. If customers are allowed to simply cancel after they locked the price, then it would be bad to the business of the company.

In the Gold Investment Parameters issued by JAKIM, it was stated that the promise can be practised as long as the promise is only from one party and not an exchange of promises by both parties. In the case of Public Gold, it can be seen in the process of making the purchase order, whereby the customer has made a promise to buy the gold at the locked price. The locked price in this situation is a separate agreement and not as part of the sale. It is merely an element of business administration. When a customer lock the price, he does not only determine the purchase price but also what and how much the quantity that he wants to buy. It does not bound the parties to effect the sale. If any of the parties either the seller or the buyer, decided not to continue with the sale, it does not constitute breach of contract of sale.

After the price is locked, the customer shall proceed with the payment of the purchase price. There are two methods of payment available to customer. Customer may choose to pay in full or by way of easy payment. At this juncture, there arise the issue of *riba*. If a customer choose to pay in full, the transaction is valid and considered as made on the spot basis. If however, the easy payment purchase (EPP) method is chosen, it will constitute *riba* as the payment will be made in installments (4 times/4 months). This is clearly contradicts with one requirement in gold trading i.e. sale and purchase must be on the spot, not deferred or pay by installments. In this method of payment, customer will be charged 0.5% of the whole purchase price. The EPP is not only available to customer who buys online, but also available to customer who buys at Public Gold branch. In Public Gold, some Muslim customers choose the EPP method, as it provides facility in paying the price. Whether they did so purposely or due to ignorance of Shariah, is unknown. It is important that the Muslim customers must have the knowledge of Shariah rules so that they will not be involving in unislamic transaction.

After the order is confirmed by the customer, the company will email the Sales Order to the customer immediately. Customer will only proceed with the payment after he has satisfied with the Sales Order. After the customer has paid in full, the gold is available and he can take it immediately. According to the good banking practice, the payment will take the minimum period of 1 working day and maximum of 3 working days to be completed, depends on the method of payment used. If the customers directly bank-in to the Public Gold account, normally payment takes effect immediately and customer may collect the gold at the Public Gold branch. If payment is made by cheque, usually it takes 3 working day to be cleared. Usually, the gold is always ready at the branch. If it is unavailable, customer will have to wait not more

\_

<sup>&</sup>lt;sup>44</sup> Ibid.

<sup>&</sup>lt;sup>45</sup> Al-Nawawi, al-Adhkar, 282, Ibn Hazm, al-Muhalla, 3/518, Shaykh 'Ulayyish, Fath al-'ali al-Malik, 1/254

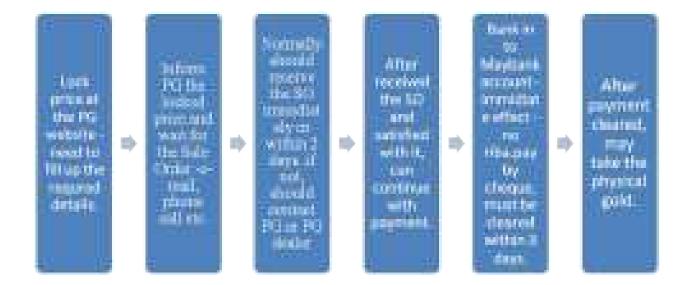

than 3 days to allow the company to collect the gold from other branch. For future reference, the customer is advised to keep the original payment record.

The procedures of gold trading in Public Gold are summarized in the following Table 2 and 3. Whether the transaction amount to riba or not depends on how the customer chooses to deal with the company.

Table 2: Procedures of gold trading at Public Gold's branch.

Table 3: Procedures of online gold trading at Public Gold's website.

#### **6.2 METHOD OF PAYMENT**

The basic rule of Shariah is the transaction must be on the spot basis (hand to hand). This is agreed by all 4 main schools of thought. Therefore, this condition rule out any deferred method of payment, or installment as discussed earlier. How about paying by credit card? If the credit card is a product of conventional banking, it is invalid according to Shariah because the credit card is a *ribawi* product out of conventional financial system. However, purchasing gold and buying by a Shariah compliant credit card which use the contract of *bay al-'inah* or *tawarruq* is allowed as the two contracts gives cash to the card owner and the cash is exist in a specific *wadiah* account. The loan, if exist, was not between the buyer and

seller of the gold but between the card holder and the bank. If the buyer pay by installment, that is considered as not made on the spot and amounts to *riba al-nasiah*.

## 6.3 TRADE-IN GOLD TO BUY GOLD

Public Gold offers an X Plan whereby the customer can trade in his old gold to purchase the Public Gold's product. The old gold presented by the customer will be graded according to the quality and its purity standard. The trade in process can only take place after the purity test is conducted in Public Gold and customer has agreed on the quoted price.<sup>47</sup>

From the Shariah point of view, this is allowed if the exchange is between the old and new gold of the same weight, contracted on the spot basis. If A trade in his gold bracelet with purity of 916 weighted 10 grams with a gold bar purity 999.99 weighted 10 grams, this is valid as long as the transaction take place on the spot.

One issue may arise out of this practice if for example A wants to trade in his old gold bracelet for an exchange of brand new gold which is higher in price. In situation whereby the gold trade in is less in value with the gold bought, then it lacks the requirements of equality in weight, thus amounts to *riba*. *Riba* may be avoided with a condition that the buyer sells his gold to the seller who pays in full, on the spot. The buyer then buys the gold that he wants with the traded in gold plus the balance price, in currency note. This may look awkward, but that is the best way to avoid *riba*.

## 6.4 GOLD INVESTMENT AND MORTGAGE (AR RAHN)

In practice, some customers buy physical gold and mortgage the same gold in any pawn shop. Whether this is allowed by Shariah depends on how the process takes place. There could be two possibilities. First situation, A sold 20 grams gold bar to B at the price of RM 3400. B paid 30% of the sold price. i.e. RM 1020. After having possession of the gold bar, B then mortgages the gold bar and gets 70% of the current gold price. B now has RM2380. That money is used to pay RM 2380, the amount that he owed to A. This is invalid according to the rules of *muamalah*, because the original buying and selling of the gold bar was not made on the spot basis. When the transaction was made on loan basis, it constitutes *riba*.

In the second situation, the buying and selling of the gold was made on the spot basis, full payment is settled and B has complete possession of the gold. B mortgaged the gold only after he has completely paid the purchase price. This is allowed and valid transaction because there was no element of *riba al nasiah*. However, mortgage for the purpose of buying more gold (create leverage) is not advised because it encourage the society to involve in unnecessary loan.

#### 6.5 CONTOVERSY OF GENNEVA MALAYSIA SDN. BHD.

The controversy of Genneva Malaysia Sdn. Bhd. has attracted the attention of many in the public. It was estimated that around 60,000 investors<sup>48</sup> affected by the Genneva's cessation of business. As of 2013, the case is still under investigation by the related authorities.

The Fatwa Committee of the National Council for Islamic Religious Affairs in its 100<sup>th</sup> meeting held on 4-6 July 2012 has issued a *fatwa* that the business of gold trading conducted by Genneva Malaysia Sdn. Bhd. do not fully comply with the Gold Investment Parameter.<sup>49</sup> JAKIM advised the society not to be

<sup>47</sup> http://www.publicgold.com.my/v1/images/stories/pdf/promotions/x-plan\_july.pdf. Last visited on 26/5/2103.

<sup>49</sup> http://www.e-fatwa.gov.my/fatwa-kebangsaan/hukum-jual-beli-dan-pelaburan-emas-yang-dijalankan-oleh-syarikat-genneva-malaysia-s. Last visisted on 24/5/2013

<sup>&</sup>lt;sup>48</sup> No official numbers from Genneva. But some claims that it has 60,000 customers in Malaysia. Can read at http://gms101.wordpress.com/2013/03/13/press-statement-by-genneva-customers-sabah/. Last visited on 26/5/2013.

involved in any activities of gold trading which in violation against the Shariah principles. Previously, on 1 and 2 October 2012, a joint raiding operation was conducted on Genneva Malaysia Sdn. Bhd. and its affiliates by the Royal Malaysian Police, the Ministry of Domestic Trade, Cooperatives and Consumerism, Companies Commission of Malaysia and Bank Negara Malaysia. These companies are being investigated for suspected offences among which include illegal deposit taking, money laundering, tax evasion and avoidance, misrepresentation including false description and appointment of agents without license. Relevant assets and documents of the company were seized for the purpose of investigation. <sup>50</sup>

The *modus operandi* adopted by this company is different from others. The customer who buys the gold will sign an agreement for 6 months. Every month, the customer is given an agreed percentage of *hibah*, at the discretion of the company. Thus, upon conclusion of the contract of sale, (by signing Sale and Purchase Agreement), the buyer holds the gold, letter of *hibah* with guaranteed percentage of *hibah* (ranging from 1.8% to 2.5%) for 6 months, certificate of ownership and first cheque of *hibah*. The monthly *hibah* will be issued till the contract ends. Upon expiry of the 6 month contract, the customer has 3 options. He can choose to continue with the contract, sell back the gold to Genneva at the purchased price or keep the gold purchased. Who could resist such proposal? According to the JAKIM's Parameters, *hibah* is permissible as long as it fulfill the conditions of hibah. *Hibah* is voluntary and not to be part of the obligations of any of the parties in contract. If the customer breach the contract before the term agreed, a penalty of 20% - 25% will be imposed.

Based on the *modus operandi*, it is submitted that what Genneva offered is not a gold trading but more inclined to money lending business. In any trading, the rule is very clear. There must be a willing buyer and seller for a transaction to take place at a price agreed by both parties. In the case of Genneva, the customer becomes the lender and Genneva is the borrower. The customer bears the financial risk; in return Genneva pays you the monthly interest as they call it *hibah*. At the end of the loan contract, Genneva returns the money to you. During the contract, the customer keeps the gold as collateral in the event the company fails to pay, the customer will not lose the full amount lent to the company. If there is a contractual obligation for monthly interest and promise of buy back, it is similar to money lending. In a purely sell and buying, there is no such obligations exist; only the seller profits and the buyer keeps the gold. The price of gold in Genneva is higher compared to other competitors, and this explains how they manage to pay *hibah* to the buyer.

In the practice of Genneva, technically, the seller (Genneva) do not realized its profit because there is a contractual obligation to pay 2%-3% *hibah*, and also obliged to buy back the gold at the original purchased price. Such obligation becomes a liability to the seller. In a clear cut trading, the more goods sold out, the more profits reailsed. In Genneva situation, the more customers' means the more liability imposed on the company because of the obligation to pay *hibah* and to buy back the gold. It seems that the buyers will obtain more profits rather than the seller. This is too good to be true. Even banks with a bigger capital do not give *hibah* to its customer.

The whole system works as long as the gold price does not crash, people continue to buy gold bars, Genneva continues to generate positive income from their billions of dollars of profit elsewhere. Genneva also know that its customers will not redeem their gold at the same time. From the Shariah point of view, this kind of *modus operandi* is tainted with uncertainties and *gharar*.

#### 7. CONCLUSION

Of all the precious metals, gold has always been a good and preferable choice of investment due to its various advantages over the other types of investment. Unlike other items, trading and investing gold is subjected to two basic requirements of Shariah because it is included as ribawi item. In Malaysia, there are many options for the Muslims to invest in gold. As for the gold investment account offers by 6 banks in Malaysia, only the gold investment account in Kuwait Finance House and Al Rajhi Bank comply with the requirements of Shariah. Among the many companies involve in gold trading in Malaysia, until 2013,78 companies were not authorized under regulations of Central Bank Malaysia. Muslims scholars have disagreement as to the position of the currency, whether it is a ribawi item or not. Following the resolution issued by the Islamic Figh Council of the Muslim World League and the Council of Islamic Figh of the OIC, currency is considered as a *ribawi* item as it currently plays the role of gold and silver as currency. Thus, the trading of gold is governed by two rules of equality and on the spot basis. riba can be avoided if customer adhere to these requirements. Based on the study conducted, the practice of gold trading in the Public Gold company may be valid and invalid according to Shariah, depends on how the transaction is conducted. Therefore, it is gravely important that the society particularly the Muslims to be aware of the Shariah rules and regulations before involve in gold trading or investment. They must not be easily trapped into various attractive offers by the companies but should equip themselves with education on investment and more importantly, the Islamic rules and regulations on gold investment and trading. Many of these companies are operated by the non-Muslims thus explain why their operations are not scrutinized by the Shariah panel. It is recommended that these companies should consider establishing a Shariah panel to advise them on the Shariah compliant gold trading. In the current framework, JAKIM has taken good efforts and issued the Gold Investment Parameters serve as guidelines to those involve in gold trading and investment. Hopefully, the Muslim will gain more confidence to trade and invest in gold, for a better future.

## DETERMINANTS OF USAGE OF ONLINE INVESTMENT PLATFORM: AN EMPIRICAL ANALYSIS.

Haneffa Muchlis Gazali<sup>1</sup> Rosita Chong<sup>2</sup>

#### **ABSTRACT**

Malaysia has experienced a revolution in doing investment, which is internet-based investment when in 2000 Kuala Lumpur Stock Exchange or currently known as Bursa Malaysia launched the online stock trading. The study defines online investment as any kind of investment activity undertaken through the bank website, whereby customers can buy or sell their stocks or investments on their own as long as they have access to internet. This study looks into the criteria that determine as to why Muslims choose to invest online. The findings from this study would give Muslims some perspectives on the permissibility concerning the application of internet technology in performing investment. Hence, the main objective for this study is to identify variables or factors that significantly determine potential investors to use online investment platform from an Islamic perspective. The findings have revealed that out of the six criteria identified to determine usage of online investment platform; only four criteria supported the hypothesis of the study. It is found that the four variables namely; perceived usefulness, perceived security, perceived financial return and perceived religiosity have a positive relationship with intention to use online investment platform. A surprising but interesting finding is that Islamic worldview indicates to have a negative relationship with usage of online investment platform. This indicates either that (i) some of the respondents do not actually understand the concept of Islamic worldview, or (ii) they understood it very well, hence are more cautious in their business dealings especially where online investment is concerned.

Keywords: Online investment platform, TAM, Religiosity, Islamic worldview

## 1. INTRODUCTION

Malaysia has experienced a revolution in doing investment, which is internet-based investment when Kuala Lumpur Stock Exchange or currently known as Bursa Malaysia launched the online stock trading in 2000. Konana and Balasubramanian (2005) define online investment as the activity performed by individual investor towards the independent management of their investment account with online brokers. We define online investment as any kind of investment activity undertaken through the bank website, whereby customers can buy or sell their stocks or investments on their own as long as they have access to internet.

According to Armfield and Holbert (2003), American religious individuals will less likely use the internet. Thus, in this study, we want to determine among others, if religiosity and understanding of Islamic worldview influence Muslim investor's usage of online investment platform. This is in view of the fact that, a Muslim must ensure that they comply with *Shariah* rulings in every decision that they makes in their life. The requirement to adhere is well documented in The Holy Quran and Sunnah (Aribi and Gao, 2010). As Allah mention in al-Quran, *Surah al-Maidah*, verse 48:

<sup>&</sup>lt;sup>1</sup> Tutor and currently doing her Master in Islamic Finance, School of International Business and Finance, Universiti Malaysia Sabah. Corresponding author. Email: haneffa@ums.edu.my

<sup>&</sup>lt;sup>2</sup> Senior Lecturer in Islamic Finance, School of International Business and Finance, Universiti Malaysia Sabah. Email: itachong@ums.edu.my

To thee We sent the Scripture in truth, confirming the scripture that came before it, and guarding it in safety; so judge between them by what Allah hath revealed, and follow not their vain desires, diverging from the Truth that hath come to thee. To each among you have We prescribed a Law and an Open Way. If Allah had so willed, He would have made you a single people, but (His plan is) to test you in what He hath given you: so strive as in a race in all virtues. The goal of you all is to Allah; it is He that will show you the truth of the matters in which ye dispute. (48)

Hardie and Robboy (2008) in their study based on the Islamic investment theory found that, ethical aspect of investment is an essential feature of investment in the Islamic world. In the Quran, there are so many reminders from Allah (SWT) to Muslims regarding the ethical management of their wealth. As Allah (SWT) mentioned in *Surah al-Bagarah*, verse 188:

And do not eat up your property among yourselves for vanities, nor use it as bait for the judges, with intent that ye may eat up wrongfully and knowingly a little of (other) people's property. (al-Baqarah: 188)

Shariah is the body of Islamic Religious Law. The term means "way" or "path to the water sources". It is the legal framework known as the Islamic principles of jurisprudence is within which the public and private aspects of life are based on. This study, would like to look in depth the most favourable criteria that determine as to why Muslims choose to invest online. The information gathers from this study would give Muslims some perspectives on the permissibility concerning the application of internet technology in performing investment. Hence, the main objective for this study is to identify variables or factors that significantly determine potential investors to use online investment platform from an Islamic perspective. It is hoped that this study would be able to provide significant benefits to Muslim investors, in assisting them in their decision-making, as to whether they would like to use or not online investment platform. Since previous studies have focussed mainly on internet banking, this study will be a preliminary study for investors to get some ideas about the Shariah ruling pertaining to online investment.

The paper is organised as follows; Section one introduces the study. Section two discusses the past literatures related to investment from the Islamic and online perspectives. Section three provides the theoretical framework for the model on determinants of usage of online investment platform. Specifically, the model tries to identify variables that determine usage of online investment platform. Section four analyses and discusses the findings of the study. Finally, the last chapter concludes the study.

#### 2. LITERATURE REVIEW

There are many researchers who use extended TAM by adding others variables that are relevant to their study. For a case in point, Khalil Md Nor *et al.* (2010) applied TAM as a based model and combined with trust to study the adoption of internet banking among the Malay and Chinese. For that reason, this study also extend TAM, to include four more variables to work with namely, perceived security, perceived financial return, perceived religiosity and Islamic worldview.

Perceived usefulness (PU) is defined as the degree of an individual's belief that by using a particular system, it would enhance the individual's job performance (Davis, 1989; Wang, 2003). The benefits include the effortlessness whereby they can conduct investment activities at anytime and in anywhere. For the purpose of practicing online trading, Jafarpour (2006) ratified that internet technology will provide convenience and efficiency, whereby consumers' can perform their trading activities 24 hours a day without having to call a stockbroker, save a lot of time and money. In addition, many studies found that perceived usefulness significantly and positively influenced individual intention to use online banking. (Cheong and Park, 2005; Chiu *et al.*, 2005; Lassar *et al.*, 2004; Hanudin Amin, 2007; Jahangir and Begum, 2008; Wang *et al.*, 2003). Pikkarainen *et al.*, (2004) viewed that perceived usefulness is one of the variables that is significant to

influence the customer's intention to use online banking in Finland. Based on the reviews, it thus hypothesised that there is a significant positive relationship between PU and usage of online investment platform and thereby denoted by the following hypothesis;

H1: Significant positive relationship exists between perceived usefulness and usage of online investment platform.

The other construct variable in TAM model is Perceived Ease of Use (PEOU). PEOU is defined as the degree to which an individual believes that using a particular system would be free of effort (Davis, 1989). Indeed, if the applications of the system were easy to use, more people would be likely to accept it. Extensive research over the past decade provides evidence of the significant effect of perceived ease of use on usage intention (Davis, 1989; Adams *et al.*, 1992; Ramayah *et al.*, 2003; Wang, 2003; Guriting and Ndubisi, 2006; Hanudin Amin, 2007). Ramayah *et al.*, (2009) acknowledge that the advertising of benefits and ease of use from companies offering online stock trading will lead to a positive reaction among current and potential users. Based on these findings, it is hypothesised that PEOU has a significant and positive relationship with usage of online investment platform. It is denoted by the following hypothesis;

H2: Significant positive relationship exists between perceived ease of use and usage of online investment platform.

Security is one of the important considerations for users to use internet banking. Wang *et al.*, (2003) in their study define security as a protection of data or system from any kind of illegal interruption and losses. In addition, Salisbury *et al.*, (2001) defined perceived web security as the extent of user's beliefs that it is secure for them to transmit sensitive information via internet. Indeed, there are many previous banking studies, which focussed on the security and privacy to support the acceptance of online banking, among others Poon (2008); Hernandez and Mazzon (2007); Chen and Barnes (2007); Sathye (1999); Tan and Teo (2000); Polatoglu and Ekin (2001); Black *et al.* (2002); Howcroft et al. (2002). According to Warrington *et al.*, (2000) the users who were concerned with the security level tend to be very careful when providing sensitive information online. Therefore, it is hypothesised that perceived security does have an influence on usage of online investment platform, and is shown by the following hypothesis;

H3: Significant positive relationship exists between perceived security and usage of online investment platform.

According to Curry and Penman (2004), technology can provide customers more information with a lesser cost as compared to the traditional way. Field (2007) in his study agreed that there are many benefits that investors' can get by undertaking online investment. In fact, there are some benefits that investors receive only by using online investing technologies such as cost saving, efficiency, competence and control over the portfolio (Looney *et al.*, (2006). Jafarpour (2006) addressed that the online brokerage institutions compete each other by lowering commission rates to attract as many new entrants as possible. Therefore based on prior studies, it is hypothesised that financial return has a significant and positive impact on the use of online investment platform, and is illustrated by the following hypothesis:

H4: Significant positive relationship exists between financial return and usage of online investment platform.

Krause (1993) claims that the dimension of religious belief has historically been the most neglected aspect of business especially with respect to financial business. He also claimed that the participation in religious institution and is frequently related to church attendance or church membership. As correctly pointed out by Kutcher, *et al.*, (2010) religious beliefs and practice bring many positive consequences to peoples' life. Ultimately, religious beliefs are the main beliefs of people that are related to their religion, and man or

woman's relationship to God. Religiosities were generally related to clear behaviour and it is instructs behavioural patterns and encourages obvious religious expression (Hill et al., 2000). In addition, they stated that, Muslims want to conduct their business transaction in line with *Shariah*. This is because conducting transactions within the *Shariah* boundaries are considered as *ibadah*. Naziruddin Abdullah and M. Shabri Abd. Majid (2003) in their study found that savings and religiosity is intimately and significant positively related. Therefore, based on prior studies, it hypothesised that religiosity does determine the use of online investment platform, and this is indicated by the following hypothesis;

H5: Significant positive relationship exists between religiosity and usage of online investment platform

However, to the knowledge of the researchers, there have been no published studies regarding Islamic worldview and their impact on online investment. With this in mind, it is hoped that the initial study on these three concepts would fill up the gap existing in the literature, and to investigate further on the relationship between Islamic worldview with online investment.

# 3. RESEARCH METHOD

The framework of this study was developed based on the work of Davis (1989), whereby, Davis include perceived usefulness and perceived ease of use, and that they are strongly correlated with user acceptance. However in this study, the variables that determine usage of online investment platform are perceived usefulness, perceived ease of use, perceived security, financial return, religiosity and Islamic worldview. The dependent variable is to determine the usage online investment platform. Usage of online investment platform refers to the use of online investment platform when undertaking investment. Independent variables are the variables that can influence the dependent variable either in a positive or negative way. This study would like to investigate the determinants that could influence people's usage of online investment platform. The variables that might influence the usage of online investment platform are perceived usefulness, perceived ease of use and perceived security, financial return, religiosity and Islamic worldview.

Unit analysis for this study is individual and the respondents are Muslim since this study want to look into the Islamic perspectives. For the purpose of this study, the minimum criteria for respondent are that they must have online banking account, have experiences in using online banking and at least they are financial literate. Moreover, the criterion chosen was to enable the respondents to understand the question given. The survey was then distributed to amongst 350 participants in the urban city, Kuala Lumpur. This sample was to cover a wide spectrum of internet users and internet banking adopters.

The standard rule of thumb for an appropriate sample size used in this study was based on Hair *et al.* (2006), whereby the minimum requirement for sample size is to have at least five participants per item. The total number of items in order to measure all of the variables in the study is 36. Therefore, an acceptable sample for this study is 180 participants. Prior to conducting the study, a pre-test session was carried out. Some amendments on the questionnaire were made based on the comments from the per-test. During the fieldwork, 350 questionnaires were distributed. However, only 255 were returned and 246 were usable for the analysis. The rate of response is therefore 70.3 percent. The total numbers of items analysed were 52 variables. This conforms with the guidelines by Hair *et al.*, (2006) that is, the minimum requirement is that the sample has to be 5 times the total number of variables which is 52.

Factor analysis can reduce data set to fewer variables. According to Hair *et al.*, (2006), in order to have an appropriate analysis, it is compulsory to have several assumptions. The first assumption is to include that the value Kaiser-Meyer-Olkin measure of sampling adequacy (KMO) must more than 0.50. In addition, the Bartlett's test of sphericity is required to be less than 0.6 in order for it to be considered significant. Besides that, the anti-image correlation matrix of items and communalities of the variables should be at least or

greater than 0.50. Additionally, it also take into account that the factor loading of 0.40 or above for each item is considered practical and considered statistically significant for sample size of 200 or greater. Further, factors with eigenvalues greater than 1 are also to be considered significant.

#### 4. RESULT

The purpose is to investigate the banking customers' preference when they make up their mind to use online investment platform. There were seven items used to measure usage of online investment platform. After the factor analysis performed, five items were produced and eigenvalues of 3.721 was extracted and they explain 74.41 percent of the total variance. The Kaiser-Meyer-Olkin value is 0.873 and the Bartlett test of sphercity is found to be significant at 0.000, indicating that the items were correlated and suitable for factor analysis. The communalities of the five variables ranged from 0.689 to 0.794 and factor loadings of the variables ranged from 0.830 to 0.891. Table 4.1 (refer appendix) displays the factor loadings of the items measuring the construct for potential investor's intention to use online investment platform.

Initially there were 37 items used to be measure the determinants of usage of online investment platform such as perceived usefulness (4 items), perceived ease of use (5 items), perceived security (7 items), perceived financial return (5 items), perceived religiosity (9 items) and *Islamic* worldview (7 items). Hence, during the first iteration of factor analysis, there were 37 items from eight factors with eigenvalues above one were produced. The Kaiser-Meyer-Olkin value was 0.844 and the Bertlett's test of sphericity was significant at 0.000. Anti-Image correlation for the determinants of usage of online investment was greater than 0.5. however, 18 items were found to cross-load in more than one factor. These items were then deleted. After removal of the items, factor analysis was run again. After the second iteration for factor analysis, five factors were extracted with eigenvalues greater than one. The Kaiser-Meyer-Olkin value was 0.821 and the Bartlett test of sphercity was significant at 0.000. Anti-image correlation for the whole usage of online investment platform variables revealed communalities of 0.5 and above.

Factor 1 is labelled as "Perceived usefulness". This factor captured 29.37 percent of the total variance with 5.58 eigenvalues. Factor 2 is labelled as "Perceived religiosity" and this factor captured 22.06 percent of the total variance with 4.19 eigenvalues. There were five items that fall under this factor. Factor 3 is labelled as "Perceived security" and this factor captured 10.30 percent of the total variance with 1.95 eigenvalues. There were four items that fall under this factor. Factor 4 is labelled as "Islamic worldview" and this factor captured 7.26 percent of the total variance with 1.38 eigenvalues. Three items fall under this factor. Factor 5 is labelled as "Perceived financial return" and this factor captured 5.97 percent of the total variance with 1.13 eigenvalues. Two items fall under this factor.

The degree of stability and consistency among the multiple measurement of a variable is based on the internal consistency of the variables. This means that there is consistency amongst variables that could be determined using reliability test (Hair *et al.*, 2006). A Cronbach's alpha was calculated in order to examining the internal consistency of the factors extracted. As reported by Sekaran (2003), when the alpha value close to 1.0, it indicates that there is high internal consistency, the alpha value above 0.8, the reliability of the factors is considered to be good. The values for the Cronbach's alpha in this study were significantly over 0.8.

The mean and standard deviation values for all of the variables are presented in the descriptive analysis. In this study, all the variables were measured using five-point Likert scale ranging from 1 (strongly disagree), 2 (disagree), 3 (neither agree nor disagree), 4 (agree) to 5 (strongly agree). Table 4.4 (refer appendix) represents the mean and standard deviation values for all of the variables. The results of the descriptive analysis suggest that the mean score is between 1.68 and 2.90. The dimension tested in these study shows that all the respondents had moderate perception. Besides, the standard deviation for all the dimensions

ranged from 0.47 and 0.76. The mean score for intention to use online investment, perceived usefulness, perceived ease of use, perceived security and perceived financial return are rated as average. However, the mean score for perceived religiosity and Islamic worldview are rated as low due to the mean score, which is less than two. In addition, based on the general guideline suggested by Norjaya Mohd Yasin (2004) explains the scale of 1 to 5, in that, a mean score of less than 2 is rated as low. Correspondingly, when the mean score is between 2 and 4, it is rated as average.

Overall, the results of the correlation in Table 4.5 (refer appendix) between the dependent variable (usage of online investment platform) and the independent variables (perceived usefulness, perceived ease of use, perceived security, perceived financial return, perceived religiosity and Islamic worldview) shows that they are significant and positive except perceived religiosity and Islamic worldview. In addition, the result of the correlation coefficient also suggested that there is no correlation coefficient values of the variables that are beyond 0.8. For that matter, in this study the multicollinearity does not exist (Hair *et al.*, 2006).

In order to determine if the relationship between dependent and independent variables of the model are significant, multiple regression analysis was carried out (Ramayah *et al.*, 2009). It was used to analyse the direct relationship between intention to use online investment platform (dependent variable) towards perceived usefulness, perceived ease of use, perceived security, perceived financial return, perceived religiosity and Islamic worldview (independent variable). Normally, the significance of the model depends on two factors, (1) goodness of fit, which is the observation of the data as whether the model is fit, and (2) generalisation of the model, which is the capability of the model to generalise the findings to the whole population (Kalsom Abdul Wahab, 2004; Anderson, 2008; Hanudin Amin *et al.*, 2009).

The first hypothesis (H1) examines if there is a positive relationship between perceived usefulness and intention to use online investment platform. As a point of reference, Table 4.6 (refer appendix) shows that there is a significant positive relationship between perceived usefulness and intention to use online investment platform ( $\beta$  = .292, p < .000). Therefore, H1 is supported. The second hypothesis (H2) investigates whether there is positive relationship between perceived ease of use and intention to use online investment platform. As the result shown in Table 4.6 (refer appendix), it indicates that there is a negative relationship between perceived ease of use and intention to use online investment platform ( $\beta$  -.032 = p < .652). Therefore, this finding is not significant; hence, H2 is not supported. The third hypothesis (H3) examines whether there is a positive relationship between perceived security and the intention to use online investment platform. Table 4.6 (refer appendix) illustrates that perceived security is significantly and positively correlated to intention to use online investment platform ( $\beta$  .500 = p <0.000). Therefore, H3 is also supported.

The fourth hypothesis (H4) investigates whether there is positive relationship between perceived financial return and intention to use online investment platform. Table 4.6 (refer appendix) presents the findings that suggest perceived financial return and intention to use online investment platform is positively correlated ( $\beta$  .134 = p < 0.027) and is significant at 5% significance level. Therefore, H4 is also supported. The fifth hypothesis (H5) examines whether there is positively relationship between perceived religiosity and intention to use online investment platform. As the results shown in the Table 4.6 (refer appendix), perceived religiosity and intention to use online investment platform is positively correlated ( $\beta$  .077 = p < 0.097) and significant at 10% significance level. Therefore, H5 is also supported. The sixth hypothesis (H6) investigates if there is a positive association between Islamic Worldview. Table 4.6 (refer appendix) illustrates that Islamic worldview is negatively correlated to intention to use online investment platform ( $\beta$  -.037 = p < 0.448). As a result, H6 is not supported.

#### 5. CONCLUSION

The study has revealed that out of the six criteria identified to determine usage of online investment platform; only four criteria supported the hypothesis of the study. It is found that the four variables namely; perceived usefulness, perceived security, perceived financial return and perceived religiosity have a positive relationship with intention to use online investment platform. A surprising but interesting finding is that Islamic worldview indicates to have a negative relationship with usage of online investment platform. This indicates either that (i) some of the respondents do not actually understand the concept of Islamic worldview, or (ii) they understood it very well, hence are more cautious in their business dealings especially where online investment is concerned. All researches have limitations, therefore, the participation of respondents become one the major limitation for this study. The citizens living in this urban city are classified as busy persons, they spend their time wisely, and thus it is hard to find a voluntary person to become respondent for this study. The other limitation of this research is the survey was conducted in English. Most of the respondents claimed that they would prefer to corporate in the survey if was it in Bahasa Malaysia. In this research, there was still some of the factors had not been further studied such as demographic factors. Therefore, the researcher emphasized that future research on the factors that has not been studied to gain better understanding on the usage of online platform. Besides, the researcher also recommends that future research would include testing of the consumers understanding towards Islamic banking product.

# PERFORMANCE OF ISLAMIC REAL ESTATE INVESTMENT TRUSTS AROUND DIVIDEND ANNOUNCEMENT DAY

Hairulnizam Hashim<sup>1</sup> Mohd Faizal Kamarudin<sup>2</sup> Nurul Ainun Ahmad Atory<sup>3</sup>

#### **ABSTRACT**

Real estate investment trusts (REITs) have been traditionally able to attract investors because of their relatively low risks and high dividend yields. This study analyzes the effect of dividend announcements on share prices among listed Islamic REITs (i-REITs) in Malaysia. It is also analyzes the general perception of the investors with a belief that share prices are favourable with the increase dividend announcement, while neutral or unfavourable with unchanged or decrease dividend announcement. The sample of 38 dividend announcements throughout 2007 to 2012, which comprises of 19 increased and 19 decreased dividend announcement respectively among three i-REITs have been analyzed upon thirty (30) days event window (t-15 days, t+15 days). This study discovers that generally there are significant positive dividends announcements affect on i-REITs. Specifically, this study establishes significant positive effects on increased dividend announcements, while insignificant effect for decreased dividend announcements for i-REITs.

Keywords: Islamic Real Estate Investment Trusts (i-REITs), dividend announcement effect

#### 1. INTRODUCTION

Real estate investment trust (REIT) is a trust that manages a pool of fund from numerous investors to be invested in the real estate or real estate-related assets beside distributing the dividends to the unit-holders on regular basis (James, 2006; Ling & Archer, 2005). The income producing real estate assets owned by a REITS possibly will include office buildings, shopping malls, apartments, hotels, resorts, self-storage facilities, warehouses, mortgages or loans.

In general, there are three (3) main types of REITs, which are equity REITs, mortgage REITs and hybrid REITs (Ling & Archer, 2005). The equity REITs are involved in investing and managing diversified or specialized income generating properties. The mortgage REITs are involved in acquiring mortgage debt that secured by commercial properties and effectively as real estate lenders. Hybrid REITs are involved in investing in both properties operations and mortgages loans. In addition, in order to accommodate Muslim investors, Malaysia introduced Islamic REITs (i-REITs) in the year 2005, which comes under the category of equity REITs (Malaysian Securities Commission, 2005). The i-REITs invest in real estate, in which the tenants operate permissible activities according to Syariah rules or at least 80% must be permissible (Ting & Abdul Rahman, 2007). In most cases, an Islamic insurance coverage or Takaful must apply as part of the prerequisites. i-REITs must also appoint Syariah committee.

The distribution of income, although similar with those of conventional REITs where it should only be made from realized gains or realized income, for i-REIT these income must be earned from Syariah compliant activities or from the activities within the 20% benchmark. This benchmark is used to assess the level of contribution from mixed rental payment from non-Syariah compliant activities such as the rental payment from premises that are involved or dealing with gambling and sales of liquor.

<sup>1,2,3</sup> Lecturers, Faculty of Business Management, Universiti Teknologi MARA (UiTM). Corresponding author: hairul1927@salam.uitm.edu.my

643

The initiation of establishing REITs is to allow small investors to invest in income yielding commercial properties, which are normally dominated by rich investors and big institutions (Imperiale, 2002). Further, REITs could offer better diversification of property portfolios because the qualified real estate professionals are engaged in administering them (EPRA, 2004). As a substitute of investing in real estate development, private schemes might purchase equity in REITs, and therefore keep away from some of the direct risks of investing in property, for example construction and credit risks (Mutero, 2011).

Even though there are unlisted REITs, a majority of REITs are listed or exchange-traded. Thus, REITs provide higher liquidity as compared to physical property, which is hard to liquidate (James, 2006). Moreover, REITs provide high dividend distribution policy to their unit holders which is generally more than 90% of their taxable income (Jones Lang LaSalle, 2005/2006). Advantages of REITs may create strong demand to investors (Coskun, 2011).
